- Schematic electronic symbols A33
- International graphic symbols A34-A39
- Classification of living organisms A40-A46
- Biographical listing A47-A65

Contents

Preface

When the first edition of the *McGraw-Hill Dictionary of Scientific and Technical Terms* was published in 1974, its aim was to fill the need created by inadequate representation of the vocabulary of science, engineering, and technology in general English language dictionaries. Now in its third edition, this Dictionary continues that purpose, concentrating on the specialized scientific and technical terminology and providing definitions of this vocabulary for the professional community as well as for the general reader with an interest in science.

To keep pace with the continuing rapid developments and expanding vocabularies in all areas of science and technology, the editors of the Dictionary decided to publish this enlarged third edition. Thoroughly up to date, with the addition of 7500 new entries, the third edition includes 98,500 terms with 115,500 definitions. In selecting entries, most disciplines were covered, but special emphasis was given to electronics and computer science since these areas have experienced the most dramatic growth during the past few years.

The definitions are written in clear, simple language that is understandable even to nonspecialists but is consistent with the complexity of the term itself. Each definition is identified by the field in which it is used. There are 100 fields represented, some of which are highly specialized—such as atomic physics [ATOM PHYS] and molecular biology [MOL BIO]—while others are more general—such as chemistry [CHEM] and science and technology [SCI TECH]. A definition is given a specific field identifier except where it applies to more than one field. In this case, a more general field is designated. For example, if the same definition is used in both invertebrate zoology and vertebrate zoology, it is assigned to the field of zoology. An alphabetical list of field abbreviations and a complete list of fields with an explanation of the scope of each begins on page xii.

In addition to definitions, synonyms, acronyms, and abbreviations are given under the appropriate entry. These also appear in the alphabetical sequence as separate entries providing cross-references to the principal term. Where units of measurement are essential to the definition, U.S. Customary units are used with International System (SI) or metric equivalents. Many definitions are supplemented by detailed, informative illustrations, of which there are approximately 3000.

The definitions were written by the staff of the *McGraw-Hill Encyclopedia of Science and Technology* and by a select group of contributing editors, and were reviewed by the consulting editors. Their efforts were supplemented by existing resources of the McGraw-Hill Book Company, including such published works as: Philip B. Jordain, *Condensed Computer Encyclopedia;* John Markus, *Electronics and Nucleonics Dictionary;* John Quick, *Artists' and Illustrators' Encyclopedia; Blakiston's Gould Medical Dictionary;* and Theodore Baumeister and Lionel S. Marks (eds.), *Standard Handbook for Mechanical Engineers.* These and other works from which material was drawn are credited on the copyright page.

The emphasis in the Dictionary is placed on providing definitions rather than on pronunciation, etymology, or syllabication.

The Appendix contains a full explanation of the International System of units with conversion tables for the U.S. Customary and metric systems. It also includes a table of the chemical elements; a periodic table; lists of mathematical notation; tables of mathematical signs and symbols, fundamental constants, and elementary particles; international graphic symbols; semiconductor symbols and abbreviations; schematic electronic symbols; a list of abbreviations for scientific and technical organizations; and a biographical listing comprising noted scientists, both historical and modern. A new feature of the Appendix is an outline of the classification of living organisms, from kingdom down to the ordinal level.

An explanation of how to use the Dictionary, describing alphabetization, cross-referencing, and so on, is on page x.

Through the collaborative efforts of the editorial staff, the contributing editors, and the consulting editors, the third edition of the *McGraw-Hill Dictionary of Scientific and Technical Terms,* now a standard international reference, will continue to serve the information needs of readers within and outside the scientific community.

SYBIL P. PARKER
EDITOR IN CHIEF

Editorial Staff

Sybil P. Parker, Editor in Chief

Jonathan Weil, Staff editor
Betty Richman, Staff editor

Edward J. Fox, Art director

Ann D. Bonardi, Art production supervisor
Cynthia M. Kelly, Art production assistant

Joe Faulk, Editing manager
Ruth L. Williams, Editing supervisor

Patricia W. Albers, Senior editing assistant
Judith Alberts, Editing assistant
Barbara Begg, Editing assistant

Consulting Editors

Prof. Eugene A. Avallone—Department of Mechanical Engineering, City University of New York. MECHANICAL POWER ENGINEERING.

Dr. Patrick Barry—Senior Staff Scientist, Grumman Aerospace Corporation, Bethpage, New York. CONTROL SYSTEMS.

Waldo G. Bowman—Formerly, Black and Veatch, Consulting Engineers, New York City. CIVIL ENGINEERING.

Dr. John M. Carroll—Associate Professor of Computer Science, Department of Computer Science, University of Western Ontario. RADIO COMMUNICATIONS.

Dr. John F. Clark—Director, Space Application and Technology, RCA Laboratories, Princeton, New Jersey. SPACE TECHNOLOGY.

Dr. Richard B. Couch—Ship Hydrodynamics Laboratory, University of Michigan. NAVAL ARCHITECTURE.

Dr. Charles B. Curtin—Associate Professor of Biology, Creighton University. BIOLOGY.

Robert L. Davidson—Formerly, Editor in Chief, Business Books and Services, Professional and Reference Book Division, McGraw-Hill Book Company. CHEMICAL ENGINEERING; CHEMISTRY; PETROLEUM ENGINEERING.

Prof. Roland H. Good, Jr.—Department of Physics, Pennsylvania State University. PHYSICS.

Dr. J. Allen Hynek—Department of Astronomy, Northwestern University. ASTRONOMY.

Philip B. Jordain—Senior Research Officer, First National City Bank of New York. COMPUTERS.

Dr. Gary Judd—Vice Provost, Academic Programs and Budget, and Dean of the Graduate School, Rensselaer Polytechnic Institute. METALLURGICAL ENGINEERING.

Alvin W. Knoerr—Mining Engineer, U.S. Bureau of Mines, Washington, D.C. MINING ENGINEERING.

John Markus—Author and Consultant. ELECTRONICS.

Dr. Nathaniel Martin—Department of Mathematics, University of Virginia. MATHEMATICS.

Dr. Edward C. Monahan—Statutory Lecturer in Physical Oceanography, University College, Galway, Ireland. OCEANOGRAPHY.

Dr. N. Karle Mottet—Professor of Pathology, University of Washington School of Medicine. BIOCHEMISTRY; MEDICINE; PSYCHOLOGY.

Dr. Charles Oviatt—State Department of Education of Missouri. CHEMISTRY.

Dr. Guido Pontecorvo—Imperial Cancer Research Fund Laboratories, London. GENETICS AND EVOLUTION.

Dr. John Quick—Arthur D. Little, Inc., Cambridge, Massachusetts. ARMAMENTS; GRAPHIC ARTS.

Prof. Alan Saleski—Department of Mathematics, Loyola University of Chicago. MATHEMATICS.

Brig. Gen. Peter C. Sandretto—Formerly, Director, Engineering Management, International Telephone and Telegraph Corporation. NAVIGATION.

Prof. Frederic Schwab—Department of Geology, Washington and Lee University. GEOLOGY; PHYSICAL GEOGRAPHY.

Dr. W. R. Sistrom—Department of Biology, University of Oregon. MICROBIOLOGY.

Dr. Leonard Spero—Walter Reed Hospital Unit, Fort Dietrick, Maryland. CHEMISTRY.

Dr. C. N. Touart—Senior Scientist, Air Force Geophysics Laboratory. GEOCHEMISTRY; GEOPHYSICS; METEOROLOGY.

Dr. Joachim Weindling—Professor of System Engineering and Operations Research, Polytechnic Institute of Brooklyn. INDUSTRIAL AND PRODUCTION ENGINEERING.

Prof. George S. Bonn—Formerly, Graduate School of Library Science, University of Illinois. LIBRARY CONSULTANT.

Contributing Editors

Prof. Theodore Baumeister—(Deceased) Consulting Engineer; Stevens Professor of Mechanical Engineering, Emeritus, Columbia University. MECHANICAL POWER ENGINEERING.

Robert L. Davidson—Formerly, Editor in Chief, Business Books and Services, Professional and Reference Book Division, McGraw-Hill Book Company. CHEMICAL ENGINEERING; CHEMISTRY; PETROLEUM ENGINEERING.

Gerald M. Eisenberg—Senior Engineering Administrator, American Society of Mechanical Engineers. ENGINEERING.

Dr. Samuel J. Hessel—Department of Radiology, Peter Bent Brigham Hospital, Harvard Medical School. RADIOLOGY.

Philip B. Jordain—Senior Research Officer, First National City Bank of New York. COMPUTERS.

John Markus—Author and Consultant. ELECTRONICS.

Dr. Nathaniel Martin—Department of Mathematics, University of Virginia. MATHEMATICS.

Dr. John Quick—Arthur D. Little, Inc., Cambridge, Massachusetts. ARMAMENTS; GRAPHIC ARTS.

Dr. Aaron Strauss—Department of Mathematics, University of Maryland. MATHEMATICS.

How to Use the Dictionary

I. ALPHABETIZATION

The terms in the *McGraw-Hill Dictionary of Scientific and Technical Terms* are alphabetized on a letter-by-letter basis; word spacing, hyphen, comma, solidus, and apostrophe in a term are ignored in the sequencing. For example, an ordering of terms would be:

air-earth current
air ejector
airfield
air filter
AKF diagram

Also ignored in the sequencing of terms (usually, chemistry terms) are italic elements, numbers, small capitals, and Greek letters. For example, the following terms appear within alphabet letter "A":

***N*-acetylethanolamine**
2-aminobutane
α-aminohydrocinnamic acid
***ortho*-aminophenol**

II. FORMAT

The basic format for a defining entry provides the term in boldface, the field in small capitals, and the single definition in lightface:

term [FIELD] Definition.

A field may be followed by multiple definitions, each introduced by a boldface number:

term [FIELD] **1.** Definition. **2.** Definition. **3.** Definition.

A term may have definitions in two or more fields:

term [BOT] Definition. [GEOL] Definition.

A simple cross-reference entry appears as:

term *See* another term.

A cross-reference may also appear in combination with definitions:

term [BOT] Definition. [GEOL] *See* another term.

III. CROSS-REFERENCING

A cross-reference entry directs the user to the defining entry. For example, the user looking up "average life" finds:

average life *See* mean life.

The user then turns to the "M" terms for the definition.

Cross-references are also made from variant spellings, acronyms, abbreviations, and symbols.

aesthacyte *See* esthacyte.
ASROC *See* antisubmarine rocket.
at. wt *See* atomic weight.
Au *See* gold.

The user should observe that an element ignored in alphabetizing may appear in a cross-reference entry. For example, the following directs the user to a term in alphabet letter "V," not in "N":

amyl aldehyde *See n*-valeraldehyde.

IV. ALSO KNOWN AS . . . , etc.

A definition may conclude with a mention of a synonym of the term, a variant spelling, an abbreviation for the term, or other such information, introduced by "Also known as . . . ," "Also spelled . . . ," "Abbreviated . . . ," "Symbolized . . . ," "Derived from . . . ." When a term has more than one definition, the positioning of any of these phrases conveys the extent of applicability. For example:

term [BOT] **1.** Definition. Also known as synonym. **2.** Definition. Symbolized T.

In the above arrangement, "Also known as . . ." applies only to the first definition: "Symbolized . . ." applies only to the second definition.

term [BOT] **1.** Definition. **2.** Definition. [GEOL] Definition. Also known as synonym.

In the above arrangement "Also known as . . ." applies only to the second field.

term [BOT] Also known as synonym. **1.** Definition. **2.** Definition. [GEOL] Definition.

In the above arrangement, "Also known as . . ." applies to both definitions in the first field.

term Also known as synonym. [BOT] **1.** Definition. **2.** Definition. [GEOL] Definition.

In the above arrangement, "Also known as . . ." applies to all definitions in both fields.

V. CHEMICAL FORMULAS

Chemistry definitions may include either an empirical formula (say, for acetaldehyde, C_2H_4O) or a line formula (for acrylic acid, $CH_2CHCOOH$), whichever is appropriate.

Field Abbreviations

ACOUS	acoustics
AERO ENG	aerospace engineering

Scope of Fields

acoustics—The science of the production, transmission, and effects of sound.

aerospace engineering—Engineering pertaining to the design and construction of aircraft and space vehicles and of power units, and dealing with the special problems of flight in both the earth's atmosphere and space, such as in the flight of air vehicles and the launching, guidance, and control of missiles, earth satellites, and space vehicles and probes.

agriculture—The production of plants and animals useful to humans, involving soil cultivation and the breeding and management of crops and livestock.

analytical chemistry—Science and art of determining composition of materials in terms of elements and compounds which they contain.

anatomy—The branch of morphology concerned with the gross and microscopic structure of animals, especially humans.

anthropology—The study of the interrelations of biological, cultural, geographical, and historical aspects of the human race.

archeology—The scientific study of the material remains of the cultures of historical and prehistorical peoples.

architecture—The art or practice of designing structures, especially habitable structures in accordance with principles determined by esthetic and practical or material considerations.

astronomy—The science concerned with celestial bodies and with the observation and interpretation of radiation received in the vicinity of earth from the component parts of the universe.

astrophysics—A branch of astronomy that treats of the physical properties of celestial bodies, such as luminosity, size, mass, density, temperature, and chemical composition, and their origin and evolution.

atomic physics—A branch of physics concerned with the structures of the atom, the characteristics of the electrons and other elementary particles of which the atom is composed, the arrangement of the atom's energy states, and the processes involved in the radiation of light and x-rays.

biochemistry—The study of the chemical substances that occur in living organisms, the processes by which these substances enter into or are formed in the organisms and react with each other and the environment, and the methods by which the substances and processes are identified, characterized, and measured.

biology—The science of living organisms, concerned with the study of embryology, anatomy, physiology, cytology, morphology, taxonomy, genetics, evolution, and ecology.

biophysics—The hybrid science involving the methods and ideas of physics and chemistry to study and explain the structures of living organisms and the mechanics of life processes.

botany—That branch of biological science which embraces the study of plants and plant life, including algae; deals with taxonomy, morphology, physiology, and other aspects.

building construction—The art of business of assembling materials into a structure, especially one designated for occupancy.

chemical engineering—A branch of engineering that deals with the development and application of manufacturing processes, such as refinery processes, which chemically convert raw materials into a variety of products, and that deals with the design and operation of plants and equipment to perform such work.

chemistry—The scientific study of the properties, composition, and structure of matter, the changes in structure and composition of matter, and accompanying energy changes.

civil engineering—The planning, design, construction, and maintenance of fixed structures and ground facilities for industry, for transportation, for use and control of water, for occupancy, and for harbor facilities.

climatology—That branch of meteorology concerned with the mean physical state of the atmosphere together with its statistical variations in both space and time as reflected in the weather behavior over a period of many years.

communications—The science and technology by which information is collected from an originating source, transformed into electric currents or fields, transmitted over electrical networks or space to another point, and reconverted into a form suitable for interpretation by a receiver.

computer science—The branch of knowledge concerned with information processes, the structures and procedures that represent these processes, and their implementation in information-processing systems.

control systems—The study of those systems in which one or more outputs are forced to change in a desired manner as time progresses.

cryogenics—The science of producing and maintaining very low temperatures, of phenomena at those temperatures, and of technical operations performed at very low temperatures.

crystallography—The branch of science that deals with the geometric description of crystals, their internal arrangement, and their properties.

cytology—The branch of biological science which deals with the structure, behavior, growth, and reproduction of cells and the function and chemistry of cells and cell components.

design engineering—A branch of engineering concerned with the design of a product or facility according to generally accepted uniform standards and procedures, such as the specification of a linear dimension, or a manufacturing practice, such as the consistent use of a particular size of screw to fasten covers.

ecology—The study of the interrelationships between organisms and their environment.

electricity—The science of physical phenomena involving electric charges and their effects when at rest and when in motion.

electromagnetism—The branch of physics dealing with the observations and laws relating electricity to magnetism, and with magnetism produced by an electric current.

electronics—The branch of science and technology relating to the conduction of electricity through gases or vacuum or through semiconducting materials; concerned with the design, manufacture, and application of electron tubes.

embryology—The study of the development of the organism from the zygote, or fertilized egg.

engineering—The science by which the properties of matter and the sources of power in nature are made useful to man in structures, machines, and products.

engineering acoustics—A field of acoustics that deals with the production, detection, and control of sound by electrical devices, including the study, design, and construction of such things as microphones, loudspeakers, sound recorders and reproducers, and public address systems.

evolution—The processes of biological and organic change in organisms by which descendants come to differ from their ancestors, and a history of the sequence of such change.

fluid mechanics—The science concerned with fluids, either at rest or in motion, and dealing with pressures, velocities, and accelerations in the fluid, including fluid deformation and compression or expansion.

food engineering—Technical discipline involved in food manufacturing and processing.

forestry—The science of developing, cultivating, and managing forest lands for wood, forage, water, wildlife, and recreation; the management of growing timber.

genetics—The science concerned with biological inheritance, that is, with the causes of the resemblances and differences among related individuals.

geochemistry—The study of the chemical composition of the various phases of the earth and the physical and chemical processes which have produced the observed distribution of the elements and nuclides in these phases.

geodesy—A subdivision of geophysics which includes determinations of the size and shape of the earth, the earth's gravitational field, and the location of points fixed to the earth's crust in an earth-referred coordinate system.

geography—The science that deals with the description of land, sea, and air and the distribution of plant and animal life, including humans.

geology—The study or science of earth, its history, and its life as recorded in the rocks; includes the study of the geologic features of an area, such as the geometry of rock formations, weathering and erosion, and sedimentation.

geophysics—A branch of geology in which the principles and practices of physics are used to study the earth and its environment, that is, earth, air, and (by extension) space.

graphic arts—The fine and applied arts of representation, decoration, and writing or printing on flat surfaces together with the techniques and crafts associated with each; includes painting, drawing, engraving, etching, lithography, photography, and printing arts.

histology—The study of the structure and chemical composition of animal tissues as related to their function.

horology—Science of time measurement and the principles and technology of constructing time-measuring instruments.

hydrology—The science that treats of the surface and ground waters of the earth; their occurrence, circulation, and distribution; their chemical and physical properties; and their reaction with their environment.

immunology—The division of biological science concerned with the native or acquired resistance of higher animal forms and humans to infection with microorganisms.

industrial engineering—The application of engineering principles and training and the techniques of scientific management to the maintenance of a high level of productivity at optimum cost in industrial enterprises, as by analytical study, improvement, and installation of methods and systems, operating procedures, quantity and quality measurements and controls, safety measures, and personnel administration.

inorganic chemistry—A branch of chemistry that deals with reactions and properties of all chemical elements and their compounds, excluding hydrocarbons but usually including carbides and other simple carbon compounds (such as CO_2, CO, and HCN).

invertebrate zoology—A branch of zoology concerned with the taxonomy, behavior, and morphology of invertebrate animals.

lapidary—The study relating to precious stones or the art of cutting them.

mapping—The art and practice of making a drawing or other representation, usually on a flat surface, of the whole or part of an area (as the surface of the earth or some other planet), indicating relative position and size according to a specified scale or projection of selected features, as countries, cities, rock formations, or bodies of water.

materials—The study of admixtures of matter or the basic matter from which products are made; includes adhesives, building materials, fuels, paints, leathers, and so on.

mathematics—The deductive study of shape, quantity, and dependence; the two main areas are applied mathematics and pure mathematics, the former arising from the study of physical phenomena, the latter involving the intrinsic study of mathematical structures.

mechanical engineering—The branch of engineering concerned with the generation, transmission, and utilization of heat and mechanical power, and with the production and operation of tools, machinery, and their products.

mechanics—The branch of physics which seeks to formulate general rules for predicting the behavior of a physical system under the influence of any type of interaction with its environment.

medicine—The study of cause and treatment of human disease, including the healing arts dealing with diseases which are treated by a physician or a surgeon.

metallurgy—The branch of engineering concerned with the production of metals and alloys, their adaptation to use, and their performance in service; and the study of chemical reactions involved in the processes by which metals are produced, and of the laws governing the physical, chemical, and mechanical behavior of metallic materials.

meteorology—The science concerned primarily with the ob-

servation of the atmosphere and its phenomena, including temperature, density, winds, clouds, and precipitation.

microbiology—The science and study of microorganisms, especially bacteria and rickettsiae, and of antibiotic substances.

mineralogy—The science concerning the study of natural inorganic substances called minerals, including origin, description, and classification.

mining engineering—A branch of engineering concerned with the location and evaluation of coal and mineral deposits, the survey of mining areas, the layout and equipment of mines, the supervision of mining operations, and the cleaning, sizing, and dressing of the product.

molecular biology—That branch of biology which attempts to interpret biological events in terms of the molecules in the cell.

mycology—A branch of biological science concerned with the study of fungi.

naval architecture—The study of the physical characteristics and the design and construction of buoyant structures which operate in water, and of the construction and operation of the power plant and other mechanical equipment of these structures.

navigation—The science or art of conducting ships or aircraft from one place to another, especially the method of determining position, course, and distance traveled over the surface of the earth by the principles of geometry and astronomy and by reference to devices (radar, beacons, and instruments) designed as aids.

nuclear physics—The study of the characteristics, behavior, and internal structure of the atomic nucleus.

nucleonics—The technology based on phenomena of the atomic nucleus such as radioactivity, fission, and fusion; includes nuclear reactors, various applications of radioisotopes and radiation, particle accelerators, and radiation detection devices.

oceanography—The scientific study and exploration of the oceans and seas in all their aspects.

optics—The study of phenomena associated with the generation, transmission, and detection of electromagnetic radiation in the spectral range extending from the long-wave edge of the x-ray region to the short-wave edge of the radio region; and the science of light.

ordnance—That military area concerned with supplies, including weapons, ammunition, combat vehicles, and the necessary repair equipment; and with heavy firearms discharged from mounts, including cannons and artillery.

organic chemistry—The study of the composition, reactions, and properties of carbon compounds except CO_2, CO, and certain ionic compounds such as Na_2CO_3 and NaCN.

paleobotany—The study of fossil plants and vegetation of the geologic past.

paleontology—The study of life in the geologic past as recorded by fossil remains.

pathology—The branch of biological science which deals with the nature of disease, through study of its causes, its processes, and its effects, together with the associated alterations of structure and function; and the laboratory findings of disease, as distinguished from clinical signs and symptoms.

particle physics—The branch of physics concerned with understanding the properties, behavior, and structure of elementary particles, especially through study of collisions or decays involving energies of hundreds of MeV or more.

petroleum engineering—A branch of engineering concerned with the search for and extraction of oil, gas, and liquefiable hydrocarbons.

petrology—The branch of geology dealing with the origin, occurrence, structure, and history of rocks, especially igneous and metamorphic rocks.

pharmacology—The science of detection and measurement of the effects of drugs or other chemicals on biological systems; includes all chemicals used as drugs.

physical chemistry—The description and prediction of chemical behavior by means of physical theory, with extensive use of graphs and mathematical formulas; main subject areas are structure, thermodynamics, and kinetics.

physics—The science concerned with those aspects of nature which can be understood in terms of elementary principles and laws.

physiology—The branch of biological science concerned with the basic activities that occur in cells and tissues of living organisms and involving physical and chemical studies of these organisms.

plant pathology—The branch of botany concerned with diseases of plants.

plasma physics—The study of highly ionized gases.

psychology—The science of the function of the mind and the behavior of an organism, both animal and human, in relation to its environment.

quantum mechanics—The modern theory of matter, of electromagnetic radiation, and of the interaction between matter and radiation; it differs from classical physics, which it generalizes and supersedes, mainly in the realm of atomic and subatomic phenomena.

relativity—The study of physics theory which recognizes the universal character of the propagation speed of light and the consequent dependence of space, time, and other mechanical measurements on the motion of the observer performing the measurements; the two main divisions are special theory and general theory.

science and technology—The study of the natural sciences and the application of this knowledge for practical purposes.

solid-state physics—The branch of physics centering on the physical properties of solid materials; it is usually concerned with the properties of crystalline materials only, but it is sometimes extended to include the properties of glasses or polymers.

spectroscopy—The branch of physics concerned with the production, measurement, and interpretation of electromagnetic spectra arising from either emission or absorption of radiant energy by various substances.

statistical mechanics—That branch of physics which endeavors to explain and predict the macroscopic properties and behavior of a system on the basis of the known characteristics and interactions of the microscopic constituents of the system, usually when the number of such constituents is very large.

statistics—The science dealing with the collection, analysis, interpretation, and presentation of masses of numerical data.

systematics—The science of animal and plant classification.

systems engineering—The branch of engineering dealing with the design of a complex interconnection of many elements (a system) to maximize an agreed-upon measure of system performance.

textiles—Area of industry involving the production of fibers, filaments, or yarn, and the cloth made from these materials.

thermodynamics—The branch of physics which seeks to derive, from a few basic postulates, relations between properties of substances, especially those which are affected by changes in temperature, and a description of the conversion of energy from one form to another.

vertebrate zoology—A branch of zoology concerned with the taxonomy, behavior, and morphology of vertebrate animals.

veterinary medicine—That branch of medical practice which treats of the diseases and injuries of animals.

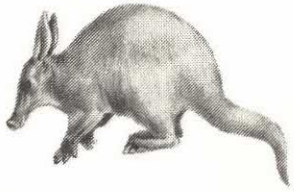
virology—The science that deals with the study of viruses.

zoology—The science that deals with the taxonomy, behavior, and morphology of animal life.

A

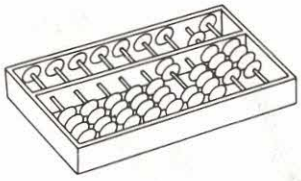
a *See* ampere; atto-.
aΩ *See* abohm.
$(a\Omega)^{-1}$ *See* abmho.
A *See* ampere; angstrom.
Å *See* angstrom.
A+ *See* A positive.
A-1 *See* Skyraider.
A-3 *See* Skywarrior.
A-4 *See* V-2.
A-5 *See* Vigilante.
aA *See* abampere.
AA *See* antiaircraft.
AAA *See* antiaircraft artillery.
aaa disease [MED] An endemic hookworm disease accompanied by anemia that occurred in ancient Egypt and is designated in the Ebers Papyrus.
aa channel [GEOL] A narrow, sinuous channel in which a lava river moves down and away from a central vent to feed an aa flow.
aAcm² *See* abampere centimeter squared.
aA/cm² *See* abampere per square centimeter.
aa lava [GEOL] Type of lava with a rough, fragmental surface; consists of clinkers and scoria.
Aalenian [GEOL] Lowermost Middle or uppermost Lower Jurassic geologic time.
AAM *See* air-to-air missile; antiaircraft missile.
A AND NOT B gate *See* AND NOT gate.
aapamoor [ECOL] A moor with elevated areas or mounds supporting dwarf shrubs and sphagnum, interspersed with low areas containing sedges and sphagnum, thus forming a mosaic.
aardvark [VERT ZOO] A nocturnal, burrowing, insectivorous mammal of the genus *Orycteropus* in the order Tubulidentata. Also known as earth pig.
aardwolf [VERT ZOO] *Proteles cristatus*. A hyenalike African mammal of the family Hyaenidae.
Aaron's rod [ARCH] A decorative rounded molding on which are entwined a single serpent and sometimes vines and leaves.
a axis [CRYSTAL] One of the crystallographic axes used as reference in crystal description, usually oriented horizontally, front to back. [GEOL] The direction of movement or transport in a tectonite.
ab- [ELECTROMAG] A prefix used to identify centimeter-gram-second electromagnetic units, as in abampere, abcoulomb, abfarad, abhenry, abmho, abohm, and abvolt.
abac *See* nomograph.
abaca [BOT] *Musa textilis*. A plant of the banana family native to Borneo and the Philippines, valuable for its hard fiber. Also known as Manila hemp.
abactinal [INV ZOO] In radially symmetrical animals, pertaining to the surface opposite the side where the mouth is located.
abacus [ARCH] A slab forming the topmost division of the capital of a column. [MATH] An instrument for performing arithmetical calculations manually by sliding markers on rods or in grooves.
abaft [NAV ARCH] In a direction farther aft in a ship than a specified reference position, such as abaft the mast.
abalienation [PSYCH] Mental deterioration or derangement.
abalone [INV ZOO] A gastropod mollusk composing the single genus *Haliotis* of the family Haliotidae. Also known as ear shell; ormer; paua.
abalyn [ORG CHEM] A liquid rosin that is a methyl ester of abietic acid; prepared by treating rosin with methyl alcohol; used as a plasticizer.
abampere [ELEC] The unit of electric current in the electromagnetic centimeter-gram-second system; 1 abampere equals 10 amperes in the absolute meter-kilogram-second-ampere system. Abbreviated aA. Also known as Bi; biot.
abampere centimeter squared [ELECTROMAG] The unit of magnetic moment in the electromagnetic centimeter-gram-second system. Abbreviated $aAcm^2$.
abampere per square centimeter [ELEC] The unit of current density in the electromagnetic centimeter-gram-second system. Abbreviated aA/cm^2.
abamurus [ARCH] A masonry block, in the form of a buttress, used to support a structure.
A band [HISTOL] The region between two adjacent I bands in a sarcomere; characterized by partial overlapping of actin and myosin filaments.
abandon [ENG] To stop drilling and remove the drill rig from the site of a borehole before the intended depth or target is reached.
abandoned channel *See* oxbow.
abandoned mine *See* abandoned workings.
abandoned workings [MIN ENG] Deserted excavations, either caved or sealed, in which further mining is not intended, and opening workings which are not ventilated and inspected regularly. Also known as abandoned mine.
abandonment [MIN ENG] Failure to perform work, by conveyance, by absence, and by lapse of time, on a mining claim. [PETRO ENG] *See* abandonment contour.
abandonment contour [PETRO ENG] A graph of actual cumulative yield of an oil well compared with its estimated ultimate yield; useful in determining the most economic time to abandon an oil well. Also known as abandonment.
abapertural [INV ZOO] Away from the shell aperture, referring to mollusks.
abapical [BIOL] On the opposite side to, or directed away from, the apex.
abarognosis [MED] Lack of ability to estimate the weight of an object one is holding.
abasia [MED] Lack of muscular coordination in walking.
abate [ENG] **1.** To remove material, for example, in carving stone. **2.** In metalwork, to excise or beat down the surface in order to create a pattern or figure in low relief.
abatement [ENG] **1.** The waste produced in cutting a timber, stone, or metal piece to a desired size and shape. **2.** A decrease in the amount of a substance or other quantity, such as atmospheric pollution.
abat-jour [BUILD] A device that is used to deflect daylight downward as it streams through a window.
A battery [ELECTR] The battery that supplies power for filaments or heaters of electron tubes in battery-operated equipment.
abattoir [IND ENG] A building in which cattle or other animals are slaughtered.
abat-vent [BUILD] A series of sloping boards or metal strips, or some similar contrivance, to break the force of wind without being an obstruction to the passage of air or sound, as in a louver or chimney cowl.
abaxial [BIOL] On the opposite side to, or facing away from, the axis of an organ or organism.

AARDVARK



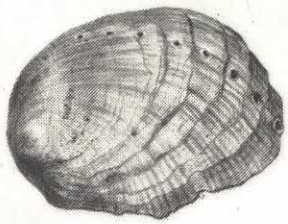
The aardvark *(Orycteropus afer)*, a nocturnal, burrowing animal ranging from Ethiopia to southern Africa.

ABACUS



Drawing of an abacus.

ABALONE



Typical abalone ear-shaped shell perforated by pores.

abb [TEXT] Yarn made of abb wool. [VERT ZOO] A coarse wool from the fleece areas of lesser quality.

abbazzo [GRAPHICS] A rough sketch, draft, or model.

Abbe condenser [OPTICS] A variable large-aperture lens system arranged substage to image a light source into the focal plane of a microscope objective.

Abbe number [OPTICS] A number which expresses the deviating effect of an optical glass on light of different wavelengths.

Abbe prism [OPTICS] A system used for image erection which is composed of two double right-angle prisms and involves four reflections.

Abbe refractometer [OPTICS] An optical instrument for the measurement of the refractive index of liquids.

Abbe's sine condition [OPTICS] A relationship which must hold to prevent aberration of a mirror or lens from producing a coma.

Abbe's theory [OPTICS] The theory that for a lens to produce a true image, it must be large enough to transmit the entire diffraction pattern of the object.

abbreviated dialing [COMMUN] A method comprising special circuits which require less than the usual number of dialing operations to connect two or more subscribers.

ABC *See* automatic brightness control.

abcoulomb [ELEC] The unit of electric charge in the electromagnetic centimeter-gram-second system, equal to 10 coulombs. Abbreviated aC.

abcoulomb centimeter [ELEC] In the electromagnetic centimeter-gram-second system of units, the unit of electric dipole moment. Abbreviated aCcm.

abcoulomb per cubic centimeter [ELEC] The electromagnetic centimeter-gram-second unit of volume density of charge. Abbreviated aC/cm^3.

abcoulomb per square centimeter [ELEC] The electromagnetic centimeter-gram-second unit of surface density of charge, electric polarization, and displacement. Abbreviated aC/cm^2.

ABC system [GEOD] *See* airborne control system. [GEOPHYS] A procedure in seismic surveying to determine the effect of irregular weathering thickness. [ORD] An atomic, biological, or chemical weapons system.

Abderhalden reaction [PATH] A chemical blood test for the identification of certain enzymes associated with pregnancy and a few diseases.

abdomen [ANAT] **1.** The portion of the vertebrate body between the thorax and the pelvis. **2.** The cavity of this part of the body. [INV ZOO] The elongate region posterior to the thorax in arthropods.

abdominal apoplexy [MED] Vascular occlusion and hemorrhage in an abdominal organ, usually the small intestine, or in the peritoneal cavity.

abdominal depth [ANTHRO] Maximum horizontal contact dimension, measured front to back.

abdominal gestation [MED] Development of a fetus outside the uterus in the abdominal cavity.

abdominal hernia *See* ventral hernia.

abdominal hysterectomy [MED] Surgical removal of all or part of the uterus through an incision in the abdomen.

abdominal regions [ANAT] Nine theoretical areas delineated on the abdomen by two horizontal and two parasagittal lines: above, the right hypochondriac, epigastric, and left hypochondriac; in the middle, the right lateral, umbilical, and left lateral; and below, the right inguinal, hypogastric, and left inguinal.

abducens [ANAT] The sixth cranial nerve in vertebrates; a paired, somatic motor nerve arising from the floor of the fourth ventricle of the brain and supplying the lateral rectus eye muscles.

abduction [PHYSIO] Movement of an extremity or other body part away from the axis of the body.

abductor [PHYSIO] Any muscle that draws a part of the body or an extremity away from the body axis.

abeam *See* on the beam.

Abegg's rule [CHEM] An empirical rule, holding for a large number of elements, that the sum of the maximum positive and negative valencies of an element equals eight.

Abelian domain *See* Abelian field.

Abelian field [MATH] A set of elements $a, b, c, \ldots$ forming Abelian groups with addition and multiplication as group operations where $a(b + c) = ab + ac$. Also known as Abelian domain; domain.

Abelian group [MATH] A group whose binary operation is commutative; that is, $ab = ba$ for each a and b in the group.

abelite [MATER] A substance made of ammonium nitrate and a nitrated aromatic hydrocarbon and used as an explosive.

Abel's inequality [MATH] An inequality which states that the absolute value of the sum of n terms, each in the form ab, where the bs are positive numbers, is not greater than the product of the largest b with the largest absolute value of a partial sum of the as.

Abel's integral equation [MATH] The equation

$$f(x) = \int_a^x u(z)(x - z)^{-a}dz \quad (0<a<1,\ x\geq a),$$

where $f(x)$ is a known function and $u(z)$ is the function to be determined; when $a = \frac{1}{2}$, this equation has application to Abel's problem.

Abel's problem [MATH] The problem which asks what path a particle will follow if it moves under the influence of gravity alone and its altitude-time function is to follow a specific law.

Abel tester [PHYS CHEM] A laboratory instrument used in testing the flash point of kerosine and other volatile oils having flash points below 120°F (49°C); the oil is contained in a closed cup which is heated by a fixed flame below and a movable flame above.

Abel theorem [MATH] **1.** A theorem stating that if a power series in z converges for $z = a$, it converges absolutely for $|z| < |a|$. **2.** A theorem stating that if a power series in z converges to $f(z)$ for $|z| < 1$ and to a for $z = 1$, then the limit of $f(z)$ as z approaches $1 = a$. **3.** A theorem stating that if the three series with nth term a_n, b_n, and $c_n = a_0b_n + a_1b_{n-1} + \cdots + a_nb_0$, respectively, converge, then the third series equals the product of the first two series.

abend [COMPUT SCI] An unplanned program termination that occurs when a computer is directed to execute an instruction or to process information that it cannot recognize. Also known as bomb; crash.

abenteric [MED] Involving abdominal organs and structures outside the intestine.

aberrant [BIOL] An atypical group, individual, or structure, especially one with an aberrant chromosome number.

aberration [ASTRON] The apparent angular displacement of the position of a celestial body in the direction of motion of the observer, caused by the combination of the velocity of the observer and the velocity of light. [OPTICS] *See* optical aberration.

abfarad [ELEC] A unit of capacitance in the electromagnetic centimeter-gram-second system equal to 10^9 farads. Abbreviated aF.

abhenry [ELEC] A unit of inductance in the electromagnetic centimeter-gram-second system of units which is equal to 10^{-9} henry. Abbreviated aH. Also known as centimeter.

abherent [MATER] A substance that inhibits a material from adhering to itself or another material.

Abies [BOT] The firs, a genus of trees in the pine family characterized by erect cones, absence of resin canals in the wood, and flattened needlelike leaves.

abietic acid [ORG CHEM] $C_{20}H_{30}O_2$ A tricyclic, crystalline acid obtained from rosin; used in making esters for plasticizers.

abietine [MATER] The distillate of the gums of the Jeffrey and digger pines; comprises 96% heptane; used as a cleaning agent, insecticide, and constituent of standard gasolines to measure detonation of engines.

abiocoen [ECOL] A nonbiotic habitat.

abiogenesis [BIOL] The obsolete concept that plant and animal life arise from nonliving organic matter. Also known as autogenesis; spontaneous generation.

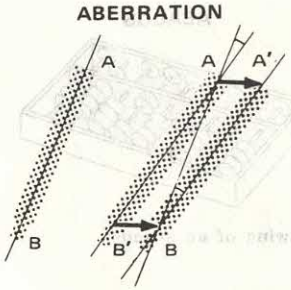
abiotic [BIOL] Referring to the absence of living organisms.

abiotic environment [ECOL] All physical and nonliving chemical factors, such as soil, water, and atmosphere, which influence living organisms.

abiotic substance [ECOL] Any fundamental chemical element or compound in the environment.

abiotrophy [MED] Disordered functioning of an organ or system, as in Huntington's chorea, due to an inherited pathologic trait, which trait, however, may remain latent in the individual rather than becoming apparent; this mechanism is still conceptual.

ABERRATION



The aberration of light as seen in astronomy. Starlight arriving along AB and seen in this direction by a stationary observer (left) appears to the observer in transverse motion AA′ (right) to come from the direction AB′ (or A′B). *(From G. de Vaucouleurs, Discovery of the Universe, 1957; reprinted by permission of Faber and Faber Ltd.)*

abjection [MYCOL] The discharge or casting off of spores by the spore-bearing structure of a fungus.
ablastin [IMMUNOL] An antibodylike substance elicited by *Trypanosoma lewisi* in the blood serum of infected rats that inhibits reproduction of the parasite.
ablation [AERO ENG] The carrying away of heat, generated by aerodynamic heating, from a vital part by arranging for its absorption in a nonvital part, which may melt or vaporize and then pass away, taking the heat with it. Also known as ablative cooling. [GEOL] The wearing away of rocks, as by erosion or weathering. [HYD] The reduction in volume of a glacier due to melting and evaporation. [MED] The removal of tissue or a part of the body by surgery, such as by excision or amputation.
ablation area [HYD] The section in a glacier or snowfield where ablation exceeds accumulation.
ablation cone [HYD] A debris-covered cone of ice, firn, or snow formed by differential ablation.
ablation factor [HYD] The rate at which a snow or ice surface wastes away.
ablation form [HYD] A feature on a snow or ice surface caused by melting or evaporation.
ablation moraine [GEOL] **1.** A layer of rock particles overlying ice in the ablation of a glacier. **2.** Drift deposited from a superglacial position through the melting of underlying stagnant ice.
ablative agent [MATER] A material from which the surface layer is to be removed, often for the purpose of dissipating extreme heat energy, as in space vehicles reentering the earth's atmosphere. Also known as ablative material.
ablative cooling *See* ablation.
ablative material *See* ablative agent.
ablative shielding [AERO ENG] A covering of material designed to reduce heat transfer to the internal structure through sublimation and loss of mass.
ablatograph [ENG] An instrument that records ablation by measuring the distance a snow or ice surface falls during the observation period.
A block [CIV ENG] A hollow concrete masonry block with one end closed and the other open and with a web between, so that when the block is laid in a wall two cells are produced.
ABM *See* antiballistic missile.
abmho [ELEC] A unit of conductance in the electromagnetic centimeter-gram-second system of units equal to 10^9 mhos. Abbreviated $(a\Omega)^{-1}$. Also known as absiemens (aS).
Abney effect [OPTICS] A shift in the apparent hue of a light which occurs as colored light is desaturated by the addition of white light.
Abney level *See* clinometer..
abnormal anticlinorium [GEOL] An anticlinorium with axial planes of subsidiary folds diverging upward.
abnormal behavior [PSYCH] Personality functioning that is socially undesirable or that renders the individual unable to cope with day-to-day living. Also known as behavior disorder.
abnormal fold [GEOL] An anticlinorium in which there is an upward convergence of the axial surfaces of the subsidiary folds.
abnormal glow discharge [ELECTR] A discharge of electricity in a gas tube at currents somewhat higher than those of an ordinary glow discharge, at which point the glow covers the entire cathode and the voltage drop decreases with increasing current.
abnormality [SCI TECH] Any deviation from normal characteristics.
abnormal magnetic variation [GEOPHYS] The anomalous value in magnetic compass readings made in some local areas containing unknown sources that deflect the compass needle from the magnetic meridian.
abnormal place [MIN ENG] An area in a coal mine where geological conditions render mining uneconomical.
abnormal propagation [COMMUN] Phenomena of unstable or changing atmospheric or ionospheric conditions acting upon transmitted radio waves, preventing such waves from following their normal path through space, and causing difficulties and disruptions of communications.
abnormal psychology [PSYCH] A branch of psychology that deals with behavior disorders and internal psychic conflict in addition to certain normal phenomena such as dreams, motivations, and anxiety.
abnormal reflections [ELECTROMAG] Sharply defined reflections of substantial intensity at frequencies greater than the critical frequency of the ionized layer of the ionosphere.
abnormal statement [COMPUT SCI] An element of a FORTRAN V (UNIVAC) program which specifies that certain function subroutines must be called every time they are referred to.
abnormal synclinorium [GEOL] A synclinorium with axial planes of subsidiary folds converging downward.
ABO blood group [IMMUNOL] An immunologically distinct, genetically determined group of human erythrocyte antigens represented by two blood factors (A and B) and four blood types (A, B, AB, and O).
abohm [ELEC] The unit of electrical resistance in the centimeter-gram-second system; 1 abohm equals 10^{-9} ohm in the meter-kilogram-second system. Abbreviated $a\Omega$.
abohm centimeter [ELEC] The centimeter-gram-second unit of resistivity. Abbreviated $a\Omega cm$.
abomasitis [VET MED] Inflammation of the abomasum in ruminants.
abomasum [VERT ZOO] The final chamber of the complex stomach of ruminants; has a glandular wall and corresponds to a true stomach.
A bomb *See* atomic bomb.
aboral [INV ZOO] Opposite to the mouth.
abort [AERO ENG] **1.** To cut short or break off an action, operation, or procedure with an aircraft, space vehicle, or the like, especially because of equipment failure. **2.** An aircraft, space vehicle, or the like which aborts. **3.** An act or instance of aborting.
aborted firing [ORD] A firing of a gun or launching of a missile which is cut off either manually or automatically after the firing command has been given but before ignition has been initiated.
abortifacient [MED] Any agent that induces abortion.
abortion [MED] The spontaneous or induced expulsion of the fetus prior to the time of viability, most often during the first 20 weeks of the human gestation period.
abortive [BIOL] Imperfectly formed or developed.
abortive transduction [MICROBIO] Failure of exogenous fragments that were introduced into a bacterial cell by viruses to become inserted into the bacterial chromosome.
abortus [MED] An aborted fetus.
abort zone [AERO ENG] The area surrounding the launch within which malperforming missiles will be contained with known and acceptable probability.
aboundikro *See* Sapele mahogany.
about-sledge [MET] A large hammer that is utilized in blacksmithing.
a-b plane [GEOL] The surface along which differential movement takes place.
AB power pack [ELEC] **1.** Assembly in a single unit of the A battery and B battery for a battery-operated vacuum-tube circuit. **2.** Unit that supplies the necessary A and B direct-current voltages from an alternating-current source of power.
abrachiocephalia [MED] Congenital lack of arms and head. Also known as acephalobrachia.
abrade [GEOL] To wear away by abrasion or friction.
Abraham's tree [METEOROL] The popular name given to a form of cirrus radiatus clouds, consisting of an assemblage of long feathers and plumes of cirrus that seems to radiate from a single point on the horizon.
Abrams' law [CIV ENG] In concrete materials, for a mixture of workable consistency the strength of concrete is determined by the ratio of water to cement.
abranchiate [ZOO] Without gills.
abrasion [ENG] **1.** The removal of surface material from any solid through the frictional action of another solid, a liquid, or a gas or combination thereof. **2.** A surface discontinuity brought about by roughening or scratching. [GEOL] Wearing away of sedimentary rock chiefly by currents of water laden with sand and other rock debris and by glaciers. [MED] A spot denuded of skin, mucous membrane, or superficial epithelium by rubbing or scraping.
abrasion platform [GEOL] An uplifted marine peneplain or plain, according to the smoothness of the surface produced by wave erosion, which is of large area.
abrasion resistance [MATER] The ability of a surface to resist wearing due to contact with another surface moving with respect to it.
abrasion resistance index [MATER] In vulcanized material or synthetic rubber compounds, a measure of abrasion resis-

tance relative to a standard rubber compound under defined conditions.

abrasion test [MECH ENG] The measurement of abrasion resistance, usually by the weighing of a material sample before and after subjecting it to a known abrasive stress throughout a known time period, or by reflectance or surface finish comparisons, or by dimensional comparisons.

abrasive [GEOL] A small, hard, sharp-cornered rock fragment, used by natural agents in abrading rock material or land surfaces. Also known as abrasive ground. [MATER] **1.** A material used, usually as a grit sieved by a specified mesh but also as a solid shape or as a paste or slurry or air suspension, for grinding, honing, lapping, superfinishing, polishing, pressure blasting, or barrel tumbling. **2.** A material sintered or formed into a solid mass such as a hone or a wheel disk, cone, or burr for grinding or polishing other materials. **3.** Having qualities conducive to or derived from abrasion.

abrasive belt [MECH ENG] A cloth, leather, or paper band impregnated with grit and rotated as an endless loop to abrade materials through continuous friction.

abrasive blasting [MECH ENG] The cleaning or finishing of surfaces by the use of an abrasive entrained in a blast of air.

abrasive cloth [MECH ENG] Tough cloth to whose surface an abrasive such as sand or emery has been bonded for use in grinding or polishing.

abrasive cone [MECH ENG] An abrasive sintered or shaped into a solid cone to be rotated by an arbor for abrasive machining.

abrasive disk [MECH ENG] An abrasive sintered or shaped into a disk to be rotated by an arbor for abrasive machining.

abrasive drilling [MIN ENG] A rotary drilling method in which drilling is effected by the abrasive action of the drill steel or drilling medium which rotates while being pressed against the rock.

abrasive ground *See* abrasive.

abrasive jet cleaning [ENG] The removal of dirt from a solid by a gas or liquid jet carrying abrasives to ablate the surface.

abrasive machining [MECH ENG] Grinding, drilling, shaping, or polishing by abrasion.

abrasiveness [MATER] **1.** The property of a material causing wear of a surface by friction. **2.** The quality or characteristic of being able to scratch, abrade, or wear away another material.

abrasive paper [MATER] Tough paper to whose surface an abrasive, such as sand or emery, has been bonded for use in grinding or polishing.

abrasive sand [MATER] Grit used as abrasive, usually graded as to which sieve mesh it will pass through.

abreast milling [MECH ENG] A milling method in which parts are placed in a row parallel to the axis of the cutting tool and are milled simultaneously.

abreuvoir [CIV ENG] A space between stones in masonry to be filled with mortar.

Abridged Nautical Almanac *See* Nautical Almanac.

abrupt [BOT] Ending suddenly, as though broken off.

abrupt junction [ELECTR] A *pn* junction in which the concentration of impurities changes suddenly from acceptors to donors.

abs [COMPUT SCI] A special function occurring in ALGOL, which yields the absolute value, or modulus, of its argument. [METEOROL] *See* absolute.

ABS *See* acrylonitrile butadiene styrene.

absarokite [PETR] An alkalic basalt of about equal portions of olivine, augite, labradorite, and sanidine with accessory biotite, apatite, and opaque oxides; leucite is occasionally present in small amounts.

abscess [MED] A localized collection of pus surrounded by inflamed tissue.

abscisic acid [BIOCHEM] $C_{16}H_{20}O_4$ A plant hormone produced by fruits and leaves that promotes abscission and dormancy and retards vegetative growth. Formerly known as abscisin.

abscisin *See* abscisic acid.

abscissa [MATH] The horizontal coordinate denoted on y, the vertical axis.

abscission [BOT] A physiological process promoted by abscisic acid whereby plants shed a part, such as a leaf, flower, seed, or fruit.

absence-of-ground searching selector [COMMUN] In dial telephones, an automatic switch which rotates, or rises vertically and rotates, in search of an ungrounded contact.

absiemens *See* abmho.

absinthe [FOOD ENG] A green liqueur having a bitter licorice flavor and a high alcohol content.

absinthe oil [MATER] A toxic essential oil obtained from the dried leaves of *Artemisia absinthum;* soluble in alcohol; formerly used in medicine. Also known as wormwood oil.

absolute [METEOROL] Referring to the highest or lowest recorded value of a meteorological element, whether at a single station or over an area, during a given period. Abbreviated abs.

absolute address [COMPUT SCI] The numerical identification of each storage location which is wired permanently into a computer by the manufacturer.

absolute addressing [COMPUT SCI] The identification of storage locations in a computer program by their physical addresses.

absolute age [GEOL] The geologic age of a fossil, or a geologic event or structure expressed in units of time, usually years. Also known as actual age.

absolute alcohol [ORG CHEM] Ethyl alcohol that contains no more than 1% water. Also known as anhydrous alcohol.

absolute altimeter [ENG] An instrument which employs radio, sonic, or capacitive technology to produce on its indicator the measurement of distance from the aircraft to the terrain below. Also known as terrain clearance indicator.

absolute altitude [ENG] Altitude above the actual surface, either land or water, of a planet or natural satellite.

absolute angle of attack [AERO ENG] The acute angle between the chord of an airfoil at any instant in flight and the chord of that airfoil at zero lift.

absolute blocking [CIV ENG] A control arrangement for rail traffic in which a track is divided into sections or blocks upon which a train may not enter until the preceding train has left.

absolute boiling point [CHEM] The boiling point of a substance expressed in the unit of an absolute temperature scale.

absolute ceiling [AERO ENG] The greatest altitude at which an aircraft can maintain level flight in a standard atmosphere and under specified conditions.

absolute code [COMPUT SCI] A code used when the addresses in a program are to be written in machine language exactly as they will appear when the instructions are executed by the control circuits.

absolute convergence [MATH] That property of an infinite series (or infinite product) of real or complex numbers if the series (product) of absolute values converges; absolute convergence implies convergence.

absolute coordinate system [NAV] The inertial coordinate system which has its origin on the axis of the earth and is fixed with respect to the stars. Also known as absolute reference frame.

absolute delay [NAV] In loran, the time interval between transmission of a signal from the A station and transmission of the next signal from the B station.

absolute density *See* absolute gravity.

absolute deviation [ORD] The shortest distance between the center of the target and the point where a projectile hits or bursts. [STAT] The difference, without regard to sign, between a variate value and a given value.

absolute drought [METEOROL] In Britain, a period of at least 15 consecutive days during which no measurable daily precipitation has fallen.

absolute efficiency [ENG ACOUS] The ratio of the power output of an electroacoustic transducer, under specified conditions, to the power output of an ideal electroacoustic transducer.

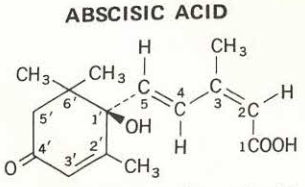
absolute electrometer [ELEC] A very precise type of attracted disk electrometer in which the attraction between two disks is balanced against the force of gravity.

absolute error [MATH] In an approximate number, the numerical difference between the number and a number considered exact. [ORD] **1.** Shortest distance between the center of impact or the center of burst of a group of shots and the point of impact or burst of a single shot within the group. **2.** Error of a sight consisting of its error in relation to a master service sight with which it is tested and of the known error of the master service sight.

absolute expansion [THERMO] The true expansion of a liquid with temperature, as calculated when the expansion of the container in which the volume of the liquid is measured is taken into account; in contrast with apparent expansion.

absolute gain of an antenna [ELECTROMAG] Gain in a given direction when the reference antenna is an isotropic anten-

ABSCISIC ACID



Structural formula for +-abscisic acid, the naturally occurring form.

na isolated in space. Also known as isotropic gain of an antenna.

absolute geopotential topography *See* geopotential topography.

absolute gravity [CHEM] Density or specific gravity of a fluid reduced to standard conditions; for example, with gases, to 760 mmHg pressure and 0°C temperature. Also known as absolute density.

absolute humidity [PHYS] The ratio of the mass of water vapor in a sample of air to the volume of the sample.

absolute inequality *See* unconditional inequality.

absolute instability [METEOROL] The state of a column of air in the atmosphere when it has a superadiabatic lapse rate of temperature, that is, greater than the dry-adiabatic lapse rate. Also known as autoconvective instability; mechanical instability.

absolute instrument [ENG] An instrument which measures a quantity (such as pressure or temperature) in absolute units by means of simple physical measurements on the instrument.

absolute isohypse [METEOROL] A line that has the properties of both constant pressure and constant height above mean sea level.

absolute linear momentum *See* absolute momentum.

absolute luminosity [OPTICS] The luminosity of an object expressed in units of fundamental quantities.

absolute magnetometer [ENG] An instrument used to measure the intensity of a magnetic field without reference to other magnetic instruments.

absolute magnitude [ASTROPHYS] **1.** A measure of the brightness of a star equal to the magnitude the star would have at a distance of 10 parsecs from the observer. **2.** The stellar magnitude any meteor would have if placed in the observer's zenith at a height of 100 kilometers. [MATH] The absolute value of a number or quantity.

absolute manometer [ENG] **1.** A gas manometer whose calibration, which is the same for all ideal gases, can be calculated from the measurable physical constants of the instrument. **2.** A manometer that measures absolute pressure.

absolute momentum [METEOROL] The sum of the (vector) momentum of a particle relative to the earth and the (vector) momentum of the particle due to the earth's rotation. Also known as absolute linear momentum.

absolute motion [NAV] Motion relative to a point fixed on the earth's surface or to an apparently fixed celestial point. [PHYS] Motion of an object described by its measurement in a frame of reference that is preferred over all other frames.

absolute orientation [NAV] The adjusting to proper scale, orientating of the model datum parallel to sea level or another given vertical datum, and positioning of the model with reference to the horizontal datum of a stereoscopic model or group of models.

absolute parallax *See* absolute stereoscopic parallax.

absolute permeability [ELECTROMAG] The ratio of the magnetic flux density to the intensity of the magnetic field in a medium; measurement is in webers per square meter in the meter-kilogram-second system. Also known as induced capacity.

absolute pitch [ACOUS] The pitch of a musical tone expressed as the frequency of the sound wave of that tone.

absolute potential vorticity *See* potential vorticity.

absolute pressure [PHYS] The pressure above the absolute zero value of pressure that theoretically obtains in empty space or at the absolute zero of temperature, as distinguished from gage pressure.

absolute pressure gage [ENG] A device that measures the pressure exerted by a fluid relative to a perfect vacuum; used to measure pressures very close to a perfect vacuum.

absolute pressure transducer [ENG] A device that responds to absolute pressure as the input and provides a measurable output of a nature different than but proportional to absolute pressure.

absolute programming [COMPUT SCI] Programming with the use of absolute code.

absolute reaction rate [PHYS CHEM] The rate of a chemical reaction as calculated by means of the (statistical-mechanics) theory of absolute reaction rates.

absolute reference frame *See* absolute coordinate system.

absolute roof [MIN ENG] The entire mass of strata overlying a subsurface point of reference.

absolute scale *See* absolute temperature scale.

absolute space-time [PHYS] A concept underlying Newtonian mechanics which postulates the existence of a preferred reference system of time and spatial coordinates; replaced in relativistic mechanics by Einstein's equivalency principle. Also known as absolute time.

absolute specific gravity [MECH] The ratio of the weight of a given volume of a substance in a vacuum at a given temperature to the weight of an equal volume of water in a vacuum at a given temperature.

absolute stability [METEOROL] The state of a column of air in the atmosphere when its lapse rate of temperature is less than the saturation-adiabatic lapse rate.

absolute standard [PHYS] A particle or object designated as a standard by assigning to it a mass of one unit; used in defining quantities in Newton's second law of motion.

absolute stereoscopic parallax [GRAPHICS] Considering a pair of aerial photographs of equal principal distance, the absolute stereoscopic parallax of a point is the algebraic difference of the distances of the two images from their respective photograph nadirs, measured in a horizontal plane and parallel to the air base. Also known as absolute parallax; horizontal parallax; linear parallax; parallax; stereoscopic parallax; x-parallax.

absolute stop [CIV ENG] A railway signal which indicates that the train must make a full stop and not proceed until there is a change in the signal. Also known as stop and stay.

absolute system of units [PHYS] A set of units for measuring physical quantities, defined by interrelated equations in terms of arbitrary fundamental quantities of length, mass, time, and charge or current.

absolute temperature [THERMO] **1.** The temperature measurable in theory on the thermodynamic temperature scale. **2.** The temperature in Celsius degrees relative to the absolute zero at −273.16°C (the Kelvin scale) or in Fahrenheit degrees relative to the absolute zero at −459.69°F (the Rankine scale).

absolute temperature scale [THERMO] A scale with which temperatures are measured relative to absolute zero. Also known as absolute scale.

absolute threshold [PHYSIO] The minimum stimulus energy that an organism can detect.

absolute time [GEOL] Geologic time measured in years, as determined by radioactive decay of elements. [PHYS] *See* absolute space-time.

absolute unit [PHYS] A unit defined in terms of units of fundamental quantities such as length, time, mass, and charge or current.

absolute vacuum [PHYS] A void completely empty of matter. Also known as perfect vacuum.

absolute-value computer [COMPUT SCI] A computer that processes the values of the variables rather than their increments.

absolute value of a complex number [MATH] The modulus of a complex number; the square root of the sum of the squares of its real and imaginary part. Also known as magnitude of a complex number; modulus of a complex number.

absolute value of a real number [MATH] The number if it is nonnegative, and the negative of the number if it is negative. Also known as magnitude of a real number; numerical value of a real number.

absolute value of a vector [MATH] The length of a vector, disregarding its direction; the square root of the sum of the squares of its orthogonal components. Also known as magnitude of a vector.

absolute velocity [PHYS] The vector sum of the velocity of a fluid parcel relative to the earth and the velocity of the parcel due to the earth's rotation; the east-west component is the only one affected.

absolute viscosity [FL MECH] The tangential force per unit area of two parallel planes at unit distance apart when the space between them is filled with a fluid and one plane moves with unit velocity in its own plane relative to the other.

absolute volume [ENG] The total volume of the particles in a granular material, including both permeable and impermeable voids but excluding spaces between particles.

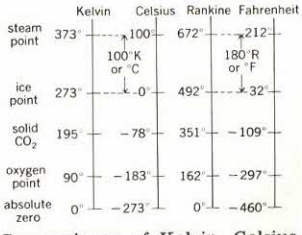
absolute vorticity [FL MECH] The vorticity of a fluid relative to an absolute coordinate system; especially, the vorticity of the atmosphere relative to axes not rotating with the earth.

absolute wavemeter [ELECTROMAG] A type of wavemeter in which the frequency of an injected radio-frequency voltage is determined by measuring the length of a resonant line.

ABSOLUTE PRESSURE TRANSDUCER

A miniaturized absolute pressure transducer used in flight testing.

ABSOLUTE TEMPERATURE



Comparisons of Kelvin, Celsius, Rankine, and Fahrenheit temperature scales. Temperatures are rounded off to nearest degree. *(From M. W. Zemansky, Temperatures Very Low and Very High, Van Nostrand, 1964)*

absolute zero [THERMO] The temperature of −273.16°C, or −459.69°F, or 0 K, thought to be the temperature at which molecular motion vanishes and a body would have no heat energy.

absorb [CHEM] To take up a substance in bulk. [ELECTROMAG] To take up energy from radiation. [PHYS] To take up matter or radiation.

absorbance [PHYS CHEM] The common logarithm of the reciprocal of the transmittance of a pure solvent. Also known as absorbancy; extinction.

absorbancy *See* absorbance.

absorbed dose [MED] The part of an administered medication which is not excreted by the recipient's body. [NUCLEO] The amount of energy imparted by ionizing particles to a unit mass of irradiated material at a place of interest. Also known as dosage; dose.

absorbed dose rate [NUCLEO] The absorbed dose of ionizing radiation imparted at a given location per unit of time (second, minute, hour, or day).

absorbency [CHEM] Penetration of one substance into another.

absorbency index *See* absorptivity.

absorbent [MATER] A material which, in contact with a liquid or gas, extracts one or more substances for which it has an affinity, and is altered physically or chemically during the process.

absorbent cotton [MATER] A cotton fiber that absorbs water because its natural waxes have been removed.

absorbent paper [MATER] Paper capable of absorbing and holding liquids by the capillarity of the pores between or within the closely matted cellulosic fibers.

absorber [CHEM ENG] Equipment in which a gas is absorbed by contact with a liquid. [ELECTR] A material or device that takes up and dissipates radiated energy; may be used to shield an object from the energy, prevent reflection of the energy, determine the nature of the radiation, or selectively transmit one or more components of the radiation. [MECH ENG] **1.** A device which holds liquid for the absorption of refrigerant vapor or other vapors. **2.** That part of the low-pressure side of an absorption system used for absorbing refrigerant vapor. [NUCLEO] A material that absorbs neutrons or other ionizing radiation.

absorber control *See* absorption control.

absorber oil *See* absorption oil.

absorbing boom [CIV ENG] A device that floats on the water and is used to stop the spread of an oil spill and aid in its removal.

absorbing rod *See* control rod.

absorbing state [MATH] A special case of recurrent state in a Markov process in which the transition probability, P_{ii}, equals 1; a process will never leave an absorbing state once it enters.

absorbing well [CIV ENG] A shaft that permits water to drain through an impermeable stratum to a permeable stratum.

absorptance [PHYS] The ratio of the total unabsorbed radiation to the total incident radiation; equal to one (unity) minus the transmittance.

absorptiometer [ANALY CHEM] **1.** An instrument equipped with a filter system or other simple dispersing system to measure the absorption of nearly monochromatic radiation in the visible range by a gas or a liquid, and so determine the concentration of the absorbing constituents in the gas or liquid. **2.** A device for regulating the thickness of a liquid in spectrophotometry.

absorptiometric analysis [ANALY CHEM] Chemical analysis of a gas or a liquid by measurement of the peak electromagnetic absorption wavelengths that are unique to a specific material or element.

absorption [CHEM] The taking up of matter in bulk by other matter, as in dissolving of a gas by a liquid. [ELEC] The property of a dielectric in a capacitor which causes a small charging current to flow after the plates have been brought up to the final potential, and a small discharging current to flow after the plates have been short-circuited, allowed to stand for a few minutes, and short-circuited again. Also known as dielectric soak. [ELECTROMAG] The taking up of energy from radiation by the medium through which the radiation is passing. [HYD] The entrance of surface water into the lithosphere. [NUCLEO] The process by which the quantity of particles entering a body is reduced by their interaction with the matter. [PHYSIO] Passage of a chemical substance, a pathogen, or radiant energy through a body membrane.

absorption atelectasis *See* obstructive atelectasis.

absorption band [PHYS] A range of wavelengths or frequencies in the electromagnetic spectrum within which radiant energy is absorbed by a substance.

absorption bed [CIV ENG] A sizable pit containing coarse aggregate about a distribution pipe system; absorbs the effluent of a septic tank.

absorption circuit [ELECTR] A series-resonant circuit used to absorb power at an unwanted signal frequency by providing a low impedance to ground at this frequency.

absorption coefficient Also known as absorption factor; absorption ratio; coefficient of absorption. [ACOUS] The ratio of the sound energy absorbed by a surface of a medium or material to the sound energy incident on the surface. [PHYS] If a flux through a material decreases with distance x in proportion to e^{-ax}, then a is called the absorption coefficient.

absorption column *See* absorption tower.

absorption constant *See* absorptivity.

absorption control [ELECTR] *See* absorption modulation. [NUCLEO] Control of a nuclear reactor by a material that absorbs neutrons, such as cadmium or boron steel. Also known as absorber control.

absorption cross section [ELECTROMAG] In radar, the ratio of the amount of power removed from a beam by absorption of radio energy by a target to the power in the beam incident upon the target.

absorption current [ELEC] The component of a dielectric current that is proportional to the rate of accumulation of electric charges within the dielectric.

absorption curve [PHYS] A graph showing the curvilinear relationship of the variation in absorbed radiation as a function of wavelength.

absorption cycle [MECH ENG] In refrigeration, the process whereby a circulating refrigerant, for example, ammonia, is evaporated by heat from an aqueous solution at elevated pressure and subsequently reabsorbed at low pressure, displacing the need for a compressor.

absorption dynamometer [ENG] A device for measuring mechanical forces or power in which the mechanical energy input is absorbed by friction or electrical resistance.

absorption edge [SPECT] The wavelength corresponding to a discontinuity in the variation of the absorption coefficient of a substance with the wavelength of the radiation. Also known as absorption limit.

absorption-emission pyrometer [ENG] A thermometer for determining gas temperature from measurement of the radiation emitted by a calibrated reference source before and after this radiation has passed through and been partially absorbed by the gas.

absorption factor *See* absorption coefficient.

absorption fading [COMMUN] Slow type of fading, primarily caused by variations in the absorption rate along the radio path.

absorption field [CIV ENG] Trenches containing coarse aggregate about distribution pipes permitting septic-tank effluent to seep into surrounding soil. Also known as disposal field.

absorption gasoline [MATER] A gasoline obtained by using an oil to absorb the natural or refinery gas containing the gasoline and then distilling it from the oil.

absorption hygrometer [ENG] An instrument with which the water vapor content of the atmosphere is measured by means of the absorption of vapor by a hygroscopic chemical.

absorption index [OPTICS] The complex index of refraction may be written as $n(1+ik)$; the coefficient k is the absorption index. Also known as index of absorption.

absorption lens [OPTICS] Glass which prevents selected wavelengths from passing through it; used in eyeglasses.

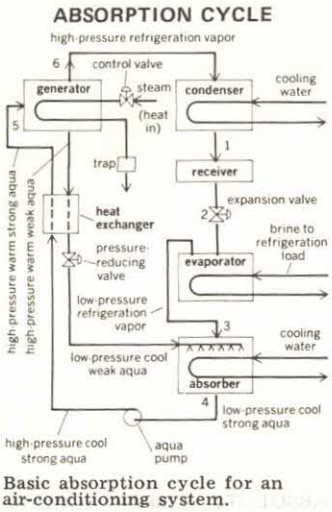
absorption limit *See* absorption edge.

absorption line [SPECT] A minute range of wavelength or frequency in the electromagnetic spectrum within which radiant energy is absorbed by the medium through which it is passing.

absorption loss [CIV ENG] The quantity of water that is lost during the initial filling of a reservoir because of absorption by soil and rocks. [COMMUN] That part of the transmission loss due to the dissipation or conversion of either sound energy or electromagnetic energy into other forms of energy, either within the medium or attendant upon a reflection.

absorption meter [ENG] An instrument designed to measure the amount of light transmitted through a transparent substance, using a photocell or other light detector.

absorption modulation [ELECTR] A system of amplitude



Basic absorption cycle for an air-conditioning system.

modulation in which a variable-impedance device is inserted in or coupled to the output circuit of the transmitter. Also known as absorption control; loss modulation.

absorption nebula *See* dark nebula.

absorption number [ENG] A dimensionless group used in the field of gas absorption in a wetted-wall column; represents the liquid side mass-transfer coefficient.

absorption oil [MATER] A petroleum or coal tar oil that is contacted with a vapor or gas mixture to remove heavy components, as in the recovery of natural gasoline from wet natural gas. Also known as absorber oil; scrubbing oil; wash oil.

absorption peak [SPECT] A wavelength of maximum electromagnetic absorption by a chemical sample; used to identify specific elements, radicals, or compounds.

absorption plant [CHEM ENG] A facility to recover the condensable portion of natural or refinery gas.

absorption process [CHEM ENG] A method in which light oil is introduced into an absorption tower so that it absorbs the gasoline in the rising wet gas; the light oil is then distilled to separate the gasoline.

absorption ratio *See* absorption coefficient.

absorption refrigeration [MECH ENG] Refrigeration in which cooling is effected by the expansion of liquid ammonia into gas and absorption of the gas by water; the ammonia is reused after the water evaporates.

absorption spectrophotometer [SPECT] An instrument used to measure the relative intensity of absorption spectral lines and bands. Also known as difference spectrophotometer.

absorption spectroscopy [SPECT] The study of spectra obtained by the passage of radiant energy from a continuous source through a cooler, selectively absorbing medium.

absorption spectrum [SPECT] The array of absorption lines and absorption bands which results from the passage of radiant energy from a continuous source through a cooler, selectively absorbing medium.

absorption system [MECH ENG] A refrigeration system in which the refrigerant gas in the evaporator is taken up by an absorber and is then, with the application of heat, released in a generator.

absorption test [IMMUNOL] Analysis of the antigenic components of bacterial cells and large macromolecules by a series of precipitation or agglutination reactions with specific antibodies.

absorption tower [ENG] A vertical tube in which a rising gas is partially absorbed by a liquid in the form of falling droplets. Also known as absorption column.

absorption trench [CIV ENG] A trench containing coarse aggregate about a distribution tile pipe through which septic-tank effluent may move beneath earth.

absorption tube [CHEM] A tube filled with a solid absorbent and used to absorb gases and vapors.

absorption unit *See* sabin.

absorption wavemeter [ELECTR] A frequency- or wavelength-measuring instrument consisting of a calibrated tunable circuit and a resonance indicator.

absorptive power *See* absorptivity.

absorptivity [ANALY CHEM] The constant a in the Beer's law relation $A = abc$, where A is the absorbance, b the path length, and c the concentration of solution. Also known as absorptive power. Formerly known as absorbency index; absorption constant; extinction coefficient.

absorptivity-emissivity ratio [ASTROPHYS] In space applications, the ratio of absorptivity for solar radiation of a material to its infrared emissivity. Also known as A/E ratio.

ABS resin *See* acrylonitrile butadiene styrene resin.

abstinence syndrome [MED] A disturbance of metabolic equilibrium that occurs when a narcotic drug is withdrawn from the user.

abstract algebra [MATH] The study of mathematical systems consisting of a set of elements, one or more binary operations by which two elements may be combined to yield a third, and several rules (axioms) for the interaction of the elements and the operations; includes group theory, ring theory, and number theory.

abstract automata theory [COMPUT SCI] The mathematical theory which characterizes automata by three sets: input signals, internal states, and output signals; and two functions: input functions and output functions.

abstraction [HYD] **1.** The draining of water from a stream by another having more rapid corroding action. **2.** The part of precipitation that does not become direct runoff.

abstract theory [SCI TECH] A theory in which a system is described without specifying a structure.

abstriction [MYCOL] In fungi, the cutting off of spores in hyphae by formation of septa followed by abscission of the spores, especially by constriction.

abT *See* gauss.

abterminal [BIOL] Referring to movement from the end toward the middle; specifically, describing the mode of electric current flow in a muscle.

abtesla *See* gauss.

Abt track [CIV ENG] One of the cogged rails used for railroad tracking in mountains and so arranged that the cogs are not opposite one another on any pair of rails.

Abukuma-type facies [PETR] A type of dynathermal regional metamorphism characterized by low pressure.

abulia [PSYCH] Loss of ability to make decisions.

abundance *See* abundance ratio.

abundance ratio [NUCLEO] The ratio of the number of atoms of one isotope to the total number of atoms in a mixture of isotopes. Also known as abundance.

aburton [NAV ARCH] Of an object, having its length directed across a ship from side to side.

abutment [CIV ENG] A surface or mass provided to withstand thrust; for example, end supports of an arch or a bridge.

abutting joint [DES ENG] A joint which connects two pieces of wood in such a way that the direction of the grain in one piece is angled (usually at 90°) with respect to the grain in the other.

abutting tenons [DES ENG] Two tenons inserted into a common mortise from opposite sides so that they contact.

abvolt [ELEC] The unit of electromotive force in the electromagnetic centimeter-gram-second system; 1 abvolt equals 10^{-8} volt in the absolute meter-kilogram-second system. Abbreviated aV.

abvolt per centimeter [ELEC] In the electromagnetic centimeter-gram-second system of units, the unit of electric field strength. Abbreviated aV/cm.

abwatt [ELEC] The unit of electrical power in the centimeter-gram-second system; 1 abwatt equals 1 watt in the absolute meter-kilogram-second system.

abWb *See* maxwell.

abweber *See* maxwell.

abyssal [GEOL] *See* plutonic. [OCEANOGR] Pertaining to the abyssal zone.

abyssal-benthic [OCEANOGR] Pertaining to the bottom of the abyssal zone.

abyssal cave *See* submarine fan.

abyssal fan *See* submarine fan.

abyssal floor [GEOL] The ocean floor, or bottom of the abyssal zone.

abyssal gap [GEOL] A gap in a sill, ridge, or rise that lies between two abyssal plains.

abyssal hill [GEOL] A hill 2000 to 3000 feet (600 to 900 meters) high and a few miles wide within the deep ocean.

abyssal injection [GEOL] The process of driving magmas, originating at considerable depths, up through deep-seated contraction fissures in the earth's crust.

abyssal plain [GEOL] A flat, almost level area occupying the deepest parts of many of the ocean basins.

abyssal rock [GEOL] Plutonic, or deep-seated, igneous rocks.

abyssal theory [GEOL] A theory of the origin of ores involving the separation of ore silicates from the liquid stage during the cooling of the earth.

abyssal zone [OCEANOGR] The biogeographic realm of the great depths of the ocean beyond the limits of the continental shelf, generally below 1000 meters.

abyssolith [GEOL] A molten mass of eruptive material passing up without a break from the zone of permanently molten rock within the earth.

abyssopelagic [OCEANOGR] Pertaining to the open waters of the abyssal zone.

ac *See* alternating current.

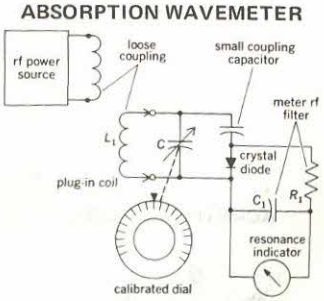
aC *See* abcoulomb.

Ac *See* actinium; altocumulus cloud.

Ac_0 [MET] The temperature at which a magnetic change occurs in cementite; the Curie point of cementite.

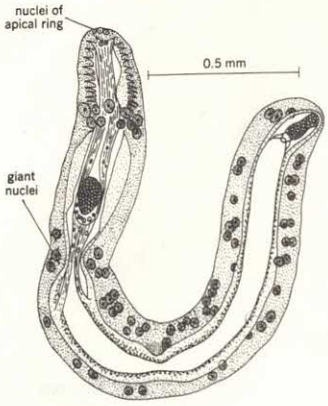
Ac_1 [MET] The temperature at which austenite begins to be formed upon heating a steel.

ABSORPTION WAVEMETER



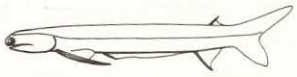
Schematic diagram of inductance-capacitance type of absorption wavemeter (for frequencies between approximately 50 kilohertz and 1000 megahertz).

ACANTHELLA



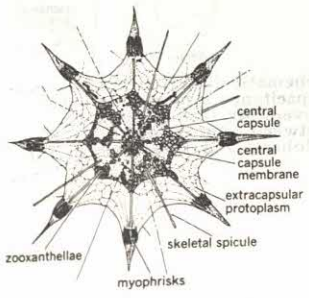
A stage in the life history of *Moniliformis dubius*, a helminth, with the acanthella dissected from its enveloping sheath.

ACANTHODES



A lateral view of *Acanthodes* species, about 30 centimeters long. *(After D. M. S. Watson)*

ACANTHOMETRIDA



A drawing of *Acanthometra* showing the characteristic pattern of the radially arranged rods (skeletal spicules). *(From L. H. Hyman, The Invertebrates, vol. 1, McGraw-Hill, 1940)*

Ac_2 [MET] The Curie point of ferrite.
Ac_3 [MET] The temperature at which the transformation of ferrite to austenite is completed upon heating a steel.
Ac_4 [MET] The temperature at which delta iron is formed from gamma iron upon heating a steel.
Ac_{cm} [MET] The temperature at which the solution of cementite in austenite is completed upon heating a hypereutectoid steel.
acacia gum *See* gum arabic.
Acadian orogeny [GEOL] The period of formation accompanied by igneous intrusion that took place during the Middle and Late Devonian in the Appalachian Mountains.
Acala [BOT] A type of cotton indigenous to Mexico and cultivated in Texas, Oklahoma, and Arkansas.
acalyculate [BOT] Lacking a calyx.
Acalyptratae *See* Acalyptreatae.
Acalyptreatae [INV ZOO] A large group of small, two-winged flies in the suborder Cyclorrhapha characterized by small or rudimentary calypters. Also spelled Acalyptratae.
acantha [BIOL] A sharp spine; a spiny process, as on vertebrae.
Acanthaceae [BOT] A family of dicotyledonous plants in the order Scrophulariales distinguished by their usually herbaceous habit, irregular flowers, axile placentation, and dry, dehiscent fruits.
acanthaceous [BOT] Having sharp points or prickles; prickly.
Acantharia [INV ZOO] A subclass of essentially pelagic protozoans in the class Actinopodea characterized by skeletal rods constructed of strontium sulfate (celestite).
Acanthaster [INV ZOO] A genus of Indo-Pacific starfishes, including the crown-of-thorns, of the family Asteriidae; economically important as a destroyer of oysters in fisheries.
acanthella [INV ZOO] A transitional larva of the phylum Acanthocephala in which rudiments of reproductive organs, lemnisci, a proboscis, and a proboscis receptacle are formed.
acanthite [MINERAL] Ag_2S A blackish to lead-gray silver sulfide mineral, crystallizing in the orthorhombic system.
acanthocarpous [BOT] Having spiny fruit.
Acanthocephala [INV ZOO] The spiny-headed worms, a phylum of helminths; adults are parasitic in the alimentary canal of vertebrates.
Acanthocheilonema perstans [INV ZOO] A tropical filarial worm, parasitic in man.
acanthocheilonemiasis [MED] A parasitic infection of man caused by the filarial nematode *Acanthocheilonema perstans*.
acanthocladous [BOT] Having spiny branches.
acanthocyte [PATH] A crenated red cell which has a distinctive spiky outline.
acanthocytosis [MED] A disorder of erythrocytes in which spiny projections appear on the blood cells.
Acanthodes [PALEON] A genus of Carboniferous and Lower Permian eellike acanthodian fishes of the family Acanthodidae.
Acanthodidae [PALEON] A family of extinct acanthodian fishes in the order Acanthodiformes.
Acanthodiformes [PALEON] An order of extinct fishes in the class Acanthodii having scales of acellular bone and dentine, one dorsal fin, and no teeth.
Acanthodii [PALEON] A class of extinct fusiform fishes, the first jaw-bearing vertebrates in the fossil record.
acanthoid [BIOL] Shaped like a spine.
Acanthometrida [INV ZOO] An order of marine protozoans in the subclass Acantharia with 20 or less skeletal rods.
Acanthophis antarcticus [VERT ZOO] The death adder, a venomous snake found in Australia and New Guinea; venom is neurotoxic.
Acanthophractida [INV ZOO] An order of marine protozoans in the subclass Acantharia; skeleton includes a latticework shell and skeletal rods.
acanthopodous [BOT] Having a spiny or prickly petiole or peduncle.
acanthopore [PALEON] A tubular spine in some fossil bryozoans.
Acanthopteri [VERT ZOO] An equivalent name for the Perciformes.
Acanthopterygii [VERT ZOO] An equivalent name for the Perciformes.
acanthosis [MED] Any thickening of the prickle-cell layer of the epidermis; associated with many skin diseases.
acanthosoma [INV ZOO] The last primitive larval stage, the mysis, in the family Sergestidae.
Acanthosomatidae [INV ZOO] A small family of insects in the order Hemiptera.
acanthosphere [BOT] A specialized ciliated body in *Nitella* cells.
acanthostegous [INV ZOO] Being overlaid with two series of spines, as the ovicell or ooecium of certain bryozoans.
acanthozooid [INV ZOO] A specialized individual in a bryozoan colony that secretes tubules which project as spines above the colony's outer surface.
Acanthuridae [VERT ZOO] The surgeonfishes, a family of perciform fishes in the suborder Acanthuroidei.
Acanthuroidei [VERT ZOO] A suborder of chiefly herbivorous fishes in the order Perciformes.
acanthus [ARCH] A sculptured ornamentation representing the leaves of an *Acanthus*, a Mediterranean prickly herb.
acapau [MATER] A type of ebony obtained from *Voucapapoua americana* in the Amazon valley; used for fine inlay work. Also known as partridge wood.
acapnia [MED] Absence of carbon dioxide in the blood and tissues.
Acari [INV ZOO] The equivalent name for Acarina.
acariasis [MED] Any skin disease resulting from infestation with acarids or mites.
acaricide [MATER] A pesticide used to destroy mites on domestic animals, crops, and man. Also known as miticide.
Acaridiae [INV ZOO] A group of pale, weakly sclerotized mites in the suborder Sarcoptiformes, including serious pests of stored food products and skin parasites of warm-blooded vertebrates.
Acarina [INV ZOO] The ticks and mites, a large order of the class Arachnida, characterized by lack of body demarcation into cephalothorax and abdomen.
acaroid resin [ORG CHEM] A gum resin from aloelike trees of the genus *Xanthorrhoea* in Australia and Tasmania; used in varnishes and inks. Also known as gum accroides; yacca gum.
acarology [INV ZOO] A branch of zoology dealing with the mites and ticks.
acarophily [ECOL] A symbiotic relationship between plants and mites.
acarophobia [PSYCH] Abnormal fear of mites.
acarpellous [BOT] Lacking carpels.
acarpous [BOT] Not producing fruit.
ACAS *See* airborne collision avoidance system.
acatalasemia [MED] Lack of catalase in the blood.
acatalasia [MED] Congenital absence of the enzyme catalase.
acatamathesia [MED] **1.** Inability to understand conversation. **2.** Morbid blunting or deterioration of the senses, as in mental deafness and blindness.
acaulous [BOT] **1.** Lacking a stem. **2.** Being apparently stemless but having a short underground stem.
acaustobiolith [PETR] A noncombustible organic rock, or one formed by organic accumulation of minerals.
acaustophytolith [PETR] An acaustobiolith resulting from plant activity, such as a pelagic ooze that contains diatoms.
accelerated erosion [GEOL] The process of weathering at a rate greater than normal for the site, brought about by man, usually through reduction of the vegetation.
accelerated hypertension *See* malignant hypertension.
accelerated life test [ENG] Operation of a device, circuit, or system above maximum ratings to produce premature failure; used to estimate normal operating life.
accelerated test [ELEC] A test of the serviceability of an electric cable in use for some time by applying twice the voltage normally carried.
accelerated weathering [ENG] A laboratory test used to determine, in a short period of time, the resistance of a paint film or other exposed surface to weathering.
accelerating agent [MATER] **1.** A substance which increases the speed of a chemical reaction. **2.** A compound which hastens and improves the curing of rubber.
accelerating electrode [ELECTR] An electrode used in cathode-ray tubes and other electron tubes to increase the velocity of the electrons that contribute the space current or form a beam.
accelerating incentive *See* differential piece-rate system.
accelerating potential [ELECTR] The energy potential in

electron-beam equipment that imparts additional speed and energy to the electrons.

acceleration [MECH] The rate of change of velocity with respect to time.

acceleration analysis [MECH ENG] A mathematical technique, often done graphically, by which accelerations of parts of a mechanism are determined.

acceleration error [NAV] That error resulting from change in a craft's velocity vector: specifically, either the deviation of an aircraft magnetic compass caused by the action of the vertical component of the earth's magnetic field on the compass magnets when the compass card is thrown off level by accelerations of the aircraft; or the deflection of the apparent vertical, as indicated by an artificial horizon, due to acceleration.

acceleration error constant [CONT SYS] The ratio of the acceleration of a controlled variable of a servomechanism to the actuating error when the actuating error is constant.

acceleration feedback [AERO ENG] The use of accelerometers strategically located within the body of a missile so that they sense body accelerations during flight and interact with another device on board the missile or with a control center on the ground or in an airplane to keep the missile's speed within design limits.

acceleration globulin [BIOCHEM] A globulin that acts to accelerate the conversion of prothrombin to thrombin in blood clotting; found in blood plasma in an inactive form.

acceleration measurement [MECH] The technique of determining the magnitude and direction of acceleration, including translational and angular acceleration. [NAV] A fundamental measurement required for the operation of the inertial navigator.

acceleration mechanisms [ASTROPHYS] The ways in which cosmic-ray and solar-flare particles may have acquired their high energies.

acceleration of free fall *See* acceleration of gravity.

acceleration of gravity [MECH] The acceleration imparted to bodies by the attractive force of the earth; has an international standard value of 980.665 cm/sec^2 but varies with latitude and elevation. Also known as acceleration of free fall; apparent gravity.

acceleration potential [FL MECH] The sum of the potential of the force field acting on a fluid and the ratio of the pressure to the fluid density; the negative of its gradient gives the acceleration of a point in the fluid.

acceleration stress [MED] The effect of an increase in gravitational force upon human physiology and behavior, particularly during takeoff and reentry in space flight.

acceleration time [COMPUT SCI] The time required for a magnetic tape transport or any other mechanical device to attain its operating speed.

acceleration tolerance [ENG] The degree to which personnel or equipment withstands acceleration. [PHYSIO] The maximum g forces an individual can withstand without losing control or consciousness.

acceleration voltage [ELECTR] The voltage between a cathode and accelerating electrode of an electron tube.

accelerator [CHEM ENG] In the manufacture of rubber, a substance that acts as a catalyst of vulcanization but undergoes a chemical change in the process. [MATER] **1.** Any substance added to stucco, plaster, mortar, concrete, cement, and so on to hasten the set. **2.** In the vulcanization process, a substance, added with a curing agent, to speed processing and enhance physical characteristics of a vulcanized material. [MECH ENG] A device for varying the speed of an automotive vehicle by varying the supply of fuel. [PHYS] *See* particle accelerator.

accelerator catalyst [MATER] A catalyst that increases the rate of a chemical reaction.

accelerator jet [MECH ENG] The jet through which the fuel is injected into the incoming air in the carburetor of an automotive vehicle with rapid demand for increased power output.

accelerator linkage [MECH ENG] The linkage connecting the accelerator pedal of an automotive vehicle to the carburetor throttle valve or fuel injection control.

accelerator pedal [MECH ENG] A pedal that operates the carburetor throttle valve or fuel injection control of an automotive vehicle.

accelerator pump [MECH ENG] A small cylinder and piston controlled by the throttle of an automotive vehicle so as to provide an enriched air-fuel mixture during acceleration.

acceleratory reflex [PHYSIO] Any reflex originating in the labyrinth of the inner ear in response to a change in the rate of movement of the head.

accelerogram [ENG] A record made by an accelerograph.

accelerograph [ENG] An accelerometer having provisions for recording the acceleration of a point on the earth during an earthquake or for recording any other type of acceleration.

accelerometer [ENG] An instrument which measures acceleration or gravitational force capable of imparting acceleration.

accelofilter [CHEM] A filtration device that uses a vacuum or pressure to draw or force the liquid through the filter to increase the rate of filtration.

accent lighting [CIV ENG] Directional lighting which highlights an object or attracts attention to a particular area.

accentuation [ELECTR] The enhancement of signal amplitudes in selected frequency bands with respect to other signals.

accentuator [ELECTR] A circuit that provides for the first part of a process for increasing the strength of certain audio frequencies with respect to others, to help these frequencies override noise or to reduce distortion. Also known as accentuator circuit. [MATER] A material that acts to increase the selectivity or intensity of a stain.

accentuator circuit *See* accentuator.

accept [COMPUT SCI] A data transmission statement which is used in FORTRAN when the computer is in conversational mode, and which enables the programmer to input, through the teletypewriter, data the programmer wishes stored in memory.

acceptability [ENG] State or condition of meeting minimum standards for use, as applied to methods, equipment, or consumable products.

acceptable quality level [IND ENG] The maximum percentage of defects that has been determined tolerable as a process average for a sampling plan during inspection or test of a product with respect to economic and functional requirements of the item. Abbreviated AQL.

acceptable reliability level [IND ENG] The required level of reliability for a part, system, device, and so forth; may be expressed in a variety of terms, for example, number of failures allowable in 1000 hours of operating life. Abbreviated ARL.

acceptable risk [GEOPHYS] In seismology, that level of earthquake effects which is judged to be of sufficiently low social and economic consequence, and which is useful for determining design requirements in structures or for taking certain actions.

acceptance criteria [IND ENG] Standards of judging the acceptability of manufactured items.

acceptance number [IND ENG] The maximum allowable number of defective pieces in a sample of specified size.

acceptance test [IND ENG] A test used to determine conformance of a product to design specifications, as a basis for its acceptance.

accepted indicator [NAV] An airborne indicator which has been proven capable of accurate and reliable measurement.

acceptor [CHEM] **1.** A chemical whose reaction rate with another chemical increases because the other substance undergoes another reaction. **2.** A species that accepts electrons, protons, electron pairs, or molecules such as dyes. [SOLID STATE] An impurity element that increases the number of holes in a semiconductor crystal such as germanium or silicon; aluminum, gallium, and indium are examples. Also known as acceptor impurity; acceptor material.

acceptor atom [SOLID STATE] An atom of a substance added to a semiconductor crystal to increase the number of holes in the conduction band.

acceptor circuit [ELECTR] A series-resonant circuit that has a low impedance at the frequency to which it is tuned and a higher impedance at all other frequencies.

acceptor impurity *See* acceptor.

acceptor material *See* acceptor.

access [CIV ENG] Freedom, ability, or the legal right to pass without obstruction from a given point on earth to some other objective, such as the sea or a public highway. [COMPUT SCI] The reading of data from storage or the writing of data into storage.

access arm [COMPUT SCI] The mechanical device which positions the read/write head on a magnetic storage unit.

access code [COMMUN] **1.** Numeric identification for internetwork or facility switching. **2.** The preliminary digits that a user must dial to be connected through an automatic PBX to the serving switching center, as in AUTOVON.

ACCIDENTAL WHORL

A reproduction of an I tracing of an accidental whorl. *(Federal Bureau of Investigation)*

access-control register [COMPUT SCI] A storage device which controls the word-by-word transmission over a given channel.

access-control words [COMPUT SCI] Permanently wired instructions channeling transmitted words into reserved locations.

access door [BUILD] A provision for access to concealed plumbing or other equipment without disturbing the wall or fixtures.

access gap *See* memory gap.

access line [COMMUN] Four-wire circuit between a subscriber or a local PBX to the serving switching center.

access mechanism [COMPUT SCI] The mechanism of positioning reading or writing heads onto the required tracks of a magnetic disk.

access method [COMPUT SCI] A set of programming routines which links programs and the data that these programs transfer into and out of memory.

access mode [COMPUT SCI] A programming clause in COBOL which is required when using a random-access device so that a specific record may be read out of or written into a mass storage bin.

accessorius [ANAT] Any muscle that reinforces the action of another.

accessory [MECH ENG] A part, subassembly, or assembly that contributes to the effectiveness of a piece of equipment without changing its basic function; may be used for testing, adjusting, calibrating, recording, or other purposes.

accessory bud [BOT] An embryonic shoot occurring above or to the side of an axillary bud. Also known as supernumerary bud.

accessory cell [BOT] A morphologically distinct epidermal cell adjacent to, and apparently functionally associated with, guard cells on the leaves of many plants.

accessory chromosome *See* supernumerary chromosome.

accessory cloud [METEOROL] A cloud form that is dependent, for its formation and continuation, upon the existence of one of the major cloud genera; may be an appendage of the parent cloud or an immediately adjacent cloudy mass.

accessory ejecta [GEOL] Pyroclastic material formed from solidified volcanic rocks that are from the same volcano as the ejecta.

accessory element *See* trace element.

accessory gland [ANAT] A mass of glandular tissue separate from the main body of a gland. [INV ZOO] A gland associated with the male reproductive organs in insects.

accessory mineral [MINERAL] A minor mineral in an igneous rock that does not affect its general character.

accessory movement *See* synkinesia.

accessory nerve [ANAT] The eleventh cranial nerve in tetrapods, a paired visceral motor nerve; the bulbar part innervates the larynx and pharynx, and the spinal part innervates the trapezius and sternocleidomastoid muscles.

accessory plate [OPTICS] Thin plate of quartz, gypsum, or mica used with a petrological microscope to modify the effects of polarized light and intensify qualities in translucent minerals.

accessory sexual characters [ANAT] Those structures and organs (excluding the gonads) composing the genital tract and including accessory glands and external genitalia.

accessory species [ECOL] A species comprising 25–50% of a community.

access road [CIV ENG] A route, usually paved, that enables vehicles to reach a designated facility expeditiously.

access time [COMPUT SCI] The time period required for reading out of or writing into the computer memory.

access tunnel [CIV ENG] A tunnel provided for an access road.

accident [HYD] An interruption in a river that interferes with, or sometimes stops, the normal development of the river system.

accidental ejecta [GEOL] Pyroclastic rock formed from preexisting nonvolcanic rocks or from volcanic rocks unrelated to the erupting volcano.

accidental error [SCI TECH] In experimental observations, an error which does not always recur when an observation is repeated under the same conditions.

accidental inclusion *See* xenolith.

accidental point [GRAPHICS] The vanishing point of a group of lines in a perspective drawing that are parallel neither to the line of sight nor to the horizon.

accidental species [ECOL] A species which constitutes less than one-fourth of the population of a stand.

accidental whorl [ANAT] A type of whorl fingerprint pattern which is a combination of two different types of pattern, with the exception of the plain arch, with two or more deltas; or a pattern which possesses some of the requirements for two or more different types; or a pattern which conforms to none of the definitions; in accidental whorl tracing three types appear: an outer (O), inner (I), or meeting (M).

accident block [GEOL] A solid chip of rock broken off from the subvolcanic basement and ejected from a volcano.

accident-cause code [IND ENG] Sponsored by the American Standards Association, the code that classifies accidents under eight defective working conditions and nine improper working practices.

accident frequency rate [IND ENG] The number of all disabling injuries per million man-hours of exposure.

accident prone [MED] Predisposed to sustain more accidents than others exposed to the same hazard.

accident severity rate [IND ENG] The number of man-days lost as a result of disabling injuries per thousand man-hours of exposure.

Accipitridae [VERT ZOO] The diurnal birds of prey, the largest and most diverse family of the order Falconiformes, including hawks, eagles, and kites.

acclimated microorganism [ECOL] Any microorganism that is able to adapt to environmental changes such as a change in temperature, or a change in the quantity of oxygen or other gases.

acclimation *See* acclimatization.

acclimatization [EVOL] Adaptation of a species or population to a changed environment over several generations. Also known as acclimation.

acclivity [GEOL] A slope that is ascending from a reference point.

aCcm *See* abcoulomb centimeter.

aC/cm² *See* abcoulomb per square centimeter.

aC/cm³ *See* abcoulomb per cubic centimeter.

accolade [ARCH] Decorative molding in which two ogee curves meet centrally over the top of a window or door.

accommodation [ECOL] A population's location within a habitat. [MAP] The limits or range within which a stereoplotting instrument is capable of operating. [PHYSIO] A process in most vertebrates whereby the focal length of the eye is changed by automatic adjustment of the lens to bring images of objects from various distances into focus on the retina.

accommodation coefficient [STAT MECH] The ratio of the average energy actually transferred between a surface and impinging gas molecules scattered by the surface, to the average energy which would theoretically be transferred if the impinging molecules reached complete thermal equilibrium with the surface.

accommodation ladder [NAV ARCH] A light ladder or similar structure, usually portable, hung over a ship's side at the gangway to permit access to small boats.

accommodation reflex [PHYSIO] Changes occurring in the eyes when vision is focused from a distant to a near object; involves pupil contraction, increased lens convexity, and convergence of the eyes.

accordant [GEOL] Pertaining to topographic features that have nearly the same elevation.

accordant fold [GEOL] One of several folds that are similarly oriented.

accordant summit level [GEOL] A hypothetical horizontal plane that can be drawn over a broad region connecting mountain summits of similar elevation.

accordion cable [ELEC] A flat, multiconductor cable prefolded into a zigzag shape and used to make connections to movable equipment such as a chassis mounted on pullout slides.

accordion door [BUILD] A door that folds and unfolds like an accordion when it is opened and closed.

accordion fold [GRAPHICS] In a binding operation, two or more parallel folds of printed sheets.

accordion partition [BUILD] A movable, fabric-faced partition which is fitted into an overhead track and folds like an accordion.

accordion roller conveyor [MECH ENG] A conveyor with a flexible latticed frame which permits variation in length.

accounting machine [COMPUT SCI] A machine that pro-

duces tabulations or accounting records of a specified unvarying format.

accounting package [COMPUT SCI] A set of special routines that allow collection of information about the usage level of various components of a computer system by each production program.

accouplement [ARCH] A pair of elements of a structure that are very close or touching, such as two columns.

accrescent [BOT] Growing continuously with age, especially after flowering.

accretion [ASTRON] A process in which a star gathers molecules of interstellar gas to itself by gravitational attraction. [CIV ENG] Artificial buildup of land due to the construction of a groin, breakwater, dam, or beach fill. [GEOL] **1.** Gradual buildup of land on a shore due to wave action, tides, currents, airborne material, or alluvial deposits. **2.** The process whereby stones or other inorganic masses add to their bulk by adding particles to their surfaces. Also known as aggradation. [METEOROL] The growth of a precipitation particle by the collision of a frozen particle (ice crystal or snowflake) with a supercooled liquid droplet which freezes upon contact.

accretionary lapilli *See* mud ball.

accretionary lava ball [GEOL] A rounded ball of lava that occurs on the surface of an aa lava flow.

accretionary limestone [PETR] A type of limestone formed by the slow accumulation of organic remains.

accretionary ridge [GEOL] A beach ridge located inland from the modern beach, indicating that the coast has been built seaward.

accretion hypothesis [ASTRON] Any hypothesis which assumes that the earth originated by the gradual addition of solid bodies, such as meteorites, that were formerly revolving about the sun but were drawn by gravitation to the earth.

accretion line [HISTOL] A microscopic line on a tooth, marking the addition of a layer of enamel or dentin.

accretion theory [ASTRON] A theory that the solar system originated from vortices in a disk-shaped mass.

accretion topography [GEOL] Topographic features built by accumulation of sediment.

accretion vein [GEOL] A type of vein formed by the repeated filling of channels followed by their opening because of the development of fractures in the zone undergoing mineralization.

accretion zone [GEOL] Any beach area undergoing accretion.

accumbent [BOT] Describing an organ that leans against another; specifically referring to cotyledons having their edges folded against the hypocotyl.

accumulated discrepancy [ENG] The sum of the separate discrepancies which occur in the various steps of making a survey.

accumulated divergence [MAP] In making a map, the algebraic sum of the divergences for the sections of a line of levels, from the beginning of the line to any section end at which it is desired to compute the total divergence.

accumulated total punching [COMPUT SCI] A checking procedure to ensure that no punch-card item has been dropped from a file.

accumulating reproducer [COMPUT SCI] An electromechanical device which reads a sorted deck of cards and creates a set of subtotals on additional cards according to some preset criterion.

accumulation [HYD] The quantity of snow or other solid form of water added to a glacier or snowfield by alimentation. [MIN ENG] **1.** In coal mining, firedamp that collects in higher parts of mine workings and at the edge of wastes. **2.** Oil or gas in some form of trap.

accumulation area [HYD] The portion of a glacier above the firn line, where the accumulation exceeds ablation. Also known as firn field; zone of accumulation.

accumulation factor [MATH] The quantity $(1+r)$ in the formula for compound interest, where r is the rate of interest; measures the rate at which the principal grows.

accumulation point *See* cluster point.

accumulation zone [GEOL] The area where the bulk of the snow contributing to an avalanche was originally deposited.

accumulative error *See* cumulative error.

accumulative timing [IND ENG] A time-study method that allows direct reading of the time for each element of an operation by the use of two stopwatches which operate alternately.

accumulator [AERO ENG] A device sometimes incorporated in the fuel system of a gas-turbine engine to store fuel and release it under pressure as an aid in starting. [CHEM ENG] An auxiliary ram extruder on blow-molding equipment used to store melted material between deliveries. [COMPUT SCI] A specific register, located in the arithmetic unit of a computer, in which the result of an arithmetic or logical operation is formed; here numbers are added or subtracted, and certain operations such as sensing, shifting, and complementing are performed. Also known as accumulator register; counter. [ELEC] *See* storage battery. [MECH ENG] **1.** A device, such as a bag containing pressurized gas, which acts upon hydraulic fluid in a vessel, discharging it rapidly to give high hydraulic power, after which the fluid is returned to the vessel with the use of low hydraulic power. **2.** A device connected to a steam boiler to enable a uniform boiler output to meet an irregular steam demand. **3.** A chamber for storing low-side liquid refrigerant in a refrigeration system. Also known as surge drum; surge header.

accumulator jump instruction [COMPUT SCI] An instruction which programs a computer to ignore the previously established program sequence depending on the status of the accumulator. Also known as accumulator transfer instruction.

accumulator plant [BOT] A plant or tree that grows in a metal-bearing soil and accumulates an abnormal content of the metal.

accumulator register *See* accumulator.

accumulator shift instruction [COMPUT SCI] A computer instruction which causes the word in a register to be displaced a specified number of bit positions to the left or right.

accumulator transfer instruction *See* accumulator jump instruction.

accuracy [SCI TECH] The extent to which the results of a calculation or the readings of an instrument approach the true values of the calculated or measured quantities, and are free from error.

accuracy checking [MAP] The procurement of presumptive evidence of a map's compliance with specified accuracy standards; indicates the relative (rather than the absolute) accuracy of map features.

accuracy control system [COMPUT SCI] Any method which attempts error detection and control, such as random sampling and squaring.

accuracy life [ORD] The estimated average number of rounds that a particular weapon can fire before its tube becomes so worn that its accuracy tolerance is exceeded.

accuracy of fire [ORD] The measurement of the precision of fire expressed as the distance of the center of impact from the center of the target.

accuracy testing [MAP] The procurement of confirmed evidence, on a sampling basis, of a map's compliance with specified accuracy standards; indicates both the relative and absolute accuracy of map features.

accurate contour [MAP] A contour line whose accuracy lies within one-half of the basic vertical interval. Also known as normal contour.

accustomization [ENG] The process of learning the techniques of living with a minimum of discomfort in an extreme or new environment.

ac/dc motor *See* universal motor.

ac/dc receiver [ELECTR] A radio receiver designed to operate from either an alternating- or direct-current power line. Also known as universal receiver.

acediamine hydrochloride *See* acetamidine hydrochloride.

acellular [BIOL] Not composed of cells.

acellular gland [PHYSIO] A gland, such as intestinal glands, the pancreas, and the parotid gland, that secretes a noncellular product.

acellular slime mold [MYCOL] The common name for members of the Myxomycetes.

Ac-Em *See* actinon.

acenaphthene [ORG CHEM] $C_{12}H_{10}$ An unsaturated hydrocarbon whose colorless crystals melt at 92°C; insoluble in water; used as a dye intermediate and as an agent for inducing polyploidy.

1,2-acenaphthenedione *See* acenaphthequinone.

acenaphthequinone [ORG CHEM] $C_{10}H_6(CO)_2$ A three-ring hydrocarbon in the form of yellow needles melting at 261–263°C; insoluble in water and soluble in alcohol; used in dye synthesis. Also known as 1,2-acenaphthenedione.

acene [ORG CHEM] Any condensed polycyclic compound with fused rings in a linear arrangement; for example, anthracene.

acenocoumarin *See* acenocoumarol.

acenocoumarol [ORG CHEM] $C_{19}H_{15}NO_6$ A tasteless, odorless, white, crystalline powder with a melting point of 197°C; slightly soluble in water and organic solvents; used as an anticoagulant. Also known as acenocoumarin.

acentric [BIOL] Not oriented around a middle point. [GEN] A chromosome or chromosome fragment lacking a centromere.

acentrous [VERT ZOO] Lacking vertebral centra and having the notochord persistent throughout life, as in certain primitive fishes.

Acephalina [INV ZOO] A suborder of invertebrate parasites in the protozoan order Eugregarinida characterized by nonseptate trophozoites.

acephalobrachia *See* abrachiocephalia.

acephalocardia [MED] Congenital lack of a head and a heart.

acephalochiria [MED] Congenital lack of a head and hands.

acephalocyst [INV ZOO] An abnormal cyst of the *Echinococcus granulosus* larva, lacking a head and brood capsules, found in human organs.

acephalopodia [MED] Congenital lack of a head and feet.

acephalorrhachia [MED] Congenital lack of a head and vertebral column.

acephalostomia [MED] Congenital lack of a head, with a mouthlike orifice in the neck or chest.

acephalothoracica [MED] Congenital lack of a head and thorax.

acephalous [BOT] Having the style originate at the base instead of at the apex of the ovary. [ZOO] Lacking a head.

acephate [ORG CHEM] $C_4H_{10}NO_3PS$ A white solid with a melting point of 72–80°C; very soluble in water; used as an insecticide for a wide range of aphids and foliage pests. Also known as *O,S*-dimethyl acetylphosphoramidothioate.

acephatemet [ORG CHEM] $CH_3OCH_3SPONH_2$ A white, crystalline solid with a melting point of 39–41°C; limited solubility in water; used as an insecticide to control cutworms and borers on vegetables. Also known as *O,S*-dimethylphosphoroamidothioate; methamidophos.

Acer [BOT] A genus of broad-leaved, deciduous trees of the order Sapindales, commonly known as the maples; the sugar or rock maple (*A. saccharum*) is the most important commercial species.

acerate [BOT] Needle-shaped, specifically referring to leaves.

acerbophobia [PSYCH] Abnormal fear of sour taste sensations. Also known as acerophobia.

Acerentomidae [INV ZOO] A family of wingless insects belonging to the order Protura; the body lacks tracheae and spiracles.

acerophobia *See* acerbophobia.

acervate [BIOL] Growing in heaps or dense clusters.

acervulus [MYCOL] A cushion- or disk-shaped mass of hyphae, peculiar to the Melanconiales, on which there are dense aggregates of conidiophores.

acetabulum [ANAT] A cup-shaped socket on the hipbone that receives the head of the femur. [INV ZOO] **1.** A cavity on an insect body into which a leg inserts for articulation. **2.** The sucker of certain invertebrates such as trematodes and tapeworms.

acetal [ORG CHEM] **1.** $CH_3CH(OC_2H_5)_2$ A colorless, flammable, volatile liquid used as a solvent and in manufacture of perfumes. Also known as 1,1-diethoxyethane. **2.** Any one of a class of compounds formed by the addition of alcohols to aldehydes.

acetaldehydase [BIOCHEM] An enzyme that catalyzes the oxidation of acetaldehyde to acetic acid.

acetaldehyde [ORG CHEM] C_2H_4O A colorless, flammable liquid used chiefly to manufacture acetic acid. Also known as ethanal.

***para*-acetaldehyde** *See* paraldehyde.

acetaldehyde ammonia *See* aldehyde ammonia.

acetaldehyde cyanohydrin *See* lactonitrile.

acetal resins [ORG CHEM] Linear, synthetic resins produced by the polymerization of formaldehyde (acetal homopolymers) or of formaldehyde with trioxane (acetal copolymers); hard, tough plastics used as substitutes for metals. Also known as polyacetals.

acetamide [ORG CHEM] CH_3CONH_2 The crystalline, colorless amide of acetic acid, used in organic synthesis and as a solvent. Also known as ethanamide.

acetamidine hydrochloride [ORG CHEM] $C_2H_6N_2 \cdot HCl$ Deliquescent crystals that are long prisms with a melting point reported as either 174°C or 164–166°C; soluble in water and alcohol; used in the synthesis of imidazoles, pyrimidines, and triazines. Also known as acediamine hydrochloride; α-amino-α-iminoethane hydrochloride; ethanamidine hydrochloride; ethenylamidine hydrochloride.

***para*-acetamidobenzenesulfonyl chloride** *See N*-acetylsulfanilyl chloride.

3-acetamido-4-hydroxybenzenearsonic acid [PHARM] $(HO)(CH_3CONH)C_6H_3AsO \cdot (OH)_2$ An odorless, white to slightly yellow powder with a slightly acid taste; soluble in alkali and alkali carbonate solutions; used in veterinary medicine. Also known as acetarsone; acetylaminohydroxyphenylarsonic acid.

2-acetamido-4-mercaptobutyric acid-γ-thiolactone *See N*-acetylhomocysteinethiolactone.

l-α-acetamido-β-mercaptopropionic acid *See* acetylcysteine.

acetamidophenol *See* acetaminophen.

α-acetamido-γ-thiobutyrolactone *See N*-acetylhomocysteinethiolactone.

acetaminophen [ORG CHEM] $C_8H_9O_2N$ Large monoclinic prisms with a melting point of 169–170°C; soluble in organic solvents such as methanol and ethanol; used in the manufacture of azo dyes and photographic chemicals, and as an analgesic and antipyretic. Also known as acetamidophenol; acetaminophenol; *N*-acetyl-*para*-aminophenol (APAP); *para*-hydroxyacetanilide.

acetanilide [ORG CHEM] An odorless compound in the form of white, shining, crystalline leaflets or a white, crystalline powder with a melting point of 114–116°C; soluble in hot water, alcohol, ether, chloroform, acetone, glycerol, and benzene; used as a rubber accelerator, in the manufacture of dyestuffs and intermediates, as a precursor in penicillin manufacture, and as a painkiller. Also known as *N*-phenylacetamide.

acetanisidine *See* methacetin.

acetarsone *See* 3-acetamido-4-hydroxybenzenearsonic acid.

acetate [ORG CHEM] One of two species derived from acetic acid, CH_3COOH; one type is the acetate ion, CH_3COO^-; the second type is a compound whose structure contains the acetate ion, such as ethyl acetate. [TEXT] The official name for the textile fiber produced from partially hydrolyzed cellulose acetate. Formerly known as acetate rayon.

acetate C-8 *See n*-octyl acetate.

acetate dye [CHEM] **1.** Any of a group of water-insoluble azo or anthroquinone dyes used for dyeing acetate fibers. **2.** Any of a group of water-insoluble amino azo dyes that are treated with formaldehyde and bisulfate to make them water-soluble.

acetate film [MATER] A cellulose acetate resin sheet that is transparent, airproof, hygienic, and resistant to grease, oil, and dust; used for photographic film, magnetic tapes, and packaging.

acetate of lime [ORG CHEM] Calcium acetate made from pyroligneous acid and a water suspension of calcium hydroxide.

acetate process [CHEM ENG] Acetylation of cellulose (wood pulp or cotton linters) with acetic acid or acetic anhydride and sulfuric acid catalyst to make cellulose acetate resin or fiber.

acetate rayon *See* acetate.

acetazolamide [PHARM] $(CH_3CONH)C_2N_2S(SO_2NH_2)$ An odorless, white to faintly yellowish-white, crystalline powder with a melting point of 258°C; slightly soluble in water; used as a diuretic.

acetenyl *See* ethinyl.

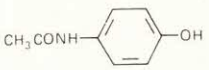
acetic acid [ORG CHEM] CH_3COOH **1.** A clear, colorless liquid or crystalline mass with a pungent odor, miscible with water or alcohol; crystallizes in deliquescent needles; a component of vinegar. Also known as ethanoic acid. **2.** A mixture of the normal and acetic salts; used as a mordant in the dyeing of wool.

acetic acid bacteria *See* Acetobacter.

acetic anhydride [ORG CHEM] $(CH_3CO)_2O$ A liquid with a pungent odor that combines with water to form acetic acid; used as an acetylating agent.

acetic ester *See* ethyl acetate.

ACETAMINOPHEN



Structural formula.

acetic ether *See* ethyl acetate.

acetic fermentation [MICROBIO] Oxidation of alcohol to produce acetic acid by the action of bacteria of the genus *Acetobacter*.

acetic thiokinase [BIOCHEM] An enzyme that catalyzes the formation of acetyl coenzyme A from acetate and adenosinetriphosphate.

acetidin *See* ethyl acetate.

acetin [ORG CHEM] $C_3H_5(OH)_2OOCCH_3$ A thick, colorless, hygroscopic liquid with a boiling point of 158°C, made by heating glycerol and strong acetic acid; soluble in water and alcohol; used in tanning, as a dye solvent and food additive, and in explosives. Also spelled acetine. Also known as glyceryl monoacetate; monoacetin.

acetine *See* acetin.

acetoacetanilide *See* acetoacetic acid.

acetoacetate [ORG CHEM] A salt which contains the CH_3COCH_2COO radical; derived from acetoacetic acid.

acetoacetic acid [ORG CHEM] CH_3COCH_2COOH A colorless liquid miscible with water; derived from β-hydroxybutyric acid in the body. Also known as acetoacetanilide; α-acetylacetanilide; β-ketobutyranilide.

acetoacetic ester *See* ethyl acetoacetate.

acetoacetyl coenzyme A [BIOCHEM] $C_{25}H_{41}O_{18}N_7P_3S$ An intermediate product in the oxidation of fatty acids.

acetoamidoacetic acid *See* aceturic acid.

Acetobacter [MICROBIO] A genus of gram-negative, aerobic bacteria of uncertain affiliation comprising ellipsoidal to rod-shaped cells as singles, pairs, or chains; they oxidize ethanol to acetic acid. Also known as acetic acid bacteria; vinegar bacteria.

Acetobacter aceti [MICROBIO] An aerobic, rod-shaped bacterium capable of efficient oxidation of glucose, ethyl alcohol, and acetic acid; found in vinegar, beer, and souring fruits and vegetables.

Acetobacter suboxydans [MICROBIO] A short, nonmotile vinegar bacterium that can oxidize ethanol to acetic acid; useful for industrial production of ascorbic and tartaric acids.

acetobromamide *See N*-bromoacetamide.

α-acetobutyrolactone *See* α-acetylbutyrolactone.

acetocinnamone *See* benzylideneacetone.

acetoin [ORG CHEM] $CH_3COCHOHCH_3$ A slightly yellow liquid, melting point 15°C, used as an aroma carrier in the preparation of flavors and essences; produced by fermentation or from diacetyl by partial reduction with zinc and acid. Also known as acetylmethyl carbinol; dimethylketol.

acetol [ORG CHEM] CH_3COCH_2OH A colorless liquid soluble in water; a reducing agent. Also known as 1-hydroxy-2-propanone.

acetolactic acid [BIOCHEM] $C_5H_8O_4$ A monocarboxylic acid formed as an intermediate in the synthesis of the amino acid valine.

acetolysis [ORG CHEM] Decomposition of an organic molecule through the action of acetic acid or acetic anhydride.

acetomeroctol [PHARM] $CH_3COOHgC_6H_3(OH)C(CH_3)_2CH_3C(CH_3)_3$ A white solid with a melting point of 155–157°C; soluble in alcohol, ether, and chloroform; used as an antiseptic.

Acetomonas [MICROBIO] A genus of aerobic, polarly flagellated vinegar bacteria in the family Pseudomonadaceae; used industrially to produce vinegar, gluconic acid, and L-sorbose.

acetone [ORG CHEM] CH_3COCH_3 A colorless, volatile, extremely flammable liquid, miscible with water; used as a solvent and reagent. Also known as 2-propanone.

acetone-benzol process [CHEM ENG] A dewaxing process in petroleum refining, with acetone and benzol used as solvents.

acetone body *See* ketone body.

acetone chloroform *See* chlorobutanol.

acetone cyanohydrin [ORG CHEM] $(CH_3)_2COHCN$ A colorless liquid obtained from condensation of acetone with hydrocyanic acid; used as an insecticide or as an organic chemical intermediate.

acetone fermentation [MICROBIO] Formation of acetone by the metabolic action of certain anaerobic bacteria on carbohydrates.

acetone glucose *See* acetone sugar.

acetone glycerol *See* 2,2-dimethyl-1,3-dioxolane-4-methanol.

acetonemia [MED] A condition characterized by large amounts of acetone bodies in the blood. Also known as ketonemia.

acetone number [CHEM] A ratio used to estimate the degree of polymerization of materials such as drying oils; it is the weight in grams of acetone added to 100 grams of a drying oil to cause an insoluble phase to form.

acetone oxime *See* acetoxime.

acetone pyrolysis [ORG CHEM] Thermal decomposition of acetone into ketene.

acetone-sodium bisulfite [ORG CHEM] $(CH_3)_2C(OH)SO_3Na$ Crystals that have a slight sulfur dioxide odor and slightly fatty feel; freely soluble in water, decomposed by acids; used in photography and in textile dyeing and printing. Also known as acetone sulfite; 2-hydroxy-2 propanesulfonic acid sodium salt; sodium-acetone bisulfite.

acetone sugar [ORG CHEM] Any reducing sugar that contains acetone; examples are 1,2-monoacetone-D-glucofuranose and 1,2-5,6-diacetone-D-glucofuranose. Also known as acetone glucose.

acetone sulfite *See* acetone-sodium bisulfite.

acetonitrile [ORG CHEM] CH_3CN A colorless liquid soluble in water; used in organic synthesis. Also known as ethane nitrile; methyl cyanide.

acetonylacetone [ORG CHEM] $CH_3COCH_2CH_2COCH_3$ A colorless liquid with a boiling point of 192.2°C; soluble in water; used as a solvent and as an intermediate for pharmaceuticals and photographic chemicals.

3-(α-acetonylbenzyl)-4-hydroxycoumarin *See* warfarin.

3-(α-acetonyl-4-chlorobenzyl)-4-hydroxy-coumarin *See* coumachlor.

acetophenetidide *See* acetophenetidin.

acetophenetidin [PHARM] $CH_3CONHC_6H_4OC_2H_5$ Odorless, white crystals or powder with a melting point of 135°C; soluble in alcohol, chloroform, and ether; used as an analgesic. Also known as acetophenetidide; *para*-ethoxyacetanilide; phenacetin.

acetophenone [ORG CHEM] $C_6H_5COCH_3$ Colorless crystals with a melting point of 19.6°C and a specific gravity of 1.028; used as a chemical intermediate. Also known as phenyl methyl ketone.

acetostearin [ORG CHEM] A general term for monoglycerides of stearic acid acetylated with acetic anhydride; used as a protective food coating and as plasticizers for waxes and synthetic resins to improve low-temperature characteristics.

acetovanillon [PHARM] $HOC_6H_3(OCH_3)COCH_3$ Fine, needlelike crystals with a melting point of 115°C and a faint vanilla odor; freely soluble in hot water, alcohol, benzene, chloroform, and ether; used as a cardiotonic drug. Also known as apocynin; 4-hydroxy-3-methoxyacetophenone.

acetoxime [ORG CHEM] $(CH_3)_2CNOH$ Colorless crystals with a chlorallike odor and a melting point of 61°C; soluble in alcohol, ethers, and water; used in organic synthesis and as a solvent for cellulose ethers. Also known as acetone oxime; 2-propanone oxime.

21-acetoxypregnenolone [PHARM] $C_{23}H_{34}O_4$ Needlelike crystals which become opaque at about 80°C or on prolonged standing; melting point is 184–185°C; soluble in chloroform and toluene; used as an antiarthritic drug.

(2-acetoxypropyl)trimethylammonium chloride *See* methacholine chloride.

acetozone *See* acetyl benzoyl peroxide.

aceturic acid [ORG CHEM] $CH_3CONHCHCH_2COOH$ Long, needlelike crystals with a melting point of 206–208°C; soluble in water and alcohol; forms stable salts with organic bases; used in medicine. Also known as acetamidoacetic acid; acetylaminoacetic acid; *N*-acetylglycine; acetylglycocoll; ethanoylaminoethanoic acid.

acetyl [ORG CHEM] $CH_3CO—$ A two-carbon organic radical containing a methyl group and a carbonyl group.

acetylacetanilide *See* acetoacetanilide.

α-acetylacetanilide *See* acetoacetic acid.

acetylacetone [ORG CHEM] $CH_3COCH_2OCCH_3$ A colorless liquid with a pleasant odor and a boiling point of 140.5°C; soluble in water; used as a solvent, lubricant additive, paint drier, and pesticide. Also known as diacetylmethane; 2,4–pentanedione.

acetylaminoacetic acid *See* aceturic acid.

***para*-acetylaminobenzenesulfonyl chloride** *See N*-acetylsulfonilyl chloride.

acetylaminohydroxyphenylarsonic acid *See* 3-acetamido-4-hydroxybenzenearsonic acid.

***N*-acetyl-*para*-aminophenol** *See* acetaminophen.

***para*-acetylaminophenol** *See* acetaminophen.

***para*-acetylaminophenyl salicylate** [PHARM] $C_6H_4(NHCOCH_3)OOCC_6H_4OH$ Odorless and tasteless, fine, white, crystalline scales with a melting point of 187–188°C; soluble in alcohol, ether, and hot water; used as an analgesic. Also known as phenetsal.

acetylase [BIOCHEM] Any enzyme that catalyzes the formation of acetyl esters.

acetylated cotton [MATER] Mildewproof cotton made by the chemical conversion of part of the raw cotton fiber to cellulose acetate.

acetylated lanolin [MATER] A clear, nongreasy liquid made by reacting lanolin with polyoxyethylenes; soluble in water, oils, and alcohol; used in cosmetics.

acetylating agent [ORG CHEM] A reagent, such as acetic anhydride, capable of bonding an acetyl group onto an organic molecule.

acetylation [ORG CHEM] The process of bonding an acetyl group onto an organic molecule.

acetyl benzoyl peroxide [ORG CHEM] $C_6H_5CO \cdot O_2 \cdot OCCH_3$ White crystals with a melting point of 36.6°C; moderately soluble in ether, chloroform, carbon tetrachloride, and water; used as a germicide and disinfectant. Also known as acetozone; benzozone.

acetyl bromide [ORG CHEM] CH_3COBr A colorless, fuming liquid with a boiling point of 81°C; soluble in ether, chloroform, and benzene; used in organic synthesis and dye manufacture.

α-acetylbutyrolactone [ORG CHEM] $C_6H_8O_3$ A liquid with an esterlike odor; soluble in water; used in the synthesis of 3,4-disubstituted pyridines. Also known as α-acetobutyrolactone; α-acetyl-γ-hydroxybutyric acid γ-lactone; α-(2-hydroxyethyl)acetoacetic acid γ-lactone.

acetylcarbromal [PHARM] $(C_2H_5)_2CBrCONHCONHCOCH_3$ Crystals with a slightly bitter taste and a melting point of 109°C; soluble in alcohol and ethyl acetate; used as a sedative.

acetyl chloride [ORG CHEM] CH_3COCl A colorless, fuming liquid with a boiling point of 51–52°C; soluble in ether, acetone, and acetic acid; used in organic synthesis, and in the manufacture of dyestuffs and pharmaceuticals. Also known as ethanoyl chloride.

acetylcholine [BIOCHEM] $C_7H_{17}O_3N$ A compound released from certain autonomic nerve endings which acts in the transmission of nerve impulses to excitable membranes.

acetylcholinesterase [BIOCHEM] An enzyme found in excitable membranes that inactivates acetylcholine.

acetyl coenzyme A [BIOCHEM] $C_{23}H_{39}O_{17}N_7P_3S$ A coenzyme, derived principally from the metabolism of glucose and fatty acids, that takes part in many biological acetylation reactions; oxidized in the Krebs cycle.

acetylcysteine [PHARM] $HSCH_2CH(NHCOCH_3)COOH$ Crystals with a melting point of 109–110°C; used as a mucolytic drug. Also known as L-α-acetamido-β-mercaptopropionic acid; *N*-acetyl-3-mercaptoalanine.

acetylene [ORG CHEM] C_2H_2 A colorless, highly flammable gas that is explosive when compressed; the simplest compound containing a triple bond; used in organic synthesis and as a welding fuel. Also known as ethyne.

acetylene black [ORG CHEM] A form of carbon with high electrical conductivity; made by decomposing acetylene by heat.

acetylene cutting *See* oxyacetylene cutting.

acetylene dichloride *See sym*-dichloroethylene.

acetylene generator [ENG] A steel cylinder or tank that provides for controlled mixing of calcium carbide and water to generate acetylene.

acetylene series [ORG CHEM] A series of unsaturated aliphatic hydrocarbons, each containing at least one triple bond and having the general formula C_nH_{2n-2}.

acetylene tetrabromide [ORG CHEM] $CHBr_2CHBr_2$ A yellowish liquid with a boiling point of 239–242°C; soluble in alcohol and ether; used for separating minerals and as a solvent. Also known as *sym*-tetrabromoethane.

acetylene tetrachloride *See sym*-tetrachloroethane.

acetylene torch *See* oxyacetylene torch.

acetylene welding *See* oxyacetylene welding.

acetylenic [ORG CHEM] Pertaining to acetylene or being like acetylene, such as having a triple bond.

acetylenyl *See* ethinyl.

***N*-acetylethanolamine** [ORG CHEM] $CH_3CONHC_2H_4OH$ A brown, viscous liquid with a boiling range of 150–152°C; soluble in alcohol, ether, and water; used as a plasticizer, humectant, high-boiling solvent, and textile conditioner. Also known as hydroxyethylacetamide.

***N*-acetylglycine** *See* aceturic acid.

acetylglycocoll *See* aceturic acid.

***N*-acetylhomocysteinethiolactone** [ORG CHEM] $C_6H_9NO_2S$ Needlelike crystals that melt at 111.5–112.5°C; used as a photographic antifogging agent and a reagent for insolubilizing antibodies. Abbreviated AHCTL. Also known as 2-acetamido-4-mercaptobutyric acid γ-thiolactone; α-acetamido-γ-thiobutyrolactone; citiolone; *N*-(tetrahydro-2-oxo-3-thienyl)acetamide.

α-acetyl-γ-hydroxybutyric acid *See* α-acetylbutyrolactone.

acetylide [ORG CHEM] A compound formed from acetylene with the H atoms replaced by metals, as in cuprous acetylide (Cu_2C_2).

acetyl iodide [ORG CHEM] CH_3COI A colorless, transparent, fuming liquid with a boiling point of 105–108°C; soluble in ether and benzene; used in organic synthesis.

acetylisoeugenol [ORG CHEM] $C_6H_3(CHCHCH_3)(OCH_3)(OCOCH_3)$ White crystals with a clovelike odor and a congealing point of 77°C; used in perfumery and flavoring. Also known as isoeugenol acetate.

acetyl ketene *See* diketene.

***N*-acetyl-3-mercaptoalanine** *See* acetylcysteine.

acetylmethylcarbinol *See* acetoin.

***O*-acetyl-β-methylcholine** *See* methacholine chloride.

acetyl-β-methylcholine chloride *See* methacholine chloride.

acetyl number [ANALY CHEM] A measure of free hydroxyl groups in fats or oils determined by the amount of potassium hydroxide used to neutralize the acetic acid formed by saponification of acetylated fat or oil.

acetyl peroxide [ORG CHEM] $(CH_3CO)_2O_2$ Colorless crystals with a melting point of 30°C; soluble in alcohol and ether; used as an initiator and catalyst for resins. Also known as diacetyl peroxide.

acetyl phosphate [BIOCHEM] $C_2H_5O_5P$ The anhydride of acetic and phosphoric acids occurring in the metabolism of pyruvic acid by some bacteria; phosphate is used by some microorganisms, in place of ATP, for the phosphorylation of hexose sugars.

acetylpropionic acid *See* levulinic acid.

acetyl propionyl [ORG CHEM] $CH_3COCOCH_2CH_3$ A yellow liquid with a boiling point of 106–110°C; used in butterscotch- and chocolate-type flavors. Also known as methyl ethyl diketone; methyl ethyl glyoxal; 2,3-pentanedione.

acetylsalicylic acid [ORG CHEM] $CH_3COOC_6H_4COOH$ A white, crystalline, weakly acidic substance, with melting point 137°C; slightly soluble in water; used medicinally as an antipyretic. Also known by trade name aspirin.

***N*-acetylsulfanilyl chloride** [ORG CHEM] $C_8H_8ClNO_3S$ Thick, light tan prisms ranging to brown powder or fine crystals with a melting point of 149°C; soluble in benzene, chloroform, and ether; used as an intermediate in the preparation of sulfanilamide and its derivatives. Abbreviated ASC. Also known as *para*-acetamidobenzenesulfonyl chloride; *para*-acetylaminobenzenesulfonyl chloride.

acetylurea [ORG CHEM] $CH_3CONHCONH_2$ Crystals that are colorless and are slightly soluble in water.

acetyl valeryl [ORG CHEM] $CH_3COCOC_4H_9$ A yellow liquid used for cheese, butter, and other flavors. Also known as heptadione-2,3.

ACF diagram [PETR] A triangular diagram showing the chemical character of a metamorphic rock; the three components plotted are $A = Al_2O_3 + Fe_2O_3 - (Na_2O + K_2O)$, $C = CaO$, $F = FeO + MgO + MnO$.

acfm *See* actual cubic feet per minute.

a-c fracture [CRYSTAL] A type of tension fracture lying parallel to the a-c fabric plane and normal to plane b in a crystal.

a-c girdle [GEOL] A girdle of points in a petrofabric diagram that have a tread parallel with the plane of the a and c fabric axes.

Achaenodontidae [PALEON] A family of Eocene dichobunoids, piglike mammals belonging to the suborder Palaeodonta.

A chain *See* heavy chain.

achalasia [MED] Inability of a hollow muscular organ or ring of muscle (sphincter) to relax.

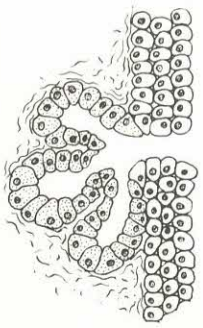
achalasia of the cardia [MED] Enlargement of the esophagus as a result of cardiospasm.

ache [MED] A constant dull or throbbing pain.
acheb [ECOL] Short-lived vegetation regions of the Sahara composed principally of mustards (Cruciferae) and grasses (Gramineae).
achene [BOT] A small, dry, indehiscent fruit formed from a simple ovary bearing a single seed.
Acheulean [ARCHEO] Lower Paleolithic archeological time, characterized by biface tools having cutting edges all around.
achievement age [PSYCH] Accomplishment, or actual level of scholastic performance, expressed as equivalent to the age in years of the average child showing similar attainments.
achievement quotient [PSYCH] The ratio, usually multiplied by 100, between the achievement age, or actual scholastic level, and the mental age.
achilary [BOT] In flowers, having the lip (labellum) undeveloped or lacking.
Achilles [ASTRON] An asteroid; member of the group known as the Trojan planets.
Achilles group *See* Greek group.
Achilles jerk [PHYSIO] A reflex action seen as plantar flection in response to a blow to the Achilles tendon. Also known as Achilles tendon reflex.
Achilles tendon [ANAT] The tendon formed by union of the tendons of the calf muscles, the soleus and gastrocnemius, and inserted into the heel bone.
Achilles tendon reflex *See* Achilles jerk.
achiral molecules [ORG CHEM] Molecules which are superposable to their mirror images.
achlamydeous [BOT] Lacking a perianth.
achlorhydria [MED] Absence of hydrochloric acid in the stomach.
achluophobia [PSYCH] Abnormal fear of darkness.
Acholeplasma [MICROBIO] The single genus of the family Acholeplasmataceae, comprising spherical and filamentous cells.
Acholeplasmataceae [MICROBIO] A family of the order Mycoplasmatales; characters same as for the order and class (Mollicutes); do not require sterol for growth.
acholia [MED] Suppression or absence of bile secretion into the small intestine.
achondrite [GEOL] A stony meteorite that contains no chondrules.
achondroplasia [MED] A hereditary deforming disease of the skeletal system, inherited in humans as an autosomal dominant trait and characterized by insufficient growth of the long bones, resulting in reduced length. Also known as chondrodystrophy fetalis.
achondroplastic dwarf [MED] A human with short legs and arms due to achondroplasia.
achordate [VERT ZOO] Lacking a notochord.
achreocythemia [MED] An anemia characterized by pale erythrocytes due to hemoglobin deficiency.
achroglobin [BIOCHEM] A colorless respiratory pigment present in some mollusks and urochordates.
achroite [MINERAL] A colorless variety of tourmalines found in Malagasy.
achromastia [MED] Absence of normal skin pigment.
achromat *See* achromatic lens.
Achromatiaceae [MICROBIO] A family of gliding bacteria of uncertain affiliation; cells are spherical to ovoid or cylindrical, movements are slow and jerky, and microcysts are not known.
achromatic [OPTICS] Capable of transmitting light without decomposing it into its constituent colors.
achromatic color [OPTICS] A color that has no hue or saturation but only brightness, such as white, black, and various shades of gray.
achromatic condenser [OPTICS] A condenser designed to eliminate chromatic and spherical aberrations, usually through the use of four elements, two of which are achromatic lenses; used in microscopes having high magnification.
achromatic fringe [OPTICS] An interference fringe of light whose position is independent of the wavelength of the light used; the first fringe of a Lloyd's mirror system and the central fringe of a Fresnel biprism system are examples.
achromatic interval [PHYSIO] The difference between the achromatic threshold and the smallest light stimulus at which the hue is detectable.
achromatic lens [OPTICS] A combination of two or more lenses having a focal length that is the same for two quite different wavelengths, thereby removing a major portion of chromatic aberration. Also known as achromat.
achromatic prism [OPTICS] A prism consisting of two or more prisms with different refractive indices combined so that light passing through the device is deviated but not dispersed.
achromatic threshold [PHYSIO] The smallest light stimulus that can be detected by a dark-adapted eye, so called because all colors lose their hue at this illumination.
achromatin [CYTOL] The portion of the cell nucleus which does not stain easily with basic dyes.
Achromatium [MICROBIO] The type genus of the family Achromatiaceae.
achromatophilia [BIOL] The property of not staining readily.
achromic [BIOL] Colorless; lacking normal pigmentation.
Achromobacter [MICROBIO] A genus of motile and nonmotile, gram-negative, rod-shaped bacteria in the family Achromobacteraceae.
Achromobacteraceae [MICROBIO] Formerly a family of true bacteria, order Eubacteriales, characterized by aerobic metabolism.
Achroonema [MICROBIO] A genus of bacteria in the family Pelonemataceae; cells have smooth, delicate, porous walls.
achylia [MED] Absence of chyle.
achylia gastrica [MED] Lack of secretion of hydrochloric acid and proteolytic enzymes by the stomach.
ACI *See* acoustic comfort index.
acicular [SCI TECH] Needlelike; slender and pointed.
acicular ice [HYD] Fresh-water ice composed of many long crystals and layered hollow tubes of varying shape containing air bubbles. Also known as fibrous ice; satin ice.
acicular powder [MET] A metal powder whose grains are needle-shaped.
aciculignosa [ECOL] Narrow sclerophyll or coniferous vegetation that is mostly subalpine, subarctic, or continental.
acid [CHEM] **1.** Any of a class of chemical compounds whose aqueous solutions turn blue litmus paper red, react with and dissolve certain metals to form salts, and react with bases to form salts. **2.** A compound capable of transferring a hydrogen ion in solution. **3.** A substance that ionizes in solution to yield the positive ion of the solvent. **4.** A molecule or ion that combines with another molecule or ion by forming a covalent bond with two electrons from the other species.
1,2,4-acid *See* 1-amino-2-naphthol-4-sulfonic acid.
π-acid [ORG CHEM] An acid that readily forms stable complexes with aromatic systems.
acid acceptor [ORG CHEM] A stabilizer compound added to plastic and resin polymers to combine with trace amounts of acids formed by decomposition of the polymers.
acid alcohol [ORG CHEM] A compound containing both a carboxyl group (—COOH) and an alcohol group (—CH_2OH, =CHOH, or ≡COH).
Acidaminococcus [MICROBIO] A genus of bacteria in the family Veillonellaceae; cells are often oval or kidney-shaped and occur in pairs; amino acids can supply the single energy source.
acid ammonium tartrate *See* ammonium bitartrate.
acid anhydride [CHEM] An acid with one or more molecules of water removed; for example, SO_3 is the acid anhydride of H_2SO_4, sulfuric acid.
acid azide [ORG CHEM] **1.** A compound in which the hydroxy group of a carboxylic acid is replaced by the azido group (—NH_3). **2.** An acyl or aroyl derivative of hydrazoic acid. Also known as acyl azide.
acid-base balance [PHYSIO] Physiologically maintained equilibrium of acids and bases in the body.
acid-base catalysis [CHEM] The increase in speed of certain chemical reactions due to the presence of acids and bases.
acid-base equilibrium [CHEM] The condition when acidic and basic ions in a solution exactly neutralize each other; that is, the pH is 7.
acid-base indicator [ANALY CHEM] A substance that reveals, through characteristic color changes, the degree of acidity or basicity of solutions.
acid-base pair [CHEM] A concept in the Brönsted theory of acids and bases; the pair consists of the source of the proton (acid) and the base generated by the transfer of the proton.
acid-base titration [ANALY CHEM] A titration in which an acid of known concentration is added to a solution of base of unknown concentration, or the converse.

acid blowcase *See* blowcase.
acid bottom and lining [MET] A melting furnace's inner bottom and lining composed of materials that at operating temperatures of the furnace react with the melt and slag to give an acid reaction; examples of materials are sand, siliceous rock, and silica brick.
acid brittleness [MET] Low ductility of a metal due to its absorption of hydrogen gas, which may occur during an electrolytic process or during cleaning. Also known as hydrogen embrittlement.
acid bronze [MET] A copper-tin alloy containing lead and nickel; used in pumping equipment.
acid calcium phosphate *See* calcium phosphate.
acid cell [HISTOL] A parietal cell of the stomach. [PHYS CHEM] An electrolytic cell whose electrolyte is an acid.
acid chloride [ORG CHEM] A compound containing the radical —COCl; an example is benzoyl chloride.
acid clay [GEOL] A type of clay that gives off hydrogen ions when it dissolves in water.
acid conductor [CHEM ENG] A vessel designed for refortification of hydrolyzed acid by heating and evaporation of water, or sometimes by distillation of water under partial vacuum.
acid dilution [PETRO ENG] Dilution of concentrated hydrochloric acid with water prior to oil-well acidizing.
acid disproportionation [CHEM] The self-oxidation of a sample of an oxidized element to the next higher oxidation state and then a corresponding reduction to lower oxidation states.
acid dye [ORG CHEM] Any of a group of sodium salts of sulfonic and carboxylic acids used to dye natural and synthetic fibers, leather, and paper.
acid egg *See* blowcase.
acid electrolyte [INORG CHEM] A compound, such as sulfuric acid, that dissociates into ions when dissolved, forming an acidic solution that conducts an electric current.
acidemia [MED] A condition in which the pH of the blood falls below normal.
acid-fast bacteria [MICROBIO] Bacteria, especially mycobacteria, that stain with basic dyes and fluorochromes and resist decoloration by acid solutions.
acid-fast stain [MICROBIO] A differential stain used in identifying species of *Mycobacterium* and one species of *Nocardia*.
acid gases [CHEM ENG] The hydrogen sulfide and carbon dioxide found in natural and refinery gases which, when combined with moisture, form corrosive acids; known as sour gases when hydrogen sulfide and mercaptans are present.
acid halide [ORG CHEM] A compound of the type RCOX, where R is an alkyl or aryl radical and X is a halogen.
acid heat test [ANALY CHEM] The determination of degree of unsaturation of organic compounds by reacting with sulfuric acid and measuring the heat of reaction.
acidic [CHEM] **1.** Pertaining to an acid or to its properties. **2.** Forming an acid during a chemical process.
acidic group [ORG CHEM] The radical COOH, present in organic acids.
acidic lava [GEOL] Extruded felsic igneous magma which is rich in silica (SiO_2 content exceeds 65%).
acidic oxide [INORG CHEM] An oxygen compound of a nonmetal, for example, SO_2 or P_2O_5, which yields an oxyacid with water.
acidic rock [PETR] Igneous rock containing more than 66% SiO_2, making it silicic.
acidic sodium aluminum phosphate *See* sodium aluminum phosphate.
acidic titrant [ANALY CHEM] An acid solution of known concentration used to determine the basicity of another solution by titration.
acidification [CHEM] Addition of an acid to a solution until the pH falls below 7.
acidimeter [ANALY CHEM] An apparatus or a standard solution used to determine the amount of acid in a sample.
acidimetry [ANALY CHEM] The titration of an acid with a standard solution of base.
aciding [ENG] A light etching of a building surface of cast stone.
acidity [CHEM] The state of being acid.
acidity coefficient [GEOCHEM] The ratio of the oxygen content of the bases in a rock to the oxygen content in the silica. Also known as oxygen ratio.
acidizing [PETRO ENG] Well-stimulation method to increase oil production by injecting hydrochloric acid into the oil-bearing formation; the acid dissolves rock to enlarge the porous passages through which the oil must flow.
acid jetting [PETRO ENG] The jetting, from a device lowered through oil-well tubing, of an acid spray onto bottom-hole rock to clean away mud and scale interfering with oil flow.
acid lead [METAL] A 99.9% pure commercial lead made by adding copper to fully refined lead.
acid lining [ENG] In steel production, a silica-brick lining used in furnaces.
acid magnesium citrate *See* dibasic magnesium citrate.
acid manganous phosphate [INORG CHEM] $MnHPO_4 \cdot 3H_2O$ Acid-soluble pink powder. Also known as manganese hydrogen phosphate; secondary manganous phosphate.
acid mine drainage [MIN ENG] Drainage from bituminous coal mines containing a large concentration of acidic sulfates, especially ferrous sulfate.
acid mine water [MIN ENG] Mine water with free sulfuric acid, due to the weathering of iron pyrites.
acid number [CHEM] *See* acid value. [ENG] A number derived from a standard test indicating the acid or base composition of lubricating oils; it in no way indicates the corrosive attack of the used oil in service. Also known as corrosion number.
acidolysis [ORG CHEM] A chemical reaction involving the decomposition of a molecule, with the addition of the elements of an acid to the molecule; the reaction is comparable to hydrolysis or alcoholysis, in which water or alcohol, respectively, is used in place of the acid. Also known as acyl exchange.
acid open-hearth process [MET] A steelmaking process employing an open-hearth furnace lined with siliceous-type refractories.
acidophil [BIOL] **1.** Any substance, tissue, or organism having an affinity for acid stains. **2.** An organism having a preference for an acid environment. [HISTOL] **1.** An alpha cell of the adenohypophysis. **2.** *See* eosinophil.
acidophilia *See* eosinophilia.
acidophilic erythroblast *See* normoblast.
acidosis [MED] A condition of decreased alkali reserve of the blood and other body fluids.
acidotrophic [BIOL] Having an acid nutrient requirement.
acid phosphatase [BIOCHEM] An enzyme in blood which catalyzes the release of phosphate from phosphate esters; optimum activity at pH 5.
acid phosphate [INORG CHEM] A mono- or dihydric phosphate; for example, M_2HPO_4 or MH_2PO_4, where M represents a metal atom.
acid phthalic anhydride *See* phthalic anhydride.
acid pickle [MATER] Industrial waste water that is the spent liquor from a chemical process used to clean metal surfaces.
acid polishing [ENG] The use of acids to polish a glass surface.
acid potassium phthalate *See* potassium biphthalate.
acid potassium sulfate *See* potassium bisulfate.
acid precipitation [METEOROL] Rain or snow with a pH of less than 5.6.
acid process [MET] A melting process carried out in a furnace lined with acidic materials which combine readily with the oxides in the ore.
acid-proof coating [MATER] Material in liquid form suitable for application, by spraying, to the wall of projectile or bomb cavities to protect the metal from attack by explosives or other shell fillers.
acid reaction [CHEM] A chemical reaction produced by an acid.
acid recovery plant [CHEM ENG] In some refineries, a facility for separating sludge acid into acid oil, tar, and weak sulfuric acid, with provision for later reconcentration.
acid refined oils [MATER] A class of linseed oils with the mucilaginous component removed by treatment of raw oil with sulfuric acid.
acid refractory [MATER] A refractory that is composed principally of silica and reacts at high temperatures with bases such as lime, alkalies, and basic oxides.
acid-resistant [MATER] Able to withstand chemical reaction with or degeneration by acids.
acid salt [CHEM] A compound derived from an acid and base in which only a part of the hydrogen is replaced by a basic radical; for example, the acid sulfate $NaHSO_4$.
acid slag [MET] Furnace slag in which there is more silica and silicates than lime and magnesia.

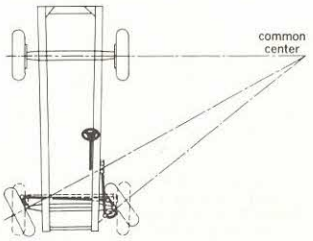
acid sludge [CHEM ENG] The residue left after treating petroleum oil with sulfuric acid for the removal of impurities.
acid sodium tartrate *See* sodium bitartrate.
acid soil [GEOL] A soil with pH less than 7; results from presence of exchangeable hydrogen and aluminum ions.
acid solution [CHEM] An aqueous solution containing more hydrogen ions than hydroxyl ions.
acid soot [ENG] Carbon particles that have absorbed acid fumes as a by-product of combustion; hydrochloric acid absorbed on carbon particulates is frequently the cause of metal corrosion in incineration.
acid spar [MINERAL] A grade of fluorspar containing over 98% CaF_2 and no more than 1% SiO_2; produced by flotation; used for the production of hydrofluoric acid.
acid steel [MET] Steel produced in a melting furnace employing siliceous-type refractories.
acid tartrate *See* bitartrate.
acid tide [MED] A period of increased acidity of urine and body fluids.
acid treating [CHEM ENG] A refining process in which unfinished petroleum products, such as gasoline, kerosine, and diesel oil, are contacted with sulfuric acid to improve their color, odor, and other properties.
acidulant [FOOD ENG] One of a class of chemicals added to food to increase either tartness or acidity, such as malic or citric acids for tartness and phosphoric acid for acidity.
acidulous water [HYD] Mineral water either with dissolved carbonic acid or dissolved sulfur compounds such as sulfates.
acid value [CHEM] The acidity of a solution expressed in terms of normality. Also known as acid number.
acid wash [MATER] A solution of phosphoric acid applied to steel parts that removes and neutralizes the alkaline solutions used for grease removal after machining; also leaves a metallic phosphate coating which accepts paint well and, of itself, provides a degree of protection against rust.
acid water pollution [ENG] Industrial waste waters that are acidic; usually appear in effluent from the manufacture of chemicals, batteries, artificial and natural fiber, fermentation processes (beer), and mining.
acieration [MET] Electrolytic coating of a thin metal plate with iron; the iron hardens to steellike strength.
acinar [ANAT] Pertaining to an acinus.
acinar cell [ANAT] Any of the cells lining an acinous gland.
Acinetobacter [MICROBIO] A genus of nonmotile, short, plump, almost spherical rods in the family Neisseriaceae; strictly aerobic; resistant to penicillin.
aciniform [ZOO] Shaped like a berry or a bunch of grapes.
acinotubular gland *See* tubuloalveolar gland.
acinous [BIOL] Of or pertaining to acini.
acinous gland [ANAT] A multicellular gland with sac-shaped secreting units. Also known as alveolar gland.
acinus [ANAT] The small terminal sac of an acinous gland, lined with secreting cells. [BOT] An individual drupelet of a multiple fruit.
Acipenser [VERT ZOO] A genus of actinopterygian fishes in the sturgeon family, Acipenseridae.
Acipenseridae [VERT ZOO] The sturgeons, a family of actinopterygian fishes in the order Acipenseriformes.
Acipenseriformes [VERT ZOO] An order of the subclass Actinopterygii represented by the sturgeons and paddlefishes.
Ackeret method [FL MECH] A method of studying the behavior of an airfoil in a supersonic airstream based on the hypothesis that the disturbance caused by the airfoil consists of two plane waves, at the leading and trailing edges, which propagate outward like sound waves and each makes an angle equal to the Mach angle with the direction of flow.
Ackerman linkage *See* Ackerman steering gear.
Ackerman steering gear [MECH ENG] Differential gear or linkage that turns the two steered road wheels of a self-propelled vehicle so that all wheels roll on circles with a common center. Also known as Ackerman linkage.
aclastic [OPTICS] Having the property of not refracting light.
aclinal [GEOL] Without dip; horizontal.
aclinic [GEOPHYS] Referring to a situation where a freely suspended magnetic needle remains in a horizontal position.
aclinic line *See* magnetic equator.
aΩcm *See* abohm centimeter.
Acmaeidae [INV ZOO] A family of gastropod mollusks in the order Archaeogastropoda; includes many limpets.
acme [PALEON] The time of largest abundance or variety of a fossil taxon; the taxon may be either general or local.
acme harrow [AGR] A type of harrow having a transverse horizontal frame with stiff curved blades. Also known as blade harrow; curved knife-tooth harrow; pulverizer.
acme screw thread [DES ENG] A standard thread having a profile angle of 29° and a flat crest; used on power screws in such devices as automobile jacks, presses, and lead screws on lathes. Also known as acme thread.
acme thread *See* acme screw thread.
acmic [ECOL] A phase or period in which an aquatic population undergoes seasonal changes.
acmite [MINERAL] $NaFeSi_2O_6$ A brown or green silicate mineral of the pyroxene group, often in long, pointed prismatic crystals; hardness is 6–6.5 on Mohs scale, and specific gravity is 3.50–3.55; found in igneous and metamorphic rocks.
acne [MED] A pleomorphic, inflammatory skin disease involving sebaceous follicles of the face, back, and chest and characterized by blackheads, whiteheads, papules, pustules, and nodules.
acne rosacea [MED] A form of acne occurring in older persons and seen as reddened inflamed areas on the forehead, nose, and cheeks.
Acnidosporidia [INV ZOO] An equivalent name for the Haplosporea.
acnode *See* isolated point.
Acoela [INV ZOO] An order of marine flatworms in the class Turbellaria characterized by the lack of a digestive tract and coelomic cavity.
Acoelea [INV ZOO] An order of gastropod mollusks in the subclass Opistobranchia; includes many sea slugs.
Acoelomata [INV ZOO] A subdivision of the animal kingdom; individuals are characterized by lack of a true body cavity.
acoelous [ZOO] **1.** Lacking a true body cavity or coelom. **2.** Lacking a true stomach or digestive tract.
acolpate [BOT] Of pollen grains, lacking furrows or grooves.
Aconchulinida [INV ZOO] An order of protozoans in the subclass Filosia comprising a small group of naked amebas having filopodia.
aconitase [BIOCHEM] An enzyme involved in the Krebs citric acid cycle that catalyzes the breakdown of citric acid to *cis*-aconitic and isocitric acids.
aconite [BOT] Any plant of the genus *Aconitum*. Also known as friar's cowl; monkshood; mousebane; wolfsbane. [PHARM] A toxic drug obtained from the dried tuberous root of *Aconitum napellus;* the principal alkaloid is aconitine.
aconitic acid [ORG CHEM] $C_6H_6O_6$ A white, crystalline organic acid found in sugarcane and sugarbeet; obtained during manufacture of sugar.
aconitine [PHARM] $C_{34}H_{47}O_{11}N$ A poisonous, white, crystalline alkaloid compound obtained from aconites such as monkshood (*Aconitum napellus*).
acorn [BOT] The nut of the oak tree, usually surrounded at the base by a woody involucre.
acorn barnacle [INV ZOO] Any of the sessile barnacles that are enclosed in conical, flat-bottomed shells and attach to ships and near-shore rocks and piles.
acorn disease [PL PATH] A virus disease of citrus plants characterized by malformation of the fruit, which is somewhat acorn-shaped.
acorn sugar *See* quercitol.
acorn tube [ELECTR] An ultra-high-frequency electron tube resembling an acorn in shape and size.
acorn worm [INV ZOO] Any member of the class Enteropneusta, free-living animals that usually burrow in sand or mud. Also known as tongue worm.
acotyledon [BOT] A plant without cotyledons.
acoubuoy [ENG] An acoustic listening device similar to a sonobuoy, used on land to form an electronic fence that will pick up sounds of enemy movements and transmit them to orbiting aircraft or land stations.
acouchi [VERT ZOO] A hystricomorph rodent represented by two species in the family Dasyproctidae; believed to be a dwarf variety of the agouti.
acoustic [ACOUS] Relating to, containing, producing, arising from, actuated by, or carrying sound.
acoustic absorption *See* sound absorption.
acoustic absorption coefficient *See* sound absorption coefficient.

ACINOUS GLAND



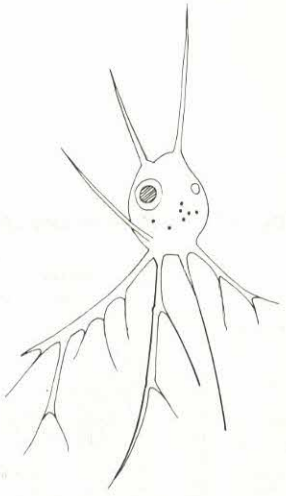
An example of a typical compound type of acinous gland.

ACKERMAN STEERING GEAR



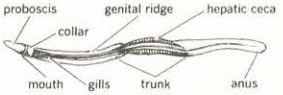
All wheels turn about a common center.

ACONCHULINIDA



A drawing of *Penardia cometa* showing the filamentous pseudopodia (filopodia). *(After De Saedeleer)*

ACORN WORM



A drawing of the acorn worm, *Saccoglossus*, showing anatomical features. *(From T. I. Storer and R. L. Usinger, General Zoology, 4th ed., McGraw-Hill, 1965)*

acoustic absorptivity *See* sound absorption coefficient.

acoustical [ACOUS] Having a characteristic concerning sound, of an object or quantity that in and of itself does not have properties associated with sound, such as a device, measurement, or symbol.

acoustical ceiling [BUILD] A ceiling covered with or built of material with special acoustical properties.

acoustical ceiling system [BUILD] A system for the structural support of an acoustical ceiling; lighting and air diffusers may be included as part of the system.

acoustical door [BUILD] A solid door with gasketing along the top and sides, and usually an automatic door bottom, designed to reduce noise transmission.

acoustical Doppler effect [ACOUS] The change in pitch of a sound observed when there is relative motion between source and observer.

acoustical holography [PHYS] A technique for using sound to form visible images, in which acoustic beams form an interference pattern of an object and a beam of light interacts with this pattern and is focused to form an optical image.

acoustical insulation board [MATER] A porous board designed or used for acoustical applications or for sound-insulating construction.

acoustical material [MATER] Any natural or synthetic material that absorbs sound; acoustical tile is an example.

acoustical model [CIV ENG] A model used to investigate certain acoustical properties of an auditorium or room such as sound pressure distribution, sound-ray paths, and focusing effects.

acoustical plaster [MATER] A low-density sound-absorbing plaster applied as a finish coat to provide a uniform finished surface.

acoustical scintillation [COMMUN] Irregular fluctuation in the received intensity of sounds propagated through the atmosphere from a source of uniform output; produced by nonhomogeneous structure of the atmosphere along the path of the sound.

acoustical stiffness [ACOUS] The acoustic reactance associated with the potential energy of a medium multiplied by 2π times the sound frequency.

acoustical tile [MATER] A sound-absorptive material, usually having unit dimensions of 24 × 24 inches (approximately 61 × 61 centimeters) or less, used to cover an acoustical ceiling.

acoustical treatment [CIV ENG] That part of building planning that is designed to provide a proper acoustical environment; includes the use of acoustical material.

acoustic amplifier [ELECTR] A device that amplifies mechanical vibrations directly at audio and ultrasonic frequencies. Also known as acoustoelectric amplifier.

acoustic approximation [FL MECH] The approximation that leads from the nonlinear hydrodynamic equations of a gas to the linear wave equation for sound wave propagation.

acoustic array [ENG ACOUS] A sound-transmitting or -receiving system whose elements are arranged to give desired directional characteristics.

acoustic axis *See* axis of acoustic symmetry.

acoustic bearing *See* sonic bearing.

acoustic branch [SOLID STATE] One of the parts of the dispersion relation, frequency as a function of wave number, for crystal lattice vibrations, representing vibration at low (acoustic) frequencies.

acoustic bridge [ELECTR] A device, based on the principle of the electrical Wheatstone bridge, used for analysis of deafness.

acoustic capacitance *See* acoustic compliance.

acoustic center [ENG ACOUS] The center of the spherical sound waves radiating outward from an acoustic transducer.

acoustic clarifier [ENG ACOUS] System of cones loosely attached to the baffle of a loudspeaker and designed to vibrate and absorb energy during sudden loud sounds to suppress these sounds.

acoustic comfort index [ACOUS] An arbitrarily designed scale to indicate the noise inside the passenger cabin of an aircraft; on this scale +100 represents ideal conditions or zero noise, 0 represents barely tolerable conditions, and −100 represents intolerable conditions. Abbreviated ACI.

acoustic compliance [ACOUS] The reciprocal of acoustic stiffness. Also known as acoustic capacitance.

acoustic convolver *See* convolver.

acoustic coupler [ENG ACOUS] A device used between the modem of a computer terminal and a standard telephone line to permit transmission of digital data in either direction without making direct connections.

acoustic delay [ENG ACOUS] A delay which is deliberately introduced in sound reproduction by having the sound travel a certain distance along a pipe before conversion into electric signals.

acoustic delay line [ELECTR] A device in which acoustic signals are propagated in a medium to make use of the sonic propagation time to obtain a time delay for the signals. Also known as sonic delay line.

acoustic detection [ENG] Determination of the profile of a geologic formation, an ocean layer, or some object in the ocean by measuring the reflection of sound waves off the object.

acoustic detector [ELECTR] The stage in a receiver at which demodulation of a modulated radio wave into its audio component takes place.

acoustic dispersion [ACOUS] A complex sound wave's separation into its frequency components as it passes through a medium; usually measured by the rate of change of velocity with frequency.

acoustic domain [ACOUS] A concentration of crystal lattice vibrations traveling at the speed of sound; used to generate light from an array of *pn* junctions.

acoustic emission [ACOUS] The phenomenon of transient elastic-wave generation due to a rapid release of strain energy caused by a structural alteration in a solid material. Also known as stress-wave emission.

acoustic energy *See* sound energy.

acoustic fatigue [MECH] The tendency of a material, such as a metal, to lose strength after acoustic stress.

acoustic feedback [ENG ACOUS] The reverberation of sound waves from a loudspeaker to a preceding part of an audio system, such as to the microphone, in such a manner as to reinforce, and distort, the original input. Also known as acoustic regeneration.

acoustic filter *See* filter.

acoustic fix *See* sonic fix.

acoustic generator [ENG ACOUS] A transducer which converts electrical, mechanical, or other forms of energy into sound.

acoustic grating [ACOUS] A series of rods or other suitable objects of equal size placed in a row a fixed distance apart; causes sounds with different wavelengths to be diffracted in different directions.

acoustic hologram [ENG] The phase interference pattern, formed by acoustic beams, that is used in acoustical holography; when light is made to interact with this pattern, it forms an image of an object placed in one of the beams.

acoustic homing [NAV] The following of a path of acoustic energy to or toward its source or point of reflection.

acoustic horn *See* horn.

acoustic image [ACOUS] The geometric space figure that is made up of the acoustic foci of an acoustic lens, mirror, or other acoustic optical system and is the acoustic counterpart of an extended source of sound. Also known as image.

acoustic imaging [ACOUS] The production of real-time images of the internal structure of a metallic or biological object that is opaque to light. Also known as ultrasonic imaging.

acoustic impedance [ACOUS] The complex ratio of the sound pressure on a given surface to the sound flux through that surface, expressed in acoustic ohms.

acoustic inertance *See* acoustic mass.

acoustic insulation [MATER] A material used to diminish sound energy that passes through it or strikes its surface.

acoustic intensity [ACOUS] The limit approached by the ratio of the acoustic power in a given area to the magnitude of this area as the magnitude approaches zero.

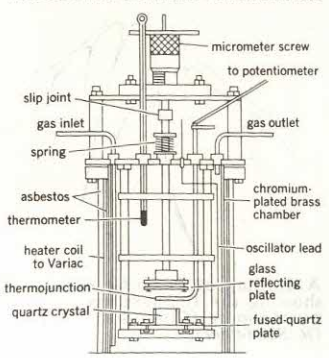
acoustic interferometer [ACOUS] A device for measuring the velocity and attenuation of sound waves in a gas or liquid by an interference method.

acoustic jamming [ENG ACOUS] The deliberate radiation or reradiation of mechanical or electroacoustic signals with the objectives of obliterating or obscuring signals which the enemy is attempting to receive and of deterring enemy weapons systems.

acoustic labyrinth [ENG ACOUS] Special baffle arrangement used with a loudspeaker to prevent cavity resonance and to reinforce bass response.

acoustic lens [MATER] Selected materials shaped to refract

ACOUSTIC INTERFEROMETER



The interferometric chamber in which measurements of change in velocity and attenuation of sound waves are made.

sound waves in accordance with the principles of geometrical optics, as is done for light. Also known as lens.

acoustic levitation [ACOUS] The use of a very intense sound wave to keep a body suspended above the device producing the sound wave.

acoustic line [ENG ACOUS] The acoustic equivalent of an electrical transmission line, involving baffles, labyrinths, or resonators placed at the rear of a loudspeaker and arranged to help reproduce the very low audio frequencies.

acoustic line of position *See* sonic line of position.

acoustic Mach meter [AERO ENG] A device which registers data on sound propagation for the calculation of Mach number.

acoustic mass [ACOUS] The quantity which, after multiplication by 2π times the frequency, results in the acoustic reactance associated with the kinetic energy of the sound medium. Also known as acoustic inertance.

acoustic mass reactance [ACOUS] The part of the acoustic reactance associated with the kinetic energy of a medium. Also known as mass reactance.

acoustic measurement [ACOUS] The process of quantitatively determining one or more properties of sound.

acoustic memory [COMPUT SCI] A computer memory that uses an acoustic delay line, in which a train of pulses travels through a medium such as mercury or quartz.

acoustic microscope [OPTICS] An instrument which employs acoustic radiation at microwave frequencies to allow visualization of the microscopic detail exhibited in elastic properties of an object.

acoustic mine [ORD] A naval mine which is activated by acoustic means.

acoustic mode [SOLID STATE] The type of crystal lattice vibrations which for long wavelengths act like an acoustic wave in a continuous medium, but which for shorter wavelengths approach the Debye frequency, showing a dispersive decrease in phase velocity.

acoustic navigation *See* sonic navigation.

acoustic nerve *See* auditory nerve.

acoustic noise [ACOUS] Noise in the acoustic spectrum; usually measured in decibels.

acoustic ocean-current meter [ENG] An instrument that measures current flow in rivers and oceans by transmitting acoustic pulses in opposite directions parallel to the flow and measuring the difference in pulse travel times between transmitter-receiver pairs.

acoustic ohm [ACOUS] The unit of acoustic impedance. Also known as acoustic reactance unit; acoustic resistance unit.

acousticophobia [PSYCH] Abnormal fear of sounds.

acoustic phonon [SOLID STATE] A quantum of excitation of an acoustic mode of vibration.

acoustic plaster [MATER] Plaster having good acoustic absorbing properties; it contains metal which, upon contact with water, evolves gas to aerate the mass.

acoustic position reference system [ENG] An acoustic system used in offshore oil drilling to provide continuous information on ship position with respect to an ocean-floor acoustic beacon transmitting an ultrasonic signal to three hydrophones on the bottom of the drilling ship.

acoustic power *See* sound power.

acoustic radar [ENG] Use of sound waves with radar techniques for remote probing of the lower atmosphere, up to heights of about 1500 meters, for measuring wind speed and direction, humidity, temperature inversions, and turbulence.

acoustic radiation [ACOUS] Infrasonic, sonic, or ultrasonic waves propagating through a solid, liquid, or gaseous medium.

acoustic radiation pressure [ACOUS] A unidirectional, steady-state pressure exerted upon a surface exposed to a sound wave.

acoustic radiator [ENG ACOUS] A vibrating surface that produces sound waves, such as a loudspeaker cone or a headphone diaphragm.

acoustic radiometer [ENG] An instrument for measuring sound intensity by determining the unidirectional steady-state pressure caused by the reflection or absorption of a sound wave at a boundary.

acoustic ratio [ENG ACOUS] The ratio of the intensity of sound radiated directly from a source to the intensity of sound reverberating from the walls of an enclosure, at a given point in the enclosure.

acoustic reactance [ACOUS] The imaginary component of the acoustic impedance.

acoustic reactance unit *See* acoustic ohm.

acoustic receiver [ELECTR] The complete equipment required for receiving modulated radio waves and converting them into sound.

acoustic reciprocity theorem [ACOUS] A theorem which states that in the acoustic field due to a sound source at point A, the sound pressure received at any other point B is the same as that which would be produced at A if the source were placed at B, and that this can be generalized for multiple sources and receivers.

acoustic reflection coefficient *See* acoustic reflectivity.

acoustic reflectivity [ACOUS] Ratio of the rate of flow of sound energy reflected from a surface, on the side of incidence, to the incident rate of flow. Also known as acoustic reflection coefficient; sound reflection coefficient.

acoustic reflex [PHYSIO] Brief, involuntary closure of the eyes due to stimulation of the acoustic nerve by a sudden sound.

acoustic reflex enclosure [ENG ACOUS] A loudspeaker cabinet designed with a port to allow a low-frequency contribution from the rear of the speaker cone to be radiated forward.

acoustic refraction [ACOUS] Variation of the direction of sound transmission due to spatial variation of the wave velocity in the medium.

acoustic regeneration *See* acoustic feedback.

acoustic resistance [ACOUS] The real component of the acoustic impedance.

acoustic resistance unit *See* acoustic ohm.

acoustic resonance [ACOUS] A phenomenon exhibited by an acoustic system, such as an organ pipe or Helmholtz resonator, in which the response of the system to sound waves becomes very large when the frequency of the sound approaches a natural vibration frequency of the air in the system.

acoustic resonator [ACOUS] An enclosure that produces sound-wave resonance at a particular frequency.

acoustics [PHYS] **1.** The science of the production, transmission, and effects of sound. **2.** The characteristics of a room that determine the qualities of sound in it relevant to hearing.

acoustic scattering [ACOUS] The irregular reflection, refraction, and diffraction of sound in many directions.

acoustic seal [ENG ACOUS] A joint between two parts to provide acoustical coupling with low losses of energy, such as between an earphone and the human ear.

acoustic shadow [ACOUS] A region immediately behind an object placed in the path of a sound wave whose wavelength is much smaller than the object, in which the initial sound wave is cut off by the object and the sound intensity is determined by the diffraction and interference of sound waves bent around the obstacle.

acoustic shielding [ACOUS] A sound barrier that prevents the transmission of acoustic energy.

acoustic signature [ENG] In acoustic detection, the profile characteristic of a particular object or class of objects, such as a school of fish or a specific ocean-bottom formation.

acoustic spectrograph [ENG] A spectrograph used with sound waves of various frequencies to study the transmission and reflection properties of ocean thermal layers and marine life.

acoustic spectrometer [ENG ACOUS] An instrument that measures the intensities of the various frequency components of a complex sound wave. Also known as audio spectrometer.

acoustic spectrum [ACOUS] The range of acoustic frequencies, extending from subsonic to ultrasonic frequencies, that is, approximately from zero to at least 1 megahertz.

acoustic stiffness [ACOUS] The product of the angular frequency and the acoustic stiffness reactance.

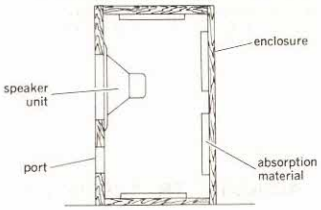
acoustic stiffness reactance [ACOUS] The part of acoustic reactance associated with the potential energy of a medium or its boundaries. Also known as stiffness reactance.

acoustic strain gage [ENG] An instrument used for measuring structural strains; consists of a length of fine wire mounted so its tension varies with strain; the wire is plucked with an electromagnetic device, and the resulting frequency of vibration is measured to determine the amount of strain.

acoustic streaming [FL MECH] Unidirectional flow currents in a fluid that are due to the presence of sound waves.

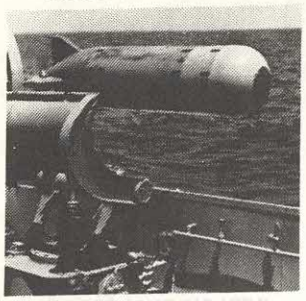
acoustic theodolite [ENG] An instrument that uses sound waves to provide a continuous vertical profile of ocean currents at a specific location.

ACOUSTIC REFLEX ENCLOSURE



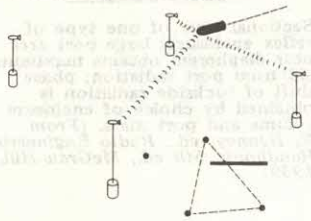
Sectional view of one type of reflex enclosure; large port area near diaphragm obtains maximum aid from port radiation; phase shift of backside radiation is obtained by choice of enclosure volume and port mass. *(From K. Henney, ed., Radio Engineering Handbook, 5th ed., McGraw-Hill, 1959)*

ACOUSTIC TORPEDO



The Mark 32 acoustic torpedo shown leaving its launcher. *(Official U. S. Navy photograph)*

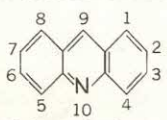
ACOUSTIC TRANSPONDER



pilot's dead reckoning tracer (DRT) presentation

Submersible navigating from underwater acoustic transponders.

ACRIDINE



Structural formula for acridine showing the carbon positions by number.

acoustic theory [AERO ENG] The linearized small-disturbance theory used to predict the approximate airflow past an airfoil when the disturbance velocities caused by the flow are small compared to the flight speed and to the speed of sound.

acoustic tile [MATER] A thin, often decorative tile with sound-absorbing properties, used to cover ceilings and walls.

acoustic torpedo [ORD] A naval torpedo which is directed toward its target either by the noise emitted by the target or by sonar.

acoustic transducer [ENG ACOUS] A device that converts acoustic energy to electrical or mechanical energy, such as a microphone or phonograph pickup.

acoustic transformer [ENG ACOUS] A device, such as a horn or megaphone, for increasing the efficiency of sound radiation.

acoustic transmission coefficient *See* sound transmission coefficient.

acoustic transmissivity *See* sound transmission coefficient.

acoustic transponder [NAV] A device used in underwater navigation which, on being interrogated by coded acoustic signals, emits acoustic reply.

acoustic treatment [BUILD] The use of sound-absorbing materials to give a room a desired degree of freedom from echo and reverberation.

acoustic velocity *See* speed of sound.

acoustic wave [ACOUS] **1.** An elastic nonelectromagnetic wave that has a frequency which may extend into the gigahertz range; one type is a surface acoustic wave, and the other type is a bulk or volume acoustic wave. Also known as elastic wave. **2.** *See* sound.

acoustic-wave amplifier [ELECTR] An amplifier in which the charge carriers in a semiconductor are coupled to an acoustic wave that is propagated in a piezoelectric material, to produce amplification.

acoustic well logging [ENG] A ground exploration method that uses a high-energy sound source and a receiver, both underground.

acoustoelectric amplifier *See* acoustic amplifier.

acoustoelectric effect [ELECTR] The development of a direct-current voltage in a semiconductor or metal by an acoustic wave traveling parallel to the surface of the material. Also known as electroacoustic effect.

acoustoelectronics [ENG ACOUS] The branch of electronics that involves use of acoustic waves at microwave frequencies (above 500 megahertz), traveling on or in piezoelectric or other solid substrates. Also known as pretersonics.

acoustooptical cell [ELEC] An electric-to-optical transducer in which an acoustic or ultrasonic electric input signal modulates or otherwise acts on a beam of light.

acoustooptical filter [OPTICS] An optical filter that is tuned across the visible spectrum by acoustic waves in the frequency range of 40 to 68 megahertz.

acoustooptical material [MATER] A material in which the refractive index or some other optical property can be changed by an acoustic wave.

acoustooptic interaction [OPTICS] A way to influence the propagation characteristics of an optical wave by applying a low-frequency acoustical field to the medium through which the wave passes.

acoustooptic modulator [OPTICS] A device utilizing acoustooptic interaction ultrasonically to vary the amplitude or the phase of a light beam. Also known as Bragg cell.

acoustooptics [OPTICS] The science that deals with interactions between acoustic waves and light.

ACP *See* acyl carrier protein.

a-c plane [CRYSTAL] A plane at right angles to the surface of movement in a crystal.

acquire [ELECTR] **1.** Of acquisition radars, the process of detecting the presence and location of a target in sufficient detail to permit identification. **2.** Of tracking radars, the process of positioning a radar beam so that a target is in that beam to permit the effective employment of weapons. Also known as target acquisition.

acquired [BIOL] Not present at birth, but developed by an individual in response to the environment and not subject to hereditary transmission.

acquired drive [PSYCH] Any aroused state of behavior that originates from and is nurtured by experience rather than inheritance.

acquired immunity [IMMUNOL] Resistance to a microbial or other antigenic substance taken on by a naturally susceptible individual; may be either active or passive.

acquired immunological tolerance [IMMUNOL] Failure of immunological responsiveness, that is, inability of antigen-sensitive cells to synthesize antibodies; induced by exposure to large amounts of an antigen. Also known as immunological paralysis.

acquisition [ENG] The process of pointing an antenna or a telescope so that it is properly oriented to allow gathering of tracking or telemetry data from a satellite or space probe.

acquisition and tracking radar [ENG] A radar set capable of locking onto a received signal and tracking the object emitting the signal; the radar may be airborne or on the ground.

acrania [MED] Partial or complete absence of the cranium at birth.

Acrania [ZOO] A group of lower chordates with no cranium, jaws, vertebrae, or paired appendages; includes the Tunicata and Cephalochordata.

acrasia [PSYCH] Lack of self-control.

Acrasiales [BIOL] A group of microorganisms that have plant and animal characteristics; included in the phylum Myxomycophyta by botanists and Mycetozoia by zoologists.

Acrasida [MYCOL] An order of Mycetozoia containing cellular slime molds.

Acrasieae [BIOL] An equivalent name for the Acrasiales.

acrasin [BIOCHEM] The chemotactic substance thought to be secreted by, and to effect aggregation of, myxamebas during their fruiting phase.

acraspedote [INV ZOO] Describing tapeworm segments which are not overlapping.

acre [MECH] A unit of area, equal to 43,560 square feet, or to 4046.8564224 square meters.

Acree's reaction [ANALY CHEM] A test for protein in which a violet ring appears when concentrated sulfuric acid is introduced below a mixture of the unknown solution and a formaldehyde solution containing a trace of ferric chloride.

acre-foot [HYD] The volume of water required to cover 1 acre to a depth of 1 foot, hence 43,560 cubic feet; a convenient unit for measuring irrigation water, runoff volume, and reservoir capacity.

acre foot per day [HYD] The United States unit of volume rate of water flow. Abbreviated acre ft/d.

acre ft/d *See* acre foot per day.

acre-in. *See* acre-inch.

acre-inch [HYD] A unit of volume used in the United States for water flow, equal to 3630 cubic feet. Abbreviated acre-in.

acre-yield [GEOL] The average amount of oil, gas, or water taken from one acre of a reservoir.

acridine [ORG CHEM] $(C_6H_4)_2NCH$ A typical member of a group of organic heterocyclic compounds containing benzene rings fused to the 2,3 and 5,6 positions of pyridine; derivatives include dyes and medicines.

acridine orange [ORG CHEM] A dye with an affinity for nucleic acids; the complexes of nucleic acid and dye fluoresce orange with RNA and green with DNA when observed in the fluorescence microscope.

acriflavine [ORG CHEM] $C_{14}H_{14}N_3Cl$ A yellow acridine dye obtained from proflavine by methylation in the form of red crystals; used as an antiseptic in solution.

acroagnosis [MED] Loss or absence of sense perception in a limb.

acrobatholithic [GEOL] A stage in batholithic erosion where summits of cupolas and stocks are exposed without any exposure of the surface separating the barren interior of the batholith from the mineralized upper part.

acroblast [CYTOL] A vesicular structure in the spermatid formed from Golgi material.

acrocarpous [BOT] In some mosses of the subclass Eubrya, having the sporophyte at the end of a stem and therefore exhibiting the erect habit.

acrocentric chromosome [CYTOL] A chromosome having the centromere close to one end.

acrocephalosyndactylism [MED] A congenital malformation consisting of an enlarged, pointed skull and defective separation of fingers and toes. Also known as Apert's syndrome.

acrocephaly *See* oxycephaly.

Acroceridae [INV ZOO] The humpbacked flies, a family of orthorrhaphous dipteran insects in the series Brachycera.

acrodomatia [ECOL] Specialized structures on certain

plants adapted to shelter mites; relationship is presumably symbiotic.

acrodont [ANAT] Having teeth fused to the edge of the supporting bone.

acrodynia [MED] A childhood syndrome associated with mercury ingestion and characterized by periods of irritability alternating with apathy, anorexia, pink itching hands and feet, photophobia, sweating, tachycardia, hypertension, and hypotonia.

acrolein [ORG CHEM] CH_2=CHCHO A colorless to yellow liquid with a pungent odor and a boiling point of 52.7°C; soluble in water, alcohol, and ether; used in organic synthesis, pharmaceuticals manufacture, and as an herbicide and tear gas. Also known as acrylaldehyde; acrylic aldehyde; 2-propenal.

acrolein cyanohydrin [ORG CHEM] CH_2:CHCH(OH)-CN A liquid soluble in water and boiling at 165°C; copolymerizes with ethylene and acrylonitrile; used to modify synthetic resins.

acrolein dimer [ORG CHEM] $C_6H_8O_2$ A flammable, water-soluble liquid used as an intermediate for resins, dyestuffs, and pharmaceuticals. Also known as 2-formyl-3,4-dihydro-2*H*-pyran.

acrolein test [ANALY CHEM] A test for the presence of glycerin or fats; a sample is heated with potassium bisulfate, and acrolein is released if the test is positive.

acromegaly [MED] A chronic condition in adults caused by hypersecretion of the growth hormone and marked by enlarged jaws, extremities, and viscera, accompanied by certain physiological changes.

acromelalgia *See* erythromelalgia.

acromere [HISTOL] The distal portion of a rod or cone in the retina.

acrometer [ENG] An instrument to measure the density of oils.

acromion [ANAT] The flat process on the outer end of the scapular spine that articulates with the clavicle and forms the outer angle of the shoulder.

acromorph [GEOL] A salt dome.

acron [EVOL] Unsegmented head of the ancestral arthropod. [INV ZOO] **1.** The preoral, nonsegmented portion of an arthropod embryo. **2.** The prostomial region of the trochophore larva of some mollusks.

acroparesthesia [MED] A chronic self-limited symptom complex associated with a variety of systemic diseases, characterized by tingling, pins-and-needles sensations, numbness or stiffness, and occasionally pains in the hands and feet.

acropetal [BOT] From the base toward the apex, as seen in the formation of certain organs or the spread of a pathogen.

acrophobia [PSYCH] Abnormal fear of great heights.

Acrosaleniidae [PALEON] A family of Jurassic and Cretaceous echinoderms in the order Salenoida.

acroscopic [BOT] Facing, or on the side toward, the apex.

acrosin [BIOCHEM] A proteolytic enzyme located in the acrosome of a spermatozoon; thought to be involved in penetration of the egg.

acrosome [CYTOL] The anterior, crescent-shaped body of spermatozoon, formed from Golgi material of the spermatid. Also known as perforatorium.

acrospore [MYCOL] In fungi, a spore formed at the outer tip of a hypha.

acrotarsium [ANAT] Instep of the foot.

acroterion [ARCH] **1.** A pedestal on a pediment to support an ornamental, such as a statue. **2.** An ornamental placed on such a pedestal.

Acrothoracica [INV ZOO] A small order of burrowing barnacles in the subclass Cirripedia that inhabit corals and the shells of mollusks and barnacles.

Acrotretacea [PALEON] A family of Cambrian and Ordovician inarticulate brachipods of the suborder Acrotretidina.

Acrotretida [INV ZOO] An order of brachiopods in the class Inarticulata; representatives are known from Lower Cambrian to the present.

Acrotretidina [INV ZOO] A suborder of inarticulate brachiopods of the order Acrotretida; includes only species with shells composed of calcium phosphate.

acrozone *See* range zone.

Acrux *See* α Crucis.

acrylaldehyde *See* acrolein.

acrylamide [ORG CHEM] $CH_2CHCONH_2$ Colorless, odorless crystals with a melting point of 84.5°C; soluble in water, alcohol, and acetone; used in organic synthesis, polymerization, sewage treatment, ore processing, and permanent press fabrics.

acrylamide copolymer [ORG CHEM] A thermosetting resin formed of acrylamide with other resins, such as the acrylic resins.

acrylate [ORG CHEM] **1.** A salt or ester of acrylic acid. **2.** *See* acrylate resin.

acrylate resin [ORG CHEM] Acrylic acid or ester polymer with a —CH_2—CH(COOR)— structure; used in paints, sizings and finishes for paper and textiles, adhesives, and plastics. Also known as acrylate.

acrylic acid [ORG CHEM] $CH_2CHCOOH$ An easily polymerized, colorless, corrosive liquid used as a monomer for acrylate resins.

acrylic aldehyde *See* acrolein.

acrylic ester [ORG CHEM] An ester of acrylic acid.

acrylic fiber [TEXT] Any of numerous synthetic textile fibers made by polymerization of acrylonitrile.

acrylic resin [ORG CHEM] A thermoplastic synthetic organic polymer made by the polymerization of acrylic derivatives such as acrylic acid, methacrylic acid, ethyl acrylate, and methyl acrylate; used for adhesives, protective coatings, and finishes.

acrylic rubber [ORG CHEM] Synthetic rubber containing acrylonitrile; for example, nitrile rubber.

acrylic syrup [MATER] Lucite in a liquid form; used as a low-pressure laminating resin; produces stiff, strong, tough laminates that can be adapted to bright or translucent colors.

acrylonitrile [ORG CHEM] CH_2CHCN A colorless liquid compound used in the manufacture of acrylic rubber and fibers. Also known as vinylcyanide.

acrylonitrile-butadiene rubber *See* nitrile rubber.

acrylonitrile butadiene styrene resin [ORG CHEM] A polymer made by blending acrylonitrile-styrene copolymer with a butadiene-acrylonitrile rubber or by interpolymerizing polybutadiene with styrene and acrylonitrile; combines the advantages of hardness and strength of the vinyl resin component with the toughness and impact resistance of the rubbery component. Abbreviated ABS resin.

acrylonitrile copolymer [ORG CHEM] Oil-resistant synthetic rubber made by polymerization of acrylonitrile with compounds such as butadiene or acrylic acid.

acrylonitrile rubber *See* nitrile rubber.

ACSR *See* aluminum cable steel-reinforced.

Actaeonidae [INV ZOO] A family of gastropod mollusks in the order Tectibranchia.

Actaletidae [INV ZOO] A family of insects belonging to the order Collembola characterized by simple tracheal systems.

ACTH *See* adrenocorticotropic hormone.

Actidione [MICROBIO] Trade name for the antibiotic cyclohexamide.

actin [BIOCHEM] A muscle protein that is the chief constituent of the Z-band myofilaments of each sarcomere.

actinal [INV ZOO] In radially symmetrical animals, referring to the part from which the tentacles or arms radiate or to the side where the mouth is located.

Actiniaria [INV ZOO] The sea anemones, an order of coelenterates in the subclass Zoantharia.

actinic [PHYS] Pertaining to electromagnetic radiation capable of initiating photochemical reactions, as in photography or the fading of pigments.

actinic achromatism [OPTICS] **1.** The design of a photographic lens system so that light sources at the wavelength of the Fraunhofer D line near 589 nanometers and the G line at 430.8 nanometers are focused at the same point and produce images of the same size. **2.** The design of an astronomical lens system so that light sources at the wavelength of the Fraunhofer F line at 486.1 nanometers and the G line at 430.8 nanometers are focused at the same point and produce images of the same size. Also known as FG achromatism.

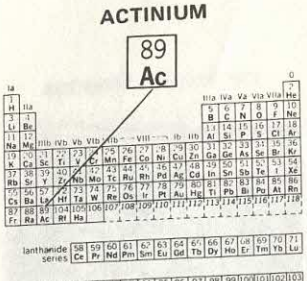
actinic focus [OPTICS] The point in an optical system at which the chemically most effective rays (usually those in the ultraviolet) converge. Also known as chemical focus.

actinic glass [OPTICS] Glass that transmits more of the visible components of incident radiation and less of the infrared and ultraviolet components.

actinide series [CHEM] The group of elements of atomic number 89 through 103. Also known as actinoid elements.

S.C.E.R.T., West Bengal
Date 2-3-87
Acc. No. 3785

ACTINIUM



Periodic table of the chemical elements showing the position of actinium.

actinism [CHEM] The production of chemical changes in a substance upon which electromagnetic radiation is incident.

actinium [CHEM] A radioactive element, symbol Ac, atomic number 89; its longest-lived isotope is Ac^{227} with a half-life of 21.7 years; the element is trivalent; chief use is, in equilibrium with its decay products, as a source of alpha rays.

actinium decay series [NUCLEO] A series of radioactive disintegration products derived from uranium-235.

actinium emanation *See* actinon.

actinobacillosis [VET MED] A bacterial disease of domestic animals caused by *Actinobacillus lignieresii*.

Actinobacillus [MICROBIO] A species of gram-negative, oval, spherical, or rod-shaped bacteria that are of uncertain affiliation; coccal and bacillary cells are often interspersed, giving a "Morse code" form; species are pathogens of animals, occasionally of humans.

Actinobifida [MICROBIO] A genus of bacteria in the family Micromonosporaceae with a dichotomously branched substrate; an aerial mycelium is formed which produces single spores.

actinocarpous [BOT] Having flowers and fruit radiating from one point.

actinochemistry [CHEM] A branch of chemistry concerned with chemical reactions produced by light or other radiation.

actinochitin [BIOCHEM] A form of birefringent or anisotropic chitin found in the seta of certain mites.

Actinochitinosi [INV ZOO] A group name for two closely related suborders of mites,the Trombidiformes and the Sarcoptiformes.

actinodielectric [ELEC] Of a substance, exhibiting an increase in electrical conductivity when electromagnetic radiation is incident upon it.

actinoelectricity [ELEC] The electromotive force produced in a substance by electromagnetic radiation incident upon it.

actinogram [ENG] The record of heat from a source, such as the sun, as detected by a recording actinometer.

actinograph [ENG] A recording actinometer.

actinoid elements *See* actinide series.

actinolite [MINERAL] $Ca_2(Mg,Fe)_5Si_8O_{22}(OH)_2$ A green, monoclinic rock-forming amphibole; a variety of asbestos occurring in needlelike crystals and in fibrous or columnar forms; specific gravity 3–3.2.

actinology [PHYS] The branch of physics dealing with electromagnetic radiation and its chemical effects.

actinomere [INV ZOO] One of the segments composing the body of a radially symmetrical animal.

actinometer [ENG] Any instrument used to measure the intensity of radiant energy, particularly that of the sun.

actinometry [ASTROPHYS] The science of measurement of radiant energy, particularly that of the sun, in its thermal, chemical, and luminous aspects.

actinomorphic [BIOL] Descriptive of an organism, organ, or part that is radially symmetrical.

Actinomyces [MICROBIO] The type genus of the family Actinomycetaceae; anaerobic to facultatively anaerobic; includes human and animal pathogens.

Actinomyces bovis [MICROBIO] A nonmotile, gram-positive, anaerobic bacterium that causes actinomycosis.

Actinomycetaceae [MICROBIO] A family of bacteria in the order Actinomycetales; gram-positive, diphtheroid cells which form filaments but not mycelia; chemoorganotrophs that ferment carbohydrates.

Actinomycetales [MICROBIO] An order of bacteria; cells form branching filaments which develop into mycelia in some families.

actinomycete [MICROBIO] Any member of the bacterial family Actinomycetaceae.

actinomycin [MICROBIO] The collective name for a large number of red chromoprotein antibiotics elaborated by various strains of *Streptomyces*.

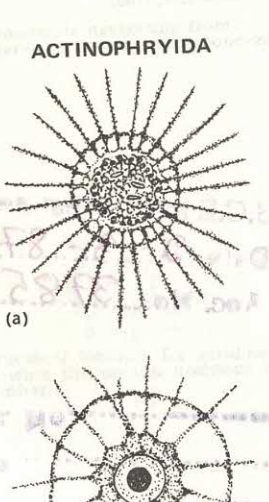
actinomycosis [MED] An infectious bacterial disease caused by *Actinomyces bovis* in cattle, hogs, and occasionally in man. Also known as lumpy jaw.

Actinomyxida [INV ZOO] An order of protozoan invertebrate parasites of the class Myxosporidea characterized by trivalved spores with three polar capsules.

actinon [NUC PHYS] A radioactive isotope of radon, symbol An, atomic number 86, atomic weight 219, belonging to the actinium series. Also known as actinium emanation (Ac-Em).

actinophage [MICROBIO] A bacteriophage that infects and lyses members of the order Actinomycetales.

ACTINOPHRYIDA



Examples of Actinophryida. (a) Single specimen of *Actinosphaerium eichorni* (after Pernard). (b) Single specimen of *Actinophrys pontica*. (From R. P. Hall, *Protozoology*, Prentice-Hall, 1953)

Actinophryida [INV ZOO] An order of protozoans in the subclass Heliozoia; individuals lack an organized test, a centroplast, and a capsule.

Actinoplanaceae [MICROBIO] A family of bacteria in the order Actinomycetales with well-developed mycelia and spores formed on sporangia.

Actinoplanes [MICROBIO] A genus of bacteria in the family Actinoplanaceae having aerial mycelia and spherical to subspherical sporangia; spores are spherical and motile by means of a tuft of polar flagella.

Actinopodea [INV ZOO] A class of protozoans belonging to the superclass Sarcodina; most are free-floating, with highly specialized pseudopodia.

Actinopteri [VERT ZOO] An equivalent name for the Actinopterygii.

Actinopterygii [VERT ZOO] The ray-fin fishes, a subclass of the Osteichthyes distinguished by the structure of the paired fins, which are supported by dermal rays.

actinostele [BOT] A protostele characterized by xylem that is either star-shaped in cross section or has ribs radiating from the center.

actinostome [BIOL] **1.** The mouth of a radiate animal. **2.** The peristome of an echinoderm.

Actinostromariidae [PALEON] A sphaeractinoid family of extinct marine hydrozoans.

actinotherapy *See* radiation therapy.

actinotrocha [INV ZOO] The free-swimming larva of *Phoronis*, a genus of small, marine, tubicolous worms.

actinouranium [NUC PHYS] A naturally occurring radioactive isotope of the actinium series, emitting only alpha decay; symbol AcU; atomic number 92; mass number 235; half-life 7.1 $\times$ 10^8 years; isotopic symbol U^{235}.

actinula [INV ZOO] A larval stage of some hydrozoans that has tentacles and a mouth; attaches and develops into a hydroid in some species, or metamorphoses into a medusa.

action [MECH] An integral associated with the trajectory of a system in configuration space, equal to the sum of the integrals of the generalized momenta of the system over their canonically conjugate coordinates. Also known as phase integral. [ORD] The mechanism of a gun, usually breechloading, by which it is loaded, fired, and unloaded.

action at a distance theory [PHYS] A theory of the interaction of two bodies separated in space, without concern for a detailed mechanism of the propagation of effects between bodies.

action current [PHYSIO] The electric current accompanying membrane depolarization and repolarization in an excitable cell.

action entries [COMPUT SCI] The lower right-hand portion of a decision table, indicating which of the various possible actions result from each of the various possible conditions.

action integral *See* action variable.

action period [ELECTR] The period of time during which data in a Williams tube storage device can be read or new data can be written into this storage.

action portion [COMPUT SCI] The lower portion of a decision table, comprising the action stub and action entries.

action potential [PHYSIO] A transient change in electric potential at the surface of a nerve or muscle cell occurring at the moment of excitation.

action-reaction law [PHYS] The law that when one body exerts force on another, the second body exerts a collinear force on the first equal in magnitude but oppositely directed.

action spectrum [PHYSIO] Graphic representation of the comparative effects of different wavelengths of light on living systems or their components.

action stub [COMPUT SCI] The lower left-hand portion of a decision table, consisting of a single column listing the various possible actions (transformations to be done on data and materials).

action variable [PHYS] The integral $\int pdq$ over a cycle of a dynamical system; q is some coordinate, and p the conjugate momentum. Also known as action integral.

actium [ECOL] A rocky seashore community.

activate [ELEC] To make a cell or battery operative by addition of a liquid. [ELECTR] To treat the filament, cathode, or target of a vacuum tube to increase electron emission. [ENG] To set up conditions so that the object will function as designed or required. [NUCLEO] To induce radioactivity through bombardment by neutrons or by other types of radia-

tion. [ORD] **1.** To bring into existence by official order a unit, post, camp, station, base, or shore activity which has previously been constituted and designated by name or number, or both, so that it can be organized to function in its assigned capacity. **2.** To prepare for active service a naval ship or craft which has been in an inactive or reserve status. [PHYS] To start activity or motion in a device or material.

activated alumina [MATER] Highly porous, granular aluminum oxide that preferentially absorbs liquids from gases and vapors, and moisture from some liquids; also used as a catalyst or catalyst carrier, as an absorbent to remove fluorides from drinking water, and in chromatography.

activated bauxite *See* filter bauxite.

activated carbon [MATER] A powdered, granular, or pelleted form of amorphous carbon characterized by very large surface area per unit volume because of an enormous number of fine pores. Also known as activated charcoal.

activated cathode [ELECTR] A thermionic cathode consisting of a tungsten filament to which thorium has been added, and then brought to the surface, by a process such as heating in the absence of an electric field in order to increase thermionic emission.

activated charcoal *See* activated carbon.

activated clay [MATER] Bentonite, or other clay, treated with acid to enhance its ability to absorb or bleach.

activated coal plough [MIN ENG] A type of power-operated cutting blade used for coal seams too hard to be sheared by a normal blade.

activated complex [PHYS CHEM] An energetically excited state which is intermediate between reactants and products in a chemical reaction.

activated rosin flux [MATER] Soldering flux containing activating agents which promote wetting by the solder.

activated sintering [MET] Sintering of a metal powder compact in contact with a gaseous atmosphere which reacts with the metal surfaces and enhances the joining of metal particles.

activated sludge [CIV ENG] A semiliquid mass removed from the liquid flow of sewage and subjected to aeration and aerobic microbial action; the end product is dark to golden brown, partially decomposed, granular, and flocculent, and has an earthy odor when fresh.

activated-sludge effluent [CIV ENG] The liquid from the activated-sludge treatment that is further processed by chlorination or by oxidation.

activated-sludge process [CIV ENG] A sewage treatment process in which the sludge in the secondary stage is put into aeration tanks to facilitate aerobic decomposition by microorganisms; the sludge and supernatant liquor are separated in a settling tank; the supernatant liquor or effluent is further treated by chlorination or oxidation.

activating reagent [MATER] Material added to another material or mixture so that a physical or chemical change will take place more rapidly or completely.

activation [CHEM] Treatment of a substance by heat, radiation, or activating reagent to produce a more complete or rapid chemical or physical change. [ELEC] The process of adding liquid to a manufactured cell or battery to make it operative. [ELECTR] The process of treating the cathode or target of an electron tube to increase its emission. Also known as sensitization. [MET] **1.** A process of facilitating the separation and collection of ore powders by the use of substances which change the response of the particle surfaces to a flotation fluid. **2.** A process that increases the rate of pressing and heating a metal powder into cohesion. [MOL BIO] A change that is induced in an amino acid before it is utilized for protein synthesis. [NUCLEO] The process of inducing radioactivity by bombardment with neutrons or with other types of radiation. [PHYSIO] The designation for all changes in the ovum during fertilization, from sperm contact to the dissolution of nuclear membranes.

activation analysis [NUCLEO] A method of chemical analysis based on the detection of characteristic radionuclides following a nuclear bombardment. Also known as radioactivity analysis.

activation energy [PHYS CHEM] The energy, in excess over the ground state, which must be added to an atomic or molecular system to allow a particular process to take place.

activation record [COMPUT SCI] A variable part of a program module, such as data and control information, that may vary with different instances of execution.

activator [CHEM] **1.** A substance that increases the effectiveness of a rubber vulcanization accelerator; for example, zinc oxide or litharge. **2.** A trace quantity of a substance that imparts luminescence to crystals; for example, silver or copper in zinc sulfide or cadmium sulfide pigments.

activator RNA [GEN] Ribonucleic acid molecules which form a sequence-specific complex with receptor genes linked to producer genes.

active anaphylaxis [IMMUNOL] The allergic response following reintroduction of an antigen into a hypersensitive individual.

active antiroll system [NAV ARCH] A system of antiroll tanks in a ship in which pumps are used to transfer the liquid, through a connecting channel, from one tank in a pair to the other.

active area [ELECTR] The area of a metallic rectifier that acts as the rectifying junction and conducts current in the forward direction.

active amyl alcohol *See* 2-methyl-1-butanol.

active balance [COMMUN] Summation of all return currents, in telephone repeater operation, at a terminal network balanced against the impedance of the local circuit or drop.

active center [ASTRON] A localized, transient region of the solar atmosphere in which sunspots, faculae, plages, prominences, solar flares, and so forth are observed.

active chaff [ORD] An expendable battery-powered jammer, usually supported by parachute or balloon, dropped by aircraft to saturate enemy radars or produce delayed false returns when triggered by enemy radars.

active communications satellite [AERO ENG] Satellite which receives, regenerates, and retransmits signals between stations.

active component [ELEC] In the phasor representation of quantities in an alternating-current circuit, the component of current, voltage, or apparent power which contributes power, namely, the active current, active voltage, or active power. Also known as power component. [ELECTR] *See* active element.

active computer [COMPUT SCI] When two or more computers are installed, the one that is on-line and processing data.

active controls technology [AERO ENG] The development of special forms of augmentation systems to stabilize airplane configurations and to limit, or tailor, the design loads that the airplane structure must support.

active current [ELEC] The component of an electric current in a branch of an alternating-current circuit that is in phase with the voltage. Also known as watt current.

active detection system [ENG] A guidance system which emits energy as a means of detection; for example, sonar and radar.

active device [ELECTR] A component, such as an electron tube or transistor, that is capable of amplifying the current or voltage in a circuit.

active door *See* active leaf.

active earth pressure [CIV ENG] The horizontal pressure that an earth mass exerts on a wall.

active electric network [ELEC] Electric network containing one or more sources of energy.

active electronic countermeasures [ELECTR] The major subdivision of electronic countermeasures concerning electronic jamming and electronic deceptions.

active element [ELECTR] Any generator of voltage or current in an impedance network. Also known as active component. [NUC PHYS] A chemical element which has one or more radioactive isotopes.

active entry [MIN ENG] An entry in which coal is being mined from a portion or from connected sections.

active filter [ELECTR] A filter that uses an amplifier with conventional passive filter elements to provide a desired fixed or tunable pass or rejection characteristic.

active front [METEOROL] A front, or portion thereof, which produces appreciable cloudiness and, usually, precipitation.

active galaxy [ASTRON] A galaxy whose central region exhibits strong emission activity, from radio to x-ray frequencies, probably as a result of gravitational collapse; this category includes M82 galaxies, Seyfert galaxies, N galaxies, and possibly quasars.

active glacier [HYD] A glacier in which some of the ice is flowing.

active homing [NAV] **1.** The homing of an aerodynamic missile by radar, in which radio signals are transmitted from the

S.C.E.R.T., West Beng
Date 2-3-87
Acc. No. 3785

S.C.E.R.T., West Bengal
Library
Calcutta
25/3, B. C. Road

missile to the target and reflected to the missile to direct it toward the target. **2.** Homing in which the homing device on the missile reveals the presence of the missile to the target.

active immunity [IMMUNOL] Disease resistance in an individual due to antibody production after exposure to a microbial antigen following disease, inapparent infection, or inoculation.

active infrared detection system [ENG] An infrared detection system in which a beam of infrared rays is transmitted toward possible targets, and rays reflected from a target are detected.

active jamming *See* jamming.

active layer [GEOL] That part of the soil which is within the suprapermafrost layer and which usually freezes in winter and thaws in summer. Also known as frost zone.

active leaf [BUILD] In a door with two leaves, the leaf which carries the latching or locking mechanism. Also known as active door.

active leg [ELECTR] An electrical element within a transducer which changes its electrical characteristics as a function of the application of a stimulus.

active location system [NAV] A navigation system in which the navigation satellite interrogates the craft, and the craft responds; useful for surveillance by a ground station, or for automated navigation if the satellite subsequently transmits data.

active logic [ELECTR] Logic that incorporates active components which provide such functions as level restoration, pulse shaping, pulse inversion, and power gain.

active master file [COMPUT SCI] A relatively active computer master file, as determined by usage data.

active master item [COMPUT SCI] A relatively active item in a computer master file, as determined by usage data.

active material [ELEC] **1.** A fluorescent material used in screens for cathode-ray tubes. **2.** An energy-storing material, such as lead oxide, used in the plates of a storage battery. **3.** A material, such as the iron of a core or the copper of a winding, that is involved in energy conversion in a circuit. [ELECTR] The material of the cathode of an electron tube that emits electrons when heated. [NUCLEO] A material capable of releasing substantial quantities of nuclear energy during fission.

active permafrost [GEOL] Permanently frozen ground (permafrost) which, after thawing by artificial or unusual natural means, reverts to permafrost under normal climatic conditions.

active power [ELEC] The product of the voltage across a branch of an alternating-current circuit and the component of the electric current that is in phase with the voltage.

active prominence [ASTRON] A classification of prominences of the sun; such a prominence is rapidly moving, and is the most frequent type.

active prominence region [ASTRON] Portions of the solar limb that display active prominences, characterized by downflowing knots and streamers, sprays, frequent surges, and curved loops. Abbreviated APR.

active region [ASTRON] A localized, transient, nonuniform region on the sun's surface, penetrating well down into the lower chromosphere. [ELECTR] The region in which amplifying, rectifying, light emitting, or other dynamic action occurs in a semiconductor device.

active satellite [AERO ENG] A satellite which transmits a signal.

active site [MOL BIO] The region of an enzyme molecule at which binding with the substrate occurs. Also known as binding site; catalytic site.

active sludge [CIV ENG] A sludge rich in destructive bacteria used to break down raw sewage.

active sonar [ENG] A system consisting of one or more transducers to send and receive sound, equipment for the generation and detection of the electrical impulses to and from the transducer, and a display or recorder system for the observation of the received signals.

active substrate [SOLID STATE] A semiconductor or ferrite material in which active elements are formed; also a mechanical support for the other elements of a semiconductor device or integrated circuit.

active system [ENG] In radio and radar, a system that requires transmitting equipment, such as a beacon or transponder.

active tracking system [NAV] A system with a transponder or transmitter on board the vehicle to repeat, transmit, or retransmit information to the tracking equipment; for example, Dovap, Secor, Azusa, Miran, and Minitrack.

active transducer [ELECTR] A transducer whose output is dependent upon sources of power, apart from that supplied by any of the actuating signals, which power is controlled by one or more of these signals.

active transport [PHYSIO] The pumping of ions or other substances across a cell membrane against an osmotic gradient, that is, from a lower to a higher concentration.

active volcano [GEOL] A volcano capable of venting lava, pyroclastic material, or gases.

active voltage [ELEC] In an alternating-current circuit, the component of voltage which is in phase with the current.

active workings [MIN ENG] All places in a mine that are ventilated and inspected regularly.

activity [COMPUT SCI] The use or modification of information contained in a file. [NUC PHYS] The intensity of a radioactive source. Also known as radioactivity. [PHYS CHEM] A thermodynamic function that correlates changes in the chemical potential with changes in experimentally measurable quantities, such as concentrations or partial pressures, through relations formally equivalent to those for ideal systems. [SYS ENG] The representation in a PERT or critical-path-method network of a task that takes up both time and resources and whose performance is necessary for the system to move from one event to the next.

activity chart [IND ENG] A tabular presentation of a series of operations of a process plotted against a time scale.

activity coefficient [PHYS CHEM] A characteristic of a quantity expressing the deviation of a solution from ideal thermodynamic behavior; often used in connection with electrolytes.

activity duration [SYS ENG] In critical-path-method terminology, the estimated amount of time required to complete an activity.

activity level [COMPUT SCI] **1.** The value assumed by a structural variable during the solution of a programming problem. **2.** A measure of the number of times that use or modification is made of the information contained in a file.

activity ratio [COMPUT SCI] The ratio between used or modified records and the total number of records in a file. [GEOL] The ratio of plasticity index to percentage of clay-sized minerals in sediment.

activity sampling *See* work sampling.

actol *See* silver lactate.

actomyosin [BIOCHEM] A protein complex consisting of myosin and actin; the major constituent of a contracting muscle fibril.

actophilous [ECOL] Having a seashore growing habit.

actual age *See* absolute age.

actual argument [COMPUT SCI] The variable which replaces a dummy argument when a procedure or macroinstruction is called up.

actual cost [IND ENG] Cost determined by an allocation of cost factors recorded during production.

actual cubic feet per minute [CHEM ENG] A measure of the volume of gas at operating temperature and pressure, as distinct from volume of gas at standard temperature and pressure. Abbreviated acfm.

actual decimal point [COMPUT SCI] The period appearing on a printed report as opposed to the virtual point defined only by the data structure within the computer.

actual elevation [METEOROL] The vertical distance above mean sea level of the ground at the meteorological station.

actual exhaust velocity [AERO ENG] **1.** The real velocity of the exhaust gas leaving a nozzle as determined by accurately measuring at a specified point in the nozzle exit plane. **2.** The velocity obtained when the kinetic energy of the gas flow produces actual thrust.

actual height [ELECTROMAG] Highest altitude at which refraction of radio waves actually occurs.

actual horsepower *See* actual power.

actual instruction *See* effective instruction.

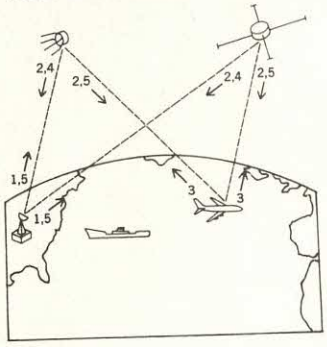
actual key [COMPUT SCI] A data item in COBOL computer language which can be used as an address.

actual motion [NAV] Motion of a craft relative to the earth.

actual power [MECH ENG] The power delivered at the output shaft of a source of power. Also known as actual horsepower.

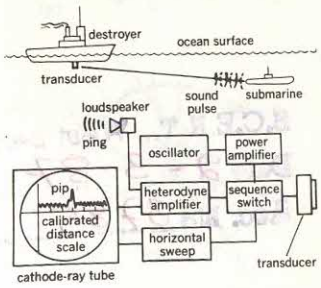
actual pressure [METEOROL] The atmospheric pressure at the level of the barometer (elevation of ivory point), as obtained

ACTIVE LOCATION SYSTEM



Sequence of events in active location procedure for traffic control showing the relay of questions and answers between the plane, the satellites, and the ground station.

ACTIVE SONAR



Active sonar system. *(From H. F. Olson, Acoustical Engineering, 3d ed., Van Nostrand, 1957)*

from the observed reading after applying the necessary corrections for temperature, gravity, and instrumental errors.

actual relative movement *See* slip.

actual time [IND ENG] Time taken by a worker to perform a given task.

actual time of arrival [NAV] The time at which a craft arrives at a specified point at a destination.

actual time of departure [NAV] **1.** The time of leaving a specified point at a place. **2.** The actual time an aircraft becomes airborne.

actual time of interception [NAV] The time of intercepting a craft by another craft.

actuate [MECH ENG] To put into motion or mechanical action, as by an actuator.

actuated roller switch [MECH ENG] A centrifugal sequence-control switch that is placed in contact with a belt conveyor, immediately preceding the conveyor it controls.

actuating system [CONT SYS] An electric, hydraulic, or other system that supplies and transmits energy for the operation of other mechanisms or systems.

actuator [CONT SYS] A mechanism to activate process control equipment by use of pneumatic, hydraulic, or electronic signals; for example, a valve actuator for opening or closing a valve to control the rate of fluid flow. [ENG ACOUS] An auxiliary external electrode used to apply a known electrostatic force to the diaphragm of a microphone for calibration purposes. Also known as electrostatic actuator. [MECH ENG] A device that produces mechanical force by means of pressurized fluid. [ORD] Part of the receiver mechanism in certain types of automatic weapons.

AcU *See* actinouranium.

acuate [BIOL] **1.** Having a sharp point. **2.** Needle-shaped.

acuity [BIOL] Sharpness of sense perception, as of vision or hearing.

Aculeata [INV ZOO] A group of seven superfamilies that constitute the stinging forms of hymenopteran insects in the suborder Apocrita.

aculeus [INV ZOO] **1.** A sharp, hairlike spine, as on the wings of certain lepidopterans. **2.** An insect stinger modified from an ovipositor.

Aculognathidae [INV ZOO] The ant-sucking beetles, a family of coleopteran insects in the superfamily Cucujoidea.

acuminate [BOT] Tapered to a slender point, especially referring to leaves.

acupuncture [MED] The ancient Chinese art of puncturing the body with long, fine gold or silver needles to relieve pain and cure disease.

acutance [OPTICS] An objective measure of the ability of a photographic system to show a sharp edge between contiguous areas of low and high illuminance.

acute [BIOL] Ending in a sharp point. [MED] Referring to a disease or disorder of rapid onset, short duration, and pronounced symptoms.

acute alcoholism [MED] Drunkenness accompanied by an acute, transient disturbance of physiological and mental functions.

acute angle [MATH] An angle of less than 90°.

acute angle block [GEOL] A fault block in which the strike of strata on the down-dip side meets a diagonal fault at an acute angle.

acute appendicitis [MED] A sudden, severe attack of appendicitis characterized by abdominal pain, usually localized in the lower right quadrant, with nausea, vomiting, and constipation.

acute arch [ARCH] An arch with a sharply pointed apex and narrow width. Also known as lancet arch.

acute arthritis [MED] A severe joint inflammation with a short course.

acute ascending myelitis [MED] Severe inflammation of the spinal cord beginning in the lower segments and progressing toward the head.

acute bacterial endocarditis [MED] Fulminant, rapidly progressive endocarditis, usually associated with a significant systemic infection.

acute benign lymphoblastosis *See* infectious mononucleosis.

acute berylliosis [MED] Severe chemical pneumoconiosis caused by inhalation of beryllium salts.

acute bisectrix [MINERAL] A bisecting line of the acute angle of the optic axes of biaxial minerals.

acute cerebellar ataxia [MED] A severe childhood syndrome of sudden onset characterized by muscular incoordination, impaired articulation, oscillations of the eyeballs, and decreased intraocular pressure.

acute dermatitis [MED] Any severe inflammation of the skin.

acute glomerulonephritis [MED] Severe kidney inflammation, usually following infection with group A hemolytic streptococci, particularly type 12.

acute granulocytic leukemia [MED] A severe blood disorder in which the abnormal white cells are immature forms of granulocytes. Also known as myeloblastic leukemia.

acute infective encephalomyelitis *See* epidemic neuromyasthenia.

acute inflammation [MED] Severe inflammation with rapid progress and pronounced symptoms.

acute leukemia [MED] A severe blood disorder characterized by rapid onset and progress, with anemia and hemorrhagic manifestations; immature forms of leukocytes are predominant.

acute lymphocytic leukemia [MED] A severe blood disorder in which abnormal leukocytes are identified as immature forms of lymphocytes. Also known as lymphoblastic leukemia.

acute monocytic leukemia [MED] A severe blood disorder in which abnormal leukocytes are identified as immature forms of monocytes. Also known as monoblastic leukemia.

acute necrotizing hemorrhagic encephalomyelitis [MED] A sudden, severe central nervous system disease with variable symptoms; pathology includes hemorrhages and necrosis of the white matter.

acute nonsuppurative hepatitis *See* interstitial hepatitis.

acute radiation syndrome [MED] A complex of symptoms involving the intestinal tract, blood-forming organs, and skin following whole-body irradiation.

acute respiratory disease [MED] Severe adenovirus infection of the respiratory tract characterized by fever, sore throat, and cough.

acute rheumatic fever [MED] A severe infectious process caused by beta hemolytic streptococci; characterized by fever and frequently accompanied by painful inflamed joints, endocarditis, chorea, or glomerulonephritis.

acute rhinitis [MED] Inflammation of the nasal mucous membrane due to either infection or allergy.

acute toxic encephalopathy [MED] A severe childhood syndrome characterized by sudden onset of coma or stupor, fever, convulsions, and impaired respiratory and cardiovascular functioning.

acute transfection [GEN] Short-term deoxyribonucleic acid infection of cells.

acute triangle [MATH] A triangle each of whose angles is less than 90°.

acute tubular necrosis *See* lower nephron nephrosis.

acute yellow atrophy [MED] Rapid liver destruction following viral hepatitis, toxic chemicals, or other agents.

acutifoliate [BOT] Having sharply pointed leaves.

acutilobate [BOT] Having sharply pointed lobes.

acyclic [BOT] Having flowers arranged in a spiral instead of a whorl. [MATH] **1.** A transformation on a set to itself for which no nonzero power leaves an element fixed. **2.** A chain complex all of whose homology groups are trivial. [PHYS] Continually varying without a regularly repeated pattern.

acyclic compound [ORG CHEM] A chemical compound with an open-chain molecular structure rather than a ring-shaped structure; for example, the alkane series.

acyclic feeding [COMPUT SCI] A method employed by alphanumeric readers in which the trailing edge or some other document characteristic is used to activate the feeding of the succeeding document.

acyclic machine *See* homopolar generator.

acyclic motion *See* irrotational flow.

acyl [ORG CHEM] A radical formed from an organic acid by removal of a hydroxyl group; the general formula is RCO, where R may be aliphatic, alicyclic, or aromatic.

acylation [ORG CHEM] Any process whereby the acyl group is incorporated into a molecule by substitution.

acyl azide *See* acid azide.

acylcarbene [ORG CHEM] A carbene radical in which at least one of the groups attached to the divalent carbon is an acyl group; for example, acetylcarbene.

acyl carnitine *See* fatty acyl carnitine.

acyl carrier protein [BIOCHEM] A protein in fatty acid synthesis that picks up aceytl and malonyl groups from acetyl coenzyme A and malonyl coenzyme A and links them by condensation to form β-keto acid acyl carrier protein, releasing carbon dioxide and the sulfhydryl form of acyl carrier protein. Abbreviated ACP.

acyl-coenzyme A *See* fatty acyl-coenzyme A.

acyl exchange *See* acidolysis.

acyl halide [ORG CHEM] One of a large group of organic substances containing the halocarbonyl group; for example, acyl fluoride.

acylnitrene [ORG CHEM] A nitrene in which the nitrogen is covalently bonded to an acyl group.

acyloin [ORG CHEM] An organic compound that may be synthesized by condensation of aldehydes; an example is benzoin, $C_6H_5COCHOHC_6H_5$.

acyloin condensation [ORG CHEM] The reaction of an aliphatic ester with metallic sodium to form intermediates converted by hydrolysis into aliphatic α-hydroxyketones called acyloins.

AD *See* average deviation.

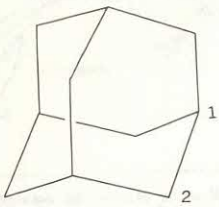
ADA *See* air defense artillery.

adalert [GEOPHYS] An advance alert issued by a regional warning center to give prompt warning of a change in solar activity.

1-adamantanamine *See* amantadine.

adamantane [ORG CHEM] A $C_{10}H_{16}$ alicyclic hydrocarbon whose structure has the same arrangement of carbon atoms as does the basic unit of the diamond lattice.

ADAMANTANE



Structure of adamantane showing bridgehead carbon labeled 1 and alternate position for substitution at carbon 2.

adamantine drill [MECH ENG] A core drill with hardened steel shot pellets that revolve under the rim of the rotating tube; employed in rotary drilling in very hard ground.

adamantine spar [MINERAL] A silky brown variety of corundum.

adamantinoma *See* ameloblastoma.

adambulacral [INV ZOO] Lying adjacent to the ambulacrum.

adamellite *See* quartz monzonite.

adamite [MINERAL] $Zn_2(AsO_4)(OH)$ A colorless, white, or yellow mineral consisting of basic zinc arsenate, crystallizing in the orthorhombic system; hardness is 3.5 on Mohs scale, and specific gravity is 4.34–4.35.

Adams-Bashforth process [MATH] A method of numerically integrating a differential equation of the form $(dy/dx) = f(x,y)$ that uses one of Gregory's interpolation formulas to expand f.

Adam's catalyst [CHEM ENG] Finely divided plantinum(IV) oxide, made by fusing hexachloroplatinic(IV) acid with $NaNO_3$.

adamsite [MINERAL] Greenish-black mica. [ORG CHEM] $C_6H_4{\cdot}NH{\cdot}C_6H_4{\cdot}AsCl$ A yellow crystalline arsenical; used in leather tanning and in warfare and riot control to produce skin and eye irritation, chest distress, and nausea; U.S. Army code is DM. Also known as diphenylaminechloroarsine; phenarsazine chloride.

ada mud [ENG] A conditioning material added to drilling mud to obtain satisfactory cores and samples of formations.

adapertural [INV ZOO] Near the aperture, specifically of a conch.

adapical [BOT] Near or toward the apex or tip.

adaptability test [ORD] A test to ascertain the adaptability of a standardized item or equipment to a particular unit or organization.

adaptation [GEN] The occurrence of genetic changes in a population or species as the result of natural selection so that it adjusts to new or altered environmental conditions. [PHYSIO] The occurrence of physiological changes in an individual exposed to changed conditions; for example, tanning of the skin in sunshine, or increased red blood cell counts at high altitudes.

adaptation brightness *See* adaptation luminance.

adaptation illuminance *See* adaptation luminance.

adaptation level *See* adaptation luminance.

adaptation luminance [OPTICS] The average luminance, or brightness, of objects and surfaces in the immediate vicinity of an observer estimating the visual range. Also known as adaptation brightness; adaptation illuminance; adaptation level; brightness level; field brightness; field luminance.

adaptation syndrome [MED] Endocrine-mediated stress reaction of the body in response to systemic injury; involves an initial stage of shock, followed by resistance or adaptation and then healing or exhaustion.

adapter [COMPUT SCI] A device which converts bits of information received serially into parallel bit form for use in the inquiry buffer unit. [ENG] A device used to make electrical or mechanical connections between items not originally intended for use together. [MET] A connecting piece, usually made of fireclay, between a horizontal zinc retort and the condenser in which the molten zinc collects. [OPTICS] An attachment to a camera that permits its use in a manner for which it was not designed.

adapter skirt [AERO ENG] A flange or extension of a space vehicle that provides a ready means for fitting some object to a stage or section.

adapter transformer [ELEC] A transformer designed to supply a single electric lamp; its primary terminals are designed to fit into an ordinary lampholder, its secondary terminals into a lampholder of a low-voltage lamp.

adaptive behavior [PSYCH] Any behavior that helps the organism adjust to its environment.

adaptive colitis *See* irritable colon.

adaptive communications [COMMUN] A communications system capable of automatic change to meet changing inputs or changing characteristics of the device or process being controlled. Also known as self-adjusting communications; self-optimizing communications.

adaptive control [CONT SYS] A control method in which one or more parameters are sensed and used to vary the feedback control signals in order to satisfy the performance criteria.

adaptive control function [CONT SYS] That level in the functional decomposition of a large-scale control system which updates parameters of the optimizing control function to achieve a best fit to current plant behavior, and updates parameters of the direct control function to achieve good dynamic response of the closed-loop system.

adaptive disease [PHYSIO] The physiologic changes impairing an organism's health as the result of exposure to an unfamiliar environment.

adaptive divergence [EVOL] Divergence of new forms from a common ancestral form due to adaptation to different environmental conditions.

adaptive enzyme [MICROBIO] Any bacterial enzyme formed in response to the presence of a substrate specific for that enzyme.

adaptive integration [MATH] A numerical technique for obtaining the definite integral of a function whose smoothness, or lack thereof, is unknown, to a desired degree of accuracy, while doing only as much work as necessary on each subinterval of the interval in question.

adaptive optics [OPTICS] The theory and design of optical systems that measure and correct wavefront aberrations in real time, that is, simultaneous with the operation of the system.

adaptive radiation [EVOL] Diversification of a dominant evolutionary group into a large number of subsidiary types adapted to more restrictive modes of life (different adaptive zones) within the range of the larger group.

adaptive system [COMPUT SCI] A system that can change itself to meet new requirements.

adaptive system theory [COMPUT SCI] The branch of automata theory dealing with adaptive, or self-organizing, systems.

adaptometer [ENG] An instrument that measures the lowest brightness of an extended area that can barely be detected by the eye.

ADAR *See* advanced design array radar.

adatom [PHYS CHEM] An atom adsorbed on a surface so that it will migrate over the surface.

adaxial [BIOL] On the same side as or facing toward the axis of an organ or organism.

Adcock antenna [ELECTROMAG] A pair of vertical antennas separated by a distance of one-half wavelength or less and connected in phase opposition to produce a radiation pattern having the shape of a figure eight.

Adcock direction finder [NAV] A radio direction finder utilizing one or more pairs of Adcock antennas.

ADCON *See* address constant.

adconductor cathode [ELECTR] A cathode in which adsorbed alkali metal atoms provide electron emission in a glow or arc discharge.

add [ORD] A fire correction term used by observers in adjust-

ing fire to indicate that an increase in range (of so many yards) will follow and is desired.

addend [MATH] One of a collection of numbers to be added.

addendum [DES ENG] The radial distance between two concentric circles on a gear, one being that whose radius extends to the top of a gear tooth (addendum circle) and the other being that which will roll without slipping on a circle on a mating gear (pitch line).

addendum circle [DES ENG] The circle on a gear passing through the tops of the teeth.

adder [COMPUT SCI] A computer device that can form the sum of two or more numbers or quantities. [ELECTR] A circuit in which two or more signals are combined to give an output-signal amplitude that is proportional to the sum of the input-signal amplitudes. Also known as adder circuit. [VERT ZOO] Any of the venomous viperine snakes included in the family Viperidae.

adder circuit *See* adder.

addiction [MED] Habituation to a specific practice, such as drinking alcoholic beverages or using drugs.

adding circuit [ELECTR] A circuit that performs the mathematical operation of addition.

adding machine [COMPUT SCI] A device which performs the arithmetical operation of addition and subtraction.

adding tape [ENG] A surveyor's tape that is calibrated from 0 to 100 by full feet (or meters) in one direction, and has 1 additional foot (or meter) beyond the zero end which is subdivided in tenths or hundredths.

Addis count [PATH] A renal function test which estimates the blood cell count in a 12-hour urine specimen.

Addison's disease [MED] A primary failure or insufficiency of the adrenal cortex to secrete hormones.

addition [MATH] An operation by which two elements of a set are combined to yield a third; denoted +; usually reserved for the operation in an Abelian group or the group operation in a ring or vector space.

addition agent [PHYS CHEM] A substance added to a plating solution to change characteristics of the deposited substances.

addition item [COMPUT SCI] An item which is to be filed in its proper place in a computer.

addition of complex quantities [MATH] The combining of complex quantities in which the individual real parts and the individual imaginary parts are separately added.

addition of vectors [MATH] The combining of vectors in a prescribed way; for example, by algebraically adding corresponding components of vectors or by forming the third side of the triangle whose other sides each represent a vector. Also known as composition of vectors.

addition polymer [ORG CHEM] A polymer formed by the chain addition of unsaturated monomer molecules, such as olefins, with one another without the formation of a by-product, as water; examples are polyethylene, polypropylene, and polystyrene. Also known as addition resin.

addition reaction [ORG CHEM] A type of reaction of unsaturated hydrocarbons with hydrogen, halogens, halogen acids, and other reagents, so that no change in valency is observed and the organic compound forms a more complex one.

addition record [COMPUT SCI] A new record inserted into an updated master file.

addition resin *See* addition polymer.

addition solid solution [CRYSTAL] Random addition of atoms or ions in the interstices within a crystal structure.

addition table [COMPUT SCI] The part of memory that holds the table of numbers used in addition in a computer employing table look-up techniques to carry out this operation.

additive [MATER] **1.** A substance added to another to improve, strengthen, or otherwise alter it; for example, tetraethyllead added to gasoline to prevent engine knock. **2.** *See* admixture. [MATH] Pertaining to addition. [STAT] That property of a process in which increments of the dependent variable are independent for nonoverlapping intervals of the independent variable.

additive function [MATH] Any function which preserves addition, such as $f(x+y) = f(x) + f(y)$.

additive level [MATER] The total percentage of all the additives in an oil sample.

additive primary colors [OPTICS] The three colors, usually red, green, and blue, which are mixed together in an additive process.

additive process [OPTICS] The process of producing colors by mixing lights of additive primary colors in various proportions.

additive set function [MATH] A set function with the property that the value of the function at a finite union of disjoint sets is equal to the sum of the values at each set in the union.

address [COMPUT SCI] The number or name that uniquely identifies a register, memory location, or storage device in a computer.

address computation [COMPUT SCI] The modification by a computer of an address within an instruction, or of an instruction based on results obtained so far. Also known as address modification.

address constant [COMPUT SCI] A value, or its expression, used in the calculation of storage addresses from relative addresses for computers. Abbreviated ADCON. Also known as base address; presumptive address; reference address.

address conversion [COMPUT SCI] The use of an assembly program to translate symbolic or relative computer addresses.

address counter [COMPUT SCI] A counter which increments an initial memory address as a block of data is being transferred into the memory locations indicated by the counter.

address field [COMPUT SCI] The portion of a computer program instruction which specifies where a particular piece of information is located in the computer memory.

address format [COMPUT SCI] A description of the number of addresses included in a computer instruction.

address-free program [COMPUT SCI] A computer program in which all addresses are represented as displacements from the expected contents of a base register.

address generation [COMPUT SCI] An addressing technique which facilitates addressing large storages and implementing dynamic program relocation; the effective main storage address is obtained by adding together the contents of the base register of the index register and of the displacement field.

addressing mode [COMPUT SCI] The specific technique by means of which a memory reference instruction will be spelled out if the computer word is too small to contain the memory address.

addressing system [COMPUT SCI] A labeling technique used to identify storage locations within a computer system.

address interleaving [COMPUT SCI] The assignment of consecutive addresses to physically separate modules of a computer memory, making possible the very-high-speed access of a sequence of contiguously addressed words, since all modules operate nearly simultaneously.

addressless instruction format *See* zero address instruction format.

address modification *See* address computation.

address part [COMPUT SCI] That part of a computer instruction which contains the address of the operand, of the result, or of the next instruction.

address register [COMPUT SCI] A register wherein the address part of an instruction is stored by a computer.

address sort routine [COMPUT SCI] A debugging routine which scans all instructions of the program being checked for a given address.

address track [COMPUT SCI] A path on a magnetic tape, drum, or disk on which are recorded addresses used in the retrieval of data stored on other tracks.

address translation [COMPUT SCI] The assignment of actual locations in a computer memory to virtual addresses in a computer program.

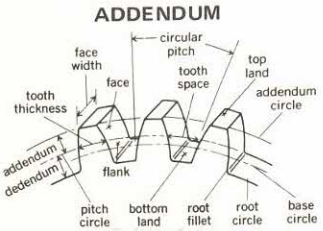
add-subtract time [COMPUT SCI] The time required to perform an addition or subtraction, exclusive of the time required to obtain the quantities from storage and put the sum or difference back into storage.

add time [COMPUT SCI] The time required by a computer to perform an addition, not including the time needed to obtain the addends from storage and put the sum back into storage.

add-to-memory technique [COMPUT SCI] In direct-memory-access systems, a technique which adds a data word to a memory location; permits linear operations such as data averaging on process data.

adduct [CHEM] **1.** A chemical compound that forms from chemical addition of two species; for example, reaction of butadiene with styrene forms an adduct, 4-phenyl-1-cyclohexene. **2.** The complex compound formed by association of an inclusion complex.

adduction [PHYSIO] Movement of one part of the body toward another or toward the median axis of the body.



Drawing of the principal features of a gear tooth showing the addendum in relation to the other parts.

adductor [ANAT] Any muscle that draws a part of the body toward the median axis.

Adeleina [INV ZOO] A suborder of protozoan invertebrate parasites in the order Eucoccida in which the sexual and asexual stages are in different hosts.

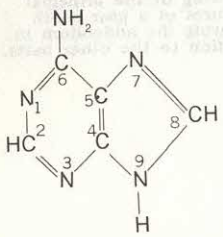
adelite [MINERAL] $CaMg(AsO_4)(OH,F)$ A colorless to gray, bluish-gray, yellowish-gray, yellow, or light green orthorhombic mineral consisting of a basic arsenate of calcium and magnesium; usually occurs in massive form.

adelphous [BOT] Having stamens fused together by their filaments.

adenase [BIOCHEM] An enzyme that catalyzes the hydrolysis of adenine to hypoxanthine and ammonia.

adenine [BIOCHEM] $C_5H_5N_5$ A purine base, 6-aminopurine, occurring in ribonucleic acid and deoxyribonucleic acid and as a component of adenosinetriphosphate.

ADENINE



Structural formula of adenine; the carbon atoms are numbered.

adenitis [MED] Inflammation of a gland or lymph node.

adenoacanthoma [MED] An adenocarcinoma, common in the endometrium, in which squamous cells replace the cylindrical epithelium.

adeno-associated satellite virus [VIROL] A defective virus that is unable to reproduce without the help of an adenovirus.

adenocarcinoma [MED] A malignant tumor originating in glandular or ductal epithelium and tending to produce acinic structures.

adenohypophysis [ANAT] The glandular part of the pituitary gland, composing the anterior and intermediate lobes.

adenoid [ANAT] **1.** A mass of lymphoid tissue. **2.** Lymphoid tissue of the nasopharynx. Also known as pharyngeal tonsil.

adenoma [MED] A benign tumor of glandular origin and structure.

adenomatoid tumor [MED] A benign genital-tract tumor composed of stroma whose spaces are lined by cells that resemble epithelium, endothelium, and mesothelium.

adenomatosis [MED] A condition characterized by multiple adenomas within an organ or in several related organs.

adenomatous goiter [MED] An asymmetric goiter due to isolated nodular masses of thyroid tissue. Also known as multiple colloid goiter; nodular goiter.

adenomere [EMBRYO] The embryonic structure which will become the functional portion of a gland.

adenomyoma [MED] A benign tumor of glandular and muscular elements occurring principally in the uterus and rectum.

adenomyosis [MED] **1.** The invasion of muscular tissue, such as of the uterine wall or Fallopian tubes, by endometrial tissue. **2.** Any abnormal growth of muscle or glandular tissues.

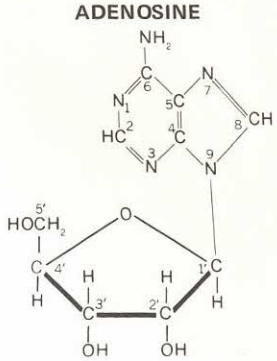
adenopathy [MED] Any glandular disease; common usage limits the term to any abnormal swelling or enlargement of lymph nodes.

Adenophorea [INV ZOO] A class of unsegmented worms in the phylum Nematoda.

adenophyllous [BOT] Having leaves with glands.

adenosine [BIOCHEM] $C_{10}H_{13}N_5O_4$ A nucleoside composed of adenine and D-ribose.

ADENOSINE



Structural formula of adenosine.

adenosine 3′,5′-cyclic monophosphate *See* cyclic adenylic acid.

adenosine 3′,5′-cyclic phosphate *See* cyclic adenylic acid.

adenosinediphosphatase [BIOCHEM] An enzyme that catalyzes the hydrolysis of adenosinediphosphate. Abbreviated ADPase.

adenosinediphosphate [BIOCHEM] $C_{10}H_{15}N_5O_{10}P_2$ A coenzyme composed of adenosine and two molecules of phosphoric acid that is important in intermediate cellular metabolism. Abbreviated ADP.

adenosinemonophosphate *See* adenylic acid.

adenosine 3′,5′-cyclic phosphate *See* cyclic adenylic acid.

adenosinediphosphatase [BIOCHEM] An enzyme that catalyzes the hydrolysis of adenosinediphosphate. Abbreviated ADPase.

adenosinediphosphate [BIOCHEM] $C_{10}H_{15}N_5O_{10}P_2$ A coenzyme composed of adenosine and two molecules of phosphoric acid that is important in intermediate cellular metabolism. Abbreviated ADP.

adenosinemonophosphate *See* adenylic acid.

adenosine 3′,5′-monophosphate *See* cyclic adenylic acid.

adenosinetriphosphatase [BIOCHEM] An enzyme that catalyzes the hydrolysis of adenosinetriphosphate. Abbreviated ATPase.

adenosinetriphosphate [BIOCHEM] $C_{10}H_{16}N_5O_{12}P_3$ A coenzyme composed of adenosinediphosphate with an additional phosphate group; an important energy compound in metabolism. Abbreviated ATP.

adenosis [MED] Any nonneoplastic glandular disease, especially one involving the lymph nodes.

adeno-SV40 hybrid virus [VIROL] A defective virus particle in which part of the genetic material of papovavirus SV40 is encased in an adenovirus protein coat.

adenovirus [VIROL] A group of animal viruses which cause febrile catarrhs and other respiratory diseases.

adenylic acid [BIOCHEM] **1.** A generic term for a group of isomeric nucleotides. **2.** The phosphoric acid ester of adenosine. Also known as adenosinemonophosphate (AMP).

adeoniform [INV ZOO] **1.** A lobate, bilamellar zooarium. **2.** Resembling the fossil bryozoan *Adeona*.

Adephaga [INV ZOO] A suborder of insects in the order Coleoptera characterized by fused hind coxae that are immovable.

adequate contact [MED] The degree of contact required between an infectious and a susceptible individual to cause infection of the latter.

adequate stimulus [PHYSIO] The energy of any specific mode that is sufficient to elicit a response in an excitable tissue.

ader wax *See* ozocerite.

ADF *See* automatic direction finder.

ADF bearing indicator [NAV] An instrument used with an airborne radio direction finder to indicate automatically the relative, magnetic, or true bearing (or reciprocal) of a transmitter.

adfreezing [HYD] The process by which one object adheres to another by the binding action of ice; applied to permafrost studies.

ADF reversal [NAV] The swinging of the needle on the direction indicator of an airborne automatic direction finder (ADF) through 180°, indicating that the station to which the direction finder is tuned has been passed.

ADH *See* vasopressin.

Adhara [ASTRON] A star of spectral type B2II. Also known as ε Canis Majoris.

adherend [MATER] A body attracted to another by means of an adhesive substance.

adhesion [BOT] Growing together of members of different and distinct whorls. [ELECTROMAG] Any mutually attractive force holding together two magnetic bodies, or two oppositely charged nonconducting bodies. [ENG] Intimate sticking together of metal surfaces under compressive stresses by formation of metallic bonds. [MECH] The force of static friction between two bodies, or the effects of this force. [MED] The abnormal union of an organ or part with some other part by formation of fibrous tissue. [PHYS] The tendency, due to intermolecular forces, for matter to cling to other matter.

adhesional work [THERMO] The work required to separate a unit area of a surface at which two substances are in contact. Also known as work of adhesion.

adhesive [MATER] A substance used to bond two or more solids so that they act or can be used as a single piece; examples are resins, formaldehydes, glue, paste, cement, putty, and polyvinyl resin emulsions.

adhesive bond [MECH] The forces such as dipole bonds which attract adhesives and base materials to each other.

adhesive bonding [ENG] The fastening together of two or more solids by the use of glue, cement, or other adhesive.

adhesive cell [INV ZOO] Any of various glandular cells in ctenophores, turbellarians, and hydras used for adhesion to a substrate and for capture of prey. Also known as colloblast; glue cell; lasso cell.

adhesive strength [ENG] The strength of an adhesive bond, usually measured as a force required to separate two objects of standard bonded area, by either shear or tensile stress.

adhesive tape [MATER] Tape coated with a substance that binds or sticks to a surface.

adiabatic [THERMO] Referring to any change in which there is no gain or loss of heat.

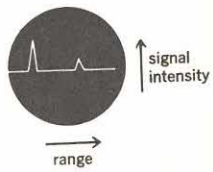
adiabatic atmosphere [METEOROL] A model atmosphere characterized by a dry-adiabatic lapse rate throughout its vertical extent.

adiabatic calorimeter [PHYS CHEM] An instrument used to study chemical reactions which have a minimum loss of heat.

adiabatic chart *See* Stuve chart.

adiabatic compression [THERMO] A reduction in volume of a substance without heat flow, in or out.
adiabatic condensation pressure *See* condensation pressure.
adiabatic condensation temperature *See* condensation temperature.
adiabatic cooling [THERMO] A process in which the temperature of a system is reduced without any heat being exchanged between the system and its surroundings.
adiabatic curing [ENG] The curing of concrete or mortar under conditions in which there is no loss or gain of heat.
adiabatic demagnetization [CRYO] A method of cooling paramagnetic salts to temperatures of 10^{-3} K; the sample is cooled to boiling point of helium in a strong magnetic field, thermally isolated, and then removed from the field to demagnetize it. Also known as Giaque-Debye method; magnetic cooling; paramagnetic cooling.
adiabatic ellipse [FL MECH] A plot of the speed of sound as a function of the speed of flow for the adiabatic flow of a gas, which forms one quadrant of an ellipse.
adiabatic engine [MECH ENG] A heat engine or thermodynamic system in which there is no gain or loss of heat.
adiabatic envelope [THERMO] A surface enclosing a thermodynamic system in an equilibrium which can be disturbed only by long-range forces or by motion of part of the envelope; intuitively, this means that no heat can flow through the surface.
adiabatic equilibrium [METEOROL] A vertical distribution of temperature and pressure in an atmosphere in hydrostatic equilibrium such that an air parcel displaced adiabatically will continue to possess the same temperature and pressure as its surroundings, so that no restoring force acts on a parcel displaced vertically. Also known as convective equilibrium.
adiabatic equivalent temperature *See* equivalent temperature.
adiabatic expansion [THERMO] Increase in volume without heat flow, in or out.
adibatic extrusion [ENG] Forming plastic objects by energy produced by driving the plastic mass through an extruder without heat flow.
adiabatic flame temperature [PHYS CHEM] The highest possible temperature of combustion obtained under the conditions that the burning occurs in an adiabatic vessel, that it is complete, and that dissociation does not occur.
adiabatic flow [FL MECH] Movement of a fluid without heat transfer.
adiabatic invariant [PHYS] A physical quantity which may be quantized and which, to a certain degree of approximation, remains unchanged under the slow variation of any parameter.
adiabatic lapse rate *See* dry-adiabatic lapse rate.
adiabatic law [PHYS] The relationship which states that, for adiabatic expansion of gases, $P\rho^{-\gamma}$ = constant, where P = pressure, ρ = density, and γ ratio of specific heats C_p/C_v.
adiabatic low-energy injection and capture experiment [NUCLEO] An experimental apparatus for research on controlled fusion that uses a beam of neutral deuterium atoms. Also known as Alice.
adiabatic process [THERMO] Any thermodynamic procedure which takes place in a system without the exchange of heat with the surroundings.
adiabatic rate *See* dry-adiabatic lapse rate.
adiabatic recovery temperature [FL MECH] **1.** The temperature reached by a moving fluid when brought to rest through an adiabatic process. Also known as recovery temperature; stagnation temperature. **2.** The final and initial temperature in an adiabatic, Carnot cycle.
adiabatic saturation pressure *See* condensation pressure.
adiabatic saturation temperature *See* condensation temperature.
adiabatic system [SCI TECH] A body or system whose condition is altered without gaining heat from or losing heat to the surroundings.
adiabatic vaporization [THERMO] Vaporization of a liquid with virtually no heat exchange between it and its surroundings.
adiabatic wall temperature [FL MECH] The temperature assumed by a wall in a moving fluid stream when there is no heat transfer between the wall and the stream.
adiadochokinesis [MED] A type of motor incoordination associated with cerebellar damage in which repetitive movements controlled by antagonistic muscles cannot be performed without severe muscular incoordination.
adiagnostic [PETR] Pertaining to a rock texture in which identification of individual components is not possible macroscopically or microscopically; applied especially to igneous rock.
adiathermanous [PHYS] Not capable of transmitting radiant heat. Also known as adiathermic.
adiathermic *See* adiathermanous.
Adie's syndrome [MED] Impaired pupillary reaction to light and absent tendon reflexes.
Adimeridae [INV ZOO] An equivalent name for the Colydiidae.
adinole [GEOL] An argillaceous sediment that has undergone albitization at the margin of a basic intrusion.
adipate [ORG CHEM] Salt produced by reaction of adipic acid with a basic compound.
adiphenine [PHARM] $C_{20}H_{25}NO_2 \cdot HCl$ The compound 2-diethylaminoethyl diphenylacetate hydrochloride; a cholinergic blocking agent.
adipic acid [ORG CHEM] $HOOC(CH_2)_4COOH$ A colorless crystalline dicarboxylic acid, sparingly soluble in water; used in nylon manufacture. Also known as 1,4-butanedicarboxylic acid; hexanedioic acid.
adipinketone *See* cyclopentanone.
adipocellulose [BIOCHEM] A type of cellulose found in the cell walls of cork tissue.
adipocere [MED] A light-colored, waxy material formed by postmortem conversion of body fats to higher fatty acids.
adipocerite *See* hatchettite.
adipocire *See* hatchettite.
adipogenesis [PHYSIO] The formation of fat or fatty tissue.
adiponecrosis neonatorum [MED] Localized fatty-tissue necrosis occurring in large, healthy infants born after difficult labor.
adiponitrile [ORG CHEM] $NC(CH_2)_4CN$ The high-boiling liquid dinitrile of adipic acid; used to make nylon intermediates. Also known as hexanedinitrile.
adipose [BIOL] Fatty; of or relating to fat.
adipose fin [VERT ZOO] A modified posterior dorsal fin that is fleshy and lacks rays; found in salmon and typical catfishes.
adipose tissue [HISTOL] A type of connective tissue specialized for lipid storage.
adiposis dolorosa [MED] An uncommon type of obesity in which the excess fat deposits are tender and painful.
adiposogenital dystrophy [MED] A syndrome involving obesity, retarded gonad development, and sometimes diabetes insipidus resulting from impaired functioning of the pituitary and hypothalamus. Also known as Froehlich's syndrome.
A display [ELECTR] A radar oscilloscope display in cartesian coordinates; the targets appear as vertical deflection lines; their Y coordinates are proportional to signal intensity; their X coordinates are proportional to distance to targets.
adit [CIV ENG] An access tunnel used for excavation of the main tunnel. [MIN ENG] A nearly horizontal tunnel for access, drainage, or ventilation of a mine. Also known as side drift.
adjab butter [MATER] A semisolid oil extracted from the nuts of the tree *Bassia toxisperma;* used to make soap. Also known as djave butter.
adjacency [COMPUT SCI] A condition in character recognition in which two consecutive graphic characters are separated by less than a specified distance.
adjacency structure [MATH] A listing, for each vertex of a graph, of all the other vertices adjacent to it.
adjacent angle [MATH] One of a pair of angles with common side formed by two intersecting straight lines.
adjacent-channel interference [COMMUN] Interference that is caused by a transmitter operating in an adjacent channel when the side bands of the adjacent-channel transmitter beat with the carrier signal of the desired station. Also known as monkey chatter; side-band interference; side-band splash.
adjacent-channel selectivity [ELECTR] The ability of a radio receiver to respond to the desired signal and to reject signals in adjacent frequency channels.
adjacent sea [GEOGR] A sea connected with the oceans but semienclosed by land; examples are the Caribbean Sea and North Polar Sea.
adjective dye [CHEM] Any dye that needs a mordant.
adjoining sheets [MAP] Those maps that are contiguous to one or more sides and corners of a map series.
adjoint of a matrix *See* adjugate of a matrix; Hermitian conjugate of a matrix.
adjoint operator [MATH] An operator B such that the inner

A DISPLAY



Drawing of a frequently employed display for presentation of radar outputs.

products (Ax,y) and (x,By) are equal for a given operator A and for all elements x and y of a Hilbert space. Also known as associate operator; Hermitian conjugate operator.

adjoint variable [PHYS] In classical dynamics, the canonically conjugate p_i interpreted as generalized momenta.

adjoint vector space [MATH] The complete normed vector space constituted by a class of bounded, linear, homogeneous scalar functions defined on a normed vector space.

adjoint wave functions [QUANT MECH] Functions in the Dirac electron theory which are formed by applying the Dirac matrix B to the Hermitian conjugates of the original wave functions.

adjugate of a matrix [MATH] The matrix obtained by replacing each element with the cofactor of the transposed element. Also known as adjoint of a matrix.

adjustable base anchor [BUILD] An item which holds a doorframe above a finished floor.

adjustable parallels [ENG] Wedge-shaped iron bars placed with the thin end of one on the thick end of the other, so that the top face of the upper and the bottom face of the lower remain parallel, but the distance between the two faces is adjustable; the bars can be locked in position by a screw to prevent shifting.

adjustable propeller [NAV ARCH] A screw propeller with blades that can be rotated around their axes to change the pitch. Also known as controllable-pitch propeller.

adjustable resistor [ELEC] A resistor having one or more sliding contacts whose position may be changed.

adjustable square [ENG] A try square with an arm that is at right angles to the ruler; the position of the arm can be changed to form an L or a T. Also known as double square.

adjustable transformer *See* variable transformer.

adjustable wrench [ENG] A wrench with one jaw which is fixed and another which is adjustable; the size is adjusted by a knurled screw.

adjusted decibel [ELECTR] A unit used to show the relationship between the interfering effect of a noise frequency, or band of noise frequencies, and a reference noise power level of −85 dBm. Abbreviated dBa. Also known as decibel adjusted.

adjusted elevation [GEOD] **1.** The elevation resulting from the application of an adjustment correction to an orthometric elevation. **2.** The elevation resulting from the application of both an orthometric correction and an adjustment correction to a preliminary elevation.

adjusted position [MAP] An adjusted value of the coordinate position of a point.

adjusted stream [HYD] A stream which flows mostly parallel to the strike and as little as necessary in other courses.

adjusted value [SCI TECH] A value of a quantity derived from observed data by some orderly process which eliminates discrepancies arising from errors in those data.

adjusting point [ORD] A distinctive terrain feature or some portion of the target at or near the center of the area upon which the observer wishes to place fire.

adjusting ring [ORD] Part of a fuse setter which is used to adjust the setting element on the fuse of an explosive projectile.

adjustment [GEOD] **1.** The determination and application of corrections to orthometric differences of elevation or to orthometric elevations to make the elevation of all bench marks consistent and independent of the circuit closures. **2.** The placing of detail or control stations in their positions relative to other detail or control stations. [PSYCH] The process of mental change to allow an individual to function harmoniously with his environment.

adjustment correction *See* arbitrary correction.

adjustment of fire [ORD] The determining and applying of corrections to firing data to bring the center of impact or of burst, or the cone of fire of automatic weapons, to the adjusting point and to keep it there.

adjustment reaction [PSYCH] A transient, situational personality disorder occurring in reaction to some significant person, immediate event, or internal emotional conflict.

adjustor neuron [ANAT] Any of the interconnecting nerve cells between sensory and motor neurons of the central nervous system.

adjutage [ENG] A tube attached to a container of liquid at an orifice to facilitate or regulate outflow.

adjuvant [PHARM] A material that enhances the action of a drug or antigen.

ad lib [BIOL] Shortened form for ad libitum; without limit or restraint.

adlittoral [OCEANOGR] Of, pertaining to, or occurring in shallow waters adjacent to a shore.

administrative map [MAP] **1.** A map with graphically recorded information pertaining to administrative matters, such as supply and evacuation installations, medical facilities, service and maintenance areas, main supply roads, boundaries, and other details necessary to show the administrative situation in relation to the tactical situation. **2.** Any map on which are delineated political subdivisions and boundaries of a country or countries.

Administrative Terminal System [COMPUT SCI] A system developed by the International Business Machine Corporation to enable the handling by computer of texts that would otherwise require copying by a typist. Abbreviated ATS.

admiralty brass [MET] An alloy containing 71% copper, 28% zinc, and 0.75–1.0% tin for additional corrosion resistance.

admiralty coal [MIN ENG] A high-quality, smokeless steam coal.

Admiralty constant [NAV ARCH] Any of the numbers that give the horsepower of a ship required for a given speed at a given displacement and midship section.

admittance [ELEC] A measure of how readily alternating current will flow in a circuit; the reciprocal of impedance, it is expressed in mhos.

admittance martix [ELEC] A matrix Y whose elements are the mutual admittances between the various meshes of an electrical network; it satisfies the matrix equation $I = YV$, where I and V are column vectors whose elements are the currents and voltages in the meshes.

admixture [GEOL] One of the lesser or subordinate grades of sediment. [MATER] A material (other than aggregate, cement, or water) added in small quantities to concrete to produce some desired change in properties. Also known as additive.

adnate [BIOL] United through growth; used especially for unlike parts. [BOT] Pertaining to growth with one side adherent to a stem.

adnexa [BIOL] Subordinate or accessory parts, such as eyelids, Fallopian tubes, and extraembryonic membranes.

adobe [GEOL] Heavy-textured clay soil found in the southwestern United States and in Mexico.

adobe brick [MATER] An earth or clay, straw brick of large but varying dimensions, roughly molded and sun-dried.

adobe construction [BUILD] Wall construction with sun-dried blocks of adobe soil.

adobe flats [GEOL] Broad flats that are floored with sandy clay and have been formed from sheet floods.

adolescence [GEOL] Stage in the cycle of erosion following youth and preceding maturity. [PSYCH] The period of life from puberty to maturity.

adolescent coast [GEOL] A type of shoreline characterized by low but nearly continuous sea cliffs.

adolescent river [HYD] A river with a graded bed and a well-cut channel that reaches base level at its mouth, its waterfalls and lakes of the youthful stage having been destroyed.

adolescent stream [HYD] A stream characterized by a well-cut, smoothly graded channel that may reach base level at its mouth.

Adonis [ASTRON] An asteroid with an orbital eccentricity of 0.779 and a perihelion well inside the orbit of Venus that passed about 1.6×10^6 kilometers from earth in 1936.

adonite *See* adonitol.

adonitol [BIOCHEM] $C_5H_{12}O_5$ A pentitol from the dicotyledenous plant *Adonis vernalis;* large crystals that are optically inactive and melt at 102°C; it does not reduce Fehling's solution, and is freely soluble in water and hot alcohol. Also known as adonite; ribitol.

adont hinge [INV ZOO] A type of ostracod hinge articulation which either lacks teeth and has overlapping valves or has a ridge and groove.

adoral [ZOO] Near the mouth.

ADP *See* adenosinediphosphate; automatic data processing.

ADPase *See* adenosinediphosphatase.

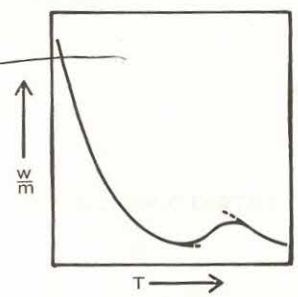
ADPE *See* automatic data-processing equipment.

adrenal cortex [ANAT] The cortical moitie of the suprarenal glands which secretes glucocorticoids, mineralocorticoids, androgens, estrogens, and progestagens.

adrenal cortex hormone [BIOCHEM] Any of the steroids produced by the adrenal cortex. Also known as adrenocortical hormone; corticoid.

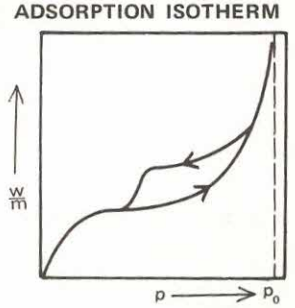
adrenal cortical insufficiency [MED] Failure of the adrenal cortex to secrete adequate hormones.
adrenalectomy [MED] Surgical removal of an adrenal gland.
adrenal gland [ANAT] An endocrine organ located close to the kidneys of vertebrates and consisting of two morphologically distinct components, the cortex and medulla. Also known as suprarenal gland.
adrenaline *See* epinephrine.
adrenal medulla [ANAT] The hormone-secreting chromaffin cells of the adrenal gland that produce epinephrine and norepinephrine.
adrenal virilism [MED] **1.** The development of male characteristics in the female resulting from excessive production of adrenal hormones with androgenic activity. **2.** A rare form of pseudohermaphroditism.
adrenergic [PHYSIO] Describing the chemical activity of epinephrine or epinephrine-like substances.
adrenergic blocking agent [BIOCHEM] Any substance that blocks the action of epinephrine or an epinephrine-like substance.
adrenochrome [BIOCHEM] $C_9H_9O_3N$ A brick-red oxidation product of epinephrine which can convert hemoglobin into methemoglobin.
adrenocortical hormone *See* adrenal cortex hormone.
adrenocorticotropic hormone [BIOCHEM] The chemical secretion of the adenohypophysis that stimulates the adrenal cortex. Abbreviated ACTH. Also known as adrenotropic hormone.
adrenogenital syndrome [MED] A group of symptoms associated with hypersecretion of adrenal cortex hormones; effects vary with sex and time of development.
adrenotropic [PHYSIO] Of or pertaining to an effect on the adrenal cortex.
adrenotropic hormone *See* adrenocorticotropic hormone.
adret [ECOL] The sunny (usually south) face of a mountain featuring high timber and snow lines.
adsorbate [CHEM] A solid, liquid, or gas which is adsorbed as molecules, atoms, or ions by such substances as charcoal, silica, metals, water, and mercury.
adsorbent [CHEM] A solid or liquid that adsorbs other substances; for example, charcoal, silica, metals, water, and mercury.
adsorption [CHEM] The surface retention of solid, liquid, or gas molecules, atoms, or ions by a solid or liquid, as opposed to absorbtion, the penetration of substances into the bulk of the solid or liquid.
adsorption chromatography [ANALY CHEM] Separation of a chemical mixture (gas or liquid) by passing it over an adsorbent bed which adsorbs different compounds at different rates.
adsorption gasoline [MATER] Gasoline extracted from natural gas or refinery gas.
adsorption indicator [ANALY CHEM] An indicator used in solutions to detect slight excess of a substance or ion; precipitate becomes colored when the indicator is adsorbed. An example is fluorescein.
adsorption isobar [PHYS CHEM] A graph showing how adsorption varies with some parameter, such as temperature, while holding pressure constant.
adsorption isotherm [PHYS CHEM] The relationship between the gas pressure p and the amount w, in grams, of a gas or vapor taken up per gram of solid at a constant temperature.
adsorption system [MECH ENG] A device that dehumidifies air by bringing it into contact with a solid adsorbing substance.
adularescence [OPTICS] A certain type of white or bluish light seen in a gemstone (usually adularia) as it is turned.
adularia [MINERAL] A weakly triclinic form of the mineral orthoclase occurring in transparent, colorless to milky-white pseudo-orthorhombic crystals.
adularization [GEOL] Replacement by or introduction of the mineral adularia.
adult rickets *See* osteomalacia.
ad valorem tax [PETRO ENG] Property tax for oil-producing properties, assessed at a flat rate for each net barrel of oil produced.
advance [GEOL] **1.** A continuing movement of a shoreline toward the sea. **2.** A net movement over a specified period of time of a shoreline toward the sea. [HYD] The forward movement of a glacier. [MECH ENG] To effect the earlier occurrence of an event, for example, spark advance or injection advance. [NAV] **1.** In making a turn, the distance a vessel moves in its initial direction from the point where the rudder is started over until the heading has changed 90°. **2.** The distance a vessel moves in the initial direction for heading changes of less than 90°.
advanced design array radar [ORD] A radar system that uses two antennas and a data-processing center to locate and identify enemy intercontinental ballistic missiles. Abbreviated ADAR.
advanced gallery [MIN ENG] A small heading driven in advance of the main tunnel in tunnel excavation.
advanced gas-cooled reactor [NUCLEO] A power-generating nuclear reactor which has steel-clad uranium dioxide fuel elements and is cooled by carbon dioxide gas.
advanced line of position [NAV] A line of position which has been moved forward along the course line to allow for the run since the line was established; the opposite is a retired line of position.
advanced potential [ELECTROMAG] Any electromagnetic potential arising as a solution of the classical Maxwell field equations, analogous to a retarded potential solution, but lying on the future light cone of space-time; the potential appears, at present, to have no physical interpretation.
advanced signal-processing system [COMPUT SCI] A portable data-processing system for military use; its complete configuration may consist of the analyzer unit, a postprocessing unit (for data-processing and control tasks), and an advanced signal-processing display unit. Also known as Proteus.
advance feed tape [COMPUT SCI] Computer tape punched so that the leading edges of its feed holes will line up with the leading edges of the data holes in the tape usage device.
advance overburden [MIN ENG] Overburden in excess of the average overburden-to-ore ratio that must be removed in opencut mining.
advance signal [CIV ENG] A signal in a block system up to which a train may proceed within a block that is not completely cleared.
advance slope grouting [ENG] A grouting technique in which the front of the mass of grout is forced to move horizontally through preplaced aggregate.
advance slope method [ENG] A method of concrete placement in which the face of the fresh concrete, which is not vertical, moves forward as the concrete is placed.
advance stripping [MIN ENG] The removal of barren or sub-ore-grade earthy or rock materials to expose the minable grade of ore.
advance wave [MIN ENG] The air pressure wave preceding the flame in a coal dust explosion.
advancing [MIN ENG] Mining outward from the shaft toward the boundary.
advancing fire *See* assault fire.
advancing longwall [MIN ENG] Mining coal outward from the shaft pillar, with roadways maintained through the worked-out portion of the mine.
advection [METEOROL] The process of transport of an atmospheric property solely by the mass motion of the atmosphere. [OCEANOGR] The process of transport of water, or of an aqueous property, solely by the mass motion of the oceans, most typically via horizontal currents.
advection fog [METEOROL] A type of fog caused by the horizontal movement of moist air over a cold surface and the consequent cooling of that air to below its dew point.
advective hypothesis [METEOROL] The assumption that local temperature changes are the result only of horizontal or isobaric advection.
advective model [METEOROL] A mathematical or dynamic model of fluid flow which is characterized by the advective hypothesis.
advective thunderstorm [METEOROL] A thunderstorm resulting from static instability produced by advection of relatively colder air at high levels or relatively warmer air at low levels or by a combination of both conditions.
adventitia [ANAT] The external, connective-tissue covering of an organ or blood vessel. Also known as tunica adventitia.
adventitious [BIOL] Also known as adventive. **1.** Acquired spontaneously or accidentally, not by heredity. **2.** Arising, as a tissue or organ, in an unusual or abnormal place.
adventitious bud [BOT] A bud that arises at points on the plant other than at the stem apex or a leaf axil.
adventitious deafness [MED] A type of deafness that oc-

ADSORPTION ISOBAR



A typical adsorption isobar; w/m is weight of material adsorbed per unit weight of adsorbent, and T is absolute temperature.

ADSORPTION ISOTHERM



A typical adsorption isotherm; w/m is weight of material adsorbed per weight of adsorbent, and p is pressure.

curs at any point during a lifetime and may have a course either of gradual, progressive development or of sudden onset.

adventitious embryo [MED] An embryo developing outside the uterus.

adventitious root [BOT] A root that arises from any plant part other than the primary root (radicle) or its branches.

adventitious vein [INV ZOO] The vessel between the intercalary and accessory veins on certain insect wings.

adventive [BIOL] **1.** An organism that is introduced accidentally and is imperfectly naturalized; not native. **2.** *See* adventitious.

adventive cone [GEOL] A volcanic cone that is on the flank of and subsidiary to a larger volcano. Also known as lateral cone; parasitic cone.

adventive crater [GEOL] A crater opened on the flank of a large volcanic cone.

advisory area [NAV] A designated area within a flight information region to which air-traffic advisory notices apply.

advolution [BIOL] Development or growth with increasing similarities; growth toward; the opposite of evolution.

adz [DES ENG] A cutting tool with a thin arched blade, sharpened on the concave side, at right angles on the handle; used for rough dressing of timber.

adz block [MECH ENG] The part of a machine for wood planing that carries the cutters.

Ae [MET] The temperature of equilibrium for corresponding phase change Ac; Ae_{cm}, Ae_3, and Ae_4 are similarly related to Ac_{cm}, Ac_3, and Ac_4.

Ae_1 [MET] The temperature, attained without thermal lag, at which cementite-austenite conversion takes place in a hypoeutectoid steel or ferrite-austenite conversion takes place in a hypereutectoid steel.

aebi [BIOL] A unit for the standardization of a phosphatase.

Aechminidae [PALEON] A family of extinct ostracods in the order Paleocopa in which the hollow central spine is larger than the valve.

aeciospore [MYCOL] A spore produced by an aecium.

aecium [MYCOL] The fruiting body or sporocarp of rust fungi.

aedeagus [INV ZOO] The copulatory organ of a male insect.

Aedes [INV ZOO] A genus of the dipterous subfamily Culicinae in the family Culicidae, with species that are vectors for many diseases of man.

Aedes aegypti [INV ZOO] A cosmopolitan mosquito that transmits the etiological agents of yellow fever, dengue, equine encephalomyelitis, and Bancroft's filariasis.

Aeduellidae [PALEON] A family of Lower Permian palaeoniscoid fishes in the order Palaeonisciformes.

Aegeriidae [INV ZOO] The clearwing moths, a family of lepidopteran insects in the suborder Heteroneura characterized by the lack of wing scales.

Aegialitidae [INV ZOO] An equivalent name for the Salpingidae.

Aegidae [INV ZOO] A family of isopod crustaceans in the suborder Flabellifera whose members are economically important as fish parasites.

aegirine [MINERAL] $NaFe(SiO_3)_2$ A brown or green clinopyroxene occurring in alkali-rich igneous rocks. Also known as aegirite.

aegirite *See* aegirine.

aegithognathous [VERT ZOO] Referring to a bird palate in which the vomers are completely fused and truncate in appearance.

Aegothelidae [VERT ZOO] A family of small Australo-Papuan owlet-nightjars in the avian order Caprimulgiformes.

Aegypiinae [VERT ZOO] The Old World vultures, a subfamily of diurnal carrion feeders of the family Accipitridae.

Aegyptianella [MICROBIO] A genus of the family Anaplasmataceae; organisms from inclusions in red blood cells of birds.

Aegyptopithecus [PALEON] A primitive primate that is thought to represent the common ancestor of both the human and ape families.

aelophilous [BOT] Describing a plant whose disseminules are dispersed by wind.

Aelosomatidae [INV ZOO] A family of microscopic freshwater annelid worms in the class Oligochaeta characterized by a ventrally ciliated prostomium.

aenigmatite *See* enigmatite.

aeolian *See* eolian.

aeolotropic *See* anisotropic.

aeolotropy *See* anisotropy.

aeon [ASTRON] A billion (10^9) years.

Aepophilidae [INV ZOO] A family of bugs in the hemipteran superfamily Saldoidea.

Aepyornis [PALEON] A genus of extinct ratite birds representing the family Aepyornithidae.

Aepyornithidae [PALEON] The single family of the extinct avian order Aepyornithiformes.

Aepyornithiformes [PALEON] The elephant birds, an extinct order of ratite birds in the superorder Neognathae.

aerated concrete [MATER] Concrete made by adding substances which will liberate gases by chemical reaction; entrapped gases reduce its density and enhance insulation properties.

aerated flow [ENG] Flowing liquid in which gas is dispersed as fine bubbles throughout the liquid.

aerating agent [FOOD ENG] A gas such as carbon dioxide, nitrous oxide, or food-grade Freon used to flavor beverages or to dispense liquids from charged containers.

A/E ratio *See* absorptivity-emissivity ratio.

aeration [ENG] **1.** Exposing to the action of air. **2.** Causing air to bubble through. **3.** Introducing air into a solution by spraying, stirring, or similar method. **4.** Supplying or infusing with air, as in sand or soil. [FOOD ENG] Charging a liquid with some gas, such as water with carbon dioxide (soda water). [MIN ENG] The introduction of air into the pulp in a flotation cell to form air bubbles.

aeration cell [PHYS CHEM] An electrolytic cell whose electromotive force is due to electrodes of the same material located in different concentrations of dissolved air. Also known as oxygen cell.

aeration tank [ENG] A fluid-holding tank with provisions to aerate its contents by bubbling air or another gas through the liquid or by spraying the liquid into the air.

aerator [DES ENG] A tool having a roller equipped with hollow fins; used to remove cores of soil from turf. [ENG] **1.** One who aerates. **2.** Equipment used for aeration. **3.** Any device for supplying air or gas under pressure, as for fumigating, welding, or ventilating. [MECH ENG] Equipment used to inject compressed air into sewage in the treatment process. [MET] A device which decreases the density of sand by mixing it with air, thus facilitating the movement of sand particles in packing.

aerenchyma [BOT] A specialized tissue in some water plants characterized by thin-walled cells and large intercellular air spaces.

aerial [BIOL] Of, in, or belonging to the air or atmosphere. [ELECTR] *See* antenna. [ORD] **1.** Of or pertaining to operations in the air or to aircraft. **2.** Of weapons or missiles used in aircraft or launched, dropped, or shot from aircraft.

aerial archeology [ARCHEO] Location of ancient earthworks, walls, village sites, ditches, and other features through the use of aerial surveys.

aerial bomb [ORD] A bomb designed to be dropped from an aircraft, carrying either a high explosive or another agent, and normally detonated on contact or by a timing device.

aerial burst *See* airburst.

aerial cableway *See* aerial tramway.

aerial camera [OPTICS] A camera designed for use in aircraft and containing a mechanism to expose the film in continuous sequence at a steady rate. Also known as aerocamera.

aerial cannon *See* aircraft cannon.

aerial cartographic photography *See* mapping photography.

aerial dart [ORD] A metal dart designed to be dropped as a missile from an aircraft. Also known as flechette.

aerial film [GRAPHICS] Specially designed roll film supplied in many lengths and widths, with various emulsion types, for use in aerial cameras.

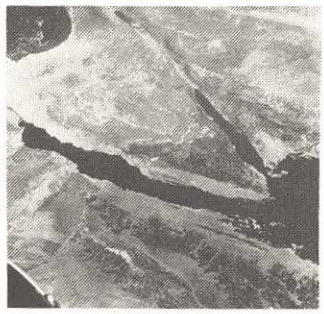
aerial mapping [MAP] The making of planimetric and contoured maps and charts on the basis of photographs of the ground surface from an aircraft, spacecraft, or rocket. Also known as aerocartography.

aerial mine [ORD] **1.** A mine designed to be dropped from an aircraft, especially into water. **2.** An early World War II light case bomb, the predecessor of the blockbuster, that was normally dropped by parachute.

aerial mycelium [MYCOL] A mass of hyphae that occurs above the surface of a substrate.

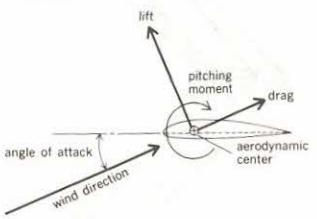
aerial observation [ORD] Observation from aircraft of artillery fire.
aerial perspective [OPTICS] The effect produced by diffusion of light in the atmosphere whereby more distant objects have less clarity of outline and are lighter in tone.
aerial photogrammetry [ENG] Use of aerial photographs to make accurate measurements in surveying and mapmaking.
aerial photographic reconnaissance *See* aerial photoreconnaissance.
aerial photography [ENG] The making of photographs of the ground surface from an aircraft, spacecraft, or rocket. Also known as aerophotography.
aerial photoreconnaissance [ENG] The obtaining of information by air photography; the three types are strategic, tactical, and survey-cartographic photoreconnaissance. Also known as aerial photographic reconnaissance.
aerial reconnaissance [ENG] The collection of information by visual, electronic, or photographic means while aloft.
aerial root [BOT] A root exposed to the air, usually anchoring the plant to a tree, and often functioning in photosynthesis.
aerial ropeway *See* aerial tramway.
aerial sound ranging [AERO ENG] The process of locating an aircraft by means of the sounds it emits.
aerial spud [MECH ENG] A cable for moving and anchoring a dredge.
aerial stem [BOT] A stem with an erect or vertical growth habit above the ground.
aerial survey [ENG] A survey utilizing photographic, electronic, or other data obtained from an airborne station. Also known as aerosurvey; air survey.
aerial torpedo [ORD] **1.** A torpedo designed or adapted to be launched from a low-flying aircraft into water. **2.** Formerly, the explosive projectile thrown by a trench mortar and designed so as to fall point down.
aerial tramway [MECH ENG] A system for transporting bulk materials that consists of one or more cables supported by steel towers and is capable of carrying a traveling carriage from which loaded buckets can be lowered or raised. Also known as aerial cableway; aerial ropeway.
aeriform [PHYS] Having the form or nature of air.
aeroallergen [MED] Any airborne particulate matter that can induce allergic responses in sensitive persons.
aeroballistics [MECH] The study of the interaction of projectiles or high-speed vehicles with the atmosphere.
aerobe [BIOL] An organism that requires air or free oxygen to maintain its life processes.
aerobic-anaerobic interface [CIV ENG] That point in bacterial action in the body of a sewage sludge or compost heap where both aerobic and anaerobic microorganisms participate, and the decomposition of the material goes no further.
aerobic-anaerobic lagoon [CIV ENG] A pond in which the solids from a sewage plant are placed in the lower layer; the solids are partially decomposed by anaerobic bacteria, while air or oxygen is bubbled through the upper layer to create an aerobic condition.
aerobic bacteria [MICROBIO] Any bacteria requiring free oxygen for the metabolic breakdown of materials.
aerobic digestion [CHEM ENG] Digestion of matter suspended or dissolved in waste by microorganisms under favorable conditions of oxygenation.
aerobic lagoon [CIV ENG] An aerated pond in which sewage solids are placed, and are decomposed by aerobic bacteria.
aerobic process [BIOL] A process requiring the presence of oxygen.
aerobiology [BIOL] The study of the atmospheric dispersal of airborne fungus spores, pollen grains, and microorganisms; and, more broadly, of airborne propagules of algae and protozoans, minute insects such as aphids, and pollution gases and particles which exert specific biologic effects.
aerobioscope [MICROBIO] An apparatus for collecting and determining the bacterial content of a sample of air.
aerobiosis [BIOL] Life existing in air or oxygen.
aerocamera *See* aerial camera.
aerocartography *See* aerial mapping.
aerochlorination [CIV ENG] Treatment of sewage with compressed air and chlorine gas to remove fatty substances.
Aerococcus [MICROBIO] A genus of bacteria in the family Streptococcaceae; spherical cells have the tendency to form tetrads; they ferment glucose with production of dextrorotatory lactic acid (homofermentative).
AERO code [METEOROL] An international code used to encode for transmission, in words five numerical digits long, synoptic weather observations of particular interest to aviation operations.
aerocyst [BOT] An air vesicle in certain species of algae.
aerodiscone antenna [ELECTROMAG] Electrically small antenna for airborne applications in the very-high-frequency and ultra-high-frequency bands; it is derived from, and preserves, the desirable electrical characteristics of the discone antenna and can be designed in various physical shapes.
aerodontalgia [MED] A toothache brought on by atmospheric decompression.
aerodrome *See* airport.
aeroduct [AERO ENG] A ramjet type of engine designed to scoop up ions and electrons freely available in the outer reaches of the atmosphere or in the atmospheres of other spatial bodies and, by a metachemical process within the engine duct, to expel particles derived from the ions and electrons as a propulsive jetstream.
aerodynamic [FL MECH] Pertaining to forces acting upon any solid or liquid body moving relative to a gas (especially air).
aerodynamically rough surface [FL MECH] A surface whose irregularities are sufficiently high that the turbulent boundary layer reaches right down to the surface.
aerodynamically smooth surface [FL MECH] A surface whose irregularities are sufficiently small to be entirely embedded in the laminar sublayer.
aerodynamic balance [ENG] A balance used for the measurement of the forces exerted on the surfaces of instruments exposed to flowing air; frequently used in tests made on models in wind tunnels.
aerodynamic center [AERO ENG] A point on a cross section of a wing or rotor blade through which the forces of drag and lift are acting and about which the pitching moment coefficient is practically constant.
aerodynamic characteristics [AERO ENG] The performance of a given airfoil profile as related to lift and drag, to angle of attack, and to velocity, density, viscosity, compressibility, and so on.
aerodynamic chord [AERO ENG] A straight line intersecting or touching an airfoil profile at two points; specifically, that part of such a line between two points of intersection.
aerodynamic coefficient [FL MECH] Any nondimensional coefficient relating to aerodynamic forces or moments, such as a coefficient of drag or a coefficient of lift.
aerodynamic configuration [AERO ENG] The form of an aircraft, incorporating desirable aerodynamic qualities.
aerodynamic control [AERO ENG] A control surface whose use causes local aerodynamic forces.
aerodynamic drag [FL MECH] A retarding force that acts upon a body moving through a gaseous fluid and that is parallel to the direction of motion of the body; it is a component of the total fluid forces acting on the body. Also known as aerodynamic resistance.
aerodynamic force [FL MECH] The force between a body and a gaseous fluid caused by their relative motion. Also known as aerodynamic load.
aerodynamic heating [FL MECH] The heating of a body produced by passage of air or other gases over its surface; caused by friction and by compression processes and significant chiefly at high speeds.
aerodynamic instability [AERO ENG] An unstable state caused by oscillations of a structure that are generated by spontaneous and more or less periodic fluctuations in the flow, particularly in the wake of the structure.
aerodynamic lift [FL MECH] That component of the total aerodynamic force acting on a body perpendicular to the undisturbed airflow relative to the body. Also known as lift.
aerodynamic load *See* aerodynamic force.
aerodynamic missile [AERO ENG] A missile with surfaces which produce lift during flight.
aerodynamic moment [AERO ENG] The torque about the center of gravity of a missile or projectile moving through the atmosphere, produced by any aerodynamic force which does not act through the center of gravity.
aerodynamic noise [ACOUS] Acoustic noise caused by turbulent airflow over the surface of a body.
aerodynamic phenomena [FL MECH] Acoustic, thermal, electrical, and mechanical effects, among others, that result from the flow of air over a body.

AERIAL PHOTOGRAPHY



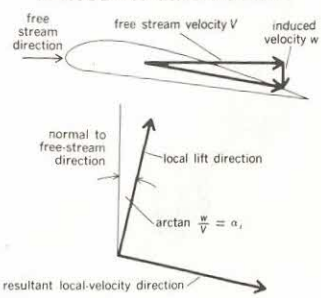
Aerial photograph of view over Sinai Peninsula from *Gemini 2* looking northeast; eastern desert of Egypt in foreground, Israel and Jordan in background. *(NASA photograph)*

AERODYNAMIC CENTER



Aerodynamic forces on an airfoil section, showing aerodynamic center. *(From C. D. Perkins and R. E. Hage, Airplane Performance Stability and Control, Wiley, 1949)*

AERODYNAMIC FORCE



Effect of the induced velocity on the direction of local velocity and lift.

aerodynamic resistance *See* aerodynamic drag.

aerodynamics [FL MECH] The science that deals with the motion of air and other gaseous fluids and with the forces acting on bodies when they move through such fluids or when such fluids move against or around the bodies.

aerodynamic size [PHYS] Particle size determined from inertia or settling velocity, assuming Stokes' law for the resistance to a sphere moving through a fluid. Also known as inertial size.

aerodynamic stability [AERO ENG] The property of a body in the air, such as an aircraft or rocket, to maintain its attitude, or to resist displacement, and if displaced, to develop aerodynamic forces and moments tending to restore the original condition.

aerodynamic trail [FL MECH] A condensation trail formed by adiabatic cooling to saturation (or slight supersaturation) of air passing over the surfaces of high-speed aircraft.

aerodynamic trajectory [MECH] A trajectory or part of a trajectory in which the missile or vehicle encounters sufficient air resistance to stabilize its flight or to modify its course significantly.

aerodynamic turbulence [FL MECH] A state of fluid flow in which the instantaneous velocities exhibit irregular and apparently random fluctuations.

aerodynamic vehicle [AERO ENG] A device, such as an airplane or glider, capable of flight only within a sensible atmosphere and relying on aerodynamic forces to maintain flight.

aerodynamic wave drag [FL MECH] The force retarding an airplane, especially in supersonic flight, as a consequence of the formation of shock waves ahead of it.

aerodyne [AERO ENG] Any heavier-than-air craft that derives its lift in flight chiefly from aerodynamic forces, such as the conventional airplane, glider, or helicopter.

aeroelasticity [MECH] The deformation of structurally elastic bodies in response to aerodynamic loads.

aeroembolism [MED] A condition marked by the presence of nitrogen bubbles in the blood and other body tissues resulting from a sudden fall in atmospheric pressure. Also known as air embolism.

aerofall mill [MECH ENG] A grinding mill of large diameter with either lumps of ore, pebbles, or steel balls as crushing bodies; the dry load is airswept to remove mesh material.

aerofilter [CIV ENG] A filter bed for sewage treatment consisting of coarse material and operated at high speed, often with recirculation.

aerofoil *See* airfoil.

aerogel [CHEM] A porous solid formed from a gel by replacing the liquid with a gas with little change in volume so that the solid is highly porous.

aerogenerator [ELEC] A generator that is driven by the wind, designed to utilize wind power on a commercial scale.

aerogeography [GEOGR] The geographic study of earth features by means of aerial observations and aerial photography.

aerogeology [GEOL] The geologic study of earth features by means of aerial observations and aerial photography.

aerogram [COMMUN] A message transmitted by radio or carried by an aircraft.

aerograph [ENG] Any self-recording instrument carried aloft by any means to obtain meteorological data.

aerography [METEOROL] **1.** The study of the air or atmosphere. **2.** The practice of weather observation, map plotting, and maintaining records. **3.** *See* descriptive meteorology.

aerohydrous mineral [MINERAL] A mineral containing water in small cavities.

aerolite *See* stony meteorite.

aerologation [NAV] The science of long-range navigation by altimetry. Also known as minimal flight path; pressure pattern flying; single heading flight.

aerological days [METEOROL] Specified days on which additional upper-air observations are made; an outgrowth of the International Polar Year.

aerology [METEOROL] **1.** Synonym for meteorology, according to official usage in the U.S. Navy until 1957. **2.** The study of the free atmosphere throughout its vertical extent, as distinguished from studies confined to the layer of the atmosphere near the earth's surface.

aeromagnetic surveying [GEOPHYS] The mapping of the magnetic field of the earth through the use of electronic magnetometers suspended from aircraft.

aeromechanics [FL MECH] The science of air and other gases in motion or equilibrium; has two branches, aerostatics and aerodynamics.

aeromedicine *See* aerospace medicine.

aerometeorograph [ENG] A self-recording instrument used on aircraft for the simultaneous recording of atmospheric pressure, temperature, and humidity.

aerometer [ENG] An instrument to ascertain the weight or density of air or other gases.

Aeromonas [MICROBIO] A genus of bacteria in the family Vibrionaceae; straight, motile rods with rounded ends; most species are pathogenic to marine and fresh-water animals.

aeromotor [AERO ENG] An engine designed to provide motive power for an aircraft.

aeronaut [AERO ENG] A person who operates or travels in an airship or balloon.

aeronautical beacon [NAV] A visual aid to navigation, displaying flashes of white or colored light or both, used to indicate the location of airports, landmarks, and certain points of the Federal airways in mountainous terrain and to mark hazards.

aeronautical chart [MAP] A basic map of countries or lands made primarily on Lambert conformal ionic projection and layer-tinted; air navigational data are overprinted.

aeronautical climatology [METEOROL] The application of the data and techniques of climatology to aviation meteorological problems.

aeronautical engineering [AERO ENG] The branch of engineering concerned primarily with the design and construction of aircraft structures and power units, and with the special problems of flight in the atmosphere.

aeronautical flutter [FL MECH] An aeroelastic, self-excited vibration in which the external source of energy is the airstream and which depends on the elastic, inertial, and dissipative forces of the system in addition to the aerodynamic forces. Also known as flutter.

aeronautical information overprint [NAV] Additional information which is printed or stamped on a map or chart for the specific purpose of air navigation.

aeronautical light [NAV] A luminous or lighted aid to navigation intended primarily for air navigation.

aeronautical meteorology [METEOROL] The study of the effects of weather upon aviation.

aeronautical mile *See* air mile.

aeronautical pilotage chart [NAV] An aeronautical chart designed primarily for air navigation. Also known as contact chart.

aeronautical planning chart [NAV] An aeronautical chart of small scale designed to satisfy long-range air navigation and mission-planning requirements.

aeronautics [FL MECH] The science that deals with flight through the air.

aeronomy [GEOPHYS] The study of the atmosphere of the earth or other bodies, particularly in relation to composition, properties, relative motion, and radiation from outer space or other bodies.

aerootitis *See* barotitis.

aerophare *See* radio beacon.

aerophotography *See* aerial photography.

aerophysics [AERO ENG] The physics dealing with the design, construction, and operation of aerodynamic devices.

aerophyte *See* epiphyte.

aeropulse engine *See* pulsejet engine.

aeroservoelasticity [AERO ENG] The study of the interaction of automatic flight controls on aircraft and aeroelastic response and stability.

aerosiderite [GEOL] A meteorite composed principally of iron.

aerosinusitis *See* barosinusitis.

aerosol [CHEM] A gaseous suspension of ultramicroscopic particles of a liquid or a solid.

aerosol generator [MECH ENG] A mechanical means of producing a system of dispersed phase and dispersing medium, that is, an aerosol.

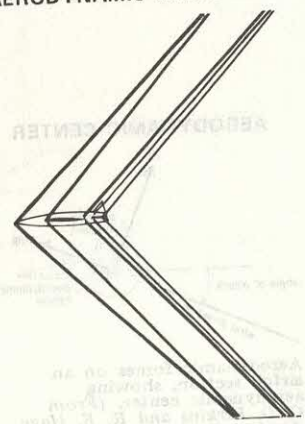
aerosol propellant [MATER] Compressed gas or vapor in a container which, upon release of pressure and expansion through a valve, carries another substance from the container; used for cosmetics, household cleaners, and so on; examples are butanes, propane, nitrogen, fluorocarbons, and carbon dioxide.

aerospace *See* airspace.

aerospace electronics [ELECTR] The field of electronics as applied to aircraft and spacecraft.

aerospace engineering [ENG] Engineering pertaining to the design and construction of aircraft and space vehicles and of

AERODYNAMIC WAVE DRAG



Shock waves generated by an airplane at supersonic speeds act to retard the plane.

power units, and to the special problems of flight in both the earth's atmosphere and space, as in the flight of air vehicles and in the launching, guidance, and control of missiles, earth satellites, and space vehicles and probes.

aerospace environment [GEOPHYS] **1.** The conditions, influences, and forces that are encountered by vehicles, missiles, and so on in the earth's atmosphere or in space. **2.** External conditions which resemble those of atmosphere and space, and in which a piece of equipment, a living organism, or a system operates.

aerospace ground equipment [AERO ENG] Support equipment for air and space vehicles. Abbreviated AGE.

aerospace industry [ENG] Industry concerned with the use of vehicles in both the earth's atmosphere and space.

aerospace medicine [MED] The branch of medicine dealing with the effects of flight in the atmosphere or space upon the human body and with the prevention or cure of physiological or psychological malfunctions arising from these effects. Also known as aeromedicine; aviation medicine.

aerospace vehicle [AERO ENG] A vehicle capable of flight both within and outside the sensible atmosphere.

Aerosporin [MICROBIO] Trade name for the antibiotic polymyxin B.

aerostat [AERO ENG] Any aircraft that derives its buoyancy or lift from a lighter-than-air gas contained within its envelope or one of its compartments; for example, ships and balloons.

aerostatic balance [ENG] An instrument for weighing air.

aerostatics [FL MECH] The science of the equilibrium of gases and of solid bodies immersed in them when under the influence only of natural gravitational forces.

aerosurvey *See* aerial survey.

aerotaxis [BIOL] The movement of an organism, especially aerobic and anaerobic bacteria, with reference to the direction of oxygen or air.

aerothermochemistry [FL MECH] The study of gases which takes into account the effect of motion, heat, and chemical changes.

aerothermodynamic border [GEOPHYS] An altitude of about 100 miles (161 km), above which the atmosphere is so rarefied that the skin of an object moving through it at high speeds generates no significant heat.

aerothermodynamics [FL MECH] The study of aerodynamic phenomena at sufficiently high gas velocities that thermodynamic properties of the gas are important.

aerothermoelasticity [FL MECH] The study of the response of elastic structures to the combined effects of aerodynamic heating and loading.

aerotropism [BOT] A response in which the growth direction of a plant component changes due to modifications in oxygen tension.

aerozine [MATER] Hydrazine mixed 50:50 with dimethylhydrazine; the most-used bipropellant rocket fuel.

AES *See* Auger electron spectroscopy.

aeschynomenous [BOT] Having sensitive leaves that droop when touched, such as members of the Leguminosae.

Aesculus [BOT] A genus of deciduous trees or shrubs belonging to the order Sapindales. Commonly known as buckeye.

Aeshnidae [INV ZOO] A family of odonatan insects in the suborder Anisoptera distinguished by partially fused eyes.

aesthacyte *See* esthacyte.

aesthesia *See* esthesia.

aesthesiometer *See* esthesiometer.

aesthete [BOT] A plant organ with the capacity to respond to definite physical stimuli.

aestidurilignosa [ECOL] A mixed woodland of evergreen and deciduous hardwoods.

aestilignosa [ECOL] A woodland of tropophytic vegetation in temperate regions.

aestival *See* estival.

aestivation [BOT] The arrangement of floral parts in a bud. [PHYSIO] The condition of dormancy or torpidity.

AET *See* *S*-(2-aminoethyl)isothiuronium bromide hydrobromide.

Aetosauria [PALEON] A suborder of Triassic archosaurian quadrupedal reptiles in the order Thecodontia armored by rings of thick, bony plates.

af *See* audio frequency.

aF *See* abfarad.

AFC *See* automatic frequency control.

afebrile [MED] Without fever.

affect [PSYCH] Conscious awareness of feelings; mood.

affection [MED] Any pathology or diseased state of the body. [PSYCH] The feeling aspect of consciousness.

affective psychosis [PSYCH] A severe disturbance marked by extremes of mood, such as depression or manic elation.

affectivity [PSYCH] The state of being susceptible to emotional stimuli.

afferent [PHYSIO] Conducting or conveying inward or toward the center, specifically in reference to nerves and blood vessels.

afferent neuron [ANAT] A nerve cell that conducts impulses toward a nerve center, such as the central nervous system.

affination [FOOD ENG] Removing the film of adhering molasses from raw sugar crystals by treating with a heavy sugar syrup.

affine deformation [GEOL] A type of deformation in which very thin layers slip against each other so that each moves equally with respect to its neighbors; generally does not result in folding. [MAP] A deformation in which the scale along one axis, or reference plane, is different from the scale along the other axis, or plane, normal to the first.

affine geometry [MATH] The study of geometry using the methods of linear algebra.

affine strain [GEOPHYS] A strain in the earth that does not differ from place to place.

affine transformation [MATH] A function on a linear space to itself, which is the sum of a linear transformation and a fixed vector.

affinity [IMMUNOL] The strength of the attractive forces between an antigen and an antibody.

affinity chromatography [ANALY CHEM] A chromatographic technique that utilizes the ability of biological molecules to bend to certain ligands specifically and reversibly; used in protein biochemistry.

affinity labeling [BIOCHEM] A method for introducing a label into the active site of an enzyme by relying on the tight binding between the enzyme and its substrate (or cofactors).

afforestation [FOR] Establishment of a new forest by seeding or planting on nonforested land.

affreightment [IND ENG] The lease of a vessel for the transportation of goods.

afibrinogenemia [MED] Complete absence of fibrinogen in the blood.

aflatoxicosis [MED] Aflatoxin poisoning.

aflatoxin [BIOCHEM] The toxin produced by some strains of the fungus *Aspergillus flavus*, the most potent carcinogen yet discovered.

afocal lens [OPTICS] A lens of zero convergent power, whose focal points are infinitely distant.

afocal system [OPTICS] An optical system of zero convergent power, for example, a telescope.

a format [COMPUT SCI] A nonexecutable statement in FORTRAN which permits alphanumeric characters to be transmitted in a manner similar to numeric data.

A frame [BUILD] A dwelling whose main frames are in the shape of the letter A. [ENG] Two poles supported in an upright position by braces or guys and used for lifting equipment. Also known as double mast. [OCEANOGR] An A-shaped frame used for outboard suspension of oceanographic gear on a research vessel.

Africa [GEOGR] The second largest continent, with an area of 11,700,000 square miles; bisected midway by the Equator, above and below which it shows symmetry of climate and vegetation zones.

African greenheart [MATER] The yellowish-brown wood of *Piptadena africana;* used for shipbuilding and dock timbers. Also known as dahoma.

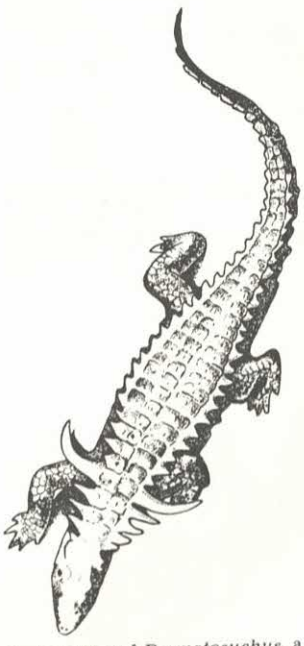
African horse sickness [VET MED] An infectious, mosquito-borne virus disease of equines characterized by fever and edematous swelling.

African sleeping sickness [MED] A disease of man confined to tropical Africa, caused by the protozoans *Trypanosoma gambiense* or *T. rhodesiense;* symptoms include local reaction at the site of the bite, fever, enlargement of adjacent lymph nodes, skin rash, edema, and during the late phase, somnolence and emaciation. Also known as African trypanosomiasis; maladie du sommeil; sleeping sickness.

African swine fever *See* hog cholera.

African trypanosomiasis *See* African sleeping sickness.

AETOSAURIA



Restoration of *Desmatosuchus*, a quadrupedal thecodont, length to 3 meters. *(From E.H. Colbert, Evolution of the Vertebrates, 2d ed., copyright © 1969 by John Wiley & Sons, Inc.; reprinted by permission)*

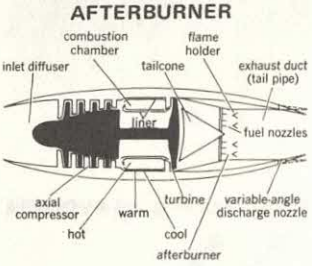


Diagram of turbojet engine showing afterburner.

African violet [BOT] *Saintpaulia ionantha*. A flowering plant typical of the family Gesneriaceae.

aft [NAV ARCH] Near, toward, or at the stern of a ship.

afterbirth [EMBRYO] The placenta and fetal membranes expelled from the uterus following birth of offspring in viviparous mammals.

afterblow [MET] A blow in a Bessemer process, occurring after the flame for the removal of carbon has dropped, to remove phosphorus.

afterbody [AERO ENG] **1.** A companion body that trails a satellite. **2.** A section or piece of a rocket or spacecraft that enters the atmosphere unprotected behind the nose cone or other body that is protected for entry. **3.** The afterpart of a vehicle.

afterbreak [MIN ENG] A phenomenon occurring during mine subsidence; material slides inward after the main break, assumed at right angles to the plane of the seam.

afterburner [AERO ENG] A device for augmenting the thrust of a jet engine by burning additional fuel in the uncombined oxygen in the gases from the turbine.

afterburning [AERO ENG] The function of an afterburner. [MECH ENG] Combustion in an internal combustion engine following the maximum pressure of explosion.

afterburnt [AERO ENG] Descriptive of the condition following the complete transformation of the solid propellant to gaseous form.

afterburst [MIN ENG] **1.** A tremor that sometimes follows a rock blast as the ground adjusts to the new stress distribution. **2.** A sudden collapse of rock in an underground mine subsequent to a rock burst.

afterchromed dye [MATER] A dye that is improved in color quality or fastness after the textile is dyed by treatment with sodium dichromate, copper sulfate, or similar materials.

aftercondenser [MECH ENG] A condenser in the second stage of a two-stage ejector; used in steam power plants, refrigeration systems, and air conditioning systems.

aftercooler [MECH ENG] A heat exchanger which cools air that has been compressed; used on turbocharged engines.

aftercooling [MECH ENG] The cooling of a gas after its compression. [NUCLEO] The cooling of a reactor after it has been shut down.

afterdamp [MIN ENG] The mixture of gases which remains in a mine after a mine fire or an explosion of firedamp.

afterfilter [MECH ENG] In an air-conditioning system, a high-efficiency filter located near a terminal unit. Also known as final filter.

afterflaming [AERO ENG] With liquid- or solid-propellant rocket thrust chambers, a characteristic low-grade combustion that takes place in the thrust chamber assembly and around its nozzle exit after the main propellant flow has been stopped.

aftergases [MIN ENG] Gases produced by mine explosions or mine fires.

afterglow [ATOM PHYS] *See* phosphorescence. [METEOROL] A broad, high arch of radiance or glow seen occasionally in the western sky above the highest clouds in deepening twilight, caused by the scattering effect of very fine particles of dust suspended in the upper atmosphere. [PL PHYS] The transient decay of a plasma after the power has been turned off.

afterheat [NUCLEO] Heat derived from residual radioactivity after a reactor has been shut down.

afterimage [PHYSIO] A visual sensation occurring after the stimulus to which it is a response has been removed.

afterpain [MED] Lower abdominal pain after passage of the placenta secondary to uterine contractions.

afterpeak [NAV ARCH] The compartment closest to the stern in the hold of a ship.

after-perpendicular [NAV ARCH] A vertical line through the intersection of the design waterline with the after-side of the straight portion of the rudder post of a ship. Abbreviated AP.

afterpotential [PHYSIO] A small positive or negative wave that follows and is dependent on the main spike potential, seen in the oscillograph tracing of an action potential passing along a nerve.

afterripening [BOT] A period of dormancy after a seed is shed during which the synthetic machinery of the seed is prepared for germination and growth.

afterscour water [TEXT] Wash water that has been discharged from the dyeing vat in the chemical treatment of fabric.

aftershaft [VERT ZOO] An accessory, plumelike feather near the upper umbilicus on the feathers of some birds.

aftershock [GEOPHYS] A small earthquake following a larger earthquake and originating at or near the larger earthquake's epicenter.

aftertack [MATER] Of a paint film, tackiness or stickiness which remains over a long period of time. Also known as residual tack.

afterwind [NUCLEO] A wind produced by the updraft accompanying the rise of the fireball of a nuclear explosion and directed toward the burst center.

Aftonian interglacial [GEOL] Post-Nebraska interglacial geologic time.

afwillite [MINERAL] $Ca_3Si_2O_4(OH)_6$ A colorless mineral consisting of a hydrous calcium silicate and occurring in monoclinic crystals; specific gravity is 2.6.

Ag *See* silver.

agalactia [MED] Nonsecretion or imperfect secretion of milk after childbirth.

agalite [MINERAL] A mineral with the same composition as talc but with a less soapy feel; used as a filler in writing paper.

agalmatolite [GEOL] A soft, waxy, gray, green, yellow, or brown mineral or stone, such as pinite and steatite; used by the Chinese for carving images. Also known as figure stone; lardite; pagodite.

Agamemnon [ASTRON] An asteroid, one of a group of Trojan planets whose periods of revolution are approximately equal to that of Jupiter, or about 12 years.

agameon [BIOL] An organism which reproduces only by asexual means. Also known as agamospecies.

agamete [BIOL] An asexual reproductive cell that develops into an adult individual.

agamic [BIOL] Referring to a species or generation which does not reproduce sexually.

Agamidae [VERT ZOO] A family of Old World lizards in the suborder Sauria that have acrodont dentition.

agammaglobulinemia [MED] The condition characterized by lack of or extremely low levels of gamma globulin in the blood, together with defective antibody production and frequent infections; primary agammaglobulinemia occurs in three clinical forms: congenital, acquired, and transient.

agamogony [BIOL] Asexual reproduction, specifically schizogony.

agamospecies *See* agameon.

agamospermy [BOT] Apogamy in which sexual union is incomplete because of abnormal development of the pollen and the embryo sac.

Agaontidae [INV ZOO] A family of small hymenopteran insects in the superfamily Chalcidoidea; commonly called fig insects for their role in cross-pollination of figs.

agar [MATER] A gelatinous product extracted from certain red algae and used chiefly as a gelling agent in culture media.

agar attar *See* oriental linaloe.

agar-gel reaction [IMMUNOL] A precipitin type of antigen-antibody reaction in which the reactants are introduced into different regions of an agar gel and allowed to diffuse toward each other.

agaric acid [ORG CHEM] $C_{19}H_{36}(OH)(COOH)_3$ An acid with melting point 141°C; soluble in water, insoluble in benzene; used as an irritant. Also known as agaricin.

Agaricales [MYCOL] An order of fungi in the class Basidiomycetes containing all forms of fleshy, gilled mushrooms.

agaricin *See* agaric acid.

agaric mineral *See* rock milk.

agarophyte [BOT] Any seaweed that yields agar.

Agassiz orogeny [GEOL] A phase of diastrophism confined to North America Cordillera occurring at the boundary between the Middle and Late Jurassic.

Agassiz trawl [OCEANOGR] A dredge consisting of a net attached to an iron frame with a hoop at each end that is used to collect organisms, particularly invertebrates, living on the ocean bottom.

Agassiz Valleys [GEOL] Undersea valleys in the Gulf of Mexico between Cuba and Key West.

agate [GRAPHICS] A type size in printing of about 5½ points, where 72 points equals 1 inch. [MINERAL] SiO_2 A fine-grained, fibrous variety of chalcedony with color banding or irregular clouding.

agate glass [MATER] Multicolor glass made by blending glasses of two or more colors or by rolling transparent glass into powdered glass of various colors.

agate jasper [MINERAL] An impure variety of quartz consisting of jasper and agate. Also known as jaspagate.

agatized wood *See* silicified wood.

Agavaceae [BOT] A family of flowering plants in the order Liliales characterized by parallel, narrow-veined leaves, a more or less corolloid perianth, and an agavaceous habit.

agavose [ORG CHEM] $C_{12}H_{22}O_{11}$ A sugar found in the juice of the agave tree; used in medicine as a diuretic and laxative.

AGC *See* automatic gain control.

age [BIOL] Period of time from origin or birth to a later time designated or understood; length of existence. [GEOL] **1.** Any one of the named epochs in the history of the earth marked by specific phases of physical conditions or organic evolution, such as the Age of Mammals. **2.** One of the smaller subdivisions of the epoch as geologic time, corresponding to the stage or the formation, such as the Lockport Age in the Niagara Epoch.

AGE *See* aerospace ground equipment.

age coating [ELEC] The black deposit that is formed on the inner surface of an electric lamp by material evaporated from the filament.

aged [GEOL] Of a ground configuration, having been reduced to base level.

age determination [GEOL] Identification of the geologic age of a biological or geological specimen by using the methods of dendrochronology or radiometric dating.

age distribution [ECOL] The distribution of different age groups in a population.

aged shore [GEOL] A shore long established at a constant level and adjusted to the waves and currents of the sea.

age hardening [MET] Increasing the hardness of an alloy by a relatively low-temperature heat treatment that causes precipitation of components or phases of the alloy from the supersaturated solid solution.

agel fiber [MATER] Fiber from the leaves and stem of the gebang palm; used for rope, sailcloth, and fishnets.

Agena *See* β Centauri.

Agena rocket [AERO ENG] A liquid-fuel, upper-stage rocket usually used with a first-stage Atlas or Thor booster in certain space satellite projects.

agenda [COMPUT SCI] **1.** The sequence of control statements required to carry out the solution of a computer problem. **2.** A collection of programs used for manipulating a matrix in the solution of a problem in linear programming.

agendum call card [COMPUT SCI] A punch card that contains one item in an agenda for manipulation of a matrix in the solution of a linear programming problem.

agenesis [BIOL] Absence of a tissue or organ due to lack of development.

age of diurnal inequality [GEOPHYS] The time interval between the maximum semimonthly north or south declination of the moon and the time that the maximum effect of the declination upon the range of tide or speed of the tidal current occurs. Also known as age of diurnal tide; diurnal age.

age of diurnal tide *See* age of diurnal inequality.

Age of Fishes [GEOL] An informal designation of the Silurian and Devonian periods of geologic time.

Age of Mammals [GEOL] An informal designation of the Cenozoic era of geologic time.

Age of Man [GEOL] An informal designation of the Quaternary period of geologic time.

age of parallax inequality [GEOPHYS] The time interval between the perigee of the moon and the maximum effect of the parallax (distance of the moon) upon the range of tide or speed of tidal current. Also known as parallax age.

age of phase inequality [GEOPHYS] The time interval between the new or full moon and the maximum effect of these phases upon the range of tide or speed of tidal current. Also known as age of tide; phase age.

age of the moon [ASTRON] The elapsed time, usually expressed in days, since the last new moon.

age of tide *See* age of phase inequality.

ageostrophic wind *See* geostrophic departure.

age ratio [GEOL] The ratio of the amount of daughter to parent isotope in a mineral being dated radiometrically.

age softening [MET] The loss of strength and hardness which takes place at room temperature in some alloys because of the spontaneous decrease of residual stresses in the strain-hardened structure.

age structure [ANTHRO] Categorization of the population of communities or countries by age groups, allowing demographers to make projections of the growth or decline of the particular population.

agger [CIV ENG] A material used for road fill over low ground.

agglomeration [FOOD ENG] A technique that combines powdered material to form larger, more soluble particles by intermingling in a humid atmosphere. [MET] Conversion of small pieces of low-grade iron ore into larger lumps by application of heat. [METEOROL] The process in which particles grow by collision with and assimilation of cloud particles or other precipitation particles. Also known as coagulation. [SCI TECH] An indiscriminately formed cluster of particles.

agglomeration test [MIN ENG] A test of a button of coke whose results are used as a measure of the binding qualities of the coal.

agglutinate cone *See* spatter cone.

agglutination reaction [IMMUNOL] Clumping of a particulate suspension of antigen by a reagent, usually an antibody.

agglutinin [IMMUNOL] An antibody from normal or immune serum that causes clumping of its complementary particulate antigen, such as bacteria or erythrocytes.

agglutinogen [IMMUNOL] An antigen that stimulates production of a specific antibody (agglutinin) when introduced into an animal body.

agglutinoid [IMMUNOL] An agglutin that lacks the power to agglutinate but has the ability to unite with its agglutinogen.

aggradation [GEOL] *See* accretion. [HYD] A process of shifting equilibrium of stream deposition, with upbuilding approximately at grade.

aggradation recrystallization [GEOL] Recrystallization resulting in the enlargement of crystals.

aggraded valley floor [GEOL] The surface of a flat deposit of alluvium which is thicker than the stream channel's depth and is formed where a stream has aggraded its valley.

aggraded valley plain *See* alluvial plain.

aggregate [GEOL] A collection of soil grains or particles gathered into a mass. [MATER] The natural sands, gravels, and crushed stone used for mixing with cementing material in making mortars and concretes.

aggregate bin [ENG] A structure designed for storing and dispensing dry granular construction materials such as sand, crushed stone, and gravel; usually has a hopperlike bottom that funnels the material to a gate under the structure.

aggregate interlock [ENG] The projection of aggregate particles or portions thereof from one side of a joint or crack in concrete into recesses in the other side so as to effect load transfer in compression and shear, and to maintain mutual alignment.

aggregate recoil [NUC PHYS] The ejection of atoms from the surface of a sample as a result of their being attached to one atom that is recoiling as the result of α-particle emission.

aggregate structure [GEOL] A mass composed of separate small crystals, scales, and grains that, under a microscope, extinguish at different intervals during the rotation of the stage.

aggression [PSYCH] Feelings and behavior of anger and hostility usually manifested by punitive or destructive actions; often associated with frustration.

aggressive carbon dioxide [CHEM ENG] The carbon dioxide dissolved in water in excess of the amount required to precipitate a specified concentration of calcium ions as calcium carbonate; used as a measure of the corrosivity and scaling properties of water.

aggressive device [COMPUT SCI] A unit of a computer that can initiate a request for communication with another device.

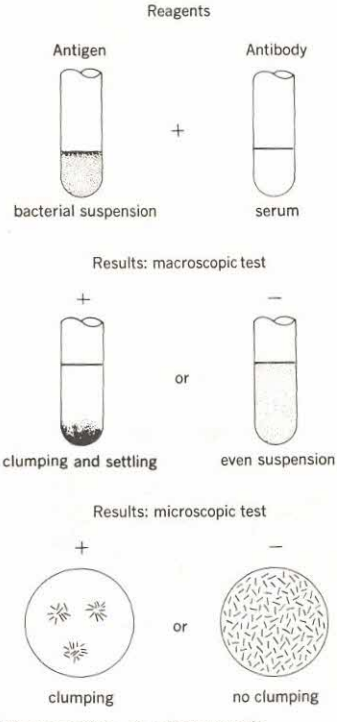
aggressive magma [GEOL] A magma that forces itself into place.

aggressive mimicry [ZOO] Mimicry used to attract or deceive a species in order to prey upon it.

aggressive water [HYD] Any of the waters which force their way into place.

aging [BIOL] Growing older. [CHEM] All irreversible structural changes that occur in a precipitate after it has formed. [ELEC] Allowing a permanent magnet, capacitor, meter, or other device to remain in storage for a period of time, sometimes with a voltage applied, until the characteristics of the device become essentially constant. [ELECTROMAG] Change in the magnetic properties of iron with passage of time, for example, increase in the hysteresis. [ENG] **1.** The changing of the characteristics of a device due to its use. **2.** Operation

AGGLUTINATION REACTION



Macroscopic or microscopic results of agglutination reaction. *(From C. J. Witton, Microbiology with Application to Nursing, 2d ed., McGraw-Hill, 1956)*

of a product before shipment to stabilize characteristics or detect early failures. [MATER] **1.** Change in the properties of any substance with time. **2.** Change occurring in powders or slips with the passage of time. **3.** Curing of ceramic materials, such as clays and glazes, by a definite period of time under controlled storage conditions. [MET] **1.** Change in properties of an alloy or metal which generally proceeds slowly at room temperatures and faster at elevated temperatures. **2.** Strain relief, occurring through long storage outdoors under varying temperatures, of iron castings intended for use as toolroom plates or lathe-bed supports. **3.** A second heat treatment of an alloy at a lower temperature, causing precipitation of the unstable phase and increasing hardness, strength, and electrical conductivity. [NUCLEO] The slowing down of neutrons.

aging-lung emphysema [MED] An asymptomatic pulmonary disease associated with aging, characterized by alveolar dilation due to loss of tissue elasticity.

agitating speed [MECH ENG] The rate of rotation of the drum or blades of a truck mixer or other device used for agitation of mixed concrete.

agitating truck [MECH ENG] A vehicle carrying a drum or agitator body, in which freshly mixed concrete can be conveyed from the point of mixing to that of placing, the drum being rotated continuously to agitate the contents.

agitator [MECH ENG] A device for keeping liquids and solids in liquids in motion by mixing, stirring, or shaking.

agitator body [MECH ENG] A truck-mounted drum for transporting freshly mixed concrete; rotation of internal paddles or of the drum prevents the setting of the mixture prior to delivery.

Aglaspida [PALEON] An order of Cambrian and Ordovician merostome arthropods in the subclass Xiphosurida characterized by a phosphatic exoskeleton and vaguely trilobed body form.

aglomerular [HISTOL] Lacking glomeruli.

Aglossa [VERT ZOO] A suborder of anuran amphibians represented by the single family Pipidea and characterized by the absence of a tongue.

aglycon [BIOCHEM] The nonsugar compound resulting from the hydrolysis of glycosides; an example is 3,5,7,3′,4′-pentahydroxyflavylium, or cyanidin.

aglyphous [VERT ZOO] Having solid teeth.

agmatine [BIOCHEM] $C_5H_{14}N_4$ Needlelike crystals with a melting point of 231°C; soluble in water; a product of the enzymatic decarboxylation of argenine. Also known as 4-(aminobutyl)guanidine.

agmatite [PETR] **1.** A migmatite that contains xenoliths. **2.** Fragmental plutonic rock with granitic cement.

agnate [BIOL] Related exclusively through male descent.

Agnatha [VERT ZOO] The most primitive class of vertebrates, characterized by the lack of true jaws.

agnathia [MED] Lack of the jaws.

agnosia [MED] Loss of the ability to recognize persons or objects and their meaning.

agonic line [GEOPHYS] The imaginary line through all points on the earth's surface at which the magnetic declination is zero; that is, the locus of all points at which magnetic north and true north coincide.

Agonidae [VERT ZOO] The poachers, a small family of marine perciform fishes in the suborder Cottoidei.

agonistic behavior [PSYCH] In social animals, fighting and escape behavior common in males during the rutting season.

agoraphobia [PSYCH] Abnormal fear of open places.

agouti [VERT ZOO] A hystricomorph rodent, *Dasyprocta*, in the family Dasyproctidae, represented by 13 species.

agpaite [PETR] A group of igneous rocks containing feldspathoids; includes naujaite, lujavrite, and kakortokite.

agranular leukocyte [HISTOL] A type of white blood cell, including lymphocytes and monocytes, characterized by the absence of cytoplasmic granules and by a relatively large spherical or indented nucleus.

agranulocytosis [MED] An acute febrile illness, usually resulting from drug hypersensitivity, manifested as severe leukopenia, often with complete disappearance of granulocytes.

agraphia [MED] Loss of the ability to write.

agravic [GEOPHYS] Of or pertaining to a condition of no gravitation.

agravic illusion [MED] An apparent movement of a target in the visual field due to otolith response in zero gravity. Also known as oculoagravic illusion.

agrestal [ECOL] Growing wild in the fields.

agricere [GEOL] A waxy or resinous organic coating on soil particles.

agricolite *See* eulytite.

agricultural chemicals [MATER] Fertilizers, soil conditioners, fungicides, insecticides, weed killers, and other chemicals used to increase farm crop productivity and quality.

agricultural chemistry [AGR] The science of chemical compositions and changes involved in the production, protection, and use of crops and livestock; includes all the life processes through which food and fiber are obtained for man and his animals, and control of these processes to increase yields, improve quality, and reduce costs.

agricultural climatology [AGR] In general, the study of climate as to its effect on crops; it includes, for example, the relation of growth rate and crop yields to the various climatic factors and hence the optimum and limiting climates for any given crop. Also known as agroclimatology.

agricultural engineering [AGR] A discipline concerned with developing and improving the means for providing food and fiber for mankind's needs.

agricultural geology [GEOL] A branch of geology that deals with the nature and distribution of soils, the occurrence of mineral fertilizers, and the behavior of underground water.

agricultural lime [MATER] A hydrated lime which is used to condition soil.

agricultural machinery [AGR] Machines utilized for tillage, planting, cultivation, and harvesting of crops.

agricultural meteorology [AGR] The study and application of relationships between meteorology and agriculture, involving problems such as timing the planting of crops. Also known as agrometeorology.

agricultural pipe drain [CIV ENG] A system of porous or perforated pipes laid in a trench filled with gravel or the like; used for draining subsoil.

agricultural science [AGR] A discipline dealing with the selection, breeding, and management of crops and domestic animals for more economical production.

agricultural wastes [AGR] Those liquid or solid wastes that result from agricultural practices, such as cattle manure, crop residue (for example, corn stalks), pesticides, and fertilizers.

agriculture [BIOL] The production of plants and animals useful to man, involving soil cultivation and the breeding and management of crops and livestock.

Agriochoeridae [PALEON] A family of extinct tylopod ruminants in the superfamily Merycoidodontoidea.

agrioecology [ECOL] The ecology of cultivated plants.

Agrionidae [INV ZOO] A family of odonatan insects in the suborder Zygoptera characterized by black or red markings on the wings.

Agrobacterium [MICROBIO] A genus of bacteria in the family Rhizobiaceae; cells do not fix free nitrogen, and three of the four species are plant pathogens, producing galls and hairy root.

Agrobacterium tumefaciens [MICROBIO] A pathogenic soil bacterium that causes root and stem galls on plants in over 40 families of angiosperms.

agroenvironment [AGR] The soil and climate of a region as they affect agriculture.

Agromyzidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects of the subsection Acalypteratae; commonly called leaf-miner flies because the larvae cut channels in leaves.

agronomy [AGR] The principles and procedures of soil management and of field crop and special-purpose plant improvement, management, and production.

agrophilous [ECOL] Having a natural habitat in grain fields.

agrostology [BOT] A division of systematic botany concerned with the study of grasses.

agrotechnology [AGR] An innovative technology designed to render agricultural production more efficient and profitable.

aguilarite [MINERAL] Ag_4SeS An iron-black mineral associated with argentite and silver in Mexico.

Agulhas Current [OCEANOGR] A fast current flowing in a southwestward direction along the southeastern coast of Africa.

agyiophobia [PSYCH] Abnormal fear of crossing streets.

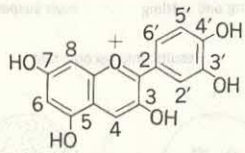
aH *See* abhenry.

Ah *See* ampere-hour.

ahaptoglobinemia [MED] An inherited lack of haptoglobin, a blood serum protein.

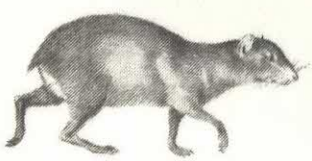
AHCTL *See N*-acetylhomocysteinethiolactone.

AGLYCON



Cyanidin, the commonest aglycon.

AGOUTI



The agouti (*Dasyprocta aguti*), a rodent found in Mexico, South America, and the West Indies.

ahermatypic [INV ZOO] Non-reef-building, applied to corals.

ahlfeldite [MINERAL] $(Ni,Co)SeO_3 \cdot 2H_2O$ A triclinic mineral identified as green to yellow crystals with a reddish-brown coating, consisting of a hydrous selenite of nickel.

aichmophobia [PSYCH] Abnormal fear of sharp or pointed objects.

aided matching [ORD] Mechanical system for transferring firing or other data from a data-transmission line to a gun data computer or other device.

aided tracking [ENG] A system of radar-tracking a target signal in bearing, elevation, or range, or any combination of these variables, in which the rate of motion of the tracking equipment is machine-controlled in collaboration with an operator so as to minimize tracking error.

aided-tracking mechanism [ENG] A device consisting of a motor and variable-speed drive which provides a means of setting a desired tracking rate into a director or other fire-control instrument, so that the process of tracking is carried out automatically at the set rate until it is changed manually.

aided-tracking ratio [ENG] The ratio between the constant velocity of the aided-tracking mechanism and the velocity of the moving target.

aid to navigation [NAV] A device external to a craft, designed to assist in determination of position of the craft, or of a safe course, or to warn of dangers or obstructions.

aiguille [ENG] A slender form of drill used for boring or drilling a blasthole in rock. [GEOL] The needle-top of the summit of certain glaciated mountains, such as near Mont Blanc.

aikinite [MINERAL] $PbCuBiS_3$ A mineral crystallizing in the orthorhombic system and occurring massive and in gray needle-shaped crystals; hardness is 2 on Mohs scale, and specific gravity is 7.07. Also known as needle ore.

aileron [AERO ENG] The hinged rear portion of an aircraft wing moved differentially on each side of the aircraft to obtain lateral or roll control moments. [ARCH] A half gable, such as that which closes the end of a penthouse roof or of a church aisle.

ailsyte [PETR] An alkalic microgranite containing a considerable amount of riebeckite. Also known as paisanite.

ailurophobia [PSYCH] Abnormal fear of cats.

AIM *See* Airmen's Information Manual.

aiming circle [ENG] An instrument for measuring angles in azimuth and elevation in connection with artillery firing and general topographic work; equipped with fine and coarse azimuth micrometers and a magnetic needle.

aiming point [ORD] **1.** An object or point on which the sight of a weapon is laid for direction, or on which an observer orients his observing instrument. **2.** The point used by an aerial bombardier or pilot to determine where to release bombs, rockets, mines, torpedoes, and so forth.

aiming post [ORD] In mortar firing, a wooden or metal post having contrasting painted transverse bands and a metal point or stake for driving into the ground; used as a sighting point in direct fire.

aimless drainage [HYD] Drainage without a well-developed system, as in areas of glacial drift or karst topography.

A/in.² *See* ampere per square inch.

A indicator *See* A scope.

ainhum [MED] A tropical disease of unknown etiology that is peculiar to male Negroes, in which a toe is slowly and spontaneously amputated by a fibrous ring.

aiophyllous *See* evergreen.

air [CHEM] A predominantly mechanical mixture of a variety of individual gases forming the earth's enveloping atmosphere.

air-acetylene welding [MET] A gas-welding process in which the heat is obtained from the combustion of acetylene and air.

AIRAD [NAV] Airmen advisory on NOTAM which is given only local dissemination during preflight or inflight briefings.

air adit [MIN ENG] An adit driven for the purpose of ventilating a mine.

Air Almanac [NAV] **1.** A periodical publication of astronomical data useful to and designed primarily for air navigation. **2.** A joint publication of the U.S. Naval Observatory and the Royal Greenwich Observatory, listing the Greenwich hour angle and declination of various celestial bodies at 10-minute intervals, the time of sunrise, sunset, moonrise, and moonset, and other astronomical information arranged in a form convenient for navigators; each publication covers 4 months.

air-arc furnace [ENG] An arc furnace designed to power wind tunnels, the air being superheated to 20,000 K and expanded to emerge at supersonic speeds.

air armament [ORD] All equipment through which a combat aircraft can release destructive power on a target.

air-assist forming [ENG] A plastics thermoforming method in which air pressure is used to partially preform a sheet before it enters the mold.

air atomizing oil burner [ENG] An oil burner in which a stream of fuel oil is broken into very fine droplets through the action of compressed air.

air barrage [MIN ENG] An airtight wall dividing a ventilation gallery in a mine into two parts, so that air is led in through one part and out through the other. [ORD] **1.** Bombs dropped in a predetermined pattern from a fleet of aircraft to reduce the effectiveness of ground military personnel and equipment. **2.** The shells fired by an antiaircraft battery of guns at attacking airplanes.

air base [AERO ENG] **1.** In the U.S. Air Force, an establishment, comprising an airfield, its installations, facilities, personnel, and activities, for the flight operation, maintenance, and supply of aircraft and air organizations. **2.** A similar establishment belonging to any other air force. **3.** In a restricted sense, only the physical installation. [MAP] **1.** The line joining two air stations, or the length of this line. **2.** The distance, at the scale of the stereoscopic model, between adjacent perspective centers as reconstructed in the plotting instrument.

air battery [ELEC] A connected group of two or more air cells; also, a single air cell.

air belt [MECH ENG] The chamber which equalizes the pressure that is blasted into the cupola at the tuyeres.

air-bend die [MET] A device for forming metals in which only the two edges of the lower section are in contact with the metal.

air bind [ENG] The presence of air in a conduit or pump which impedes passage of the liquid.

airblast [MIN ENG] A disturbance in underground workings accompanied by a strong rush of air.

airblast circuit breaker [ELEC] An electric switch which, on opening, utilizes a high-pressure gas blast (air or sulfur hexafluoride) to break the arc.

airblasting [ENG] A blasting technique in which air at very high pressure is piped to a steel shell in a shot hole and discharged. Also known as air breaking.

air bleeder [(MECH ENG)] A device, such as a needle valve, for removing air from a hydraulic system.

air-blower noise [ACOUS] Noise in blowers in heater and air-conditioning systems due to air turbulence.

air-blown asphalt [MATER] A bituminous product made by reacting the residual oil of petroleum distillation with air at 400–600°F (204–316°C).

airboat [AERO ENG] *See* seaplane. [NAV ARCH] A shallow boat that is propelled by an airplane propeller and steered by an airplane rudder.

airborne [AERO ENG] Of equipment and material, carried or transported by aircraft. [ORD] **1.** Of a force or organization, transported, or designed to be transported, by aircraft. **2.** Of an action or operation, carried out with transport aircraft.

airborne alert [ORD] A state of aircraft readiness wherein combat-equipped aircraft are rapidly airborne and ready for immediate action; it is designed to reduce reaction time and to increase the survival factor.

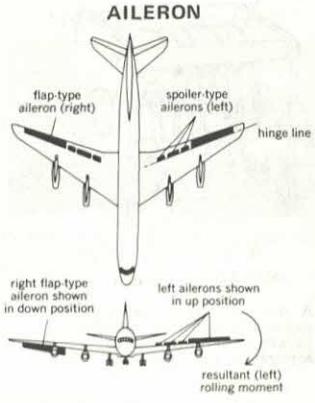
airborne assault weapon [ORD] An unarmored, mobile, full-tracked gun providing a mobile antitank capability for airborne troops; it can be air-dropped.

airborne collision avoidance system [NAV] A navigation system for preventing collisions between aircraft that relies primarily on equipment carried on the aircraft itself, but which may make use of equipment already employed in the ground-based air-traffic control system. Abbreviated ACAS.

airborne collision warning system [ENG] A system such as a radar set or radio receiver carried by an aircraft to warn of the danger of possible collision.

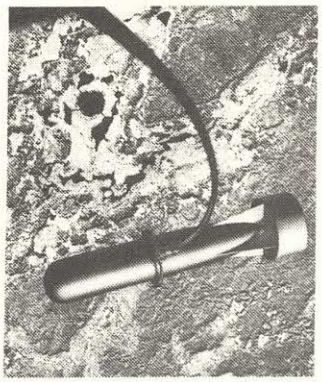
airborne command post [ORD] A suitably equipped aircraft used by the commander for the control of his forces.

airborne control system [GEOD] A survey system for fourth-order horizontal and vertical control surveys involving electromagnetic distance measurements and horizontal and ver-



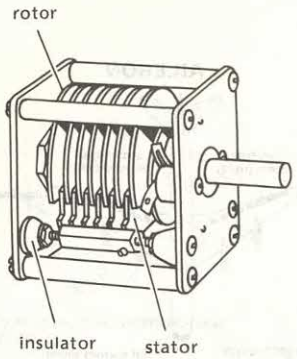
Flap- and spoiler-type ailerons on jet transport airplane.

AIRBORNE MAGNETOMETER



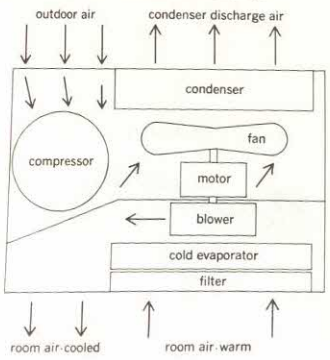
View from aircraft of suspended magnetometer in use on a magnetic survey in an inaccessible region of moderate to low relief. *(Aero Service Corporation)*

AIR CAPACITOR



A drawing of a variable air capacitor showing the flat, parallel metallic plates separated by air.

AIR CONDITIONER



Schematic of room air conditioner. *(From American Society of Heating, Refrigerating and Air-conditioning Engineers, Inc., Guide and Data Book, 1967)*

tical measurements from two or more known positions to a helicopter hovering over the unknown position. Also known as ABC system.

airborne detector [ENG] A device, transported by an aircraft, whose function is to locate or identify an air or surface object.

airborne early warning [ORD] The detection of enemy air or surface units by radar or other equipment carried in an airborne vehicle, and the transmitting of a warning to friendly units.

airborne early warning and control [ORD] Air surveillance and control provided by airborne early-warning vehicles which are equipped with search and height-finding radar and communications equipment for controlling weapons.

airborne early-warning station [ORD] An airborne radar station for detecting aircraft, which are incapable of being detected by a ground radar station because of line-of-sight propagation limitations.

airborne electronic survey control [ENG] The airborne portion of very accurate positioning systems used in controlling surveys from aircraft.

airborne intercept radar [ENG] Airborne radar used to track and "lock on" to another aircraft to be intercepted or followed.

airborne magnetometer [ENG] An airborne instrument used to measure the magnetic field of the earth.

airborne operation [ORD] An operation involving the movement and delivery by air, into an objective area, of combat forces and their logistic support for execution of a tactical or a strategic mission; the means may be any combination of airborne units, air-transportable units, and types of transport aircraft, depending on the mission and the overall situation.

airborne profile [GEOD] Continuous terrain-profile data produced by an absolute altimeter in an aircraft which is making an altimeter-controlled flight along a prescribed course.

airborne profile recorder [ENG] An electronic instrument that emits a pulsed-type radar signal from an aircraft to measure vertical distances between the aircraft and the earth's surface. Abbreviated APR. Also known as terrain profile recorder (TPR).

airborne radar [ENG] Radar equipment carried by aircraft to assist in navigation by pilotage, to determine drift, and to locate weather disturbances; a very important use is locating other aircraft either for avoidance or attack.

airborne troops [ORD] Ground units whose primary mission is to make assault landings from the air; may refer specifically to troops landed by aircraft as distinguished from parachute troops, or may refer only to those troops landed by parachute or glider as distinguished from those landed in powered aircraft.

airborne unit [ORD] A ground unit organized, trained, and equipped for airborne assault.

airborne warning and control system [ORD] A U.S. Air Force program that uses airborne radar to detect low-flying enemy aircraft and high-altitude attacking bombers and to provide associated command and control functions for strategic interceptor forces. Abbreviated AWACS.

airborne waste [ENG] Vapors, gases, or particulates introduced into the atmosphere by evaporation, chemical, or combustion processes; a frequent cause of smog and an irritant to eyes and breathing passages.

air-bound [ENG] Of a pipe or apparatus, containing a pocket of air that prevents or reduces the desired liquid flow.

air brake [MECH ENG] An energy-conversion mechanism activated by air pressure and used to retard, stop, or hold a vehicle or, generally, any moving element.

air breaking *See* airblasting.

air-break switch *See* air switch.

air breakup [AERO ENG] The breakup of a test reentry body within the atmosphere.

air-breathing [MECH ENG] Of an engine or aerodynamic vehicle, required to take in air for the purpose of combustion.

air-breathing missile [ORD] A missile having an engine that requires air intake for combustion of its fuel, such as a ramjet or turbojet; it cannot operate beyond the atmosphere.

air brick [MATER] A brick or brick-sized metal box that is hollow or perforated and used for ventilation.

airbrush [GRAPHICS] A pencil-shaped air gun that fine-sprays paint; used in retouching photographs and in shading drawings.

airburst [ORD] Any burst in the air, but usually the bursting of a projectile or bomb above the ground with resulting spray of fragments. Also known as aerial burst.

air cap [MECH ENG] A device used in thermal spraying which directs the air pattern for purposes of atomization.

air capacitor [ELEC] A capacitor having only air as the dielectric material between its plates. Also known as air condenser.

air carbon arc cutting [MET] A carbon arc cutting process in which the molten metal in the cut is removed by an airblast.

air casing [ENG] A metal casing surrounding a pipe or reservoir and having a space between to prevent heat transmission.

air cell [ELECTR] A cell in which depolarization at the positive electrode is accomplished chemically by reduction of the oxygen in the air. [ZOO] A cavity or receptacle for air such as an alveolus, an air sac in birds, or a dilation of the trachea in insects.

air chamber [MECH ENG] A pressure vessel, partially filled with air, for converting pulsating flow to steady flow of water in a pipeline, as with a reciprocating pump.

air changes [CIV ENG] A measure of the volume of air supplied to or exhausted from a building or room; expressed as the ratio of the volume of air exchanged to the volume of the building or room.

air check [ENG ACOUS] A recording made of a live radio broadcast for filing purposes at the broadcasting facility.

air classifier [MECH ENG] A device to separate particles by size through the action of a stream of air.

air cleaner [ENG] Any of various devices designed to remove particles and aerosols of specific sizes from air; examples are screens, settling chambers, filters, wet collectors, and electrostatic precipitators.

Airco-Hoover sweetening [CHEM ENG] Removal of mercaptans from gasoline by caustic and water washes, then heating the dried gasoline and passing it with some oxygen through a reactor containing a slurry of diatomaceous earth impregnated with copper chloride; the oxygen regenerates the catalyst.

air composition [METEOROL] The kinds and amounts of the constituent substances of air, the amounts being expressed as percentages of the total volume or mass.

air compression [PHYS] The decrease of volume of a quantity of air as a result of an increase in pressure, as is accomplished by a piston moving in a cylinder.

air compressor [MECH ENG] A machine that increases the pressure of air by increasing its density and delivering the fluid against the connected system resistance on the discharge side.

air-compressor unloader [MECH ENG] A device for control of air volume flowing through an air compressor.

air-compressor valve [MECH ENG] A device for controlling the flow into or out of the cylinder of a compressor.

air condenser [ELEC] *See* air capacitor. [MECH ENG] **1.** A steam condenser in which the heat exchange occurs through metal walls separating the steam from cooling air. Also known as air-cooled condenser. **2.** A device that removes vapors, such as of oil or water, from the airstream in a compressed-air line.

air conditioner [MECH ENG] A mechanism primarily for comfort cooling that lowers the temperature and reduces the humidity of air in buildings.

air conditioning [MECH ENG] The maintenance of certain aspects of the environment within a defined space to facilitate the function of that space; aspects controlled include air temperature and motion, radiant heat level, moisture, and concentration of pollutants such as dust, microorganisms, and gases. Also known as climate control. [TEXT] A chemical process by which small fibers are sealed into yarn.

air content [MATER] The volume of air voids in cement paste, mortar,or concrete, exclusive of pore space in aggregate particles; usually expressed as a percentage of total volume of the mixture.

air-control center [COMM] An area set aside in a submarine for the control of aircraft; it is the equivalent of a combat information center on an aircraft or a ship.

air conveyor *See* pneumatic conveyor.

air-cooled blast-furnace slag [MET] The material resulting from solidification of molten blast-furnace slag under atmospheric conditions.

air-cooled condenser *See* air condenser.

air-cooled engine [MECH ENG] An engine cooled directly by a stream of air without the interposition of a liquid medium.

air-cooled heat exchanger [MECH ENG] A finned-tube (ex-

tended-surface) heat exchanger with hot fluids inside the tubes, and cooling air that is fan-blown (forced draft) or fan-pulled (induced draft) across the tube bank.

air cooling [MECH ENG] Lowering of air temperature for comfort, process control, or food preservation.

air coordinates [ORD] A system of coordinates used in determining the forces acting on a missile.

air-core coil [ELECTR] An inductor without a magnetic core.

air-core transformer [ELECTROMAG] Transformer (usually radio-frequency) having a nonmetallic core.

air course *See* airway.

air cover [ORD] **1.** The protection against attack, especially air attack, given by airplanes to surface or airborne forces. **2.** The airplanes giving, or designated to give, this protection.

aircraft [AERO ENG] Any structure, machine, or contrivance, especially a vehicle, designed to be supported by the air, either by the dynamic action of the air upon the surfaces of the structure or object or by its own buoyancy. Also known as air vehicle.

aircraft ammunition [ORD] Ammunition designed to be shot, launched, or dropped from aircraft.

aircraft antenna [ELECTR] An airborne device used to detect or radiate electromagnetic waves.

aircraft axes *See* axes of an aircraft.

aircraft bonding [AERO ENG] Electrically connecting together all of the metal structure of the aircraft, including the engine and metal covering on the wiring.

aircraft cannon [ORD] A cannon designed or modified for use in an aircraft. Also known as aerial cannon.

aircraft carrier [NAV ARCH] A ship that carries aircraft, has a takeoff and landing deck, and is otherwise designed and equipped to serve as a base of operations for the aircraft. Also known as carrier.

aircraft ceiling [METEOROL] After United States weather observing practice, the ceiling classification applied when the reported ceiling value has been determined by a pilot while in flight within 1.5 nautical miles (2.8 kilometers) of any runway of the airport.

aircraft compass system [NAV] A wholly airborne direction-giving system consisting of means for sensing the earth's magnetic field, stabilizing means, and usually remote indicating equipment.

aircraft control and warning system [ORD] A system established to control and report the movement of aircraft; consists of observation facilities (radar, passive electronic, visual, or other means), control centers, and necessary communications.

aircraft decibel rating [ELECTROMAG] The ratio of the radar reflectivity of a specific type of aircraft to that of a selected reference aircraft, measured in decibels.

aircraft detection [ENG] The sensing and discovery of the presence of aircraft; major techniques include radar, acoustical, and optical methods.

aircraft dispersal area [ORD] An area on a military installation designed primarily for the dispersal of parked aircraft, to make such aircraft less vulnerable in the event of an enemy air raid.

aircraft early-warning station [NAV] A station with long-range radar for detecting the approach of aircraft at a distance.

aircraft electrification [METEOROL] **1.** The accumulation of a net electric charge on the surface of an aircraft. **2.** The separation of electric charge into two concentrations of opposite sign on distinct portions of an aircraft surface.

aircraft engine [AERO ENG] A component of an aircraft that develops either shaft horsepower or thrust and incorporates design features advantageous for aircraft propulsion.

aircraft fuel [MATER] The material used as a source of energy by an aircraft engine to provide propulsion.

aircraft gun [ORD] A gun of any type mounted in a combat aircraft, such as a machine gun or cannon.

aircraft icing [METEOROL] The accumulation of ice on the exposed surfaces of aircraft when flying through supercooled water drops (cloud or precipitation).

aircraft impactor [ENG] An instrument carried by an aircraft for the purpose of obtaining samples of airborne particles.

aircraft instrumentation [AERO ENG] Electronic, gyroscopic, and other instruments for detecting, measuring, recording, telemetering, processing, or analyzing different values or quantities in the flight of an aircraft.

aircraft instrument panel [AERO ENG] A coordinated instrument display arranged to provide the pilot and flight crew with information about the aircraft's speed, altitude, attitude, heading, and condition; also advises the pilot of the aircraft's response to his control efforts.

aircraft low-approach system [NAV] Any of the various means for furnishing guidance in the vertical and horizontal planes to aircraft during descent from an initial approach altitude to a point near the ground.

aircraft machine-gun turret [ORD] An armored enclosure installed in an aircraft for housing the armament and related accessories; it is designed to rotate about one or more axes, thus permitting positioning and firing of a machine gun in a number of directions or angles.

aircraft noise [ACOUS] Effective sound output of the various sources of noise associated with aircraft operation, such as propeller and engine exhaust, jet noise, and sonic boom.

aircraft propeller [AERO ENG] A hub-and-multiblade device for transforming the rotational power of an aircraft engine into thrust power for the purpose of moving an aircraft through the air.

aircraft propulsion [AERO ENG] The means, other than gliding, whereby an aircraft moves through the air; effected by the rearward acceleration of matter through the use of a jet engine or by the reactive thrust of air on a propeller.

aircraft pylon [AERO ENG] A suspension device externally installed under the wing or fuselage of an aircraft; it is aerodynamically designed to fit the configuration of specific aircraft so as to create the least amount of drag; it provides a means of attaching fuel tanks, bombs, rockets, torpedoes, rocket motors, or machine-gun pods.

aircraft report *See* pilot report.

aircraft rocket [ORD] A rocket missile designed to be launched from an aircraft and employing warheads that are armor-piercing, incendiary, or explosive; it is carried beneath the wings of fighter or ground-attack airplanes.

aircraft testing [AERO ENG] The subjecting of an aircraft or its components to simulated or actual flight conditions while measuring and recording pertinent physical phenomena that indicate operating characteristics.

aircraft thermometry [METEOROL] The science of temperature measurement from aircraft.

aircraft vectoring [NAV] The directional control of in-flight aircraft through transmission of bearing and altitude instructions from the ground.

aircraft weather reconnaissance [METEOROL] The making of detailed weather observations or investigations from aircraft in flight.

air crossing [MIN ENG] A mine passage in which two airways cross each other.

air-cure [CHEM ENG] To vulcanize at ordinary room temperatures, or without the aid of heat.

air current [FL MECH] Very generally, any moving stream of air. [GEOPHYS] *See* air-earth conduction current. [MIN ENG] The flow of air ventilating the workings of a mine. Also known as airflow.

air curtain [MECH ENG] A stream of high-velocity temperature-controlled air which is directed downward across an opening; it excludes insects, exterior drafts, and so forth, prevents the transfer of heat across it, and permits air-conditioning of a space with an open entrance.

air cushion [MECH ENG] A mechanical device using trapped air to arrest motion without shock.

air-cushion vehicle [MECH ENG] A transportation device supported by low-pressure, low-velocity air capable of traveling equally well over water, ice, marsh, or relatively level land. Also known as ground-effect machine (GEM); hovercraft.

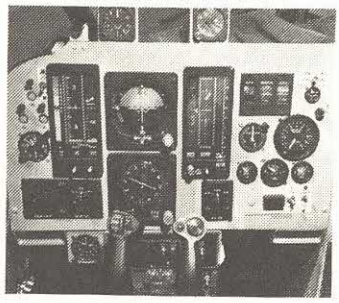
air cycle [MECH ENG] A refrigeration cycle characterized by the working fluid, air, remaining as a gas throughout the cycle rather than being condensed to a liquid; used primarily in airplane air conditioning.

air cylinder [MECH ENG] A cylinder in which air is compressed by a piston, compressed air is stored, or air drives a piston.

air defense [ORD] All measures designed to destroy, nullify, or reduce the effectiveness of enemy attack by aircraft or missiles after they are airborne.

air defense artillery [ORD] Weapons and equipment for actively combating air targets from the ground. Abbreviated ADA.

AIRCRAFT INSTRUMENT PANEL

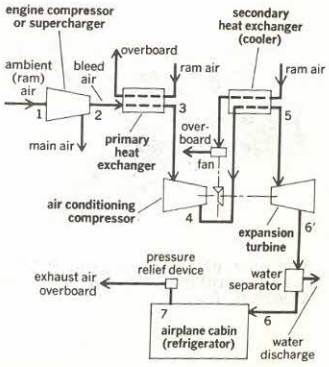


Integrated flight instrument panel designed by Wright Air Development Center, used on high-performance fighters. *(Aviat. Week Space Technol.)*

AIR-CUSHION VEHICLE

Princeton University experimental 20-foot (6-meter) air-cushion vehicle.

AIR CYCLE



Open air-cycle bootstrap system for airplanes.

air deficiency [CHEM] Insufficient air in an air-fuel mixture causing either incomplete fuel oxidation or lack of ignition.

air delivery [ORD] A method of air movement wherein personnel, supplies, and equipment are unloaded from aircraft in flight. Also known as air drop.

air density [MECH] The mass per unit volume of air.

air depolarized battery [ELEC] A primary battery which is kept depolarized by atmospheric oxygen rather than chemical compounds. Also known as metal-air battery.

air diffuser [BUILD] An air distribution outlet, usually located in the ceiling and consisting of deflecting vanes discharging supply air in various directions and planes, and arranged to promote mixing of the supplied air with the air already in the room.

air discharge [GEOPHYS] **1.** A form of lightning discharge, intermediate in character between a cloud discharge and a cloud-to-ground discharge, in which the multibranching lightning channel descending from a cloud base does not reach the ground, but succeeds only in neutralizing the space charge distributed in the subcloud layer. **2.** A type of diffuse electrical discharge occasionally reported as occurring in the region above an active thunderstorm.

air-distributing acoustical ceiling [BUILD] A suspended acoustical ceiling in which the board or tile is provided with small, evenly distributed mechanical perforations; designed to provide a desired flow of air from a pressurized plenum above.

air door [MIN ENG] A door placed in a mine roadway to prevent the passage of air.

air dose [NUCLEO] The total absorbed dose at a point in free air, resulting from both the radiation of a primary beam of x-rays or gamma rays and the radiation scattered by the surrounding air.

air drain [CIV ENG] An empty space left around the external foundation wall of a building to prevent the earth from lying against it and causing dampness.

air drainage [METEOROL] General term for gravity-induced, downslope flow of relatively cold air.

airdraulic [MECH ENG] Combining pneumatic and hydraulic action for operation.

air-dried lumber [MATER] Wood dried by exposure to air under natural conditions; usually has a moisture content not greater than 24%. Also known as air-seasoned lumber; natural-seasoned lumber.

air-dried strength [MET] Tenacity of a sand mixture after a core or mold has been dried in air without application of heat.

air drift [MIN ENG] A roadway, generally inclined, driven in stone for ventilation purposes.

air drill [MECH ENG] A drill powered by compressed air.

air drop *See* air delivery.

air drying [ENG] Removing moisture from a material by exposure to air to the extent that no further moisture is released on contact with air; important in lumber manufacture.

air duct *See* airflow duct.

air-earth conduction current [GEOPHYS] That part of the air-earth current contributed by the electrical conduction of the atmosphere itself; represented as a downward movement of positive space charge in storm-free regions all over the world. Also known as air current.

air-earth current [GEOPHYS] The transfer of electric charge from the positively charged atmosphere to the negatively charged earth; made up of the air-earth conduction current, a precipitation current, a convection current, and miscellaneous smaller contributions.

air ejector [MECH ENG] A device that uses a fluid jet to remove air or other gases, as from a steam condenser.

air eliminator [MECH ENG] In a piping system, a device used to remove air from water, steam, or refrigerant.

air embolism *See* aeroembolism.

air endway [MIN ENG] A narrow roadway driven in a coal seam parallel and close to a winning headway for ventilation.

air engine [MECH ENG] An engine in which compressed air is the actuating fluid.

air-entrained cement [MATER] Cement with improved qualities due to the introduction of air bubbles in its preparation.

air-entraining agent [MATER] An admixture, usually a resin, soap, or grease, for portland cement or concrete to effect air entrainment and, thus, superior properties.

air entrainment [ENG] The inclusion of minute bubbles of air in cement or concrete through the addition of some material during grinding or mixing to reduce the surface tension of the water, giving improved properties for the end product.

air environment [COMMUN] The aggregate of all airborne equipment which is a part of a communications-electronics system.

air equivalent [NUCLEO] A measure of the effectiveness of an absorber of nuclear radiation, equal to the thickness of a layer of air at standard pressure and temperature that absorbs the same fraction of radiation or results in the same energy loss as does the absorber.

air-exhaust ventilator [MECH ENG] Any air-exhaust unit used to carry away dirt particles, odors, or fumes.

air feed [MET] In thermal spraying, transmittal of powdered material by air pressure through the gun into the heat source.

airfield [CIV ENG] The area of an airport for the takeoff and landing of airplanes.

air filter [ENG] A device that reduces the concentration of solid particles in an airstream to a level that can be tolerated in a process or space occupancy; a component of most systems in which air is used for industrial processes, ventilation, or comfort air conditioning.

airfloat clay [MIN ENG] Fine particles of clay obtained by air separation from coarser particles following a grinding operation.

airflow [FL MECH] **1.** A flow or stream of air which may take place in a wind tunnel or, as a relative airflow, past the wing or other parts of a moving craft. Also known as airstream. **2.** A rate of flow, measured by mass or volume per unit of time. [MIN ENG] *See* air current.

airflow duct [ENG] A pipe, tube, or channel through which air moves into or out of an enclosed space. Also known as air duct.

airflow orifice [ENG] An opening through which air moves out of an enclosed space.

airflow pipe [ENG] A tube through which air is conveyed from one location to another.

airflow stack effect [FL MECH] The variation of pressure with height in air flowing in a vertical duct due to a difference in temperature between the flowing air and the air outside the duct.

airfoil [AERO ENG] A body of such shape that the force exerted on it by its motion through a fluid has a larger component normal to the direction of motion than along the direction of motion; examples are the wing of an airplane and the blade of a propeller. Also known as aerofoil.

airfoil profile [AERO ENG] The closed curve defining the external shape of the cross section of an airfoil. Also known as airfoil section; airfoil shape; wing section.

airfoil section *See* airfoil profile.

airfoil shape *See* airfoil profile.

airfoil-vane fan [MIN ENG] A centrifugal-type mine fan; the vanes are curved backward from the direction of rotation.

airframe [AERO ENG] The basic assembled structure of any aircraft or rocket vehicle, except lighter-than-air craft, necessary to support aerodynamic forces and inertia loads imposed by the weight of the vehicle and contents.

air-fuel ratio [CHEM] The ratio of air to fuel by weight or volume which is significant for proper oxidative combustion of the fuel.

air furnace [MET] **1.** A furnace using a natural air draft. **2.** A furnace in which the metal is melted by a flame originating from fuel burned at one end, passing over the hearth in the middle, and exiting at the other end.

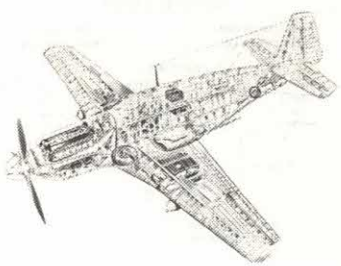
air gage [ENG] **1.** A device that measures air pressure. **2.** A device that compares the shape of a machined surface to that of a reference surface by measuring the rate of passage of air between the surfaces.

air gap [ELECTR] **1.** A gap or an equivalent filler of nonmagnetic material across the core of a choke, transformer, or other magnetic device. **2.** A spark gap consisting of two electrodes separated by air. [ENG] **1.** The distance between two components or parts. **2.** In plastic extrusion coating, the distance from the opening of the extrusion die to the nip formed by the pressure and chill rolls. **3.** The unobstructed vertical distance between the lowest opening of a faucet (or the like) which supplies a plumbing fixture (such as a tank or washbowl) and the level at which the fixture will overflow. [GEOL] *See* wind gap.

air gas [MATER] A gaseous fuel made by blowing air through a coal or coke bed so that CO_2 is reduced to CO.

airglow [GEOPHYS] The quasi-steady radiant emission from the upper atmosphere over middle and low latitudes, as dis-

AIRFRAME



Airframe of piston-engine P-51A pursuit airplane. *(North American Aviation, Inc.)*

tinguished from the sporadic emission of auroras which occur over high latitudes. Also known as light-of-the-night-sky; night-sky light; night-sky luminescence; permanent aurora.

air grating [BUILD] A fixed metal grille on the exterior of a building through which air is brought into or discharged from the building for purposes of ventilation.

air-ground communication [COMMUN] Two-way communication between aircraft and stations on the ground.

air gun *See* air rifle.

air-handling system [MECH ENG] An air-conditioning system in which an air-handling unit provides part of the treatment of the air.

air-handling unit [MECH ENG] A packaged assembly of air-conditioning components (coils, filters, fan humidifier, and so forth) which provides for the treatment of air before it is distributed.

air-hardening steel [MET] A steel whose content of carbon and other alloying elements is sufficient for the steel to harden fully by cooling in air or any other atmosphere from a temperature above its transformation range. Also known as self-hardening steel.

airhead [ORD] A designated geographical area in an area of operations used as a base of supply and evacuation by air.

air heater *See* air preheater.

air-heating system *See* air preheater.

air heave [GEOL] Deformation of plastic sediments on a tidal flat as a result of the growth of air pockets in them; the growth occurs by accretion of smaller air bubbles oozing through the sediment.

air hoar [HYD] A hoar growing on objects above the ground or snow.

air hoist [MECH ENG] A lifting tackle or tugger constructed with cylinders and pistons for reciprocating motion and air motors for rotary motion, all powered by compressed air. Also known as pneumatic hoist.

airhole [MIN ENG] A small excavation or hole made to improve ventilation by communication with other workings or with the surface.

air horsepower [MECH ENG] The theoretical (minimum) power required to deliver the specified quantity of air under the specified pressure conditions in a fan, blower, compressor, or vacuum pump. Abbreviated air hp.

air hp *See* air horsepower.

air hunger [MED] The deep, gasping respiration characteristic of severe diabetic acidosis and coma.

air-injection system [MECH ENG] A device that uses compressed air to inject the fuel into the cylinder of an internal combustion engine.

air inlet [MECH ENG] In an air-conditioning system, a device through which air is exhausted from a room or building.

air-insulated substation [ELEC] An electric power substation that has the busbars and equipment terminations generally open to air and utilizes insulation properties of ambient air for insulation to ground.

air intake [AERO ENG] An open end of an air duct or similar projecting structure so that the motion of the aircraft is utilized in capturing air to be conducted to an engine or ventilator. [MIN ENG] A device for supplying a compressor with clean air at the lowest possible temperature.

air-jet process [TEXT] A technique by which filament yarns are exposed to a forceful stream of air in order to increase their bulk.

air knife [ENG] A device that uses a thin, flat jet of air to remove the excess coating from freshly coated paper.

air-knife coating [ENG] An even film of coating left on paper after treatment with an air knife.

air-lance [ENG] To direct a pressurized-air stream to remove unwanted accumulations, as in boiler-wall cleaning.

air launch [AERO ENG] Launching from an aircraft in the air.

air-launched ballistic missile [ORD] A ballistic missile launched from an airborne vehicle.

air layering [BOT] A method of vegetative propagation, usually of a wounded part, in which the branch or shoot is enclosed in a moist medium until roots develop, and then it is severed and cultivated as an independent plant.

air leakage [MECH ENG] **1.** In ductwork, air which escapes from a joint, coupling, and such. **2.** The undesired leakage or uncontrolled passage of air from a ventilation system.

airless spraying [ENG] The spraying of paint by means of high fluid pressure and special equipment. Also known as hydraulic spraying.

air lift [MECH ENG] **1.** Equipment for lifting slurry or dry powder through pipes by means of compressed air. **2.** *See* air-lift pump.

airlift [AERO ENG] **1.** To transport passengers and cargo by the use of aircraft. **2.** The total weight of personnel or cargo carried by air.

air-lift hammer [MECH ENG] A gravity drop hammer used in closed die forging in which the ram is raised to its starting point by means of an air cylinder.

air-lift pump [MECH ENG] A device composed of two pipes, one inside the other, used to extract water from a well; the lower end of the pipes is submerged, and air is delivered through the inner pipe to form a mixture of air and water which rises in the outer pipe above the water in the well; also used to move corrosive liquids, mill tailings, and sand. Also known as air lift.

Airlift Thermofor catalytic cracking [CHEM ENG] A continuous catalytic process for the conversion of heavy gas oils into lighter products; utilizes a moving bed of small pellets or beads of catalyst traveling continuously through the oil-cracking vessel and then through a regeneration kiln.

airlight [METEOROL] In determinations of visual range, light from sun and sky which is scattered into the eyes of an observer by atmospheric suspensoids (and, to slight extent, by air molecules) lying in the observer's cone of vision.

airlight formula [OPTICS] A fundamental equation of visual-range theory, relating the apparent luminance of a distant black object, the apparent luminance of the background sky above the horizon, and the extinction coefficient of the air layer near the ground.

air line [ENG] A fault, in the form of an elongated bubble, in glass tubing. Also known as hairline. [MECH ENG] A duct, hose, or pipe that supplies compressed air to a pneumatic tool or piece of equipment. [SPECT] Lines in a spectrum due to the excitation of air molecules by spark discharges, and not ordinarily present in arc discharges.

air-line lubricator *See* line oiler.

air-line main [MIN ENG] The pipe column supplying air from the compressors to the quarry face.

air lock [ENG] **1.** A chamber capable of being hermetically sealed that provides for passage between two places of different pressure, such as between an altitude chamber and the outside atmosphere, or between the outside atmosphere and the work area in a tunnel or shaft being excavated through soil subjected to water pressure higher than atmospheric. **2.** An air bubble in a pipeline which impedes liquid flow. [MIN ENG] A casing atop an upcast mine shaft to minimize surface air leakage into the fan.

air-lock strip [BUILD] The weather stripping which is fastened to the edges of each wing of a revolving door.

air log [AERO ENG] A distance-measuring device used especially in certain guided missiles to control range.

airman [MIN ENG] A man who constructs brattices. [ORD] An enlisted man in the military air force.

air mass [METEOROL] An extensive body of the atmosphere which approximates horizontal homogeneity in its weather characteristics, particularly with reference to temperature and moisture distribution.

air-mass analysis [METEOROL] In general, the theory and practice of synoptic surface-chart analysis by the so-called Norwegian methods, which involve the concepts of the polar front and of the broad-scale air masses which it separates.

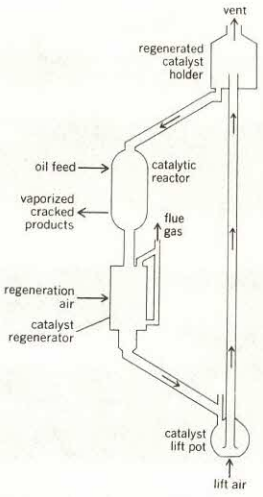
air-mass climatology [CLIMATOL] The representation of the climate of a region by the frequency and characteristics of the air masses under which it lies; basically, a type of synoptic climatology.

air-mass precipitation [METEOROL] Any precipitation that can be attributed only to moisture and temperature distribution within an air mass when that air mass is not, at that location, being influenced by a front or by orographic lifting.

air-mass shower [METEOROL] A shower that is produced by local convection within an unstable air mass; the most common type of air-mass precipitation.

air-mass source region [METEOROL] An extensive area of the earth's surface over which bodies of air frequently remain for a sufficient time to acquire characteristic temperature and moisture properties imparted by that surface.

AIRLIFT THERMOFOR CATALYTIC CRACKING

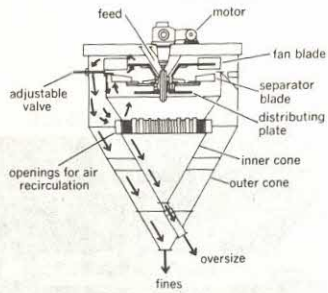


Components of the Airlift Thermofor catalytic cracking process.

air-measuring station [MIN ENG] A place in a mine airway where the volume of air passing is measured periodically.
Airmen's Information Manual [NAV] Notices to airmen regarding the status of components of the national airspace system. Abbreviated AIM.
air meter [ENG] A device that measures the flow of air, or gas, expressed in volumetric or weight units per unit time. Also known as airometer.
air mile [NAV] A unit of length used in air navigation and equal, since 1954, to 1 international nautical mile (1852 meters). Also known as aeronautical mile.
air mileage [NAV] The number of miles flown relative to the air; true air speed multiplied by time.
air mileage indicator [ENG] An instrument on an airplane which continuously indicates mileage through the air.
air mileage unit [ENG] A device which derives continuously and automatically the air distance flown, and feeds this information into other units, such as an air mileage indicator.
air-mixing plenum [MECH ENG] In an air-conditioning system, a chamber in which the recirculating air is mixed with air from outdoors.
air monitoring [CIV ENG] A practice of continuous air sampling by various levels of government or particular industries.
air motor [MECH ENG] A device in which the pressure of confined air causes the rotation of a rotor or the movement of a piston.
air mover [MIN ENG] A portable compressed-air appliance, used as a blower or exhauster.
air navigation [NAV] The process of directing and monitoring the progress of an aircraft between selected geographic points or with respect to some predetermined plan. Also known as avigation.
airometer [ENG] **1.** An apparatus for both holding air and measuring the quantity of air admitted into it. **2.** *See* air meter.
air outlet [MECH ENG] In an air-conditioning system, a device at the end of a duct through which air is supplied to a space.
air parcel [METEOROL] An imaginary body of air to which may be assigned any or all of the basic dynamic and thermodynamic properties of atmospheric air.
air permeability [TEXT] The quality of porosity of a fabric; indicates the wind resistance, and therefore warmth or coolness, of the fabric.
air permeability test [ENG] A test for the measurement of the fineness of powdered materials, such as portland cement.
air pickets [ORD] Airborne early-warning aircraft disposed around a position, area, or formation primarily to detect, report, and track approaching enemy aircraft and to control intercepts.
airplane [AERO ENG] A heavier-than-air vehicle designed to use the pressures created by its motion through the air to lift and transport useful loads.
airplane flare [ENG] A flare, often magnesium, that is dropped from an airplane to illuminate a ground area; a small parachute decreases the rate of descent.
air plot [NAV] A continuous plot of the position of an airborne object represented graphically to show true headings steered and distances flown.
air-plot wind velocity [NAV] The wind velocity calculated from a knowledge of an air position and a fix.
air pocket [ENG] An air-filled space that is normally occupied by a liquid. Also known as air trap. [METEOROL] An expression used in the early days of aviation for a downdraft; such downdrafts were thought to be pockets in which there was insufficient air to support the plane.
air pollution [ECOL] The presence in the outdoor atmosphere of one or more contaminants such as dust, fumes, gas, mist, odor, smoke, or vapor in quantities and of characteristics and duration such as to be injurious to human, plant, or animal life or to property, or to interfere unreasonably with the comfortable enjoyment of life and property.
air-pollution control [ENG] A practical means of treating polluting sources to maintain a desired degree of air cleanliness.
airport [CIV ENG] A terminal facility used for aircraft takeoff and landing and including facilities for handling passengers and cargo and for servicing aircraft. Also known as aerodrome.
airport engineering [CIV ENG] The planning, design, construction, and operation and maintenance of facilities providing for the landing and takeoff, loading and unloading, servicing, maintenance, and storage of aircraft.
airport light beacon [NAV] A visual navigational aid, usually a rotating beacon displaying flashes of white or colored light or both, located at or near an airport to indicate its specific or general location.
airport surface detection equipment [NAV] A short-range radar using millimeter waves and giving a panoramic presentation of all aircraft and vehicles, moving or stationary, on the surface of an aerodrome; used by air traffic controllers for expeditious movement of surface aircraft on the ramp, taxiway, and runway.
airport traffic [NAV] Aircraft both in the air and on the active runways in the airport zone.
airport traffic control tower [NAV] The terminal control point at an airport for all takeoff and landing operations, departure and approach operations, and ground movements of aircraft and airport vehicles. Abbreviated ATCT.
air position [NAV] The theoretical position of an aircraft or missile at a given moment, assuming it to have been unaffected in flight by wind. Also known as no-wind position.
air-position indicator [NAV] An airborne computing system which presents a continuous indication of the aircraft position on the basis of aircraft heading, airspeed, and elapsed time. Abbreviated API.
air preheater [MECH ENG] A device used in steam boilers to transfer heat from the flue gases to the combustion air before the latter enters the furnace. Also known as air heater; air-heating system.
air pressure [PHYS] The force per unit area that the air exerts on any surface in contact with it, arising from the collisions of the air molecules with the surface.
air-pressure drop [FL MECH] The pressure lost in overcoming friction along an airway.
airproof *See* airtight.
air propeller [AERO ENG] A hub-and-multiblade device for changing rotational power of an aircraft engine into thrust power for the purpose of propelling an aircraft through the air. [MECH ENG] A rotating fan for moving air.
air properties [PHYS] Characteristics of air as a gas, such as density, molecular weight, specific heats, boiling point, critical temperature, and critical pressure.
air pump [MECH ENG] A device for removing air from an enclosed space or for adding air to an enclosed space.
Air Pump *See* Antlia.
air puncher [ENG] A machine consisting essentially of a reciprocating chisel or pick, driven by air.
air purge [MECH ENG] Removal of particulate matter from air within an enclosed vessel by means of air displacement.
air raid [ORD] An attack of a place by aircraft; may consist of a bombing or strafing attack against a position or a city.
air raid shelter [CIV ENG] A chamber, often underground, provided with living facilities and food, for sheltering people against air attacks.
air register [ENG] A device attached to an air-distributing duct for the purpose of controlling the discharge of air into the space to be heated, cooled, or ventilated.
air regulator [MECH ENG] A device for regulating airflow, as in the burner of a furnace. [MIN ENG] An adjustable door installed in permanent air stoppings to control ventilating current.
air reheater [MECH ENG] In a heating system, any device used to add heat to the air circulating in the system.
air release valve [MECH ENG] A valve, usually manually operated, which is used to release air from a water pipe or fitting.
air resistance [MECH] Wind drag giving rise to forces and wear on buildings and other structures.
air rifle [ORD] A low-powered rifle that shoots small metal pellets (BBs) by the action of compressed air. Also known as air gun; BB gun.
air ring [ENG] In plastics forming, a circular manifold which distributes an even flow of cool air into a hollow tubular form passing through the manifold.
air route [NAV] The navigable airspace between two points, identified to the extent necessary for the application of flight rules.
air-route surveillance radar [NAV] A long-range (approximately 150-mile or 240-kilometer) radar used by the Federal Aviation Agency to control air traffic between terminals. Abbreviated ARSR.
air-route traffic control [NAV] Traffic control service provided to aircraft which are operating under instrument flight rules within controlled airspace, and principally en route.

air-route traffic control center [NAV] A place from which traffic is directed along a controlled air route.
air sac [GEOL] *See* vesicle. [INV ZOO] One of large, thin-walled structures associated with the tracheal system of some insects. [VERT ZOO] In birds, any of the small vesicles that are connected with the respiratory system and located in bones and muscles to increase buoyancy.
air sampling [ENG] The collection and analysis of samples of air to measure the amounts of various pollutants or other substances in the air, or the air's radioactivity.
air scoop [DES ENG] An air-duct cowl projecting from the outer surface of an aircraft or automobile, which is designed to utilize the dynamic pressure of the airstream to maintain a flow of air.
air screw [MECH ENG] A screw propeller that operates in air.
air-seasoned [ENG] Treated by exposure to air to give a desired quality.
air-seasoned lumber *See* air-dried lumber.
air separator [MECH ENG] A device that uses an air current to separate a material from another of greater density or particles from others of greater size.
air-setting mortar [MATER] Mortar that sets in air at atmospheric pressure and ordinary temperatures.
air sextant [NAV] A sextant designed primarily for air navigation; generally provided with some mechanical devices for furnishing horizon indications.
air shaft [BUILD] An open space surrounded by the walls of a building or buildings to provide ventilation for windows. Also known as air well. [MIN ENG] A usually vertical earth bore or shaft to supply surface air to an underground facility such as a mine.
airship [AERO ENG] A propelled and steered aerial vehicle, dependent on gases for flotation.
air shooting [GEOPHYS] In seismic prospecting, the technique of applying a seismic pulse to the earth by detonating a charge or charges in the air.
air shot [ENG] A shot prepared by loading (charging) so that an air space is left in contact with the explosive for the purpose of lessening its shattering effect.
air shower *See* cosmic-ray shower.
airsickness [MED] Motion sickness associated with flying due to the effects of acceleration.
air-slaked [CHEM] Having the property of a substance, such as lime, that has been at least partially converted to a carbonate by exposure to air.
Airslide conveyor [MECH ENG] An air-activated gravity-type conveyor, of the Fuller Company, using low-pressure air to aerate or fluidize pulverized material to a degree which will permit it to flow on a slight incline by the force of gravity.
air sounding [METEOROL] The act of measuring atmospheric phenomena or determining atmospheric conditions at altitude, especially by means of apparatus carried by balloons or rockets.
air space [ENG] An enclosed space containing air in a wall for thermal insulation. [ORD] The space in a firearm between the powder charge and projectile.
airspace [AERO ENG] **1.** The space occupied by an aircraft formation or used in a maneuver. **2.** The area around an airplane in flight that is considered an integral part of the plane in order to prevent collision with another plane; the space depends on the speed of the plane. [METEOROL] **1.** Of or pertaining to both the earth's atmosphere and space. Also known as aerospace. **2.** The portion of the atmosphere above a particular land area, especially a nation or other political subdivision.
air-spaced coax [ELECTROMAG] Coaxial cable in which air is basically the dielectric material; the conductor may be centered by means of a spirally wound synthetic filament, beads, or braided filaments.
airspace reservation [NAV] An airspace designated by government authority in which flight is prohibited or restricted.
airspace warning area [NAV] An airspace which is outside the territorial limits of any country and in which exists an actual or potential hazard to aircraft in flight; such an area has no legal status.
airspeed [AERO ENG] The speed of an airborne object relative to the atmosphere; in a calm atmosphere, airspeed equals ground speed.
airspeed head [ENG] Any instrument or device, usually a pitot tube, mounted on an aircraft for receiving the static and dynamic pressures of the air used by the airspeed indicator.
airspeed indicator [ENG] A device that computes and displays the speed of an aircraft relative to the air mass in which the aircraft is flying.
air spora [BIOL] Airborne fungus spores, pollen grains, and microorganisms.
air spring [MECH ENG] A spring in which the energy storage element is air confined in a container that includes an elastomeric bellows or diaphragm.
air stack [AERO ENG] A group of planes flying at prescribed heights while waiting to land at an airport. [MIN ENG] A chimney for ventilating a coal mine.
air-standard cycle [THERMO] A thermodynamic cycle in which the working fluid is considered to be a perfect gas with such properties of air as a volume of 12.4 ft^3/lb at 14.7 psi (approximately 0.7756 m^3/kg at 101.36 kPa) and 492°R and a ratio of specific heats of 1:4.
air-standard engine [MECH ENG] A heat engine operated in an air-standard cycle.
airstart [AERO ENG] An act or instance of starting an aircraft's engine while in flight, especially a jet engine after flameout.
air starting valve [MECH ENG] A device that admits compressed air to an air starter.
air station *See* camera station.
airstream *See* airflow.
air strike [ORD] An attack on specific objectives by fighter, bomber, or attack air craft on an offensive mission; may consist of several air organizations under a single command in the air.
air strip *See* landing strip.
air-supply mask *See* air-tube breathing apparatus.
air surveillance [ENG] Systematic observation of the airspace by visual, electronic, or other means, primarily for identifying all aircraft in that airspace, and determining their movements.
air surveillance radar [ENG] Radar of moderate range providing position of aircraft by azimuth and range data without elevation data; used for air-traffic control.
air survey *See* aerial survey.
air-suspension encapsulation [CHEM ENG] A technique for microencapsulation of various types of solid particles; the particles undergo a series of cycles in which they are first suspended by a vertical current of air while they are sprayed with a solution of coating material, and are then moved by the airstream into a region where they undergo a drying treatment. Also known as Wurster process.
air-suspension system [MECH ENG] Parts of an automotive vehicle that are intermediate between the wheels and the frame, and support the car body and frame by means of a cushion of air to absorb road shock caused by passage of the wheels over irregularities.
air sweetening [CHEM ENG] A process in which air or oxygen is used to oxidize lead mercaptides to disulfides instead of using elemental sulfur.
air switch [ELEC] A switch in which the breaking of the electric circuit takes place in air. Also known as air-break switch.
air system [MECH ENG] A mechanical refrigeration system in which air serves as the refrigerant in a cycle comprising compressor, heat exchanger, expander, and refrigerating core.
air taxi [AERO ENG] A carrier of passengers and cargo engaged in charter flights, feeder air services to large airline facilities, or contract airmail transportation.
air temperature [METEOROL] **1.** The temperature of the atmosphere which represents the average kinetic energy of the molecular motion in a small region and is defined in terms of a standard or calibrated thermometer in thermal equilibrium with the air. **2.** The temperature that the air outside of the aircraft is assumed to have as indicated on a cockpit instrument.
air temperature correction [NAV] **1.** A correction to a sextant altitude reading, required because of the air temperature. **2.** A correction required in the airspeed as read by a pitot tube to arrive at true airspeed.
air terminal [CIV ENG] A facility providing a place of assembly and amenities for airline passengers and space for administrative functions. [ELEC] A structure, such as a tower, that serves as a lightning arrester.
air thermometer [ENG] A device that measures the temperature of an enclosed space by means of variations in the pressure or volume of air contained in a bulb placed in the space.

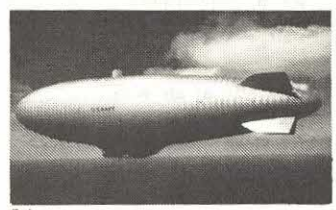
AIR SEPARATOR



The double-cone air separator, a type of air classifier. *(From W. L. McCabe and J. C. Smith, Unit Operations of Chemical Engineering, McGraw-Hill, 1956)*

AIRSHIP

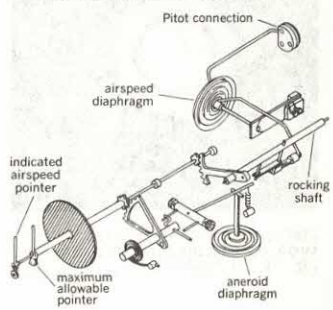
(a)



(b)

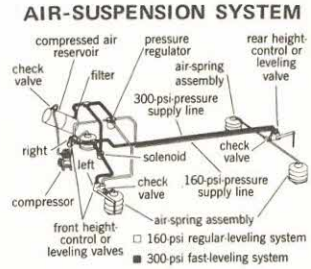
Two types of airships, (*a*) rigid and (*b*) nonrigid.

AIRSPEED INDICATOR



Drawing of moving parts of indicated airspeed meter.

AIR-SUSPENSION SYSTEM

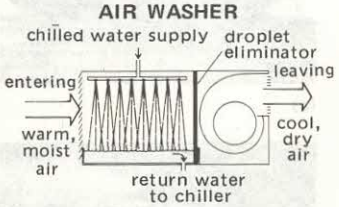


Basic components of an air suspension system in an automobile.

AIR-TO-GROUND MISSILE

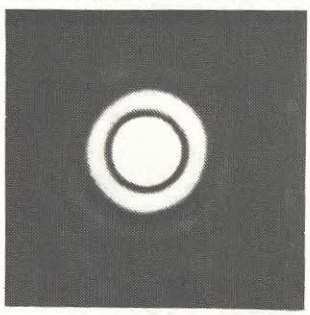
Air-to-ground missile, Hound Dog, launched from B-52 strategic bomber. *(Official U.S. Air Force photograph)*

AIR WASHER



Schematic of air washer.

AIRY DISK



Picture of an Airy disk, one type of diffraction pattern. *(R. W. Ditchburn)*

airtight [ENG] Not permitting the passage of air. Also known as airproof.

air-to-air missile [ORD] A missile launched from an aircraft at an airborne target. Abbreviated AAM.

air-to-air resistance [CIV ENG] The resistance provided by the wall of a building to the flow of heat.

air-to-ground missile [ORD] A missile launched from an aircraft at a ground target. Abbreviated AGM.

air-to-space missile [ORD] A missile launched from an aircraft at a space target, such as an earth satellite.

air-to-surface missile [ORD] A missile launched from aircraft at a ground or sea target. Abbreviated ASM.

air-to-underwater missile [ORD] A missile launched from an aircraft at an underwater target.

air-track drill [MIN ENG] A heavy drilling machine for quarry or opencast blasting, equipped with caterpillar tracks and operated by independent air motors.

air traffic [NAV] Aircraft operating in the air or on an airport surface.

air-traffic area [NAV] The airspace within a circular limit defined by a 5-statute-mile (approximately 8 km) horizontal radius from the geographical center of an airport at which an operative airport traffic control tower is located, and an upward extent to 2000 feet (609.6 m) above the surface.

air-traffic control [NAV] **1.** A service which promotes the safe and fast movement of aircraft operating in the air or on an airport surface by providing rules, procedures, and information and advisory services for pilots. Abbreviated ATC. **2.** A system comprising enabling legislation, operating procedures, and navigation and communication equipment which is intended to make for the safe and expeditious movement of aircraft from the time that they leave the departure gates to arrival at the terminal gates.

air-traffic control center [NAV] A place for receiving information regarding aircraft movement, interpreting this information, and issuing instructions to aircraft to promote safe, orderly, expeditious flow of traffic; it directs traffic along controlled airspace.

air-traffic controller [NAV] A person responsible for controlling air traffic.

air-traffic control radar beacon system [NAV] A system adopted by the Federal Aviation Agency for use in controlling air traffic over the United States; the aircraft carry identification transponders designed to transmit an airplane identity code, altitude, and additional message when interrogated by an air-traffic controller's equipment. Abbreviated ATCRBS.

air-traffic control zone *See* control zone.

air transport [MIN ENG] Movement from one place to another of the filling material in a mine through pneumatic pipelines. Also known as air transportation.

air transportation [AERO ENG] The use of aircraft, predominantly airplanes, to move passengers and cargo. [MIN ENG] *See* air transport.

air trap [CIV ENG] A U-shaped pipe filled with water that prevents the escape of foul air or gas from such systems as drains and sewers. [ENG] *See* air pocket.

air-tube breathing apparatus [ENG] A device consisting of a smoke helmet, mask, or mouthpiece supplied with fresh air by means of a flexible tube. Also known as air-supply mask.

air turbulence [METEOROL] Highly irregular atmospheric motion characterized by rapid changes in wind speed and direction and by the presence, usually, of up and down currents.

air valve [MECH ENG] A valve that automatically lets air out of or into a liquid-carrying pipe when the internal pressure drops below atmospheric.

air vane [AERO ENG] A vane that acts in the air, as contrasted to a jet vane which acts within a jetstream.

air vehicle *See* aircraft.

air-velocity measurement [FL MECH] The measurement of the rate of displacement of air or gas at a specific location, as when ascertaining wind speed or airspeed of an aircraft.

air vessel [ENG] **1.** An enclosed volume of air which uses the compressibility of air to minimize water hammer. **2.** An enclosed chamber using the compressibility of air to promote a more uniform flow of water in a piping system.

air void [MATER] A space which is filled with air in cement paste, mortar, or concrete.

air volcano [GEOL] An eruptive opening in the earth from which large volumes of gas emanate, in addition to mud and stones; a variety of mud volcano.

air wall [NUCLEO] A wall of an ionization chamber designed so that its effect on ionizing radiation approximates that of air.

air washer [MECH ENG] **1.** A device for cooling and cleaning air in which the entering warm, moist air is cooled below its dew point by refrigerated water so that although the air leaves close to saturation with water, it has less moisture per unit volume than when it entered. **2.** Apparatus to wash particulates and soluble impurities from air by passing the airstream through a liquid bath or spray.

air-water jet [ENG] A jet of mixed air and water which leaves a nozzle at high velocity; used in cleaning the surfaces of concrete or rock.

air-water storage tank [ENG] A water storage tank in which the air above the water is compressed.

air–water vapor mixture [PHYS] A mixture of dry air and water vapor, such as the atmosphere.

airwave [ELECTR] A radio wave used in radio and television broadcasting. [METEOROL] A wavelike oscillation in the pattern of wind flow aloft, usually with reference to the stronger portion of the westerly current.

airway [BUILD] A passage for ventilation between thermal insulation and roof boards. [MIN ENG] A passage for air in a mine. Also known as air course. [NAV] A designated route of passage for aircraft.

airway beacon [NAV] A revolving light indicating the course of an airway.

airways code *See* U.S. airways code.

airways forecast *See* aviation weather forecast.

airways observation *See* aviation weather observation.

air well *See* air shaft.

Airy differential equation [MATH] The differential equation $(d^2f/dz^2) - zf = 0$, where z is the independent variable and f is the value of the function; used in studying the diffraction of light near caustic surface.

Airy disk [OPTICS] The bright, diffuse central spot of light formed by an optical system imaging a point source of light.

Airy function [MATH] Either of the solutions of the Airy differential equation.

Airy isostasy [GEOPHYS] A theory of hydrostatic equilibrium of the earth's surface which contends that mountains are floating on a fluid lava of higher density, and that higher mountains have a greater mass and deeper roots.

Airy phase [ACOUS] An acoustic wave formed by an explosion in shallow water over a flat bottom.

Airy points [ENG] The points at which a horizontal rod is optionally supported to avoid its bending.

Airy stress function [MECH] A biharmonic function of two variables whose second partial derivatives give the stress components of a body subject to a plane strain.

aisle [ARCH] **1.** A passageway between or alongside blocks of seats, as in an auditorium. **2.** One of the parts of a basilica which are located at the sides of the nave, with each aisle separated from it by a row of columns.

aisleway [CIV ENG] A passage or walkway within a factory, storage building, or shop permitting the flow of inside traffic.

Aistopoda [PALEON] An order of Upper Carboniferous amphibians in the subclass Lepospondyli characterized by reduced or absent limbs and an elongate, snakelike body.

Aitken dust counter [ENG] An instrument for determining the dust content of the atmosphere. Also known as Aitken nucleus counter.

Aitken nuclei [METEOROL] The microscopic particles in the atmosphere which serve as condensation nuclei for droplet growth during the rapid adiabatic expansion produced by an Aitken dust counter.

Aitken nucleus counter *See* Aitken dust counter.

Aitken's formula [ASTRON] The expression used to determine the separation limit for true binary stars: $\log p'' = 2.5 - 0.2m$, where p'' = limit, m = magnitude.

Aitoff equal-area map projection [MAP] A Lambert equal-area azimuthal projection of a hemisphere converted into a map projection of the entire sphere by a manipulation suggested by Aitoff.

Aizoaceae [BOT] A family of flowering plants in the order Caryophyllales; members are unarmed leaf-succulents, chiefly of Africa.

Ajax powder [MATER] A high-strength, high-density, gelatinous permitted explosive having good water resistance; contains nitroglycerine, potassium perchlorate, ammonium oxalate, and wood flour.

ajmaline [ORG CHEM] $C_{20}H_{26}N_2O_2$ An amber, crystalline alkaloid obtained from *Rauwolfia* plants, especially *R. serpentina*.

AJO breathing apparatus [MIN ENG] A breathing device consisting of a Siebe-Gorman mining gas mask with a small oxygen cylinder and a canister which neutralizes mining gases, such as carbon monoxide, sulfureted hydrogen, and nitrous fumes.

ajowan oil [MATER] A yellow essential oil distilled from seeds of the herbaceous plant *Carum copticum* (*Ptychotis ajowan*) and used in pharmaceuticals. Also known as ptychotis oil.

akaganeite [MINERAL] β-FeO(OH) A mineral found in meteorites and considered to be formed in flight or by alteration.

akaryote [CYTOL] A cell that lacks a nucleus.

akenobeite [PETR] A form of aplite composed of orthoclase and oligoclase with quartz in the interstices.

akerite [PETR] A rock composed of quartz syenite containing soda microcline, oligoclase, and augite.

akermanite [MINERAL] $Ca_2MgSi_2O_7$ Anhydrous calcium-magnesium silicate found in igneous rocks; a melilite.

AKF diagram [PETR] A triangular diagram showing the chemical character of a metamorphic rock in which the three components plotted are $A = Al_2O_3 + Fe_2O_3 + (CaO + Na_2O)$, $K = K_1O$, and $F = FeO + MgO + MnO$.

akimbo span [ANTHRO] The distance measured between elbow points when the subject stands with arms flexed in a horizontal plane, with the wrists straight, palms down, fingers straight and together, and the thumbs touching the chest; or the distance measured with upper arms horizontal, forearms vertical.

akinesia [MED] **1.** Loss of or impaired motor function. **2.** Immobility from any cause.

akinete [BOT] A thick-walled resting cell of unicellular and filamentous green algae.

Akins' classifier [MIN ENG] A device for separating fine-size solids from coarser solids in a wet pulp; consists of an interrupted-flight screw conveyor, operating in an inclined trough.

akrochordite [MINERAL] $Mn_4Mg(AsO_4)_2(OH)_4 \cdot 4H_2O$ Mineral consisting of a hydrous basic manganese magnesium arsenate and occurring in reddish-brown rounded aggregates; hardness is 3 on Mohs scale, and specific gravity is 3.2.

aktological [GEOL] Nearshore shallow-water areas, conditions, sediments, or life.

akund [MATER] A silky cotton fiber from the shrub *Calotropis gigantea;* used in combination with kapok fiber for insulation.

akureyri disease *See* epidemic neuromyasthenia.

Al *See* aluminum.

ala [BIOL] A wing or winglike structure.

alabandite [MINERAL] MnS A complex sulfide mineral that is a component of meteorites and usually occurs in iron-black massive or granular form. Also known as manganblende.

alabaster [MINERAL] **1.** $CaSO_4 \cdot 2H_2O$ A fine-grained, colorless gypsum. **2.** *See* onyx marble.

alabaster glass [MATER] A glass that contains small inclusions of different diffractive indexes and shows no color reaction to light.

alalia [MED] Loss of speech.

alamalt [FOOD ENG] A powder made from cooked and toasted sweet potato and used to make candy.

alamosite [MINERAL] $PbSiO_3$ A white or colorless monoclinic mineral consisting of lead silicate and occurring in radiating fibers; hardness is 4.5 on Mohs scale, and specific gravity is 6.5.

alang-alang *See* cogon.

alanine [BIOCHEM] $C_3H_7NO_2$ A white, crystalline, nonessential amino acid of the pyruvic acid family.

alanyl [ORG CHEM] The radical $CH_3CHNH_2CO—$; occurs in, for example, alanyl alanine, a dipeptide.

alar [BIOL] Winglike or pertaining to a wing.

alarm gage [ENG] A device that actuates a signal either when the steam pressure in a boiler is too high or when the water level in a boiler is too low.

alarm reaction [BIOL] The sum of all nonspecific phenomena which are elicited by sudden exposure to stimuli, which affect large portions of the body, and to which the organism is quantitatively or qualitatively not adapted.

alarm signal [ELECTR] The international radiotelegraph alarm signal transmitted to actuate automatic devices that sound an alarm indicating that a distress message is about to be broadcast.

alarm song [INV ZOO] A stress signal occurring in many families of beetles.

alarm system [ENG] A system which operates a warning device after the occurrence of a dangerous or undesirable condition.

alarm valve [ENG] A device that sounds an alarm when water flows in an automatic sprinkler system.

Alaska cedar [MATER] Wood from *Chamaecyparis nootkaensis* or *Cupressus sitkaensis;* has a fine, uniform, straight grain and is light and moderately hard; used for furniture and boat building. Also known as Sitka cypress; yellow cedar; yellow cypress.

Alaska Current [OCEANOGR] A current that flows northwestward and westward along the coasts of Canada and Alaska to the Aleutian Islands.

Alaska Integrated Communications Exchange [ELECTR] A network of radio stations, generally using scatter-propagation equipment, that links early-warning radar stations. Also known as Alice; White Alice.

alaskaite [MINERAL] A light lead-gray sulfide mineral consisting of a mixture of lead, silver, copper, and bismuth.

alaskite [PETR] A granitic rock composed mainly of quartz and alkali feldspar, with few dark mineral components.

Alaudidae [VERT ZOO] The larks, a family of Oscine birds in the order Passeriformes.

Albada finder [OPTICS] A viewfinder used with a camera held at eye level; the field of view is enclosed by a white frame that is made to appear very distant by reflection from the rear surface of the objective lens.

albafite [MINERAL] Greenish to brownish bitumen which becomes white when exposed to air; contains up to 15% oxygen; fusible; insoluble in organic solvents; varies from soft to hard, porous to compact; atomic ratio H/C 1.75–2.25.

albanite [PETR] A melanocratic leucitite found near Rome, Italy.

albarium [MATER] A white lime used for stucco; made by burning marble.

albatross [VERT ZOO] Any of the large, long-winged oceanic birds composing the family Diomedeidae of the order Procellariformes.

albedo [NUCLEO] The reflection factor a surface, such as paraffin, has for neutrons. [OPTICS] That fraction of the total light incident on a reflecting surface, especially a celestial body, which is reflected back in all directions.

albedometer [ENG] An instrument used for the measurement of the reflecting power, that is, the albedo, of a surface.

albedo neutrons *See* albedo particles.

albedo particles [GEOPHYS] Neutrons or other particles, such as electrons or protons, which leave the earth's atmosphere, having been produced by nuclear interactions of energetic particles within the atmosphere. Also known as albedo neutrons.

Alberger process [CHEM ENG] A method of manufacturing salt by heating brine at high pressure and passing it to a graveler which removes calcium sulfate; the salt crystallizes as the pressure is reduced and thus is separated from the brine.

Albers projection [MAP] An equal-area projection of the conical type, on which the meridians are straight lines that meet in a common point beyond the limits of the map, and the parallels are concentric circles whose center is at the point of intersection of the meridians.

Alberta low [METEOROL] A low centered on the eastern slope of the Canadian Rockies in the province of Alberta, Canada.

albertite [MINERAL] Jet-black, brittle natural hydrocarbon with conchoidal fracture, hardness of 1–2, and specific gravity of approximately 1.1. Also known as asphaltite coal.

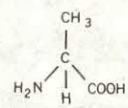
albertype *See* photogelatin printing plate.

Albian [GEOL] Uppermost Lower Cretaceous geologic time.

albic horizon [GEOL] A soil horizon from which clay and free iron oxides have been removed or in which the iron oxides have been segregated.

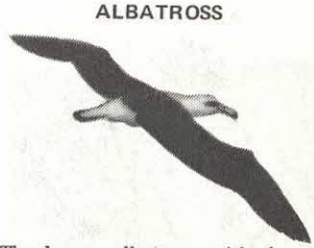
albinism [BIOL] The state of having colorless chromat-

ALANINE



Structural formula of the amino acid alanine.

ALBATROSS



The laysan albatross, with the characteristic hooked bill and long, tubular nostrils of oceanic birds.

ophores, which results in the absence of pigmentation in animals that are normally pigmented. [MED] A hereditary, metabolic disorder transmitted as an autosomal recessive and characterized by the inability to form melanin in the skin, hair, and eyes due to tyrosinase deficiency.

Albionian [GEOL] Lower Silurian geologic time.

albite [MINERAL] $NaAlSi_3O_8$ A colorless or milky-white variety of plagioclase of the feldspar group found in granite and various igneous and metamorphic rocks. Also known as sodaclase; sodium feldspar; white feldspar; white schorl.

albite-epidote-amphibolite facies [PETR] Rocks of metamorphic type formed under intermediate temperature and pressure conditions by regional metamorphism or in the outer contact metamorphic zone.

albite law [CRYSTAL] A rule specifying the orientation of alternating lamellae in multiple twin feldspar crystals; the twinning plane is brachypinacoid and is common in albite.

albitite [PETR] A porphyritic dike rock that is coarse-grained and composed almost wholly of albite; common accessory minerals are muscovite, garnet, apatite, quartz, and opaque oxides.

albitization [PETR] The formation of albite in a rock as a secondary mineral.

albitophyre [PETR] A porphyritic rock that contains albite phenocrysts in a groundmass composed mostly of albite.

albolite [MATER] A plastic cement composed principally of magnesia and silica.

Alboll [GEOL] A suborder of the soil order Mollisol with distinct horizons, wet for some part of the year; occurs mostly on upland flats and in shallow depressions.

albomycin [MICROBIO] An antibiotic produced by *Actinomyces subtropicus*; effective against penicillin-resistant pneumococci and staphylococci.

alboranite [PETR] Olivine-free hypersthene basalt.

albuginea [HISTOL] A layer of white, fibrous connective tissue investing an organ or other body part.

albumen [CYTOL] The white of an egg, composed principally of albumin.

albumin [BIOCHEM] Any of a group of plant and animal proteins which are soluble in water, dilute salt solutions, and 50% saturated ammonium sulfate.

albumin-globulin ratio [BIOCHEM] The ratio of the concentrations of albumin to globulin in blood serum.

albumin glue [MATER] A bonding agent composed of soluble dried blood with minor additives and giving strong, durable bonds when coagulated in plywood joints at temperatures of 160–180°F (71–82°C).

albuminoid [BIOCHEM] *See* scleroprotein. [BIOL] Having the characteristics of albumin.

albumin suspension test [PATH] A blood-grouping test in which the determination is made by suspending the red cells in diluted bovine albumin instead of in a saline solution.

albuminuria [MED] The presence of albumin in the urine; usually indicating renal disease.

albumose [BIOCHEM] A protein derivative formed by the action of a hydrolytic enzyme, such as pepsin.

alburnum *See* sapwood.

Alcaligenes [MICROBIO] A genus of gram-negative, aerobic rods and cocci of uncertain affiliation; cells are motile, and species are commonly found in the intestinal tract of vertebrates.

alcaptonuria *See* alkaptonuria.

Alcator [PL PHYS] A type of tokamak with a high toroidal field (up to 8.7 teslas) and high-density plasma (up to 3×10^{15} particles per cubic centimeter).

Alcedinidae [VERT ZOO] The kingfishers, a worldwide family of colorful birds in the order Coraciiformes; characterized by large heads, short necks, and heavy, pointed bills.

alchemy [CHEM] A speculative chemical system having as its central aims the transmutation of base metals to gold and the discovery of the philosopher's stone.

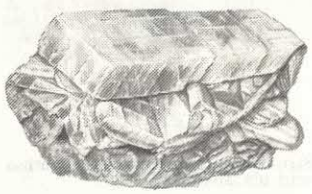
alcian blue [MATER] A copper phthalocyanin derivative used as a stain for connective tissue mucins and a number of epithelial mucins and as a gelling agent for lubricating fluids.

Alcidae [VERT ZOO] A family of shorebirds, predominantly of northern coasts, in the order Charadriiformes, including auks, puffins, murres, and guillemots.

Alciopidae [INV ZOO] A pelagic family of errantian annelid worms in the class Polychaeta.

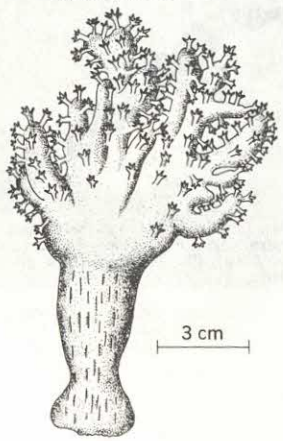
alcogel [CHEM] A gel formed by an alcosol.

ALBITE



Crystals of albite from Amelia Court House, Virginia. *(Specimen from Department of Geology, Bryn Mawr College)*

ALCYONACEA



Representative alcyonacean *Alcyonium palmatum. (After Y. Delage)*

alcohol [ORG CHEM] **1.** C_2H_5OH A colorless, volatile liquid; boiling point of pure liquid is 78.3°C; it is soluble in water, chloroform, and methyl alcohol; used as solvent and in manufacture of many chemicals and medicines. Also known as ethanol; ethyl alcohol. **2.** Any of a class of organic compounds containing the hydroxyl group, OH.

alcoholate [ORG CHEM] A compound formed by the reaction of an alcohol with an alkali metal. Also known as alkoxide.

alcohol C-9 *See* *n*-nonyl alcohol.

alcohol C-11 *See* undecylenic alcohol.

alcohol C-12 *See* lauryl alcohol.

alcohol dehydrogenase [BIOCHEM] The enzyme that catalyzes the oxidation of ethanol to acetaldehyde.

alcohol fuel [MATER] A motor fuel of gasoline blended with 5–25% of anhydrous ethyl alcohol; used particularly in Europe.

alcoholic [MED] An individual who consumes excess amounts of alcoholic beverages to the extent of being addicted, habituated, or dependent.

alcoholic beverage [FOOD ENG] A potable preparation containing ethyl alcohol.

alcoholic fermentation [MICROBIO] The process by which certain yeasts decompose sugars in the absence of oxygen to form alcohol and carbon dioxide; method for production of ethanol, wine, and beer.

alcoholimeter *See* alcoholometer.

alcoholism [MED] Compulsive consumption of and dependence on alcoholic beverages, usually leading to pathology of the digestive and nervous systems.

alcoholmeter *See* alcoholometer.

alcoholometer [ENG] A device, such as a form of hydrometer, that measures the quantity of an alcohol contained in a liquid. Also known as alcoholimeter; alcoholmeter.

alcoholysis [ORG CHEM] The breaking of a carbon-to-carbon bond by addition of an alcohol.

Alcor [ASTRON] The star 80 Ursae Majoris.

alcosol [CHEM] Mixture of an alcohol and a colloid.

alcove [ARCH] **1.** A recessed part of a room. **2.** A small room that opens into a larger one. **3.** An arched opening in a wall. [GEOL] A large niche formed by a stream in a face of horizontal strata.

alcove lands [GEOL] Terrain where the mud rocks or sandy clays and shales that compose the hills (badlands) are interstratified by occasional harder beds; the slopes are terraced.

Alcyonacea [INV ZOO] The soft corals, an order of littoral anthozoans of the subclass Alcyonaria.

Alcyonaria [INV ZOO] A subclass of the Anthozoa; members are colonial coelenterates, most of which are sedentary and littoral.

Aldebaran [ASTRON] A red giant star of visual magnitude 1.06, spectral classification K5-III, in the constellation Taurus; the star α Tauri.

aldehyde [ORG CHEM] One of a class of organic compounds containing the CHO radical.

aldehyde ammonia [ORG CHEM] $CH_3CHOHNH_2$ A white, crystalline solid with a melting point of 97°C; soluble in water and alcohol; used in organic synthesis and as a vulcanization accelerator. Also known as acetaldehyde ammonia; 1-aminoethanol.

aldehyde C-12 lauric *See* lauryl aldehyde.

aldehyde dehydrogenase [BIOCHEM] An enzyme that catalyzes the conversion of an aldehyde to its corresponding acid.

aldehyde lyase [BIOCHEM] Any enzyme that catalyzes the nonhydrolytic cleavage of an aldehyde.

aldehyde polymer [ORG CHEM] Any of the plastics based on aldehydes, such as formaldehyde, acetaldehyde, butyraldehyde, or acrylic aldehyde (acrolein).

alder [BOT] The common name for several trees of the genus Alnus.

aldicarb [ORG CHEM] $C_7H_{14}N_2O_2S$ A colorless, crystalline compound with a melting point of 100°C; used as an insecticide, miticide, and nematicide to treat soil for cotton, sugarbeets, potatoes, peanuts, and ornamentals. Also known as 2-methyl-2(methylthio)propionaldehyde *O*-(methylcarbamoyl)oxime.

Aldis signaling lamp [COMMUN] A hand-carried signaling lamp used to transmit messages from ships and aircraft.

aldohexose [ORG CHEM] A hexose, such as glucose or mannose, containing the aldehyde group.

aldol [ORG CHEM] $CH_3CH(OH)CH_2CHO$ A colorless,

thick liquid with a boiling point of 83°C; used in manufacturing rubber age resistors, accelerators, and vulcanizers. Also known as 3-hydroxybutanal.

aldolase [BIOCHEM] An enzyme in anaerobic glycolysis that catalyzes the cleavage of fructose 1,6-diphosphate to glyceraldehyde 3-phosphate; used also in the reverse reaction.

aldol condensation [ORG CHEM] Formation of a β-hydroxycarbonyl compound by the condensation of an aldehyde or a ketone in the presence of an acid or base catalyst. Also known as aldol reaction.

aldol reaction *See* aldol condensation.

aldose [ORG CHEM] A class of monosaccharide sugars; the molecule contains an aldehyde group.

aldosterone [BIOCHEM] $C_{21}H_{28}O_5$ A steroid hormone extracted from the adrenal cortex that functions chiefly in regulating sodium and potassium metabolism.

aldosteronism [MED] Hypertension induced by excessive secretion of aldosterone.

Aldrich syndrome [MED] A recessive, sex-linked disease characterized by a complex of symptoms, including eczematoid dermatitis, thrombocytopenia, black stool, and a deficiency of immune globulins.

Aldrin [ORG CHEM] $C_{12}H_8Cl_6$ Trade name for a water-insoluble, white, crystalline compound, consisting mainly of chlorinated dimethanonaphthalene; used as a pesticide.

ale [FOOD ENG] A fermented malt beverage, differing from beer in containing up to 8% alcohol by volume and being hopped more heavily.

alecithal [CYTOL] Referring to an egg without yolk, such as the eggs of placental mammals.

alee basin [GEOL] A basin formed in the deep sea by turbidity currents aggrading courses where the currents were deflected around a submarine ridge.

aleishtite [GEOL] A bluish or greenish mixture of dickite and other clay minerals.

Alembert *See* d'Alembert entries.

alençon [TEXT] A type of point lace characterized by a fine mesh ground and a floral design that is outlined with heavy thread.

aleph null [MATH] The cardinal number of any set which can be put in one-to-one correspondence with the set of positive integers.

Alepocephaloidei [VERT ZOO] The slickheads, a suborder of deap-sea teleostean fishes of the order Salmoniformes.

alert [ORD] A state of readiness against impending danger or for going into action.

alerting signal [COMMUN] Specific signal that is applied to subscriber access lines to indicate an incoming call.

aletophyte [ECOL] A weedy plant growing on the roadside or in fields where natural vegetation has been disrupted by man.

alette [ARCH] **1.** A minor wing of a building. **2.** A door jamb. **3.** A rear pilaster, partially visible within a cluster of columnar elements. **4.** The wing of the pier on both sides of an engaged column.

aleukemia [MED] Leukemia in which the white blood cell count is normal or low.

aleuron [BOT] Protein in the form of grains stored in the embryo, endosperm, or perisperm of many seeds.

aleurospore [MYCOL] A simple terminal or lateral, thick-walled, nondeciduous spore produced by some fungi of the order Moniliales.

Aleutian Current [OCEANOGR] A current setting southwestward along the southern coasts of the Aleutian Islands.

Aleutian disease [VET MED] A disease of mink characterized by accumulations of plasma cells in several organs, hyaline changes in the walls of small arteries, and interstitial fibrosis of the kidneys.

Aleutian low [METEOROL] The low-pressure center located near the Aleutian Islands on mean charts of sea-level pressure; represents one of the main centers of action in the atmospheric circulation of the Northern Hemisphere.

alewife [VERT ZOO] *Pomolobus pseudoharengus*. A food fish of the herring family that is very abundant on the Atlantic coast.

Alexandrian [GEOL] Lower Silurian geologic time.

alexandrite [MINERAL] A gem variety of chrysoberyl; emerald green in natural light but red in transmitted or artificial light.

alexia [MED] Loss of the ability to read.

Alexinic unit [BIOL] A unit for the standardization of blood serum.

Aleyrodidae [INV ZOO] The whiteflies, a family of homopteran insects included in the series Sternorrhyncha; economically important as plant pests.

alfalfa [BOT] *Medicago sativa*. A herbaceous perennial legume in the order Rosales, characterized by a deep taproot. Also known as lucerne.

alfa process [FOOD ENG] A German process for butter manufacture in which high-fat cream (78%) is run through a three-cylinder cooler, inside of which cooled spiral-ribbed rollers turn.

alfenol [METAL] A permeability alloy that has 16% aluminum and 84% iron; it is brittle and at 572°F (300°C) can be rolled into thin sheets; used for transformer cores and tape recorder heads.

alfin catalyst [ORG CHEM] A catalyst derived from reaction of an alkali alcoholate with an olefin halide; used to convert olefins (for example, ethylene, propylene, or butylenes) into polyolefin polymers.

Alfisol [GEOL] An order of soils with gray to brown surface horizons, a medium-to-high base supply, and horizons of clay accumulation.

Alford loop [ELECTROMAG] An antenna utilizing multielements which usually are contained in the same horizontal plane and adjusted so that the antenna has approximately equal and in-phase currents uniformly distributed along each of its peripheral elements and produces a substantially circular radiation pattern in the plane of polarization; it is known for its purity of polarization.

Alfvén number [PHYS] The ratio of the speed of the Alfvén wave to the speed of the fluid at a point in the fluid.

Alfvén speed [PHYS] The speed of motion of the Alfvén wave, which is $v_a = B_0/\sqrt{\rho\mu}$, where B_0 is the magnetic field strength, ρ the fluid density, and μ the magnetic permeability (in meter-kilogram-second units).

Alfvén wave [PHYS] A hydromagnetic shear wave which moves along magnetic field lines; a major accelerative mechanism of charged particles in plasma physics and astrophysics.

algae [BOT] General name for the chlorophyll-bearing organisms in the plant subkingdom Thallobionta.

algae bloom [ECOL] A heavy growth of algae in and on a body of water as a result of high phosphate concentration from farm fertilizers and detergents.

algae wash [ECOL] A shoreline drift consisting almost entirely of filamentous algae.

algal [BOT] Of or pertaining to algae. [GEOL] Formed from or by algae.

algal biscuit [GEOL] A disk-shaped or spherical mass, up to 20 centimeters in diameter, made up of carbonate that is probably the result of precipitation by algae.

algal limestone [PETR] A type of limestone either formed from the remains of calcium-secreting algae or formed when algae bind together the fragments of other lime-secreting organisms.

algal pit [GEOL] An ablation depression that is small and contains algae.

algal reef [GEOL] An organic reef which has been formed largely of algal remains and in which algae are or were the main lime-secreting organisms.

algal ridge [GEOL] Elevated margin of a windward coral reef built by actively growing calcareous algae.

algal rim [GEOL] Low rim built by actively growing calcareous algae on the lagoonal side of a leeward reef or on the windward side of a patch reef in a lagoon.

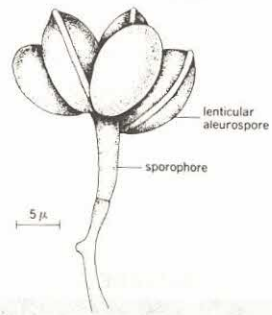
algal structure [GEOL] A deposit, most frequently calcareous, with banding, irregular concentric structures, crusts, and pseudopisolites or pseudoconcretionary forms resulting from organic, colonial secretion and precipitation.

algebra [MATH] **1.** A method of solving practical problems by using symbols, usually letters, for unknown quantities. **2.** The study of the formal manipulations of equations involving symbols and numbers. **3.** An abstract mathematical system consisting of a vector space together with a multiplication by which two vectors may be combined to yield a third, and some axioms relating this multiplication to vector addition and scalar multiplication. Also known as hypercomplex system.

algebraic addition [MATH] The addition of algebraic quantities in the sense that adding a negative quantity is the same as subtracting a positive one.

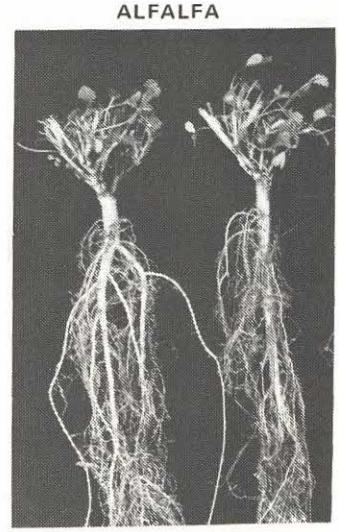
algebraic closure of a field [MATH] An algebraic extension field which has no algebraic extensions but itself.

ALEUROSPORE



Papularia sphaerosperma (Coniosporium arundinis) with aleurospores. *(After G. Goldanich, 1938)*

ALFALFA



Buffalo alfalfa, showing crown and root in 8-month-old plants. *(Iowa State University Photo Service)*

algebraic curve [MATH] **1.** The set of points in the plane satisfying a polynomial equation in two variables. **2.** More generally, the set of points in n-space satisfying a polynomial equation in n variables.

algebraic equation [MATH] An equation in which zero is set equal to an algebraic expression.

algebraic expression [MATH] An expression which is obtained by performing a finite number of the following operations on symbols representing numbers: addition, subtraction, multiplication, division, raising to a power.

algebraic extension of a field [MATH] A field which contains both the given field and all roots of polynomials with coefficients in the given field.

algebraic function [MATH] A function whose value is obtained by performing only the following operations to its argument: addition, subtraction, multiplication, division, raising to a rational power.

algebraic geometry [MATH] The study of geometric properties of figures using methods of abstract algebra.

algebraic K theory [MATH] The study of the mathematical structure resulting from associating with each ring A the group $K(A)$, the Grothendieck group of A.

algebraic language [MATH] The conventional method of writing the symbols, parentheses, and other signs of formulas and mathematical expressions.

algebraic manipulation language [COMPUT SCI] A programming language used in the solution of analytic problems by symbolic computation.

algebraic number [MATH] Any root of a polynomial with rational coefficients.

algebraic number theory [MATH] The study of properties of real numbers, especially integers, using the methods of abstract algebra.

algebraic sum [MATH] The result of the addition of two or more quantities, with the addition of a negative quantity equivalent to subtraction of the corresponding positive quantity.

algebraic surface [MATH] A subset S of a complex n-space which consists of the set of complex solutions of a system of polynomial equations in n variables such that S is a complex two-manifold in the neighborhood of most of its points.

algebraic topology [MATH] The study of topological properties of figures using the methods of abstract algebra; includes homotopy theory, homology theory, and cohomology theory.

alged malaria *See* falciparum malaria.

Algenib [ASTRON] A star in the constellation Pegasus.

Algerian onyx *See* onyx marble.

algesia [PHYSIO] Sensitivity to pain.

algesimeter [PHYSIO] A device used to determine pain thresholds.

algesireceptor [PHYSIO] A pain-sensitive cutaneous sense organ.

algicide [MATER] A chemical used to kill algae.

algin *See* sodium alginate.

alginate [ORG CHEM] One of a class of salts of algin, such as sodium alginate.

algin fibers [ORG CHEM] A polymer of D-mannuronic acid.

alginic acid [ORG CHEM] $(C_6H_8O_6)_n$ An insoluble colloidal acid obtained from brown marine algae; it is hard when dry and absorbent when moist. Also known as algin.

alginic acid sodium salt *See* sodium alginate.

alginite *See* algite.

algite [PETR] The petrological unit that constitutes algal material present in considerable amounts in algal or boghead coal. Also known as alginite.

algodonite [MINERAL] Cu_6As A steel gray to silver white mineral consisting of copper arsenide and occuring as minute hexagonal crystals or in massive and granular form.

Algol [ASTRON] An eclipsing variable star of spectral classification B8 in the constellation Perseus; the star β Persei. Also known as Demon Star.

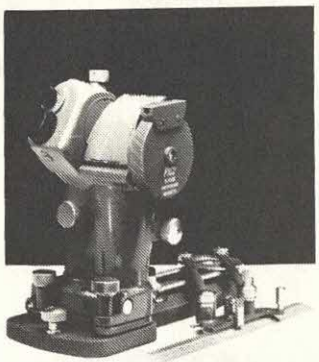
ALGOL [COMPUT SCI] An algorithmic and procedure-oriented computer language used principally in the programming of scientific problems.

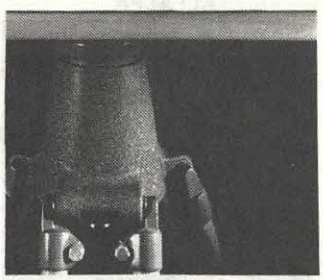
algology [BOT] The study of algae.

Algoman orogeny [GEOL] Orogenic episode affecting Archean rocks of Canada about 2.4 billion years ago. Also known as Kenoran orogeny.

algometer [MED] An instrument for measuring pressure stimuli which produce pain.

ALIDADE





A surveying alidade, having a telescope with attached graduated vertical circle, mounted on a flat base that can be moved about the table. *(Kern Instruments, Inc.)*

Algonkian [GEOL] Geologic time between the Archean and Paleozoic. Also known as Proterozoic.

algophobia [PSYCH] Abnormal fear of pain.

algorithm [MATH] A set of well-defined rules for the solution of a problem in a finite number of steps.

algorithmic language [COMPUT SCI] A language in which a procedure or scheme of calculations can be expressed accurately.

algorithm translation [COMPUT SCI] A step-by-step computerized method of translating one programming language into another programming language.

algor mortis [PATH] Postmortem cooling of the body.

alias [COMPUT SCI] An alternative entry point in a computer subroutine at which its execution may begin, if so instructed by another routine.

aliasing [MATH] Introduction of error into the computed amplitudes of the lower frequencies in a Fourier analysis of a function carried out using discrete time samplings whose interval does not allow the proper analysis of the higher frequencies present in the analyzed function.

Alice *See* Adiabatic Low-energy Injection and Capture Experiment; Alaska Integrated Communications Exchange.

alicyclic [ORG CHEM] **1.** Having the properties of both aliphatic and cyclic substances. **2.** Referring to a class of organic compounds containing only carbon and hydrogen atoms joined to form one or more rings. **3.** Any one of the compounds of the alicyclic class. Also known as cyclane.

alidade [ENG] **1.** An instrument for topographic surveying and mapping by the plane-table method. **2.** Any sighting device employed for angular measurement.

aliesterase [BIOCHEM] Any one of the lipases or nonspecific esterases.

alignment [ELECTR] The process of adjusting components of a system for proper interrelationship, including the adjustment of tuned circuits for proper frequency response and the time synchronization of the components of a system. [ENG] Placing of surveying points along a straight line. [MAP] Representing of the correct direction, character, and relationships of a line or feature on a map. [MIN ENG] The act of laying out a tunnel or regulating by line; adjusting to a line. [NUC PHYS] A population $p(m)$ of the $2I + 1$ orientational substates of a nucleus; $m = -I$ to $+I$, such that $p(m) = p(-m)$.

alignment chart *See* nomograph.

alignment correction [ENG] A correction applied to the measured length of a line to allow for not holding the tape exactly in a vertical plane of the line.

alignment pin [DES ENG] Pin in the center of the base of an octal, loctal, or other tube having a single vertical projecting rib that aids in correctly inserting the tube in its socket.

alignment wire *See* ground wire.

alimentary [BIOL] Of or relating to food, nutrition, or diet.

alimentary canal [ANAT] The tube through which food passes; in man, includes the mouth, pharynx, esophagus, stomach, and intestine.

alimentation [BIOL] Providing nourishment by feeding. [HYD] *See* accumulation.

Alioth [ASTRON] Traditional name for a second-magnitude star in the Big Dipper; the star ε Ursae Majoris.

aliphatic [ORG CHEM] Of or pertaining to any organic compound of hydrogen and carbon characterized by a straight chain of the carbon atoms; three subgroups of such compounds are alkanes, alkenes, and alkynes.

aliphatic acid [ORG CHEM] Any organic acid derived from aliphatic hydrocarbons.

aliphatic acid ester [ORG CHEM] Any organic ester derived from aliphatic acids.

aliphatic polycyclic hydrocarbon [ORG CHEM] A hydrocarbon compound in which at least two of the aliphatic structures are cyclic or closed.

aliphatic polyene compound [ORG CHEM] Any unsaturated aliphatic or alicyclic compound with more than four carbons in the chain and with at least two double bonds; for example, hexadiene.

aliphatic series [ORG CHEM] A series of open-chained carbon-hydrogen compounds; the two major classes are the series with saturated bonds and with the unsaturated.

aliquot [MED] A representative sample of a larger quantity.

Alismataceae [BOT] A family of flowering plants belonging

to the order Alismatales characterized by schizogenous secretory cells, a horseshoe-shaped embryo, and one or two ovules.

Alismatales [BOT] A small order of flowering plants in the subclass Alismatidae, including aquatic and semiaquatic herbs.

Alismatidae [BOT] A relatively primitive subclass of aquatic or semiaquatic herbaceous flowering plants in the class Liliopsida, generally having apocarpous flowers, and trinucleate pollen and lacking endosperm.

alisphenoid [ANAT] **1.** The bone forming the greater wing of the sphenoid in adults. **2.** Of or pertaining to the sphenoid wing.

alite [MATER] A constituent of portland cement clinker consisting mostly of calcium silicate.

Aliva concrete sprayer [MIN ENG] A compressed-air machine for spraying concrete on the roof and sides of mine roadways.

alive [ELEC] *See* energized. [MIN ENG] That portion of a lode that is productive.

alivincular [INV ZOO] In some bivalves, having the long axis of the short ligament transverse to the hinge line.

alizarin [ORG CHEM] $C_{14}H_6O_2(OH)_2$ An orange crystalline compound, insoluble in cold water; made synthetically from anthraquinone; used in the manufacture of dyes and red pigments. Also known as 1,2-dihydroxyanthraquinone.

alizarin dye [ORG CHEM] Sodium salts of sulfonic acids derived from alizarin.

alizarin red [ORG CHEM] Any of several red dyes derived from anthraquinone.

alizarin yellow [MATER] A dye useful as an acid-base indicator; solutions change color from yellow (acid) to purple (basic) in the pH range 10.1 to 12.0. Also known as *para*-nitrophenylazosalicylate sodium.

alizarin yellow C *See* gallacetophenone.

alkalemia [MED] An increase in blood pH above normal levels.

alkalescence [CHEM] The property of a substance that is alkaline, that is, having a pH greater than 7.

alkali [CHEM] Any compound having highly basic qualities. [PETR] *See* alkalic.

alkali-aggregate reaction [CHEM] The chemical reaction of an aggregate with the alkali in a cement, resulting in a weakening of the concrete.

alkali alcoholate [ORG CHEM] A compound formed from an alcohol and an alkali metal base; the alkali metal replaces the hydrogen in the hydroxyl group.

alkali blue [ORG CHEM] The sodium salt of triphenylrosanilinesulfonic acid; used as an indicator.

alkalic Also known as alkali. [PETR] **1.** Of igneous rock, containing more than average alkali (K_2O and Na_2O) for that clan in which they are found. **2.** Of igneous rock, having feldspathoids or other minerals, such as acmite, so that the molecular ratio of alkali to silica is greater than 1:6. **3.** Of igneous rock, having a low alkali-lime index (51 or less).

alkali-calcic series [PETR] The series of igneous rocks with weight percentage of silica in the range 51–55, and weight percentages of CaO and $K_2O + Na_2O$ equal.

alkali cellulose [MATER] Product of wood pulp steeped with sodium hydroxide; first step in manufacture of viscose rayon and other cellulosics.

alkali chlorosis [PL PATH] Yellowing of plant foliage due to excess amounts of soluble salts in the soil.

alkalide [INORG CHEM] A member of a class of crystalline salts with an alkali metal atom.

alkali denaturation test [PATH] A blood test for the measurement of fetal hemoglobin in terms of its resistance to alkali denaturation.

alkali disease [MED] Selenium poisoning. [VET MED] **1.** Botulism of ducks. **2.** Trembles of cattle.

alkali emission [GEOPHYS] Light emission from free lithium, potassium, and especially sodium in the upper atmosphere.

alkali feldspar [MINERAL] A feldspar composed of potassium feldspar and sodium feldspar, such as orthoclase, microcline, albite, and anorthoclase; all are considered alkali-rich.

alkali flat [GEOL] A level lakelike plain formed by the evaporation of water in a depression and deposition of its fine sediment and dissolved minerals.

alkali ion diode [ENG] In testing for leaks, a device which senses the presence of halogen gases by the use of positive ions of alkali metal on the heated diode surfaces.

alkali lake [HYD] A lake with large quantities of dissolved sodium and potassium carbonates as well as sodium chloride.

alkali lead [METAL] An alloy of lead hardened with small quantities of alkali metals; used as bearing metals.

alkali lignin [MATER] A type of lignin produced by treating the black liquor from the soda process with acid; used as an extender in the negative plates of storage batteries, in asphalt, and in paperboard products.

alkali-lime index [PETR] The percentage by weight of silica in a sequence of igneous rocks on a variation diagram where the weight percentages of CaO and of K_2O and Na_2O are equal.

alkali metal [CHEM] Any of the elements of group Ia in the periodic table: lithium, sodium, potassium, rubidium, cesium, and francium.

alkalimeter [ANALY CHEM] **1.** An apparatus for measuring the quantity of alkali in a solid or liquid. **2.** An apparatus for measuring the quantity of carbon dioxide formed in a reaction.

alkalimetry [ANALY CHEM] Quantitative measurement of the concentration of bases or the quantity of one free base in a solution; techniques include titration and other analytical methods.

alkaline [CHEM] **1.** Having properties of an alkali. **2.** Having a pH greater than 7.

alkaline cell [ELEC] A primary cell that uses an alkaline electrolyte, usually potassium hydroxide, and delivers about 1.5 volts at much higher current rates than the common carbon-zinc cell. Also known as alkaline-manganese cell.

alkaline cleaner [MET] An aqueous solution of an alkali used for metal cleaning.

alkaline earth [INORG CHEM] An oxide of an element of group IIa in the periodic table, such as barium, calcium, and strontium. Also known as alkaline-earth oxide.

alkaline-earth metals [CHEM] The heaviest members of group IIa in the periodic table; usually calcium, strontium, magnesium, and barium.

alkaline-earth oxide *See* alkaline earth.

alkaline-manganese cell *See* alkaline cell.

alkaline phosphatase [BIOCHEM] A phosphatase active in alkaline media.

alkaline soil [GEOL] Soil containing soluble salts of magnesium, sodium, or the like, and having a pH value between 7.3 and 8.5.

alkaline storage battery [ELEC] A storage battery in which the electrolyte consists of an alkaline solution, usually potassium hydroxide.

alkaline tide [PHYSIO] The temporary decrease in acidity of urine and body fluids after eating, attributed by some to the withdrawal of acid from the body due to gastric digestion.

alkaline wash [CHEM ENG] The removal of impurities from kerosine, used for illuminating purposes, by caustic soda solution.

alkalinity [CHEM] The property of having excess hydroxide ions in solution.

alkali reactivity [MATER] Susceptibility of a concrete aggregate to alkali-aggregate reaction

alkali-resisting paint [MATER] A paint, such as one made with a synthetic resin, that does not undergo saponification when used in such places as bathrooms or on such materials as new concretes.

alkali soil [GEOL] A soil, with salts injurious to plant life, having a pH value of 8.5 or higher.

alkaloid [ORG CHEM] One of a group of nitrogenous bases of plant origin, such as nicotine, cocaine, and morphine.

alkalometry [ANALY CHEM] The measurement of the quantity of alkaloids present in a substance.

alkalosis [MED] A condition of high blood alkalinity caused either by high intake of sodium bicarbonate or by loss of hydrochloric acid or blood carbon dioxide.

alkamine [ORG CHEM] A compound that has both the alcohol and amino groups. Also known as amino alcohol.

alkane [ORG CHEM] A member of a series of saturated aliphatic hydrocarbons having the empirical formula C_nH_{2n+2}.

alkanet [MATER] A chemical indicator made from the root of *Alkanna tinctoria*. Also known as alkanna; anchusa; orcanette.

alkanna *See* alkanet.

alkannin [ORG CHEM] $C_{16}H_{16}O_5$ A red powder, the coloring ingredient of alkanet; soluble in alcohol, benzene, ether, and oils; used as a coloring agent for fats and oils, wines, and wax.

alkanolamine [ORG CHEM] One of a group of viscous, water-soluble amino alcohols of the aliphatic series.

alkaptonuria [MED] A hereditary metabolic disorder transmitted as an autosomal recessive in man in which large amounts of homogentisic acid (alkapton) are excreted in the urine due to a deficiency of homogentisic acid oxidase. Also spelled alcaptonuria.

Alkar process [CHEM ENG] Catalytic alkylation of aromatic hydrocarbons with olefins to produce alkylaromatics; for example, production of ethylbenzene from benzene and ethylene.

alkarsine *See* cacodyl oxide.

alkene [ORG CHEM] One of a class of unsaturated aliphatic hydrocarbons containing one or more carbon-to-carbon double bonds.

alkoxide *See* alcoholate.

alkoxy [ORG CHEM] An alkyl radical attached to a molecule by oxygen, such as the ethoxy radical.

alkyd paint [MATER] A paint using an alkyd resin as the vehicle for the pigment.

alkyd resin [ORG CHEM] A class of adhesive resins made from unsaturated acids and glycerol.

alkyl [ORG CHEM] A monovalent radical, C_nH_{2n+1}, which may be considered to be formed by loss of a hydrogen atom from an alkane; usually designated by R.

alkylamine [ORG CHEM] A compound consisting of an alkyl group attached to the nitrogen of an amine; an example is ethylamine, $C_2H_5NH_2$.

alkylaryl sulfonates [ORG CHEM] General name for alkylbenzene sulfonates.

alkylate [ORG CHEM] A product of the alkylation process in petroleum refining.

alkylate bottom [CHEM ENG] Residue from fractionation of total alkylate which boils at a higher temperature than aviation gasolines.

alkylated gasoline [MATER] A cleaning-burning gasoline with a high-octane rating; prepared by adding neohexane or some other alkylate.

alkylation [CHEM ENG] A refinery process for chemically combining isoparaffin with olefin hydrocarbons. [ORG CHEM] A chemical process in which an alkyl radical is introduced into an organic compound by substitution or addition.

alkylbenzene sulfonates [ORG CHEM] Widely used nonbiodegradable detergents, commonly dodecylbenzene or tridecylbenzene sulfonates.

alkyldimethylbenzylammoniumchloride *See* benzalkonium chloride.

alkylene [ORG CHEM] An organic radical formed from an unsaturated aliphatic hydrocarbon; for example, the ethylene radical C_2H_3—.

alkyl halide [ORG CHEM] A compound consisting of an alkyl group and a halogen; an example is ethylbromide.

alkyne [ORG CHEM] One of a group of organic compounds containing a carbon-to-carbon triple bond.

allachesthesia [MED] A tactile sensation experienced remote from the point of stimulation but on the same side of the body.

allactite [MINERAL] $Mn_7(AsO_4)_2(OH)_8$ Brownish-red mineral consisting of a basic manganese arsenate.

allalinite [PETR] An altered gabbro with original texture and euhedral pseudomorphs.

allanite [MINERAL] $(Ca,Ce,La,Y)_2(Al,Fe)_3Si_3O_{12}(OH)$ Monoclinic mineral distinguished from all other members of the epidote group of silicates by a relatively high content of rare earths. Also known as bucklandite; cerine; orthite; treanorite.

allantoic acid [BIOCHEM] $C_4H_8N_4O_4$ A crystalline acid obtained by hydrolysis of allantoin; intermediate product in nucleic acid metabolism.

allantoin [BIOCHEM] $C_4H_6N_4O_3$ A crystallizable oxidation product of uric acid found in allantoic and amniotic fluids and in fetal urine.

allantoinase [BIOCHEM] An enzyme, occurring in nonmammalian vertebrates, that catalyzes the hydrolysis of allantoin.

allantois [EMBRYO] A fluid-filled, saclike, extraembryonic membrane lying between the chorion and amnion of reptilian, bird, and mammalian embryos.

allantoxanic acid [BIOCHEM] $C_4H_3N_3O_4$ An acid formed by oxidation of uric acid or allantoin.

allanturic acid [BIOCHEM] $C_3H_4N_2O_3$ An acid formed principally by the oxidation of allantoin.

ALLANITE

Allanite from Goiaz, Brazil. *(Specimen from Department of Geology, Bryn Mawr College)*

Allard's law [OPTICS] A mathematical formula defining the relationship between the intensity of a light, atmospheric conditions, and the amount of light received at any given distance.

all-around traverse [ORD] A turn in a complete circle in a horizontal plane; a weapon has this capability when it can be turned 360° by its traversing mechanism.

all-burnt time [AERO ENG] The point in time at which a rocket has consumed its propellants.

all-burnt velocity *See* burnout velocity.

all-channel tuning [COMMUN] The ability of a television set to receive ultra-high-frequency as well as very-high-frequency channels.

allcharite [MINERAL] A lead gray mineral, supposed to be a lead arsenic sulfide and known only crystallographically as orthorhombic crystals.

all-diffused monolithic integrated circuit [ELECTR] Microcircuit consisting of a silicon substrate into which all of the circuit parts (both active and passive elements) are fabricated by diffusion and related processes.

Alleculidae [INV ZOO] The comb claw beetles, a family of mostly tropical coleopteran insects in the superfamily Tenebrionoidea.

Allee's principle [GEN] The concept of an intermediate optimal population density by which groups of organisms often flourish best if neither too few nor too many individuals are present.

allege [BUILD] A part of a wall which is thinner than the rest, especially the spandrel under a window.

alleghanyite [MINERAL] $Mn_5(SiO_4)_2(OH)_2$ A pink mineral consisting of basic manganese silicate.

Alleghenian [GEOL] Lower Middle Pennsylvanian geologic time.

Alleghenian life zone [ECOL] A biome that includes the eastern mixed coniferous and deciduous forests of New England.

Alleghenian orogeny [GEOL] Pennsylvanian and Early Permian orogenic episode which deformed the rocks of the Appalachian Valley and the Ridge and Plateau provinces.

allele [GEN] One of a pair of genes, or of multiple forms of a gene, located at the same locus of homologous chromosomes. Also known as allelomorph.

allelic mutant [GEN] A cell or organism with characters different from those of the parent due to alterations of one or more alleles.

allelochemic [PHYSIO] Pertaining to a semiochemical that acts as an interspecific agent of communication.

allelochemistry [CHEM] The science of compounds synthesized by one organism that stimulate or inhibit other organisms.

allelomimetic behavior [PSYCH] Behavior in social animals in which each animal does the same thing as those nearby.

allelomorph *See* allele.

allelopathy [PL PHYS] The harmful effect of one plant or microorganism on another owing to the release of secondary metabolic products into the environment.

allelotropism [BIOL] A mutual attraction between two cells or organisms.

allemontite [MINERAL] AsSb Rhombohedric, gray or reddish, native antimony aresenide occurring in reniform masses. Also known as arsenical antimony.

Allen-Doisy unit [BIOL] A unit for the standardization of estrogens.

allene [ORG CHEM] C_3H_4 An unsaturated aliphatic hydrocarbon with two double bonds. Also known as propadiene.

Allen-Moore diaphragm cell [CHEM ENG] A rectangular electrolyte diaphragm used early in the history of chlorine manufacture.

Allen red metal [METAL] An alloy of copper and lead containing 50% lead and a small quantity of sulfur to hold the lead in solution.

Allen screw [DES ENG] A screw or bolt which has an axial hexagonal socket in its head.

Allen wrench [DES ENG] A wrench made from a straight or bent hexagonal rod, used to turn an Allen screw.

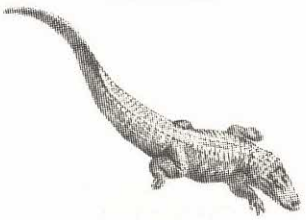
allergen [IMMUNOL] Any antigen, such as pollen, a drug, or food, that induces an allergic state in humans or animals.

allergic arteritis [MED] Inflammation of the arterial walls resulting from an allergic state.

allergic dermatitis [MED] Inflammation of the skin following contact of an allergen with sensitized tissue.

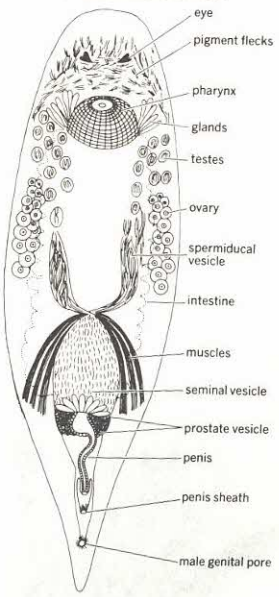
allergic reaction *See* allergy.
allergic rhinitis *See* hay fever.
allergic vasculitis syndrome [MED] A skin disease, possibly immunologic, characterized by ulcers which result from destructive inflammation of underlying blood vessels.
allergy [MED] A type of antigen-antibody reaction marked by an exaggerated physiologic response to a substance that causes no symptoms in nonsensitive individuals. Also known as allergic reaction.
allethrin [ORG CHEM] An insecticide, a synthetic pyrethroid, more effective than pyrethrin.
allevardite *See* rectorite.
alliaceous [SCI TECH] Having a garlic- or onionlike smell.
alliance [SYST] A group of related families ranking between an order and a class.
allicin [MATER] An oily liquid extracted from garlic which has a sharp garlic odor; used in medicine as an antibacterial agent.
allidochlor [ORG CHEM] $C_8H_{12}NOCl$ An amber liquid with slight solubility in water; used as a preemergence herbicide for vegetable crops, soybeans, sorghum, and ornamentals. Also known as *N,N*-diallyl-2-chloroacetamide.
alligator [VERT ZOO] Either of two species of archosaurian reptiles in the genus *Alligator* of the family Alligatoridae.
alligator clip [ELEC] A long, narrow spring clip with meshing jaws; used with test leads to make temporary connections quickly. Also known as crocodile clip.
alligator effect *See* orange peel.
Alligatorinae [VERT ZOO] A subgroup of the crocodilian family Crocodylidae that includes alligators, caimans, *Melanosuchus*, and *Paleosuchus*.
alligatoring [MATER] Cracking of a film of paint or varnish, with broad, deep cracks through one or more coats. Also known as crocodiling. [MET] **1.** A splitting of an end of a rolled steel slab in which the plane of the split is parallel to the rolled surface. Also known as fishmouthing. **2.** The roughening of a sheet-metal surface during forming due to the coarse grain of the metal used.
alligator pear oil *See* avocado oil.
alligator shears *See* lever shears.
alligator squeezer [MET] A tool with a fixed upper jaw and a movable lower jaw used to squeeze a ball of iron produced by the paddling process into a bloom or billet.
alligator wrench [DES ENG] A wrench having fixed jaws forming a V, with teeth on one or both jaws.
Allihn condenser [CHEM ENG] A condenser whose condensing surface is a series of interconnected glass bulbs.
all-inertial guidance [NAV] **1.** The guidance of a vehicle entirely by use of inertial devices. **2.** A self-contained system which can automatically determine the position, velocity, and attitude of a moving vehicle for the purpose of directing its future course.
Allium [BOT] A genus of bulbous herbs in the family Liliaceae including leeks, onions, and chives.
allivalite [PETR] A form of gabbro composed of anorthite and olivine; accessories are augite, apatite, and opaque iron oxides.
allo- [CHEM] Prefix applied to the stabler form of two isomers.
alloantibody [IMMUNOL] Antibody that reacts with an antigen occurring in a genetically different member of the same species.
alloantigen *See* isoantigen.
allobar [NUC PHYS] A form of an element differing in its atomic weight from the naturally occurring form and hence being of different isotopic composition. [PHYS] A barometric pressure change.
allocate [COMPUT SCI] To place a portion of a computer memory or a peripheral unit under control of a computer program, through the action of an operator, program instruction, or executive program. [IND ENG] To assign a portion of a resource to an activity.
allocheiria [MED] A form of allachesthesia in which the tactile sensation is experienced on the side opposite the one to which the stimulus was applied; seen in tabes dorsalis and other conditions.
allochem [GEOL] Sediment formed by chemical or biochemical precipitation within a depositional basin; includes intraclasts, oolites, fossils, and pellets.
allochemical metamorphism [PETR] Metamorphism accompanied by addition or removal of material so that the bulk chemical composition of the rock is changed.
allochetite [PETR] A porphyritic igneous rock composed of phenocrysts of labradorite, orthoclase, titanaugite, nepheline, magnetite, and apatite in a groundmass of augite, biotite, magnetite, hornblende, nepheline, and orthoclase.
allochoric [BOT] Describing a species that inhabits two or more closely related communities, such as forest and grassland, in the same region.
allochromatic crystal [CRYSTAL] A crystal having photoconductive properties due to the presence of small particles within it.
allochromy [PHYS] Emission of electromagnetic radiation that results from incident radiation at a different wavelength, as occurs in fluorescence or the Raman effect.
allochthon [GEOL] A rock that was transported a great distance from its original deposition by some tectonic process, generally related to overthrusting, recumbent folding, or gravity sliding.
allochthonous [PETR] Of rocks whose primary constituents have not been formed in situ.
allochthonous coal [GEOL] A type of coal arising from accumulations of plant debris moved from their place of growth and deposited elsewhere.
allochthonous stream [HYD] A stream flowing in a channel that it did not form.
Alloeocoela [INV ZOO] An order of platyhelminthic worms of the class Turbellaria distinguished by a simple pharynx and a diverticulated intestine.
allogene [GEOL] A mineral or rock that has been moved to the site of deposition. Also known as allothigene; allothogene.
allogeneic [IMMUNOL] Referring to a transplant made to a different genotype within the same species.
allogenic [ECOL] Caused by external factors, as in reference to the change in habitat of a natural community resulting from draught. [GEOL] *See* allothogenic.
allograft [BIOL] Graft from a donor transplanted to a genetically dissimilar recipient of the same species.
Allogromiidae [INV ZOO] A little-known family of protozoans in the order Foraminiferida; adults are characterized by a chitinous test.
Allogromiina [INV ZOO] A suborder of marine and freshwater protozoans in the order Foraminiferida characterized by an organic test of protein and acid mucopolysaccharide.
allogyric birefringence [OPTICS] The phenomenon in active optical media whereby circularly polarized light is transmitted unchanged but the velocity of right-handed circularly polarized light is different from that of left-handed.
allomerism [CRYSTAL] A constancy in crystal form in spite of a variation in chemical composition.
allometry [BIOL] **1.** The quantitative relation between a part and the whole or another part as the organism increases in size. Also known as heterauxesis; heterogony. **2.** The quantitative relation between the size of a part and the whole or another part, in a series of related organisms that differ in size.
allomone [PHYSIO] A chemical produced by an organism which induces in a member of another species a behavioral or physiological reaction favorable to the emitter; may be mutualistic or antagonistic.
allomorphism *See* paramorphism.
allomorphite [MINERAL] A mineral consisting of barite that is pseudomorphous after anhydrite.
allomorphosis [EVOL] Allometry in phylogenetic development.
Allomyces [MYCOL] A genus of aquatic phycomycetous fungi in the order Blastocladiales characterized by basal rhizoids, terminal hyphae, and zoospores with a single posterior flagellum.
allopathy [MED] A system of medicine that employs remedies whose effects are unlike those of the disease, in contrast to homeopathy.
allopatric [ECOL] Referring to populations or species that occupy naturally exclusive, but usually adjacent, geographical areas.
allopelagic [ECOL] Relating to organisms living at various depths in the sea in response to influences other than temperature.
allophanamide *See* biuret.
allophane [GEOL] $Al_2O_3 \cdot SiO_2 \cdot nH_2O$ A clay mineral com-

ALLIGATOR



The American alligator *(Alligator mississipiensis)*.

ALLOEOCOELA



Plagiostomum morgani, one of the two largest and best-known genera of the Alloeocoela. *(After L. Graff, 1911)*

posed of hydrated aluminosilicate gel of variable composition; P_2O_5 may be present in appreciable quantity.

allophore [HISTOL] A chromatophore which contains a red pigment that is soluble in alcohol; found in the skin of fishes, amphibians, and reptiles.

allopolyploid [GEN] An organism or strain arising from a combination of genetically distinct chromosome sets from two diploid organisms.

allopurinol [PHARM] $C_5H_4ON_4$ The compound 4-hydroxypyrazolo-3,4-*d*-pyrimidine; inhibits xanthine oxidase, an enzyme required for uric acid formation.

all-or-none law [PHYSIO] The principle that transmission of a nerve impulse is either at full strength or not at all.

allosome [GEN] **1.** Sex chromosome. **2.** Any atypical chromosome.

allosteric effector [BIOCHEM] A small molecule that reacts either with a nonbinding site of an enzyme molecule, or with a protein molecule, and causes a change in the function of the molecule. Also known as allosteric modulator.

allosteric enzyme [BIOCHEM] Any of the regulatory bacterial enzymes, such as those involved in end-product inhibition.

allosteric modulator *See* allosteric effector.

allosteric transition [BIOCHEM] A reversible exchange of one base pair for another on a protein molecule that alters the properties of the active site and changes the biological activity of the protein.

allostery [BIOCHEM] The property of an enzyme able to shift reversibly between an active and an inactive configuration.

Allotheria [PALEON] A subclass of Mammalia that appeared in the Upper Jurassic and became extinct in the Cenozoic.

allothigene *See* allogene.

allothimorph [GEOL] A metamorphic rock constituent which retains its original crystal outlines in the new rock.

allothogene *See* allogene.

allothogenic [GEOL] Formed from preexisting rocks which have been transported from another location. Also known as allogenic.

allotrioblast *See* xenoblast.

Allotriognathi [VERT ZOO] An equivalent name for the Lampridiformes.

allotriomorphic [MINERAL] Of minerals in igneous rock not bounded by their own crystal faces but having their outlines impressed on them by the adjacent minerals. Also known as anhedral; xenomorphic.

allotriomorphism *See* allotropy.

allotrope [CHEM] A form of an element or other substance showing allotropy.

allotropism *See* allotropy.

allotropy [CHEM] The assumption by an element or other substance of two or more different forms or structures which are most frequently stable in different temperature ranges, such as different crystalline forms of carbon as charcoal, graphite, or diamond. Also known as allotriomorphism; allotropism.

allotter [COMMUN] A telephone term referring to a distributor, associated with the finder control group relay assembly, which allots an idle line-finder in preparation for an additional call.

allotter relay [COMMUN] A telephone term referring to a relay of the line-finder circuit whose function is to preallot an idle line-finder to the next incoming call from the line, and to guard relays.

allotype [SYST] A paratype of the opposite sex to the holotype.

allowable bearing value [CIV ENG] The maximum permissible pressure on foundation soil that provides adequate safety against rupture of the soil mass or movement of the foundation of such magnitude as to impair the structure imposing the pressure. Also known as allowable soil pressure.

allowable load [MECH] The maximum force that may be safely applied to a solid, or is permitted by applicable regulators.

allowable oil [PETRO ENG] The oil an operator is permitted by law to remove from a well in one day.

allowable soil pressure *See* allowable bearing value.

allowable stress [MECH] The maximum force per unit area that may be safely applied to a solid.

allowance [DES ENG] An intentional difference in sizes of two mating parts, allowing clearance usually for a film of oil, for running or sliding fits.

allowed energy bands [SOLID STATE] The restricted regions of possible electron energy levels in a solid.

allowed hours *See* standard hour.

allowed time [IND ENG] Amount of time allowed each employee for personal needs during a work cycle.

allowed transition [QUANT MECH] A transition between two states which is permitted by the selection rules and which consequently has a relatively high priority.

alloxan [BIOCHEM] $C_4H_2N_2O_4$ Crystalline oxidation product of uric acid; induces diabetes experimentally by selective destruction of pancreatic beta cells. Also known as mesoxalylurea.

alloy [MET] Any of a large number of substances having metallic properties and consisting of two or more elements; with few exceptions, the components are usually metallic elements.

Alloy 600 *See* Inconel.

Alloy 750 [MET] A bearing alloy, containing 6.5% tin, 2.5% silicon, 1% copper, 0.5% nickel, and the remainder aluminum; used for automobile engine bearings.

alloying [MET] The addition of a metal or alloy to another metal or alloy.

alloy junction [ELECTR] A junction produced by alloying one or more impurity metals to a semiconductor to form a *p* or *n* region, depending on the impurity used. Also known as fused junction.

alloy junction diode [ELECTR] A junction diode made by placing a pill of doped alloying material on a semiconductor material and heating until the molten alloy melts a portion of the semiconductor, resulting in a *pn* junction when the dissolved semiconductor recrystallizes. Also known as fused-junction diode.

alloy-junction transistor [ELECTR] A junction transistor made by placing pellets of a *p*-type impurity such as indium above and below an *n*-type wafer of germanium, then heating until the impurity alloys with the germanium to give a *pnp* transistor. Also known as fused-junction transistor.

alloy nuclear fuel [NUCLEO] A material used in nuclear reactors that is an alloy of a fissionable substance and a nonfissionable metal or metals.

alloy plating [MET] The codeposition of two or more metals on an electrode by electrolysis.

alloy steel [MET] A steel whose distinctive properties are due to the presence of one or more elements other than carbon.

all-pass network [ELECTR] A network designed to introduce a phase shift in a signal without introducing an appreciable reduction in energy of the signal at any frequency.

all-purpose computer [COMPUT SCI] A computer combining the specific capabilities of a general-purpose computer and a special-purpose, scientific or business computer.

all-sky camera [OPTICS] A camera directed vertically downward toward a horizontal convex mirror so as to photograph the entire sky simultaneously.

allspice [BOT] The dried, unripe berries of a small, tropical evergreen tree, *Pimenta officinalis*, of the myrtle family; yields a pungent, aromatic spice.

allspice oil *See* pimenta oil.

allulose [ORG CHEM] $CH_2OHCO(CHOH)_3CH_2OH$ A constituent of cane sugar molasses; it is nonfermentable. Also known as D-piscose; D-ribo-2-ketohexose.

alluvial [GEOL] **1.** Of a placer, or its associated valuable mineral, formed by the action of running water. **2.** Pertaining to or consisting of alluvium, or deposited by running water.

alluvial cone [GEOL] An alluvial fan with steep slopes formed of loose material washed down the slopes of mountains by ephemeral streams and deposited as a conical mass of low slope at the mouth of a gorge. Also known as cone delta; cone of dejection; cone of detritus; debris cone; dry delta; hemicone; wash.

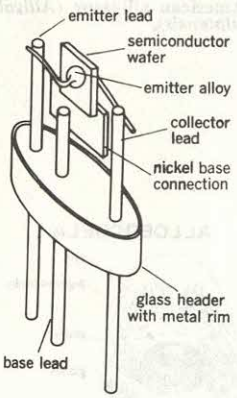
alluvial dam [GEOL] A sedimentary deposit which is built by an overloaded stream and dams its channel; especially characteristic of distributaries on alluvial fans.

alluvial deposit *See* alluvium.

alluvial fan [GEOL] A fan-shaped deposit formed by a stream either where it issues from a narrow moutain valley onto a plain or broad valley, or where a tributary stream joins a main stream.

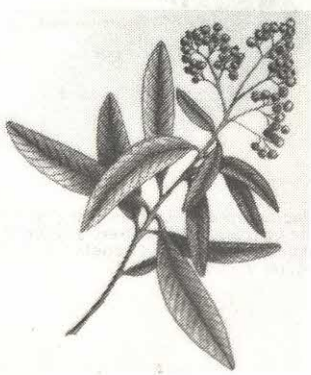
alluvial flat [GEOL] A small alluvial plain having a slope of about 5 to 20 feet per mile and built of fine sandy clay or adobe deposited during flood.

ALLOY JUNCTION TRANSISTOR



View of an alloy junction transistor.

ALLSPICE



A branch of *Pimenta officinalis* with the berry fruit.

alluvial mining [MIN ENG] The exploitation of alluvial deposits by dredging, hydraulicking, or drift mining.

alluvial ore deposit [GEOL] A deposit in which the valuable mineral particles have been transported and left by a stream.

alluvial plain [GEOL] A plain formed from the deposition of alluvium usually adjacent to a river that periodically overflows. Also known as aggraded valley plain; river plain; wash plain; waste plain.

alluvial slope [GEOL] A surface of alluvium which slopes down from mountainsides and merges with the plain or broad valley floor.

alluvial soil [GEOL] A soil deposit developed on floodplain and delta deposits.

alluvial terrace [GEOL] A terraced embankment of loose material adjacent to the sides of a river valley. Also known as built terrace; drift terrace; fill terrace; stream-built terrace; wave-built platform; wave-built terrace.

alluvial valley [GEOL] A valley filled with a stream deposit.

alluviation [GEOL] Deposition of sediment by a river.

alluvion *See* alluvium.

alluvium [GEOL] The detrital materials eroded, transported, and deposited by streams; an important constituent of shelf deposits. Also known as alluvial deposit; alluvion.

all-wave receiver [ELECTR] A radio receiver capable of being tuned from about 535 kilohertz to at least 20 megahertz; some go above 100 megahertz and thus cover the FM band also.

all-weather aircraft [AERO ENG] Aircraft that are designed or equipped to perform by day or night under any weather conditions.

all-weather airport [CIV ENG] An airport with facilities to permit the landing of qualified aircraft and aircrewmen without regard to operational weather limits.

all-weather fighter [AERO ENG] A fighter aircraft equipped with radar and other special devices which enable it to intercept its target in the dark, or in daylight weather conditions that do not permit visual interception; it is usually a multiplace (pilot plus navigator-observer) airplane.

all-weather landing system [NAV] An instrument landing system having optimum operational capability in low and zero visibility.

all-weld-metal test specimen [MET] A specimen composed entirely of weld metal used in a weld tension test wherein the axis of the weld from which it is derived is parallel to the axis of the test bar.

allyl- [ORG CHEM] A prefix used in names of compounds whose structure contains an allyl cation.

allylacetone [ORG CHEM] $CH_2CHCH_2CH_2COCH_3$ A colorless liquid, soluble in water and organic solvents; used in pharmaceutical synthesis, perfumes, fungicides, and insecticides.

allyl alcohol [ORG CHEM] CH_2CHCH_2OH Colorless, pungent liquid, boiling at 96°C; soluble in water; made from allyl chloride by hydrolysis. Also known as 2-propen-1-ol.

allylamine [ORG CHEM] $CH_2CHCH_2NH_2$ A yellow oil that is miscible with water; boils at 58°C; prepared from mustard oil. Also known as 2-propen-1-amine.

***para*-allylanisole** *See* estragole.

allyl bromide [ORG CHEM] C_3H_5Br A colorless to light yellow, irritating toxic liquid with a boiling point of 71.3°C; soluble in organic solvents; used in organic synthesis and for the manufacture of synthetic perfumes. Also known as bromoallylene; 3-bromo-1-propene.

5-allyl-5-*sec*-butylbarbituric acid *See* talbutal.

allylcarbamide *See* allylurea.

allyl cation [ORG CHEM] A carbonium cation with a structure usually represented as $CH_2=CH—CH_2^+$; attachment site is the saturated carbon atom.

allyl chloride [ORG CHEM] CH_2CHCH_2Cl A volatile, pungent, toxic, flammable, colorless liquid, boiling at 46°C; insoluble in water; made by chlorination of propylene at high temperatures. Also known as 3-chloro-1-propene.

allyl cyanide [ORG CHEM] C_4H_5N A liquid with an onionlike odor and a boiling point of 119°C; slightly soluble in water; used as a cross-linking agent in polymerization. Also known as 3-butenenitrile; vinylacetonitrile.

1-allyl-3,4-dimethoxybenzene *See* methyleugenol.

allylene [ORG CHEM] $CH_3C{:}CH$ An acetylenic, three-carbon hydrocarbon; a colorless gas boiling at −24°C; soluble in ether. Also known as methyl acetylene; propine; propyne.

4-allyl guaiacol *See* eugenol.

1-allyl-4-hydroxybenzene *See* chavicol.

allylic rearrangement [ORG CHEM] In a three-carbon molecule, the shifting of a double bond from the 1,2 carbon position to the 2,3 position, with the accompanying migration of an entering substituent or substituent group from the third carbon to the first.

allyl isosulfocyanate *See* allyl isothiocyanate.

allyl isothiocyanate [ORG CHEM] $CH_2CH{:}CH_2NCS$ A pungent, colorless to pale-yellow liquid; soluble in alcohol, slightly soluble in water; irritating odor; boiling point 152°C; used as a fumigant and as a poison gas. Also known as allyl isosulfocyanate; mustard oil.

allyl mercaptan [ORG CHEM] CH_2CHCH_2SH A colorless liquid with a boiling point of 67–68°C; soluble in ether and alcohol; used as intermediate in pharmaceutical manufacture. Also known as allyl thiol; 2-propene-1-thiol.

***para*-allyl phenol** *See* chavicol.

allyl plastic *See* allyl resin.

allyl resin [ORG CHEM] Any of a class of thermosetting synthetic resins derived from esters of allyl alcohol or allyl chloride; used in making cast and laminated products. Also known as allyl plastic.

allyl sulfide [ORG CHEM] $(CH_2CHCH_2)_2S$ A colorless liquid with a garliclike odor and a boiling point of 139°C; used in synthetic oil of garlic. Also known as diallyl sulfide; oil garlic; thioallyl ether.

allylsulfocarbamide *See* allylthiourea.

allyl sulfourea *See* allylthiourea.

allyl thiol *See* allyl mercaptan.

allylthiourea [ORG CHEM] $C_3H_5NHCSNH_2$ A white, crystalline solid that melts at 78°C; soluble in water; used as a corrosion inhibitor. Also known as allylsulfocarbamide; allyl sulfourea; thiosinamine.

allyltrichlorosilane [ORG CHEM] $CH_2CHCH_2SiCl_3$ A pungent, colorless liquid with a boiling point of 117.5°C; used as an intermediate for silicones.

allylurea [ORG CHEM] $C_4H_8N_2O$ Crystals with a melting point of 85°C; freely soluble in water and alcohol; used to manufacture allylthiourea and other corrosion inhibitors. Also known as allylcarbamide.

allyxycarb [ORG CHEM] $C_{16}H_{22}N_2O_2$ A yellow, crystalline compound used as an insecticide for fruit orchards, vegetable crops, rice, and citrus. Also known as 4-diallylamino-3,5-xylyl-*N*-methylcarbamate.

alm [ECOL] A meadow in alpine or subalpine mountain regions.

almandine [MINERAL] $Fe_3Al_2(SiO_4)_3$ A variety of garnet, deep red to brownish red, found in igneous and metamorphic rocks in many parts of world; used as a gemstone and an abrasive. Also known as almandite.

almandite *See* almandine.

almendro [MATER] The wood of tonka bean tree species in Panama *(Coumarouna panamensis);* resistant to marine borers and used as a substitute for greenheart in marine construction.

almerite *See* natroalunite.

almon [MATER] A type of lauan from the tree *Shorea eximia*; wood is fairly strong and hard with a coarse texture.

almond [BOT] *Prunus amygdalus*. A small deciduous tree of the order Rosales; it produces a drupaceous edible fruit with an ellipsoidal, slightly compressed nutlike seed.

almost periodic function [MATH] A continuous function $f(x)$ such that for any positive number ϵ there is a number M so that for any real number x, any interval of length M contains a nonzero number t such that $|f(x + t) - f(x)| < \epsilon$.

Almquist unit [BIOL] A unit for the standardization of vitamin K.

almucantar *See* parallel of altitude.

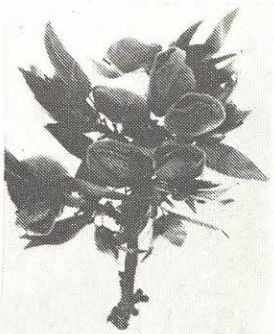
alnico [MET] One of a series of ferrous alloys containing aluminum, nickel, and cobalt, valued because of their highly retentive magnetic properties; usually designated with a roman-numeral number, such as alnico VII. Also known as aluminum-nickel-cobalt alloy.

alnico magnet [ELECTROMAG] A permanent magnet made of alnico.

Alnilam [ASTRON] A star in the constellation Orion.

alnoite [PETR] A variety of biotite lamprophyres characterized by lepidomelane phenocrysts; it is feldspar-free but

ALMOND

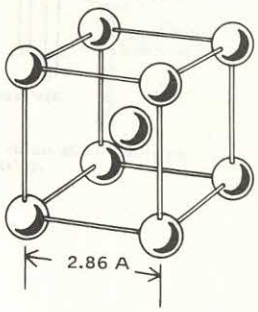


Almond twig with leaves and fruit.

ALPACA

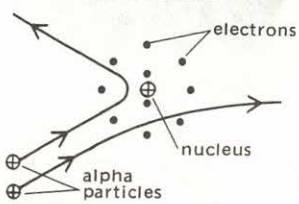
The alpaca *(Lama pacos)*, sheared every 2 years, to yield 18-24 pounds (8-11 kilograms) of wool in its lifetime.

ALPHA IRON



The body-centered cubic crystal structure of alpha iron.

ALPHA–PARTICLE SCATTERING



Scattering by an atom of alpha particles.

contains melitite, perovskite, olivine, and carbonate in the matrix.

aloe [PHARM] The dried resinous juice extracted from the leaves of the genus *Aloe*, especially *Aloe vulgaris* of the West Indies and *A. perryi* of Africa; used in purgative mixtures.

aloe lace [TEXT] A fragil lace fabric made from the fibers of an aloe plant.

aloe wood oil *See* oriental linaloe.

aloisite [MINERAL] A brown to violet mineral consisting of a hydrous subsilicate of calcium, iron, magnesium, and sodium, and occurring in amorphous masses.

alongshore current *See* littoral current.

alopecia [MED] Loss of hair; baldness.

Alopiidae [VERT ZOO] A family of pelagic isurid elasmobranchs commonly known as thresher sharks because of their long, whiplike tail.

alpaca [VERT ZOO] *Lama pacos*. An artiodactyl of the camel family (Camelidae); economically important for its long, fine wool.

alpage [ECOL] A summer grazing area composed of natural plant pasturage in upland or mountainous regions.

alpenglow [METEOROL] A reappearance of sunset colors on a mountain summit after the original mountain colors have faded into shadow; also, a similar phenomenon preceding the regular coloration at sunrise.

alpestrine [ECOL] Referring to organisms that live at high elevation but below the timberline. Also known as subalpine.

alpha [SCI TECH] The first letter in the Greek alphabet; α, A.

alphabet [SCI TECH] Any ordered set of unique graphics called characters, such as the 26 letters of the Roman alphabet.

alphabetic coding [COMPUT SCI] **1.** Abbreviation of words for computer input. **2.** A system of coding with a number system of base 26, the letters of the alphabet being used instead of the cardinal numbers.

alphabetic shift [COMPUT SCI] The status of a card punch when the program control is off (star wheels are raised).

alphabetic string *See* character string.

alpha brass [MET] An alloy of copper and zinc containing up to 36% zinc dissolved, rather than chemically combined, with the copper; ductile, easily cold-worked, and corrosion resistant; used for hot-water pipes.

alpha cell [HISTOL] Any of the acidophilic chromophiles in the anterior lobe of the adenohypophysis.

alpha cellulose [ORG CHEM] A highly refined, insoluble cellulose from which sugars, pectin, and other soluble materials have been removed. Also known as chemical cellulose.

alpha cross section [NUCLEO] Total cross section for interaction with α-particles.

alpha cutoff frequency [ELECTR] The frequency at the high end of a transistor's range at which current amplification drops 3 decibels below its low-frequency value.

alpha decay [NUC PHYS] A radioactive transformation in which an alpha particle is emitted by a nuclide.

alpha emission [NUC PHYS] Ejection of alpha particles from the atom's nucleus.

alpha globulin [BIOCHEM] A heterogeneous fraction of serum globulins containing the proteins of greatest electrophoretic mobility.

alpha gypsum [MATER] A specially processed gypsum having low consistency and high compressive strength, often exceeding 5000 pounds per square inch (34.5 megapascals).

alpha helix [MOL BIO] A spatial configuration of the polypeptide chains of proteins in which the chain assumes a helical form, 0.54 nanometer in pitch, 3.6 amino acids per turn, presenting the appearance of a hollow cylinder with radiating side groups.

alpha hemolysis [MICROBIO] Partial hemolysis of red blood cells with green discoloration in a blood agar medium by certain hemolytic streptococci.

alpha iron [MET] Iron with a body-centered cubic structure which is stable below 1670°F (910°C).

alpha irradiation [NUCLEO] Subjection of a substance to a flux of alpha particles.

alphameric characters *See* alphanumeric characters.

alphameric typebar [COMPUT SCI] A metal bar containing the alphabet, the ten numerical characters, and the ampersand, in use in electromechanical accounting machines.

alphanumeric characters [COMPUT SCI] All characters used by a computer, including letters, numerals, punctuation marks, and such signs as $, @, and #. Also known as alphameric characters.

alphanumeric display device [ELECTR] A device which visibly represents alphanumeric output information from some signal source.

alphanumeric grid *See* atlas grid.

alphanumeric instruction [COMPUT SCI] The name given to instructions which can be read equally well with alphabetic or numeric kinds of fields of data.

alphanumeric reader [ELECTR] A device capable of reading alphabetic, numeric, and special characters and punctuation marks.

alpha olefin [ORG CHEM] An olefin where the unsaturation (double bond) is at the alpha position, that is, between the two end carbons of the carbon chain.

alpha particle [ATOM PHYS] A positively charged particle consisting of two protons and two neutrons, identical with the nucleus of the helium atom; emitted by several radioactive substances.

alpha-particle detector [NUCLEO] A device used to indicate the presence of alpha particles.

alpha-particle scattering [ATOM PHYS] Deviation at various angles of a stream of alpha particles passing through a foil of material.

alpha position [ORG CHEM] In chemical nomenclature, the position of a substituting group of atoms in the main group of a molecule; for example, in a straight-chain compound such as α-hydroxypropionic acid ($CH_3CHOHCOOH$), the hydroxyl radical is in the alpha position.

alpha ray [NUCLEO] A stream of alpha particles.

alpha-ray vacuum gage [ENG] An ionization gage in which the ionization is produced by alpha particles emitted by a radioactive source, instead of by electrons emitted from a hot filament; used chiefly for pressures from 10^{-3} to 10 torrs. Also known as alphatron.

alpha rhythm [PHYSIO] An electric current from the occipital region of the brain cortex having a pulse frequency of 8 to 13 per second; associated with a relaxed state in normal human adults.

alpha rule *See* renaming rule.

alphascope [COMPUT SCI] An interactive alphanumerical input/output device that consists of a cathode-ray tube, keyboard, method of generating characters, method of refreshing the display, and communications equipment, and that forms part of a computer-based system requiring a short response time for retrieving answers to queries from a computer random-access memory.

alpha system [COMMUN] A signaling system in which alphabetic characters designate the signaling code to be used.

alpha taxonomy [SYST] The level of taxonomic study concerned with characterizing and naming species.

alphatopic [NUCLEO] Pertaining to the relationship between two nuclides that differ in composition or in mass by an alpha particle.

alphatron *See* alpha-ray vacuum gage.

Alpheidae [INV ZOO] The snapping shrimp, a family of decapod crustaceans included in the section Caridea.

Alphonsus [ASTRON] A moon crater.

Alpides [GEOL] Great east-west structural belt including the Alps of Europe and the Himalayas and related mountains of Asia; mostly folded in Tertiary times.

alpine [ECOL] Any plant native to mountain peaks or boreal regions. [GEOL] Similar to or characteristic of a lofty mountain or mountain system.

alpine glacier [HYD] A glacier lying on or occupying a depression in mountainous terrain. Also known as mountain glacier.

Alpine orogeny [GEOL] Jurassic through Tertiary orogeny which affected the Alpides.

alpine tundra [ECOL] Large, flat or gently sloping, treeless tracts of land above the timberline.

alpine-type facies [PETR] High-pressure, low-temperature (150–400°C) dynamothermal metamorphism characterized by the presence of the pumpellyite and glaucophane schist facies.

alpinotype tectonics [GEOL] Tectonics of the alpine-type geosynclinal mountain belts characterized by deep-seated plastic folding, plutonism, and lateral thrusting.

alsbachite [PETR] A plutonic rock of sodic plagioclase, quartz, and subordinate orthoclase and accessory garnet, biotite, and muscovite; a variety of porphyritic granodiorite.

alsifilm [MATER] A bentonite gel in the form of sheets used primarily for electrical insulation, because of its properties of heat and oil resistance.

alstonite *See* bromlite.

alt *See* altitude.

Altair [ASTRON] A star that is 16.5 light-years from the sun; spectral type A7IV–V. Also known as α Aquilae.

altaite [MINERAL] PbTe A tin-white lead-tellurium mineral occurring as isometric crystals with tin ores in central Asia.

Altar *See* Ara.

altazimuth [ENG] An instrument equipped with both horizontal and vertical graduated circles, for the simultaneous observation of horizontal and vertical directions or angles. Also known as astronomical theodolite; universal instrument.

altazimuth mounting [ENG] A telescope mounting with a vertical axis that determines the azimuth, and a horizontal axis, supported on the vertical axis, that determines the altitude; the telescope must be moved in both altitude and azimuth to follow a celestial object.

altazimuth telescope [OPTICS] A telescope equipped with an altazimuth mounting.

alteration [GRAPHICS] In printing composition, a change that is made in typeset copy. [PETR] A change in a rock's mineral composition.

alteration switch [COMPUT SCI] A hand-operated switch mounted on the console of a computer, used to feed a single bit of information into a program. Also known as sense switch.

alter ego [PSYCH] A close friend who represents a second self to an individual.

alternate [BOT] **1.** Of the arrangement of leaves on opposite sides of the stem at different levels. **2.** Of the arrangement of the parts of one whorl between members of another whorl.

alternate airport [NAV] An airport designated in a pilot's flight plan at which an aircraft will have the capability to land if a landing at the intended airport becomes inadvisable.

alternate angles [MATH] A pair of nonadjacent angles that a transversal forms with each of two lines; they lie on opposite sides of the transversal, and are both interior, or both exterior, to the two lines.

alternate-channel interference [COMMUN] Interference that is caused in one communications channel by a transmitter operating in the next channel beyond an adjacent channel. Also known as second-channel interference.

alternate immersion test [MET] A corrosion test in which a specimen is repeatedly carried through a cycle of immersion in and removal from a corrosive medium over definite time intervals.

alternate polarity operation [MET] A resistance welding method which utilizes alternating polarity for the progression of weld pulses.

alternate routing [COMMUN] The operation of a switching center when all circuits are found busy in a programmed route to the destination, and the call is offere to another programmed route.

alternate track [COMPUT SCI] The disk track used if, after a disk volume is initialized, a defective track is sensed by the system.

alternate traversing fire [ORD] Method of covering a target that has both width and depth by firing a succession of traversing groups whose normal range dispersion will provide for distribution in depth.

alternating copolymer [ORG CHEM] A polymer formed of two different monomer molecules that alternate in sequence in the polymer chain.

alternating current [ELEC] Electric current that reverses direction periodically, usually many times per second. Abbreviated ac.

alternating-current circuit theory [ELEC] The mathematical description of conditions in an electric circuit driven by an alternating source or sources.

alternating-current coupling [ELECTR] A coupling which passes alternating-current signals but blocks direct-current signals.

alternating-current/direct-current [ELECTR] Pertaining to electronic equipment capable of operation from either an alternating-current or direct-current primary power source.

alternating-current dump [ELECTR] The removal of all alternating-current power from a computer intentionally, accidentally, or conditionally.

alternating-current erase [ELECTR] The use of an alternating current to energize a tape recorder erase head in order to remove previously recorded signals from a tape.

alternating-current erasing head [ELECTR] In magnetic recording, an erasing head which uses alternating current to produce the magnetic field necessary for erasing.

alternating-current generator [ELEC] A machine, usually rotary, which converts mechanical power into alternating-current electric power.

alternating-current magnetic biasing [ELECTR] Biasing with alternating current, usually well above the signal frequency range, in magnetic tape recording.

alternating-current motor [ELEC] A machine that converts alternating-current electrical energy into mechanical energy by utilizing forces exerted by magnetic fields produced by the current flow through conductors.

alternating-current power supply [ELEC] A power supply that provides one or more alternating-current output voltages, such as an ac generator, dynamotor, inverter, or transformer.

alternating-current resistance *See* high-frequency resistance.

alternating-current transmission [ELECTR] In television, that form of transmission in which a fixed setting of the controls makes any instantaneous value of signal correspond to the same value of brightness for only a short time.

alternating-current welder [ENG] A welding machine utilizing alternating current for welding purposes.

alternating flashing light [NAV] A light showing one or more flashes with color variations at regular intervals, the duration of light being less than that of darkness.

alternating function [MATH] A function in which the interchange of two independent variables causes the dependent variable to change sign.

alternating gradient [ELECTROMAG] A magnetic field in which successive magnets have gradients of opposite sign, so that the field increases with radius in one magnet and decreases with radius in the next; used in synchrotrons and cyclotrons.

alternating-gradient synchrotron [NUCLEO] A proton synchrotron using an alternating magnetic-field gradient for focusing; beams of protons having extremely high energy (above 25 GeV) are produced.

alternating group [MATH] A group made up of all the even permutations of n objects.

alternating group flashing light [NAV] A navigation light having groups of total eclipses at regular intervals and having color variations, the duration of light being equal to or greater than that of darkness. Also known as alternating group occulting light.

alternating group occulting light *See* alternating group flashing light.

alternating occulting light [NAV] A navigation light having one or more total eclipses at regular intervals and having color variations, the duration of light being equal to or greater than that of darkness.

alternating series [MATH] Any series of real numbers in which consecutive terms have opposite signs.

alternating stress [MECH] A stress produced in a material by forces which are such that each force alternately acts in opposite directions.

alternating voltage [ELEC] Periodic voltage, the average value of which over a period is zero.

alternation [PHYS] Variation, either positive or negative, of a waveform from zero to maximum and back to zero, equaling one-half of a cycle.

alternation of generations *See* metagenesis.

alternation of multiplicities law [CHEM] The law that the periodic table arranges the elements in such a sequence that their number of orbital electrons, and hence their multiplicities, alternates between even and odd numbers.

alternator [ELEC] A mechanical, electrical, or electromechanical device which supplies alternating current.

alterne [ECOL] A community exhibiting alternating dominance with other communities in the same area.

altherbosa [ECOL] Communities of tall herbs, usually succeeding where forests have been destroyed.

altigraph [ENG] A pressure altimeter that has a recording mechanism to show the changes in altitude.

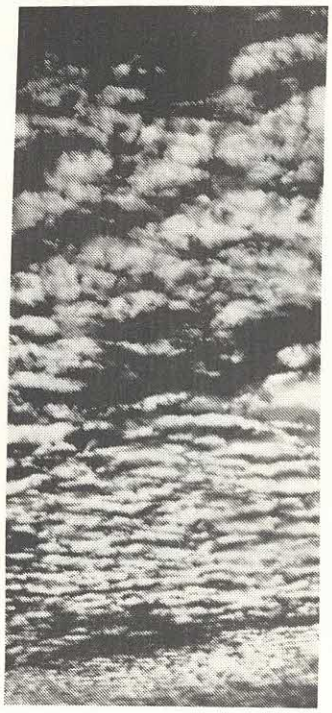
altimeter [ENG] An instrument which determines the altitude of an object with respect to a fixed level, such as sea level; there are two common types: the aneroid altimeter and the radio altimeter.

altimeter corrections [ENG] Corrections which must be

ALTIMETER

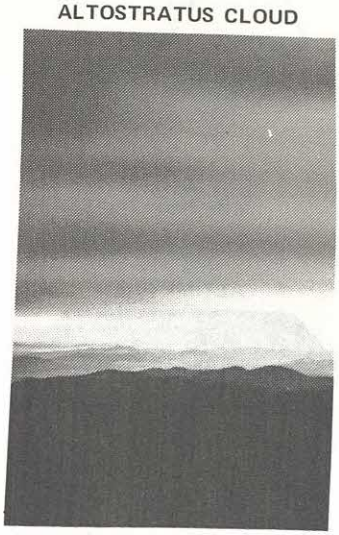
Aneroid altimeter.

ALTOCUMULUS CLOUD



Altocumulus, which occurs at intermediate levels. *(G. A. Lott, U.S. Weather Bureau)*

ALTOSTRATUS CLOUD



Altostratus, a middle-level layer cloud. Thick layers of such cloud, with bases extending down to low levels, produce prolonged rain or snow, and are then called nimbostratus. *(C. F. Brooks, U.S. Weather Bureau)*

made to the readings of a pressure altimeter to obtain true altitudes; involve horizontal pressure gradient error and air temperature error.

altimeter setting [ENG] The value of atmospheric pressure to which the scale of an aneroid altimeter is set; after United States practice, the pressure that will indicate airport elevation when the altimeter is 10 feet (3 meters) above the runway (approximately cockpit height).

altimeter-setting indicator [ENG] A precision aneroid barometer calibrated to indicate directly the local altimeter setting.

altimetry [ENG] The measurement of heights in the atmosphere (altitude), generally by means of an altimeter.

altiplanation [GEOL] A phase of solifluction that may be seen as terracelike forms, flattened summits, and passes that are mainly accumulations of loose rock.

altiplanation surface [GEOL] A flat area fronted by scarps a few to hundreds of feet in height; the area ranges from several square rods to hundreds of acres. Also known as altiplanation terrace.

altiplanation terrace *See* altiplanation surface.

altithermal [GEOPHYS] Period of high temperature, particularly the postglacial thermal optimum.

Altithermal [GEOL] A dry postglacial interval centered about 5500 years ago during which temperatures were warmer than at present.

altithermal soil [GEOL] Soil recording a period of rising or high temperature.

altitude Abbreviated alt. [ENG] **1.** Height, measured as distance along the extended earth's radius above a given datum, such as average sea level. **2.** Angular displacement above the horizon measured by an altitude curve. [MATH] The perpendicular distance from the base to the top (a vertex or parallel line) of a geometric figure such as a triangle or parallelogram.

altitude acclimatization [PHYSIO] A physiological adaptation to reduced atmospheric and oxygen pressure.

altitude azimuth [ENG] An azimuth determined by solution of the navigational triangle with altitude, declination, and latitude given.

altitude chamber [ENG] A chamber within which the air pressure, temperature, and so on can be adjusted to simulate conditions at different altitudes; used for experimentation and testing.

altitude circle [ASTRON] *See* parallel of altitude. [ELECTROMAG] A bright circle which surrounds the central dark portion of a plan position indicator display or photograph, and which results from ground clutter.

altitude-contour *See* C factor.

altitude curve [ENG] The arc of a vertical circle between the horizon and a point on the celestial sphere, measured upward from the horizon. [NAV] A graphical representation of the altitude of a celestial body as it would appear from a single assumed position or a series of assumed positions over a period of time; such curves are precomputed.

altitude datum [ENG] The arbitrary level from which heights are reckoned.

altitude delay [ELECTR] Synchronization delay introduced between the time of transmission of the radar pulse andthe start of the trace on the indicator to eliminate the altitude/height hole on the plan position indicator–type display.

altitude difference [ENG] The difference between computed and observed altitudes, or between precomputed and sextant altitudes. Also known as altitude intercept; intercept.

altitude hole [ELECTR] The blank area in the center of a plan position indicator–type radarscope display caused by the time interval between transmission of a pulse and the receipt of the first ground return.

altitude intercept *See* altitude difference.

altitude reservation [NAV] **1.** The prior approval by the appropriate air traffic control agencies of flight plans, requesting use of certain airspace for the purpose of expediting mass movement of aircraft or other special air operations. **2.** A flight altitude assigned to an aircraft by an air-traffic control agency.

altitude sickness [MED] In general, any sickness brought on by exposure to reduced oxygen tension and barometric pressure.

altitude signal [ELECTR] The radio signals returned to an airborne electronics device by the ground or sea surface directly beneath the aircraft.

altitude tnts *See* gradient tints.

altitude valve [AERO ENG] A valve that adjusts the composition of the air-fuel mixture admitted into an airplane carburetor as the air density varies with altitude.

altitude wind tunnel [AERO ENG] A wind tunnel in which the air pressure, temperature, and humidity can be varied to simulate conditions at different altitudes.

altitudinal vegetation zone [ECOL] A geographical band of physiognomically similar vegetation correlated with vertical and horizontal gradients of environmental conditions.

alto [GRAPHICS] The negative which is electrodeposited during the preparation of plates for printing currency.

altocumulus cloud [METEOROL] A principal cloud type, white or gray or both white and gray in color; occurs as a layer or patch with a waved aspect, the elements of which appear as laminae, rounded masses, or rolls; frequently appears at different levels in a given sky. Abbreviated Ac.

altostratus cloud [METEOROL] A principal cloud type in the form of a gray or bluish (never white) sheet or layer of striated, fibrous, or uniform appearance; very often totally covers the sky and may cover an area of several thousand square miles; vertical extent may be from several hundred to thousands of meters. Abbreviated As.

altricial [VERT ZOO] Pertaining to young that are born or hatched immature and helpless, thus requiring extended development and parental care.

ALU *See* arithmetical unit.

alula [ZOO] **1.** Digit of a bird wing homologous to the thumb. **2.** *See* calypter.

alum [INORG CHEM] **1.** Any of a group of double sulfates of trivalent metals such as aluminum, chromium, or iron and a univalent metal such as potassium or sodium. **2.** *See* aluminum sulfate; ammonium aluminum sulfate; potassium aluminum sulfate. [MINERAL] $KAl(SO_4)_2 \cdot 12H_2O$ A colorless, white, astringent-tasting evaporite mineral.

alum cake [MATER] A material composed of silica and aluminum sulfate produced by the action of sulfuric acid on clay.

alum coal [GEOL] Argillaceous brown coal rich in pyrite in which alum is formed on weathering.

alumetized steel *See* aluminized steel.

alumina [INORG CHEM] Al_2O_3 The native form of aluminum oxide occurring as corundum or in hydrated forms, as a powder or crystalline substance.

alumina balls [MATER] Alumina in the form of balls ¼ to ¾ inch (6.4 to 19 mm) in diameter; usually composed of 99% alumina and having high resistance to chemicals and heat; used in reactor and catalytic beds.

alumina brick [MATER] A group of fireclay bricks containing 50, 60, or 70% alumina, used in high temperature applications.

alumina bubble brick [MATER] A lightweight refractory brick used to line kiln walls; manufactured by passing an air jet over molten alumina to produce small hollow bubbles which are pressed into bricks and other shapes.

alumina cement [MATER] A cement made with bauxite and containing a high percentage of aluminate, having the property of setting to high strength in 24 hours.

alumina fibers [MATER] Short, linear crystals of alumina which have a strength of up to 200,000 pounds per square inch (1.38 gigapascals); used in plastics as a filler to improve heat resistance and dielectric properties. Also known as sapphire whiskers.

alumina porcelain [MATER] Porcelain composed principally of alumina; used to make spark plugs.

aluminate [INORG CHEM] A negative ion usually assigned the formula AlO_2^- and derived from aluminum hydroxide.

aluminate cement [MATER] Cement made with bauxite, with high percentage of alumina; sets to a high strength in 24 hours and is used for constructing bank walls and laying roads. Also known as aluminous cement; high-alumina cement; high-speed cement.

alumina trihydrate [INORG CHEM] $Al_2O_3 \cdot 3H_2O$, or $Al(OH)_3$ A white powder; insoluble in water, soluble in hydrochloric or sulfuric acid or sodium hydroxide; used in the manufacture of ceramic glasses and in paper coating. Also known as aluminum hydrate; aluminum hydroxide; hydrated alumina; hydrated aluminum oxide.

aluminite [MINERAL] $Al_2(SO_4)(OH)_4 \cdot 7H_2O$ Native monoclinic hydrous aluminum sulfate; used in tanning, papermaking, and water purification. Also known as websterite.

aluminium *See* aluminum.

aluminize [ENG] To apply a film of aluminum to a material, such as glass. [MET] To form a protective surface alloy on a metal by treatment at elevated temperature with aluminum or an aluminum compound.

aluminized explosive [MATER] An explosive to which aluminum has been added.

aluminized steel [MET] A steel coated with an aluminum-iron alloy coating; prepared by dip-coating and diffusing aluminum into steel at 1600°F (870°C); resists scaling and oxidation up to 1650°F (900°C). Also known as alumetized steel; calorized steel.

aluminon [ORG CHEM] $C_{22}H_{23}N_3O_9$ A yellowish-brown, glassy powder that is freely soluble in water; used for the detection and colorimetric estimation of aluminum in foods, water, and tissues, and as a pharyngeal aerosol spray. Also known as aurintricarboxylic acid triammonium salt.

aluminosilicate [INORG CHEM] $3Al_2O_3 \cdot 2SiO_2$ A colorless, crystalline combination of silicate and aluminate in the form of rhombic crystals.

aluminosis [MED] A lung disorder caused by inhalation of alumina dust.

aluminothermy [MET] The process of reducing a metallic oxide to the metal and producing great heat by mixing finely divided aluminum with the oxide, which is reduced as the aluminum is oxidized.

aluminotype [GRAPHICS] A printing plate of the relief type; the raised surface is made of aluminum.

aluminous cement *See* aluminate cement.

aluminum [CHEM] A chemical element, symbol Al, atomic number 13, and atomic weight 26.9815. Also spelled aluminium.

aluminum acetate [ORG CHEM] $Al(CH_3COO)_3$ A white, amorphous powder that is soluble in water; used in aqueous solution as an antiseptic.

aluminum acetylsalicylate [PHARM] $[C_6H_4(OCOCH_3)(COO)]_2AlOH$ White, odorless granules or powder; decomposes on melting and in alkali, hydroxides, and carbonates; used in medicine. Also known as aluminum aspirin.

aluminum alloy [MET] An alloy of aluminum and relatively small amounts of other metals, such as copper, magnesium, or manganese.

aluminum ammonium sulfate *See* ammonium aluminum sulfate.

aluminum arrester *See* aluminum-cell arrester.

aluminum-base grease *See* aluminum-soap grease.

aluminum borohydride [ORG CHEM] $Al(BH_4)_3$ A volatile liquid with a boiling point of 44.5°C; used in organic synthesis and as a jet fuel additive.

aluminum brass [MET] **1.** A casting brass to which aluminum has been added as a flux to improve the casting qualities and, with the addition of lead, the machining qualities. **2.** A wrought brass to which aluminum has been added to improve the extruding and forging qualities and the oxidation resistance.

aluminum bronze [MET] A copper-aluminum alloy which may also contain iron, manganese, nickel, or zinc.

aluminum cable steel-reinforced [ELEC] A type of power transmission line made of an aluminum conductor provided with a core of steel. Abbreviated ACSR.

aluminum-cell arrester [ELEC] A lightning arrester consisting of a number of electrolytic cells in series formed from aluminum trays containing electrolyte. Also known as aluminum arrester; electrolytic arrester.

aluminum chloride [INORG CHEM] $AlCl_3$ or Al_2Cl_6 A deliquescent compound in the form of white to colorless hexagonal crystals; fumes in air and reacts explosively with water; used as a catalyst.

aluminum coating [MET] A film of aluminum applied to a metallic surface by, for example, spraying, electrolysis, or hot dipping.

aluminum conductor [ELEC] Any of several aluminum alloys employed for conducting electric current; because its weight is one-half that of copper for the same conductance, it is used in high-voltage transmission lines.

aluminum fluoride [INORG CHEM] $AlF_3 \cdot 3\frac{1}{2}H_2O$ A white, crystalline powder, insoluble in cold water.

aluminum fluosilicate [INORG CHEM] $Al_2(SiF_6)_3$ A white powder that is soluble in hot water; used for artificial gems, enamels, and glass. Also known as aluminum silicofluoride.

aluminum foil [MET] Aluminum in the form of a sheet of thickness not exceeding 0.005 inch (0.127 mm).

aluminum grease *See* aluminum-soap grease.

aluminum halide [INORG CHEM] A compound of aluminum with a halogen element, such as aluminum chloride.

aluminum hydrate *See* alumina trihydrate.

aluminum hydroxide *See* alumina trihydrate.

aluminum-magnesium alloy [MET] An alloy of aluminum, 5–10% magnesium, and sometimes small amounts of other metals, characterized by high resistance to corrosion and high machinability.

aluminum monostearate [ORG CHEM] $Al(OH)_2[OOC(CH_2)_{16}CH_3]$ A white to yellowish-white powder with a melting point of 155°C; used in the manufacture of medicine, paint, and ink, in waterproofing, and as a plastics stabilizer.

aluminum-nickel-cobalt alloy *See* alnico.

aluminum nitrate [INORG CHEM] $Al(NO_3)_3 \cdot 9H_2O$ White, deliquescent crystals with a melting point of 73°C; soluble in alcohol and acetone; used as a mordant for textiles, in leather tanning, and as a catalyst in petroleum refining.

aluminum oleate [ORG CHEM] A soaplike compound of aluminum and oleic acid, used in lubricating oils and greases to improve their viscosity.

aluminum ore [GEOL] A natural material from which aluminum may be economically extracted.

aluminum orthophosphate [INORG CHEM] $AlPO_4$ White crystals, melting above 1500°C; insoluble in water, soluble in acids and bases; useful in ceramics, paints, pulp, and paper. Also known as aluminum phosphate.

aluminum oxide [INORG CHEM] Al_2O_3 A compound in the form of a white powder or colorless hexagonal crystals; melts at 2020°C; insoluble in water; used in aluminum production, paper, spark plugs, absorbing gases, light bulbs, artificial gems, and manufacture of abrasives, refractories, ceramics, and electrical insulators.

aluminum paint [MATER] A mixture of oil varnish and aluminum pigment in the form of thin flakes which overlap in the paint film; reflects the sun's radiation well and retains the heat in hot-air or hot-water pipes or tanks.

aluminum palmitate [ORG CHEM] $Al(C_{16}H_{31}O_2) \cdot H_2O$ An aluminum soap used in waterproofing fabrics, paper, and leather and as a drier in paints.

aluminum paste [MATER] Aluminum powder finely ground in oil; used in aluminum paints.

aluminum phosphate *See* aluminum orthophosphate.

aluminum plate [GRAPHICS] A polymer-coated, anodized aluminum printing plate used in offset-lithographic printing.

aluminum potassium sulfate *See* potassium aluminum sulfate.

aluminum powder [MATER] Small flakes of aluminum metal obtained by stamping or ball-milling foil in the presence of a fatty lubricant, such as stearic acid, which causes the flakes to orient in a pattern to give high brilliance.

aluminum silicate [INORG CHEM] $Al_2(SiO_3)_3$ A white solid that is insoluble in water; used as a refractory in glassmaking.

aluminum silicofluoride *See* aluminum fluosilicate.

aluminum-silicon alloy [MET] An alloy of aluminum, 5–22% silicon, and sometimes small amounts of other metals, characterized by ease of casting and welding, light weight, and high resistance to corrosion.

aluminum-silicon bronze [MET] An alloy consisting chiefly of copper, with aluminum and silicon added to give greater strength and hardness.

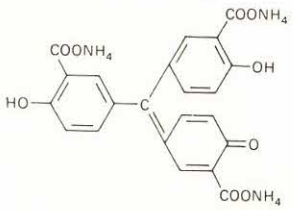
aluminum soap [ORG CHEM] Any of various salts of higher carboxylic acids and aluminum that are insoluble in water and soluble in oils; used in lubricating greases, paints, varnishes, and waterproofing substances.

aluminum-soap grease [MATER] A lubricating grease consisting of a petroleum oil thickened with aluminum soap. Also known as aluminum-base grease; aluminum grease.

aluminum sodium sulfate [INORG CHEM] $AlNa(SO_4)_2 \cdot 12H_2O$ Colorless crystals with an astringent taste and a melting point of 61°C; soluble in water; used as a mordant and for waterproofing textiles, as a food additive, and for matches, tanning, ceramics, engraving, and water purification. Abbreviated SAS. Also known as porous alum; soda alum; sodium aluminum sulfate.

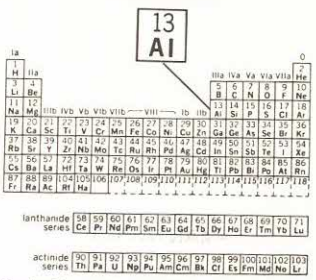
aluminum solder [MET] A solder containing up to 15% aluminum, having a melting point above that of the tin-lead solders, and applied with a brazing torch.

ALUMINON



Structural formula.

ALUMINUM



Periodic table of the chemical elements showing the position of aluminum.

aluminum stearate [ORG CHEM] $Al(C_{17}H_{35}COO)_3$ An aluminum soap in the form of a white powder that is insoluble in water and soluble in oils; used for waterproofing fabrics and concrete and as a drier in paints and varnishes.

aluminum sulfate [INORG CHEM] $Al_2(SO_4)_3 \cdot 18H_2O$ A colorless salt in the form of monoclinic crystals that decompose in heat and are soluble in water; used in papermaking, water purification, and tanning, and as a mordant in dyeing. Also known as alum.

aluminum therapy [MED] Therapy intended mainly for prevention rather than treatment of silicosis; provides for inhalation of powdered aluminum and alumina (Al_2O_3) dust by miners in the change house.

aluminum triacetate [ORG CHEM] $Al(C_2H_3O_2)_3$ A white solid, very slightly soluble in cold water.

alumite *See* alunite.

alum rock *See* alunite.

alum schist *See* alum shale.

alum shale [PETR] A shale containing pyrite that is decomposed by weathering to form sulfuric acid, which acts on potash and alumina constituents to form alum. Also known as alum schist; alum slate.

alum slate *See* alum shale.

alumstone *See* alunite.

alunite [MINERAL] $KAl_3(SO_4)_2(OH)_6$ A mineral composed of a basic potassium aluminum sulfate; it occurs as a hydrothermal-alteration product in feldspathic igneous rocks and is used in the manufacture of alum. Also known as alumite; alum rock; alumstone.

alunitization [GEOL] Introduction of or replacement by alunite.

alunogen [MINERAL] $Al_2(SO_4)_3 \cdot 18H_2O$ A white mineral occurring as a fibrous incrustation of hydrated aluminum sulfate by volcanic action or decomposition of pyrite. Also known as feather alum; hair salt.

alure [ARCH] A gallery or passage, as along the parapets of a castle, around the roof of a church, or along a cloister.

alurgite [MINERAL] A purple manganiferous variety of muscovite mica.

alvar [ECOL] Dwarfed vegetation characteristic of certain Scandinavian steppelike communities with a limestone base.

alveator [INV ZOO] A type of pedicellaria in echinoderms.

alveolar [BIOL] Of or relating to an alveolus.

alveolar-capillary block syndrome [MED] Arterial oxygen deficiency due to improper functioning of the membranes between the alveoli and capillaries.

alveolar gland *See* acinous gland.

alveolar oxygen pressure [PHYSIO] The oxygen pressure in the alveoli; the value is about 105 mm Hg.

alveolated cell *See* epithelioid cell.

alveolitoid [INV ZOO] A type of tabulate coral having a vaulted upper wall and a lower wall parallel to the surface of attachment.

alveolus [ANAT] **1.** A tiny air sac of the lung. **2.** A tooth socket. **3.** A sac of a compound gland.

Alydidae [INV ZOO] A family of hemipteran insects in the superfamily Coreoidea.

alymphocytosis [MED] Absence or deficiency of blood lymphocytes.

alyphite [GEOL] Bitumen that yields a high percentage of open-chain aliphatic hydrocarbons upon distillation.

Alysiella [MICROBIO] A genus of bacteria in the family Simonsiellaceae; cells are arranged in pairs within the filaments.

Alzheimer's disease [MED] A type of presenile dementia associated with sclerosis of the cerebral cortex.

Am *See* americium; ammonium.

AM *See* amplitude modulation.

A/m *See* ampere per meter.

Am² *See* ampere meter squared.

A/m² *See* ampere per square meter.

amacratic lens *See* amasthenic lens.

Amagat density unit [PHYS] A unit of density in the Amagat system, used in the study of the behavior of gases under pressure; it is equal to the density of a gas at a pressure of 1 atmosphere and a temperature of 0°C; for an ideal gas this is 44.616 ± 0.006 moles per cubic meter.

Amagat diagram [PHYS] A diagram that plots a series of isothermal curves for a gas pressure versus the gas pressure-volume product.

Amagat law *See* Amagat-Leduc rule.

Amagat-Leduc rule [PHYS] The rule which states that the volume taken up by a gas mixture equals the sum of the volumes each gas would occupy at the temperature and pressure of the mixture. Also known as Amagat law; Leduc law.

Amagat system [PHYS] A system of units in which the unit of pressure is the atmosphere and the unit of volume is the gram-molecular volume (22.4 liters at standard conditions).

Amagat volume unit [PHYS] A unit of volume in the Amagat system, used in the study of the behavior of gases under pressure; it is equal to the volume occupied by 1 mole of a gas at a pressure of 1 atmosphere and a temperature of 0°C; for an ideal gas this is 0.022413 ± 0.000003 cubic meter.

amalgam [MET] An alloy of mercury. [MINERAL] A silver mercury alloy occurring in nature.

amalgamate [MET] **1.** To unite a metal in an alloy with mercury. **2.** To unite two dissimilar metals. **3.** To cover the zinc elements of a galvanic battery with mercury.

amalgamating table [MET] A sloping wooden table covered with a copper plate on which mercury is spread to amalgamate with precious-metal particles.

amalgamation [MET] Also known as amalgam treatment. **1.** The process of separating metal from ore by alloying the metal with mercury; formerly used for gold and silver recovery, where it has been superseded by the cyanide process. **2.** The formation of an alloy of a metal with mercury.

amalgamation pan [MET] A circular cast-iron pan in which gold or silver ore is ground and the precious metal particles are amalgamated with mercury added to the pan.

amalgamator [MET] A device for bringing pulverized ore into contact with mercury to form an amalgam from which the metal is subsequently recovered.

amalgam barrel [MET] A small batching mill used to grind auriferous concentrates with mercury.

amalgam retort [MET] A retort in which mercury is distilled off from gold, or silver amalgam is obtained in amalgamation.

amalgam treatment *See* amalgamation.

Amalthea [ASTRON] The innermost known satellite of Jupiter, orbiting at a mean distance of 1.13×10^5 miles (1.82×10^5 kilometers); it has a diameter of about 150 miles (240 kilometers). Also known as Jupiter V.

amantadine [PHARM] $C_{10}H_{17}N$ A symmetrical amine used as a viral chemoprophylactic because it selectively inhibits certain myxoviruses; also of value in the treatment of parkinsonism. Also known as 1-adamantanamine; 1-aminoadamantane.

amanthophilous [BOT] Of plants having a habitat in sandy plains or hills.

Amaranthaceae [BOT] The characteristic family of flowering plants in the order Caryophyllales; they have a syncarpous gynoecium, a monochlamydeous perianth that is more or less scarious, and mostly perfect flowers.

amarantite [MINERAL] $Fe(SO_4)(OH) \cdot 3H_2O$ An amaranth red to brownish- or orange-red triclinic mineral consisting of a hydrated basic sulfate of ferric iron.

amarillite [MINERAL] $NaFe(SO_4)2 \cdot 6H_2O$ A pale greenish-yellow mineral consisting of a hydrous sodium ferric sulfate.

Amaryllidaceae [BOT] The former designation for a family of plants now included in the Liliaceae.

amasthenic lens [OPTICS] A lens that refracts the rays of light into one focus. Also known as amacratic lens.

amateur bands [COMMUN] Bands of frequencies assigned exclusively to licensed radio amateurs.

amateur radio [ELECTR] A radio used for two-way radio communications by private individuals as leisure-time activity. Also known as ham radio.

amathophobia [PSYCH] Abnormal fear of dust.

amatol [MATER] An explosive mixture composed of ammonium nitrate and trinitrotoluene; mixtures with 50% and 80% ammonium nitrate are used for small and large shells, respectively.

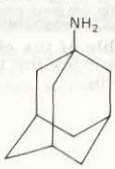
amaurosis [MED] Total or partial blindness.

amaurotic familial idiocy [MED] A hereditary condition, transmitted as an autosomal recessive, predominantly in Jewish children, characterized by blindness, muscular weakness, and subnormal mental development; when onset is in infancy, the disease is known commonly as Tay-Sachs disease.

amazonite [MINERAL] An apple-green, bright-green, or blue-green variety of microcline found in the United States and Soviet Union; sometimes used as a gemstone. Also known as amazon stone.

amazon stone *See* amazonite.

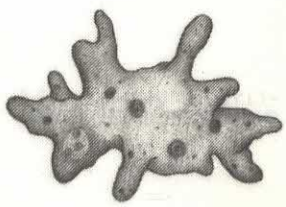
AMANTADINE



Structural formula.

ambatoarinite [MINERAL] A mineral consisting of a carbonate of cerium metals and strontium.
amber [MINERAL] A transparent yellow, orange, or reddish-brown fossil resin derived from a coniferous tree; used for ornamental purposes; it is amorphous, has a specific gravity of 1.05–1.10, and a hardness of 2–2.5 on Mohs scale.
amber glass [MATER] A tinted glass made by using different mixtures of sulfur and iron oxide; the color can vary from pale yellow to ruby amber.
ambergris [PHYSIO] A fatty substance formed in the intestinal tract of the sperm whale; used in the manufacture of perfume.
amberite [MATER] A smokeless powder composed of guncotton, barium nitrate, and paraffin.
amber mutation [GEN] Alteration of a codon to *UAG*, a codon that results in premature polypeptide chain termination in bacteria.
amberoid [MINERAL] A gem-quality mineral composed of small fragments of amber that have been reunited by heat or pressure.
amber oil [MATER] **1.** A yellowish to brown essential oil made by destructive distillation of amber; has an acrid taste. **2.** A light essential oil prepared by destructive distillation of rosin.
ambident [ORG CHEM] A reagent or substrate which can have two or more attacking sites.
ambidextrous [PHYSIO] Capable of using both hands with equal skill.
ambient [ENG] Surrounding; especially, of or pertaining to the environment about a flying aircraft or other body but undisturbed or unaffected by it, as in ambient air or ambient temperature.
ambient light [OPTICS] The surrounding light, such as that reaching a television picture-tube screen from light sources in a room.
ambient noise [ACOUS] The pervasive noise associated with a given environment, being usually a composite of sounds from sources both near and distant.
ambient pressure [FL MECH] The pressure of the surrounding medium, such as a gas or liquid, which comes into contact with an apparatus or with a reaction.
ambient stress field [GEOPHYS] The distribution and numerical value of the stresses present in a rock environment prior to its disturbance by man. Also known as in-place stress field; primary stress field; residual stress field.
ambient temperature [PHYS] The temperature of the surrounding medium, such as gas or liquid, which comes into contact with the apparatus.
ambigenous [BOT] Of a perianth whose outer leaves resemble the calyx while the inner leaves resemble the corolla.
ambiguity [ELECTR] The condition in which a synchro system or servosystem seeks more than one null position. [NAV] The condition in which navigation coordinates derived from a navigational instrument define more than one point, direction, line of position, or surface of position.
ambiguity error [COMPUT SCI] An error in reading a number represented in a digital display that can occur when this representation is changing; for example, the number 699 changing to 700 might be read as 799 because of imprecise synchronization in the changing of digits.
ambiguous codon [GEN] A codon capable of coding for more than one amino acid sequence.
ambipolar [SCI TECH] Simultaneously operating in two opposite directions; for example, an electric current arising from the movement of positive and negative ions.
ambipolar diffusion [PHYS] The diffusion in a plasma of charged particles, such as electrons or ions, as a result of the almost exact local charge neutrality required.
ambisexual [MED] An individual having undifferentiated primordia of both sexes. [PSYCH] Having feelings and exhibiting behavior common to both sexes.
ambitus [BIOL] The periphery or external edge, as of a mollusk shell or leaf.
ambivalence [PSYCH] The coexistence of conflicting reactions toward a person or object.
amblygonite [MINERAL] $(Li,Na)AlPO_4(F,OH)$ A mineral occurring in white or greenish cleavable masses and found in the United States and Europe; important ore of lithium.
amblyopia [MED] Dimness of vision, especially that not due to refractive errors or organic disease of the eye; may be congenital or acquired.
Amblyopsidae [VERT ZOO] The cave fishes, a family of actinopterygian fishes in the order Percopsiformes.
Amblyopsiformes [VERT ZOO] An equivalent name for the Percopsiformes.
Amblypygi [INV ZOO] An order of chelicerate arthropods in the class Arachnida, commonly known as the tailless whip scorpions.
amboceptor [IMMUNOL] According to P. Ehrlich, an antibody present in the blood of immunized animals which contains two specialized elements: a cytophil group that unites with a cellular antigen, and a complementophil group that joins with the complement.
amboceptor unit [BIOL] A unit for the standardization of blood serum.
ambonite [PETR] Any of a group of hornblende-biotite andesites and dacites containing cordierite.
ambrette oil [MATER] A fixative for perfume having a strong musklike odor and distilled from the musk seed of *Hibiscus abelmoschus*.
ambrite [MINERAL] A yellow-gray, semitransparent fossil resin resembling amber; found in large masses in New Zealand coal fields and regarded as a semiprecious stone.
ambrosine [MINERAL] A yellowish to clove-brown variety of amber rich in succinic acid; occurs as rounded masses in phosphate beds near Charleston, S.C.
ambrotype [GRAPHICS] An obsolete method of photography in which a negative is formed in a collodion emulsion on glass; when backed with black velvet or black varnish, the collodion surface reflects positive highlights and the resulting effect is that of a positive.
ambulacrum [INV ZOO] In echinoderms, any of the radial series of plates along which the tube feet are arranged.
ambulatorial [ZOO] **1.** Capable of walking. **2.** In reference to a forest animal, having adapted to walking, as opposed to running, crawling, or leaping.
ambulatory [ARCH] **1.** A passageway around the apse of a church, or around a shrine. **2.** A covered walk of a cloister.
ambulatory schizophrenia [PSYCH] A condition in which a person exhibits symptoms of both manic-depressive and schizophrenic psychosis but is not considered to require institutionalization.
Ambystoma [VERT ZOO] A genus of common salamanders; the type genus of the family Ambystomatidae.
Ambystomatidae [VERT ZOO] A family of urodele amphibians in the suborder Salamandroidea; neoteny occurs frequently in this group.
Ambystomoidea [VERT ZOO] A suborder to which the family Ambystomatidae is sometimes elevated.
AMCHA *See trans*-4-(aminomethyl)cyclohexanecarboxylic acid.
amchem *See N-sec*-butyl-4-*tert*-butyl-2,6-dinitroaniline.
AME *See* angle-measuring equipment.
ameba [INV ZOO] The common name for a number of species of naked unicellular protozoans of the order Amoebida; an example is a member of the genus *Amoeba*.
Amebelodontinae [PALEON] A subfamily of extinct elephantoid proboscideans in the family Gomphotheriidae.
amebiasis [MED] A parasitic disease of man caused by the ameba *Entamoeba histolytica*, characterized by clinical-pathological intestinal manifestations, including an acute dysentery phase. Also known as amebic dysentery.
amebic abscess [MED] Liquefactive necrosis of the brain and liver, without suppuration, caused by amebas, usually *Entamoeba histolytica*.
amebic dysentery *See* amebiasis.
amebicide [MATER] A chemical used to kill amebas, especially parasitic species.
amebocyte [INV ZOO] One of the wandering ameboid cells in the tissues and fluids of many invertebrates that function in assimilation and excretion.
ameboid movement [CYTOL] A type of cellular locomotion involving the formation of pseudopodia.
ameiosis [GEN] Nonreduction of chromosome number due to suppression of one of the miotic divisions, as in parthenogenesis.
Ameiuridae [VERT ZOO] A family of North American catfishes belonging to the suborder Siluroidei.
ameloblast [EMBRYO] One of the columnar cells of the enamel organ that form dental enamel in developing teeth.
ameloblastic odontoma [MED] A neoplasm of epithelial

AMEBA



Typical species of ameba showing numerous pseudopodia, which are used for locomotion.

and mesenchymal odontogenic tissue. Also known as ameloblastoma.

ameloblastoma [MED] An epithelial tumor associated with the enamel organ; cells of basal layers resemble the ameloblast. Also known as adamantinoma.

anamutile [GENET] A mutation with one or more changes in its mode of growth.

amendment file *See* change file.

amendment record *See* change record.

amenorrhea [MED] Absence of menstruation due to either normal or abnormal conditions.

amensalism [ECOL] An interaction between species in which one species is harmed and the other is unaffected.

ament [MED] A cretin. [MED] A person with congenital mental deficiency; an idiot.

amentia [MED] Congenital subnormal intellectual development.

Ameres [INV ZOO] One of the three divisions of the phylum Nemes proposed by O. Bütschli in 1910 and given the rank of a subphylum.

American basement [BUILD] A basement located above ground level and containing the building's main entrance.

American bond [CIV ENG] A bond in which every fifth, sixth, or seventh course of a wall consists of headers and the other courses consist of stretchers. Also known as common bond; Scotch bond.

American boreal faunal region [ECOL] A zoogeographic region comprising marine littoral animal communities of the coastal waters off east-central North America.

American boring system [MIN ENG] A rope system of percussive boring, with a derrick which enables the complete set of boring tools to be raised clear of the hole. Also known as American system.

American caisson *See* box caisson.

American dillseed oil *See* dill oil.

American-Egyptian cotton [AGR] A type of cotton developed by hybridization of Egyptian and American plants.

American Ephemeris and Nautical Almanac [ASTRON] An annual publication of the U.S. Naval Observatory containing tables of the predicted positions of various celestial bodies and other data of use to astronomers and navigators.

American explosives [MATER] One of many explosives that have passed U.S. Bureau of Mines tests and are used under certain conditions.

American filter *See* disk filter.

American jute *See* califorate.

American linn *See* puma.

American melting point [CHEM ENG] A temperature 3°F (1.7°C) higher than the ASTM Method D87 paraffin wax melting point.

American mucocutaneous leishmaniasis [MED] A form of leishmaniasis caused by *Leishmania braziliensis*, transmitted by sandflies of the genus *Phlebotomus*, and characterized by skin ulcers and ulceration and necrosis of the mucosa of the mouth and nose. Also known as South American leishmaniasis.

American pennyroyal oil *See* hedeoma oil.

American rule [MATH] A system of numbering woolen yarns of 100 yards each in 1 ounce; thus if 1400 yards weigh 1 ounce, it would be a 14-run yarn.

American spotted bear *See* Rocky Mountain spotted fever.

American standard beam [CIV ENG] A type of I beam made of hot-rolled structural steel.

American standard channel [CIV ENG] A C-shaped structural member made of hot-rolled structural steel.

American Standard Code for Information Interchange [COMMUN] Coded characters set to be used for the general interchange of information among information-processing systems, communications systems, and associated equipment. Abbreviated ASCII.

American standard pipe thread [MECH ENG] Taper, straight, or dryseal pipe thread whose dimensions conform to those of a particular series of specified sizes established as a standard in the United States. Also known as Briggs pipe thread.

American standard screw thread [MECH ENG] Screw thread whose dimensions conform to those of a particular series of specified sizes established as a standard in the United States for bolts, nuts, and machine screws.

American system *See* American boring system.

American system drill *See* churn drill.

American Table of Distances [ENG] Published data concerning the safe storage of explosives and ammunition.

American wire gage [MET] A particular series of sporting diameters and thicknesses established as a standard in the United States and used for nonferrous sheets, rods, and wires. Abbreviated AWG. Also known as Brown and Sharp gage (B and S gage).

American wormseed oil *See* chenopodium oil.

americium [CHEM] A chemical element, symbol Am, atomic number 95; the mass number of the isotope with the longest half-life is 243.

americyl ion [INORG CHEM] A dioxo monocation of americium, with the formula $(AmO_2)^+$.

Amerosporae [MYCOL] A spore group of the Fungi Imperfecti characterized by one-celled or threadlike spores.

amesite [MINERAL] $(Mg,Fe)_4Al_2Si_2O_{10}(OH)_8$ Apple-green phyllosilicate mineral occurring in foliated hexagonal plates.

ametabolous metamorphosis [INV ZOO] A growth stage of certain insects characterized by an increase in size without distinct external changes.

A-metal [METAL] A type of permeability alloy containing 44% nickel and a small amount of copper; used to give nondistortion characteristics upon magnetization in transformers and loudspeakers.

amethocaine hydrochloride *See* tetracaine hydrochloride.

amethopterin [PHARM] $C_{20}H_{22}N_8O_5 \cdot H_2O$ An antimetabolite effective as a folic acid antagonist and used for treatment of acute and subacute leukemia. Also known as methotrexate.

amethyst [MINERAL] The transparent purple to violet variety of the mineral quartz; used as a jeweler's stone.

ametoecious [ECOL] Of a parasite that remains with the same host.

ametropia [MED] Any deficiency in the refractive ability of the eye that causes an unfocused image to fall on the retina.

ametryne *See* 2-(ethylamino)-4-(isopropylamino)-6-(methylthio)-s-triazine.

AM field signature [ELECTR] The characteristic pattern of an alternating magnetic field, as displayed by detection and classification equipment.

amherstite [PETR] A syenodiorite containing andesine and antiperthite.

amianthus [MINERAL] A fine, silky variety of asbestos, such as chrysotile.

amicable numbers [MATH] Two numbers such that the exact divisors of each number (except the number itself) add up to the other number.

Amici prism [OPTICS] A compound prism, used in direct-vision spectroscopes, that disperses a beam of light into a spectrum without causing the beam as a whole to undergo any net deviation; it is made up of alternate crown and flint glass components, refracting in opposite directions. Also known as direct-vision prism.

amicron [PHYS CHEM] A particle having a size of 10^{-7} centimeter or less, which is a size in a system of classification of particle sizes in colloid chemistry.

amictic [INV ZOO] **1.** In rotifers, producing diploid eggs that are incapable of being fertilized. **2.** Pertaining to the egg produced by the amictic female.

amictic lake [HYD] A lake that is perennially frozen.

amidase [BIOCHEM] Any enzyme that catalyzes the hydrolysis of nonpeptide C–N linkages.

amidation [ORG CHEM] The process of forming an amide; for example, in the laboratory benzyl reacts with methyl amine to form *N*-methylbenzamide.

amidazophen *See* aminopyrine.

amide [ORG CHEM] One of a class of organic compounds containing the $CONH_2$ radical.

amidine [ORG CHEM] A compound which contains the radical $C(NH)NH_2$.

amido [ORG CHEM] Indicating the NH_2 radical when it is present in a molecule with the CO radical.

amidocarbonic acid *See* carbamic acid.

amidohydrolase [BIOCHEM] An enzyme that catalyzes deamination.

Amidol [ORG CHEM] $C_6H_3(NH_2)_2OH \cdot HCl$ A grayish-white crystalline salt; soluble in water, slightly soluble in alcohol; used as a developer in photography and as an analytical reagent. Also known as 2,4-diaminophenol hydrochloride.

amidopyrine *See* aminopyrine.

amidosuccinic hydrochloride *See* aminosuccinamic hydrochloride.

amidship [SHIP AMID] At or toward the middle of a ship.

Amiidae [VERT ZOO] A family of actinopterygian fishes in the order Amiiformes represented by a single living species, the bowfin (*Amia calva*).

Amiiformes [VERT ZOO] An order of actinopterygian fishes characterized by an abbreviate heterocercal tail, fusiform body, and median fin rays.

A. min *See* aspirin minus.

amin- *See* amino-.

amination [ORG CHEM] **1.** The preparation of amines. **2.** A process in which the amino group ($-NH_2$) is introduced into organic molecules.

amine [ORG CHEM] One of a class of organic compounds which can be considered to be derived from ammonia by replacement of one or more hydrogens by organic radicals.

amine oxidase [BIOCHEM] An enzyme that catalyzes the oxidation of tyramine and tryptamine to aldehyde.

aminerhin *See* cystamine.

amino- [CHEM] Having the property of a compound in which the group NH_2 is attached to a radical other than an acid radical. Also spelled amin-.

aminoacetic acid *See* glycine.

aminoacetophenethidide hydrochloride *See* phenacetil hydrochloride.

amino acid [BIOCHEM] Any of the organic compounds that contain one or more basic amino groups and one or more acidic carboxyl groups and that are polymerized to form peptides and proteins; only 20 of the more than 80 amino acids found in nature serve as building blocks for proteins; examples are tyrosine and lysine.

aminoaciduria [MED] A group of disorders in which excess amounts of amino acids are excreted in the urine; caused by abnormal protein metabolism.

1-aminoadamantane *See* amantadine.

amino alcohol *See* alkanine.

1-aminoanthraquinone [ORG CHEM] $C_{14}H_9NO_2$. Ruby-red crystals with a melting point of 250°C; freely soluble in alcohol, benzene, chloroform, ether, glacial acetic acid, and hydrochloric acid; used in the manufacture of dyes and pharmaceuticals.

4-aminoantipyrine [PHARM] $C_{11}H_{13}N_3O$. Pale yellow crystals with a melting point of 108°C; soluble in water, benzene, and ethanol; used as an antipyretic and analgesic. Also known as aminopyrine; 1,5-dimethyl-2-phenyl-4-aminopyrazolone.

para-aminobenzenesulfonamide *See* sulfanilamide.

meta-aminobenzenesulfonic acid *See* metanilic acid.

para-aminobenzenesulfonic acid *See* sulfanilic acid.

meta-aminobenzoate methanesulfonate *See* tricaine.

para-aminobenzoic acid [BIOCHEM] $C_7H_7O_2N$. A yellowish, crystalline compound that is part of the folic acid molecule; essential to metabolism of certain bacteria. Abbreviated PABA.

para-aminobenzoyldiethylaminoethanol base *See* procaine base.

1-aminobutane *See* n-butyl amine.

2-aminobutane *See* sec-butyl amine.

2-amino-1-butanol [ORG CHEM] $CH_3CH_2CH(NH_2)CH_2OH$. A liquid miscible with water; soluble in alcohol; used in the synthesis of surface-active agents, ion-moving accelerators, and pharmaceuticals, and as an emulsifying agent for such products as cosmetic creams and lotions. Also known as 2-amino-n-butyl alcohol.

2-amino-n-butyl alcohol *See* 2-amino-1-butanol.

4-aminobutylguanidine *See* agmatine.

4-amino-6-tert-butyl-3-(methylthio)-1,2,4- triazin-5-(4H)-one *See* metribuzin.

γ-aminobutyric acid [ORG CHEM] $H_2NCH_2CH_2CH_2COOH$. Crystals which are either leaflets or needles, with a melting point of 202°C; thought to be a central nervous system postsynaptic inhibitory transmitter. Abbreviated GABA. Also known as γ-aminobutyric acid; piperidic acid.

γ-amino-n-butyric acid *See* γ-aminobutyric acid.

ε-aminocaproic acid [ORG CHEM] $C_6H_{13}NO_2$. Crystals with a melting point of 204–206°C; freely soluble in water; used as an antifibrinolytic agent and a spacer for affinity chromatography. Also known as 6-aminohexanoic acid; epsilonaminocaproic acid.

aminocarb [PEST CHEM] $C_{12}H_{18}N_2O_2$. A tan crystalline compound with a melting point of 93–94°C; slightly soluble in water; used as an insecticide for control of fruiter leaves and pests of cotton, tomatoes, tobacco, and field crops. Also known as 4-(dimethylamino)-m-tolyl methylcarbamate.

5-amino-4-chloro-2-phenyl-3(2H)-pyridazinone *See* pyrazon.

aminocitric *See* isocitric acid 1,2-dicarboxylic acid.

aminocyclohexane *See* cyclohexylamine.

amino diabetes [MED] A congenital disorder characterized by excessive quantities of amino acids, glucose, and phosphate in the urine, resulting from defective resorption in the proximal convoluted tubules of the kidney. Also known as Fanconi's syndrome.

aminodibenzene [ORG CHEM] Any compound derived from diphenyl ($C_6H_5C_6H_5$) in which one H of the ring has been replaced by NH_2.

3-amino-2,5-dichlorobenzoic acid [ORG CHEM] $C_7H_5Cl_2NO_2$. A white solid with a melting point of 200–201°C; solubility in water is 700 parts per million at 20°C; used as a preemergence herbicide for soybeans, corn, and sweet potatoes. Also known as chloramben.

2-amino-3-(3,4-dihydroxyphenyl) propanoic acid *See* levodopa.

aminodimethylbenzene *See* xylidine.

2-amino-4,6-dinitrophenol *See* picramic acid.

para-aminodiphenyl *See* para-biphenylamine.

aminodithiuronic acid *See* dithiocarbamic acid.

aminoethane *See* ethyl amine.

2-aminoethanesulfonic acid *See* taurine.

2-aminoethanethiol [PHARM] C_2H_7NS. Crystals having a disagreeable odor and a melting point of 97–98.5°C; used in radiation sickness therapy. Also known as 2-aminoethyl mercaptan; cysteamine; decarboxycysteine; mercamine; mercaptamine; β-mercaptoethylamine; MEA-S; thioethanamine.

1-aminoethanol *See* aldehyde ammonia.

2-aminoethanol *See* ethanolamine.

2-(2-aminoethyl)isothiouronium bromide hydrobromide [ORG CHEM] $C_3H_{12}Br_2N_3S$. Hygroscopic crystals with a melting point of 198–199°C; used as a radioprotective agent. Abbreviated AET.

2-aminoethyl mercaptan *See* 2-aminoethanethiol.

para-β-aminoethylphenol *See* tyramine.

4-aminofolic acid *See* aminopterin.

aminoformic acid *See* carbamic acid.

aminohexane *See* hexylamine.

6-aminohexanoic acid *See* ε-aminocaproic acid.

o-aminohydrocinnamic acid *See* phenylalanine.

4-amino-3-hydroxybutyric acid [PHARM] $H_2NCH_2CH(OH)CH_2COOH$. Crystals that decompose at 189°C; soluble in water; used as an anticonvulsant. Also known as 3-amino-β-hydroxybutyric acid; (±)-4-BCH; hibenzate.

γ-amino-β-hydroxybutyric acid *See* 4-amino-3-hydroxybutyric acid.

ε-amino-α-iminocaproic hydrochloride *See* guanidine hydrochloride.

aminoiminomethanesulfinic acid *See* formamidinesulfinic acid.

3-aminoisophthalic acid *See* 3-amino-2-naphthoic acid.

2-aminoisovaleric acid *See* valine.

α-aminoisovaleric acid *See* valine.

aminolaevulic chloride *See* aminolevulinic chloride.

aminomethane *See* methylamine.

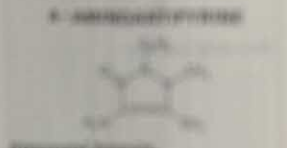
para-(aminomethyl)benzenesulfonamide [PHARM] $C_7H_{10}N_2O_2S$. Crystals with a melting point of 151–152°C; soluble in dilute alkali and acid; used as an antibacterial agent. Also known as 4-homosulfanilamide; mafenide; mafenidum.

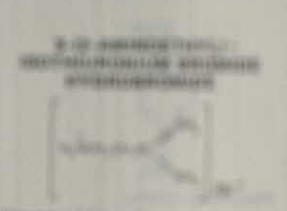
3-amino-3-methylbutyric acid *See* valine.

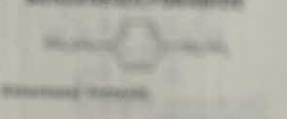
trans-4-(aminomethyl)cyclohexanecarboxylic acid *See* tranexamic acid.

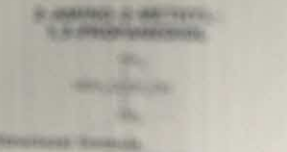
α-amino-β-methyl-β-mercaptobutyric acid *See* penicillamine.

2-amino-2-methyl-1,3-propanediol [ORG CHEM] $HOCH_2C(CH_3)(NH_2)CH_2OH$. Crystals with a melting point of 109–111°C; soluble in water and alcohol; used in the synthesis of surface-active agents, pharmaceuticals, and vulcanization accelerators, and as an emulsifying agent for cosmetics, surface coatings, polishes, and cleaning compounds.









2-amino-2-methyl-1-propanol-8-bromotheophyllinate *See* pamabrom.

1-aminonaphthalene-4-sulfonic acid *See* naphthionic acid.

4-amino-1-naphthalene sulfonic acid *See* naphthionic acid.

3-amino-2-naphthoic acid [ORG CHEM] $H_2NC_{10}H_6$-COOH Yellow crystals in the shape of scales with a melting point of 214°C; soluble in alcohol and ether; used in the determination of copper, nickel, and cobalt. Also known as 3-aminoisonaphthoic acid.

1-amino-8-naphthol-4,6-disulfonic acid *See* K acid.

8-amino-1-naphthol-3,5-disulfonic acid *See* K acid.

8-amino-1-naphthol-3,6-disulfonic acid *See* H acid.

1-amino-2-naphthol-4-sulfonic acid [ORG CHEM] $H_2NC_{10}H_5(OH)SO_3H$ White or gray, needlelike crystals; soluble in hot sodium bisulfite solutions; used in the manufacture of azo dyes. Also known as 1,2,4-acid.

2-amino-5-naphthol-7-sulfonic acid [ORG CHEM] $C_{10}H_5NH_2OHSO_3H$ Gray or white needles that are soluble in hot water; used as a dye intermediate. Also known as 6-amino-1-naphthol-3-sulfonic acid; J acid.

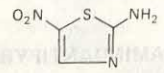
5-amino-1-naphthol-3-sulfonic acid *See* M acid.

6-amino-1-naphthol-3-sulfonic acid *See* 2-amino-5-naphthol-7-sulfonic acid.

amino nitrogen [CHEM] Nitrogen combined with hydrogen in the amino group. Also known as ammonia nitrogen.

2-amino-5-nitrothiazole [PHARM] $C_3H_3N_3O_2S$ A fluffy, greenish to orange-yellow powder with a slightly bitter taste; decomposes at 202°C; used as a veterinary drug in turkeys and chickens for histomonads and for trichomoniasis in pigeons.

2-AMINO-5-NITROTHIAZOLE



Structural formula.

aminooxamide *See* semioxamazide.

6-aminopenicillanic acid [PHARM] $C_8H_{12}N_2O_3S$ Nonhygroscopic crystals that decompose at 209°C; used in the manufacture of synthetic penicillins. Abbreviated 6-APA. Also known as penicin; penin.

1-aminopentane *See* *n*-amylamine.

aminopeptidase [BIOCHEM] An enzyme which catalyzes the liberation of an amino acid from the end of a peptide having a free amino group.

aminophenazone *See* aminopyrine.

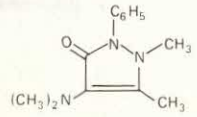
4-aminophenetole *See* phenetidine.

aminophenol [ORG CHEM] A type of compound containing the NH_2 and OH groups joined to the benzene ring; examples are *para*-aminophenol and *ortho*-hydroxylaniline.

***ortho*-aminophenol** *See ortho*-hydroxylaniline.

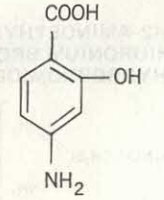
***para*-aminophenol** [ORG CHEM] *p*-$HOC_6H_4NO_2$ A phenol in which an amino (—NH_2) group is located on the benzene ring of carbon atoms para (*p*) to the hydroxyl (—OH) group; used as a photographic developer and as an intermediate in dye manufacture.

AMINOPYRINE



Structural formula.

PARA-AMINOSALICYLIC ACID



Structural formula.

α-amino-β-phenylpropionic acid *See* phenylalanine.

3-aminophthalic acid cyclic hydrazide *See* luminol.

aminophylline [PHARM] $C_{16}H_{24}N_{10}O_4$ A drug in the form of white or slightly yellowish, water-soluble granules or powder, used as a smooth-muscle relaxant, myocardial stimulant, and diuretic.

amino plastic [MATER] Any plastic made of compounds derived from ammonia.

aminopolypeptidase [BIOCHEM] A proteolytic enzyme that cleaves polypeptides containing either a free amino group or a basic nitrogen atom having at least one hydrogen atom.

2-aminopropane *See* isopropylamine.

1-amino-2-propanol *See* isopropanolamine.

aminoprotease [BIOCHEM] An enzyme that hydrolyzes a protein and unites with its free amino group.

aminopterin [PHARM] $C_{19}H_{20}N_8O_5 \cdot 2H_2O$ A yellow crystalline acid which is similar to folic acid and is used clinically as an antagonist of folic acid. Trade name for 4-aminofolic acid; 4-aminopteroylglutamic acid.

4-aminopteroylglutamic acid *See* aminopterin.

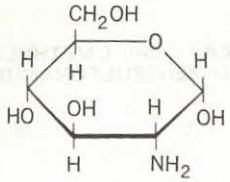
3-aminopyridine *See* β-aminopyridine.

4-aminopyridine [ORG CHEM] $C_5H_6N_2$ White crystals with a melting point of 158.9°C; soluble in water; used as a repellent for birds. Abbreviated 4-AP.

β-aminopyridine [ORG CHEM] $C_5H_6N_2$ Crystals with a melting point of 64°C; soluble in water, alcohol, and benzene; used in drug and dye manufacture. Also known as 3-aminopyridine.

aminopyrine [PHARM] $C_{13}H_{17}N_3O$ Leafletlike crystals with a melting point of 107–109°C; soluble in alcohol, benzene, and chloroform; used as an antipyretic and analgesic in humans and animals. Also known as amidazophen; amidopyrine; aminophenazone; 4-dimethylaminoantipyrine; dimethylaminophenazone; dimethylaminophenyldimethylpyrazolone; dipyrine.

AMINO SUGAR



The Haworth formula of D-glucosamine.

amino resin [ORG CHEM] A type of resin prepared by condensation polymerization, with an aldehyde, of a compound containing an amino group.

***para*-aminosalicylic acid** [PHARM] $C_7H_7NO_3$ White, crystalline drug used with other drugs in the treatment of tuberculosis. Abbreviated PAS.

amino sugar [BIOCHEM] A monosaccharide in which a nonglycosidic hydroxyl group is replaced by an amino or substituted amino group; an example is D-glucosamine.

amino terminal [BIOCHEM] The end part of a polypeptide chain which contains a free α-amino group.

2-aminothiazole [ORG CHEM] $C_3H_4N_2S$ Pale-yellow crystals that melt at 92°C; soluble in cold water, slightly soluble in ethyl alcohol; used as an intermediate in the synthesis of sulfathiazole.

aminothiourea *See* thiosemicarbazide.

***meta*-aminotoluene** *See meta*-toluidine.

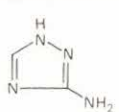
***ortho*-aminotoluene** *See ortho*-toluidine.

***para*-aminotoluene** *See para*-toluidine.

aminotransferase *See* transaminase.

aminotriazole [ORG CHEM] $C_2H_4N_4$ Crystals with a melting point of 159°C; soluble in water, methanol, chloroform, and ethanol; used as an herbicide, cotton plant defoliant, and growth regulator for annual grasses and broadleaf and aquatic weeds. Abbreviated ATA. Also known as 3-amino-1*H*-1,2,4-triazole; amitrole.

AMINOTRIAZOLE



Structural formula.

3-amino-1*H*-1,2,4-triazole *See* aminotriazole.

4-amino-3,5,6-trichloropicolinic acid *See* picloram.

amitrole *See* aminotriazole.

aminourea hydrochloride *See* semicarbazide hydrochloride.

aminoxylene *See* xylidine.

amitosis [CYTOL] Cell division by simple fission of the nucleus and cytoplasm without chromosome differentiation.

Am²/Js *See* ampere square meter per joule second.

AML *See* automatic modulation limiting.

Ammanian [GEOL] Middle Upper Cretaceous geologic time.

ammeter [ENG] An instrument for measuring the magnitude of electric current flow.

ammine [INORG CHEM] One of a group of complex compounds formed by coordination of ammonia molecules with metal ions.

ammocoete [ZOO] A protracted larval stage of lampreys.

ammocolous [ECOL] Describing plants having a habitat in dry sand.

Ammodiscacea [INV ZOO] A superfamily of foraminiferal protozoans in the suborder Textulariina, characterized by a simple to labyrinthic test wall.

Ammodytoidei [VERT ZOO] The sand lances, a suborder of marine actinopterygian fishes in the order Perciformes, characterized by slender, eel-shaped bodies.

ammonal [MATER] A high-explosive mixture, made of ammonium nitrate, trinitrotoluene (TNT), and flaked or powdered aluminum.

ammonation [INORG CHEM] A reaction in which ammonia is added to other molecules or ions by covalent bond formation utilizing the unshared pair of electrons on the nitrogen atom, or through ion-dipole electrostatic interactions.

ammonia [INORG CHEM] NH_3 A colorless gaseous alkaline compound that is very soluble in water, has a characteristic pungent odor, is lighter than air, and is formed as a result of the decomposition of most nitrogenous organic material; used as a fertilizer and as a chemical intermediate.

ammonia absorption refrigerator [MECH ENG] An absorption-cycle refrigerator which uses ammonia as the circulating refrigerant.

ammonia alum *See* ammonium aluminum sulfate.

ammonia-beam maser [PHYS] A gas maser using ammonia as the paramagnetic material.

ammoniac [INORG CHEM] *See* ammoniacal. [MATER] A gum resin obtained from the stems of the ammoniac plant; used in medicine, perfume, plaster, concrete, and adhesive. Also known as ammoniac gum; ammoniacum; gum ammoniac; Persian ammoniac.

ammoniacal [INORG CHEM] Pertaining to ammonia or its properties. Also known as ammoniac.

ammoniac gum *See* ammoniac.

ammonia clock [HOROL] A time-measuring device dependent on the pyramidal ammonia molecule's property of turning inside out readily and oscillating between the two extreme positions at the precise frequency of 2.387013×10^{10} hertz.

ammonia compressor [MECH ENG] A device that decreases the volume of a quantity of gaseous ammonia by the amplification of pressure; used in refrigeration systems.

ammonia condenser [MECH ENG] A device in an ammonia refrigerating system that raises the pressure of the ammonia gas in the evaporating coil, conditions the ammonia, and delivers it to the condensing system.

ammoniacum *See* ammoniac.

ammonia dynamite [CHEM] Dynamite with part of the nitroglycerin replaced by ammonium nitrate.

ammonia gelatin [MATER] An explosive of the gelatin dynamite class containing ammonium nitrate.

ammonia liquor [CHEM ENG] Water solution of ammonia, ammonium compounds, and impurities, obtained from destructive distillation of bituminous coal.

ammonia maser clock [HOROL] A gas maser that utilizes the transition of high-energy ammonia molecules to generate a stable microwave output signal for use as a time standard.

ammonia nitrogen *See* amino nitrogen; imino nitrogen.

ammonia oil [MATER] Low-pour-test lubricating oil for use in an ammonia compressor in mechanical refrigeration.

ammonia permissible [MATER] A permissible explosive that is an ammonia dynamite.

ammonia synthesis [CHEM ENG] Chemical combination of nitrogen and hydrogen gases at high temperature and pressure in the presence of a catalyst to form ammonia.

ammoniated mercuric chloride *See* ammoniated mercury.

ammoniated mercury [INORG CHEM] $HgNH_2Cl$ A white powder that darkens on light exposure; insoluble in water and alcohol, soluble in ammonium carbonate solutions and in warm acids; used in pharmaceuticals and as a local anti-infective in medicine. Also known as aminomercuric chloride; ammoniated mercuric chloride; ammoniated mercury chloride; ammonobasic mercuric chloride; mercury cosmetic.

ammoniated mercury chloride *See* ammoniated mercury.

ammoniated ruthenium oxychloride *See* ruthenium red.

ammoniated superphosphate [INORG CHEM] A fertilizer containing 5 parts of ammonia to 100 parts of superphosphate.

ammoniation [CHEM] Treating or combining with ammonia.

ammonia valve [ENG] A valve that is resistant to corrosion by ammonia.

ammonia water [CHEM] A water solution of ammonia; a clear colorless liquid that is basic because of dissociation of NH_4OH to produce hydroxide ions; used as a reagent, solvent, and neutralizing agent.

ammonification [CHEM] Addition of ammonia or ammonia compounds, especially to the soil.

ammonifiers [ECOL] Fungi, or actinomycetous bacteria, that participate in the ammonification part of the nitrogen cycle and release ammonia (NH_3) by decomposition of organic matter.

ammonioborite [MINERAL] $(NH_4)_2B_{10}O_{16}\cdot 5H_2O$ A white mineral consisting of a hydrous ammonium borite and occurring as aggregates of minute plates.

ammoniojarosite [MINERAL] $(NH_4)Fe_3(SO_4)_2(OH)_6$ Pale-yellow mineral consisting of basic ferric ammonium sulfate.

ammonite [MATER] An explosive containing 70–95% ammonium nitrate. [PALEON] A fossil shell of the cephalopod order Ammonoidea.

ammonium [CHEM] The radical NH_4^+. Abbreviated Am.

ammonium acetate [ORG CHEM] **1.** CH_3COONH_4 A normal salt formed by the neutralization of acetic acid with ammonium hydroxide; a white, crystalline, deliquescent material used in solution for the standardization of electrodes for hydrogen ions. **2.** $CH_3COONH_4\cdot CH_3COOH$ An acid salt resulting from the distillation of the neutral salt or from its solution in hot acetic acid; crystallizes in deliquescent needles. **3.** A mixture of the normal and acetic salts; used as a mordant in the dyeing of wool.

ammonium acid carbonate *See* ammonium bicarbonate.

ammonium acid fluoride *See* ammonium bifluoride.

ammonium acid tartrate *See* ammonium bitartrate.

ammonium alginate [ORG CHEM] $(C_6H_7O_6\cdot NH_4)_n$ A high-molecular-weight, hydrophilic colloid; used as a thickening agent/stabilizer in ice cream, cheese, canned fruits, and other food products.

ammonium alum *See* ammonium aluminum sulfate.

ammonium aluminum sulfate [INORG CHEM] $NH_4Al(SO_4)_2\cdot 12H_2O$ Colorless, odorless crystals that are soluble in water; used in manufacturing medicines and baking powder, dyeing, papermaking, and tanning. Also known as alum; aluminum ammonium sulfate; ammonia alum; ammonium alum.

ammonium benzoate [ORG CHEM] $NH_4C_7H_5O_2$ A salt of benzoic acid prepared as a coarse, white powder; used as a preservative in certain adhesives and rubber latex.

ammonium bicarbonate [INORG CHEM] NH_4HCO_3 White, crystalline, water-soluble salt; used in baking powders and in fire-extinguishing mixtures. Also known as ammonium acid carbonate; ammonium hydrogen carbonate.

ammonium bichromate *See* ammonium dichromate.

ammonium bifluoride [INORG CHEM] $NH_4F\cdot HF$ A salt that crystallizes in the orthorhombic system and is soluble in water; prepared in the form of white flakes from ammonia treated with hydrogen fluoride; used in solution as a fungicide and wood preservative. Also known as ammonium acid fluoride; ammonium hydrogen fluoride.

ammonium bitartrate [ORG CHEM] $NH_4HC_4H_4O_6$ Colorless crystals that are soluble in water; used to make baking powder and to detect calcium. Also known as acid ammonium tartrate; ammonium acid tartrate; ammonium hydrogen tartrate; monoammonium tartrate.

ammonium bithiolicum *See* ichthammol.

ammonium borate [INORG CHEM] NH_4BO_3 A white, crystalline, water-soluble salt which decomposes at 198°C; used as a fire retardant on fabrics.

ammonium bromide [INORG CHEM] NH_4Br An ammonium halide that crystallizes in the cubic system; made by the reaction of ammonia with hydrobromic acid or bromine; used in photography and for pharmaceutical preparations (sedatives).

ammonium carbamate [INORG CHEM] $NH_4NH_2CO_2$ A salt that forms colorless, rhombic crystals, which are very soluble in cold water; an important, unstable intermediate in the manufacture of urea; found in commercial ammonium carbonate.

ammonium carbonate [INORG CHEM] **1.** $(NH_4)_2CO_3$ The normal ammonium salt of carbonic acid, prepared by passing gaseous carbon dioxide into an aqueous solution of ammonia and allowing the vapors (ammonia, carbon dioxide, water) to crystallize. **2.** $NH_4HCO_3\cdot NH_2COONH_4$ A white, crystalline double salt of ammonium bicarbonate and ammonium carbamate obtained commercially; the principal ingredient of smelling salts.

ammonium chloride [INORG CHEM] NH_4Cl A white crystalline salt that occurs naturally as a sublimation product of volcanic action or is manufactured; used as an electrolyte in dry cells, as a flux for soldering, tinning, and galvanizing, and as an expectorant.

ammonium chromate [INORG CHEM] $(NH_4)_2CrO_4$ A salt that forms yellow, monoclinic crystals; made from ammonium hydroxide and ammonium dichromate; used in photography as a sensitizer for gelatin coatings.

ammonium citrate [ORG CHEM] $(NH_4)_2HC_6H_5O_7$ White, granular material; used as a reagent.

ammonium dichromate [INORG CHEM] $(NH_4)_2Cr_2O_7$ A salt that forms orange, monoclinic crystals; made from ammonium sulfate and sodium dichromate; soluble in water and alcohol; ignites readily; used in photography, lithography, pyrotechnics, and dyeing. Also known as ammonium bichromate.

ammonium fluoride [INORG CHEM] NH_4F A white, unstable, crystalline salt with a strong odor of ammonia; soluble in cold water; used in analytical chemistry, glass etching, and wood preservation, and as a textile mordant.

ammonium fluosilicate [INORG CHEM] $(NH_4)_2SiF_6$ A toxic, white, crystalline powder; soluble in alcohol and water; used for mothproofing, glass etching, and electroplating. Also known as ammonium silicofluoride.

ammonium formate [ORG CHEM] HCO_2NH_4 Deliquescent crystals or granules with a melting point of 116°C; soluble in water and alcohol; used in analytical chemistry to precipitate base metals from salts of the noble metals.

ammonium gluconate [ORG CHEM] $NH_4C_6H_{11}O_7$ A white, crystalline powder made from gluconic acid and am-

mono-, soluble in water; used as an emulsifier for cheese and salad dressing and as a catalyst in textile printing.

ammonium halide [INORG CHEM] A compound with the ammonium ion bonded to an ion formed from one of the halogen elements.

ammonium hydrogen carbonate *See* ammonium bicarbonate.

ammonium hydrogen fluoride *See* ammonium bifluoride.

ammonium hydrogen tartrate *See* ammonium bitartrate.

ammonium hydroxide [INORG CHEM] NH_4OH. A hydrate of ammonia, crystalline below −79°C; it is a weak base known only in solution as ammonia water. Also known as aqua ammonia.

ammonium ichthosulfonate *See* ichthammol.

ammonium iodide [INORG CHEM] NH_4I. A salt prepared from ammonia and hydrogen iodide or iodine; it forms colorless, regular crystals which sublime when heated; used in photography and for pharmaceutical preparations.

ammonium lactate [ORG CHEM] $NH_4C_3H_5O_3$. A yellow, syrupy liquid used in finishing leather.

ammonium linoleate [ORG CHEM] $C_{17}H_{31}COONH_4$. A soft, pasty material used as an emulsifying agent in various industrial applications.

ammonium metatungstate [ORG CHEM] $(NH_4)_6H_2W_{12}O_{40}$. A white powder, soluble in water, used for electroplating.

ammonium molybdate [INORG CHEM] $(NH_4)_2MoO_4$. White, crystalline salt used as an analytic reagent, as a precipitant of phosphoric acid, and in pigments.

ammonium nickel sulfate *See* nickel ammonium sulfate.

ammonium nitrate [INORG CHEM] NH_4NO_3. A colorless crystalline salt, very sensitive and stable high explosive; also used as a fertilizer.

ammonium oxalate [ORG CHEM] $(NH_4)_2C_2O_4 \cdot H_2O$. A salt in the form of colorless, rhombic crystals.

ammonium perchlorate [INORG CHEM] NH_4ClO_4. A salt that forms colorless or white rhombic and regular crystals, which are soluble in water; it decomposes at 150°C, and the reaction is explosive at higher temperatures.

ammonium perchlorate explosive [MATER] Any of several compositions consisting of ammonium perchlorate in combination with a high explosive and powdered metal; produces powerful blast.

ammonium persulfate [INORG CHEM] $(NH_4)_2S_2O_8$. White crystals which decompose on melting; soluble in water; used as an oxidizing agent and bleaching agent, and in etching, electroplating, food preservation, and aniline dyes.

ammonium phosphate [INORG CHEM] $(NH_4)_2HPO_4$. A salt of ammonia and phosphoric acid that forms white monoclinic crystals, which are soluble in water; used as a fertilizer and fire retardant.

ammonium picrate [ORG CHEM] $NH_4C_6H_2O(NO_2)_3$. Compound with stable yellow and metastable red forms of orthorhombic crystals; used as a military explosive for armor-piercing shells. Also known as ammonium trinitrophenolate; explosive D.

ammonium salt [INORG CHEM] A product of a reaction between ammonia and various acids; examples are ammonium chloride and ammonium nitrate.

ammonium silicofluoride *See* ammonium fluosilicate.

ammonium soap [ORG CHEM] A product from reaction of a fatty acid with ammonium hydroxide; used in toiletry preparations, such as soaps and as emulsions.

ammonium stearate [ORG CHEM] $C_{17}H_{35}COONH_4$. A tan, waxlike substance with a melting point of 75–75°C; used in cosmetics and for waterproofing cements, paper, textiles, and other materials.

ammonium sulfamate [INORG CHEM] $NH_4O-SO_2NH_2$. White crystals with a melting point of 130°C, soluble in water; used for flameproofing textiles, in electroplating, and as an herbicide to control woody plant species.

ammonium sulfate [INORG CHEM] $(NH_4)_2SO_4$. Colorless, rhombic crystals which melt at 140°C and are soluble in water.

ammonium sulfide [INORG CHEM] $(NH_4)_2S$. Yellow crystals, stable only when dry and below 0°C, decomposes on melting; soluble in water and alcohol; used in photographic developers and for coloring bronzes and bronzes.

ammonium sulfocyanate *See* ammonium thiocyanate.

ammonium sulfocyanide *See* ammonium thiocyanate.

ammonium sulfoichthyolate *See* ichthammol.

ammonium tartrate [ORG CHEM] $C_4H_{12}N_2O_6$. Colorless, monoclinic crystals; used in textiles and in medicine.

ammonium thiocyanate [ORG CHEM] NH_4SCN. Colorless, deliquescent crystals with a melting point of 149.6°C; soluble in water, acetone, alcohol, and ammonia; used in analytical chemistry, freezing solutions, fabric dyeing, electroplating, photography, and steel pickling. Also known as ammonium sulfocyanate; ammonium sulfocyanide.

ammonium trinitrophenolate *See* ammonium picrate.

ammonium vanadate [INORG CHEM] NH_4VO_3. A white to yellow, water-soluble, crystalline powder; used in inks and as a paint drier and textile mordant.

ammonobasic mercuric chloride *See* ammoniated mercury.

ammonoid [PALEON] A cephalopod of the order Ammonoidea.

Ammonoidea [PALEON] An order of extinct cephalopod mollusks in the subclass Tetrabranchia; important as index fossils.

ammonolysis [CHEM] **1.** A dissociation reaction of the ammonia molecule producing H^+ and NH_2^- species. **2.** Breaking of a bond by addition of ammonia.

ammonoxidation *See* ammoxidation.

Ammon's law [ANTHRO] The law stating that cephalic index and stature vary inversely.

Ammotheidae [INV ZOO] A family of marine arthropods in the subphylum Pycnogonida.

ammoxidation [CHEM ENG] A process in which mixtures of propylene, ammonia, and oxygen are converted in the presence of a catalyst, with acrylonitrile as the primary product. Also known as ammonoxidation; oxyamination.

ammunition [ORD] **1.** All kinds of missiles to be thrown against an enemy. **2.** Missiles not for direct use against an enemy, with such purposes as illumination, signaling, and decelerating. **3.** A complete round and all its components, that is, the material required for firing a weapon such as a pistol.

ammunition belt [ORD] A fabric or metal band with loops for carrying cartridges that are fed from it into a machine gun or other automatic weapon; a feed belt.

ammunition box [ORD] A box in which linked ammunition is folded and from which it can be fed into a machine gun.

ammunition carrier [ORD] **1.** A vehicle that accompanies guns and carries ammunition for them. **2.** A member of a gun or mortar squad who carries ammunition and helps load in actual firing.

ammunition chest [ORD] A receptacle, as on a caisson, limber, or gun carriage, in which ammunition is kept.

ammunition day of supply [ORD] The estimated quantity of ammunition required per day to sustain operations in an active theater.

ammunition depot [ORD] A storage and supply depot for projectiles, bombs, or other ammunition.

ammunition dump [ORD] An ammunition storage point, usually established in the field for temporary use.

amnesia [MED] The pathological loss or impairment of memory brought about by psychogenic or physiological disturbances.

amnesic aphasia [MED] Loss of memory for the appropriate names of objects, conditions, or relations, accompanied by fragmented or hesitant speech.

amnicolous [ECOL] Describing plants having a habitat on sandy riverbanks.

amniocentesis [MED] A procedure during pregnancy by which the abdominal wall and fetal membranes are punctured with a cannula to withdraw amniotic fluid.

amniography [MED] Radiography of the fetus after injection of radiopaque material into the amniotic sac.

amnion [EMBRYO] A thin extraembryonic membrane forming a closed sac around the embryo in birds, reptiles, and mammals.

Amniota [VERT ZOO] A collective term for the Reptilia, Aves, and Mammalia, all of which have an amnion during development.

amniotic fluid [PHYSIO] A substance that fills the amnion to protect the embryo from desiccation and shock.

amobarbital [PHARM] $C_{11}H_{18}N_2O_3$. A white, crystalline powder with a bitter taste and a melting point of 156–161°C; soluble in alcohol; used in medicine.

amodiaquine [PHARM] $C_{20}H_{22}ClN_3O$. A crystalline compound that melts at 208°C; used as an antimalarial.

Amoeba [INV ZOO] A genus of naked, rhizopod protozoans

in the order Amoebida characterized by a thin pellicle and thick, irregular pseudopodia.

Amoebida [əmē'bidə] *An order of diverged protozoans in the subclass Lobosia characterized by the absence of a protective covering (test).*

Amoebobacter [əmē'bōbaktər] *A genus of bacteria in the family Chromatiaceae; cells are spherical and immotile, have gas vacuoles, and contain bacteriochlorophyll a on vesicular photosynthetic membranes.*

amoeboid [əmē'boid] *A fold or structure, such as an auricle, having no prevailing trend or definite shape.*

amoeboid glacier [əmē'boid] *A glacier connected with its snowfield for a portion of the year only.*

Amor [ā'mōr] *An asteroid with an orbital eccentricity of 0.440 that approached to about 1.6 × 10⁷ kilometers from earth.*

Amor object [ā'mōr] *Any asteroid which crosses the orbit of Mars.*

amorphic allele [ā'fik] *An allele that lacks gene activity.*

Amorphosporangium [əmôr'fōspərən'jēəm] *A genus of bacteria in the family Actinoplanaceae with irregular sporangia and oval-shaped spores; they are motile by means of polar flagella.*

amorphous [əmôr'fəs] *Pertaining to a solid which is non-crystalline, having neither definite form nor structure.*

amorphous film [əmôr'fəs] *A magnetically ordered metallic film that can be deposited on a semiconductor chip or on almost any other material without need for a crystal substrate, for use in magnetic bubble memories.*

amorphous frost [əmôr'fəs] *Hoar frost which possesses no apparent single crystalline structure, opposite of crystalline frost.*

amorphous laser *See* glass laser.

amorphous memory array [əmôr'fəs ā'rē] *An array of memory switches made of amorphous material.*

amorphous mineral [əmôr'fəs] *A mineral without definite crystalline structure.*

amorphous peat [əmôr'fəs] *Peat composed of fine grains of organic matter, in plastic like wet, heavy soil, with all original plant structures destroyed by decomposition of cellulose matter.*

amorphous semiconductor [əmôr'fəs] *A semiconductor material which is not entirely crystalline, having only short-range order in its structure.*

amorphous sky [əmôr'fəs] *A sky characterized by an abundance of fracto-clouds, usually accompanied by precipitation falling from a higher, overcast cloud layer.*

amorphous snow [əmôr'fəs] *A type of snow with irregular crystalline structure.*

amortisseur winding *See* damper winding.

amortize [ə'mərtīz] *To reduce gradually an obligation, such as a mortgage, by periodically paying a part of the principal as well as the interest.*

amortizement [ə'mərtīz] *The sloping top of a buttress or projecting pier.*

amosite [ə'mōsīt] *A monoclinic amphibole form of asbestos having long fibers and a high iron content, used in insulation.*

amount limit [əmount'] *In a test for a fixed quantity of work, the time required to complete the work or the total amount of work that can be completed in an unlimited time.*

para-aminohippuric *See* para-pentylenehippuric.

amp *See* amperage; ampere.

AMP *See* adenylic acid.

3′,5′-AMP *See* cyclic adenylic acid.

ampacity [ampa'sitē] *Current-carrying capacity in amperes, used as a rating for power cables.*

amperagehrs *See* ampere-hr.

Ampelisidae [ampə'lisidē] *A family of tube-dwelling amphipod crustacean in the suborder Gammaridea.*

ampelite [am'pəlīt] *A graphitic schist containing silica, diaspora, and sulfur; used as a refractory.*

amperage [am'pərij] *The amount of electric current in amperes. Abbreviated amp.*

ampere [am'pir] *The unit of electric current in the rationalized meter-kilogram-second system of units, defined in terms of the force of attraction between two parallel current-carrying conductors. Abbreviated a, A, amp.*

Ampere currents [am'pir kur'ənts] *Postulated "molecular ring" currents to explain the phenomena of magnetism as well as the apparent nonexistence of isolated magnetic poles.*

ampere-hour [am'pir] *A unit for the quantity of electricity, obtained by integrating current flow in amperes over the time in hours for its flow; used as a measure of battery capacity. Abbreviated Ah, amp-hr.*

ampere-hour capacity [am'pir] *The charge, measured in ampere-hours, that can be delivered by a storage battery up to the limit to which the battery may be safely discharged.*

Ampere law [am'pir lô] *1. A law giving the magnetic induction at a point due to given currents in terms of the current elements and their position relative to the point. Also known as Laplace law. 2. A law giving the line integral over a closed path of the magnetic induction due to given currents in terms of the total current linking the path.*

ampere meter squared [am'pir mē'tər skwârd'] *The SI unit of electromagnetic moment. Abbreviated Am².*

ampere-minute [am'pir] *A unit of electrical charge, equal to the charge transported in 1 minute by a current of 1 ampere, or to 60 coulombs. Abbreviated A min.*

ampere per meter [am'pir pē'tər] *The SI unit of magnetic field strength and magnetization. Abbreviated A/m.*

ampere per square inch [am'pir] *A unit of current density, equal to the uniform current density of a current of 1 ampere flowing through an area of 1 square inch. Abbreviated A/in².*

ampere per square meter [am'pir] *The SI unit of current density. Abbreviated A/m².*

Ampère rule [äⁿpâr' rool] *The rule which states that the direction of the magnetic field surrounding a conductor will be clockwise when viewed from the conductor if the direction of current flow is away from the observer.*

ampere square meter per joule second [am'pir skwâr' mē'tər pər jool' sek'ənd] *The SI unit of gyromagnetic ratio. Abbreviated Am²/Js.*

Ampère theorem [äⁿpâr' thē'ərəm] *The theorem which states that an electric current flowing in a circuit produces a magnetic field at external points equivalent to that due to a magnetic shell whose bounding edge is the conductor and whose strength is equal to the strength of the current.*

ampere-turn [am'pir tərn'] *A unit of magnetomotive force in the meter-kilogram-second system defined as the force of a closed loop of one turn when there is a current of 1 ampere flowing in the loop. Abbreviated amp-turn.*

amperometric titration [ampir'ōmet'rik] *A titration that involves measuring an electric current or changes in current during the course of the titration.*

amperometry [ampir'ām'ətrē] *Chemical analysis by techniques which involve measuring electric currents.*

Ampharetidae [am'fə] *A large, deep-water family of polychaete annelids belonging to the Sedentaria.*

Ampharetinae [am'fə] *A subfamily of annelids belonging to the family Ampharetidae.*

amphetamine [amfet'əmēn] $C_6H_5CH_2CH(NH_2)CH_3$. *A volatile, colorless liquid used as a central nervous system stimulant. Also known as* racemic 1-phenyl-2-aminopropane *and* Sympatedrine *and* Benzedrine.

amphiarthrosis [am'fē] *An articulation of limited movement in which bones are connected by fibrocartilage, such as that between vertebrae or that at the fibrodiaphysial junction.*

amphiaster [am'fē] *Type of spicule found in some sponges.*

Amphibia [amfib'ēə] *A class of vertebrate animals in the superclass Tetrapoda characterized by a moist, glandular skin, gills at some stage of development, and no amnion during the embryonic stage.*

Amphibiocarina [am'fē] *A subdivision of the mixed order Bathypterformes containing surface water bugs with aquatic antennae.*

Amphibiodae [am'fē] *A family of leptocerids in the order Cyclopterifera.*

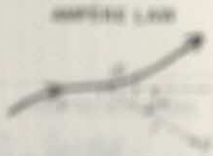
amphibiotic [am'fē] *Being aquatic during the larval stage and terrestrial in the adult stage.*

amphibious [amfib'ēəs] *Capable of living both on dry or upon land and in water.* [amfib'ēəs vē'ikəl] *Kind of vehicle or equipment designed to be operated or used on either land or water.* [amfib'ēəs] *A military operation conducted by coordinated attack of land, sea, and air forces.*

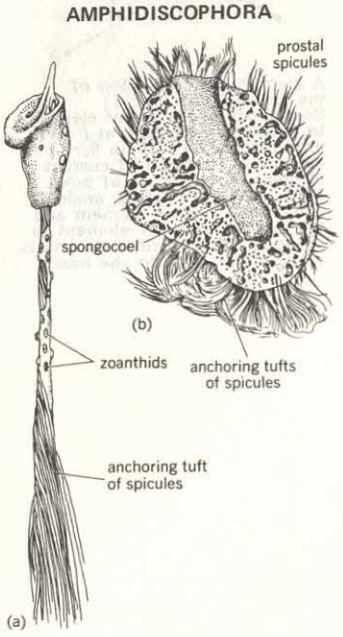
amphibious assault landing model *See* assault landing model.

amphibious assault ship [amfib'ēəs] *A ship designed to transport and land troops, equipment, and supplies by means of embarked helicopters.*

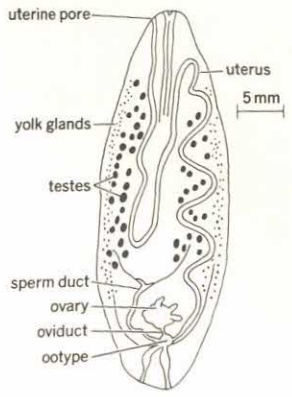
amphibious command ship [amfib'ēəs] *A naval ship from which a commander exercises control in amphibious operations.*



A graphic representation of the Ampère law, which was established by André Marie Ampère in 1820. It states that the line integral of the magnetic induction B around a closed path is proportional to the total current flowing through any surface bounded by the path. In symbolic form, $\oint B \cdot ds = \mu_0 I$, where μ_0 is the permeability of free space, a universal constant, and I is the current. Ampère's law is analogous to Gauss' law for electric fields. Ampère's law is sometimes expressed with the help of the curl operator, which is a vector quantity that describes the circulation of a vector field around a point.



Representative amphidiscophorans. *(a) Hyalonema*, with zoanthids encrusting root tuft of spicules *(after Hyman, 1940)*; *(b) Pheronema*, sectioned longitudinally *(from Hyman, 1940, after Schulze, 1887)*



Amphilina, the only tapeworm in the order Amphilinidea whose life history is completely known.

amphibious mine [ORD] A mine designed especially to hinder beach landing and river-crossing operations by damaging or destroying landing craft, small boats, water-fording vehicles, and floating bridges; it may be of various types, such as contact, controlled, or drifting.

amphibious tank [ORD] A vehicle mounting a howitzer or cannon, capable of delivering direct fire from the water as well as from land; used in providing early artillery support in amphibious operations.

amphibious tractor [ORD] A vehicle used for the movement of troops and cargo from ship to shore in the assault phase of amphibious operations, or for limited movement of troops and cargo over land or water. Abbreviated amtrac.

amphiblastic cleavage [EMBRYO] The unequal but complete cleavage of telolecithal eggs.

amphiblastula [EMBRYO] A blastula resulting from amphiblastic cleavage. [INV ZOO] The free-swimming flagellated larva of many sponges.

amphibole [MINERAL] Any of a group of rock-forming, ferromagnesian silicate minerals commonly found in igneous and metamorphic rocks; includes hornblende, anthophyllite, tremolite, and actinolite (asbestos minerals).

amphibolic [MED] Uncertain; wavering; refers to the stage of a disease when prognosis is uncertain. [ZOO] Possessing the ability to turn either backward or forward, as the outer toe of certain birds.

amphibolic pathway [BIOCHEM] A microbial biosynthetic and energy-producing pathway, such as the glycolytic pathway.

Amphibolidae [INV ZOO] A family of gastropod mollusks in the order Basommatophora.

amphibolite [PETR] A crystalloblastic metamorphic rock composed mainly of amphibole and plagioclase; quartz may be present in small quantities.

amphibolite facies [PETR] Rocks produced by medium- to high-grade regional metamorphism.

amphibolization [PETR] Formation of amphibole in a rock as a secondary mineral.

amphicarpic [BOT] Having two types of fruit, differing either in form or ripening time.

Amphichelydia [PALEON] A suborder of Triassic to Eocene anapsid reptiles in the order Chelonia; these turtles did not have a retractable neck.

amphichrome [BOT] A plant that produces flowers of different colors on the same stalk.

Amphicoela [VERT ZOO] A small suborder of amphibians in the order Anura characterized by amphicoelous vertebrae.

amphicoelous [VERT ZOO] Describing vertebrae that have biconcave centra.

amphicribral [BOT] Having the phloem surrounded by the xylem, as seen in certain vascular bundles.

amphicryptophyte [BOT] A marsh plant with amphibious vegetative organs.

Amphicyonidae [PALEON] A family of extinct giant predatory carnivores placed in the infraorder Miacoidea by some authorities.

amphicytula [EMBRYO] A zygote that is capable of holoblastic unequal cleavage.

amphid [INV ZOO] Either of a pair of sensory receptors in nematodes, believed to be chemoreceptors and situated laterally on the anterior end of the body.

amphidetic [INV ZOO] Of a bivalve ligament, extending both before and behind the beak.

amphidiploid [GEN] An organism having a diploid set of chromosomes from each parent.

Amphidiscophora [INV ZOO] A subclass of sponges in the class Hexactinellida characterized by an anchoring tuft of spicules and no hexasters.

Amphidiscosa [INV ZOO] An order of hexactinellid sponges in the subclass Amphidiscophora characterized by amphidisc spicules, that is, spicules having a stellate disk at each end.

amphidromic [OCEANOGR] Of or pertaining to progression of a tide wave or bulge around a point or center of little or no tide.

amphidromic point [MAP] On a chart of cotidal lines, a no-tide or nodal point from which the cotidal lines radiate.

amphidromic region [MAP] An area surrounding an amphidromic point in which the cotidal lines radiate from the no-tide point and progress through all hours of the tide cycle.

amphigastrium [BOT] Any of the small appendages located ventrally on the stem of some liverworts.

amphigean [ECOL] An organism that is native to both Old and New Worlds.

amphigene *See* leucite.

Amphilestidae [PALEON] A family of Jurassic triconodont mammals whose subclass is uncertain.

Amphilinidea [INV ZOO] An order of tapeworms in the subclass Cestodaria characterized by a protrusible proboscis, anterior frontal glands, and no holdfast organ; they inhabit the coelom of sturgeon and other fishes.

Amphimerycidae [PALEON] A family of late Eocene to early Oligocene tylopod ruminants in the superfamily Amphimerycoidea.

Amphimerycoidea [PALEON] A superfamily of extinct ruminant artiodactyls in the infraorder Tylopoda.

amphimixis [PHYSIO] The union of egg and sperm in sexual reproduction.

Amphimonadidae [INV ZOO] A family of zoomastigophorean protozoans in the order Kinetoplastida.

amphimorphic [GEOL] A rock or mineral formed by two geologic processes.

Amphineura [INV ZOO] A class of the phylum Mollusca; members are bilaterally symmetrical, elongate marine animals, such as the chitons.

Amphinomidae [INV ZOO] The stinging or fire worms, a family of amphinomorphan polychaetes belonging to the Errantia.

Amphinomorpha [INV ZOO] Group name for three families of errantian polychaetes: Amphenomidae, Euphrosinidae, and Spintheridae.

amphioxus [ZOO] Former designation for the lancelet, *Branchiostoma*.

amphipatic molecule [ORG CHEM] A molecule having both hydrophilic and hydrophobic groups; examples are wetting agents and membrane lipids such as phosphoglycerides.

amphiphile [CHEM] A molecule which has a polar head attached to a long hydrophobic tail.

amphiphloic [BOT] Pertaining to the central vascular cylinder of stems having phloem on both sides of the xylem.

amphiphyte [ECOL] A plant growing on the boundary zone of wet land.

amphiplatyan [ANAT] Describing vertebrae having centra that are flat both anteriorly and posteriorly.

amphiploid [GEN] A polyploid produced when chromosomes of a species hybrid double.

amphipneustic [VERT ZOO] Having both gills and lungs through all life stages, as in some amphibians.

Amphipoda [INV ZOO] An order of crustaceans in the subclass Malacostraca; individuals lack a carapace, bear unstalked eyes, and respire through thoracic branchiae or gills.

amphipodous [INV ZOO] Having both walking and swimming legs.

amphiprotic *See* amphoteric.

amphisapropel [GEOL] Cellulosic ooze containing coarse plant debris.

amphisarca [BOT] An indehiscent fruit characterized by many cells and seeds, pulpy flesh, and a hard rind; melon is an example.

Amphisbaenidae [VERT ZOO] A family of tropical snake-like lizards in the suborder Sauria.

Amphisopidae [INV ZOO] A family of isopod crustaceans in the suborder Phreactoicoidea.

amphispore [MYCOL] A specialized urediospore with a thick, colorful wall; a resting spore.

Amphissitidae [PALEON] A family of extinct ostracods in the suborder Beyrichicopina.

Amphistaenidae [VERT ZOO] The worm lizards, a family of reptiles in the suborder Sauria; structural features are greatly reduced, particularly the limbs.

amphistome [INV ZOO] An adult type of digenetic trematode having a well-developed ventral sucker (acetabulum) on the posterior end.

amphistylar [ARCH] Having free columns in porticoes either at both ends or at both sides and across the full ends of sides.

amphistylic [VERT ZOO] Having the jaw suspended from the brain case and the hyomandibular cartilage, as in some sharks.

amphitene *See* zygotene.

amphitheater [ARCH] A structure or large room containing oval, circular, or semicircular tiers of seats facing an open space. [GEOGR] A valley or gulch having an oval or circular floor and formed by glacial action.

amphithecium [BOT] The external cell layer during development of the sporangium in mosses.
Amphitheriidae [PALEON] A family of Jurassic therian mammals in the infraclass Pantotheria.
amphitriaene [INV ZOO] A poriferan spicule having three divergent rays at each end.
amphitrichous [BIOL] Having flagella at both ends, as in certain bacteria.
Amphitritinae [INV ZOO] A subfamily of sedentary polychaete worms in the family Terebellidae.
Amphitrite [ASTRON] An asteroid with a diameter of about 200 kilometers, mean distance from the sun of 2.554 astronomical units, and S-type surface composition.
amphitropical distribution [ECOL] Distribution of mostly temperate organisms which are discontinuous between the Northern and Southern hemispheres.
amphitropous [BOT] Having a half-inverted ovule with the funiculus attached near the middle.
Amphiumidae [VERT ZOO] A small family of urodele amphibians in the suborder Salamandroidea composed of three species of large, eellike salamanders with tiny limbs.
amphivasal [BOT] Having the xylem surrounding the phloem, as seen in certain vascular bundles.
Amphizoidae [INV ZOO] The trout stream beetles, a small family of coleopteran insects in the suborder Adephaga.
ampholyte [CHEM] An amphoteric electrolyte.
ampholytic detergent [CHEM] A detergent that is cationic in acidic solutions and anionic in basic solutions.
Amphoriscidae [INV ZOO] A family of calcareous sponges in the order Sycettida.
amphoteric [CHEM] Having both acidic and basic characteristics. Also known as amphiprotic.
amphotericin [MICROBIO] An amphoteric antifungal antibiotic produced by *Streptomyces nodosus* and having of two components, A and B.
amphotericin A [MICROBIO] The relatively inactive component of amphotericin.
amphotericin B [MICROBIO] $C_{46}H_{73}O_{20}N$ The active component of amphotericin, suitable for systemic therapy of deep or superficial mycotic infections.
amphoterism [CHEM] The property of being able to react either as an acid or a base.
amphoterite [GEOL] A stony meteorite containing bronzite and olivine with some oligoclase and nickel-rich iron.
amp-hr *See* ampere-hour.
amplexicaul [BOT] Pertaining to a sessile leaf with the base or stipules embracing the stem.
amplexus [BOT] Having the edges of a leaf overlap the edges of a leaf above it in vernation. [VERT ZOO] The copulatory embrace of frogs and toads.
ampliate [BIOL] Widened or enlarged.
amplidyne [ELEC] A rotating magnetic amplifier having special windings and brush connections so that small changes in power input to the field coils produce large changes in power output.
amplification [GEN] **1.** Treatment with an antibiotic or other agent to increase the relative proportion of plasmid to bacterial deoxyribonucleic acid. **2.** Bulk replication of a gene library. [sci tech] The production of an output of greater magnitude than the input.
amplification factor [ELECTR] In a vacuum tube, the ratio of the incremental change in plate voltage to a given small change in grid voltage, under the conditions that the plate current and all other electrode voltages are held constant.
amplified back bias [ELECTR] Degenerative voltage developed across a fast time-constant circuit within a stage of an amplifier and fed back into a preceding stage.
amplifier [ENG] A device capable of increasing the magnitude or power level of a physical quantity, such as an electric current or a hydraulic mechanical force, that is varying with time, without distorting the wave shape of the quantity.
amplifier-type meter [ENG] An electric meter whose characteristics have been enhanced by the use of preamplification for the signal input eventually used to actuate the meter.
amplify [ENG ACOUS] To strengthen a signal by increasing its amplitude or by raising its level.
amplifying delay line [ELECTR] Delay line used in pulse-compression systems to amplify delayed signals in the super-high-frequency region.
amplitron [ELECTR] Crossed-field continuous cathode reentrant beam backward-wave amplifier for microwave frequencies.
amplitude [MATH] The angle between a vector representing a specified complex number on an Argand diagram and the positive real axis. Also known as argument. [NAV] Angular distance north or south of the prime vertical; the arc of the horizon, or the angle at the zenith between the prime vertical and a vertical circle, measured north or south from the prime vertical to the vertical circle. [PHYS] The maximum absolute value attained by the disturbance of a wave or by any quantity that varies periodically.
amplitude discriminator *See* pulse-height discriminator.
amplitude distortion *See* frequency distortion.
amplitude factor *See* crest factor.
amplitude fading [COMMUN] Fading in which the amplitudes of all frequency components of a modulated carrier wave are uniformly attenuated.
amplitude-frequency distortion *See* frequency distortion.
amplitude-frequency response *See* frequency response.
amplitude gate [ELECTR] A circuit which transmits only those portions of an input signal which lie between two amplitude boundary level values. Also known as slicer; slicer amplifier.
amplitude level [PHYS] The natural logarithm of the ratio of two amplitudes, each measured in the same units.
amplitude limiter *See* limiter.
amplitude-limiting circuit *See* limiter.
amplitude-modulated indicator [ENG] A general class of radar indicators, in which the sweep of the electron beam is deflected vertically or horizontally from a base line to indicate the existence of an echo from a target. Also known as deflection-modulated indicator; intensity-modulated indicator.
amplitude modulation [ELECTR] Abbreviated AM. **1.** Modulation in which the aplitude of a wave is the characteristic varied in accordance with the intelligence to be transmitted. **2.** In telemetry, those systems of modulation in which each component frequency f of the transmitted intelligence produces a pair of sideband frequencies at carrier frequency plus f and carrier minus f.
amplitude-modulation noise [COMMUN] Noise produced by undesirable amplitude variations of a radio-frequency signal.
amplitude-modulation radio [COMMUN] Also known as AM radio. **1.** The system of radio communication employing amplitude modulation of a radio-frequency carrier to convey the intelligence. **2.** A receiver used in such a system.
amplitude modulator [PHYS] Any device which imposes amplitude modulation upon a carrier wave in accordance with a desired program.
amplitude noise [ELECTROMAG] Effect on radar accuracy of the fluctuations in the amplitude of the signal returned by the target; these fluctuations are caused by any change in aspect if the target is not a point source.
amplitude resonance [PHYS] The frequency at which a given sinusoidal excitation produces the maximum amplitude of oscillation in a resonant system.
amplitude response [ELECTR] The maximum output amplitude obtainable at various points over the frequency range of an instrument operating under rated conditions.
amplitude selector *See* pulse-height selector.
amplitude separator [ELECTR] A circuit used to isolate the portion of a waveform with amplitudes above or below a given value or between two given values.
amplitude shift keying [COMMUN] A method of transmitting binary coded messages in which a sinusoidal carrier is pulsed so that one of the binary states is represented by the presence of the carrier while the other is represented by its absence. Abbreviated ASK.
amplitude splitting [OPTICS] A technique in which light falls on a partially reflecting surface; part of the light is transmitted, part reflected, and after further manipulation, these parts are recombined to give interference.
amplitude suppression ratio [ELECTR] Ratio, in frequency modulation, of the undesired output to the desired output of a frequency-modulated receiver when the applied signal has simultaneous amplitude and frequency modulation.
amplitude versus frequency distortion [ELECTR] The distortion caused by the nonuniform attenuation or gain of the system, with respect to frequency under specified terminal conditions.
amp-turn *See* ampere-turn.

ampule [MED] A small, hermetically sealed flask, usually containing medicine for parenteral administration.

Ampulicidae [INV ZOO] A small family of hymenopteran insects in the superfamily Sphecoidea.

ampulla [ANAT] A dilated segment of a gland or tubule. [BOT] A small air bladder in some aquatic plants. [INV ZOO] The sac at the base of a tube foot in certain echinoderms.

ampulla of Lorenzini [VERT ZOO] Any of the cutaneous receptors in the head region of elasmobranchs; thought to have a thermosensory function.

ampulla of Vater [ANAT] Dilation at the junction of the bile and pancreatic ducts and the duodenum in man. Also known as papilla of Vater.

Ampullariella [MICROBIO] A genus of bacteria in the family Actinoplanaceae having cylindrical or bottle-shaped sporangia and rod-shaped spores arranged in parallel chains; motile by means of a polar tuft of flagella.

ampullary organ [PHYSIO] An electroreceptor most sensitive to direct-current and low-frequency electric stimuli; found over the body surface of electric fish and also in certain other fish such as sharks, rays, and catfish.

amputation [MED] The surgical, congenital, or spontaneous removal of a limb or projecting body part.

ampyrone *See* 4-aminoantipyrine.

AM radio *See* amplitude-modulation radio.

AM signature [COMMUN] A graphic representation of the significant identifying characteristics of an amplitude-modulated signal.

amtrac *See* amphibious tractor.

amu *See* atomic mass unit.

amychophobia [PSYCH] Abnormal fear of being scratched or clawed.

amygdalic acid *See* mandelic acid.

amygdalin [BIOCHEM] $C_6H_5CH(CN)OC_{12}H_{21}O_{10}$ A glucoside occurring in the kernels of certain plants of the genus *Prunus*.

amygdaloid [GEOL] Lava rock containing amygdules. Also known as amygdaloidal lava.

amygdaloidal lava *See* amygdaloid.

amygdule [GEOL] **1.** A mineral filling formed in vesicles (cavities) of lava flows; it may be chalcedony, opal, calcite, chlorite, or prehnite. **2.** An agate pebble.

amyl [ORG CHEM] Any of the eight isomeric arrangements of the radical C_5H_{11} or a mixture of them. Also known as pentyl.

amyl acetate [ORG CHEM] $CH_3COO(CH_2)_2CH(CH_3)_2$ A colorless liquid, boiling at 142°C; soluble in alcohol and ether, slightly soluble in water; used in flavors and perfumes. Also known as banana oil; isoamyl acetate.

amyl alcohol [ORG CHEM] **1.** A colorless liquid that is a mixture of isomeric alcohols. **2.** An optically active liquid composed of isopentyl alcohol and active amyl alcohol.

amyl aldehyde *See* *n*-valeraldehyde.

***n*-amylamine** [ORG CHEM] $C_5H_{11}NH_2$ A colorless liquid with a boiling point of 104.4°C; soluble in water, alcohol, and ether; used in dyestuffs, insecticides, synthetic detergents, corrosion inhibitors, and pharmaceuticals, and as a gasoline additive. Also known as 1-aminopentane; pentylamine.

amylase [BIOCHEM] An enzyme that hydrolyzes reserve carbohydrates, starch in plants and glycogen in animals.

amyl benzoate *See* isoamyl benzoate.

amyl carbinol *See* hexyl alcohol.

amylene [ORG CHEM] C_5H_{10} A highly flammable liquid with a low boiling point, 37.5–38.5°C; often a component of petroleum. Also known as 2-methyl-2-butene.

amyl ether [ORG CHEM] **1.** Either of two isomeric compounds, *n*-amyl ether or isoamyl ether; both may be represented by the formula $(C_5H_{11})_2O$. **2.** A mixture mainly of isoamyl ether and *n*-amyl ether formed in preparation of amyl alcohols from amyl chloride; very slightly soluble in water; used mainly as a solvent.

amyl hydrosulfide *See* amyl mercaptan.

amyl mercaptan [ORG CHEM] $C_5H_{11}SH$ A colorless to light yellow liquid with a boiling range of 104–130°C; soluble in alcohol; used in odorant for detecting gas line leaks. Also known as amyl hydrosulfide; pentanethiol.

amyl nitrate [ORG CHEM] $C_5H_{11}ONO_2$ An ester of amyl alcohol to diesel fuel to raise the cetane number.

amyl nitrite [ORG CHEM] $(CH_3)_2CH(CH_2)_2NO_2$ A yellow liquid; soluble in alcohol, very slightly soluble in water; fruity odor; it is flammable and the vapor is explosive; used in medicine and perfumes. Also known as isoamyl nitrite.

amyloid [PATH] An abnormal protein deposited in tissues, formed from the infiltration of an unknown substance, probably a carbohydrate.

amyloid body [PATH] Any of the microscopic hyaline bodies that stain like amyloid with metachromatic aniline dyes.

amyloidosis [MED] Deposition of amyloid in one or more organs of the body.

amylolysis [BIOCHEM] The enzyme-catalyzed hydrolysis of starch to soluble products.

amylolytic enzyme [BIOCHEM] A type of enzyme capable of denaturing starch molecules; used in textile manufacture to remove starch added to slash sizing agents.

amylopectin [BIOCHEM] A highly branched, high-molecular-weight carbohydrate polymer composed of about 80% corn starch.

amyloplast [BOT] A colorless cell plastid packed with starch grains and occurring in cells of plant storage tissue.

amylopsin [BIOCHEM] An enzyme in pancreatic juice that acts to hydrolyze starch into maltose.

amylose [BIOCHEM] A linear starch polymer.

amyl propionate [ORG CHEM] $CH_3CH_2COOC_5H_{11}$ A colorless liquid with an applelike odor and a distillation range of 135–175°C; used in perfumes, lacquers, and flavors.

amyl salicylate [ORG CHEM] $C_6H_4OHCOOC_5H_{11}$ A clear liquid that occasionally has a yellow tinge; boils at 280°C; soluble in alcohol, insoluble in water; used in soap and perfumes. Also known as isoamyl salicylate.

amyl xanthate [ORG CHEM] A salt formed by replacing the hydrogen attached to the sulfur in amylxanthic acid by a metal; used as collector agent in the flotation of certain minerals.

Amynodontidae [PALEON] A family of extinct hippopotamuslike perissodactyl mammals in the superfamily Rhinoceratoidea.

amyotonia [MED] Absence of muscle tone.

amyotonia congenita [MED] A congenital disease of the central nervous system characterized by absence of voluntary muscle tone and reflexes. Also known as Oppenheim's disease.

amyotrophic lateral sclerosis [MED] A degenerative disease of the pyramidal tracts and lower motor neurons characterized by motor weakness and a spastic condition of the limbs associated with muscular atrophy, fibrillary twitching, and final involvement of nuclei in the medulla. Also known as lateral sclerosis.

An *See* actinon.

Anabaena [BOT] A genus of blue-green algae in the class Cyanophycaea; members fix atmospheric nitrogen.

Anabantidae [VERT ZOO] A fresh-water family of actinopterygian fishes in the order Perciformes, including climbing perches and gourami.

Anabantoidei [VERT ZOO] A suborder of fresh-water labyrinth fishes in the order Perciformes.

anabasine [ORG CHEM] A colorless, liquid alkaloid extracted from the plants *Anabasis aphylla* and *Nicotiana glauca*; boiling point is 105°C; soluble in alcohol and ether; used as an insecticide. Also known as neonicotin.

anabatic wind [METEOROL] An upslope wind; usually applied only when the wind is blowing up a hill or mountain as the result of a local surface heating, and apart from the effects of the larger-scale circulation.

anabiosis [BIOL] State of suspended animation induced by desiccation and reversed by addition of moisture; can be achieved in rotifers.

anabohitsite [PETR] A variety of olivine-pyroxenite containing hornblende and hypersthene and a high proportion (about 30%) of magnetite and ilmenite.

anabolic [BIOCHEM] Pertaining to anabolism. [EVOL] Pertaining to anaboly.

anabolism [BIOCHEM] A part of metabolism involving the union of smaller molecules into larger molecules; the method of synthesis of tissue structure.

anaboly [EVOL] The addition, through evolutionary differentiation, of a new terminal stage to the morphogenetic pattern.

anabranch [HYD] A diverging branch of a stream or river that loses itself in sandy soil or rejoins the main flow downstream.

Anacanthini [VERT ZOO] An equivalent name for the Gadiformes.

Anacardiaceae [BOT] A family of flowering plants, the sumacs, in the order Sapindales; many species are allergenic to man.

anacardium gum *See* cashew gum.

anaclinal [GEOL] Having a downward inclination opposite to that of a stratum.

anaclitic depression [PSYCH] Seriously impaired physical, social, and intellectual development in some infants following sudden separation from a loving mother or mother figure.

anaclitic object choice [PSYCH] The choosing of a love object resembling the person upon whom the individual was emotionally dependent during infancy.

anaconda [VERT ZOO] *Eunectes murinus*. The largest living snake, an arboreal-aquatic member of the boa family (Boidae).

anacoustic zone [GEOPHYS] The zone of silence in space, starting at about 100 miles (160 kilometers) altitude, where the distance between air molecules is greater than the wavelength of sound, and sound waves can no longer be propagated.

Anactinochitinosi [INV ZOO] A group name for three closely related suborders of mites and ticks: Onychopalpida, Mesostigmata, and Ixodides.

Anacystis [BOT] A genus of blue-green algae in the class Cyanophycea.

anadromous [VERT ZOO] Said of a fish, such as the salmon and shad, that ascends fresh-water streams from the sea to spawn.

Anadyomenaceae [BOT] A family of green marine algae in the order Siphonocladales characterized by the expanded blades of the thallus.

anaerobe [BIOL] An organism that does not require air or free oxygen to maintain its life processes.

anaerobic bacteria [MICROBIO] Any bacteria that can survive in the partial or complete absence of air; two types are facultative and obligate.

anaerobic condition [BIOL] The absence of oxygen, preventing normal life for organisms that depend on oxygen.

anaerobic glycolysis [BIOCHEM] A metabolic pathway in plants by which, in the absence of oxygen, hexose is broken down to lactic acid and ethanol with some adenosinetriphosphate synthesis.

anaerobic petri dish [MICROBIO] A glass laboratory dish for plate cultures of anaerobic bacteria; a thioglycollate agar medium and restricted air space give proper conditions.

anaerobic process [SCI TECH] A process from which air or oxygen not in chemical combination is excluded.

anaerobic sediment [GEOL] A highly organic sediment formed in the absence or near absence of oxygen in water that is rich in hydrogen sulfide.

anaerobiosis [BIOL] A mode of life carried on in the absence of molecular oxygen.

anaerophyte [ECOL] A plant that does not need free oxygen for respiration.

anafront [METEOROL] A front at which the warm air is ascending the frontal surface up to high altitudes.

anaglyph [GRAPHICS] **1.** A stereogram in which the two views are printed or projected superimposed in complementary colors, usually red and blue; by viewing through filter spectacles of corresponding complementary colors, a stereoscopic image is formed. **2.** A surface worked in low relief.

anakinesis [BIOCHEM] A process in living organisms by which energy-rich molecules, such as adenosinetriphosphate, are formed.

anal [ANAT] Relating to or located near the anus.

analbite [MINERAL] A triclinic albite which is not stable and becomes monoclinic at about 700°C.

analbuminemia [MED] A disorder transmitted as an autosomal recessive, characterized by drastic reduction or absence of serum albumin.

anal character [PSYCH] A type of personality in which anal erotic traits dominate beyond the period of childhood.

analcime [MINERAL] $NaAlSi_2O_6 \cdot H_2O$ A white or slightly colored isometric zeolite found in diabase and in alkali-rich basalts. Also known as analcite.

analcimite [PETR] An extrusive or hypabyssal rock that consists primarily of pyroxene and analcime.

analcimization [GEOL] The replacement in igneous rock of feldspars or feldspathoids by analcime.

analcite *See* analcime.

analemma [ASTRON] A figure-eight-shaped diagram on a globe showing the declination of the sun throughout the year and also the equation of time. [CIV ENG] Any raised construction which serves as a support or rest.

analeptic [PHARM] Any drug used to restore respiration and a wakeful state.

anal fin [VERT ZOO] An unpaired fin located medially on the posterior ventral part of the fish body.

analgesia [PHYSIO] Insensibility to pain with no loss of consciousness.

analgesic [PHARM] Any drug, such as salicylates, morphine, or opiates, used primarily for the relief of pain.

anal gland [INV ZOO] A gland in certain mollusks that secretes a purple substance. [VERT ZOO] A gland located near the anus or opening into the rectum in many vertebrates.

anallobaric center *See* pressure-rise center.

analog [ELECTR] A physical variable which remains similar to another variable insofar as the proportional relationships are the same over some specified range; for example, a temperature may be represented by a voltage which is its analog. [METEOROL] A past large-scale synoptic weather pattern which resembles a given (usually current) situation in its essential characteristics.

analog adder [ELECTR] A device with one output voltage which is a weighted sum of two input voltages.

analog channel [ELECTR] A channel on which the information transmitted can have any value between the channel limits, such as a voice channel.

analog communications [COMMUN] System of telecommunications employing a nominally continuous electric signal that varies in frequency, amplitude, and so on, in some direct correlation to nonelectrical information (sound, light, and so on) impressed on a transducer.

analog comparator [ELECTR] **1.** A comparator that checks digital values to determine whether they are within predetermined upper and lower limits. **2.** A comparator that produces high and low digital output signals when the sum of two analog voltages is positive and negative, respectively.

analog computer [COMPUT SCI] A computer is which quantities are represented by physical variables; problem parameters are translated into equivalent mechanical or electrical circuits as an analog for the physical phenomenon being investigated.

analog data [COMPUT SCI] Data represented in a continuous form, as contrasted with digital data having discrete values.

analog device [ELECTR] A control device that operates with variables represented by continuously measured voltages or other quantities.

analog-digital computer *See* hybrid computer.

analog indicator [ELECTR] A device in which the result of a measurement is indicated by a pointer deflection or other visual quantity.

analog multiplexer [ELECTR] A multiplexer that provides switching of analog input signals to allow use of a common analog-to-digital converter.

analog multiplier [ELECTR] A device that accepts two or more inputs in analog form and then produces an output proportional to the product of the input quantities.

analog network [ELECTR] A circuit designed so that circuit variables such as voltages are proportional to the values of variables in a system under study.

analogous [BIOL] Referring to structures that are similar in function and general appearance but not in origin, such as the wing of an insect and the wing of a bird.

analogous pole [SOLID STATE] The pole of a crystal that acquires a positive charge when the crystal is heated.

analog output [CONT SYS] Transducer output in which the amplitude is continuously proportional to a function of the stimulus.

analog recording [ELECTR] Any method of recording in which some characteristic of the recording signal, such as amplitude or frequency, is continuously varied in a manner analogous to the time variations of the original signal.

analog signal [ELECTR] A nominally continuous electrical signal that varies in amplitude or frequency in response to changes in sound, light, heat, position, or pressure.

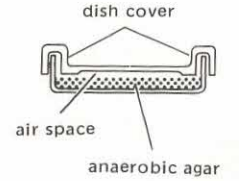
analog simulation [COMPUT SCI] The representation of physical systems and phenomena by variables such as translation, rotation, resistance, and voltage.

analog switch [ELECTR] **1.** A device that either transmits an analog signal without distortion or completely blocks it. **2.** Any

ANADYOMENACEAE

Anadyomene, a genus in Anadyomenaceae, with expanded blades.

ANAEROBIC PETRI DISH



Brewer anaerobic petri dish. *(Courtesy BioQuest, Division of Becton, Dickinson and Co.)*

solid-state device, with or without a driver, capable of bilaterally switching voltages or current.

analog-to-digital converter [ELECTR] A device which translates continuous analog signals into proportional discrete digital signals.

analog-to-frequency converter [ELECTR] A converter in which an analog input in some form other than frequency is converted to a proportional change in frequency.

analog voltage [ELECTR] A voltage that varies in a continuous fashion in accordance with the magnitude of a measured variable.

anal plate [EMBRYO] An embryonic plate formed of endoderm and ectoderm through which the anus later ruptures. [VERT ZOO] **1.** One of the plates on the posterior portion of the plastron in turtles. **2.** A large scale anterior to the anus of most snakes.

anal sphincter [ANAT] Either of two muscles, one voluntary and the other involuntary, controlling closing of the anus in vertebrates.

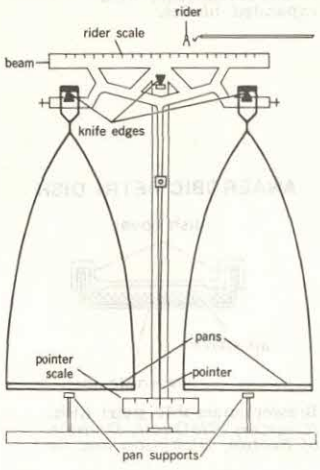
analysis [ANALY CHEM] The determination of the composition of a substance. [MATH] The branch of mathematics most explicitly concerned with the limit process or the concept of convergence; includes the theories of differentiation, integration and measure, infinite series, and analytic functions. Also known as mathematical analysis. [METEOROL] A detailed study in synoptic meteorology of the state of the atmosphere based on actual observations, usually including a separation of the entity into its component patterns and involving the drawing of families of isopleths for various elements.

analyte [ANALY CHEM] The sample being analyzed.

analytical aerotriangulation [ENG] Analytical phototriangulation, performed with aerial photographs.

analytical balance [ENG] A balance with a sensitivity of 0.1–0.01 milligram.

ANALYTICAL BALANCE



The rider analytical balance; simplest type of analytical balance.

analytical centrifugation [ENG] Centrifugation following precipitation to separate solids from solid-liquid suspensions; faster than filtration.

analytical chemistry [CHEM] The branch of chemistry dealing with techniques which yield any type of information about chemical systems.

analytical distillation [ANALY CHEM] Precise resolution of a volatile liquid mixture into its components; the mixture is vaporized by heat or vacuum, and the vaporized components are recondensed into liquids at their respective boiling points.

analytical engine [COMPUT SCI] An early-19th-century form of mechanically operated digital computer.

analytical extraction [ANALY CHEM] Precise transfer of one or more components of a mixture (liquid to liquid, gas to liquid, solid to liquid) by contacting the mixture with a solvent in which the component of interest is preferentially soluble.

analytical function generator [ELECTR] An analog computer device in which the dependence of an output variable on one or more input variables is given by a function that also appears in a physical law. Also known as natural function generator; natural law function generator.

analytical geomorphology *See* dynamic geomorphology.

analytical nadir-point triangulation [ENG] Radial triangulation performed by computational routines in which nadir points are utilized as radial centers.

analytical orientation [ENG] The computational steps required to determine tilt, direction of principal line, flight height, angular elements, and linear elements in preparing aerial photographs for rectification.

analytical photogrammetry [ENG] A method of photogrammetry in which solutions are obtained by mathematical methods.

analytical photography [ENG] Photography, either motion picture or still, accomplished to determine (by qualitative, quantitative, or any other means) whether a particular phenomenon does or does not occur.

analytical phototriangulation [ENG] A phototriangulation procedure in which the spatial solution is obtained by computational routines.

analytical radar prediction [ENG] Prediction based on proven formulas, power tables, or graphs; considers surface height, structural and terrain information, and criteria for radar reflectivity together with the aspect angle and range to the target.

analytical radial triangulation [ENG] Radial triangulation performed by computational routines.

analytical three-point resection radial triangulation [ENG] A method of computing the coordinates of the ground principal points of overlapping aerial photographs by resecting on three horizontal control points appearing in the overlap area.

analytical ultracentrifuge [ENG] An ultracentrifuge that uses one of three optical systems (schlieren, Rayleigh, or absorption) for the accurate determination of sedimentation velocity or equilibrium.

analytic continuation [MATH] The process of extending an analytic function to a domain larger than the one on which it was originally defined.

analytic curve [MATH] A curve whose parametric equations are real analytic functions of the same real variable.

analytic function [MATH] A function which can be represented by a convergent Taylor series. Also known as holomorphic function.

analytic geometry [MATH] The study of geometric figures and curves using a coordinate system and the methods of algebra. Also known as cartesian geometry.

analytic inertial navigation [NAV] Inertial navigation in which outputs of accelerometers that have inertia-maintained orientations are converted to geographic navigational data by automatic computers.

analytic mechanics [MECH] The application of differential and integral calculus to classical (nonquantum) mechanics.

analytic number theory [MATH] The study of problems concerning the discrete domain of integers by means of the mathematics of continuity.

analytic psychology [PSYCH] The school of psychology that regards the libido not as an expression of the sex instinct, but of the will to live; the unconscious mind is thought to express certain archaic memories of race. Also known as Jungian psychology.

analytic trigonometry [MATH] The study of the properties and relations of the trigonometric functions.

analyzer [COMPUT SCI] **1.** A routine for the checking of a program. **2.** One of several types of computers used to solve differential equations. [ENG] A multifunction test meter, measuring volts, ohms, and amperes. Also known as set analyzer. [MECH ENG] The component of an absorption refrigeration system where the mixture of water vapor and ammonia vapor leaving the generator meets the relatively cool solution of ammonia in water entering the generator and loses some of its vapor content. [OPTICS] A device, such as a Nicol prism, which passes only plane polarized light; used in the eyepiece of instruments such as the polariscope.

analyzing power [NUC PHYS] In a nuclear scattering process, a measure of the effect on scattering cross sections of changes in the polarization of the beam or target nuclei.

anamigmatism [GEOL] A process of high-temperature, high-pressure remelting of sediment to yield magma.

anamnesis [MED] Information gained from the patient and others regarding his medical history. [PSYCH] The faculty of memory.

anamnestic response [IMMUNOL] A rapidly increased antibody level following renewed contact with a specific antigen, even after several years. Also known as booster response.

Anamnia [VERT ZOO] Vertebrate animals which lack an amnion in development, including Agnatha, Chondrichthyes, Osteichthyes, and Amphibia.

Anamniota [VERT ZOO] The equivalent name for Anamnia.

anamorphic lens [OPTICS] A lens that produces different magnifications along lines in different directions in the image plane.

anamorphic system [OPTICS] An optical system incorporating a cylindrical surface in which the image is distorted so that the angle of coverage in a direction perpendicular to the cylinder is different for the image than for the object.

anamorphic zone [GEOL] The zone of rock flow, as indicated by reactions that may involve decarbonation, dehydration, and deoxidation; silicates are built up, and the formation of denser minerals and of compact crystalline structure takes place.

anamorphism [EVOL] *See* anamorphosis. [GEOL] A kind of metamorphism at considerable depth in the earth's crust and under great pressure, resulting in the formation of complex minerals from simple ones.

anamorphoscope [OPTICS] An optical instrument, usually consisting of a cylindrical lens or mirror, that restores an image distorted by anamorphosis to its normal proportions.

anamorphosis [EVOL] Gradual increase in complexity of form and function during evolution of a group of animals or plants. Also known as anamorphism. [GRAPHICS] A drawing which appears to be distorted unless viewed from a particular angle or with a special device. [OPTICS] The production of a distorted image by an optical system.

anamorphote lens [OPTICS] A lens designed to produce anamorphosis.

Anancinae [PALEON] A subfamily of extinct proboscidean placental mammals in the family Gomphotheriidae.

Ananke [ASTRON] A small satellite of Jupiter with a diameter of about 14 miles (23 kilometers), orbiting with retrograde motion at a mean distance of 1.3×10^7 miles (2.1×10^7 kilometers). Also known as Jupiter XII.

anapaite [MINERAL] $Ca_2Fe(PO_4)_2 \cdot 4H_2O$ A pale-green or greenish-white triclinic mineral consisting of a ferrous iron hydrous phosphate and occurring in crystals and massive forms; hardness is 3–4 on Mohs scale, and specific gravity is 3.81.

anapeirean *See* Pacific suite.

anaphase [CYTOL] **1.** The stage in mitosis and in the second meiotic division when the centromere splits and the chromatids separate and move to opposite poles. **2.** The stage of the first meiotic division when the two halves of a bivalent chromosome separate and move to opposite poles.

anaphoresis [MED] Deficient functioning of sweat glands. [PHYS CHEM] Upon application of an electric field, the movement of positively charged colloidal particles or macromolecules suspended in a liquid toward the anode. [PHYSIO] Movement of positively charged ions into tissues under the influence of an electric current.

anaphylactic shock [MED] A syndrome seen as one of the clinical manifestations of anaphylaxis.

anaphylactoid reaction [MED] A nonallergic reaction resembling anaphylaxis and depending on the toxicity of the inductant.

anaphylatoxin [IMMUNOL] The vasodilator principle, a toxic substance released by tissues of sensitized animals when antigen and antibody react.

anaphylaxis [MED] Hypersensitivity following parenteral injection of an antigen; local or systemic allergenic reaction occurs when the antigen is reintroduced after a time lapse.

anaplasia [MED] Reversion of cells to an embryonic, immature, or undifferentiated state; degree usually corresponds to malignancy of a tumor.

Anaplasma [MICROBIO] A genus of the family Anaplasmataceae; organisms form inclusions in red blood cells of ruminants.

Anaplasmataceae [MICROBIO] A family of the order Rickettsiales; obligate parasites, either in or on red blood cells or in the plasma of various vertebrates.

Anaplotheriidae [PALEON] A family of extinct tylopod ruminants in the superfamily Anaplotherioidea.

Anaplotherioidea [PALEON] A superfamily of extinct ruminant artiodactyls in the infraorder Tylopoda.

anapolysis [INV ZOO] Lifetime retention of ripe proglottids in some tapeworms.

anapophysis [ANAT] An accessory process on the dorsal side of the transverse process of the lumbar vertebrae in man and other mammals.

Anapsida [VERT ZOO] A subclass of reptiles characterized by a roofed temporal region in which there are no temporal openings.

anasarca [MED] Generalized edema of the subcutaneous connective tissue and serous body cavities.

Anasca [PALEON] A suborder of extinct bryozoans in the order Cheilostomata.

anaseism [GEOPHYS] Movement of the earth in a direction away from the focus of an earthquake.

Anaspida [PALEON] An order of extinct fresh- or brackish-water vertebrates in the class Agnatha.

Anaspidacea [INV ZOO] An order of the crustacean superorder Syncarida.

Anaspididae [INV ZOO] A family of crustaceans in the order Anaspidacea.

anastatic process [GRAPHICS] Reproduction of a printed page, either type or pictures, by moistening it with dilute acid and pressing it against a zinc plate; the acid etches the zinc wherever in contact with unprinted portions; the plate can then be inked and printed.

anastatic water [HYD] That part of the subterranean water in the capillary fringe between the zone of aeration and the zone of saturation in the soil.

anastigmat *See* anastigmatic lens.

anastigmatic lens [OPTICS] A compound lens corrected for astigmatism and curvature of field. Also known as anastigmat.

anastomosis [SCI TECH] The union or intercommunication of branched systems in either two or three dimensions. Also known as inosculation.

anastral [CYTOL] Lacking asters.

anatase [MINERAL] The brown, dark-blue, or black tetragonal crystalline form of titanium dioxide, TiO_2; used to make a white pigment. Also known as octahedrite.

anatexis [GEOL] A high-temperature process of metamorphosis by which plutonic rock in the lowest levels of the crust is melted and regenerated as a magma.

anathermal [GEOL] A period of time between the age of other strata or units of reference in which the temperature is increasing.

Anatidae [VERT ZOO] A family of waterfowl, including ducks, geese, mergansers, pochards, and swans, in the order Anseriformes.

anatomical dead space *See* dead space.

anatomy [BIOL] A branch of morphology dealing with the structure of animals and plants.

anatropous [BOT] Having the ovule fully inverted so that the micropyle adjoins the funiculus.

anauxite [MINERAL] $Al_2(SiO_7)(OH)_4$ A clay mineral that is a mixture of kaolinite and quartz. Also known as ionite.

anaxial [BIOL] Lacking an axis, therefore being irregular in form.

Anbauhobel [MIN ENG] A rapid plough, traveling at a speed of 75 feet (22.5 meters) per minute, for use on longwall faces.

Ancalomicrobium [MICROBIO] A genus of prosthecate bacteria; nonmotile, unicellar forms with two to eight prosthecae per cell; reproduction is by budding of cells.

ancestroecium [INV ZOO] The tube that encloses an ancestrula.

ancestrula [INV ZOO] The first polyp of a bryozoan colony.

anchieutectic [GEOL] A type of magma which is incapable of undergoing further notable main-stage differentiation because its mineral composition is practically in eutectic proportions.

anchimeric assistance [ORG CHEM] The participation by a neighboring group in the rate-determining step of a reaction; most often encountered in reactions of carbocation intermediates.

anchimonomineralic [PETR] Of rock composed mostly of one kind of mineral.

anchor [CIV ENG] A device connecting a structure to a heavy masonry or concrete object to a metal plate or to the ground to hold the structure in place. [ENG] A device, such as a metal rod, wire,or strap, for fixing one object to another, such as specially formed metal connectors used to fasten together timbers, masonry, or trusses. [INV ZOO] **1.** An anchor-shaped spicule in the integument of sea cucumbers. **2.** An anchor-shaped ossicle in echinoderms. [MECH ENG] A vehicle used in steam plowing and located on the side of the field opposite that of the engine while maintaining the tension on the endless wire by means of a pulley. [MET] A device that prevents the movement of sand cores in molds. [NAV ARCH] A device attached by cable to a ship and dropped overboard so that its hooks or flukes engage the bottom and hold the ship at that location.

anchorage [CIV ENG] **1.** An area where a vessel anchors or may anchor because of either suitability or designation. Also known as anchor station. **2.** A device which anchors tendons to the posttensioned concrete member. **3.** In pretensioning, a device used to anchor tendons temporarily during the hardening of the concrete. **4.** *See* deadman.

anchorage chart [MAP] A nautical chart showing prescribed or recommended anchorages.

anchorage deformation [CIV ENG] The shortening of tendons due to their modification or slippage when the prestressing force is transferred to the anchorage device. Also known as anchorage slip.

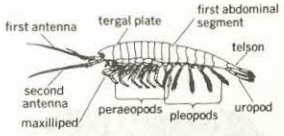
anchorage slip *See* anchorage deformation.

anchorage zone [CIV ENG] **1.** In posttensioning, the region adjacent to the anchorage for the tendon which is subjected to secondary stresses as a result of the distribution of the prestress-

ANASPIDA

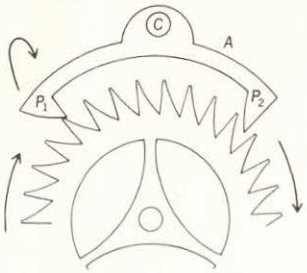
Pharyngolepis oblongus Kiaer of the Anaspida, reconstruction. *(From A. Ritchie)*

ANASPIDIDAE



A male *Anaspides tasmaniae* Thompson about 5 centimeters long, found in freshwater habitats of Tasmania. *(From R. E. Snodgrass, A Textbook of Arthropod Anatomy, Comstock, 1952)*

ANCHOR ESCAPEMENT



Common in domestic pendulum clocks, this escapement tends to compensate for changes in amplitude of the swing because of irregularly cut gears and varying lubrication; A = anchor, P_1, P_2 = pallets, C = point at which anchor swings about.

ANDALUSITE

Andalusite, variety chiastolite. Prismatic crystal specimens from Worchester County, Mass. *(American Museum of Natural History specimens)*

ANDESINE

Andesine grains with biotite, in a specimen from Zoutpansberg, Transvaal, South Africa. Andesine is rarely found except as grains in igneous rocks.

ing force. **2.** In pretensioning, the region in which transfer bond stresses are developed.

anchor and collar [DES ENG] A door or gate hinge whose socket is attached to an anchor embedded in the masonry.

anchor ball [NAV ARCH] **1.** A projectile with grappling hooks which is fired into the rigging of a wrecked vessel for lifesaving purposes. **2.** A black, circular shape hoisted between the bow and foremast of a vessel to indicate that it is anchored in or near a channel.

anchor block [BUILD] A block of wood, replacing a brick in a wall to provide a nailing or fastening surface. [CIV ENG] *See* deadman.

anchor bolster *See* hawse bolster.

anchor bolt [CIV ENG] A bolt used with its head embedded in masonry or concrete and its threaded part protruding to hold a structure or machinery in place. Also known as anchor rod.

anchor buoy [ENG] One of a series of buoys marking the limits of an anchorage.

anchor charge [ENG] A procedure that allows several charges to be preloaded in a seismic shot hole; the bottom charges are fired first, and the upper charges are held down by anchors.

anchored bulkhead [CIV ENG] A bulkhead secured to anchor piles.

anchored dune [GEOL] A sand dune stabilized by growth of vegetation.

anchored-type ceramic veneer [MATER] Ceramic veneer which is attached to a backing by grout and nonferrous metal anchors.

anchor escapement [HOROL] A clock escapement in which pallets of an anchor-shaped component cause the escape wheel to recoil slightly as the wheel is arrested. Also known as recoil escapement.

anchor gear [NAV ARCH] Shipboard apparatus consisting of anchor windlass, chain stoppers, and hawsepipes; more generally includes anchor and chain.

anchor ice [HYD] Ice formed beneath the surface of water, as in a lake or stream, and attached to the bottom or to submerged objects. Also known as bottom ice; ground ice.

anchorite [PETR] A variety of diorite having nodules of mafic minerals and veins of felsic minerals.

anchor light [NAV ARCH] A mast light shown by a vessel at anchor during the night.

anchor log [CIV ENG] A log, beam, or concrete block buried in the earth and used to hold a guy rope firmly. Also known as deadman.

anchor nut [DES ENG] A nut in the form of a tapped insert forced under steady pressure into a hole in sheet metal.

anchor packer [PETRO ENG] A device used in oil wells to seal the annular space between the tubing and its surrounding casing to help control the oil-producing gas lift.

anchor pile [CIV ENG] A pile that is located on the land side of a bulkhead or pier and anchors it through such devices as rods, cables, and chains.

anchor plate [CIV ENG] A metal or wooden plate fastened to or embedded in a support, such as a floor, and used to hold a supporting cable firmly.

anchor rod *See* anchor bolt.

anchor shackle [NAV ENG] A shackle by which a chain is joined to the ring of an anchor. Also known as bending shackle.

anchor station [CIV ENG] *See* anchorage. [OCEANOGR] An anchoring site by a research vessel for the purpose of making a set of scientific observations.

anchor stone [GEOL] A rock or pebble that has marine plants attached to it.

anchor tower [CIV ENG] **1.** A tower which is a part of a crane staging or stiffleg derrick and serves as an anchor. **2.** A tower that supports and anchors an overhead transmission line.

anchor wall *See* deadman.

anchor well [NAV ARCH] A well in a ship's forward overhang for holding anchors.

anchor windlass [NAV ARCH] A machine, generally located on the forecastle head of a ship, designed to raise or lower an anchor; it consists of a horizontal barrel that is fitted with gearlike projections that engage the links of the anchor chain, and is turned by steam or electrical power. Also known as windlass.

anchovy [VERT ZOO] Any member of the Engraulidae, a family of herringlike fishes harvested commercially for human consumption.

anchusa *See* alkanet.

anchylosis *See* ankylosis.

ancipital [BOT] Having two edges, specifically referring to flattened stems, as of certain grasses.

ancon [ARCH] A bracket, elbow, or console at the top of a wall or window jamb to support a cornice.

ancora [INV ZOO] The initial, anchor-shaped growth stage of graptolithinids.

ancylite [MINERAL] $SrCe(CO_3)_2(OH)\cdot H_2O$ A mineral consisting of hydrous basic carbonate of cerium and strontium.

ancyloid [INV ZOO] A limpet-shaped or patelliform shell with the apex directed anteriorly.

ancylopoda [PALEON] A suborder of extinct herbivorous mammals in the order Perissodactyla.

Ancylostoma [INV ZOO] A genus of roundworms, commonly known as hookworms, in the order Ancylostomidae; parasites of man, dogs, and cats.

Ancylostoma duodenale [INV ZOO] The Old World hookworm, a human intestinal parasite that causes microcytic hypochromic anemia.

Ancylostomidae [INV ZOO] A family of nematodes belonging to the group Strongyloidea.

And *See* Andromeda.

andalusite [MINERAL] Al_2SiO_5 A brown, yellow, green, red, or gray neosilicate mineral crystallizing in the orthorhombic system, usually found in metamorphic rocks.

AND circuit *See* AND gate.

Andean-type continental margin [GEOL] A continental margin, as along the Pacific coast of South America, where oceanic lithosphere descends beneath an adjacent continent producing andesitic continental margin volcanism.

Andept [GEOL] A suborder of the soil order Inceptisol, formed chiefly in volcanic ash or in regoliths with high components of ash.

Anderson bridge [ELECTR] A six-branch modification of the Maxwell-Wien bridge, used to measure self-inductance in terms of capacitance and resistance; bridge balance is independent of frequency.

Anderson-Dayem bridge [CRYO] A Josephson junction in a superconducting film, formed by a constriction with length and width on the order of a few micrometers or less.

andersonite [MINERAL] $Na_2Ca(UO_2)(CO_3)_3\cdot 6H_2O$ Bright yellow-green secondary mineral consisting of a hydrous sodium calcium uranium carbonate.

Andes glow *See* Andes lightning.

andesine [MINERAL] A plagioclase feldspar with a composition ranging from $Ab_{70}An_{30}$ to $Ab_{50}An_{50}$, where Ab = $NaAlSi_3O_8$ and An = $CaAl_2Si_2O_8$; it is a primary constituent of intermediate igneous rocks, such as andesites.

andesite [PETR] Very finely crystalline extrusive rock of volcanic origin composed largely of plagioclase feldspar (oligoclase or andesine) with smaller amounts of dark-colored mineral (hornblende, biotite, or pyroxene), the extrusive equivalent of diorite.

andesite line [GEOL] The postulated geographic and petrographic boundary between the andesite-dacite-rhyolite rock association of the margin of the Pacific Ocean and the olivine-basalt-trachyte rock association of the Pacific Ocean basin.

andesitic glass [GEOL] A natural glass that is chemically equivalent to andesite.

Andes lightning [GEOPHYS] Electrical coronal discharges observable often as far as several hundred miles away, generally over any of the mountainous areas of the world when under disturbed electrical conditions. Also known as Andes glow.

AND function [MATH] An operation in logical algebra on statements P, Q, R, such that the operation is true if all the statements P, Q, R, ... are true, and the operation is false if at least one statement is false.

AND gate [ELECTR] A circuit which has two or more input-signal ports and which delivers an output only if and when every input signal port is simultaneously energized. Also known as AND circuit; passive AND gate.

AND/NOR gate [ELECTR] A single logic element whose operation is equivalent to that of two AND gates with outputs feeding into a NOR gate.

AND NOT gate [ELECTR] A coincidence circuit that performs the logic operation AND NOT, under which a result is true only if statement A is true and statement B is not. Also known as A AND NOT B gate.

AND-OR circuit [ELECTR] Gating circuit that produces a

prescribed output condition when several possible combined input signals are applied; exhibits the characteristics of the AND gate and the OR gate.

AND-OR-INVERT gate [ELECTR] A logic circuit with four inputs, a_1, a_2, b_1, and b_2, whose output is 0 only if either a_1 and a_2 or b_1 and b_2 are 1. Abbreviated A-O-I gate.

andorite [MINERAL] $AgPbSb_3S_6$ A dark-gray or black orthorhombic mineral. Also known as sundtite.

Andr *See* Andromeda.

Andrade's creep law [MECH] A law which states that creep exhibits a transient state in which strain is proportional to the cube root of time and then a steady state in which strain is proportional to time.

andradite [MINERAL] The calcium-iron end member of the garnet group.

Andreaeales [BOT] The single order of mosses of the subclass Andreaeobrya.

Andreaeceae [BOT] The single family of the Andreaeales, an order of mosses.

Andreaeobrya [BOT] The granite mosses, a subclass of the class Bryopsida.

Andrenidae [INV ZOO] The mining or burrower bees, a family of hymenopteran insects in the superfamily Apoidea.

andrewsite [MINERAL] $(Cu,Fe^{2+})Fe_3^{3+}(PO_4)_3(OH)_2$ A bluish-green mineral consisting of a basic phosphate of iron and copper.

andrite [GEOL] A meteorite composed principally of augite with some olivine and troilite.

androecium [BOT] The aggregate of stamens in a flower.

androgen [BIOCHEM] A class of steroid hormones produced in the testis and adrenal cortex which act to regulate masculine secondary sexual characteristics.

androgenesis [EMBRYO] Development of an embryo from a fertilized irradiated egg, involving only the male nucleus.

androgenetic merogony [EMBRYO] The fertilization of egg fragments that lack a nucleus.

androgenic gland [INV ZOO] Any of the accessory glands associated with the sperm duct in male crustaceans and required for differentiation of a functional male.

androgen unit [BIOL] A unit for the standardization of male sex hormones.

androgyny [MED] A form of pseudohermaphroditism in humans in which the individual has female external sexual characteristics, but has undescended testes. Also known as male pseudohermaphroditism.

android pelvis *See* masculine pelvis.

Andromeda [ASTRON] A constellation with a right ascension of 1 hour and a declination of 40°N. Abbreviated And; Andr.

Andromeda Galaxy [ASTRON] The spiral galaxy of type Sb nearest to the Milky Way. Also known as Andromeda Nebula.

Andromeda Nebula *See* Andromeda Galaxy.

Andromedids [ASTRON] A meteor shower whose radiant is located near the star γ Andromedae, and which reaches its peak about November 27; associated with the Biela comet. Also known as Bielids.

andromerogony [EMBRYO] Development of an egg fragment following cutting, shaking, or centrifugation of a fertilized or unfertilized egg.

androphile [ECOL] An organism, such as a mosquito, showing a preference for humans as opposed to animals.

androphobia [PSYCH] Abnormal fear of men or of the male sex.

androphore [BOT] A stalk that supports stamens or antheridia. [INV ZOO] A gonophore in coelenterates in which only male elements develop.

androsin [BIOCHEM] $C_{15}H_{20}O_8$ A glucoside found in the herb *Apocynum androsaemifolium;* yields glucose and acetovanillone on hydrolysis.

androsperm [BIOL] A sperm cell carrying a Y chromosome.

androstane [BIOCHEM] $C_{19}H_{32}$ The parent steroid hydrocarbon for all androgen hormones. Also known as etioallocholane.

androstenedione [BIOCHEM] $C_{19}H_{26}O_2$ Any one of three isomeric androgens produced by the adrenal cortex.

androsterone [BIOCHEM] $C_{19}H_{30}O_2$ An androgenic hormone occurring as a hydroxy ketone in the urine of men and women.

anechoic chamber [ENG] **1.** A test room in which all surfaces are lined with a sound-absorbing material to reduce reflections of sound to a minimum. Also known as dead room; free-field room. **2.** A room completely lined with a material that absorbs radio waves at a particular frequency or over a range of frequencies; used principally at microwave frequencies, such as for measuring radar beam cross sections.

anelasticity [MECH] Deviation from a proportional relationship between stress and strain.

anelectric [PHYS] Not becoming charged by friction.

Anelytropsidae [VERT ZOO] A family of lizards represented by a single Mexican species.

anemia [MED] A condition marked by significant decreases in hemoglobin concentration and in the number of circulating red blood cells. Also known as oligochromemia.

anemic necrosis [MED] Tissue death following a critical decrease in blood flow or oxygen levels.

anemobiagraph [ENG] A recording pressure-tube anemometer in which the wind scale of the float manometer is linear through the use of springs; an example is the Dines anemometer.

anemochory [ECOL] Wind dispersal of plant and animal disseminules.

anemoclast [GEOL] A clastic rock that was fragmented and rounded by wind.

anemoclastic [GEOL] Referring to rock that was broken by wind erosion and rounded by wind action.

anemoclinometer [ENG] A type of instrument which measures the inclination of the wind to the horizontal plane.

anemogenic [MED] Causing anemia.

anemogram [ENG] A record made by an anemograph.

anemograph [ENG] **1.** An instrument which records wind velocities. **2.** A recording anemometer.

anemology [METEOROL] Scientific investigation of winds.

anemometer [ENG] A device which measures air speed.

anemometry [METEOROL] The study of measuring and recording the direction and speed (or force) of the wind, including its vertical component.

anemophilous [BOT] Pollinated by wind-carried pollen.

anemophobia [PSYCH] Abnormal fear of drafts or winds.

anemoscope [ENG] An instrument for indicating the direction of the wind.

anemotaxis [BIOL] Orientation movement of a free-living organism in response to wind.

anemotropism [BIOL] Orientation response of a sessile organism to air currents and wind.

anemovane [ENG] A combined contact anemometer and wind vane used in the Canadian Meteorological Service.

anencephalia [MED] A congenital malformation in which all or most of the brain and flat skull bones are absent.

anenterous [ZOO] Having no intestine, as a tapeworm.

Anepitheliocystidia [INV ZOO] A superorder of digenetic trematodes proposed by G. LaRue.

anergy [IMMUNOL] The condition of exhibiting no response to an antigen or antibody. [MED] The condition of exhibiting a lack of energy.

aneroid [ENG] **1.** Containing no liquid or using no liquid. **2.** *See* aneroid barometer.

aneroid altimeter [ENG] An altimeter containing an aneroid barometer that actuates the indicator.

aneroid barograph [ENG] An aneroid barometer arranged so that the deflection of the aneroid capsule actuates a pen which graphs a record on a rotating drum. Also known as aneroidograph; barograph; barometrograph.

aneroid barometer [ENG] A barometer which utilizes an aneroid capsule. Also known as anerroid.

aneroid calorimeter [ENG] A calorimeter that uses a metal of high thermal conductivity as a heat reservoir.

aneroid capsule [ENG] A thin, disk-shaped box or capsule, usually metallic, partially evacuated and sealed, held extended by a spring, which expands and contracts with changes in atmospheric or gas pressure. Also known as bellows.

aneroid diaphragm [ENG] A thin plate, usually metal, covering the end of an aneroid capsule and moving axially as the ambient gas pressure increases or decreases.

aneroid flowmeter [ENG] A mechanism to measure fluid flow rate by pressure of the fluid against a bellows counterbalanced by a calibrated spring.

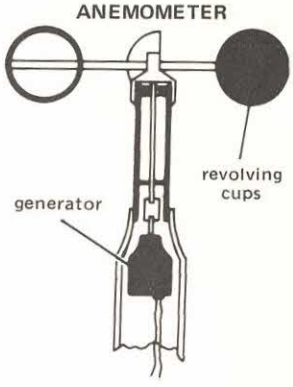
aneroid liquid-level meter [ENG] A mechanism to measure fluid depth by pressure of the fluid against a bellows which in turn acts on a manometer or signal transmitter.

aneroidograph *See* aneroid barograph.

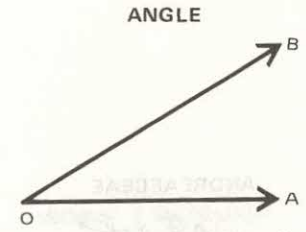
ANDREAECEAE

Andreaea petrophila. (From H. E. Jaques, Plant Families, How to Know Them, 2d ed., Brown, 1949)

ANEMOMETER



Cutaway diagram of one type of anemometer: revolving-cup electric anemometer. *(From D. M. Considine, ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*



Angle formed by rays *OA* and *OB* emanating from common point *O*. *O* is vertex of angle; *OA* and *OB* are sides of angle.

aneroid valve [MECH ENG] A valve actuated or controlled by an aneroid capsule.

anesthesia [PHYSIO] **1.** Insensibility, general or local, induced by anesthetic agents. **2.** Loss of sensation, of neurogenic or psychogenic origin.

anesthesiology [MED] A branch of medicine dealing with the administration of anesthetics.

anesthetic [PHARM] A drug, such as ether, that produces loss of sensibility.

anestrus [VERT ZOO] A prolonged period of inactivity between two periods of heat in cyclically breeding female mammals.

anethole [ORG CHEM] $C_{10}H_{12}O$ White crystals that melt at 22.5°C; very slightly soluble in water; affected by light; odor resembles oil of anise; used in perfumes and flavors, and as a sensitizer in color-bleaching processes in color photography. Also known as anise camphor; 1-methoxy-4-propenyl benzene; *para*-methoxypropenylbenzene; *para*-propenylanisole.

anethum oil *See* dill oil.

aneuploidy [GEN] Deviation from a normal haploid, diploid, or polyploid chromosome complement by the presence in excess of, or in defect of, one or more individual chromosomes.

aneurine *See* thiamine.

aneurysm [MED] Localized abnormal dilation of an artery due to weakening of the vessel wall.

angaralite [MINERAL] $Mg_2(Al,Fe)_{10}Si_6O_{29}$ A mineral of the chlorite group, occurring in thin black plates.

Angara Shield [GEOL] A shield area of crystalline rock in Siberia.

angel echo [ENG] A radar echo from a region where there are no visible targets; may be caused by insects, birds, or refractive index variations in the atmosphere.

angelica [FOOD ENG] **1.** A spice from the perennial herb *Angelica archangelica* of the ginger family. **2.** An amber or a yellow sweet wine without muscat flavor.

angelica oil [MATER] An essential oil with an odor that is strongly aromatic; soluble in alcohol; main ingredients are phellandrene and valeric acid; distilled from the seeds and roots of *Angelica archangelica;* used in medicines, liqueurs, and perfumes.

angiectasis [MED] Abnormal blood vessel dilation.

angina [MED] **1.** A sore throat. **2.** Any tense, constricting pain.

angina pectoris [MED] Constricting chest pain which may be accompanied by pain radiating down the arms, up into the jaw, or to other sites.

angioblast [EMBRYO] A mesenchyme cell derived from extraembryonic endoderm that differentiates into embryonic blood cells and endothelium.

angiocardiography [MED] Roentgenographic visualization of the heart chambers and thoracic vessels following injection of a radiopaque material.

angiogenesis [EMBRYO] The origin and development of blood vessels.

angiogram [MED] An x-ray photograph of blood vessels following injection of a radiopaque material.

angiography [MED] Roentgenographic visualization of blood vessels following injection of a radiopaque material.

angiology [MED] The branch of medicine concerned with the blood vessels and the lymphatic system.

angioma [MED] A tumor composed of lymphatic vessels or blood.

angioneurotic edema [MED] Acute, localized accumulations of tissue fluid causing swellings around the face; condition may be due either to heredity or a food allergy.

angioplacentography [MED] Radiography of the blood vessels of placentas through the injection of radiopaque dye.

angiosarcoma [MED] A malignant soft-tissue tumor arising from vascular elements.

angioscotoma [MED] A visual-field disturbance caused by dilated blood-vessels in the retina.

angiospasm *See* vasospasm.

angiosperm [BOT] The common name for members of the plant division Magnoliophyta.

Angiospermae [BOT] An equivalent name for the .agnoliophyta.

angiotensin [BIOCHEM] A decapeptide hormone that influences blood vessel constriction and aldosterone secretion by the adrenal cortex. Also known as hypertensin.

angitis [MED] An inflammatory condition of the walls of blood or lymph vessels.

angle [MATH] The geometric figure, arithmetic quantity, or algebraic signed quantity determined by two rays emanating from a common point or by two planes emanating from a common line.

angle back-pressure valve [MECH ENG] A back-pressure valve with its outlet opening at right angles to its inlet opening.

angle bar [BUILD] An upright bar at the meeting of two faces of a polygonal window, bay window, or bow window.

angle bead [BUILD] A strip, usually of metal or wood, set at the corner of a plaster wall to protect the corner or serve as a guide to float the plaster flush with it.

angle beam [ENG] Ultrasonic waves transmitted for the inspection of a metallic surface at an angle measured from the beam center line to a normal to the test surface.

angle bisection [MATH] The division of an angle by a line or plane into two equal angles.

angle blasting [ENG] Sandblasting, or the like, at an angle of less that 90°.

angle block [ENG] A small block of wood used to fasten adjacent pieces, usually at right angles, or glued into the corner of a wooden frame to stiffen it. Also known as glue block.

angle board [DES ENG] A board whose surface is cut at a desired angle; serves as a guide for cutting or planing other boards at the same angle.

angle bond [CIV ENG] A tie used to bond masonry work at wall corners.

angle brace [ENG] A brace across the interior angle of two members that meet at an angle. Also known as angle tie.

angle bracket [ARCH] A bracket used in an angle or corner of a molded cornice. [GRAPHICS] Either of a pair of marks < > enclosing a mutilated passage or the explanation of an abbreviation in a text, or to enclose quotations or illustrations in a reference work. Also known as broken bracket; pointed bracket.

angle brick [ENG] Any brick having an oblique shape to fit an oblique, salient corner.

angle buttress [ARCH] One of two buttresses at right angles to each other, forming the corner of a structure.

angle capital [ARCH] A capital at a corner column.

angle clip [CIV ENG] A short strip of angle iron used to secure structural elements at right angles.

angle closer [ENG] A specially shaped brick used to close the bond at the corner of a wall.

angle collar [DES ENG] A cast-iron pipe fitting which has a socket at each end for joining with the spigot ends of two pipes that are not in alignment.

angle cut [MIN ENG] A drilling pattern in which drill holes converge, so that a core can be blasted out and an open or relieved cavity or free face be left for the following shots, which are timed to ensue with a fractional delay.

angle diversity [COMMUN] Diversity reception in which beyond-the-horizon tropospheric scatter signals are received at slightly different angles, equivalent to paths through different scatter volumes in the troposphere.

angle divider [DES ENG] A square for setting or bisecting angles; one side is an adjustable hinged blade.

Angledozer [MECH ENG] A power-operated machine fitted with a blade, adjustable in height and angle, for pushing, sidecasting, and spreading loose excavated material as for open-cast pits, clearing land, or leveling runways. Also known as angling dozer.

angled stair [ARCH] A stair in which successive flights are at an angle of other than 180° to each other (often at 90°), with an intermediate platform between them.

angle equation [ENG] A condition equation which expresses the relationship between the sum of the measured angles of a closed figure and the theoretical value of that sum, the unknowns being the corrections to the observed directions or angles, depending on which are used in the adjustment. Also known as triangle equation.

angle fillet [ENG] A wooden strip, triangular in cross section, which is used to cover the internal joint between two surfaces meeting at an angle of less than 180°.

angle fishplates [CIV ENG] Plates which join the rails and prevent the rail joint from sagging where heavy cars and locomotives are used. Also known as angle; angle bar.

angle float [ENG] A trowel having two edge surfaces bent at

90°; used to finish corners in freshly poured concrete and in plastering.

angle gauge [CIV ENG] A template used to set or check angles in building construction.

angle gear *See* angular gear.

angle hip tile *See* arris hip tile.

angle iron [CIV ENG] **1.** An L-shaped cleat or brace. **2.** A length of steel having a cross section resembling the letter L.

angle jamming [ELECTR] An electronic countermeasure in which azimuth and elevation information, from a scanning fire control radar present in the modulation components on the returning echo pulse, is jammed by transmitting a pulse similar to the radar pulse but with modulation information out of phase with the returning target angle modulation information.

angle joint [ENG] A joint between two pieces of lumber which results in a change in direction.

angle lacing [CIV ENG] A system of lacing in which angle irons are used in place of bars.

angle-lighting luminaire [OPTICS] A luminaire whose light distribution is asymmetric with respect to a direction of specific interest.

angle-measuring equipment [NAV] A radio aid to navigation for measuring the vertical angle to a ground-based or sea-based transmitter by determining the phase difference between signals received by antennas at different positions on the aircraft. Abbreviated AME.

angle method of adjustment [ENG] A method of adjustment of observations which determines corrections to observed angles.

angle modillion [ARCH] A modillion at the corner of a cornice.

angle modulation [ELECTR] The variation in the angle of a sine-wave carrier; particular forms are phase modulation and frequency modulation. Also known as sinusoidal angular modulation.

angle noise [ELECTROMAG] Tracking error introduced into radar by variations in the apparent angle of arrival of the echo from a target, because of finite target size.

angle of action [MECH ENG] The angle of revolution of either of two wheels in gear during which any particular tooth remains in contact.

angle of advance *See* angular advance.

angle of approach [CIV ENG] The maximum angle of an incline onto which a vehicle can move from a horizontal plane without interference. [MECH ENG] The angle that is turned through by either of paired wheels in gear from the first contact between a pair of teeth until the pitch points of these teeth fall together. [ORD] Angle between the line along which a moving target is traveling and the line along which the gun is pointed.

angle of arrival [ELECTROMAG] A measure of the direction of propagation of electromagnetic radiation upon arrival at a receiver (the term is most commonly used in radio); it is the angle between the plane of the phase front and some plane of reference, usually the horizontal, at the receiving antenna.

angle of attack [AERO ENG] The angle between a reference line which is fixed with respect to an airframe (usually the longitudinal axis) and the direction of movement of the body. [MIN ENG] The angle in a mine fan made by the direction of air approach and the chord of the aerofoil section.

angle of bite *See* angle of nip.

angle of cant [AERO ENG] In a spin-stabilized rocket, the angle formed by the axis of a venturi tube and the longitudinal axis of the rocket.

angle of clearance [ORD] The angle between the line along which a gun or launcher is pointed at the target and the line along which the weapon must be pointed for a projectile or missile fired from it to clear any obstruction between the weapon and the target.

angle of climb [AERO ENG] The angle between the flight path of a climbing vehicle and the local horizontal.

angle of commutation [ASTRON] The difference between the celestial longitudes of the sun and a planet, as observed from the earth.

angle of contact [FL MECH] The angle between the surface of a liquid and the surface of a partially submerged object or of the container at the line of contact. Also known as contact angle.

angle of current [HYD] In stream gaging, the angular difference between 90° and the angle made by the current with a measuring section.

angle of cut [NAV] The smaller angular difference of two bearings or lines of position.

angle of deflection [ORD] The horizontal clockwise angle between the axis of the bore of a gun and the line of sighting when a gun is laid for direction.

angle of departure [AERO ENG] The vertical angle, at the origin, between the line of site and the line of departure. [CIV ENG] The maximum angle of an incline from which a vehicle can move onto a horizontal plane without interference, such as from rear bumpers.

angle of depression [ENG] The angle in a vertical plane between the horizontal and a descending line. Also known as depression angle; descending vertical angle; minus angle.

angle of descent [AERO ENG] The angle between the flight path of a descending vehicle and the local horizontal.

angle of deviation *See* deviation.

angle of dip *See* dip.

angle of divergence [NAV] In terminal instrument procedures, the smaller of the angles formed by the intersection of two courses, radials, bearings, or combinations thereof.

angle of elevation [ENG] The angle in a vertical plane between the local horizontal and an ascending line, as from an observer to an object; used in astronomy, surveying, and so on. Also known as ascending vertical angle; elevation angle. [ORD] **1.** The vertical angle above the line of sight through which the axis of the gun bore must be raised so that the bullet or projectile will carry to the target. **2.** In aerial gunnery, an acute angle between the bore axis of a gun and the horizontal; called quadrant elevation in ground gunnery.

angle of entry [ORD] The acute angle between the tangent to the trajectory at the point of impact of a bomb or projectile and the perpendicular to the surface of the ground or target at the point of impact.

angle of external friction [ENG] The angle between the abscissa and the tangent of the curve representing the relationship of shearing resistance to normal stress acting between soil and the surface of another material. Also known as angle of wall friction.

angle of fall [MECH] The vertical angle at the level point, between the line of fall and the base of the trajectory.

angle of friction *See* angle of repose.

angle of glide [AERO ENG] Angle of descent for an airplane or missile in a glide.

angle of impact [MECH] The acute angle between the tangent to the trajectory at the point of impact of a projectile and the plane tangent to the surface of the ground or target at the point of impact.

angle of incidence [OPTICS] The angle formed by a ray arriving at a surface and the perpendicular to that surface at the point of arrival. Also known as incidence angle.

angle of lag *See* lag angle.

angle of lead *See* lead angle.

angle of nip [MECH ENG] The largest angle that will just grip a lump between the jaws, rolls, or mantle and ring of a crusher. Also known as angle of bite; nip. [MIN ENG] In a rock-crushing machine, the maximum angle subtended by its approaching jaws or roll surfaces at which a specified piece of ore can be gripped.

angle of obliquity *See* angle of pressure.

angle of orientation [MECH] Of a projectile in flight, the angle between the plane determined by the axis of the projectile and the tangent to the trajectory (direction of motion), and the vertical plane including the tangent to the trajectory.

angle of pitch [AERO ENG] The angle, as seen from the side, between the longitudinal body axis of an aircraft or similar body and a chosen reference line or plane, usually the horizontal plane.

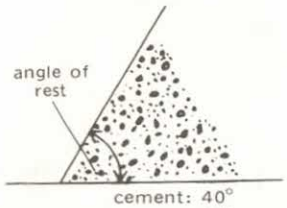
angle of pressure [DES ENG] The angle between the profile of a gear tooth and a radial line at its pitch point. Also known as angle of obliquity.

angle of radiation [ELECTROMAG] Angle between the surface of the earth and the center of the beam of energy radiated upward into the sky from a transmitting antenna.

angle of recess [MECH ENG] The angle that is turned through by either of two wheels in gear, from the coincidence of the pitch points of a pair of teeth until the last point of contact of the teeth.

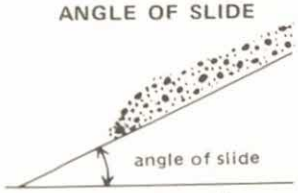
angle of reflection [PHYS] The angle between the direction

ANGLE OF REST



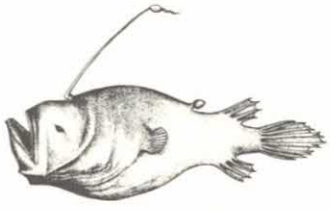
Angle of rest, one of the critical angles for bulk material.

ANGLE OF SLIDE



Angle of slide, one of the critical angles for bulk material.

ANGLERFISH



Cryptopsaras couesi, the anglerfish, length up to 18 inches (45 centimeters). *(After G. B. Goode and T. H. Bean, Oceanic Ichthyology, U.S. Nat. Mus. Spec. Bull. no. 2, 1895)*

ANGLESITE

Crystals of anglesite on galena. *(Specimen from Department of Geology, Bryn Mawr College)*

of propagation of a wave reflected by a surface and the line perpendicular to the surface at the point of reflection. Also known as reflection angle.

angle of refraction [PHYS] The angle between the direction of propagation of a wave that is refracted by a surface and the line that is perpendicular to the surface at the point of refraction.

angle of repose [ENG] *See* angle of rest. [MECH] The angle between the horizontal and the plane of contact between two bodies when the upper body is just about to slide over the lower. Also known as angle of friction.

angle of rest [ENG] The maximum slope at which a heap of any loose or fragmented solid material will stand without sliding, or will come to rest when poured or dumped in a pile or on a slope. Also known as angle of repose.

angle of roll [AERO ENG] The angle that the lateral body axis of an aircraft or similar body makes with a chosen reference plane in rolling; usually, the angle between the lateral axis and a horizontal plane.

angle of safety [ORD] Minimum permissible angular clearance, at the weapon, of the path of a projectile or missile above friendly troops.

angle of shear [GEOL] The angle between the planes of maximum shear which is bisected by the axis of greatest compression.

angle of site [ORD] The vertical angle that is formed by the line of site and the horizontal.

angle of slide [MIN ENG] The slope, measured in degrees of deviation from the horizontal, on which loose or fragmented solid materials will start to slide.

angle of stall [AERO ENG] The angle of attack at which the flow of air begins to break away from the airfoil, the lift begins to decrease, and the drag begins to increase. Also known as stalling angle.

angle of thread [DES ENG] The angle occurring between the sides of a screw thread, measured in an axial plane.

angle of torsion [MECH] The angle through which a part of an object such as a shaft or wire is rotated from its normal position when a torque is applied. Also known as angle of twist.

angle of train [ORD] The azimuth element of firing data furnished by a remote-control system.

angle of traverse [ORD] **1.** Horizontal angle through which a gun or launcher can be turned on its mount. **2.** Angle between the lines from a gun or launcher to the right and left limits of the front which is covered by its fire, that is, the angle through which the weapon is traversed.

angle of twist *See* angle of torsion.

angle of vertical [ASTRON] The angle on the celestial sphere between a given vertical circle and the prime vertical circle.

angle of view [OPTICS] The angle subtended by an image at the second nodal point of a lens.

angle of wall friction *See* angle of external friction.

angle of yaw [AERO ENG] The angle, as seen from above, between the longitudinal body axis of an aircraft, a rocket, or the like and a chosen reference direction. Also known as yaw angle.

angle paddle [ENG] A hand tool used to finish a plastered surface.

angle plate [DES ENG] An L-shaped plate or a plate having an angular section.

angle post [BUILD] A railing support used at a landing or other break in the stairs.

angle press [MECH ENG] A hydraulic plastics-molding press with both horizontal and vertical rams; used to produce complex moldings with deep undercuts.

angle rafter [BUILD] A rafter, such as a hip rafter, at the angle of the roof.

angle-resolved photoelectron spectroscopy [SPECT] A type of photoelectron spectroscopy which measures the kinetic energies of photoelectrons emitted from a solid surface and the angles at which they are emitted relative to the surface. Abbreviated ARPES.

anglerfish [VERT ZOO] Any of several species of the order Lophiiformes characterized by remnants of a dorsal fin seen as a few rays on top of the head that are modified to bear a terminal bulb.

angle rib [ARCH] **1.** One of the diagonal ribs dividing each rectangle of a gothic vaulting; it is a structural member. **2.** Molding ornamenting an angle in decorative work.

angle section [CIV ENG] A structural steel member having an L-shaped cross section.

angle set [MIN ENG] **1.** A timber set using an angle brace. **2.** One of a series of sets placed at angles to each other.

angle shot [GRAPHICS] **1.** A photograph taken with the camera tilted at an angle from the horizontal. **2.** In cinematography, a motion picture that is taken from a different angle; it may repeat the action in a previous shot or continue the action.

anglesite [MINERAL] $PbSO_4$ A mineral occurring in white or gray, tabular or prismatic orthorhombic crystals or compact masses. Also known as lead spar; lead vitriol.

angle-stem thermometer [ENG] A device used to measure temperatures in oil-custody tanks; the angle of the calibrated stem may be 90° or greater to the sensitive portion of the thermometer, as needed to fit the tank shell contour.

angle stile [BUILD] A narrow strip of wood used to conceal the joint between a wall and a vertical wood surface which makes an angle with the wall, as at the edge of a corner cabinet.

angle strut [CIV ENG] An angle-shaped structural member which is designed to carry a compression load.

angle tracking noise [ELECTR] Any deviation of the tracking axis from the center of reflectivity of a radar target; it is the resultant of servo noise, receiver noise, angle noise, and amplitude noise.

angle valve [DES ENG] A manually operated valve with its outlet opening oriented at right angles to its inlet opening; used for regulating the flow of a fluid in a pipe.

angle variable [MECH] The dynamical variable w conjugate to the action variable J, defined only for periodic motion.

angling dozer *See* Angledozer.

Angoumian [GEOL] Upper middle Upper Cretaceous (Upper Turonian) geologic time.

angrite [GEOL] An achondrite stony meteorite composed principally of augite with a little olivine and troilite.

angstrom [MECH] A unit of length, 10^{-10} meter, used primarily to express wavelengths of optical spectra. Abbreviated A; Å. Also known as tenthmeter.

Ångström coefficient [PHYS] The multiplying amplitude parameter inserted in Ångström's formula for the scattering of electromagnetic radiation by atmospheric dust.

Ångström compensation pyrheliometer [ENG] A pyrheliometer consisting of two identical Manganin strips, one shaded, the other exposed to sunlight; an electrical current is passed through the shaded strip to raise its temperature to that of the exposed strip, and the electric power required to accomplish this is a measure of the solar radiation.

Ångström's formula [PHYS] A formula stating that the scattering coefficient for dust in the atmosphere is inversely proportional to a positive power of the wavelength of the radiation, with the power depending on the size of the dust particles.

anguclast [GEOL] An angular phenoclast.

Anguidae [VERT ZOO] A family of limbless, snakelike lizards in the suborder Sauria, commonly known as slowworms or glass snakes.

Anguilliformes [VERT ZOO] A large order of actinopterygian fishes containing the true eels.

Anguilloidei [VERT ZOO] The typical eels, a suborder of actinopterygian fishes in the order Anguilliformes.

angular [SCI TECH] **1.** Having sharp corners. **2.** Having or forming angles.

angular acceleration [MECH] The time rate of change of angular velocity.

angular accelerometer [ENG] An accelerometer that measures the rate of change of angular velocity between two objects under observation.

angular advance [MECH ENG] The amount by which the angle between the crank of a steam engine and the virtual crank radius of the eccentric exceeds a right angle. Also known as angle of advance; angular lead.

angular aggregate [MATER] An aggregate whose particles possess well-defined edges formed at the intersection of roughly planar faces.

angular aperture [OPTICS] The angle subtended at an axial object point of an optical instrument by the radius of the entrance pupil.

angular bitstalk *See* angular bitstock.

angular bitstock [MECH ENG] A bitstock whose handles are positioned to permit its use in corners and other cramped areas. Also known as angular bitstalk.

angular clearance [DES ENG] The relieved space located below the straight of a die, to permit passage of blanks or slugs.

angular-contact bearing [MECH ENG] A rolling-contact antifriction bearing designed to carry heavy thrust loads and also radial loads.

angular cutter [MECH ENG] A tool-steel cutter used for finishing surfaces at angles greater or less than 90° with its axis of rotation.

angular diameter [ASTRON] The angle subtended at the observer by a diameter of a distant spherical body which is perpendicular to the line between the observer and the center of the body.

angular displacement [PHYS] A vector measure of the rotation of an object about an axis; the vector points along the axis according to the right-hand rule; the length of the vector is the rotation angle, in degrees or radians.

angular distance [NAV] **1.** The angular difference between two directions, numerically equal to the angle between two lines extending in the given directions. **2.** The arc of the great circle joining two points, expressed in angular units. **3.** The distance between two points, expressed in wavelengths at a specified frequency.

angular distortion [MAP] Distortion in a map projection because of nonconformality.

angular distribution [NUCLEO] The distribution in angle, relative to an experimentally specified direction, of the intensity of photons or particles resulting from a nuclear or extranuclear process.

angular error of closure *See* error of closure.

angular frequency [PHYS] For any oscillation, the number of vibrations per unit time, multiplied by 2π. Also known as angular velocity; radian frequency.

angular gear [MECH ENG] A gear that transmits motion between two rotating shafts that are not parallel. Also known as angle gear.

angular height [ORD] The vertical angle between the line of site and the horizontal.

angular impulse [MECH] The integral of the torque applied to a body over time.

angularity [SCI TECH] The sharpness of corners and edges.

angular lead *See* angular advance.

angular leaf spot [PL PATH] A bacterial disease of plants characterized by angular spots on leaves and caused by *Pseudomonas lachrymans* in cucumbers and *Xanthomonas malvacearum* in cotton.

angular length [MECH] A length expressed in the unit of the length per radian or degree of a specified wave.

angular magnification [OPTICS] For an optical system, the ratio of the angle subtended by the image at the eye to the angle subtended by the object at the eye.

angular milling [MECH ENG] Milling surfaces that are flat and at an angle to the axis of the spindle of the milling machine.

angular momentum [MECH] **1.** The cross product of a vector from a specified reference point to a particle, with the particle's linear momentum. Also known as moment of momentum. **2.** For a system of particles, the vector sum of the angular momenta (first definition) of the particles.

angular momentum operator [QUANT MECH] Any vector operator satisfying communication rules of the type $[J_r, J_s] = iJ_{..}$

angular parallax [NAV] The angle between grid north and true north; the angle increases the farther the grid departs from the standard meridian.

angular perspective [GRAPHICS] A form of plane linear perspective in which some of the principal lines of the picture are either parallel or perpendicular to the picture plane and some are oblique.

angular pitch [DES ENG] The angle determined by the length along the pitch circle of a gear between successive teeth.

angular rate *See* angular speed.

angular resolution [ELECTROMAG] A measure of the ability of a radar to distinguish between two targets solely by the measurement of angles.

angular resolver *See* resolver.

angular shear [MECH ENG] A shear effected by two cutting edges inclined to each other to reduce the force needed for shearing.

angular speed [MECH] Change of direction per unit time, as of a target on a radar screen, without regard to the direction of the rotation axis; in other words, the magnitude of the angular velocity vector. Also known as angular rate.

angular spreading [OCEANOGR] The lateral extension of ocean waves as they move out of the wave-generating area as swell.

angular-spreading factor [OCEANOGR] The ratio of the actual wave energy present at a point to that which would have been present in the absence of angular spreading.

angular travel [ORD] Angular distance covered by a moving target in a given time.

angular travel error [MECH] The error which is introduced into a predicted angle obtained by multiplying an instantaneous angular velocity by a time of flight.

angular travel method [ORD] Method of calculating firing data based on the rate of angular travel of the target in direction and elevation.

angular unconformity [GEOL] An unconformity in which the older strata dip at a different angle (usually steeper) than the younger strata.

angular unit method [ORD] A method of adjusting antiaircraft artillery gunfire in which range deviations in miles obtained by a distant observer are converted into altitude corrections in yards for application at the data computer.

angular velocity [MECH] The time rate of change of angular displacement. [PHYS] *See* angular frequency.

angular wave number [METEOROL] The number of waves of a given wavelength required to encircle the earth at the latitude of the disturbance. Also known as hemispheric wave number.

angulator [ENG] An instrument for converting angles measured on an oblique plane to their corresponding projections on a horizontal plane; the rectoblique plotter and the photoangulator are types.

anhalonium alkaloid [PHARM] Any of the alkaloids found in mescal buttons, including hordenine and mescaline; used as a cerebral stimulant and motor depressant. Also known as cactus alkaloid.

anharmonicity [PHYS] **1.** Mechanical vibration where the restoring force acting on a system does not vary linearly with displacement from equilibrium position. **2.** Variation from a linear relationship of dipole moment with internuclear distance in the infrared portion of the electromagnetic spectrum.

anharmonic oscillator [PHYS] An oscillating system in which the restoring force opposing a displacement from the position of equilibrium is a nonlinear function of the displacement.

anhedral *See* allotriomorphic.

anhedron [PETR] Rock that has the organized internal structure of a crystal without the external geometric form of a crystal.

anhidrosis [MED] Absent or deficient secretion of sweat.

Anhimidae [VERT ZOO] The screamers, a family of birds in the order Anseriformes characterized by stout bills, webbed feet, and spurred wings.

Anhingidae [VERT ZOO] The anhingas or snakebirds, a family of swimming birds in the order Pelecaniformes.

anhydrase [BIOCHEM] Any enzyme that catalyzes the removal of water from a substrate.

anhydremia [MED] A decreased amount of water in the plasma.

anhydride [CHEM] A compound formed from an acid by removal of water.

anhydrite [MINERAL] $CaSO_4$ A mineral that represents gypsum without its water of crystallization, occurring commonly in white and grayish granular to compact masses; the hardness is 3–3.5 on Mohs scale, and specific gravity is 2.90–2.99. Also known as cube spar.

anhydrite evaporite [PETR] $CuSO_4$ A sedimentary rock composed chiefly of copper sulfate in compact granular form deposited by evaporation of water; resembles marble and differs from gypsum in lack of water of hydration and hardness.

anhydrobiosis [PHYSIO] A type of cryptobiosis induced by dehydration.

anhydrock [PETR] A sedimentary rock chiefly made of anhydrite.

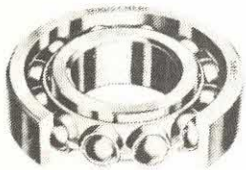
anhydroglucochloral *See* chloralose.

anhydrous [CHEM] Being without water, especially water of crystallization.

anhydrous alcohol *See* absolute alcohol.

anhydrous ammonia [INORG CHEM] Liquid ammonia, a colorless liquid boiling at −33.3°C.

ANGULAR-CONTACT BEARING



Standard angular-contact ball bearing. *(Marlin-Rockwell)*

ANGULAR VELOCITY

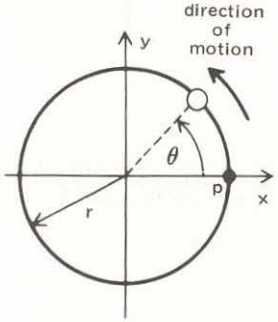


Illustration of angular velocity. Particle p moves on circular path with radius r. θ is angular displacement of p. Angular velocity is rate of change of θ with respect to time.

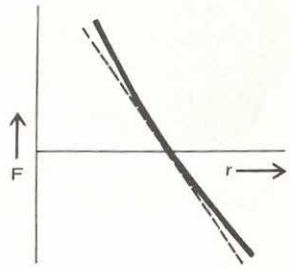
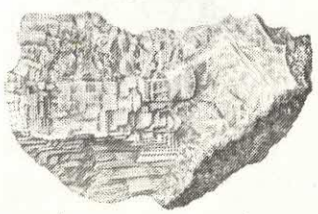
ANHARMONIC OSCILLATOR



Interatomic force F as a function of the atomic separation r. Anharmonicity is produced by the departure of the actual force (solid curve) from the dashed line.

ANHYDRITE



Anhydrite from Montanzas, Cuba. *(Specimen from Department of Geology, Bryn Mawr College)*

anhydrous calcium sulfate [MATER] Gypsum from which all the water of crystallization has been removed. Also known as dead-burnt gypsum.
anhydrous ferric chloride *See* ferric chloride.
anhydrous gypsum plaster [MATER] Plaster which has a greater percentage of the water of crystallization removed than normal gypsum plasters; used as a finish plaster.
anhydrous hydrogen chloride [INORG CHEM] HCl Hazardous, toxic, colorless gas used in polymerization, isomerization, alkylation, nitration, and chlorination reactions; becomes hydrochloric acid in aqueous solutions.
anhydrous phosphoric acid *See* phosphoric anhydride.
anhydrous plumbic acid *See* lead dioxide.
anhydrous sodium carbonate *See* soda ash.
anhydrous sodium sulfate [INORG CHEM] Na_2SO_4 Water-soluble, white crystals with bitter, salty taste; melts at 888°C; used in the manufacture of glass, paper, pharmaceuticals, and textiles, and as an analytical reagent.
anilazine [ORG CHEM] $C_9H_5Cl_3N_4$ A tan solid with a melting point of 159–160°C; used for fungal diseases of lawns, turf, and vegetable crops. Also known as 4,6-dichloro-*N*-(2-chlorophenyl)-1,3,5-triazin-2-amine.
anileridine [PHARM] $C_{22}H_{28}N_2O_2$ A white, crystalline powder; soluble in alcohol and chloroform; used as a narcotic.
anilide [ORG CHEM] A compound that has the $C_6H_5NH_2$— group; an example is benzanilide, $C_6H_5NHCOC_6H_5$.
Aniliidae [VERT ZOO] A small family of nonvenomous, burrowing snakes in the order Squamata.
aniline [ORG CHEM] $C_6H_5NH_2$ An aromatic amine compound that is a pale brown liquid at room temperature; used in the dye, pharmaceutical, and rubber industries.
aniline black [ORG CHEM] A black dye produced on certain textiles, such as cotton, by oxidizing aniline or aniline hydrochloride.
aniline chloride *See* aniline hydrochloride.
aniline *N,N*-dimethyl *See N,N*-dimethyl aniline.
aniline dye [ORG CHEM] A dye derived from aniline.
aniline-formaldehyde resin [CHEM] A thermoplastic resin made by polymerizing aniline and formaldehyde.
aniline hydrochloride [ORG CHEM] $C_6H_5NH_2 \cdot HCl$ White crystals, although sometimes the commercial variety has a greenish tinge; melting point 198°C; soluble in water and ethanol; used in dye manufacture, dyeing, and printing. Also known as aniline chloride; aniline salt.
aniline ink [MATER] A fast-drying printing ink that is a solution of a coal-tar dye in an organic solvent or a solution of a pigment in an organic solvent or water.
aniline leather [MATER] Leather whose grain pattern has been accentuated by impregnation with aniline dye.
aniline point [CHEM ENG] The minimum temperature for a complete mixing of aniline and materials such as gasoline; used in some specifications to indicate the aromatic content of oils and to calculate approximate heat of combustion.
aniline printing *See* flexography.
aniline process *See* flexography.
aniline salt *See* aniline hydrochloride.
***para*-anilinesulfonic acid** *See* sulfanilic acid.
anilinoacetic acid *See N*-phenylglycine.
2-anilinobenzoic acid *See N*-phenylanthranilic acid.
anilol [MATER] An aniline-alcohol mixture used as a blending compound in petroleum products.
animal [ZOO] Any living organism distinguished from plants by the lack of chlorophyll, the requirement for complex organic nutrients, the lack of a cell wall, limited growth, mobility, and greater irritability.
animal black [CHEM] Finely divided carbon made by calcination of animal bones or ivory; used for pigments, decolorizers, and purifying agents; varieties include bone black and ivory black.
animal charcoal [CHEM] Charcoal obtained by the destructive distillation of animal matter at high temperatures; used to adsorb organic coloring matter.
animal communication [PSYCH] The discipline within the field of animal behavior that deals with the receipt and use of signals by animals.
animal community [ECOL] An aggregation of animal species held together in a continuous or discontinuous geographic area by ties to the same physical environment, mainly vegetation.
animal ecology [ECOL] A study of the relationships of animals to their environment.
animal fiber [TEXT] A natural textile fiber of animal origin; wool and silk are the most important.
animal glue [MATER] A glue made from the bones, hide, horns, and connective tissues of animals.
animal husbandry [AGR] A branch of agriculture concerned with the breeding and feeding of domestic animals.
Animalia [SYST] The animal kingdom.
animal kingdom [SYST] One of the two generally accepted major divisions of living organisms which live or have lived on earth (the other division being the plant kingdom).
animal locomotion [ZOO] Progressive movement of an animal body from one point to another.
animal oil *See* bone oil.
animal pole [CYTOL] The region of an ovum which contains the least yolk and where the nucleus gives off polar bodies during meiosis.
animal power [MECH ENG] The time rate at which muscular work is done by a work animal, such as a horse, bullock, or elephant.
animal virus [VIROL] A small infectious agent able to propagate only within living animal cells.
Animikean [GEOL] The middle subdivision of Proterozoic geologic time. Also known as Penokean; Upper Huronian.
animikite [GEOL] An ore of silver, composed of a mixture of sulfides, arsenides, and antimonides, and containing nickel and lead; occurs in white or gray granular masses.
anion [CHEM] An ion that is negatively charged.
anion exchange [CHEM] A type of ion exchange in which the immobilized functional groups on the solid resin are positive.
anionic detergent [MATER] A class of detergents having a negatively charged surface-active ion, such as sodium alkylbenzene sulfonate.
anionic polymerization [ORG CHEM] A type of polymerization in which Lewis bases, such as alkali metals and metallic alkyls, act as catalysts.
anionotropy [CHEM] The breaking off of an ion such as hydroxyl or bromide from a molecule so that a positive ion remains in a state of dynamic equilibrium.
Anisakidae [INV ZOO] A family of parasitic roundworms in the superfamily Ascaridoidea.
anisaldehyde [ORG CHEM] $C_6H_4(OCH_3)CHO$ A compound with melting point 2.5°C, boiling point 249.5°C; insoluble in water, soluble in alcohol and ether; used in perfumery and flavoring, and as an intermediate in production of antihistamines. Also known as *para*-anisic aldehyde; aubepine; 4-methoxybenzaldehyde; *para*-methoxybenzaldehyde.
anise [BOT] The small fruit of the annual herb *Pimpinella anisum* in the family Umbelliferae; fruit is used for food flavoring, and oil is used in medicines, soaps, and cosmetics.
anise alcohol *See* anisic alcohol.
Anisean [GEOL] Lower Middle Triassic geologic time.
anise camphor *See* anethole.
anisic acid [ORG CHEM] $CH_3OC_6H_4COOH$ White crystals or powder with a melting point of 184°C; soluble in alcohol and ether; used in medicine and as an insect repellent and ovicide. Also known as *para*-methoxybenzoic acid.
anisic alcohol [ORG CHEM] $C_8H_{10}O_2$ A colorless liquid that boils in the range 255–265°C; it is obtained by reduction of anisic aldehyde; used in perfumery, and as an intermediate in the manufacture of pharmaceuticals. Also known as anise alcohol; anisyl alcohol; *para*-methoxybenzyl alcohol.
***para*-anisic aldehyde** *See* anisaldehyde.
anisocarpous [BOT] Referring to a flower whose number of carpels is different from the number of stamens, petals, and sepals.
anisochela [INV ZOO] A chelate sponge spicule with dissimilar ends.
anisocytosis [MED] A condition in which the erythrocytes show a considerable variation in size due to excessive quantities of hemoglobin.
anisodactylous [VERT ZOO] Having unequal digits, especially referring to birds with three toes forward and one backward.
anisodesmic [MINERAL] Pertaining to crystals or compounds in which the ionic bonds are unequal in strength.
anisogamete *See* heterogamete.
anisogamy *See* heterogamy.

anisole [ORG CHEM] $C_6H_5OCH_3$ A colorless liquid that is soluble in ether and alcohol, insoluble in water; boiling point is 155°C; vapors are highly toxic; used as a solvent and in perfumery. Also known as methoxybenzene; methylphenyl ether.

anisomerous [BOT] Referring to flowers that do not have the same number of parts in each whorl.

anisometric particle [VIROL] Any unsymmetrical, rod-shaped plant virus.

Anisomyaria [INV ZOO] An order of mollusks in the class Bivalvia containing the oysters, scallops, and mussels.

anisophyllous [BOT] Having leaves of two or more shapes and sizes.

Anisoptera [INV ZOO] The true dragonflies, a suborder of insects in the order Odonata.

anisostemonous [BOT] Referring to a flower whose number of stamens is different from the number of carpels, petals, and sepals.

Anisotomidae [INV ZOO] An equivalent name for Leiodidae.

anisotropic [PHYS] Showing different properties as to velocity of light transmission, conductivity of heat or electricity, compressibility, and so on, in different directions. Also known as aeolotropic.

anisotropic membrane [CHEM ENG] An ultrafiltration membrane which has a thin skin at the separating surface and is supported by a spongy sublayer of membrane material.

anisotropy [ASTRON] The departure of the cosmic microwave radiation from equal intensity in all directions. [BOT] The property of a plant that assumes a certain position in response to an external stimulus. [PHYS] The characteristic of a substance for which a physical property, such as index of refraction, varies in value with the direction in or along which the measurement is made. Also known as aeolotropy; eolotropy. [ZOO] The property of an egg that has a definite axis or axes.

anisotropy constant [ELECTROMAG] In a ferromagnetic material, temperature-dependent parameters relating the magnetization in various directions to the anisotropy energy.

anisotropy energy [ELECTROMAG] Energy stored in a ferromagnetic crystal by virtue of the work done in rotating the magnetization of a domain away from the direction of easy magnetization.

anisotropy factor *See* dissymmetry factor.

anisylacetone *See* 4-(*para*-methoxyphenyl)-2-butanone.

anisyl alcohol *See* anisic alcohol.

ankaramite [PETR] A mafic olivine basalt primarily composed of pyroxene with smaller amounts of olivine and plagioclase and accessory biotite, apatite, and opaque oxides.

ankaratrite *See* olivine nephelinite.

anker [MECH] A unit of capacity equal to 10 U.S. gallons (37.854 liters); used to measure liquids, especially honey, oil, vinegar, spirits, and wine.

ankerite [MINERAL] $Ca(Fe,Mg,Mn)(CO_3)_2$ A white, red, or gray iron-rich carbonate mineral associated with iron ores and found in thin veins in coal seams; specific gravity is 2.95–3.1. Also known as cleat spar.

ankle [ANAT] The joint formed by the articulation of the leg bones with the talus, one of the tarsal bones.

ankle breadth [ANTHRO] The distance measured between projections at lower ends of the tibia and fibula.

ankle thickness [ANTHRO] Distance measured perpendicular to ankle breadth.

Ankylosauria [PALEON] A suborder of Cretaceous dinosaurs in the reptilian order Ornithischia characterized by short legs and flattened, heavily armored bodies.

ankylosis Also spelled anchylosis. [MED] Stiffness or immobilization of a joint due to a surgical or pathologic process. [PHYS] The loss by a system of one or more degrees of freedom through development of frictional constraints.

anlage [EMBRYO] Any group of embryonic cells when first identifiable as a future organ or body part. Also known as blastema; primordium.

annabergite [MINERAL] $(Ni,Co)_3(AsO_4)_2 \cdot 8H_2O$ A monoclinic mineral usually found as apple-green incrustations as an alteration product of nickel arsenides; it is isomorphous with erythrite. Also known as nickel bloom; nickel ocher.

annatto [BOT] *Bixa orellana*. A tree found in tropical America, characterized by cordate leaves and spinose, seed-filled capsules; a yellowish-red dye obtained from the pulp around the seeds is used as a food coloring.

anneal [ENG] To treat a metal, alloy, or glass with heat and then cool to remove internal stresses and to make the material less brittle. [GEN] To recombine strands of denatured bacterial deoxyribonucleic acid that were separated.

annealing furnace [ENG] A furnace for annealing metals or glass. Also known as annealing oven.

annealing oven *See* annealing furnace.

annealing point [THERMO] The temperature at which the viscosity of a glass is $10^{13.0}$ poises. Also known as annealing temperature; 13.0 temperature.

annealing temperature *See* annealing point.

Annedidae [VERT ZOO] A small family of limbless, snakelike, burrowing lizards of the suborder Sauria.

Annelida [INV ZOO] A diverse phylum comprising the multisegmented wormlike animals.

annex point [MAP] A point used to assist in the relative orientation of vertical and oblique photographs; selected in the overlap area between the vertical and its corresponding oblique photograph, about midway between the pass points.

Anniellidae [VERT ZOO] A family of limbless, snakelike lizards in the order Squamata.

annihilation [PARTIC PHYS] A process in which an antiparticle and a particle combine and release their rest energies in other particles.

annihilation operator [QUANT MECH] An operator which reduces the occupation number of a single state by unity; for example, an annihilation operator applied to a state of one particle yields the vacuum.

annihilation radiation [PARTIC PHYS] Electromagnetic radiation arising from the collision, and resulting annihilation, of an electron and a positron, or of any particle and its antiparticle.

anniversary clock [HOROL] A clock that can run as long as 400 days on a single winding because of a slow torsion pendulum. Also known as four-hundred-day clock.

Annonaceae [BOT] A large family of woody flowering plants in the order Magnoliales, characterized by hypogynous flowers, exstipulate leaves, a trimerous perianth, and distinct stamens with a short, thick filament.

annotated photograph [MAP] A photograph on which planimetric, geologic, cultural, hydrographic, or vegetation information has been added to identify, classify, outline, clarify, or describe features that would not otherwise be apparent in examination of an unmarked photograph.

annotation [COMPUT SCI] Any comment or note included in a program or flow chart in order to clarify some point at issue.

annotation overprint [ORD] **1.** The outline delimiting a target or installation. **2.** A symbol which locates the position of a target together with an identifying reference number as depicted on a target graphic.

annotation text [ORD] A descriptive text containing the identification, function, location, physical characteristics, and other information concerning a target or installation.

annual aberration [ASTRON] Aberration caused by the velocity of the earth's revolution about the sun.

annual cost comparison [IND ENG] A method of selecting from among several alternative projects or courses of action on the basis of their annual costs, including depreciation.

annual equation [ASTRON] A variation in the moon's apparent motion caused by variations in the distance of the earth from the sun during the course of the year.

annual flood [HYD] The highest flow at a point on a stream during any particular calendar year or water year.

annual inequality [OCEANOGR] Seasonal variation in water level or tidal current speed, more or less periodic, due chiefly to meteorological causes.

annual labor *See* assessment drilling.

annual layer [GEOL] **1.** A sedimentary layer deposited, or presumed to have been deposited, during the course of a year; for example, a glacial varve. **2.** A dark layer in a stratified salt deposit containing disseminated anhydrite.

annual magnetic change *See* magnetic annual change.

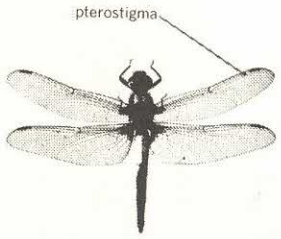
annual magnetic variation *See* magnetic annual variation.

annual parallax [ASTRON] The apparent displacement of a celestial body viewed from two separated observation points whose base line is the radius of the earth's orbit.

annual plant [BOT] A plant that completes its growth in one growing season and therefore must be planted annually.

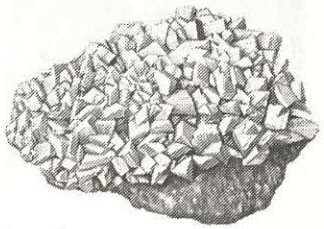
annual ring [BOT] A line appearing on tree cross sections marking the end of a growing season and showing the volume of wood added during the year.

ANISOPTERA



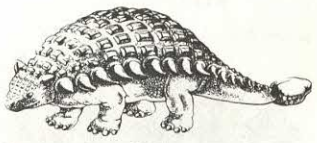
An adult dragonfly, showing the thickened spot, pterostigma, on the costal margin of the wing.

ANKERITE



A specimen of ankerite. *(Specimen from Department of Geology, Bryn Mawr College)*

ANKYLOSAURIA



Restoration of the armored Cretaceous dinosaur *Ankylosaurus* (about 20 feet or 6 meters long).

annual storage [HYD] The capacity of a reservoir that can handle a watershed's annual runoff but cannot carry over any portion of the water for longer than the year.

annual variation [ASTRON] The change in the right ascension and declination of a star during one year, due to the combined effect of the star's proper motion and the precession of the equinoxes.

annuation [ECOL] The annual variation in the presence, absence, or abundance of a member of a plant community.

annular [MIN ENG] The space between the casing and wall of a hole or between a drill pipe and casing.

annular atoms [ORG CHEM] The atoms in a cyclic compound that are members of the ring.

annular auger [DES ENG] A ring-shaped boring tool which cuts an annular channel, leaving the core intact.

annular budding [BOT] Budding by replacement of a ring of bark on a stock with a ring bearing a bud from a selected species or variety.

annular conductor [ELEC] A number of wires stranded in three reversed concentric layers around a saturated hemp core.

annular drainage pattern [HYD] A ringlike pattern subsequent in origin and associated with maturely dissected dome or basin structures.

annular eclipse [ASTRON] An eclipse in which a thin ring of the source of light appears around the obscuring body.

annular effect [FL MECH] A phenomenon observed in the flow of fluid in a tube when its motion is alternating rapidly, as in the propagation of sound waves, in which the mean velocity rises progressing from the center of the tube toward the walls and then falls within a thin laminar boundary layer to zero at the wall itself.

annular gear [DES ENG] A gear having a cylindrical form.

annular hernia *See* umbilical hernia.

annular nozzle [DES ENG] A nozzle with a ring-shaped orifice.

annular section [ENG] The open space between two concentric tubes, pipes, or vessels.

annular solid [MATH] A solid generated by rotating a closed plane curve about a line which lies in the plane of the curve and does not intersect the curve.

annular transistor [ELECTR] Mesa transistor in which the semiconductor regions are arranged in concentric circles about the emitter.

annular vault [ARCH] A vault arising from circular walls.

annulated shaft [ARCH] A column consisting of a cluster of shafts which seem to be held together at intervals by an annular band.

annulene [ORG CHEM] One of a group of monocyclic conjugated hydrocarbons having the general formula $[-CH{=}CH-]_n$.

annulus [ANAT] Any ringlike anatomical part. [BOT] **1.** An elastic ring of cells between the operculum and the mouth of the capsule in mosses. **2.** A line of cells, partly or entirely surrounding the sporangium in ferns, which constricts, thus causing rupture of the sporangium to release spores. **3.** A whorl resembling a calyx at the base of the strobilus in certain horsetails. [MATH] The ringlike figure that lies between two concentric circles. [MYCOL] A ring of tissue representing the remnant of the veil around the stipe of some agarics.

annulus conjecture [MATH] For dimension n, the assertion that if f and g are locally flat embeddings of the $(n-1)$ sphere, S^{n-1}, in real n space, R^n, with $f(S^{n-1})$ in the bounded component of $R^n - g(S^{n-1})$, then the closed region in R^n bounded by $f(S^{n-1})$ and $g(S^{n-1})$ is homeomorphic to the direct product of S^{n-1} and the closed interval $[0,1]$; it is established for $n \neq 4$.

annunciator [ENG] A signaling apparatus which operates electromagnetically and serves to indicate visually, or visually and audibly, whether a current is flowing, has flowed, or has changed direction of flow in one or more circuits.

Anobiidae [INV ZOO] The deathwatch beetles, a family of coleopteran insects of the superfamily Bostrichoidea.

anode [ELEC] The negative terminal of a primary cell or of a storage battery. [ELECTR] **1.** The collector of electrons in an electron tube. Also known as plate; positive electrode. **2.** In a semiconductor diode, the terminal toward which forward current flows from the external circuit. [PHYS CHEM] The positive terminal of an electrolytic cell.

anode balancing coil [ELEC] A set of mutually coupled windings used to maintain approximately equal currents in anodes operating in parallel from the same transformer terminal.

anode circuit [ELECTR] Complete external electrical circuit connected between the anode and the cathode of an electron tube. Also known as plate circuit.

anode-circuit detector [ELECTR] Detector functioning by virtue of a nonlinearity in its anode-circuit characteristic. Also known as plate-circuit detector.

anode copper [MET] Slabs of refined blister copper used as anodes in the electrolytic refining of copper.

anode corrosion [MET] The disintegration of a metal acting as an anode.

anode corrosion efficiency [PHYS CHEM] The ratio of actual weight loss of an anode due to corrosion to the theoretical loss as calculated by Faraday's law.

anode current [ELECTR] The electron current flowing through an electron tube from the cathode to the anode. Also known as plate current.

anode detector [ELECTR] A detector in which rectification of radio-frequency signals takes place in the anode circuit of an electron tube. Also known as plate detector.

anode dissipation [ELECTR] Power dissipated as heat in the anode of an electron tube because of bombardment by electrons and ions.

anode effect [PHYS CHEM] A condition produced by polarization of the anode in the electrolysis of fused salts and characterized by a sudden increase in voltage and a corresponding decrease in amperage.

anode efficiency [ELECTR] The ratio of the ac load circuit power to the dc anode power input for an electron tube. Also known as plate efficiency.

anode fall [ELECTR] A very thin space-charge region in front of an anode surface, characterized by a steep potential gradient through the region.

anode film [CHEM] The portion of solution in immediate contact with the anode.

anode furnace [MET] A furnace in which blister copper or impure nickel is refined.

anode impedance [ELECTR] Total impedance between anode and cathode exclusive of the electron stream. Also known as plate impedance; plate-load impedance.

anode input power [ELECTR] Direct-current power delivered to the plate (anode) of a vacuum tube by the source of supply. Also known as plate input power.

anode metal [MET] The metal used as anode in an electroplating process.

anode modulation [ELECTR] Modulation produced by introducing the modulating signal into the anode circuit of any tube in which the carrier is present. Also known as plate modulation.

anode mud [MET] An insoluble substance or mixture that collects at the anode in an electrolytic refining or plating process. Also known as anode slime.

anode neutralization [ELECTR] Method of neutralizing an amplifier in which the necessary 180° phase shift is obtained by an inverting network in the plate circuit. Also known as plate neutralization.

anode pulse modulation [ELECTR] Modulation produced in an amplifier or oscillator by application of externally generated pulses to the plate circuit. Also known as plate-pulse modulation.

anode rays [ELECTR] Positive ions coming from the anode of an electron tube; generally due to impurities in the metal of the anode.

anode resistance [ELECTR] The resistance value obtained when a small change in the anode voltage of an electron tube is divided by the resulting small change in anode current. Also known as plate resistance.

anode saturation [ELECTR] The condition in which the anode current of an electron tube cannot be further increased by increasing the anode voltage; the electrons are then being drawn to the anode at the same rate as they are emitted from the cathode. Also known as current saturation; plate saturation; saturation; voltage saturation.

anode scrap [MET] Portions of anode copper retrieved from electrolytic refining of the metal.

anode sheath [ELECTR] The electron boundary which exists in a gas-discharge tube between the plasma and the anode when the current demanded by the anode circuit exceeds the random electron current at the anode surface.

anode slime *See* anode mud.

anodic [PHYS] Pertaining to the anode.

anodic cleaning [MET] The removal of a foreign substance from a metallic surface by electrolysis with the metal as the anode. Also known as anodic pickling; reverse-current cleaning.

anodic coating [MET] A film of oxide produced on a metal by electrolysis with the metal as the anode.

anodic pickling *See* anodic cleaning.

anodic polarization [PHYS CHEM] The change in potential of an anode caused by current flow.

anodic protection [MET] Reduction of the corrosion rate in an anode by polarizing it into a potential region where the dissolution rates low.

anodic reaction [MET] The reaction in the mechanism of electrochemical corrosion in which the metal forming the anode dissolves in the electrolyte in the form of positively charged ions.

anodize [MET] The formation of a decorative or protective passive film on a metal part by making it the anode of a cell and applying electric current.

anodized aluminum [MET] Aluminum coated with a layer of aluminum oxide by an anodic process in a suitable electrolyte such as chromic acid or sulfuric acid solution.

anodized dielectric film [ELEC] An insulating film produced on a conducting surface by anodizing; used for producing thin-film capacitors, trimming resistor values, and passivation in the manufacture of integrated circuits.

anodized magnesium [MET] An anodic coating on magnesium produced in one of various electrolytes, mainly of fluorides, phosphates, or chromates.

anole [VERT ZOO] Any arboreal lizard of the genus *Anolis*, characterized by flattened adhesive digits and a prehensile outer toe.

anolyte [CHEM] The part of the electrolyte at or near the anode that is changed in composition by the reactions at the anode.

Anomalinacea [INV ZOO] A superfamily of marine and benthic sarcodinian protozoans in the order Foraminiferida.

anomalistic month [ASTRON] The average period of revolution of the moon from perigee to perigee, a period of 27 days 13 hours 18 minutes 33.2 seconds.

anomalistic period [ASTRON] The interval between two successive perigee passages of a satellite in orbit about a primary. Also known as perigee-to-perigee period.

anomalistic year [ASTRON] The period of one revolution of the earth about the sun from perihelion to perhihelion; 365 days 6 hours 13 minutes 53.0 seconds in 1900 and increasing at the rate of 0.26 second per century.

anomalon [NUC PHYS] A nuclear fragment, produced in the collision of a projectile nucleus at relativistic energy with a target nucleus at rest, that has an anomalously short mean free path, comparable to that of a uranium nucleus.

anomaloscope [OPTICS] An optical instrument for testing color vision, in which a yellow light whose intensity may be varied is matched against red and green lights whose intensity is fixed.

anomalous [SCI TECH] Deviating from the normal; irregular.

anomalous dispersion [OPTICS] Extraordinary behavior in the curve of refractive index versus wavelength which occurs in the vicinity of absorption lines or bands in the absorption spectrum of a medium.

anomalous magma [GEOL] Magma formed or obviously changed by assimilation.

anomalous magnetic moment [PARTIC PHYS] The difference between the observed magnetic moment and the value predicted by Dirac's theory.

anomalous viscosity *See* non-Newtonian viscosity.

anomalous water *See* polywater.

anomalous Zeeman effect [SPECT] A type of splitting of spectral lines of a light source in a magnetic field which occurs for any line arising from a combination of terms of multiplicity greater than one; due to a nonclassical magnetic behavior of the electron spin.

Anomaluridae [VERT ZOO] The African flying squirrels, a small family in the order Rodentia characterized by the climbing organ, a series of scales at the root of the tail.

anomaly [ASTRON] In celestial mechanics, the angle between the radius vector to an orbiting body from its primary (the focus of the orbital ellipse) and the line of apsides of the orbit, measured in the direction of travel, from the point of closest approach to the primary (perifocus). Also known as true anomaly. [BIOL] An abnormal deviation from the characteristic form of a group. [GEOL] A local deviation from the general geological properties of a region. [MED] Any part of the body that is abnormal in its position, form, or structure. [METEOROL] The deviation of the value of an element (especially temperature) from its mean value over some specified interval. [OCEANOGR] The difference between conditions actually observed at a serial station and those that would have existed had the water all been of a given arbitrary temperature and salinity. [SCI TECH] A deviation beyond normal variations.

anomaly finder [ENG] A computer-controlled data-plotting system used on ships to measure and record seismic, gravity, magnetic, and other geophysical data and water depth, time, course, and speed.

anomaly of geopotential difference *See* dynamic-height anomaly.

anomer [ORG CHEM] One of a pair of isomers of cyclic carbohydrates; resulting from creation of a new point of symmetry when a rearrangement of the atoms occurs at the aldehyde or ketone position.

anomic aphasia [PSYCH] A subtype of fluent aphasia in which principal nouns and verbs cannot be recalled by the individual; typically caused by injury at the temporo-parietal junction.

anomite [MINERAL] A variety of biotite different only in optical orientation.

Anomocoela [VERT ZOO] A suborder of toadlike amphibians in the order Anura characterized by a lack of free ribs.

anomocoelous [ANAT] Describing a vertebra with a centrum that is concave anteriorly and flat or convex posteriorly.

Anomphalacea [PALEON] A superfamily of extinct gastropod mollusks in the order Aspidobranchia.

Anomura [VERT ZOO] A section of the crustacean order Decapoda that includes lobsterlike and crablike forms.

anonymous dimensionless group 1–4 [CHEM ENG] Four of the dimensionless groups, used to solve problems in transfer processes, gas absorption in wetted-wall columns, and laminar boundary-layer flow.

anoopsia [MED] Strabismus in which the eye is turned upward.

Anopheles [INV ZOO] A genus of mosquitoes in the family Culicidae; members are vectors of malaria, dengue, and filariasis.

anopheline [INV ZOO] Pertaining to mosquitoes of the genus *Anopheles* or a closely related genus.

Anopla [INV ZOO] A class or subclass of the phylum Rhynchocoela characterized by a simple tubular proboscis and by having the mouth opening posterior to the brain.

Anoplocephalidae [INV ZOO] A family of tapeworms in the order Cyclophyllidea.

Anoplura [INV ZOO] The sucking lice, a small group of mammalian ectoparasites usually considered to constitute an order in the class Insecta.

anorexia [MED] Loss of appetite.

anorgasmy [MED] Inability, usually psychic, to reach a climax during coitus.

anorogenic [GEOL] Of a feature, forming during tectonic quiescence between orogenic periods, that is, lacking in tectonic disturbance.

anorogenic time [GEOL] Geologic time when no significant deformation of the crust occurred.

anorthic crystal *See* triclinic crystal.

anorthite [MINERAL] The white, grayish, or reddish calcium-rich end member of the plagioclase feldspar series; composition ranges from $Ab_{10}An_{90}$ to Ab_0An_{100}, where Ab = $NaAlSi_3O_8$ and An = $CaAl_2Si_2O_8$. Also known as calciclase; calcium feldspar.

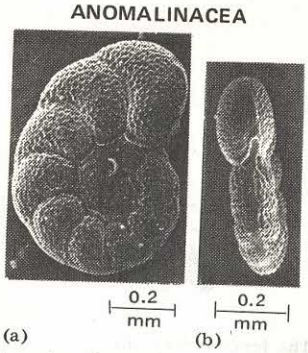
anorthite-basalt [PETR] A rock composed of a basic variety of basalt with anorthite instead of labradorite.

anorthoclase [MINERAL] A triclinic alkali feldspar having a chemical composition ranging from $Or_{40}Ab_{60}$ to $Or_{10}Ab_{90}$ to about 20 mole % An, where Or = $KAlSi_3O_8$, Ab = $NaAlSi_3O_8$, and An = $CaAl_2Si_2O_8$. Also known as anorthose; soda microcline.

anorthopia [MED] A defect of vision in which straight lines do not seem straight, and parallelism or symmetry is not properly perceived.

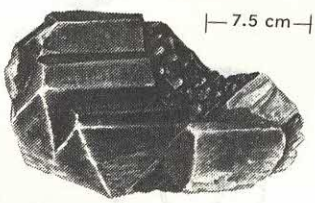
anorthose *See* anorthoclase.

ANOMALINACEA



Scanning electron micrograph of the foraminiferan *Holmanella*, from the Miocene of California. (*a*) Spiral view and (*b*) edge view of bievolute planispiral test, with a coarsely perforate granular margin, and a slitlike aperture extending up the terminal face. (*R. B. MacAdam, Chevron Oil Field Research Co.*)

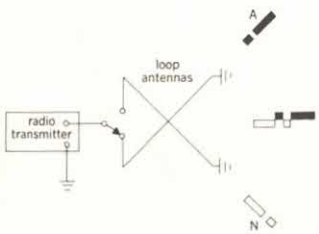
ANORTHITE



Anorthite crystals from Miakejima, Japan. (*Specimen from Department of Geology, Bryn Mawr College*)

anorthosite [PETR] A visibly crystalline plutonic rock composed almost entirely of plagioclase feldspar (andesine to anorthite) with minor amounts of pyroxene and olivine.
anorthositization [GEOL] A process of anorthosite formation by replacement or metasomatism.
anoscope [MED] An instrument for examining the lower rectum and anal canal.
anosmia [MED] Absence of the sense of smell.
Anostraca [INV ZOO] An order of shrimplike crustaceans generally referred to the subclass Branchiopoda.
anotron [ELECTR] A cold-cathode glow-discharge diode having a copper anode and a large cathode of sodium or other material.
anoxemia [MED] Condition of having an insufficient supply of oxygen in the bloodstream.
anoxia [MED] The failure of oxygen to gain access to, or to be utilized by, the body tissues.
anoxybiosis [PHYSIO] A type of cryptobiosis induced by lack of oxygen.

A-N RADIO RANGE



A-N radio range signals.

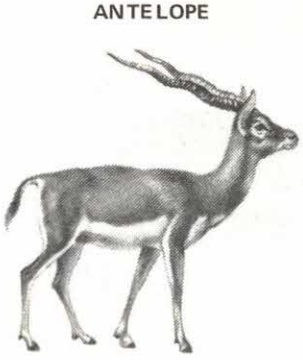
A-N radio range [NAV] A type of radio beacon station whose signals provide definite track guidance for aircraft by establishing four radial lines of position which can be identified by a continuous-tone signal made up of keyed pulses of equal amplitude representing the Morse code letters A and N.
ansae [ASTRON] The ends of the rings of Saturn, as seen from the Earth.
Ansbacher unit [BIOL] A unit for the standardization of vitamin K.
Anser [VERT ZOO] A genus of birds in the family Anatidae comprising the typical geese.
Anseranatini [VERT ZOO] A subfamily of aquatic birds in the family Anatidae represented by a single species, the magpie goose.
Anseriformes [VERT ZOO] An order of birds, including ducks, geese, swans, and screamers, characterized by a broad, flat bill and webbed feet.
Anson unit [BIOL] A unit for the standardization of trypsin and proteinases.
answering cord [ELEC] Cord nearest the face of the switchboard which is used for answering subscribers' calls and incoming trunks.
answering jack [ELEC] Jack on which a station calls in and is answered by an operator.
answer lamp [ELEC] Telephone switchboard lamp that lights when an answer cord is plugged into a line jack; the lamp goes out when the call is completed.
ant [INV ZOO] The common name for insects in the hymenopteran family Formicidae; all are social, and colonies exhibit a highly complex organization.

ANT

The female black ant *(Monororium minimum)*, about 1/16 inch (1.6 millimeters).

Ant *See* Antlia.
anta [ARCH] A pier or pilaster formed by a thickening at the end of a wall.
antacid [CHEM] Any substance that counteracts or neutralizes acidity.
antagonism [BIOL] **1.** Mutual opposition as seen between organisms, muscles, physiologic actions, and drugs. **2.** Opposing action between drugs and disease or drugs and functions.
Antarctica [GEOGR] A continent roughly centered on the South Pole and surrounded by an ocean consisting of the southern parts of the Atlantic, Pacific, and Indian oceans.
antarctic air [METEOROL] A type of air whose characteristics are developed in an antarctic region.
antarctic anticyclone [METEOROL] The glacial anticyclone which has been said to overlie the continent of Antarctica; analogous to the Greenland anticyclone.
Antarctic Circle [GEOD] The parallel of latitude approximately 66°32′ south of the Equator.
Antarctic Circumpolar Current [OCEANOGR] The ocean current flowing from west to east through all the oceans around the Antarctic Continent. Also known as West Wind Drift.
Antarctic Convergence [OCEANOGR] The oceanic polar front indicating the boundary between the subantarctic and subtropical waters. Also known as Southern Polar Front.
antarctic faunal region [ECOL] A zoogeographic region describing both the marine littoral and terrestrial animal communities on and around Antarctica.
antarctic front [METEOROL] The semipermanent, semicontinuous front between the antarctic air of the Antarctic continent and the polar air of the southern oceans; generally comparable to the arctic front of the Northern Hemisphere.

ANTELOPE



The black buck or Indian antelope *(Antilope cervicapra)*. The male is black with long, spiral horns, while the female is beige and hornless.

Antarctic Intermediate Water [OCEANOGR] A water mass in the Southern Hemisphere, formed at the surface near the Antarctic Convergence between 45° and 55°S; it can be traced in the North Atlantic to about 25°N.
Antarctic Ocean [GEOGR] A circumpolar ocean belt including those portions of the Atlantic, Pacific, and Indian oceans which reach the Antarctic continent and are bounded on the north by the Subtropical Convergence; not recognized as a separate ocean.
Antarctic Zone [GEOGR] The region between the Antarctic Circle (66°32′S) and the South Pole.
Antares [ASTRON] A red supergiant variable binary star of stellar magnitude 0.9, 520 light-years from the sun, spectral classification M1-Ib, in the constellation Scorpius; the star α Scorpii.
antazoline [PHARM] $C_{17}H_{19}N_3$ A bitter, white, crystalline powder with a melting point of 237–241°C; used as an antihistamine.
anteater [VERT ZOO] Any of several mammals, in five orders, which live on a diet of ants and termites.
antebrachium *See* forearm.
antecedent platform [GEOL] A submarine platform 50 meters or more below sea level from which barrier reefs and atolls are postulated to grow toward the water's surface.
antecedent precipitation index [METEOROL] A weighted summation of daily precipitation amounts; used as an index of soil moisture.
antecedent stream [HYD] A stream that has retained its early course in spite of geologic changes since its course was assumed.
antecedent valley [GEOL] A stream valley that existed before uplift, faulting, or folding occurred and which has maintained itself during and after these events.
anteconsequent stream [HYD] A stream consequent to the form assumed by the earth's surface as the result of early movement of the earth but antecedent to later movement.
antecosta [INV ZOO] The internal, anterior ridge of the tergum or sternum of many insects that provides a surface for attachment of the longitudinal muscles.
antediluvial [GEOL] Formerly referred to time or deposits antedating Noah's flood.
antefix [ARCH] **1.** A decorated upright slab used in classical architecture and derivatives to close or conceal the open end of a row of tiles which cover the joints of roof tiles. **2.** A similar ornament on the ridge of a roof.
anteflexion [MED] Forward bending of an organ on itself.
antelope [VERT ZOO] Any of the hollow-horned, hoofed ruminants assigned to the artiodactyl subfamily Antilopinae, confined to Africa and Asia.
antemedium [MATER] A substance, such as wax or resin solvent, used in tissue processing prior to infiltration for histological examination.
ante meridian [ASTRON] **1.** A section of the celestial meridian; it lies below the horizon, and the nadir is included. **2.** Before noon, or the period of time between midnight (0000) and noon (1200).
antemortem [MED] Before death.
antenatal [MED] Occurring or existing before birth.
antenna [ELECTROMAG] A device used for radiating or receiving radio waves. Also known as aerial; radio antenna. [INV ZOO] Any one of the paired, segmented, and movable sensory appendages on the heads of many arthropods.
antenna amplifier [ELECTROMAG] One or more stages of wide-band electronic amplification placed within or physically close to a receiving antenna to improve signal-to-noise ratio and mutually isolate various devices receiving their feed from the antenna.
antenna bearing [NAV] The generated bearing of the antenna of a radar set, as delivered to the indicator.
antenna chlorophyll [BIOCHEM] Chlorophyll molecules which collect light quanta.
antenna circuit [ELECTR] A complete electric circuit which includes an antenna.
antenna coil [ELECTROMAG] Coil through which antenna current flows.
antenna coincidence [ELECTROMAG] That instance when two rotating, highly directional antennas are pointed toward each other.
antenna counterpoise *See* counterpoise.
antenna coupler [ELECTROMAG] A radio-frequency trans-

former, tuned line, or other device used to transfer energy efficiently from a transmitter to a transmission line or from a transmission line to a receiver.

antenna crosstalk [ELECTROMAG] The ratio or the logarithm of the ratio of the undesired power received by one antenna from another to the power transmitted by the other.

antenna detector [ELECTROMAG] Device consisting of an antenna and electronic equipment to warn aircraft crew members that they are being observed by radar sets.

antenna directivity diagram [ELECTROMAG] Curve representing, in polar or cartesian coordinates, a quantity proportional to the gain of an antenna in the various directions in a particular plane or cone.

antenna effect [ELECTROMAG] A distortion of the directional properties of a loop antenna caused by an input to the direction-finding receiver which is generated between the loop and ground, in contrast to that which is generated between the two terminals of the loop. Also known as electrostatic error; vertical component effect.

antenna effective area [ELECTROMAG] In any specified direction, the square of the wavelength multiplied by the power gain (or directive gain) in that direction, and divided by 4π.

antenna field [ELECTROMAG] A group of antennas placed in a geometric configuration.

antennafier [COMMUN] Integrated low-profile antenna and amplifier for use with compact, portable communications systems.

antenna gain [ELECTROMAG] A measure of the effectiveness of a directional antenna as compared to a standard nondirectional antenna. Also known as gain.

antennal gland [INV ZOO] An excretory organ in the cephalon of adult crustaceans and best developed in the Malacostraca. Also known as green gland.

antenna loading [ELECTR] **1.** The amount of inductance or capacitance in series with an antenna, which determines the antenna's electrical length. **2.** The practice of loading an antenna in order to increase its electrical length.

antenna matching [ELECTROMAG] Process of adjusting impedances so that the impedance of an antenna equals the characteristic impedance of its transmission line.

antennamitter [COMMUN] Antenna combined with an oscillator to function as a low-power transmitter.

antenna pair [ELECTROMAG] Two antennas located on a base line of accurately surveyed length, sometimes arranged so that the array may be rotated around an axis at the center of the base line; used to produce directional patterns and in direction finding. [NAV] Two antennas located on a common base line to produce a directional pattern, often arranged so that the array may be rotated around an axis which is at their center.

antenna pattern *See* radiation pattern.

antenna power [ELECTROMAG] Radio-frequency power delivered to an antenna.

antenna power gain [ELECTROMAG] The power gain of an antenna in a given direction is 4π times the ratio of the radiation intensity in that direction to the total power delivered to the antenna.

antenna resistance [ELECTROMAG] The power supplied to an entire antenna divided by the square of the effective antenna current measured at the point where power is supplied to the antenna.

antenna scanner [ELECTROMAG] A microwave feed horn which moves in such a way as to illuminate sequentially different reflecting elements of an antenna array and thus produce the desired field pattern.

Antennata [INV ZOO] An equivalent name for the Mandibulata.

antenna tilt error [ENG] Angular difference between the tilt angle of a radar antenna shown on a mechanical indicator, and the electrical center of the radar beam.

antennaverter [COMMUN] Receiving antenna combined with a converter as a single unit, feeding directly into the intermediate-frequency amplifier of the receiver.

antenodal [INV ZOO] Before or in front of the nodus, a cross vein near the middle of the costal border of the wing of dragonflies.

antepartum [MED] Pertaining to the period before delivery or birth.

anteport [ARCH] A preliminary portal; an outer gate or door.

anter [INV ZOO] Part of a bryozoan operculum which serves to close off a portion of the operculum.

anteriad [ZOO] Toward the anterior portion of the body.

anterior [ZOO] Situated near or toward the front or head of an animal body.

anterior arm reach [ANTHRO] The distance measured from the wall to the tip of the right middle finger when the subject makes the maximum forward reach with both arms, standing with heels, buttocks, middle of back (in lateral sense), and occiput against the wall.

anterior commissure [ANAT] A bundle of nerve fibers that cross the midline of the brain in front of the third ventricle and serve to connect parts of the cerebral hemispheres.

anterograde amnesia [MED] Loss of memory for the period subsequent to a sudden trauma or a seizure.

anteromedial [ZOO] Anterior and toward the middle of the body.

antetheca [PALEON] The last or exposed septum at any stage of fusulinid growth.

anthelate [BOT] An open, paniculate cyme.

anthelic arc [ASTRON] A rare type of halo phenomenon appearing in an area 180° from the sun's azimuth and at the sun's elevation.

anthelion [ASTRON] A luminous white spot which occasionally appears on the parhelic circle 180° in azimuth away from the sun. Also known as counter sun.

anthelminthic [PHARM] A chemical substance used to destroy tapeworms in domestic animals. Also spelled anthelmintic.

anthelmintic *See* anthelminthic.

anther [BOT] The pollen-producing structure of a flower.

antheraxanthin [BIOCHEM] A neutral yellow plant pigment unique to the Euglenophyta.

antheridiophore [BOT] A specialized stemlike structure that supports an antheridium in some mosses and liverworts.

antheridium [BOT] **1.** The sex organ that produces male gametes in cryptogams. **2.** A minute structure within the pollen grain of seed plants.

antheriferous [BOT] Anther-bearing.

antherozoid [BOT] A motile male gamete produced by plants.

anther smut [MYCOL] *Ustilago violacea*. A smut fungus that attacks certain plants and forms spores in the anthers.

anthesis [BOT] The flowering period in plants.

Anthicidae [INV ZOO] The antlike flower beetles, a family of coleopteran insects in the superfamily Tenebrionoidea.

anthill [INV ZOO] A mound of earth deposited around the entrance to ant and termite nests in the ground. [MIN ENG] The cuttings around the hole collar in blasthole drilling.

anthoblast [INV ZOO] A developmental stage of some corals; produced by budding.

anthocarpous [BOT] Describing fruits having accessory parts.

anthocaulis [INV ZOO] The stemlike basal portion of some solitary corals; the oral portion becomes a new zooid.

Anthocerotae [BOT] A small class of the plant division Bryophyta, commonly known as hornworts or horned liverworts.

anthocodium [INV ZOO] The free, oral end of an anthozoan polyp.

Anthocoridae [INV ZOO] The flower bugs, a family of hemipteran insects in the superfamily Cimicimorpha.

anthocyanidin [BIOCHEM] Any of the colored aglycone plant pigments obtained by hydrolysis of anthocyanins.

anthocyanin [BIOCHEM] Any of the intensely colored, sap-soluble glycoside plant pigments responsible for most scarlet, purple, mauve, and blue coloring in higher plants.

Anthocyathea [PALEON] A class of extinct marine organisms in the phylum Archaeocyatha characterized by skeletal tissue in the central cavity.

anthocyathus [INV ZOO] The oral portion of the anthocaulus of some solitary corals that becomes a new zooid.

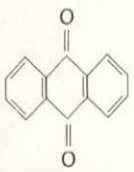
anthodite [GEOL] Gypsum or aragonite growing in clumps of long needle- or hairlike crystals on the roof or wall of a cave.

anthoinite [MINERAL] $Al_2W_2O_6 \cdot 3H_2O$ A white mineral consisting of a hydrous basic aluminum tungstate.

Anthomedusae [INV ZOO] A suborder of hydrozoan coelenterates in the order Hydroida characterized by athecate polyps.

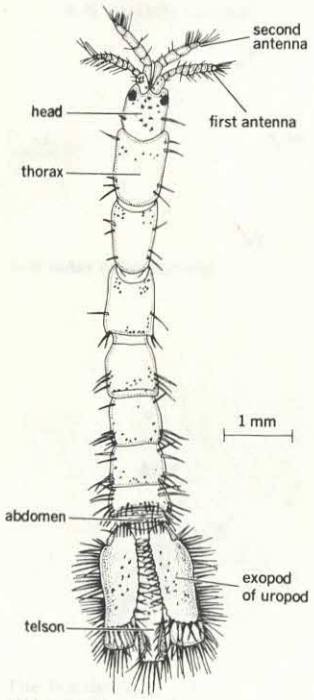
Anthomyzidae [INV ZOO] A family of cyclorrhaphous myodarian dipteran insects belonging to the subsection Acalypteratae.

ANTHRAQUINONE



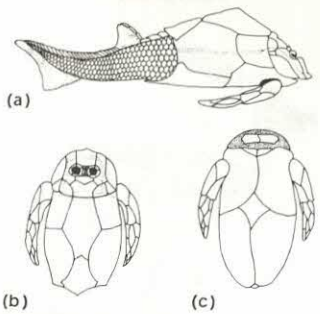
Structural formula of anthraquinone.

ANTHURIDEA



A drawing of *Paranthura infundibulata* Richardson, showing some of the characteristics of the Anthuridea.

ANTIARCHI



Pterichthyodes (Pterichthys), a Middle Devonian antiarch. *(a)* Lateral view showing scale-covered tail; about 15 centimeters in length. *(b)* Dorsal view and *(c)* ventral view of the armor. *(After Traquair)*

anthophagous [ZOO] Feeding on flowers.

anthophobia [PSYCH] Abnormal fear of flowers.

anthophore [BOT] A stalklike extension of the receptacle bearing the pistil and corolla in certain plants.

anthophyllite [MINERAL] A clove-brown orthorhombic mineral of the amphibole group. A variety of asbestos occurring as lamellae, radiations, fibers, or massive in metamorphic rocks. Also known as bidalotite.

Anthosomidae [INV ZOO] A family of fish ectoparasites in the crustacean suborder Caligoida.

anthostele [INV ZOO] A thick-walled, nonretractile aboral region of certain coelenterates.

Anthozoa [INV ZOO] A class of marine organisms in the phylum Coelenterata including the soft, horny, stony, and black corals, the sea pens, and the sea anemones.

anthozooid [INV ZOO] Any of the individual zooids of a compound anthozoan.

anthracene [ORG CHEM] $C_{14}H_{10}$ A crystalline tricyclic aromatic hydrocarbon, colorless when pure, melting at 218°C and boiling at 342°C; obtained in the distillation of coal tar; used as an important source of dyestuffs, and in coating applications.

anthracene oil [MATER] A heavy, green oil that is a coal-tar fraction boiling above 270°C; used as a source of anthracene, phenanthrene, and carbazole.

anthracene violet *See* gallein.

anthraciferous coal [ORG CHEM] Anthracite-hard coal containing or yielding anthracene.

anthracite [MINERAL] A high-grade metamorphic coal having a semimetallic luster, high content of fixed carbon, and high density, and burning with a short blue flame and little smoke or odor. Also known as hard coal; Kilkenny coal; stone coal.

anthracite duff [MATER] In Wales, fine anthracite screenings used in briquets or mixed with bituminous coal to fuel cement kilns on chain grate stokers.

anthracite fines [MIN ENG] Small pieces of material from an anthracite coal preparation plant, usually below 1/8 inch (3 millimeter) diameter.

anthracnose [PL PATH] A fungus disease of plants caused by members of the Melanconiales and characterized by dark or black limited stem lesions.

Anthracosauria [PALEON] An order of Carboniferous and Permian labyrinthodont amphibians that includes the ancestors of living reptiles.

anthracosilicosis [MED] Chronic lung inflammation caused by inhalation of carbon and silicon particles.

anthracosis [MED] The accumulation of inhaled black coal dust particles in the lung accompanied by chronic inflammation. Also known as blacklung.

Anthracotheriidae [PALEON] A family of middle Eocene and early Pleistocene artiodactyl mammals in the superfamily Anthracotherioidea.

Anthracotherioidea [PALEON] A superfamily of extinct artiodactyl mammals in the suborder Paleodonta.

anthracoxene [GEOL] A brownish resin that occurs in brown coal; in ether it dissolves into an insoluble portion, anthrocoxenite, and a soluble portion, schlanite.

anthralin [PHARM] $C_{14}H_{10}O_3$ A yellow powder with a melting point of 176–181°C; soluble in chloroform, acetone, and benzene; used in treatment of psoriasis.

anthranilic acid [ORG CHEM] *ortho*-$NH_2C_6H_4COOH$ A white or pale yellow, crystalline acid melting at 146°C; used as an intermediate in the manufacture of dyes, pharmaceuticals, and perfumes.

anthrapurpurin [ORG CHEM] $C_6H_3OH(CO)_2C_6H_2(OH)_2$ Orange-yellow, crystalline needles with a melting point of 369°C; soluble in alcohol and alkalies; used in dyeing. Also known as isopurpurin; purpurin red.

anthraquinone [ORG CHEM] $C_6H_4(CO)_2C_6H_4$ Yellow crystalline diketone that is insoluble in water; used in the manufacture of dyes. Also known as dihydrodiketoanthracene.

anthraquinone pigments [BIOCHEM] Coloring materials which occur in plants, fungi, lichens, and insects; consists of about 50 derivatives of the parent compound, anthraquinone.

anthrax [VET MED] An acute, infectious bacterial disease of sheep and cattle caused by *Bacillus anthracis;* transmissible to man. Also known as splenic fever; wool-sorter's disease.

anthraxolite [GEOL] Anthracite-like asphaltic material occurring in veins in Precambrian slate of Sudbury District, Ontario.

anthraxylon [GEOL] The vitreous-appearing components of coal derived from the woody tissues of plants.

Anthribidae [INV ZOO] The fungus weevils, a family of coleopteran insects in the superfamily Curculionoidea.

anthrone [ORG CHEM] $C_{14}H_{10}O$ Colorless needles with a melting point of 156°C; soluble in alcohol, benzene, and hot sodium hydroxide; used as a reagent for carbohydrates.

anthropic [ANTHRO] Pertaining to humans or the period of their existence on earth.

anthropic principle [ASTRON] The assertion that the presence of intelligent life on earth places limits on the many ways the universe could have developed and could have caused the conditions of temperature that prevail today.

anthropocentric [PSYCH] **1.** Regarding humankind as the most important factor in the universe. **2.** Evaluating all occurrences solely by human values.

anthropochory [ECOL] Dispersal of plant and animal disseminules by humans.

anthropodesoxycholic acid *See* chenodeoxycholic acid.

anthropogenic [ECOL] Referring to environmental alterations resulting from the presence or activities of humans.

anthropography [ANTHRO] A branch of anthropology that deals with the geographic distribution of divisions of humans based on physical character, language, customs, and institutions.

anthropoid [VERT ZOO] Pertaining to or resembling the Anthropoidea.

Anthropoidea [VERT ZOO] A suborder of mammals in the order Primates including New and Old World monkeys.

anthropology [BIOL] The study of the interrelations of biological, cultural, geographical, and historical aspects of humankind.

anthropometry [ANTHRO] Description of the physical variation in humankind by measurement; a basic technique of physical anthropology.

anthropophobia [PSYCH] Abnormal fear of people.

anthroposcopy [ANTHRO] The description of physical variation in humankind by visual inspection; a basic technique of physical anthropology.

anthroposphere [ECOL] A term sometimes used to refer to the biosphere of the great geological activities of humankind. Also known as noosphere.

Anthuridea [INV ZOO] A suborder of crustaceans in the order Isopoda characterized by slender, elongate, subcylindrical bodies, and by the fact that the outer branch of the paired tail appendage (uropod) arches over the base of the terminal abdominal segment, the telson.

antiacid additive [MATER] A substance that prevents or retards corrosive acid formation in crankcase oils during use.

antiacid bronze [METAL] A high-lead, acid-resistant bronze used for casting chemical machine parts.

antiagglutinin [IMMUNOL] A substance that neutralizes a corresponding agglutinin.

antiaggressin [IMMUNOL] An antibody that neutralizes aggressin, a substance produced by pathogenic microorganisms to enhance virulence.

antiaircraft [ORD] Used, or designed to be used, against airborne aircraft or missiles. Abbreviated AA.

antiaircraft artillery [ORD] Projectile weapons with related equipment, such as searchlights or radar, employed on the ground or on ships to strike at airborne aircraft or missiles. Abbreviated AAA.

antiaircraft barrage [ORD] **1.** A concentration of antiaircraft fire covering an area through which enemy aircraft are likely to fly. Also known as predicted barrage. **2.** Less precisely, any concentration of antiaircraft fire.

antiaircraft gun [ORD] A gun designed for use against aircraft, easily shifted in direction and elevation, having great range, and capable of firing at high angles of elevation.

antiaircraft missile [ORD] A guided missile that is intended to be launched from the surface against an airborne target. Abbreviated AAM.

antianaphylaxis [IMMUNOL] A condition in which a sensitized animal resists anaphylaxis.

Antiarchi [PALEON] A division of highly specialized placoderms restricted to fresh-water sediments of the Middle and Upper Devonian.

antiatom [ATOM PHYS] An atom made up of antiprotons, antineutrons, and positrons in the same way that an ordinary atom is made up of protons, neutrons, and electrons.

antibacterial agent [MICROBIO] A synthetic or natural compound which inhibits the growth and division of bacteria.
antiballistic missile [ORD] Any object thrown, dropped, fired, or otherwise projected with the purpose of intercepting a ballistic missile. Abbreviated ABM.
antibaryon [ATOM PHYS] One of a class of antiparticles, including the antinucleons and the antihyperons, with strong interactions, baryon number −1, and hypercharge and charge opposite to those for the particles.
antibiosis [ECOL] Antagonistic association between two organisms in which one is adversely affected.
antibiotic [MICROBIO] A chemical substance, produced by microorganisms and synthetically, that has the capacity in dilute solutions to inhibit the growth of, and even to destroy, bacteria and other microorganisms.
antibiotic assay [MICROBIO] A method for quantitatively determining the concentration of an antibiotic by its effect in inhibiting the growth of a susceptible microorganism.
antibody [IMMUNOL] A protein, found principally in blood serum, originating either normally or in response to an antigen and characterized by a specific reactivity with its complementary antigen. Also known as immune body.
antibody-deficiency syndrome [MED] Any of the human defects of antibody production, such as hypogammaglobulinemia, agammaglobulinemia, and dysgammaglobulinemia, usually associated with reduced serum concentrations of immunoglobulins.
antibonding orbital [PHYS] An atomic or molecular orbital whose energy increases as atoms are brought closer together, indicating a net repulsion rather than a net attraction and chemical bonding.
antiboreal faunal region [ECOL] A zoogeographic region including marine littoral faunal communities at the southern end of South America.
anticapacitance switch [ELECTR] A switch designed to have low capacitance between its terminals when open.
anticarcinogen [PHARM] Any substance which is antagonistic to the action of a carcinogen.
anticatalyst [CHEM] A material that slows down the action of a catalyst; an example is lead, which inhibits the action of platinum.
anticathode [ELECTR] The anode or target of an x-ray tube, on which the stream of electrons from the cathode is focused and from which x-rays are emitted.
anticenter [GEOL] The point on the surface of the earth that is diametrically opposite the epicenter of an earthquake. Also known as antiepicenter.
antichlor [CHEM ENG] A chemical used in the manufacture of paper or textiles to remove excess chlorine or bleaching solution.
anticholinesterase [BIOCHEM] Any agent, such as a nerve gas, that inhibits the action of cholinesterase and thereby destroys or interferes with nerve conduction.
anticipatory staging [COMPUT SCI] Moving blocks of data from one storage device to another prior to the actual request for them by the program.
anticlastic [MATH] Having the property of a surface or portion of a surface whose two principal curvatures at each point have opposite signs, so that one normal section is concave and the other convex.
anticlinal [BOT] Perpendicular to the surface or periphery of an organ. [GEOL] Folded as in an anticline.
anticlinal axis [GEOL] The median line of a folded structure from which the strata dip on either side.
anticlinal bend [GEOL] An upwardly convex flexure of rock strata in which one limb dips gently toward the apex of the strata and the other dips steeply away from it.
anticlinal mountain [GEOL] Ridges formed by a convex flexure of the strata.
anticlinal theory [GEOL] A theory relating trapped underground oil accumulation to anticlinal structures.
anticlinal valley [GEOL] A valley that follows an anticlinal axis.
anticline [GEOL] A fold in which layered strata are inclined down and away from the axes.
anticlinorium [GEOL] A series of anticlines and synclines that form a general arch or anticline.
anticlutter gain control [ELECTR] Device which automatically and smoothly increases the gain of a radar receiver from a low level to the maximum, within a specified period after each transmitter pulse, so that short-range echoes producing clutter are amplified less than long-range echoes.
anticoagulant [PHARM] An agent, such as sodium citrate, that prevents coagulation of a colloid, especially blood.
anticodon [GEN] A three-nucleotide sequence of transfer RNA that complements the codon in messenger RNA.
anticoincidence [NUC PHYS] The occurrence of an event at one place without a simultaneous event at another place.
anticoincidence circuit [ELECTR] Circuit that produces a specified output pulse when one (frequently predesignated) of two inputs receives a pulse and the other receives no pulse within an assigned time interval.
anticollision radar [ENG] A radar set designed to give warning of possible collisions during movements of ships or aircraft.
anticommutator [MATH] The anticommutator of two operators, A and B, is the operator $AB + BA$.
anticommute [MATH] Two operators anticommute if their anticommutator is equal to zero.
anticonvulsant [PHARM] An agent, such as Dilantin, that prevents or arrests a convulsion.
anticorona [OPTICS] A diffraction phenomenon appearing at a point before an observer with the sun or moon directly behind him; consists of rings of colored lights complementary to the coronal rings. Also known as Brocken bow.
anticorrosive paint [MATER] A paint formulated with a corrosive-resistant pigment (such as lead chromate, zinc chromate, or red lead) and a chemical- and moisture-resistant binder; used to protect iron and steel surfaces.
anticreeper [CIV ENG] A device attached to a railroad rail to prevent it from moving in the direction of its length.
anticrepuscular rays [ASTRON] Extensions of crepuscular rays, converging toward a point 180° from the sun.
anticryptic [ECOL] Pertaining to protective coloration that makes an animal resemble its surroundings so that it is inconspicuous to its prey.
anticurl coating [GRAPHICS] A thin layer generally applied to or on the back of photographic material to prevent front warping.
anticusp [INV ZOO] An anterior, downward projection in conodonts.
anticyclogenesis [METEOROL] The process which creates an anticyclone or intensifies an existing one.
anticyclolysis [METEOROL] Any weakening of anticyclonic circulation in the atmosphere.
anticyclone [METEOROL] High-pressure atmospheric closed circulation whose relative direction of rotation is clockwise in the Northern Hemisphere, counterclockwise in the Southern Hemisphere, and undefined at the Equator. Also known as high-pressure area.
anticyclonic [METEOROL] Referring to a rotation about the local vertical that is clockwise in the Northern Hemisphere, counterclockwise in the Southern Hemisphere, undefined at the Equator.
anticyclonic shear [METEOROL] Horizontal wind shear of such a nature that it tends to produce anticyclonic rotation of the individual air particles along the line of flow.
anticyclonic winds [METEOROL] The winds associated with a high pressure area and constituting part of an anticyclone.
antidepressant [PHARM] A drug, such as imipramine and tranylcypromine, that relieves depression by increasing central sympathetic activity.
antiderivative *See* indefinite integral.
antidesiccant [MATER] Material applied to plants prior to transplanting to reduce the amount of moisture lost by transpiration.
antidetonant *See* antiknock.
antideuteron [ATOM PHYS] The antiparticle to the deuteron, composed of an antineutron and an antiproton.
antidiabetic [PHARM] An agent, such as insulin, that is effective in controlling diabetes.
antidiarrheal [PHARM] An agent, such as Kaopectate, that prevents or arrests diarrhea.
antidiuretic [PHARM] An agent, such as vasopressin, that prevents the excretion of urine.
antidiuretic hormone *See* vasopressin.
antidote [PHARM] An agent that relieves or counteracts the action of a poison.
antidrag [AERO ENG] **1.** Describing structural members in an aircraft or missile that are designed or built to resist the effects of drag. **2.** Referring to a force acting against the force of drag.

ANTICLINE

Diagram relating anticlinal structure to topography.

antidune [GEOL] A temporary form of ripple on a stream bed analogous to a sand dune but migrating upcurrent.

antienzyme [BIOCHEM] An agent that selectively inhibits the action of an enzyme.

antiepicenter *See* anticenter.

antierythrite *See* erythritol.

antifading antenna [ELECTR] An antenna designed to confine radiation mainly to small angles of elevation to minimize the fading of radiation directed at larger angles of elevation.

antiferroelectric crystal [SOLID STATE] A crystalline substance characterized by a state of lower symmetry consisting of two interpenetrating sublattices with equal but opposite electric polarization, and a state of higher symmetry in which the sublattices are unpolarized and indistinguishable.

antiferromagnetic domain [SOLID STATE] A region in a solid within which equal groups of elementary atomic or molecular magnetic moments are aligned antiparallel.

antiferromagnetic resonance [ELECTROMAG] Magnetic resonance in antiferromagnetic materials which may be observed by rotating magnetic fields in either of two opposite directions.

antiferromagnetic substance [ELECTROMAG] A substance composed of antiferromagnetic domains.

antiferromagnetic susceptibility [ELECTROMAG] The magnetic response to an applied magnetic field of a substance whose atomic magnetic moments are aligned in antiparallel fashion.

antiferromagnetism [SOLID STATE] A property possessed by some metals, alloys, and salts of transition elements by which the atomic magnetic moments form an ordered array which alternates or spirals so as to give no net total moment in zero applied magnetic field.

antifertilizin [BIOCHEM] An immunologically specific substance produced by animal sperm to implement attraction by the egg before fertilization.

antifibrinolysin [BIOCHEM] Any substance that inhibits the proteolytic action of fibrinolysin.

antifix [ARCH] In classical architecture, either an ornament at the eaves to hide the ends of the joint tiles of the roof or an ornament of the cymatium of a classic cornice, sometimes pierced so that water can flow through.

antifoaming agent [ORG CHEM] A substance, such as silicones, organic phosphates, and alcohols, that inhibits the formation of bubbles in a liquid during its agitation by reducing its surface tension.

antifogging compound [MATER] A compound of one or more basic chemicals with filler or extenders for preventing condensation of moisture on glass and other transparent material, such as lenses or windshields.

antiform [GEOL] An anticlinelike structure whose stratigraphic sequence is not known.

antifouling coating [MATER] A special paint containing copper used on ships' bottoms to prevent marine organisms from attaching themselves.

antifreeze [CHEM] A substance added to a liquid to lower its freezing point; the principal automotive antifreeze component is ethylene glycol.

antifriction [MECH] Making friction smaller in magnitude. [MECH ENG] Employing a rolling contact instead of a sliding contact.

antifriction alloy [MET] An alloy generally having more than 50% tin as a base and cast as facings of machinery bearings, domestic equipment, and small parts in rolling contact.

antifriction bearing [MECH ENG] Any bearing having the capability of reducing friction effectively.

antifriction material [ENG] A machine element made of Babbitt metal, lignum vitae, rubber, or a combination of a soft, easily deformable metal overlaid on a hard, resistant one.

antifungal agent [MATER] A chemical compound that either destroys or inhibits the growth of fungi.

antigen [IMMUNOL] A substance which reacts with the products of specific humoral or cellular immunity, even those induced by related heterologous immunogens.

antigen-antibody reaction [IMMUNOL] The combination of an antigen with its antibody.

antigenic determinant [IMMUNOL] The portion of an antigen molecule that determines the specificity of the antigen-antibody reaction.

antigorite [MINERAL] $Mg_3Si_2O_5(OH)_4$ Brownish-green variety of the mineral serpentine. Also known as baltimorite; picrolite.

antigravity [PHYS] The repulsion of one body by another by means of a gravitational type of force; this has never been observed.

anti-g suit *See* g suit.

antihalation backing [GRAPHICS] A coating on the back of film to minimize reflection of light from the base into the emulsion.

antihemophilic factor [BIOCHEM] A soluble protein clotting factor in mammalian blood. Also known as factor VIII; thromboplastinogen.

antihemorrhagic vitamin *See* vitamin K.

antihistamine [PHARM] A drug that prevents or diminishes the effect of histamine; used in treating allergic reactions and common-cold symptoms.

antihunt circuit [ELECTR] A stabilizing circuit used in a closed-loop feedback system to prevent self-oscillations.

antihyperon [PARTIC PHYS] An antiparticle to a hyperon, having the same mass, lifetime, and spin as the hyperon, but with charge and magnetic moment reversed in sign.

antihypertensive agent [PHARM] A substance, such as reserpine, that reduces hypertension.

anti-icing [AERO ENG] The prevention of the formation of ice upon any object, especially aircraft, by means of windshield sprayer, addition of antifreeze materials to the carburetor, or heating the wings and tail.

anti-infective vitamin *See* vitamin A.

anti-inflammatory agent [PHARM] A substance, such as cortisone, that counteracts inflammation.

antijamming [ELECTR] Any system or technique used to counteract the jamming of communications or of radar operation.

antiknock [MATER] **1.** Resisting detonation or pinging in spark-ignited engines. **2.** A substance, such as tetraethyllead, added to motor and aviation gasolines to increase the resistance of the fuel to knock in spark-ignited engines. Also known as antidetonant.

antiknock blending value [ENG] The numerical improvement by an antiknock additive to gasoline octane, often a greater amount than the additive's own octane value.

antiknock gasoline [MATER] Gasoline containing, for example, tetraethyllead, which in small amounts prevents or lessens knocking in a spark-ignited engine.

antiknock rating [ENG] Measurement of the ability of an automotive gasoline to resist detonation or pinging in spark-ignited engines.

Antilles Current [OCEANOGR] A current formed by part of the North Equatorial Current that flows along the northern side of the Greater Antilles.

Antilocapridae [VERT ZOO] A family of artiodactyl mammals in the superfamily Bovoidea; the pronghorn is the single living species.

antilog *See* antilogarithm of a number.

antilogarithm of a number [MATH] A second number whose logarithm is the first number. Abbreviated antilog. Also known as inverse logarithm of a number.

antilogous pole [SOLID STATE] That crystal pole which becomes electrically negative when the crystal is heated or is expanded by decompression.

Antilopinae [VERT ZOO] The antelopes, a subfamily of artiodactyl mammals in the family Bovidae.

antilymphocyte serum [IMMUNOL] An immunosuppressive agent effective in prolonging the lives of homografts in experimental animals by reducing the circulating lymphocytes.

antilysin [IMMUNOL] A substance antagonistic to the action of a lysin.

antimagnetic [ENG] Constructed so as to avoid the influence of magnetic fields, usually by the use of nonmagnetic materials and by magnetic shielding.

antimalarial [PHARM] **1.** A drug, such as quinacrine, that prevents or suppresses malaria. **2.** Acting against malaria.

antimatter [PHYS] Material consisting of atoms which are composed of positrons, antiprotons, and antineutrons.

antimere [INV ZOO] Any one of the equivalent parts into which a radially symmetrical animal may be divided.

antimetabolite [PHARM] A substance, such as sulfanilamide or amethopterin, that inhibits utilization of an essential metabolite because it is an analog of the metabolite.

antimicrobial agent [MICROBIO] A chemical compound that either destroys or inhibits the growth of microscopic and submicroscopic organisms.

antimissile missile [ORD] An explosive missile designed to intercept and destroy another missile in flight. Also known as auntie.

antimitotic drug [PHARM] A substance, such as colchicine, vincristine, or vinblastine, that interferes with mitotic cellular division; used in the chemotherapy of leukemia.

antimolecule [ATOM PHYS] A molecule made up of antiprotons, antineutrons, and positrons in the same way that an ordinary molecule is made up of protons, neutrons, and electrons.

antimonate [CHEM] The negative radical $[Sb(OH)_6]^-$ in salts derived from antimony pentoxide, Sb_4O_{10}, and bases.

antimonial lead | [MET] A lead alloy containing up to 25% antimony and possessing greater hardness and tensile strength than lead; used for storage-battery plates, pipes, cable coverings, and roofing.

antimonic [CHEM] Derived from or pertaining to pentavalent antimony.

antimonide [INORG CHEM] A binary compound of antimony with a more positive compound, for example, H_3Sb. Also known as stibide.

antimonite [MINERAL] Sb_2S_3 A lead-gray antimony sulfide mineral, the primary source of antimony; sometimes contains gold or silver; has a brilliant metallic luster, and occurs as prismatic orthorhombic crystals in massive forms. Also known as antimony glance; gray antimony; stibium; stibnite.

antimonous [CHEM] Pertaining to antinomy, especially trivalent antimony.

antimonous chloride *See* antimony trichloride.

antimonous sulfide *See* antimony trisulfide.

antimony [CHEM] A chemical element, symbol Sb, atomic number 51, atomic weight 121.75. [MINERAL] A very brittle, tin-white, hexagonal mineral, the native form of the element.

antimony-124 [NUC PHYS] Radioactive antimony with mass number of 124; 60-day half-life; used as tracer in solid-state and pipeline flow studies.

antimony black *See* antimony trisulfide.

antimony blende *See* kermesite.

antimony chloride *See* antimony trichloride.

antimony glance *See* antimonite.

antimonyl [CHEM] The inorganic radical SbO^+

antimonyl potassium tartrate *See* tartar emetic.

antimony(III) oxide [INORG CHEM] Sb_2O_3 Colorless, rhombic crystals, melting at 656°C; insoluble in water; powerful reducing agent.

antimony needles *See* antimony trisulfide.

antimony orange *See* antimony trisulfide.

antimony pentachloride [INORG CHEM] $SbCl_5$ A reddish-yellow, oily liquid; hygroscopic, it solidifies after moisture is absorbed and decomposes in excess water; soluble in hydrochloric acid and chloroform; used in analytical testing for cesium and alkaloids, for dyeing, and as an intermediary in synthesis. Also known as antimony perchloride.

antimony pentafluoride [INORG CHEM] SbF_5 A corrosive, hygroscopic, moderately viscous fluid; reacts violently with water; forms a clear solution with glacial acetic acid; used in the fluorination of organic compounds.

antimony pentasulfide [INORG CHEM] Sb_2S_5 An orange-yellow powder; soluble in alkali, soluble in concentrated hydrochloric acid, with hydrogen sulfide as a by-product, and insoluble in water; used as a red pigment. Also known as antimony persulfide; antimony red; golden antimony sulfide.

antimony perchloride *See* antimony pentachloride.

antimony persulfide *See* antimony pentasulfide.

antimony red *See* antimony pentasulfide.

antimony sodiate *See* sodium antimonate.

antimony sulfate [INORG CHEM] $Sb_2(SO_4)_3$ Antimony(III) sulfate, a white, deliquescent powder; soluble in acids.

antimony sulfide *See* antimony trisulfide.

antimony trichloride [INORG CHEM] $SbCl_3$ Hygroscopic, colorless, crystalline mass; fumes slightly in air, is soluble in alcohol and acetone, and forms antimony oxychloride in water; used as a mordant, as a chlorinating agent, and in fireproofing textiles. Also known as antimonous chloride; antimony chloride; caustic antimony.

antimony trisulfide [INORG CHEM] Sb_2S_3 Black and orange-red rhombic crystals; soluble in concentrated hydrochloric acid and sulfide solutions, insoluble in water; melting point 546°C; used as a pigment, and in matches and pyrotechnics. Also known as antimonous sulfide; antimony black; antimony needles; antimony orange; antimony sulfide; black antimony.

antimony yellow *See* lead antimonite.

antimycin A [MICROBIO] $C_{28}H_{40}O_9N_2$ An antifungal antibiotic produced by *Streptomyces kitazawaensis;* the principal fraction of antimycin.

antineoplastic drug [PHARM] An agent, such as mercaptopurine compounds, that is antagonistic to the growth of a neoplasm.

antineutrino [PARTIC PHYS] The antiparticle to the neutrino; it has zero mass, spin ½, and positive helicity; there are two antineutrinos, one associated with electrons and one with muons.

antineutron [PARTIC PHYS] The antiparticle to the neutron; a strongly interacting baryon which has no charge, mass of 939.6 MeV, spin ½, and mean life of about 10^3 seconds.

antinodal points *See* negative nodal points.

antinode [ASTRON] Either of the two points on an orbit where a line in the orbit plane, perpendicular to the line of nodes and passing through the focus, intersects the orbit. [PHYS] A point, line, or surface in a standing-wave system at which some characteristic of the wave has maximum amplitude. Also known as loop.

antinoise microphone [ENG ACOUS] Microphone with characteristics which discriminate against acoustic noise.

antinucleon [PARTIC PHYS] An antineutron or antiproton, that is, particles having the same mass as their nucleon counterparts but opposite charge or opposite magnetic moment.

antinucleus [NUC PHYS] A nucleus made up of antineutrons and antiprotons in the same way that an ordinary nucleus is made up of neutrons and protons.

Antioch process [MET] A method of plaster molding in which a plaster-water mixture is poured over a pattern, after which the mold is steam-treated, allowed to set in air, dried in an oven, and cooled for use in casting certain alloys.

antioxidant [CHEM] An inhibitor, such as ascorbic acid, effective in preventing oxidation by molecular oxygen.

antiozonant [CHEM ENG] A protective agent which can be added to rubber during processing to diminish the deteriorating effects of ozone.

antiparallel [GEN] Pertaining to parallel molecules that point in opposite directions, as the strands of deoxyribonucleic acid. [PHYS] Property of two displacements or other vectors which lie along parallel lines but point in opposite directions.

antiparasitic agent [PHARM] An agent, such as emetine or quinine, that destroys or suppresses human and animal parasites.

antiparticle [PARTIC PHYS] A counterpart to a particle having mass lifetime and spin identical to the particle but with charge and magnetic moment reversed in sign.

Antipatharia [INV ZOO] The black or horny corals, an order of tropical and subtropical coelenterates in the subclass Zoantharia.

antipersonnel [ORD] Applied to bombs, mines, and missiles designed to kill, wound, or obstruct people. Abbreviated apers.

antipersonnel weapon [ORD] All instruments of combat, either offensive or defensive, used to destroy, wound, obstruct, or threaten enemy personnel.

antiperthite [GEOL] Natural intergrowth of feldspars formed by separation of sodium feldspar (albite) and potassium feldspar (orthoclase) during slow cooling of molten mixtures; the potassium-rich phase is exolved in a plagioclase host, exactly the inverse of perthite.

antipetalous [BOT] Having stamens positioned opposite to, rather than alternating with, the petals.

antipitching fin [NAV ARCH] A control surface protruding underwater at the bow or stern to generate lift opposed to the pitching of the ship.

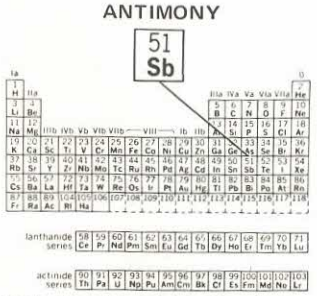
antipodal [BOT] Any of three cells grouped at the base of the embryo sac, that is, at the end farthest from the micropyle, in most angiosperms.

antipodes [GEOD] Diametrically opposite points on the earth.

antiprincipal planes *See* negative principal planes.

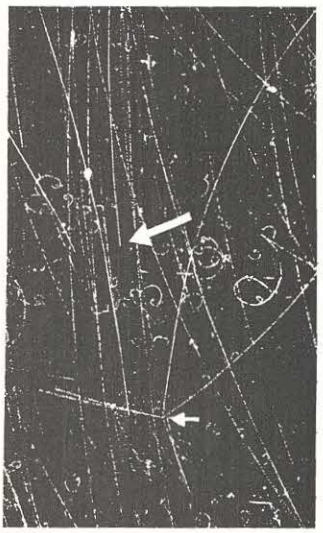
antiprincipal point *See* negative principal point.

ANTIMONY



Periodic table of the chemical elements showing the position of antimony.

ANTINEUTRON



Propane bubble-chamber photograph taken in proton and meson beam of the bevatron. Large arrow indicates where antineutron was formed. Five-pronged star indicated by small arrow is annihilation star of antineutron. Actual distance between formation and annihilation is about 12 centimeters. Density of propane is 0.42 g/cm³. *(University of California Lawrence Berkeley Laboratory)*

ANTIPATHARIA

Irregularly branching plantlike colony, *Antipathes rhipidion.* *(After F. Pax)*

antiproton [PARTIC PHYS] The antiparticle to the proton; a strongly interacting baryon which is stable, carries unit negative charge, has the same mass as the proton (983.3 MeV), and has spin ½.

antiprotonic atom [ATOM PHYS] An atom consisting of an ordinary nucleus with an orbiting antiproton.

antipruritic [PHARM] An agent, such as camphor, that relieves itching.

antipyretic [PHARM] Any agent, such as aspirin, that reduces or prevents fever.

antipyrine [PHARM] $C_{11}H_{12}ON_2$ A compound used as an antipyretic, analgesic, and antirheumatic.

antiquark [PARTIC PHYS] The hypothetical antiparticle of a quark, having electric charge, baryon number, and strangeness opposite in sign to that of the corresponding quark.

antique finish [MATER] A paper finish, somewhat rougher than eggshell, obtained by operating wet presses and calender stacks at reduced pressures.

antiquing [ENG] **1.** Producing a rich glow on the surface of a leather by applying stain, wax, or oil, allowing it to set, and rubbing or brushing the leather. **2.** A technique of handling wet paint to expose parts of the undercoat, by combing, graining, or marbling. Also known as broken-color work.

antirachitic vitamin *See* vitamin D.

antirad [CHEM ENG] An inhibitor incorporated into rubber during manufacturing to reduce the degrading effects of radiation.

antiradar coating [ENG] A surface treatment used to reduce the reflection of electromagnetic waves so as to avoid radar detection.

antireflection coating [ENG] The application of a thin film of dielectric material to a surface to reduce its reflection and to increase its transmission of light or other electromagnetic radiation.

antiresonance [ELEC] *See* parallel resonance. [ENG] The condition for which the impedance of a given electric, acoustic, or dynamic system is very high, approaching infinity.

antiresonant circuit *See* parallel resonant circuit.

anti-Rh agglutinin [IMMUNOL] An antibody against any Rh antigen; it must be acquired and is never natural.

anti-Rh immunoglobulin [IMMUNOL] A serum protein that destroys Rh-positive fetal erythrocytes in an Rh-negative mother when administered after delivery.

anti-Rh serum [IMMUNOL] A blood serum containing anti-Rh antibodies.

antiricochet device [ORD] Usually a parachute unit, fuse adapter, and fuse attached to the tail of a bomb to prevent ricochet, with consequent loss of effectiveness and possible danger to the dropping plane.

antiroll fin [NAV ARCH] A control surface protruding from either of the lower sides of a ship to generate lift opposed to the rolling of the ship.

antirolling gyroscope [NAV ARCH] A very large gyroscope having a vertical axis and mounted in a ship so that the axis can be tipped fore and aft by an electric motor, resulting in the gyroscope's exerting a large torque on the ship about the fore-and-aft axis.

antiroll tank [NAV ARCH] One of paired tanks at opposite sides within a ship which are partially filled with liquid whose flow from one tank to the other helps to offset ship rolls.

antirostrum [INV ZOO] The terminal segment of the appendages of certain mites.

antisatellite missile [ORD] A missile whose target is an orbiting satellite.

antisense [GEN] A strand of deoxyribonucleic acid having a sequence identical to messenger ribonucleic acid.

antisense strand [MOL BIO] The strand of a double-stranded deoxyribonucleic acid molecule from which ribonucleic acid is transcribed.

antiseptic [PHARM] A substance used to destroy or prevent the growth of infectious microorganisms on or in the body.

antiserum [IMMUNOL] Any immune serum that contains antibodies active chiefly in destroying a specific infecting virus or bacterium.

antisetoff powder [GRAPHICS] Fine-powdered starch or limestone applied to a freshly printed sheet of paper to reduce unintentional transfer of ink to neighboring sheets in a stack.

antishock agent [PHARM] A substance, such as a cesium salt, that relieves a state of shock.

antisideric [PHARM] A pharmaceutical that counteracts the physiological effects of iron.

anti-sidetone circuit [ELEC] Telephone circuit which prevents sound, introduced in the local transmitter, from being reproduced in the local receiver.

antiskid plate [ENG] A sheet of metal roughed on both sides and placed between piled objects, such as boxes in a freight car, to prevent sliding.

antislip metal [MET] Metal, usually iron, bronze, or aluminum, containing abrasive grains cast with the metal or rolled out to the surface; used for car steps, stair treads, or floor plates.

antislip paint [MATER] A paint with a high coefficient of friction, caused by addition of sand, wood flour, or cork dust; used on steps, porches, and walkways to prevent slipping.

antismallpox vaccine *See* smallpox vaccine.

antismudge ring [BUILD] A frame attached around a ceiling-mounted air diffuser, to minimize the formation of rings of dirt on the ceiling.

antisolar point [ASTRON] The point on the celestial sphere which lies directly opposite the sun from the observer, that is, on the line from the sun through the observer.

antispasmodic [PHARM] An agent, such as benzyl benzoate, that relieves convulsions and the pain of muscular spasms.

antistat *See* antistatic agent.

antistatic agent [MATER] A material used with textiles, plastics, paper products, or wax polishes to reduce static-electrical charges by allowing the charge to leak off. Also known as antistat.

antistatic brush [GRAPHICS] A brush whose bristles do not retain electrostatic charge.

anti-Stokes lines [SPECT] Lines of radiated frequencies which are higher than the frequency of the exciting incident light.

antistreptolysin [IMMUNOL] The antibody that neutralizes the streptolysin of group A hemolytic streptococci.

antistress mineral [MINERAL] Minerals such as leucite, nepheline, alkalic feldspar, andalusite, and cordierite which cannot form or are unstable in an environment of high shearing stress, and hence are not found in highly deformed rocks.

antistripping agent [MATER] An additive used in an asphaltic binder to overcome the affinity of an aggregate for water instead of asphalt; assists the asphalt to adhere to wet surfaces.

antisubmarine [ORD] Descriptive of equipment, mines, or missiles designed to attack or destroy submarines.

antisubmarine missile [ORD] A missile whose target is a submarine.

antisubmarine rocket [ORD] Solid-propellant-rocket-driven torpedo that is surface-launched, with final track underwater. Abbreviated ASROC.

antisubmarine weapon [ORD] Any naval device designed to destroy submarines.

antisymmetric dyadic [MATH] A dyadic equal to the negative of its conjugate.

antisymmetric matrix [MATH] A matrix which is equal to the negative of its transpose. Also known as skew-symmetric matrix.

antisymmetric tensor [MATH] A tensor in which interchanging two indices of an element changes the sign of the element.

antisymmetric wave function [PHYS] A many-particle wave function which changes its sign when the coordinates of two of the particles are interchanged.

antitail [ASTRON] A structure occasionally observed in comets that appears to extend from the coma toward the sun, and usually has the appearance of a spike.

antitank ditch [ORD] A deep ditch prepared as an obstacle to enemy tanks. Also known as tank ditch.

antitank grenade [ORD] A rifle grenade designed to be used against tanks or other armored vehicles.

antitank guided missile [ORD] An antitank missile whose flight path is controlled by a combination of optical sighting and command signals from an automatic computer through multiple wire command links; it may also contain an infrared homing device for final range correction; it is designed to be launched from any type of vehicle or ground emplacement; this definition excludes items whose trajectory cannot be altered in flight.

antitank gun [ORD] A gun suitable for use against tanks or other armored vehicles.

antitank mine activator [ORD] A nonmetallic item de

signed to adapt a firing device to an antitank mine; may be empty, inert-filled, or explosive-filled.

antitank mine field [ORD] **1.** Area in which antitank mines are planted to stop or slow down enemy tanks or other armored vehicles. **2.** Pattern of antitank mines.

antitank missile [ORD] A missile designed to destroy or immobilize enemy tanks.

antitank obstacle [ORD] Natural or manmade obstruction or barrier which will stop, slow down, or cause tanks or other armored vehicles to maneuver or change direction. Also known as tank obstacle.

antitank weapon [ORD] Any weapon suitable for use against tanks or other armored vehicles.

antitermination factor [BIOCHEM] Protein that interferes with normal termination of ribonucleic acid synthesis.

antithetic variable [STAT] One of two random variables having high negative correlation, used in the antithetic variate method of estimating the mean of a series of observations.

antithrombin [BIOCHEM] A substance in blood plasma that inactivates thrombin.

antitorpedo [ORD] Descriptive of equipment, missiles, and the like designed to combat or destroy torpedoes.

antitoxin [IMMUNOL] An antibody elaborated by the body in response to a bacterial toxin that will combine with and generally neutralize the toxin.

antitrades [METEOROL] A deep layer of westerly winds in the troposphere above the surface trade winds of the tropics.

anti-transmit-receive tube [ELECTR] A switching tube that prevents the received echo signal from being dissipated in the transmitter.

antitriptic wind [METEOROL] A wind for which the pressure force exactly balances the viscous force, in which the vertical transfers of momentum predominate.

antitubercular agent [PHARM] A substance, such as streptomycin or isoniazid, used in the treatment of tuberculosis.

antitumor antibiotic [MICROBIO] A substance, such as actinomycin, luteomycin, or mitomycin C, which is produced by microorganisms and is effective against some forms of cancer.

antitussive [PHARM] An agent, such as benylin expectorants, that relieves coughing.

antitwilight arch [METEOROL] The pink or purplish band of about 3° vertical angular width which lies just above the antisolar point at twilight; it rises with the antisolar point at sunset and sets with the antisolar point at sunrise.

antivenin [IMMUNOL] An immune serum that neutralizes the venoms of certain poisonous snakes and black widow spiders.

antivernalization [BOT] Delayed flowering in plants due to treatment with heat.

antiviral agent [PHARM] A substance, such as interferon or amantadine, that decreases virus multiplication in the body.

antivitamin [BIOCHEM] Any substance that prevents a vitamin from normal metabolic functioning.

anti-voice-operated transmission [COMMUN] Radio communications in which a voice-activated circuit prevents the operation of the transmitter while messages are being received on an associated receiver.

antixerophthalmic vitamin *See* vitamin A.

antler [VERT ZOO] One of a pair of solid bony, usually branched outgrowths on the head of members of the deer family (Cervidae); shed annually.

antlerite [MINERAL] $Cu_3SO_4(OH)_4$ Emerald- to blackish-green mineral occurring in aggregates of needlelike crystals; an ore of copper. Also known as vernadskite.

Antler orogeny [GEOL] Late Devonian and Early Mississippian orogeny in Nevada, resulting in the structural emplacement of eugeosynclinal rocks over microgeosynclinal rocks.

Antlia [ASTRON] A constellation with a right ascension of 10 hours and declination of 35°S. Abbreviated Ant. Also known as Air Pump.

ant lion [INV ZOO] The common name for insects of the family Myrmeleontidae in the order Neuroptera; larvae are commonly called doodlebugs.

antlophobia [PSYCH] Abnormal fear of floods.

AN-TNT slurry [MATER] A mixture of ammonium nitrate and trinitrotoluene; used as an explosive.

Antoine equation [PHYS] The empirical relationship between temperature and vapor pressure of liquids; $\log P = B - A/(C + T)$, where A, B, C are experimental constants, T is absolute temperature, and P is vapor pressure.

Antonadi scale [ASTRON] A scale for measuring seeing conditions, ranging from I for perfect conditions to V for very bad conditions.

Antonoff's rule [PHYS] The rule which states that the surface tension at the interface between two saturated liquid layers in equilibrium is equal to the difference between the individual surface tensions of similar layers when exposed to air.

antrorse [BIOL] Turned or directed forward or upward.

antrum [ANAT] A cavity of a hollow organ or a sinus.

ANTU *See* 1-(1-naphthyl)-2-thiourea.

Anura [VERT ZOO] An order of the class Amphibia comprising the frogs and toads.

anuresis [MED] Retention of urine in the urinary bladder due to inability to void.

anuria [MED] Complete absence of urinary output.

anus [ANAT] The posterior orifice of the alimentary canal.

anvil [ENG] **1.** The part of a machine that absorbs the energy delivered by a sharp force or blow. **2.** The stationary end of a micrometer caliper. [MET] **1.** A heavy wrought-iron, cast-iron, or steel block upon which metal is hammered in smith forging. **2.** The base of the hammer, holding the die bed and lower die part in drop forging. [METEOROL] *See* incus.

anvil cloud [METEOROL] The popular name given to a cumulonimbus capillatus cloud, a thunderhead whose upper portion spreads in the form of an anvil with a fibrous or smooth aspect; it also refers to such an upper portion alone when it persists beyond the parent cloud.

anxiety [PSYCH] A physiological and mental state of apprehension and fear of something unknown to the conscious.

anxiety neurosis [PSYCH] A psychoneurotic disorder characterized by diffuse anxious expectation not restricted to definite situations, persons, or objects, and by emotional instability, irritability, apprehensiveness, and a sense of fatigue; caused by incomplete resolution of repressed emotional problems, and frequently associated with somatic symptoms.

anyris oil [MATER] Sandalwood oil from West India sandalwood species.

Ao horizon [GEOL] That portion of the A horizon of a soil profile which is composed of pure humus.

A-O-I gate *See* AND-OR-INVERT gate.

Aoo horizon [GEOL] Uppermost portion of the A horizon of a soil profile which consists of undecomposed vegetable litter.

AOQL *See* average outgoing quality limit.

aorta [ANAT] The main vessel of systemic arterial circulation arising from the heart in vertebrates. [INV ZOO] The large dorsal or anterior vessel in many invertebrates.

aortic aneurysm [MED] Dilation of the wall of the aorta, usually the ascending portion.

aortic arch [ANAT] The portion of the aorta extending from the heart to the third thoracic vertebra; single in warm-blooded vertebrates and paired in fishes, amphibians, and reptiles.

aortic body *See* aortic paraganglion.

aortic incompetence [MED] A condition in which blood from the aorta flows back into the left ventricle because of the incapacity of the aortic valve.

aortic paraganglion [ANAT] A structure in vertebrates belonging to the chromaffin system and found on the front of the abdominal aorta near the mesenteric arteries. Also known as aortic body; organs of Zuckerkandl.

aortic stenosis [MED] Abnormal narrowing of the aortic valve orifice; may be either congenital or acquired.

aortic valve [ANAT] A heart valve comprising three flaps which guards the passage from the left ventricle to the aorta and prevents the backward flow of blood.

aortitis [MED] Inflammation of the aorta.

aortography [MED] Radiography of the aorta through a radiopaque dye injection.

AP *See* after-perpendicular.

4-AP *See* 4-aminopyridine.

6-APA *See* 6-aminopenicillanic acid.

apachite [PETR] A phonolite consisting of enigmatite and hornblende in about the same quantity as the pyroxene, but of a later crystallization phase.

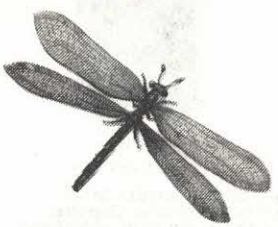
apandrous [BOT] Lacking male organs or having nonfunctional male organs.

APAP *See* acetaminophen.

apareon [ASTRON] The point on a Mars-centered orbit where a satellite is at its greatest distance from Mars.

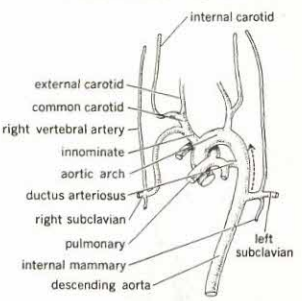
apastron [ASTRON] That point of the orbit of one member of a binary star system at which the stars are farthest apart.

ANT LION



The ant lion *(Myrmeleon immaculatus).*

AORTIC ARCH

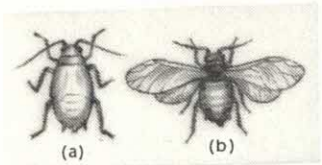


Ventral view of the aortic arch in the human, showing the blood vessels that arise from it. *(Modified from B. M. Patten)*

APATITE

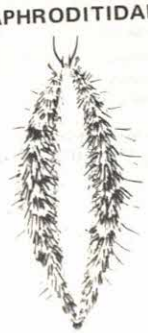
Specimen of apatite from Eganville, Ontario, Canada. *(American Museum of Natural History specimen)*

APHID



Two forms during the life cycle of an aphid: *(a)* wingless female, *(b)* winged female.

APHRODITIDAE



The sea mouse, *Aphrodita*, of the Aphroditidae.

Apatemyidae [PALEON] A family of extinct rodentlike insectivorous mammals belonging to the Proteutheria.

apatetic [ECOL] Pertaining to the imitative protective coloration of an animal subject to being preyed upon.

Apathornithidae [PALEON] A family of Cretaceous birds, with two species, belonging to the order Ichthyornithiformes.

apatite [MINERAL] A group of phosphate minerals that includes 10 mineral species and has the general formula $X_5(YO_4)_3Z$, where X is usually $Ca^{2S}pl$ or $Pb^{3S}pl$, Y is $P^{5S}pl$ or $As^{5S}pl$, and Z is F^-, Cl^-, or OH^-.

APC *See* automatic phase control.

ape [VERT ZOO] Any of the tailless primates of the families Hylobatidae and Pongidae in the same superfamily as humans.

apeirophobia [PSYCH] Abnormal fear of infinity.

aperiodic [PHYS] Of irregular occurrence; not periodic; not displaying resonant response.

aperiodic antenna [ELECTROMAG] Antenna designed to have constant impedance over a wide range of frequencies because of the suppression of reflections within the antenna system; includes terminated wave and rhombic antennas.

aperiodic compass [NAV] Literally, a compass without a period, that is, a compass that, after being deflected, returns by one direct movement to its proper reading, without oscillation. Also known as deadbeat compass.

aperiodic damping [PHYS] Condition of a system in which the amount of damping is so large that, when the system is subjected to a single disturbance, either constant or instantaneous, the system comes to a position of rest without passing through that position; while an aperiodically damped system is not strictly an oscillating system, it has such properties that it should become an oscillating system if the damping were sufficiently reduced.

aperiodic waves [ELEC] The transient current wave in a series circuit with resistance R, inductance L, and capacitance C when $R^2C = 4L$. [PHYS] Waves without a definite repetitive pattern; for example, transient waves.

apers *See* antipersonnel.

apertometer [OPTICS] An instrument designed to measure the numerical aperture of microscope objectives.

Apert's syndrome *See* acrocephalosyndactylism.

aperture [ELECTR] An opening through which electrons, light, radio waves, or other radiation can pass. [OPTICS] The diameter of the objective of a telescope or other optical instrument, usually expressed in inches, but sometimes as the angle between lines from the principal focus to opposite ends of a diameter of the objective.

aperture aberration [OPTICS] Errors in optical imaging which occur because rays of different distances from the axis do not come to the same focus.

aperture antenna [ELECTROMAG] Antenna in which the beam width is determined by the dimensions of a horn, lens, or reflector.

aperture conductivity [ACOUS] The ratio of the density of a medium to the acoustic mass at an aperture.

aperture grill picture tube [ELECTR] An in-line gun-type picture tube in which the shadow mask is perforated by long, vertical stripes and the screen is painted with vertical phosphor stripes.

aperture illumination [ELECTROMAG] Field distribution in amplitude and phase over an aperture.

aperture mask *See* shadow mask.

aperture plate [ELECTR] A small part of a piece of perforated ferromagnetic material that forms a magnetic cell.

aperture ratio [OPTICS] The ratio of the effective diameter of a lens to its focal length.

aperture sight [ORD] An irregularly shaped adjustable mechanical item usually integral to a rear sight; it functions as a peephole through which the sight at the opposite end of a gun is brought into view in aiming at a target or object.

aperture stop [OPTICS] That opening in an optical system that determines the size of the bundle of rays which traverse the system from a given point of the object to the corresponding point of the image.

apetalous [BOT] Lacking petals.

apex [ANAT] **1.** The upper portion of a lung extending into the root. **2.** The pointed end of the heart. **3.** The tip of the root of a tooth. [BOT] The pointed tip of a leaf. [ENG] In architecture or construction, the highest point, peak, or tip of any structure. [GEOL] The part of a mineral vein nearest the surface of the earth. [MATH] **1.** The vertex of a triangle opposite the side which is regarded as the base. **2.** The vertex of a cone or pyramid.

apex impulse [PHYSIO] The point of maximum outward movement of the left ventricle of the heart during systole, normally localized in the fifth left intercostal space in the midclavicular line. Also known as left ventricular thrust.

apex stone [ARCH] The uppermost stone in a gable, pediment, vault, or dome; usually triangular, often highly decorated. Also known as saddle stone.

aphagia [MED] Inability to swallow; may be organic or psychic in origin.

aphakia [MED] Absence of the lens of the eye.

aphaniphyric [PETR] Denoting a texture of porphyritic rocks with microaphanitic groundmasses. Also known as felsophyric.

aphanite [PETR] **1.** A general term applied to dense, homogeneous rocks whose constituents are too small to be distinguished by the unaided eye. **2.** A rock having aphanitic texture.

aphanitic [PETR] Referring to the texture of an igneous rock in which the crystalline components are not distinguishable by the unaided eye.

Aphanomyces [MYCOL] A genus of fungi in the phycomycetous order Saprolegniales; species cause root rot in plants.

aphasia [MED] Impairment in the use or comprehension of language caused by lesions of the cerebral cortex.

aphasic seizure [MED] A transient inability to speak due to an abnormal electrical discharge from the speech areas of the brain.

Aphasmidea [INV ZOO] An equivalent name for the Adenophorea.

Aphelenchoidea [INV ZOO] A superfamily of plant and insect-associated nematodes in the order Tylenchida.

aphelion [ASTRON] The point on a planetary orbit farthest from the sun.

Aphelocheiridae [INV ZOO] A family of hemipteran insects belonging to the superfamily Naucoroidea.

aphesperian [ASTRON] The farthest point of a satellite in its orbit about Venus.

aphid [INV ZOO] The common name applied to the soft-bodied insects of the family Aphididae; they are phytophagous plant pests and vectors for plant viruses and fungal parasites.

Aphididae [INV ZOO] The true aphids, a family of homopteran insects in the superfamily Aphidoidea.

Aphidoidea [INV ZOO] A superfamily of sternorrhynchan insects in the order Homoptera.

Aphis [INV ZOO] A genus of aphid, the type genus of the family Aphididae.

aphonia [MED] Loss of voice and power of speech.

aphotic zone [OCEANOGR] The deeper part of the ocean where sunlight is absent.

Aphredoderidae [VERT ZOO] A family of actinopterygian fishes in the order Percopsiformes containing one species, the pirate perch.

aphrodisiac [PHYSIO] Any chemical agent or odor that stimulates sexual desires.

Aphroditidae [INV ZOO] A family of scale-bearing polychaete worms belonging to the Errantia.

Aphrosalpingoidea [PALEON] A group of middle Paleozoic invertebrates classified with the calcareous sponges.

aphrosiderite *See* ripiddite.

aphtha [MED] White, painful oral ulcer of unknown cause.

aphthitalite [MINERAL] $(K,Na)_3Na(SO_4)_2$ A white mineral crystallizing in the rhombohedral system and occurring massively or in crystals.

aphylactic map projection [MAP] A map projection which is neither conformal nor equal-area.

Aphylidae [INV ZOO] An Australian family of hemipteran insects composed of two species; not placed in any higher toxonomic group.

aphyllous [BOT] Lacking foliage leaves.

aphyric [PETR] Of the texture of fine-grained igneous rocks, showing two generations of the same mineral but without phenocrysts.

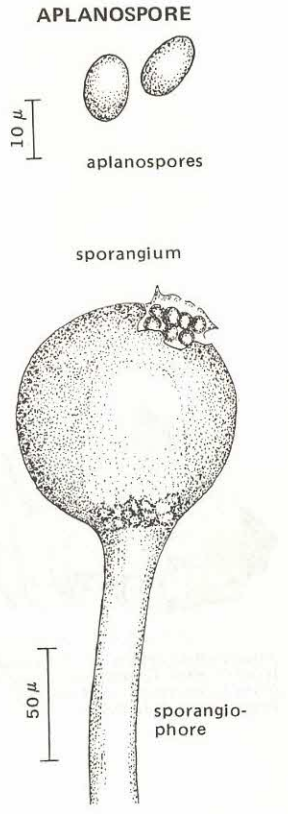
aphytic zone [ECOL] The part of a lake floor that lacks plants because it is too deep for adequate light penetration.

API *See* air-position indicator; armor-piercing incendiary.

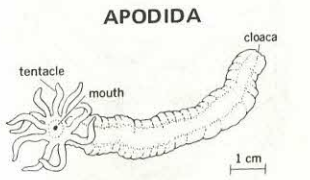
apiary [AGR] A place where bees are kept, especially for breeding and honey making.

apical [BOT] Relating to the apex or tip.

apical angle [MECH] The angle between the tangents to the curve outlining the contour of a projectile at its tip.
apical bud *See* terminal bud.
apical dominance [BOT] Inhibition of lateral bud growth by the apical bud of a shoot, believed to be a response to auxins produced by the apical bud.
apical meristem [BOT] A region of embryonic tissue occurring at the tips of roots and stems.
apical plate [INV ZOO] A group of cells at the anterior end of certain trochophore larvae; believed to have nervous and sensory functions.
apiculate [BOT] Ending abruptly in a short, sharp point.
apiculture [AGR] Large-scale commercial beekeeping.
Apidae [INV ZOO] A family of hymenopteran insects in the superfamily Apoidea including the honeybees, bumblebees, and carpenter bees.
Apioceridae [INV ZOO] A family of orthorrhaphous dipteran insects in the series Brachycera.
apioid [PHYS] A pear-shaped form taken by a rapidly revolving mass of liquid due to the force of gravity.
apiology [INV ZOO] The scientific study of bees, particularly honeybees.
Apis [INV ZOO] A genus of bees, the type genus of the Apidae.
API scale [CHEM ENG] The American Petroleum Institute hydrometer scale for the measurement of the specific gravity of liquids; used primarily in the American petroleum industry.
Apis mellifera [INV ZOO] The western honeybee, an economically important species for its honey.
Apistobranchidae [INV ZOO] A family of spioniform annelid worms belonging to the Sedentaria.
apitong [MATER] A wood from the Philippine tree *Dipterocarpus grandiflorus;* sold as mahogany although it is not a true mahogany.
apjohnite [MINERAL] $MnAl_2(SO_4)_4 \cdot 22H_2O$ A white, rose-green, or yellow mineral containing water and occurring in crusts, fibrous masses, or efflorescences.
Aplacophora [INV ZOO] A subclass of vermiform mollusks in the class Amphineura characterized by no shell and calcareous integumentary spicules.
aplanatic lens [OPTICS] A lens corrected for spherical abberation.
aplanatic points [OPTICS] Two points on the axis of an optical system which are located so that all the rays emanating from one converge to, or appear to diverge from, the other.
aplanogamete [BIOL] A gamete that lacks motility.
aplanospore [MYCOL] A nonmotile, asexual spore, usually a sporangiospore, common in the Phycomycetes.
aplasia [MED] Defective development resulting in the virtual absence of a tissue or organ; only a remnant appears.
aplastic anemia [MED] A blood disorder in which lymphocytes predominate while there is a deficiency of erythrocytes, hemoglobin, and granulocytes.
aplite [PETR] Fine-grained granitic dike rock made up of light-colored mineral constituents, mostly quartz and feldspar; used to manufacture glass and enamel.
aplysiatoxin [BIOCHEM] A bislactone toxin produced by the blue-green alga *Lyngbya majuscula*.
apnea [MED] A transient cessation of respiration.
Apneumonomorphae [INV ZOO] A suborder of arachnid arthropods in the order Araneida characterized by the lack of book lungs.
apneusis [PHYSIO] In certain lower vertebrates, sustained tonic contraction of the respiratory muscles to allow prolonged inspiration.
apo- [CHEM] A prefix that denotes formation from or relationship to another chemical compound.
apoapsis [ASTRON] The point in an orbit farthest from the center of attraction.
apoatropine [ORG CHEM] $C_{17}H_{21}NO_2$ An alkaloid melting at 61°C with decomposition of the compound; highly toxic; obtained by dehydrating atropine.
apob [METEOROL] An observation of pressure, temperature, and relative humidity taken aloft by means of an aerometeorograph; a type of aircraft sounding.
apocarpous [BOT] Having carpels separate from each other.
apocenter *See* apofocus.
apochromat *See* apochromatic lens.
apochromatic lens [OPTICS] A lens with corrections for chromatic and spherical aberration.
apochromatic system [OPTICS] An optical system which is free from both spherical and chromatic aberration for two or more colors.
apocodeine [PHARM] $C_{18}H_{19}NO_2$ White crystals with a melting point of 124°C; decomposes on melting; soluble in alcohol and ether; used in medicine.
apocrine gland [PHYSIO] A multicellular gland, such as a mammary gland or an axillary sweat gland, that extrudes part of the cytoplasm with the secretory product.
apocronus [ASTRON] The farthest point of a satellite in its orbit about Saturn. Also known as aposaturnium.
Apocynaceae [BOT] A family of tropical and subtropical flowering trees, shrubs, and vines in the order Gentianales, characterized by a well-developed latex system, granular pollen, a poorly developed corona, and the carpels often united by the style and stigma; well-known members are oleander and periwinkle.
apocynin *See* acetovanillon.
Apoda [VERT ZOO] The caecilians, a small order of wormlike, legless animals in the class Amphibia.
Apodacea [INV ZOO] A subclass of echinoderms in the class Holothuroidea characterized by simple or pinnate tentacles and reduced or absent tube feet.
apodeme [INV ZOO] An internal ridge or process on an arthropod exoskeleton to which organs and muscles attach.
Apodes [VERT ZOO] An equivalent name for the Anguilliformes.
Apodi [VERT ZOO] The swifts, a suborder of birds in the order Apodiformes.
Apodida [INV ZOO] An order of worm-shaped holothurian echinoderms in the subclass Apodacea.
Apodidae [VERT ZOO] The true swifts, a family of apodiform birds belonging to the suborder Apodi.
Apodiformes [VERT ZOO] An order of birds containing the hummingbirds and swifts.
apodization [ELECTR] A technique for modifying the response of a surface acoustic wave filter by varying the overlap between adjacent electrodes of the interdigital transducer. [OPTICS] The modification of the amplitude transmittance of the aperture of an optical system so as to reduce or suppress the energy of the diffraction rings relative to that of the central Airy disk.
apoenzyme [BIOCHEM] The protein moiety of an enzyme; determines the specificity of the enzyme reaction.
apoferritin [BIOCHEM] A protein found in intestinal mucosa cells that has the ability to combine with ferric ion.
apofocus [ASTRON] The point on an elliptic orbit at the greatest distance from the principal focus. Also known as apocenter.
apogalacteum [ASTRON] The point at which a celestial body is farthest from the center of the Milky Way.
apogamy [BIOL] Asexual, parthenogenetic development of diploid cells, such as the development of a sporophyte from a gametophyte without fertilization.
apogean tidal currents [OCEANOGR] Tidal currents of decreased speed occurring at the time of apogean tides.
apogean tides [OCEANOGR] Tides of decreased range occurring when the moon is near apogee.
apogee [ASTRON] That point in an orbit at which the moon or an artificial satellite is most distant from the earth; the term is sometimes loosely applied to positions of satellites of other planets.
apogeny [BOT] Loss of the function of reproduction.
apogeotropism [BOT] Negative geotropism; growth up or away from the soil.
Apogonidae [VERT ZOO] The cardinal fishes, a family of tropical marine fishes in the order Perciformes; males incubate eggs in the mouth.
Apoidea [INV ZOO] The bees, a superfamily of hymenopteran insects in the suborder Apocrita.
apojove [ASTRON] The farthest point of a satellite in its orbit about Jupiter.
Apollo [ASTRON] **1.** To the Greeks, the planet Mercury when it was a morning star. **2.** An asteroid with a very eccentric orbit and perihelion inside the orbit of Venus that passed about 3×10^6 kilometers from earth in 1932.
Apollo object [ASTRON] Any asteroid which crosses the earth's orbit.
Apollo program [AERO ENG] The scientific and technical



Several aplanospores and the sporangium that contains them.



Typical appearance of an apodous holothurian.

program of the United States that involved placing men on the moon and returning them safely to earth.

apolune [ASTRON] Farthest point of a satellite in an elliptic orbit about the moon. Also known as aposelene.

apolysis [INV ZOO] In most tapeworms, the shedding of ripe proglottids.

apomeiosis [CYTOL] Meiosis that is either suppressed or imperfect.

apomercurian [ASTRON] The farthest point of a satellite in its orbit about Mercury.

apomixis [EMBRYO] Parthenogenetic development of sex cells without fertilization.

apomorph [SYST] Any derived character occurring at a branching point and carried through one descending group in a phyletic lineage.

apomorphine [PHARM] $C_{17}H_{17}NO_2$ A crystalline alkaloid obtained by dehydration of morphine; acts as a powerful emetic.

apomyoglobin [BIOCHEM] Myoglobin that lacks its heme group.

aponeurosis [ANAT] A broad sheet of regularly arranged connective tissue that covers a muscle or serves to connect a flat muscle to a bone.

apophorometer [ENG] An apparatus used to identify minerals by sublimation.

apophyge [ARCH] A small curvature applied to the top or bottom of a column shaft where it expands to meet the fillet.

apophyllite [MINERAL] A hydrous calcium potassium silicate containing fluorine and occurring as a secondary mineral with zeolites with geodes and other igneous rocks; the composition is variable but approximates $KFCa_4(Si_2O_5)_4 \cdot 8H_2$. Also known as fish-eye stone.

apophyllous [BOT] Having the parts of the perianth distinct.

apophysis [ANAT] An outgrowth or process on an organ or bone. [MYCOL] A swollen filament in fungi.

apoplexy [MED] **1.** A symptom complex caused by an acute vascular lesion of the brain and characterized by unconsciousness with various degrees of paralysis and sensory impairment. **2.** Sudden, severe hemorrhage into any organ.

apoplutonian [ASTRON] The farthest point of a satellite in its orbit about Pluto.

apoposeidon [ASTRON] The farthest point of a satellite in its orbit about Neptune.

apoprotein [BIOCHEM] The protein portion of a conjugated protein exclusive of the prosthetic group.

apopyle [INV ZOO] Any one of the large pores in a sponge by which water leaves a flagellated chamber to enter the exhalant system.

Aporidea [INV ZOO] An order of tapeworms of uncertain composition and affinities; parasites of anseriform birds.

aporogamy [BOT] Entry of the pollen tube into the embryo sac through an opening other than the micropyle.

aposaturnium *See* apocronus.

aposelene *See* apolune.

aposematic [ECOL] Pertaining to colors or structures on an organism that provide a special means of defense against enemies. Also known as sematic.

A positive [ELEC] Also known as A+. **1.** Positive terminal of an A battery or positive polarity of other sources of filament voltage. **2.** Denoting the terminal to which the positive side of the filament voltage source should be connected.

apospory [MYCOL] Suppression of spore formation with development of the haploid (sexual) generation directly from the diploid (asexual) generation.

apostatic selection [ECOL] Predation on the most abundant forms in a population, leading to balanced distribution of a variety of forms.

a posteriori probability *See* empirical probability.

apostilb [OPTICS] A luminance unit equal to one ten-thousandth of a lambert. Also known as blandel.

Apostomatida [INV ZOO] An order of ciliated protozoans in the subclass Holotrichia; majority are commensals on marine crustaceans.

apotele [ANAT] A scalloped ridge around the edge of an otolith.

apothecaries' dram *See* dram.

apothecaries' measure [PHARM] A system of units of volume, usually of liquid drugs, in which 16 fluid ounces equals 1 pint.

apothecaries' ounce *See* ounce.

apothecaries' pound *See* pound.

apothecaries' weight [PHARM] A system of units of mass, usually of drugs, in which 1 pound equals 5760 grains or 1 troy pound.

apothecium [MYCOL] A spore-bearing structure in some Ascomycetes and lichens in which the fruiting surface or hymenium is exposed during spore maturation.

apothem [MATH] The perpendicular distance from the center of a regular polygon to one of its sides.

apouranian [ASTRON] The farthest point of a satellite in its orbit about Uranus.

A power supply *See* A supply.

apozymase [BIOCHEM] The protein component of a zymase.

Appalachia [GEOL] Proposed borderland along the southeastern side of North America, seaward of the Appalachian geosyncline in Paleozoic time.

Appalachian orogeny [GEOL] An obsolete term referring to Late Paleozoic diastrophism beginning perhaps in the Late Devonian and continuing until the end of the Permian; now replaced by Allegheny orogeny.

apparatus [SCI TECH] A compound instrument designed to carry out a specific function.

apparent [ASTRON] A term used to designate certain measured or measurable astronomic quantities to refer them to real or visible objects, such as the sun or a star.

apparent additional mass [FL MECH] A fictitious mass of fluid added to the mass of the body to represent the force required to accelerate the body through the fluid.

apparent candlepower [OPTICS] For an extended source of light, at a specified distance, the candlepower of a point source that would produce the same illumination as the extended source at the same distance.

apparent cohesion [GEOL] In soil mechanics, the resistance of particles to being pulled apart due to the surface tension of the moisture film surrounding each particle. Also known as film cohesion.

apparent density [MET] The weight per unit volume of a metal powder, in contrast to the weight per unit volume of the individual particles.

apparent dip [GEOL] Dip of a rock layer as it is exposed in any section not at a right angle to the strike.

apparent expansion [THERMO] The expansion of a liquid with temperature, as measured in a graduated container without taking into account the container's expansion.

apparent force [MECH] A force introduced in a relative coordinate system in order that Newton's laws be satisfied in the system; examples are the Coriolis force and the centrifugal force incorporated in gravity.

apparent gravity *See* acceleration of gravity.

apparent horizon *See* horizon.

apparent libration in longitude *See* lunar libration.

apparent luminance [OPTICS] Luminance, created by air light, of that portion of the visual field subtended by a dark, distant object; that is, the light scattered into the eye by particles, including air molecules, lying along the optic path from eye to object.

apparent magnitude [ASTRON] An index of a star's brightness relative to that of the other stars; it does not take into account the difference in distance between the stars and is not an indication of the star's true luminosity.

apparent motion *See* relative motion.

apparent movement of faults [GEOL] The apparent motion observed to have occurred in any chance section across a fault.

apparent noon [ASTRON] Twelve o'clock apparent time, or the instant the apparent sun is over the upper branch of the meridian.

apparent place *See* apparent position.

apparent plunge [GEOL] Inclination of a normal projection of lineation in the plane of a vertical cross section.

apparent position [ASTRON] The position on the celestial sphere at which a heavenly body (or a space vehicle) would be seen from the center of the earth at a particular time. Also known as apparent place.

apparent power [ELEC] The product of the root-mean-square voltage and the root-mean-square current delivered in an alternating-current circuit, no account being taken of the phase difference between voltage and current.

apparent precession *See* apparent wander.

apparent shoreline [MAP] The outer edge of marine vegeta-

APOPHYLLITE

2.5 cm

Apophyllite crystals with basalt from French Creek, Pa. *(Specimen from Department of Geology, Bryn Mawr College)*

APOSTOMATIDA

50 μ

Foettingeria, an example of an apostomatid.

tion (marsh, mangrove, cypress) delineated on photogrammetric surveys where the actual shoreline is obscured.

apparent slope [GRAPHICS] A true slope that appears vertically distorted or exaggerated in air photographs viewed with a stereoscope.

apparent solar day [ASTRON] The duration of one rotation of the earth on its axis with respect to the apparent sun. Also known as true solar day.

apparent solar time [ASTRON] Time measured by the apparent diurnal motion of the sun. Also known as apparent time; true solar time.

apparent source *See* effective center.

apparent sun [ASTRON] The sun as it appears to an observer. Also known as true sun.

apparent time *See* apparent solar time.

apparent vertical [GEOPHYS] The direction of the resultant of gravitational and all other accelerations. Also known as dynamic vertical.

apparent volume [PHYS] The difference between the volume of a binary solution and the volume of the pure solvent at the same temperature.

apparent wander [GEOPHYS] Apparent change in the direction of the axis of rotation of a spinning body, such as a gyroscope, due to rotation of the earth. Also known as apparent precession; wander.

apparent water table *See* perched water table.

apparent weight [MECH] For a body immersed in a fluid (such as air), the resultant of the gravitational force and the buoyant force of the fluid acting on the body; equal in magnitude to the true weight minus the weight of the displaced fluid.

apparent wind *See* relative wind.

apparition [ASTRON] A period during which a planet, asteroid, or comet is observable, generally between two successive conjunctions of the body with the sun.

appearance potential [PHYS] The *minimal* potential which the electron beam in the ion source of a mass spectrometer must traverse in order to acquire enough energy to produce ions of a specified nuclide or molecular fragment.

appearance ratio *See* hyperstereoscopy.

appendage [BIOL] Any subordinate or nonessential structure associated with a major body part. [NAV ARCH] Any fitting installed outside the underwater hull proper, such as a rudder, shaft, shaft strut, and bilge keel. [ZOO] Any jointed, peripheral extension, especially limbs, of arthropod and vertebrate bodies.

appendectomy [MED] Surgical removal of the vermiform appendix.

appendicitis [MED] Inflammation of the vermiform appendix.

appendicular skeleton [ANAT] The bones of the pectoral and pelvic girdles and the paired appendages in vertebrates.

appendiculate [BIOL] Having or forming appendages.

appendix [ANAT] **1.** Any appendage. **2.** *See* vermiform appendix.

appendix testis [MED] A remnant of the cranial part of the paramesonephric or Müllers duct, attached to the testis. Also known as hydatid of Morgagni.

appersonification [PSYCH] Unconscious identification with and acquisition of another person's characteristics.

appestat [PHYSIO] The center for appetite regulation in the hypothalamus.

appetitive behavior [ZOO] Any behavior that increases the probability that an animal will be able to satisfy a need; for example, a hungry animal will move around to find food.

appinite [PETR] Hornblende-rich plutonic rock with high feldspar content.

apple [BOT] *Malus domestica*. A deciduous tree in the order Rosales which produces an edible, simple, fleshy, pome-type fruit.

apple coal [GEOL] Easily mined soft coal that breaks into small pieces the size of apples.

apple essence *See* isoamyl valerate.

Applegate diagram [ELECTR] A graph of the electron paths in a two-cavity klystron tube, showing how electron bunching occurs.

apple honey *See* apple syrup.

apple of Peru *See* jimsonweed.

apple oil *See* isoamyl valerate.

apple pox *See* blister canker.

apple syrup [FOOD ENG] A sweetening agent made from cull apples and composed mainly of levulose, sucrose, and dextrose; used in the food industry. Also known as apple honey.

Appleton layer *See* F_2 layer.

appliance [ENG] A piece of equipment that draws electric or other energy and produces a desired work-saving or other result, such as an electric heater, a radio, or an electronic range.

appliance panel [ENG] In electric systems, a metal housing containing two or more devices (such as fuses) for protection against excessive current in circuits which supply portable electric appliances.

application development language [COMPUT SCI] A very-high-level programming language that generates coding in a conventional programming language or provides the user of a data-base management system with a programming language that is easier to implement than conventional programming languages.

application package [COMPUT SCI] A combination of required hardware, including remote inputs and outputs, plus programming of the computer memory to produce the specified results.

applications program [COMPUT SCI] A program written to solve a specific problem, produce a specific report, or update a specific file.

applications technology satellite [AERO ENG] Any artificial satellite in the National Aeronautics and Space Administration program for the evaluation of advanced techniques and equipment for communications, meteorological, and navigation satellites. Abbreviated ATS.

application study [COMPUT SCI] The detailed process of determining a system or set of procedures for using a computer for definite functions of operations, and establishing specifications to be used as a base for the selection of equipment suitable to the specific needs.

applied climatology [CLIMATOL] The scientific analysis of climatic data in the light of a useful application for an operational purpose.

applied ecology [ECOL] Activities involved in the management of natural resources.

applied epistemology [COMPUT SCI] The use of machines or other models to simulate processes such as perception, recognition, learning, and selective recall, or the application of principles assumed to hold for human categorization, perception, storage, search, and so on, to the design of machines, machine programs, scanning, storage, and retrieval systems.

applied meteorology [METEOROL] The application of current weather data, analyses, or forecasts to specific practical problems.

applied research [ENG] Research directed toward using knowledge gained by basic research to make things or to create situations that will serve a practical or utilitarian purpose.

applied strategic research [ENG] Research done to provide a basic understanding of a current applied project.

applied trim [BUILD] Supplementary and separate decorative strips of wood or moldings applied to the face or sides of a frame, such as a doorframe.

appliqué [GRAPHICS] A decoration or ornament made by cutting out and attaching one piece of material to the surface of another. [OPTICS] A combination of lenses that provides for the same focal length at three or more wavelengths.

appliqué armor [ORD] Material or attachment which can be installed on a tank to give it additional protection against kinetic- or nonkinetic-energy projectiles.

appliqué circuit [ELEC] Special circuit which is provided to modify existing equipment to allow for special usage; for example, some carrier telephone equipment designed for ringdown manual operation can be modified through the use of an appliqué circuit to allow for use between points having dial equipment.

apposition beach [GEOL] One of a series of parallel beaches formed on the seaward side of an older beach.

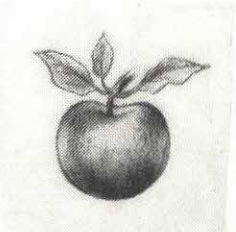
apposition eye [INV ZOO] A compound eye found in diurnal insects and crustaceans in which each ommatidium focuses on a small part of the whole field of light, producing a mosaic image.

apposition fabric [PETR] A primary orientation of the elements of a sedimentary rock that is developed or formed at time of deposition of the material; fabrics of most sedimentary rocks belong to this type. Also known as primary fabric.

appressed [BIOL] Pressed close to or lying flat against something.

approach [MECH ENG] The difference between the tempera-

APPLE



Apple *(Malus domestica)*; mature fruit.

ture of the water leaving a cooling tower and the wet-bulb temperature of the surrounding air. [NAV] In air operations, a maneuver executed by an aircraft in making its transit from high-altitude enroute flight to the point where it begins the landing approach; includes maneuvers (such as flying race-track pattern) required for traffic control.

approach and landing area [NAV] An airspace of defined dimensions together with its runways and water channels, used by aircraft arriving at or departing from or operating within the vicinity of the airport.

approach chart [NAV] An aeronautical chart which provides information about navigational facilities, flight patterns, radio aids and their frequencies, and so on, for use in making an approach to an airfield under either visual or instrument flight conditions.

approach course [NAV] A flight track to runway or approach fix defined by a visual or electronic aid. Also known as approach lane.

approach fix [NAV] A geographical position on a defined approach course.

approach gate [NAV] That point on the final approach course which is 1 mile (1.61 kilometers) from the approach fix on the side away from the airport or 5 miles (8.05 kilometers) from the landing threshold, whichever is farthest from the landing threshold.

approach lane *See* approach course.

approach lights [NAV] A group of aeronautical lights indicating a desirable line of approach to a landing area.

approach navigation [NAV] The navigation operation which must be performed in the proximity of an airport or harbor by an aircraft or ship when proceeding to terminal or dock.

approach path [NAV] That portion of the flight path which extends from the point where a descent is started to the point where tne aircraft touches down on the runway.

approach segment [NAV] The basic functional division of an instrument approach procedure. Also known as approachway.

approach sequence [NAV] The position of an aircraft while awaiting approach clearance or while on approach.

approach signal [CIV ENG] A railway signal warning an engineer of a signal ahead that displays a restrictive indication.

approach surface base line [NAV] In terminal instrument procedures, an imaginary horizontal line at threshold elevation.

approach visibility [NAV] The distance from which a pilot on the instrument approach glide path can see landing aids at the runway threshold. Also known as slant visibility.

approachway *See* approach segment.

approved flame safety lamp [MIN ENG] A flame safety lamp which has been approved for use in gaseous coal mines.

approx *See* approximate.

approximate [MATH] **1.** To obtain a result that is not exact but is near enough to the correct result for some specified purpose. **2.** To obtain a series of results approaching the correct result. [SCI TECH] **1.** Close to the correct value. Abbreviated approx. **2.** To be close to.

approximate absolute temperature [PHYS] A temperature scale with the ice point at 273° and boiling point of water at 373°; it is intended to approximate the Kelvin temperature scale with sufficient accuracy for many sciences, notably meteorology, and is widely used in the meteorological literature. Also known as tercentesimal thermometric scale.

approximate altitude [NAV] Of a star, an altitude determined by estimation, by a star finder or star chart.

approximate contour [MAP] A contour substituted for a normal contour whenever there is a question as to its reliability; reliability usually is evaluated as exceeding one-half the contour interval.

approximation [MATH] **1.** A result that is not exact but is near enough to the correct result for some specified purpose. **2.** A procedure for obtaining such a result.

appulse [ASTRON] **1.** The near approach of one celestial body to another on the celestial sphere, as in occultation or conjunction. **2.** A penumbral eclipse of the moon.

APR *See* active prominence region; airborne profile recorder.

apraxia [MED] The inability to perform purposeful acts as a result of brain lesions; characteristically, paralysis is absent and kinesthesia is unimpaired.

apricot [BOT] *Prunus armeniaca*. A deciduous tree in the order Rosales which produces a simple fleshy stone fruit.

APRICOT

Apricot (*Prunus armeniaca*) branch showing fruit cluster.

apricot kernel oil *See* persic oil.

a priori [MATH] Pertaining to deductive reasoning from assumed axioms or supposedly self-evident principles, supposedly without reference to experience.

a priori probability *See* mathematical probability.

aproctous [MED] Having an imperforate anus. [ZOO] Lacking an anus.

apron [AERO ENG] A protective device specially designed to cover an area surrounding the fuel inlet on a rocket or spacecraft. [BUILD] **1.** A board on an interior wall beneath a windowsill. **2.** The vertical rear panel of a sink attached to a wall. [CIV ENG] **1.** A covering of a material such as concrete or timber over soil to prevent erosion by flowing water, as at the bottom of a dam. **2.** A concrete or wooden shield that is situated along the bank of a river, along a sea wall, or below a dam. [GEOL] *See* outwash plain. [HYD] *See* ram. [MECH ENG] A plate serving to protect or cover a machine. [MIN ENG] A canvas-covered frame set at such an angle in the miner's rocker that the gravel and water passing over it are carried to the head of the machine. [ORD] **1.** That portion of the superior slope of a parapet or the interior slope of a pit designed to protect the slopes against blast. **2.** The hinged portion of a shield. **3.** A removal screen of camouflage material placed over or in front of artillery guns. **4.** A hard-surfaced area, usually paved, adjacent to a ship or the like, used to park, load, unload, or service vehicles.

apron conveyor [MECH ENG] A conveyor used for carrying granular or lumpy material and consisting of two strands of roller chain separated by overlapping plates, forming the carrying surface, with sides 2–6 inches high.

apron feeder [MECH ENG] A limited-length version of apron conveyor used for controlled-rate feeding of pulverized materials to a process or packaging unit. Also known as plate-belt feeder; plate feeder.

apron flashing [BUILD] **1.** The flashing that covers the joint between a vertical surface and a sloping roof, as at the lower edge of a chimney. **2.** The flashing that diverts water from a vertical surface into a gutter.

apron lining [BUILD] The piece of boarding which covers the rough apron piece of a staircase.

apron piece [BUILD] A beam that supports a landing or a series of winders in a staircase.

apron rail [BUILD] A lock rail having a raised ornamental molding.

apron wall [BUILD] In an exterior wall, a panel which extends down from a windowsill to the top of a window below.

aprotic solvent [CHEM] A solvent that does not yield or accept a proton.

Aps *See* Apus.

APS *See* armor-piercing sabot.

apse [ARCH] A semicircular (or nearly semicircular) or semipolygonal space, usually in a church, terminating an axis and intended to house an altar. [ASTRON] *See* apsis.

Apsidospondyli [VERT ZOO] A term used to include, as a subclass, amphibians in which the vertebral centra are formed from cartilaginous arches.

apsis [ASTRON] In celestial mechanics, either of the two orbital points nearest or farthest from the center of attraction. Also known as apse.

APT *See* armor-piercing tracer; Automatic Programming Tool.

apterium [VERT ZOO] A bare space between feathers on a bird's skin.

apterous [BIOL] Lacking wings, as in certain insects, or winglike expansions, as in certain seeds.

Apterygidae [VERT ZOO] The kiwis, a family of nocturnal ratite birds in the order Apterygiformes.

Apterygiformes [VERT ZOO] An order of ratite birds containing three living species, the kiwis, characterized by small eyes, limited eyesight, and nostrils at the tip of the bill.

Apterygota [INV ZOO] A subclass of the Insecta characterized by being primitively wingless.

Aptian [GEOL] Lower Cretaceous geologic time, between Barremian and Albian. Also known as Vectian.

aptitude [PSYCH] The natural inclination or capacity for skillful performance of an as yet unlearned task.

aptitude test [PSYCH] Any standardized examination used to evaluate a person'a ability to learn a particular skill.

APT system *See* automatic picture transmission system.

aptyalism [MED] Deficiency or absence of saliva.

APU *See* auxiliary power unit.

Apus [ASTRON] A constellation with a right ascension of 16 hours and declination of 75°S. Abbreviated Aps. [VERT ZOO] A genus of birds comprising the Old World swifts.

apyrase [BIOCHEM] Any enzyme that hydrolyzes adenosinetriphosphate, with liberation of phosphate and energy, and that is believed to be associated with actomyosin activity.

apyrexia [MED] Absence of fever.

Aqil *See* Aquila.

Aql *See* Aquila.

AQL *See* acceptable quality level.

Aqr *See* Aquarius.

aqua [CHEM] Latin for water.

aqua ammonia *See* ammonium hydroxide.

aquaboard *See* aquaplane.

aquaculture *See* aquiculture.

aquadag [ELECTR] Graphite coating on the inside of certain cathode-ray tubes for collecting secondary electrons emitted by the face of the tube. [MATER] A colloidal suspension of graphite in water.

aquafortis *See* nitric acid.

Aquagel [MATER] A hydrous silicate of alumina, of the Silica Products Company, used for waterproofing concrete.

aquagene tuff *See* hyaloclastite.

aqualf [GEOL] A suborder of the soil order Alfisol, seasonally wet and marked by gray or mottled colors; occurs in depressions or on wide flats in local landscapes.

aqualung [ENG] A self-contained underwater breathing apparatus (scuba) of the demand or open-circuit type developed by J.Y. Cousteau.

aquamarine [MINERAL] A pale-blue or greenish-blue transparent gem variety of the mineral beryl.

aquametry [ANALY CHEM] Analytical processes to measure the water present in materials; methods include Karl Fischer titration, reactions with acid chlorides and anhydrides, oven drying, distillation, and chromatography.

aquaplane [NAV ARCH] A board on which a person rides while being towed by a motorboat at such speed that the front part of the board rises out of the water. Also known as aquaboard.

aqua regia [INORG CHEM] A fuming, highly corrosive, volatile liquid with a suffocating odor made by mixing 1 part concentrated nitric acid and 3 parts concentrated hydrochloric acid; reacts with all metals, including silver and gold. Also known as chloroazotic acid; chloronitrous acid; nitrohydrochloric acid; nitromuriatic acid.

δ Aquarids [ASTRON] A meteor shower consisting of relatively long, slow-moving meteors that has its maximum around July 30 and radiant near the star δ Aquarii.

η Aquarids [ASTRON] A meteor shower associated with Halley's Comet that occurs in the first week of May with radiant near the star η Aquarii.

Aquarius [ASTRON] A constellation with a right ascension of 23 hours and declination of 15°S. Abbreviated Aqr. Also known as Water Bearer.

aquatic [BIOL] Living or growing in, on, or near water; having a water habitat.

aquatic weed cutter [NAV ARCH] A device attached to the bow of a boat that can cut and clear a wide path through a weed-choked lake.

aquatint [GRAPHICS] An etching process that produces several tones by varying the etching time of different areas of a copper plate; the resulting print resembles an ink or wash drawing.

aquation [CHEM] Formation of a complex that contains water by replacement of other coordinated groups in the complex.

aquatone [GRAPHICS] An offset printing process utilizing a zinc plate that is gelatin-coated and hardened and sensitized to print type, line drawings, and fine-screen halftones.

aqueduct [CIV ENG] An artificial tube or channel for conveying water.

Aquent [GEOL] A suborder of the soil order Entisol, bluish gray or greenish gray in color; under water until very recent times; located at the margins of oceans, lakes, or seas.

aqueous [SCI TECH] Relating to or made with water.

aqueous desert [ECOL] A marine bottom environment with little or no macroscopic invertebrate shelled life.

aqueous electron *See* hydrated electron.

aqueous humor [PHYSIO] The transparent fluid filling the anterior chamber of the eye.

aqueous lava [GEOL] Mud lava produced by the mixing of volcanic ash with condensing volcanic vapor or other water.

aqueous rock [PETR] A sedimentary rock deposited by or in water. Also known as hydrogenic rock.

aqueous solution [CHEM] A solution with the solvent as water.

Aquept [GEOL] A suborder of the soil order Inceptisol, wet or drained, which lacks silicate clay accumulation in the soil profiles; surface horizon varies in thickness.

aquiclude [GEOL] A porous formation that absorbs water slowly but will not transmit it fast enough to furnish an appreciable supply for a well or spring.

aquiculture [BIOL] Cultivation of natural faunal resources of water. Also spelled aquaculture.

aquifer [GEOL] A permeable body of rock capable of yielding quantities of groundwater to wells and springs. [HYD] A subsurface zone that yields economically important amounts of water to wells.

Aquifoliaceae [BOT] A family of woody flowering plants in the order Celastrales characterized by pendulous ovules, alternate leaves, imbricate petals, and drupaceous fruit; common members include various species of holly (*Ilex*).

aquifuge [GEOL] An impermeable body of rock which contains no interconnected openings or interstices and therefore neither absorbs nor transmits water.

aquiherbosa [ECOL] Herbaceous plant communities in wet areas, such as swamps and ponds.

Aquila [ASTRON] A constellation with a right ascension of 20 hours and declination of 5°N. Abbreviated Aqil; Aql.

α Aquilae *See* Altair.

aquiprata [ECOL] Communities of plants which are found in areas such as wet meadows where groundwater is a factor.

Aquitanian [GEOL] Lower lower Miocene or uppermost Oligocene geologic time.

aquitard [GEOL] A bed of low permeability adjacent to an aquifer; may serve as a storage unit for groundwater, although it does not yield water readily.

Aquod [GEOL] A suborder of the soil order Spodosol, with a black or dark brown horizon just below the surface horizon; seasonally wet, it occupies depressions or wide flats from which water cannot escape easily.

aquo ion [CHEM] Any ion containing one or more water molecules.

Aquoll [GEOL] A suborder of the soil order Mollisol, with thick surface horizons; formed under wet conditions, it may be under water at times, but is seasonally rather than continually wet.

Aquox [GEOL] A suborder of the soil order Oxisol, seasonally wet, found chiefly in shallow depressions; deeper soil profiles are predominantly gray, sometimes mottled, and contain nodules or sheets of iron and aluminum oxides.

Aquult [GEOL] A suborder of the soil order Ultisol; seasonally wet, it is saturated with water a significant part of the year unless drained; surface horizon of the soil profile is dark and varies in thickness, grading to gray in the deeper portions; it occurs in depressions or on wide upland flats from which water drains very slowly.

Ar *See* argon.

Ar_1 [MET] The temperature at which conversion of austenite to ferrite or to ferrite plus cementite is completed upon cooling a steel.

Ar_3 [MET] The temperature at which austenite begins to convert to ferrite upon cooling a steel.

Ar_4 [MET] The temperature at which delta ferrite is converted to gamma iron (austenite) upon cooling a steel.

Ar_{cm} [MET] The temperature at which austenite is converted to cementite upon cooling a hypereutectoid steel.

Ara [ASTRON] A constellation with a right ascension of 17 hours and declination of 55°S. Also known as Altar.

Arabellidae [INV ZOO] A family of polychaete worms belonging to the Errantia.

arabic numerals [MATH] The numerals 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9.

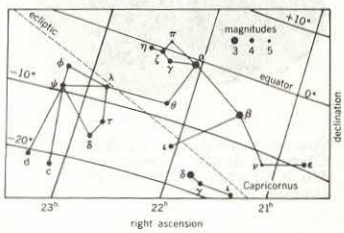
arabine *See* harman.

arabinose [BIOCHEM] $C_5IH_{10}O_5$ A pentose sugar obtained in crystalline form from plant polysaccharides such as gums, hemicelluloses, and some glycosides.

arabite *See* arabitol.

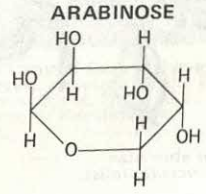
arabitol [ORG CHEM] $CH_2OH(CHOH)_3CH_2OH$ An alcohol that is derived from arabinose; a sweet, colorless crystalline

AQUARIUS



Line pattern of the constellation Aquarius. The grid lines represent the coordinates of the sky. The apparent brightness, or magnitude, of the stars is shown by the sizes of the dots, which are graded by appropriate numbers as indicated.

ARABINOSE



The structural formula of β-L-arabinose, obtained from the cherry gum plant.

material present in D and L forms; soluble in water; melts at 103°C. Also known as arabite.

Araceae [BOT] A family of herbaceous flowering plants in the order Arales; plants have stems, roots, and leaves, the inflorescence is a spadix, and the growth habit is terrestrial or sometimes more or less aquatic; well-known members include dumb cane (*Dieffenbachia*), jack-in-the-pulpit (*Arisaema*), and *Philodendron*.

arachic acid *See* eicosanoic acid.

arachidic acid *See* eicosanoic acid.

arachis oil *See* peanut oil.

arachnephobia [PSYCH] Abnormal fear of spiders.

Arachnia [MICROBIO] A genus of bacteria in the family Actinomycetaceae; branched diphtheroid rods and branched filaments form filamentous microcolonies; facultatively anaerobic; the single species is a human pathogen.

Arachnida [INV ZOO] A class of arthropods in the subphylum Chelicerata characterized by four pairs of thoracic appendages.

arachnodactyly [MED] A rare congenital defect of the skeletal system marked by abnormally long hand and foot bones.

arachnoid [ANAT] A membrane that covers the brain and spinal cord and lies between the pia mater and dura mater. [BOT] Of cobweblike appearance, caused by fine white hairs. Also known as araneose. [INV ZOO] Any invertebrate related to or resembling the Arachnida.

arachnoidal granulations [ANAT] Projections of the arachnoid layer of the cerebral meninges through the dura mater. Also known as arachnoid villi; Pacchionian bodies.

Arachnoidea [INV ZOO] The name used in some classification schemes to describe a class of primitive arthropods.

arachnoid villi *See* arachnoidal granulations.

arachnology [INV ZOO] The study of arachnids.

Aradidae [INV ZOO] The flat bugs, a family of hemipteran insects in the superfamily Aradoidea.

Aradoidea [INV ZOO] A small superfamily of hemipteran insects belonging to the subdivision Geocorisae.

Araeoscelidia [PALEON] A provisional order of extinct reptiles in the subclass Euryapsida.

araeostyle [ARCH] Having an intercolumnation alternately of two and four column diameters. Also spelled areostyle.

Arago distance [ASTRON] The angular distance from the antisolar point to the Arago point.

aragonite [MINERAL] $CaCO_3$ A white, yellowish, or gray orthorhombic mineral species of calcium carbonate but with a crystal structure different from those of vaterite and calcite, the other two polymorphs of the same composition. Also known as Aragon spar.

Aragon spar *See* aragonite.

Arago point [OPTICS] A neutral point located about 20° directly above the antisolar point in relatively clear air and at higher elevations in turbid air.

Arago's disk [ELECTROMAG] A device consisting of a horizontal disk of copper that can rotate about a vertical axis in an airtight box, and a horizontal bar magnet suspended above the disk but outside the box; upon rapid rotation of the disk, the bar magnet is deflected and eventually rotates in the same direction with smaller velocity.

Aralac [TEXT] A fiber synthesized from casein.

Arales [BOT] An order of monocotyledonous plants in the subclass Arecidae.

Araliaceae [BOT] A family of dicotyledonous trees and shrubs in the order Umbellales; there are typically five carpels and the fruit, usually a berry, is fleshy or dry; well-known members are ginseng (*Panax*) and English ivy (*Hedera helix*).

aralkyl [ORG CHEM] A radical in which an aryl group is substituted for an alkyl H atom. Derived from arylated alkyl.

aramayoite [MINERAL] $Ag(Sb,Bi)S_2$ An iron-black mineral consisting of silver antimony bismuth sulfide.

Aramidae [VERT ZOO] The limpkins, a family of birds in the order Gruiformes.

Aramite [MATER] A miticide; used for the control of phytophagous mites.

Aran-Duchenne atrophy [MED] A muscular system disorder of adults involving progressive spinal muscular atrophy.

Araneae [INV ZOO] An equivalent name for Araneida.

Araneida [INV ZOO] The spiders, an order of arthropods in the class Arachnida.

araneology [INV ZOO] The study of spiders.

araneose *See* arachnoid.

ARAGONITE

5 cm

Specimen of aragonite from Girgenti, Sicily. *(American Museum of Natural History specimen)*

ARBORVITAE

Eastern aborvitae *(Thuja occidentalis)*.

arapahite [PETR] A dark-colored, porous, fine-grained basic basalt consisting of magnetite, bytownite, and augite.

Arbacioida [INV ZOO] An order of echinoderms in the superorder Echinacea.

arbiter [COMPUT SCI] A computer unit that determines the priority sequence in which two or more processor inputs are connected to a single functional unit such as a multiplier or memory.

arbitrary correction [ORD] The correction of firing data or sound-locator data, applied to correct for observed errors after allowance has been made for all known causes of deviation. Also known as adjustment correction.

arbitrary course computer *See* course-line computer.

arbitrary function generator *See* general-purpose function generator.

arbitrary grid [MAP] Any reference system developed for use where no grid is available or practical, or where military security for the reference is desired.

arbitration [IND ENG] A semijudicial means of settling labor-management disputes in which both sides agree to be bound by the decision of one or more neutral persons selected by some method mutually agreed upon.

arbitration bar [MET] A cast-iron specimen, in the form of a standard-sized bar, to be tested for conformity to specifications of the American Society for Testing and Materials.

arbor [HOROL] The axle of a wheel in a watch or clock. [MECH ENG] **1.** A cylindrical device positioned between the spindle and outer bearing of a milling machine and designed to hold a milling cutter. **2.** A shaft or spindle used to hold a revolving cutting tool or the work to be cut. [MET] A device which supports sand cores in molds.

arbor collar [ENG] A cylindrical spacer that positions and secures a revolving cutter on an arbor.

arboreal Also known as arboreous. [BOT] Relating to or resembling a tree. [ZOO] Living in trees.

arboreous [BOT] **1.** Wooded. **2.** *See* arboreal.

arborescence [BIOL] The state of being treelike in form and appearance.

arborescent powder *See* dendritic powder.

arboretum [BOT] An area where trees and shrubs are cultivated for educational and scientific purposes.

arbor hole [DES ENG] A hole in a revolving cutter or grinding wheel for mounting it on an arbor.

arboriculture [BOT] The cultivation of ornamental trees and shrubs.

arborization [BIOL] A treelike arrangement, such as a branched dendrite or axon.

arborization block *See* intraventricular heart block.

arbor press [MECH ENG] A machine used for forcing an arbor or a mandrel into drilled or bored parts preparatory to turning or grinding. Also known as mandrel press.

arbor support [ENG] A device to support the outer end or intermediate point of an arbor.

arbor vitae [ANAT] The treelike arrangement of white nerve tissue seen in a median section of the cerebellum.

arborvitae [BOT] Any of the ornamental trees, sometimes called the tree of life, in the genus *Thuja* of the order Pinales.

arbor vitae oil *See* thuja oil.

arboviral encephalitides [MED] Diseases which are caused by arthropod-borne viruses (arboviruses), such as the encephalitis infections.

arbovirus [VIROL] Small, arthropod-borne animal viruses that are unstable at room temperature and inactivated by sodium deoxycholate; cause several types of encephalitis. Also known as arthropod-borne virus.

Arbuckle orogeny [GEOL] Mid-Pennsylvanian episode of diastrophism in the Wichita and Arbuckle Mountains of Oklahoma.

arbutin [ORG CHEM] $C_{12}H_{16}O_7$ A bitter glycoside from the bearberry and certain other plants; sometimes used as a urinary antiseptic.

arc [ELEC] *See* electric arc. [ENG] The graduated scale of an instrument for measuring angles, as a marine sextant; readings obtained on that part of the arc beginning at zero and extending in the direction usually considered positive are popularly said to be on the arc, and those beginning at zero and extending in the opposite direction are said to be off the arc. [GEOL] A geologic or topographic feature that is repeated along a curved line on the surface of the earth. [MATH] **1.** A continuous piece of the circumference of a circle. **2.** *See* edge.

arcade [ARCH] **1.** A series of arches supported on columns. **2.** An arched passageway. [INV ZOO] A type of cell associated with the pharyngeal region of nematodes and united with like cells by an arch.

arcanite [MINERAL] K_2SO_4 A colorless, vitreous orthorhombic sulfate mineral. Also known as glaserite.

arcature [ARCH] **1.** A small arcade. **2.** A blind, usually decorative arcade.

arcback [ELECTR] The flow of a principal electron stream in the reverse direction in a mercury-vapor rectifier tube because of formation of a cathode spot on an anode; this results in failure of the rectifying action. Also known as backfire.

arc blow [MET] The shifting of the arc in various directions in electric-arc welding due to the magnetic fields at the arc.

arc brazing [MET] Brazing with the use of an electric arc.

arc chute [ELEC] A collection of insulating barriers in a circuit breaker for confining the arc and preventing it from causing damage.

arc converter [ELECTR] A form of oscillator using an electric arc as the generator of alternating or pulsating current.

arc cosecant of a number [MATH] **1.** Any angle whose cosecant is that number. **2.** The angle between $-\pi/2$ radians and $\pi/2$ radians whose cosecant is that number; it is the value of the inverse of the restriction of the cosecant function to the interval between $-\pi/2$ and $\pi/2$, at this number.

arc cosine of a number [MATH] **1.** Any angle whose cosine is that number. **2.** The angle between 0 radians and π radians whose sine is that number; it is the value of the inverse of the restriction of the cosine function to the interval between 0 and π, at this number.

arc cotangent of a number [MATH] **1.** Any angle whose cotangent is that number. **2.** The angle between 0 radians and π radians whose cotangent is that number; it is the value of the inverse of the restriction of the cotangent function to the interval between 0 and π, at this number.

arc cutting [MET] A type of thermal cutting of metal using the temperature generated by an electric arc.

arc discharge [ELEC] A direct-current electrical current between electrodes in a gas or vapor, having high current density and relatively low voltage drop.

arc doubleau [ARCH] An arch, usually very massive, carried across a wide space, to support a groined vault or to stiffen a barrel vault.

Arcellinida [INV ZOO] An order of rhizopodous protozoans in the subclass Lobosia characterized by lobopodia and a well-defined aperture in the test.

arc excitation [ATOM PHYS] Use of electric-arc energy to move electrons into higher energy orbits.

arc force [MECH] The force of a plasma arc through a nozzle or opening.

arc furnace [MET] A furnace used to heat materials by the energy from an electric arc. Also known as electric-arc furnace.

arc gouging [MET] The formation of a bevel or groove by an arc cutting process.

arch [CIV ENG] A structure curved and so designed that when it is subjected to vertical loads, its two end supports exert reaction forces with inwardly directed horizontal components; common uses for the arch are as a bridge, support for a roadway or railroad track, or part of a building.

Archaeoceti [PALEON] The zeuglodonts, a suborder of aquatic Eocene mammals in the order Cetacea; the oldest known cetaceans.

Archaeocidaridae [PALEON] A family of Carboniferous echinoderms in the order Cidaroida characterized by a flexible test and more than two columns of interambulacral plates.

Archaeocopida [PALEON] An order of Cambrian crustaceans in the subclass Ostracoda characterized by only slight calcification of the carapace.

Archaeogastropoda [INV ZOO] An order of gastropod mollusks that includes the most primitive snails.

Archaeopteridales [PALEOBOT] An order of Upper Devonian sporebearing plants in the class Polypodiopsida characterized by woody trunks and simple leaves.

Archaeopteris [PALEOBOT] A genus of fossil plants in the order Archaeopteridales; used sometimes as an index fossil of the Upper Devonian.

Archaeopterygiformes [PALEON] The single order of the extinct avian subclass Archaeornithes.

Archaeopteryx [PALEON] The earliest known bird; a genus of fossil birds in the order Archaeopterygiformes characterized by flight feathers like those of modern birds.

Archaeornithes [PALEON] A subclass of Upper Jurassic birds comprising the oldest fossil birds.

archaic [PSYCH] Designating elements, largely unconscious, in the psyche which are remnants of man's prehistoric past and which reappear in dreams and other symbolic manifestations.

archallaxis [BIOL] Deviation from an ancestral pattern early in development, eliminating duplication of the phylogenetic history.

Archangiaceae [MICROBIO] A family of bacteria in the order Myxobacterales; microcysts are rod-shaped, ovoid, or spherical and are not enclosed in sporangia, and fruiting bodies are irregular masses.

Archangium [MICROBIO] The single genus of the family Archangiaceae; sporangia are lacking, and there is no definite slime wall.

Archanthropinae [PALEON] A subfamily of the Hominidae, set up by F. Weidenreich, which is no longer used.

arch band [CIV ENG] Any narrow elongated surface forming part of or connected with an arch.

arch bar [BUILD] **1.** A curved chimney bar. **2.** A curved bar in a window sash.

arch beam [CIV ENG] A curved beam, used in construction, with a longitudinal section bounded by two arcs having different radii and centers of curvature so that the beam cross section is larger at either end than at the center.

arch blocks [MIN ENG] Blocks applied to the wooden voussoirs used in framing a timber support for the roof when driving a tunnel.

arch brace [BUILD] A curved brace, usually used in pairs to support a roof frame and give the effect of an arch.

arch brick [MATER] **1.** A wedge-shaped brick used in arches. **2.** An overburned brick, resulting from contact with the fire in the arch of a kiln.

arch bridge [CIV ENG] A bridge having arches as the main supports.

arch center [CIV ENG] A temporary structure for support of the parts of a masonry or concrete arch during its construction.

arch corner bead [BUILD] A corner bead which is cut on the job; used to form and reinforce the curved portion of arch openings.

arch dam [CIV ENG] A dam having a curved face on the downstream side, the curve being roughly a portion of a cylinder whose axis is vertical.

Archean [GEOL] A term, meaning ancient, which has been applied to the oldest rocks of the Precambrian; as more physical measurements of geologic time are made, the usage is changing; the term Early Precambrian is preferred.

arc heating [MET] The heating of a material by the heat energy from an electric arc, which has a very high temperature and very high concentration of heat energy. Also known as electric-arc heating.

arched construction [BUILD] A method of construction relying on arches and vaults to support walls and floors.

archegoniophore [BOT] The stalk supporting the archegonium in liverworts and ferns.

archegonium [BOT] The multicellular female sex organ in all plants of the Embryobionta except the Pinophyta and Magnoliophyta.

archen *See* emodin.

archencephalon [EMBRYO] The primitive embryonic forebrain from which the forebrain and midbrain develop.

archenteron [EMBRYO] The cavity of the gastrula formed by ingrowth of cells in vertebrate embryos. Also known as gastrocoele; primordial gut.

archeocyte [INV ZOO] A type of ovoid amebocyte in sponges, characterized by large nucleolate nuclei and blunt pseudopodia; gives rise to germ cells.

archeological chemistry [ARCHEO] The application of chemical theories and experimental procedures, especially of analytical chemistry, to the solution of problems in archeology.

archeology [SCI TECH] The scientific study of the material remains of the cultures of historical or prehistorical peoples.

Archeozoic [GEOL] **1.** The era during which, or during the latter part of which, the oldest system of rocks was made. **2.** The last of three subdivisions of Archean time, when the lowest forms of life probably existed; as more physical measurements

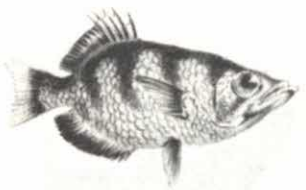
ARCHAEOPTERYX

Archaeopteryx lithographica. (From W. E. Swinton, Fossil Birds, British Museum-Natural History, 1958)

ARCH DAM

East Canyon Dam, a thin-arch concrete structure on the East Canyon River, Utah. *(U.S. Bureau of Reclamation)*

ARCHERFISH



The archerfish (*Toxotes jaculator*), maximum length 7 inches (18 centimeters).

ARCHINEPHROS

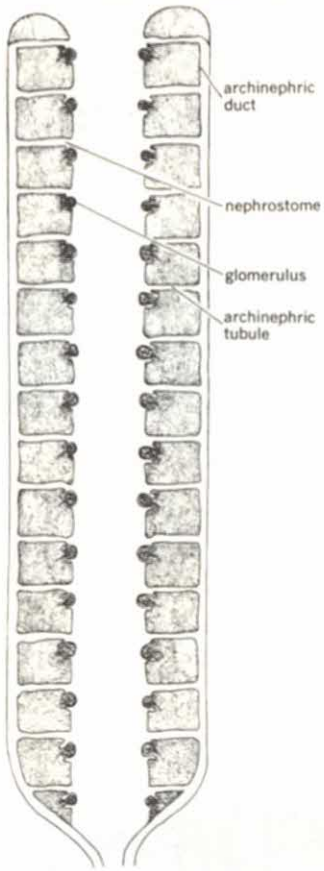


Diagram showing hypothetical structure of archinephros. (*From C. K. Weichert, Elements of Chordate Anatomy, 3d ed., McGraw-Hill, 1967*)

ARC JET ENGINE

Diagram of an arc jet engine.

of geologic time are made, the usage is changing; it is now considered part of the Early Precambrian.

Archer *See* Sagittarius.

archerfish [VERT ZOO] The common name for any member of the fresh-water family Toxotidae in the order Perciformes; individuals eject a stream of water from the mouth to capture insects.

Archeria [PALEONTOL] Genus of amphibians, order Embolomeri, in early Permian in Texas; fish eaters.

archespore [BOT] A cell from which the spore mother cell develops in either the pollen sac or the ovule of an angiosperm.

archetype [EVOL] A hypothetical ancestral type conceptualized by eliminating all specialized character traits.

arch girder [CIV ENG] A normal H-section steel girder bent to a circular shape.

arch-gravity dam [CIV ENG] An arch dam stabilized by gravity due to great mass and breadth of the base.

Archiacanthocephala [INV ZOO] An order of worms in the phylum Acanthocephala; adults are endoparasites of terrestrial vertebrates.

Archiannelida [INV ZOO] A group name applied to three families of unrelated annelid worms: Nerillidae, Protodrilidae, and Dinophilidae.

archibenthic zone [OCEANOGR] The biogeographic realm of the ocean extending from a depth of about 200 meters to 800–1100 meters (665 feet to 2625–3610 feet).

archibole *See* positive element.

Archichlamydeae [BOT] An artificial group of flowering plants, in the Englerian system of classification, consisting of those families of dicotyledons that lack petals or have petals separate from each other.

archicoel [ZOO] The segmentation cavity persisting between the ectoderm and endoderm as a body cavity in certain lower forms.

archigastrula [EMBRYO] A gastrula formed by invagination, as opposed to ingrowth of cells.

Archigregarinida [INV ZOO] An order of telosporean protozoans in the subclass Gregarinia; endoparasites of invertebrates and lower chordates.

Archimedean principle [PHYS] The principle that a body immersed in a fluid undergoes an apparent loss in weight equal to the weight of the fluid it displaces.

Archimedean solid [MATH] One of 13 possible solids whose faces are all regular polygons, though not necessarily all of the same type, and whose polyhedral angles are all equal.

Archimedes number [FL MECH] One of a dimensionless group of numbers denoting the ratio of gravitational force to viscous force.

Archimedes' problem [MATH] The problem of dividing a hemisphere into two parts of equal volume with a plane parallel to the base of the hemisphere; it cannot be solved by Euclidean methods.

Archimedes' screw [MECH ENG] A device for raising water by means of a rotating broad-threaded screw or spirally bent tube within an inclined hollow cylinder.

Archimedes' spiral *See* spiral of Archimedes.

archinephridium [INV ZOO] One of a pair of primitive nephridia found in each segment of some annelid larvae.

archinephros [VERT ZOO] The paired excretory organ of primitive vertebrates and the larvae of hagfishes and caecilians.

arching [CIV ENG] **1.** The transfer of stress from a yielding part of a soil mass to adjoining less-yielding or restrained parts of the mass. **2.** A system of arches. **3.** The arched part of a structure. [GEOL] The folding of schists, gneisses, or sediments into anticlines. [MIN ENG] Curved support for roofs of openings in mines.

archipallium [PHYSIO] The olfactory pallium or the olfactory cerebral cortex; phylogenetically, the oldest part of the cerebral cortex.

archipelagic apron [GEOL] A fan-shaped slope around an oceanic island differing from deep-sea fans in having little, if any, sediment cover.

archipelago [GEOGR] **1.** A large group of islands. **2.** A sea that has a large group of islands within it.

architect [ARCH] A person who is skilled and knowledgeable in the design of buildings and whose qualifications are recognized by a college degree and licensing by an appropriate professional organization.

architectonic [ARCH] **1.** Pertaining to or in accordance with the principles of architecture. **2.** Having the qualities of architecture in terms of structure and concept. [GEOL] Of forces that determine structure.

architect's scale [GRAPHICS] A rule with a scale on it so chosen that by placing the rule's edge on a reduced-scale drawing the scale of the drawing (say, in inches) may be converted directly into the dimensions of the object (say, in feet).

architectural acoustics [CIV ENG] The science of planning and building a structure to ensure the most advantageous flow of sound to all listeners.

architectural bronze [MET] An alloy containing 57% copper, 40% zinc, 2.75% lead, 0.25% tin; used for extruded moldings and forgings.

architectural concrete [MATER] Concrete used for ornamentation or finish on exterior or interior surfaces of a building or other structure.

architectural engineering [CIV ENG] The branch of engineering dealing primarily with building materials and components and with the design of structural systems for buildings, in contrast to heavy construction such as bridges.

architectural millwork [CIV ENG] Ready-made millwork especially fabricated to meet the specifications for a particular job, as distinguished from standard or stock items or sizes. Also known as custom millwork.

architectural terra-cotta [MATER] A hard-burnt, glazed or unglazed clay unit used in building construction.

architectural volume [CIV ENG] The cubic content of a building calculated by multiplying the floor area by the height.

architecture [ENG] **1.** The art and science of designing buildings. **2.** The product of this art and science.

architrave [ARCH] **1.** The lowest division of an entablature that rests on the column capital. **2.** The molded band, group of moldings, or other architectural member around an opening, such as a door, especially if rectangular.

architrave cornice [ARCH] An entablature in which the cornice rests directly on the architrave, the frieze being omitted.

archiving [COMPUT SCI] The storage of files, in the form of punch cards, microfilm, or magnetic tape, for very long periods of time, in case it is necessary to regenerate the file due to subsequent introduction of errors.

archivolt [ARCH] **1.** The band or molding surrounding an arch. **2.** The architectural members of the inner surface of an arch.

Archosauria [VERT ZOO] A subclass of reptiles composed of five orders: Thecodontia, Saurischia, Ornithschia, Pterosauria, and Crocodilia.

Archostemata [INV ZOO] A suborder of insects in the order Coleoptera.

arch pattern [ANAT] A fingerprint pattern in which ridges enter on one side of the impression, form a wave or angular upthrust, and flow out the other side.

arch press [MECH ENG] A punch press having an arch-shaped frame to permit operations on wide work.

arch rib [CIV ENG] One of a set of projecting molded members subdividing the undersurface of an arch.

arch ring [CIV ENG] A curved member that provides the main support of an arched structure.

arch truss [CIV ENG] A truss having the form of an arch or arches.

archway [ARCH] A way or passage over which an arch extends.

arc hyperbolic function [MATH] An inverse function of one of the hyperbolic functions.

arcing contacts [ELEC] Special contacts on which the arc is drawn after the main contacts of a switch or circuit breaker have opened.

arcing ring [ELEC] A metal ring attached to an insulator to protect it from damage by a power arc.

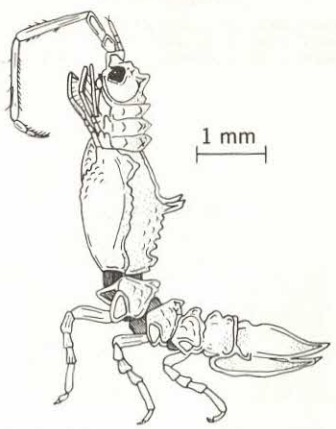
arcing time [ELEC] **1.** Interval between the parting, in a switch or circuit breaker, of the arcing contacts and the extension of the arc. **2.** Time elapsing, in a fuse, from the severance of the fuse link to the final interruption of the circuit under a specified condition.

arc jet engine [AERO ENG] An electromagnetic propulsion engine used to supply motive power for flight; hydrogen and ammonia are used as the propellant, and some plasma is formed as the result of electric-arc heating.

arc lamp [ELEC] An electric lamp in which the light is produced by an arc made when current flows through ionized gas between two electrodes. Also known as electric-arc lamp.

arc measurement [GEOD] A survey method used to determine the size of the earth.
arc melting [MET] Melting and purification of metal in an electric-arc furnace.
arcmin *See* minute.
arc navigation [NAV] A navigation system in which the position of an airplane or ship is maintained along an arc of a circle which has a radius measured from a control station by means of electronic distance-measuring equipment, such as shoran or oboe.
arcocentrum [ANAT] A centrum formed of modified, fused mesial parts of the neural or hemal arches.
arc of action *See* arc of contact.
arc of approach [DES ENG] In toothed gearing, the part of the arc of contact along which the flank of the driving wheel contacts the face of the driven wheel.
arc of contact [MECH ENG] **1.** The angular distance over which a gear tooth travels while it is in contact with its mating tooth. Also known as arc of action. **2.** The angular distance a pulley travels while in contact with a belt or rope.
arc of parallel [GEOD] A part of an astronomic or a geodetic parallel.
arc of recess [DES ENG] In toothed gearing, the part of the arc of contact wherein the face of the driving wheel touches the flank of the driven wheel.
arc of visibility [NAV] The arc of a light sector, designated by its limiting bearings as observed from seaward.
arc-over [ELEC] An unwanted arc resulting from the opening of a switch or the breakdown of insulation.
arc process [CHEM ENG] A former process that used electric arcs for fixation (oxidation) of atmospheric nitrogen to manufacture nitric acid.
arc-seam weld [MET] A linear weld or overlapping spot welds made by an arc welding process.
arc secant of a number [MATH] **1.** Any angle whose secant is that number. **2.** The angle between 0 radians and π radians whose secant is that number; it is the value of the inverse of the restriction of the secant function to the interval between 0 and π, at this number.
arc sine of a number [MATH] **1.** Any angle whose sine is that number. **2.** The angle between $-\pi/2$ radians and $\pi/2$ radians whose sine is that number; it is the value of the inverse of the restriction of the sine function to the interval between $-\pi/2$ and $\pi/2$, at this number.
arc spectrum [SPECT] The spectrum of a neutral atom, as opposed to that of a molecule or an ion; it is usually produced by vaporizing the substance in an electric arc; designated by the roman numeral I following the symbol for the element, for example, HeI.
arc-spot weld [MET] A weld that covers a very small area of the surface in contact and was made by an arc welding process.
arc spraying [MET] Depositing on a surface a metal melted by an electric arc and blown at high speed in an atomized state.
arc-suppression coil [ELEC] A grounding reactor, used in alternating-current power transmission systems, which is designed to limit the current flowing to ground at the location of a fault almost to zero by setting up a reactive current to ground that balances the capacitive current to ground flowing from the lines. Also known as Petersen coil.
arc tangent of a number [MATH] **1.** Any angle whose tangent is that number. **2.** The angle between $-\pi/2$ radians and $\pi/2$ radians whose tangent is that number; it is the value of the inverse of the restriction of the tangent function to the interval between $-\pi/2$ and $\pi/2$, at this number.
arc-through [ELECTR] Of a gas tube, a loss of control resulting in the flow of a principal electron stream in the normal direction during a scheduled nonconducting period.
arctic air [METEOROL] An air mass whose characteristics are developed mostly in winter over arctic surfaces of ice and snow.
arctic-alpine [ECOL] Of or pertaining to areas above the timberline in mountainous regions.
arctic anticyclone *See* arctic high.
Arctic Circle [GEOD] The parallel of latitude 66°32′N (often taken as 66½°N).
arctic climate *See* polar climate.
arctic desert *See* polar desert.
arctic front [METEOROL] The semipermanent, semicontinuous front between the deep, cold arctic air and the shallower, basically less cold polar air of northern latitudes.
arctic haze [METEOROL] A condition of reduced horizontal and slant visibility (but unimpeded vertical visibility) encountered by aircraft in flight (up to more than 30,000 feet, or 9140 meters) over arctic regions.
arctic high [METEOROL] A weak high that appears on mean charts of sea-level pressure over the Arctic Basin during late spring, summer, and early autumn. Also known as arctic anticyclone; polar anticyclone; polar high.
arcticization [ENG] The preparation of equipment for operation in an environment of extremely low temperatures.
arctic mist [METEOROL] A mist of ice crystals; a very light ice fog.
Arctic Ocean [GEOGR] The north polar ocean lying between North America, Greenland, and Asia.
arctic sea smoke [METEOROL] Steam fog; but often specifically applied to steam fog rising from small areas of open water within sea ice.
Arctic suite [PETR] A group of basic igneous rocks intermediate in composition between Atlantic and Pacific suites.
arctic tree line [ECOL] The northern limit of tree growth; the sinuous boundary between tundra and boreal forest.
Arctic Zone [GEOGR] The area north of the Arctic Circle (66°32′N).
Arctiidae [INV ZOO] The tiger moths, a family of lepidopteran insects in the suborder Heteroneura.
arc time [MET] The time interval during which an arc is maintained in the making of an arc weld.
arc-to-chord correction *See* conversion angle.
Arctocyonidae [PALEON] A family of extinct carnivorelike mammals in the order Condylarthra.
Arctolepiformes [PALEON] A group of the extinct jointnecked fishes belonging to the Arthrodira.
arc triangulation [ENG] A system of triangulation in which an arc of a great circle on the surface of the earth is followed in order to tie in two distant points.
Arcturidae [INV ZOO] A family of isopod crustaceans in the suborder Valvifera characterized by an almost cylindrical body and extremely long antennae.
Arcturus [ASTRON] A star that is 36 light-years from the sun; spectral classification K2IIIp. Also known as α Boötes.
arcuale [EMBRYO] Any of the four pairs of primitive cartilages from which a vertebra is formed.
arcuate [ANAT] Arched or curved; bow-shaped.
arcuated [ARCH] Based on or characterized by arches or archlike curves or vaults.
arcuate delta [GEOL] A bowed or curved delta with the convex margin facing the body of water. Also known as fan-shaped delta.
arcuation [GEOL] Production of an arc, as in rock flowage where movement proceeded in a fanlike manner.
arcus [METEOROL] A dense and horizontal roll-shaped accessory cloud, with more or less tattered edges, situated on the lower front part of the main cloud.
arc voltage [MET] The voltage across a welding arc.
arcwall coal cutter [MIN ENG] A type of electric or compressed-air cutter for under- or overcutting a coal seam in narrow work.
arc-welder's disease *See* siderosis.
arc welding *See* electric-arc welding.
Arcyzonidae [PALEON] A family of Devonian paleocopan ostracods in the superfamily Kirkbyacea characterized by valves with a large central pit.
ARDC model atmosphere *See* standard atmosphere.
ardealite [MINERAL] $Ca_2(HPO_4)(SO_4)\cdot 4H_2O$ A white or light-yellow mineral consisting of a hydrous acid calcium phosphate-sulfate.
Ardeidae [VERT ZOO] The herons, a family of wading birds in the order Ciconiiformes.
Ardennian orogeny [GEOL] A short-lived orogeny during the Ludlovian stage of the Silurian period of geologic time.
ardennite [MINERAL] $Mn_5Al_5(VO_4)(SiO_4)_5(OH)_2\cdot 2H_2O$ A yellow to yellowish-brown mineral consisting of a hydrous silicate vanadate and arsenate of manganese and aluminum.
arduinite *See* mordenite.
are [MECH] A unit of area, used mainly in agriculture, equal to 100 square meters.
area [COMPUT SCI] A section of a computer memory assigned by a computer program or by the hardware to hold data of a particular type. [MATH] A measure of the size of a two-dimensional surface, or of a region on such a surface.

ARCTURIDAE



Arcturella, a member of the family Arcturidae. *(From G. O. Sars, An Account of the Crustacea of Norway, vol. 2, 1899)*

area amniotica [EMBRYO] The transparent part of the blastodisc in mammals.

area bombing [ORD] Dropping of bombs on a general locality rather than on a specific target or in a pattern.

area control [NAV] A form of air-traffic control in which aircraft flying in designated areas are furnished flight advisory service.

area coverage [ENG] Complete coverage of an area by aerial photography having parallel overlapping flight lines and stereoscopic overlap between exposures in the line of flight.

area defense [ORD] A defense against air attack organized to protect an area, as distinguished from a point defense or line defense.

area delimiting line [MAP] A line fixing the boundary of an area.

area drain [CIV ENG] A receptacle designed to collect surface or rain water from an open area.

area effect [ELECTR] In general, the condition of the dielectric strength of a liquid or vacuum separating two electrodes being higher for electrodes of smaller area.

area fire [ORD] Fire delivered on a prescribed area.

area forecast [METEOROL] A weather forecast for a specified geographic area; usually applied to a form of aviation weather forecast. Also known as regional forecast.

area landfill [CIV ENG] A sanitary landfill operation that takes care of the solid waste of more than one municipality in a region.

areal eruption [GEOL] Volcanic eruption resulting from collapse of the roof of a batholith; the volcanic rocks grade into parent plutonic rocks.

areal geology [GEOL] Distribution and form of rocks or geologic units of any relatively large area of the earth's surface.

area light [CIV ENG] **1.** A source of light with significant dimensions in two directions, such as a window or luminous ceiling. **2.** A light used to illuminate large areas.

areal pattern [PETRO ENG] Distribution pattern of oil-production wells and water- or gas-injection wells over a given oil reservoir.

areal sweep efficiency [PETRO ENG] Percentage of the total oil reservoir or pore volume which is within the area being swept of oil by a displacing fluid, as in a natural or artificial gas drive or water injection.

areal velocity [ASTROPHYS] In celestial mechanics, the area swept out by the radius vector per unit time.

area meter [ENG] A mechanism to measure fluid flow rate through a fixed-area conduit by the movement of a weighted piston or float supported by the flowing fluid; includes rotameters and piston-type meters.

area of error [NAV] An area (elliptical, circular, parallelogram-shaped, and so on) containing the true position, within which, for a stated level of probability, the true position is considered to lie.

area opaca [EMBRYO] The opaque peripheral area of the blastoderm of birds and reptiles, continuous with the yolk.

area pellucida [EMBRYO] The central transparent area of the blastoderm of birds and reptiles, overlying the subgerminal cavity.

area placentalis [EMBRYO] The part of the trophoblast in immediate contact with the uterine mucosa in the embryos of early placental vertebrates.

area rule [AERO ENG] A prescribed method of design for obtaining minimum zero-lift drag for a given aerodynamic configuration, such as a wing-body configuration, at a given speed.

area search [COMPUT SCI] A computer search that examines only those records which satisfy some broad criteria.

area survey [ENG] A survey of areas large enough to require loops of control.

area target [ORD] A target attacked by area bombing, consisting of an area such as an entire munitions factory, rather than a single building or similar point target.

area triangulation [ENG] A system of triangulation designed to progress in every direction from a control point.

area vitellina [EMBRYO] The outer nonvascular zone of the area opaca; consists of ectoderm and endoderm.

area wall [CIV ENG] A retaining wall around an areaway.

areaway [CIV ENG] An open space at subsurface level adjacent to a building, providing access to and utilities for a basement.

Arecaceae [BOT] The palms, the single family of the order Arecales.

arecaidine methyl ester *See* arecoline.

Arecales [BOT] An order of flowering plants in the subclass Arecidae composed of the palms.

Arecidae [BOT] A subclass of flowering plants in the class Liliopsida characterized by numerous, small flowers subtended by a prominent spathe and often aggregated into a spadix, and broad, petiolate leaves without typical parallel venation.

arecoline [ORG CHEM] $C_8H_{13}O_2N$ An alkaloid from the betel nut; an oily, colorless liquid with a boiling point of 209°C; soluble in water, ethanol, and ether; combustible; used as a medicine. Also known as arecaidine methyl ester; methyl-1,2,5,6-tetrahydro-1-methylnicotinate.

areg [ECOL] A sand desert.

A register *See* arithmetic register.

arena *See* lek.

arenaceous [GEOL] Of sediment or sedimentary rocks that have been derived from sand or that contain sand. Also known as arenarious; psammitic; sabulous.

arenarious *See* arenaceous.

arendalite [MINERAL] A dark-green variety of epidote found in Arendal, Norway.

arene *See* aromatic hydrocarbon.

Arenicolidae [INV ZOO] The lugworms, a family of mud-swallowing worms belonging to the Sedentaria.

arenicolite [GEOL] A hole, groove, or other mark in a sedimentary rock, generally sandstone, interpreted as a burrow made by an arenicolous marine worm or a trail of a mollusk or crustacean.

arenicolous [ZOO] Living or burrowing in sand.

Arenigian [GEOL] A European stage including Lower Ordovician geologic time (above Tremadocian, below Llanvirnian). Also known as Skiddavian.

arenite [PETR] Consolidated sand-texture sedimentary rock of any composition. Also known as arenyte; psammite.

Arent [GEOL] A suborder of the soil order Entisol, consisting of soils formerly of other classifications that have been severely disturbed, completely disrupting the sequence of horizons.

arenyte *See* arenite.

areocentric [ASTRON] With Mars as a center.

areodesy [ASTRON] Determination, by observation and measurement, of the exact positions of points on, and the figures and areas of large portions of, the surface of the planet Mars, or the shape and size of the planet Mars.

areographic [ASTRON] Referring to positions on Mars measured in latitude from the planet's equator and in longitude from a reference meridian.

areography [ASTRON] The study of the surface features of Mars, or its geography. [ECOL] Descriptive biogeography.

areola [ANAT] **1.** The portion of the iris bordering the pupil of the eye. **2.** A pigmented ring surrounding a nipple, vesicle, or pustule. **3.** A small space, interval, or pore in a tissue.

areola mammae [ANAT] The circular pigmented area surrounding the nipple of the breast. Also known as areola papillaris; mammary areola.

areola papillaris *See* areola mammae.

areolar tissue [HISTOL] A loose network of fibrous tissue and elastic fiber that connects the skin to the underlying structures.

areology [ASTRON] The scientific study related to the properties of Mars.

areostyle *See* araeostyle.

Ares [ASTRON] The planet Mars.

arête [GEOL] Narrow, jagged ridge produced by the merging of glacial cirques. Also known as arris; crib; serrate ridge.

Arethusa [ASTRON] An asteroid with a diameter of about 210 kilometers, mean distance from the sun of 3.069 astronomical units, and C-type surface composition.

ARFOR [METEOROL] A code word used internationally to indicate an area forecast; usually applied to an aviation weather forecast.

ARFOT [METEOROL] A code word used internationally to indicate an area forecast with units in the English system; usually applied to an aviation weather forecast.

arfvedsonite [MINERAL] A black monoclinic amphibole containing sodium and silicon trioxide with occluded water and some calcium. Also known as soda hornblende.

Arg *See* Argo.

Argand diagram [MATH] A two-dimensional cartesian co

ordinate system for representing the complex numbers, the number $x + iy$ being represented by the point whose coordinates are x and y.

Argand lamp [ENG] A gas lamp having a tube-shaped wick, allowing a current of air inside as well as outside the flame.

Argasidae [INV ZOO] The soft ticks, a family of arachnids in the suborder Ixodides; several species are important as ectoparasites and disease vectors for man and domestic animals.

Argelander method [ASTRON] A technique to estimate the brightness of variable stars; it involves estimating the difference in magnitude between the variable stars as compared to one or more stars that are invariable.

argentaffin cell [HISTOL] Any of the cells of the gastrointestinal tract that are thought to secrete serotonin.

argentaffin fiber *See* reticular fiber.

argentic [CHEM] Relating to or containing silver.

argentic oxide *See* silver suboxide.

Argentinoidei [VERT ZOO] A family of marine deepwater teleostean fishes, including deep-sea smelts, in the order Salmoniformes.

argentite [MINERAL] Ag_2S A lustrous, lead-gray ore of silver; it is a monoclinic mineral and is dimorphous with acanthite. Also known as argyrite; silver glance; vitreous silver.

argentocyanides [INORG CHEM] Complexes formed, for example, in the cyanidation of silver ores and in electroplating, when silver cyanide reacts with solutions of soluble metal cyanides. Also known as dicyanoargentates.

argentojarosite [MINERAL] $AgFe_3(SO_4)_2(OH)_6$ A yellow or brownish mineral consisting of basic silver ferric sulfate.

argentometer [ENG] A hydrometer used to find the amount of silver salt in a solution.

argentometry [ANALY CHEM] A volumetric analysis that employs precipitation of insoluble silver salts; the salts may be chromates or chlorides.

argentophil [BIOL] Of cells, tissues, or other structures, having an affinity for silver.

argentum [CHEM] Latin for silver.

Argid [GEOL] A suborder of the soil order Aridisol, well drained, having a characteristically brown or red color and a silicate accumulation below the surface horizon; occupies older land surfaces in deserts.

Argidae [INV ZOO] A small family of hymenopteran insects in the superfamily Tenthredinoidea.

argil *See* potter's clay.

argillaceous [GEOL] Of rocks or sediments made of or largely composed of clay-size particles or clay minerals.

argillation [GEOL] Development of clay minerals by weathering of aluminum silicates.

argillic alteration [GEOL] A rock alteration in which certain minerals are converted to minerals of the clay group.

argilliferous [GEOL] Abounding in or producing clay.

argillite [PETR] A compact rock formed from siltstone, shale, or claystone but intermediate in degree of induration and structure between them and slate; argillite is more indurated than mudstone but lacks the fissility of shale.

arginase [BIOCHEM] An enzyme that catalyzes the splitting of urea from the amino acid arginine.

arginine [BIOCHEM] $C_6H_{14}N_4bIO_2$ A colorless, crystalline, water-soluble, essential amino acid of the α-ketoglutaric acid family.

Argo [ASTRON] The large Ptolemy constellation; a southern constellation, divided into four groups (Carina, Pupis, Vela, and Pyxis Nautica). Abbreviated Arg. Also known as Ship.

argol [FOOD ENG] A deposit formed in casks during aging of wine. [MATER] Any of several manures used as fuel in Asia.

argon [CHEM] A chemical element, symbol Ar, atomic number 18, atomic weight 39.998.

argon ionization detector [NUCLEO] An ionization chamber that is filled with argon gas.

argon laser [OPTICS] A gas laser using ionized argon; emits a 4880-angstrom line as well as infrared radiation.

Argovian [GEOL] Upper Jurassic (lower Lusitanian), a substage of geologic time in Great Britain.

Arguloida [INV ZOO] A group of crustaceans known as the fish lice; taxonomic status is uncertain.

argument [ASTRON] An angle or arc, as in argument of perigee. [COMPUT SCI] A value applied to a procedure, subroutine, or macroinstruction which is required in order to evaluate any of these. [MATH] *See* amplitude; independent variable.

argument of latitude [ASTRON] The angular distance measured in the orbit plane from the ascending node to the orbiting object; the sum of the argument of perigee and the true anomaly.

argument of perigee [ASTRON] The angle or arc, as seen from a focus of an elliptical orbit, from the ascending node to the closest approach of the orbiting body to the focus; the angle is measured in the orbital plane in the direction of motion of the orbiting body.

ε Argus [ASTRON] A star of visual magnitude 1.74, spectral type K0.

argyria [MED] A dusky-gray or bluish discoloration of the skin and mucous membranes produced by the prolonged administration or application of silver preparations.

argyrite *See* argentite.

argyrodite [MINERAL] Ag_8GeS_6 A steel-gray mineral, one of two germanium minerals and a source for germanium; crystallizes in the isometric system and is isomorphous with canfieldite.

argyrophil lattice fiber *See* reticular fiber.

Arhynchobdellae [INV ZOO] An order of annelids in the class Hirudinea characterized by the lack of an eversible proboscis; includes most of the important leech parasites of man and warm-blooded animals.

Arhynchodina [INV ZOO] A suborder of ciliophoran protozoans in the order Thigmotrichida.

arhythmicity [BIOL] A condition characterized by the absence of an expected behavioral or physiologic rhythm.

Ari *See* Aries.

ariboflavinosis [MED] Dietary deficiency of riboflavin, associated with the syndrome of angular cheilosis and stomatitis, corneal vascularity, nasolabial seborrhea, and genitorectal dermatitis.

arid biogeographic zone [ECOL] Any region of the world that supports relatively little vegetation due to lack of water.

arid climate [CLIMATOL] Any extremely dry climate.

arid erosion [GEOL] Erosion or wearing away of rock that occurs in arid regions, due largely to the wind.

Aridisol [GEOL] A soil order characterized by pedogenic horizons; low in organic matter and nitrogen and high in calcium, magnesium, and more soluble elements; usually dry.

aridity [CLIMATOL] The degree to which a climate lacks effective, life-promoting moisture.

aridity coefficient [CLIMATOL] A function of precipitation and temperature designed by W. Gorczynski to represent the relative lack of effective moisture (the aridity) of a place.

aridity index [CLIMATOL] An index of the degree of water deficiency below water need at any given station; a measure of aridity.

Arid Transition life zone [ECOL] The zone of climate and biotic communities occurring in the chaparrals and steppes from the Rocky Mountain forest margin to California.

arid zone *See* equatorial dry zone.

ariegite [PETR] A group of pyroxenites composed principally of clinopyroxene, orthopyroxene, and spinel.

Ariel [AERO ENG] A series of artificial satellites launched for Britain by the United States. [ASTRON] **1.** A satellite of the planet Uranus orbiting at a mean distance of 192,000 kilometers (119,000 miles). **2.** A constellation in the northern celestial hemisphere, seen in proximity to Taurus and Pisces.

Aries [ASTRON] A constellation with a right ascension of 3 hours and declination of 20°N. Abbreviated Ari. Also known as Ram.

arietiform [VERT ZOO] Shaped like a ram's horns; specifically, describing the dark facial marking that extends across the nose of kangaroo rats.

Ariidae [VERT ZOO] A family of tropical salt-water catfishes in the order Siluriformes.

Arikareean [GEOL] Lower Miocene geologic time.

aril [BOT] An outgrowth of the funiculus in certain seeds that either remains as an appendage or envelops the seed.

arilode [BOT] An aril originating from tissues in the micropyle region; a false aril.

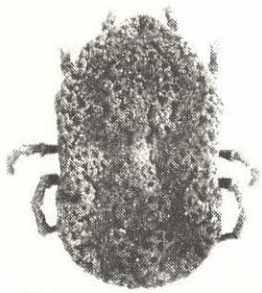
Arionidae [INV ZOO] A family of mollusks in the order Stylommatophora, including some of the pulmonate slugs.

arista [INV ZOO] The bristlelike or hairlike structure in many organisms, especially at or near the tip of the antenna of many Diptera.

Aristarchus [ASTRON] A crater on the moon.

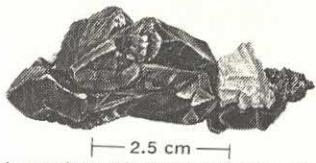
Aristolochiaceae [BOT] The single family of the plant order Aristolochiales.

ARGASIDAE



Argasid tick, *Ornithodoros coriaceus*, enlarged to about 4 times natural size.

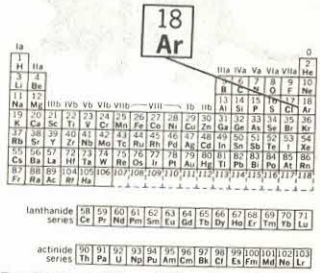
ARGENTITE



2.5 cm

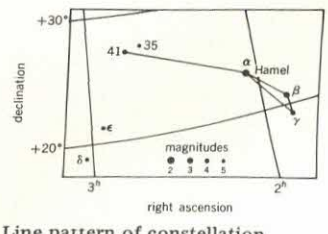
Argentite with quartz crystals from Sarrabus, Sardinia. *(Specimen from Department of Geology, Bryn Mawr College)*

ARGON



Periodic table of the chemical elements showing the position of argon.

ARIES



Line pattern of constellation Aries. Grid lines represent the coordinates of the sky. Apparent brightness, or magnitude, of stars is shown by sizes of the dots, which are graded by appropriate numbers as indicated.

Aristolochiales [BOT] An order of dicotyledonous plants in the subclass Magnoliidae; species are herbaceous to woody, often climbing, with perigynous to epigynous, apetalous flowers, uniaperturate or nonaperturate pollen, and seeds with a small embryo and copious endosperm.

aristolochic acid [ORG CHEM] $C_{17}H_{11}NO_7$ Crystals in the form of shiny brown leaflets that decompose at 281–286°C; soluble in alcohol, chloroform, acetone, ether, acetic acid, and aniline; used as an aromatic bitter. Also known as aristolochine.

aristolochine *See* aristolochic acid.

aristopedia [INV ZOO] Replacement of the arista by a nearly perfect leg.

Aristotle's lantern [INV ZOO] A five-sided feeding and locomotor apparatus surrounding the esophagus of most sea urchins.

arithlog paper [MATH] Graph paper marked with a semilogarithmic coordinate system.

arithmetic [MATH] Addition, subtraction, multiplication, and division, usually of integers, rational numbers, real numbers, or complex numbers.

arithmetic address [COMPUT SCI] An address in a computer program that results from performing an arithmetic operation on another address.

arithmetical addition [MATH] The addition of positive numbers or of the absolute values of signed numbers.

arithmetical element *See* arithmetical unit.

arithmetical instruction [COMPUT SCI] An instruction in a computer program that directs the computer to perform an arithmetic operation (addition, subtraction, multiplication, or division) upon specified items of data.

arithmetical operation [COMPUT SCI] A digital computer operation in which numerical quantities are added, subtracted, multiplied, divided, or compared.

arithmetical unit [COMPUT SCI] The section of the computer which carries out all arithmetic and logic operations. Also known as arithmetical element; arithmetic-logic unit (ALU); arithmetic section; logic-arithmetic unit; logic section.

arithmetic check [COMPUT SCI] The verification of an arithmetical operation or series of operations by another such process; for example, the multiplication of 73 by 21 to check the result of multiplying 21 by 73.

arithmetic circuitry [COMPUT SCI] The section of the computer circuitry which carries out the arithmetic operations.

arithmetic-logic unit *See* arithmetical unit.

arithmetic mean [MATH] The average of a collection of numbers obtained by dividing the sum of the numbers by the quantity of numbers. Also known as average (av).

arithmetic progression [MATH] A sequence of numbers for which there is a constant d such that the difference between any two successive terms is equal to d.

arithmetic register [COMPUT SCI] A specific memory location reserved for intermediate results of arithmetic operations. Also known as A register.

arithmetic scan [COMPUT SCI] The procedure for examining arithmetic expressions and determining the order of execution of operators, in the process of compilation into machine-executable code of a program written in a higher-level language.

arithmetic section *See* arithmetical unit.

arithmetic shift [COMPUT SCI] A shift of the digits of a number, expressed in a positional notation system, in the register without changing the sign of the number.

arithmetic sum [MATH] **1.** The result of the addition of two or more positive quantities. **2.** The result of the addition of the absolute values of two or more quantities.

arithmetization [MATH] **1.** The study of various branches of higher mathematics by methods that make use of only the basic concepts and operations of arithmetic. **2.** Representation of the elements of a finite or denumerable set by nonnegative integers. Also known as Gödel numbering.

Arizona ruby [MINERAL] A ruby-red pyrope garnet of igneous origin found in the southwestern United States.

arizonite [MINERAL] $Fe_2Ti_3O_9$ A steel-gray mineral containing iron and titanium and found in irregular masses in pegmatite. [PETR] A dike rock composed of mostly quartz, some orthoclase, and accessory mica and apatite.

Arkansas stone [ENG] A whetstone made of Arkansas stone, for sharpening edged tools. [PETR] A variety of novaculite quarried in Arkansas.

arkite [PETR] A feldspathoid-rich rock consisting largely of pseudoleucite and nepheline, subordinate melanite and pyroxene, and accessory orthoclase, apatite, and sphene.

arkose [PETR] A sedimentary rock composed of sand-size fragments that contain a high proportion of feldspar in addition to quartz and other detrital minerals.

arkose quartzite *See* arkosite.

arkosic [PETR] Having wholly or partly the character of arkose.

arkosic bentonite [PETR] Bentonite derived from volcanic ash which contains 25–75% sandy impurities and whose detrital crystalline grains remain essentially unaltered. Also known as sandy bentonite.

arkosic limestone [PETR] An impure clastic limestone composed of a relatively high proportion of grains or crystals of feldspar.

arkosic sandstone [PETR] A sandstone in which much feldspar is present, ranging from unassorted products of granular disintegration of granite to partly sorted river-laid or even marine deposits.

arkosic wacke *See* feldspathic graywacke.

arkosite [PETR] A quartzite with a high proportion of feldspar. Also known as arkose quartzite.

arksutite *See* chiolite.

ARL *See* acceptable reliability level.

arm [ANAT] The upper or superior limb in humans which comprises the upper arm with one bone and the forearm with two bones. [ELEC] *See* branch. [ENG ACOUS] *See* tone arm. [GEOL] A ridge or a spur that extends from a mountain. [MATH] A side of an angle. [NAV ARCH] The part of an anchor extending from the crown to one of the flukes. [OCEANOGR] A long, narrow inlet of water extending from another body of water. [ORD] **1.** A combat branch of a military force; specifically, a branch of the U.S. Army, such as the Infantry Armored Cavalry, the primary function of which is combat. **2.** *Often plural.* Weapons for use in war. **3.** To supply with arms. **4.** To ready ammunition for detonation, as by removal of safety devices or alignment of the explosive elements in the explosive train of the fuse. [PHYS] The perpendicular distance from the line along which a force is applied to a reference point.

armadillo [VERT ZOO] Any of 21 species of edentate mammals in the family Dasypodidae.

armament [ORD] **1.** The weapons of an airplane, tank, ship, or the like or of a unit or organized force. **2.** *Often plural.* War equipment, weapons, and supplies.

armament error [ORD] **1.** The dispersion of shots from a particular gun. **2.** The deviation of any shot from the center of impact of a series of shots from a gun after all errors of personnel and adjustment have been accounted for.

armangite [MINERAL] $Mn_3(AsO_3)_2$ A black mineral crystallizing in the rhombohedral system and consisting of manganese arsenite.

armature [ELECTROMAG] **1.** That part of an electric rotating machine that includes the main current-carrying winding in which the electromotive force produced by magnetic flux rotation is induced; it may be rotating or stationary. **2.** The movable part of an electromagnetic device, such as the movable iron part of a relay, or the spring-mounted iron part of a vibrator or buzzer.

armature chatter [ELECTROMAG] Vibration of the armature of a relay caused by pulsating coil current or by marginally low coil current.

armature contact *See* movable contact.

armature reactance [ELECTROMAG] The inductive reactance due to the flux produced by the armature current and enclosed by the conductors in the armature slots and the end connections.

armature reaction [ELECTROMAG] Interaction between the magnetic flux produced by armature current and that of the main magnetic field in an electric motor or generator.

armature resistance [ELEC] The ohmic resistance in the main current-carrying windings of an electric generator or motor.

Armco iron [MET] A relatively pure ingot iron which is made by the Armco process in a basic open-hearth furnace in a manner similar to that used for steel.

arm conveyor [MECH ENG] A conveyor in the form of an endless belt or chain to which are attached projecting arms or shelves which carry the materials.

Armco process [MET] The basic open-hearth process used by Armco Steel Corporation to make nearly chemically pure

ARMADILLO

ine-banded armadillo (*Dasypus ovemcinctus*), the only edentate habiting the United States.

for use as a construction material, in electromagnetic cores, and in special steels.

armed merchantman [NAV ARCH] An armed merchant ship of a neutral state; under international law, a vessel may be armed without prejudice to its status as a merchant ship.

arm elevator [MECH ENG] A chain elevator with protruding arms to cradle fixed-shape objects, such as drums or barrels, as they are moved upward.

armenite [MINERAL] $BaCa_2Al_6Si_8O_{28} \cdot 2H_2O$ Mineral composed of a hydrous calcium barium aluminosilicate.

ARMET [METEOROL] An international code word used to indicate an area forecast with units in the metric system.

Armillaria root rot [PL PATH] A fungus disease of forest and orchard trees initiated by invasion of the root system, then of the lower trunk, by *Armillaria mellea*. Also known as bark-splitting disease.

Armilliferidae [INV ZOO] A family of pentastomid arthropods belonging to the suborder Porocephaloidea.

arming [ORD] The changing of a fuse from a safe condition to a state of readiness for functioning.

arming device [ORD] Device for arming of a fuse under controlled conditions.

arming distance *See* arming range.

arming range [ORD] The distance from a weapon or launching point at which a fuse is expected to become armed. Also known as arming distance.

arming resistance [ORD] The resistance to the displacement of certain fuse components; must be overcome in order to arm a fuse.

arm length [ANTHRO] The length of the arm measured from top of the clavicle to the tip of the middle finger, with the arm straight down at the side of the body.

armor [ELEC] Metal sheath enclosing a cable, primarily for mechanical protection. [ORD] **1.** Any physical protective covering, such as metal, used on vehicles or persons against projectiles or fragments. **2.** Armored units or forces. **3.** The component of a weapon system that gives protection to the vehicle or weapon on its way to the target.

armor castings [MET] A type of armor made of high-alloy steel frequently used when complicated shapes are involved.

armored artillery [ORD] Self-propelled artillery, with some armor, organic to the armored division or organized as separate battalions.

armored cable [ELEC] An electrical cable provided with a sheath of metal primarily for mechanical protection.

armored cavalry [ORD] A unit organized and equipped to perform missions requiring great mobility, firepower, and shock action.

armored faceplate [DES ENG] A tamper-proof faceplate or lock front, mortised in the edge of a door to cover the lock mechanism.

armored front [DES ENG] A lock front used on mortise locks that consists of two plates, the underplate and the finish plate.

armored infantry [ORD] A field army unit designed to close and destroy the enemy by fire and maneuver, to repel hostile assault in close combat, and to provide support for tanks.

armored mud ball [GEOL] A large (1–50 centimeters in diameter) subspherical mass of silt or clay coated with coarse sand and fine gravel. Also known as pudding ball.

armored personnel carrier [ORD] An armored vehicle which provides protection from small-arms fire and shell fragments; used to transport personnel both on and off the battlefield.

armored vehicle [ORD] A wheeled or track-laying vehicle protected by armor plate that is used for combat security or cargo; for example, tanks, personnel carriers, armored cars, and self-propelled artillery.

armored wood [MATER] Wood which is faced on one or both sides with metal sheeting.

armorer [ORD] One who services and repairs small arms, fills ammunition belts, and performs similar duties necessary to keep small arms ready for use.

Armorican orogeny [GEOL] Little-used term, now replaced by Hercynian or Variscan orogeny.

armor-piercing [ORD] Of ammunition, bombs, bullets, and projectiles, designed to penetrate armor and other resistant targets.

armor-piercing bomb [ORD] A missile, designed for dropping from aircraft, which is capable of penetrating the heaviest deck armor; also effective against reinforced-concrete structures; usually contains charge of explosive D, making up about 15% of the total weight.

armor-piercing bullet [ORD] A bullet having a hard metal core, a soft metal envelope, and a jacket; when the bullet strikes armor, the envelope and jacket are stopped, but the armor-piercing core continues forward and penetrates the armor.

armor-piercing incendiary [ORD] Armor-piercing projectile designed to set fires after piercing armor. Abbreviated API.

armor-piercing incendiary tracer [ORD] An armor-piercing projectile designed to set fires after piercing armor, and also fitted with a tracer for spotting.

armor-piercing sabot [ORD] A type of projectile which is armor-piercing and which incorporates a sabot. Abbreviated APS.

armor-piercing tracer [ORD] An armor-piercing projectile fitted with a tracer for spotting. Abbreviated APT.

armor plate [BUILD] A metal plate which protects the lower part of a door from kicks and scratches, covering the door to a height usually 39 inches (1 meter) or more. [MET] Heavy, flat steel, either surface-hardened or hardened throughout, used as a sheathing for warships, tanks, and so forth to resist penetration and deformation from heavy gunfire.

Armour unit [BIOL] A unit for the standardization of adrenal cortical hormones and trypsin.

armrack [ORD] A frame with shelves, niches, hooks, or similar devices used to store small arms, to protect them, and to prevent unauthorized handling.

arms locker [ORD] A chest, cupboard, or the like used for the safekeeping of small arms.

Armstrong oscillator [ELECTR] Inductive feedback oscillator that consists of a tuned-grid circuit and an untuned-tickler coil in the plate circuit; control of feedback is accomplished by varying the coupling between the tickler and the grid circuit.

Armstrong's acid *See* naphthalene-1,5-disulfonic acid.

armure [TEXT] A plain, striped, ribbed, or woven fabric having small fancy designs that suggest chain armor.

army [ORD] **1.** The land military forces of a nation. **2.** A unit of the U.S. Army made up of two or more army corps.

army artillery [ORD] Artillery assigned or attached to an army and retained under direct army command.

army depot [ORD] A depot located within the area of an army and designated by the army commander where supplies from the communications zone or from local sources are received, classified, stored, and distributed.

armyworm [INV ZOO] Any of the larvae of certain species of noctuid moths composing the family Phalaenidae; economically important pests of corn and other grasses.

Arndt-Eistert synthesis [ORG CHEM] A method of increasing the length of an aliphatic acid by one carbon by reacting diazomethane with acid chloride.

Arneth's classification *See* Arneth's index.

Arneth's count *See* Arneth's index.

Arneth's formula *See* Arneth's index.

Arneth's index [HISTOL] A system for dividing peripheral blood granulocytes into five classes according to the number of nuclear lobes, the least mature cells being tabulated on the left, giving rise to the terms "shift to left" and "shift to right" as an indication of granulocytic immaturity or hypermaturity respectively. Also known as Arneth's classification; Arneth's count; Arneth's formula.

arnimite [MINERAL] $Cu_5(SO_4)_2(OH)_6 \cdot 3H_2O$ Mineral consisting of a hydrous copper sulfate.

Arnold sterilizer [MICROBIO] An apparatus that employs steam under pressure at 212°F (100°C) for fractional sterilization of specialized bacteriological culture media.

Arodoidea [INV ZOO] A superfamily of hemipteran insects belonging to the subdivision Geocorisae.

arolium [INV ZOO] A pad projecting between the tarsal claws of some insects and arachnids.

aromatic [ORG CHEM] **1.** Pertaining to or characterized by the presence of at least one benzene ring. **2.** Describing those compounds having physical and chemical properties resembling those of benzene.

aromatic alcohol [ORG CHEM] Any of the compounds containing the hydroxyl group in a side chain to a benzene ring, such as benzyl alcohol.

aromatic aldehyde [ORG CHEM] An aromatic compound containing the CHO radical, such as benzaldehyde.

aromatic amine [ORG CHEM] An organic compound that

contains one or more amino groups joined to an aromatic structure.

aromatic amino acid [BIOCHEM] An organic acid containing at least one amino group and one or more aromatic groups; for example, phenylalanine, one of the essential amino acids.

aromatic hydrocarbon [ORG CHEM] A member of the class of hydrocarbons, of which benzene is the first member, consisting of assemblages of cyclic conjugated carbon atoms and characterized by large resonance energies. Also known as arene.

aromatic ketone [ORG CHEM] An aromatic compound containing the —CO radical, such as acetophenone.

aromatic nucleus [ORG CHEM] The six-carbon ring characteristic of benzene and related series, or condensed six-carbon rings of naphthalene, anthracene, and so forth.

aromatic spirit of ammonia [PHARM] A flavored, hydroalcoholic solution of ammonia and ammonium carbonate having an aromatic, pungent odor; used as a reflex stimulant.

aromatic sulfuric acid [PHARM] A preparation consisting of sulfuric acid, tincture of ginger, oil of cinnamon, and alcohol; formerly used as a tonic and astringent.

aromatic vinegar [PHARM] A flavored solution of acetic acid used as smelling salts.

aromatization [CHEM ENG] Conversion of any nonaromatic hydrocarbon structure to aromatic hydrocarbon, particularly petroleum.

arostat process [CHEM ENG] A process in which aromatic molecules are saturated by catalytic hydrogenation to produce high-quality jet fuels, low-aromatic-content solvents, and high-purity cyclohexane from benzene.

aroyl [ORG CHEM] The radical RCO, where R is an aromatic (benzoyl, napthoyl) group.

aroylation [ORG CHEM] A reaction in which the aroyl group is incorporated into a molecule by substitution.

ARPA *See* automated radar plotting aid.

ARPES *See* angle-resolved photoelectron spectroscopy.

arquerite [MINERAL] A mineral consisting of a soft, malleable, silver-rich variety of amalgam, containing about 87% silver and 13% mercury.

arrastra *See* arrastre.

arrastre [MIN ENG] A mill comprising a circular, rock-lined pit in which broken ore is pulverized by stones, attached to horizontal poles fastened in a central pillar, which stones are dragged around the pit. Also spelled arrastra.

array [COMPUT SCI] A collection of data items with each identified by a subscript or key and arranged in such a way that a computer can examine the collection and retrieve data from these items associated with a particular subscript or key. [ELECTR] A group of components such as antennas, reflectors, or directors arranged to provide a desired variation of radiation transmission or reception with direction. [STAT] The arrangement of a sequence of items in statistics according to their values, such as from largest to smallest.

array processor [COMPUT SCI] A multiprocessor composed of a set of identical central processing units acting synchronously under the control of a common unit.

array radar [ENG] A radar incorporating a multiplicity of phased antenna elements.

array sonar [ENG] A sonar system incorporating a phased array of radiating and receiving transducers.

arrested decay [GEOL] A stage in coal formation where biochemical action ceases.

arrested evolution [EVOL] Evolution that was extremely slow in comparison with that characteristic of most organic lineages.

arrester [ELEC] *See* lightning arrester. [ENG] A wire screen at the top of an incinerator or chimney which prevents sparks or burning material from leaving the stack.

arrester hook [AERO ENG] A hook in the tail section of an airplane; used to engage the arrester wires on an aircraft carrier's deck.

arrester wires [NAV ARCH] Cables that extend across the stern of an aircraft carrier's deck; they are raised above the deck on supports so that they may be engaged by the arrester hook of an aircraft when it lands on a carrier; the wires play out along the deck with increasing resistance until the aircraft stops moving. Also known as arresting gear.

arresting gear *See* arrester wires.

arrhenite [MINERAL] A variety of fergusonite.

Arrhenius equation [PHYS CHEM] The relationship that the specific reaction rate constant k equals the frequency factor constant s times $\exp(-\Delta H_{act}/RT)$, where ΔH_{act} is the heat of activation, R the gas constant, and T the absolute temperature.

Arrhenius-Guzman equation [PHYS] The relation between the viscosity η of a liquid and the Kelvin temperature T at constant pressure: $\eta = A \exp(B/RT)$, where A and B are constants and R is the gas constant.

Arrhenius viscosity formulas [PHYS] A series of three equations which relate the viscosity of a liquid to the temperature, the viscosity of a solution to its concentration and to the viscosity of the solvent, and the viscosity of a sol to the viscosity of the medium.

arrhenoblastoma [MED] A solid, sometimes malignant, tumor of the ovary that usually produces male sex hormones, inducing virilism.

arrhenotoky [BIOL] Production of only male offspring by a parthenogenetic female.

arrhinencephalia [MED] A congenital malformation in which part or all of the rhinencephalon is absent and the nose is malformed.

arrhythmia [MED] Absence of rhythm, especially of heart beat or respiration.

Arridae [VERT ZOO] A family of catfishes in the suborder Siluroidei found from Cape Cod to Panama.

arrière-voussure [BUILD] **1.** An arch or vault in a thick wall carrying the thickness of the wall, especially one over a door or window frame. **2.** A relieving arch behind the face of a wall.

arris [ARCH] A short edge or angle at the junction of two surfaces, especially moldings and raised edges. [GEOL] *See* arête.

arris fillet [BUILD] A triangular wooden piece that raises the slates of a roof against a chimney or wall so that rain runs off.

arris gutter [BUILD] A V-shaped wooden gutter fixed to the eaves of a building.

arris hip tile [BUILD] A special roof tile having an L-shaped cross section, made to fit over the hip of a roof. Also known as hip tile.

arris rail [CIV ENG] A rail of triangular section, usually formed by slitting diagonally a strip of square section.

arrissing tool [ENG] A tool similar to a float, but having a form suitable for rounding an edge of freshly placed concrete.

arris tile [BUILD] Any angularly shaped tile.

arrisways [CIV ENG] Diagonally, in respect to the manner of laying tiles, slates, bricks, or timber. Also known as arriswise.

arriswise *See* arrisways.

arrival rate [IND ENG] The mean number of new calling units arriving at a service facility per unit time.

arrival time [GEOPHYS] In seismological measurements, the time at which a given wave phase is detected by a seismic recorder.

arrojadite [MINERAL] $Na_2(Fe,Mn)_5(PO_4)_4$ Dark-green mineral crystallizing in the monoclinic system, being isostructural with dickinsonite and occurring in masses.

Arrow *See* Sagitta.

arrowroot [BOT] Any of the tropical American plants belonging to the genus *Maranta* in the family Marantaceae.

arrowroot starch [FOOD ENG] A nutritive carbohydrate obtained from the underground stems of arrowroot plants and used as a food for infants and invalids.

arrow wing [AERO ENG] An aircraft wing of V-shaped planform, either tapering or of constant chord, suggesting a stylized arrowhead.

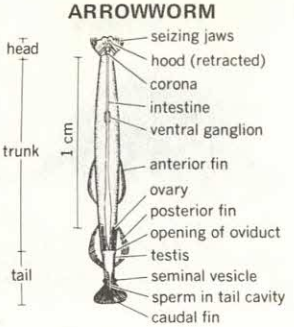
arrowworm [INV ZOO] Any member of the phylum Chaetognatha; useful indicator organism for identifying displaced masses of water.

arroyo [GEOL] Small, deep gully produced by flash flooding in arid and semiarid regions of the southwestern United States.

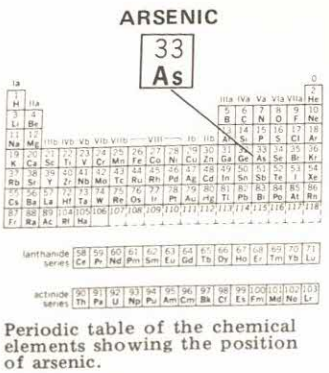
arsenal [ORD] **1.** An installation whose primary mission is research, development, and manufacture pertaining to assigned items or components. **2.** An installation having coequal missions of maintenance and supply for assigned items or components.

arsenate [INORG CHEM] **1.** AsO_4^{-3} A negative ion derived from orthoarsenic acid, $H_3AsO_4 \cdot \frac{1}{2}H_2O$. **2.** A salt or ester of arsenic acid.

arsenic [CHEM] A chemical element, symbol As, atomic number 33, atomic weight 74.9216. [MINERAL] A brittle, steel-gray hexagonal mineral, the native form of the element.



Dorsal view of *Sagitta enflata*, an arrowworm.



Periodic table of the chemical elements showing the position of arsenic.

arsenic acid [INORG CHEM] $H_3AsO_4 \cdot \frac{1}{2}H_2O$ White, poisonous crystals, soluble in water and alcohol; used in manufacturing insecticides, glass, and arsenates and as a defoliant. Also known as orthoarsenic acid.

arsenical [CHEM] **1.** Pertaining to arsenic. **2.** A compound that contains arsenic.

arsenical antimony *See* allemontite.

arsenical nickel *See* niccolite.

arsenic bloom *See* arsenolite.

arsenic disulfide [INORG CHEM] As_2S_2 Red, orange, or black monoclinic crystals, insoluble in water; used in fireworks; occurs naturally as realgar.

arsenic oxide [INORG CHEM] **1.** An oxide of arsenic. **2.** *See* arsenic pentoxide. **3.** *See* arsenic trioxide.

arsenic pentasulfide [INORG CHEM] As_2S_5 Yellow crystals that are insoluble in water and readily decompose to the trisulfide and sulfur; used as a pigment.

arsenic pentoxide [INORG CHEM] As_2O_5 A white, deliquescent compound that decomposes by heat and is soluble in water. Also known as arsenic oxide.

arsenic trichloride [INORG CHEM] $AsCl_3$ An oily, colorless liquid that dissolves in water; used in ceramics, organic chemical syntheses, and in the preparation of pharmaceuticals.

arsenic trioxide [INORG CHEM] As_2O_3 A toxic compound, slightly soluble in water; octahedral crystals change to the monoclinic form by heating at 200°C; occurs naturally as arsenolite and claudetite; used in small quantities in some medicinal preparations. Also known as arsenic oxide; arsenious acid.

arsenic trisulfide [INORG CHEM] As_2S_3 An acidic compound in the form of yellow or red monoclinic crystals with a melting point at 300°C; occurs as the mineral orpiment; used as a pigment.

arsenide [CHEM] A binary compound of negative, trivalent arsenic; for example, H_3As or GaAs.

arsenin [ORG CHEM] A heterocyclic organic compound composed of a six-membered ring system in which the carbon atoms are unsaturated and the unique heteroatom is arsenic, with no nitrogen atoms present.

arseniopleite [MINERAL] A reddish-brown mineral consisting of a basic arsenate of manganese, calcium, iron, lead, and magnesium and occurring in cleavable masses.

arseniosiderite [MINERAL] $Ca_3Fe_4(AsO_4)_4(OH)_4 \cdot 4H_2O$ A yellowish-brown mineral consisting of a basic iron calcium arsenate and occurring as concretions.

arsenious acid *See* arsenic trioxide.

arsenite [INORG CHEM] **1.** AsO_3^{-3} A negative ion derived from aqueous solutions of As_4O_6. **2.** A salt or ester of arsenious acid.

arsenobenzene [ORG CHEM] $C_6H_5As{:}AsC_6H_5$ White needles that melt at 212°C; insoluble in cold water, soluble in benzene; derivatives have some use in medicine.

arsenobismite [MINERAL] $Bi_2(AsO_4)(OH)_3$ A yellowish-green mineral consisting of a basic bismuth arsenate and occurring in aggregates.

arsenoclasite [MINERAL] $Mn_5(AsO_4)_2(OH)_4$ A red mineral consisting of a basic manganese arsenate. Also spelled arsenoklasite.

arseno compound [ORG CHEM] A compound containing an As-As bond with the general formula $(RAs)_n$, where R represents a functional group; structures are cyclic or long-chain polymers.

arsenoklasite *See* arsenoclasite.

arsenolamprite [MINERAL] FeAsS A lead gray mineral consisting of nearly pure arsenic; occurs in masses with a fibrous foliated structure.

arsenolite [MINERAL] As_2O_3 A mineral crystallizing in the isometric system and usually occurring as a white bloom or crust. Also known as arsenic bloom.

arsenopyrite [MINERAL] FeAsS A white to steel-gray mineral crystallizing in the monoclinic system with pseudo-orthorhombic symmetry because of twinning; occurs in crystalline rock and is the principal ore of arsenic. Also known as mispickel.

arsenotherapy [MED] Treatment of disease by means of arsenical drugs.

arsenous oxide *See* arsenic trioxide.

arsine [INORG CHEM] H_3As A colorless, highly poisonous gas with an unpleasant odor.

arsinic acid [INORG CHEM] An acid of general formula R_2AsO_2H; derived from trivalent arsenic; an example is cacodylic acid, or dimethylarsinic acid, $(CH_3)_2AsO_2H$.

arsoite [PETR] An olivine-bearing diopside trachyte.

arsonic acid [INORG CHEM] An acid derived from orthoarsenic acid, $OAs(OH)_3$; the type formula is generally considered to be $RAsO(OH)_2$; an example is *para*-aminobenzenearsonic acid, $NH_2C_6H_4AsO(OH)_2$.

arsonium [INORG CHEM] $—AsH_4$ A radical; it may be considered analogous to the ammonium radical in that a compound such as AsH_4OH may form.

Arsonval *See* d'Arsonval entries.

arsphenamine [PHARM] $C_{12}H_{12}As_2N_2O_2 \cdot 2HCl \cdot 2H_2O$ The antisyphilitic diaminodihydroxyarsenobenzene dihydrochloride, effective also on protozoan infections, first prepared by P. Ehrlich in 1909. Also known as Ehrlich's 606.

ARSR *See* air-route surveillance radar.

Artacaminae [INV ZOO] A subfamily of polychaete annelids in the family Terebellidae of the Sedentaria.

arteriogram [MED] A roentgenogram of an artery after injection with radiopaque material.

arteriography [MED] **1.** Graphic presentation of the pulse. **2.** Roentgenography of the arteries after the intravascular injection of a radiopaque substance.

arteriole [ANAT] An artery of small diameter that terminates in capillaries.

arteriolopathy [MED] Disease of the arterioles.

arteriolosclerosis [MED] Thickening of the lining of arterioles, usually due to hyalinization or fibromuscular hyperplasia.

arteriometer [MED] An instrument that measures arterial pulsations.

arteriosclerosis [MED] A degenerative arterial disease marked by hardening and thickening of the vessel walls.

arteriosclerosis obliterans [MED] Hardening of the artery walls with obstruction of the lumen due to proliferation of the innermost vessel layer.

arteriotomy [MED] Incision or opening of an artery.

arteriovenous anastomosis [ANAT] A blood vessel that connects an arteriole directly to a venule without capillary intervention.

arteriovenous aneurysm [MED] **1.** Dilation of the walls of an artery and a vein via an abnormal canal (fistula) between the vessels. **2.** Dilation of an arteriovenous fistula.

arterite [PETR] **1.** A migmatite produced as a result of regional contact metamorphism during which residual magmas were injected into the host rock. **2.** Gneisses characterized by veins formed from the solution given off by deep-seated intrusions of molten granite. **3.** A veined gneiss in which the vein material was injected from a magma.

arteritic migmatite [GEOL] Injection gneiss supposedly produced by introduction of pegmatite, granite, or aplite into schist parallel to the foliation.

arteritis [MED] Inflammation of an artery.

artery [ANAT] A vascular tube that carries blood away from the heart.

artesian aquifer [HYD] An aquifer that is bounded above and below by impermeable beds and that contains artesian water. Also known as confined aquifer.

artesian basin [HYD] A geologic structural feature or combination of such features in which water is confined under artesian pressure.

artesian leakage [HYD] The slow percolation of water from artesian formations into the confining materials of a less permeable, but not strictly impermeable, character.

artesian spring [HYD] A spring whose water issues under artesian pressure, generally through some fissure or other opening in the confining bed that overlies the aquifer.

artesian water [HYD] Groundwater that is under sufficient pressure to rise above the level at which it encounters a well, but which does not necessarily rise to or above the surface of the ground.

artesian well [HYD] A well in which the water rises above the top of the water-bearing bed.

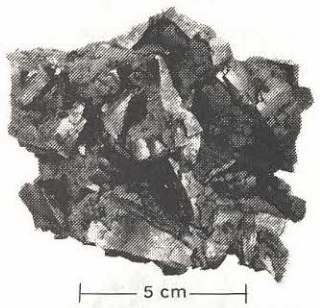
arthochromatic erythroblast *See* normoblast.

Arthoniaceae [BOT] A family of lichens in the order Hysteriales.

arthritis [MED] Any inflammatory process affecting joints or their component tissues.

arthritis deformans [MED] A chronic rheumatoid arthritis marked by deformation of affected joints.

ARSENOPYRITE

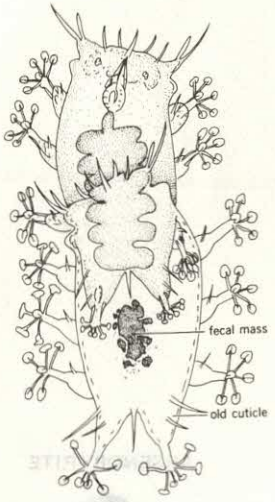


A specimen of arsenopyrite from Tavistock, Devon, England. *(American Museum of Natural History)*

ARTACAMINAE

Dorsal view of *Artacamella*, a genus of the Artacaminae.

ARTHROTARDIGRADA

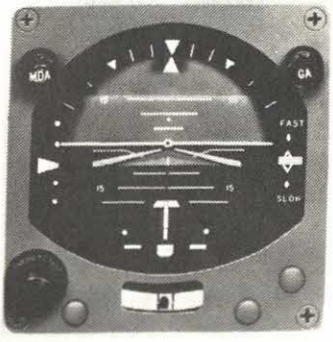


Batillipes, a genus of the Arthrotardigrada; defecation during molt.

ARTICHOKE

Edible artichoke flower heads. The bottom one is shown in cross section.

ARTIFICIAL HORIZON



Artificial horizon indicator. *(Kollsman Instrument Co.)*

arthritis urethritica *See* Reiter's syndrome.

Arthrobacter [MICROBIO] A genus of gram-positive, aerobic rods in the coryneform group of bacteria; metabolism is respiratory, and cellulose is not attacked.

arthrobranch [INV ZOO] In Malacostraca, the gill attached to the joint between the body and the first leg segment.

arthrodesis [MED] Fusion of a joint by removing the articular surfaces and securing bony union. Also known as operative ankylosis.

arthrodia [ANAT] A diarthrosis permitting only restricted motion between a concave and a convex surface, as in some wrist and ankle articulations. Also known as gliding joint.

Arthrodira [PALEON] The joint-necked fishes, an Upper Silurian and Devonian order of the Placodermi.

Arthrodonteae [BOT] A family of mosses in the subclass Eubrya characterized by thin, membranous peristome teeth composed of cell walls.

arthrogram [MED] A roentgenogram of a joint space after injection of radiopaque material.

arthrography [MED] Roentgenography of a joint space after the injection of radiopaque material.

arthrogryposis [MED] Permanent fixation of a joint in a flexed position.

Arthromitaceae [MICROBIO] Formerly a family of nonmotile bacteria in the order Caryophanales found in the intestine of millipedes, cockroaches, and toads.

arthropathy [MED] **1.** Any joint disease. **2.** A neurotrophic disorder of a joint, usually due to lack of pain sensation, found in association with tabes dorsalis, leprosy, syringomyelia, diabetic polyneuropathy, and occasionally multiple sclerosis and myelodysplasias.

arthroplasty [MED] **1.** The making of an artificial joint. **2.** Reconstruction of a new and functioning joint from an ankylosed one; a plastic operation upon a joint.

Arthropoda [INV ZOO] The largest phylum in the animal kingdom; adults typically have a segmented body, a sclerotized integument, and many-jointed segmental limbs.

arthropod-borne virus *See* arbovirus.

arthropodin [BIOCHEM] A water-soluble protein which forms part of the endocuticle of insects.

arthrosis [ANAT] An articulation or suture uniting two bones. [MED] Any degenerative joint disease.

arthrospore [BOT] A jointed, vegetative resting spore resulting from filament segmentation in some blue-green algae and hypha segmentation in many Basidiomycetes.

Arthrotardigrada [INV ZOO] A suborder of microscopic invertebrates in the order Heterotardigrada characterized by toelike terminations on the legs.

Arthur unit [BIOL] A unit for the standardization of splenin A.

Arthus reaction [IMMUNOL] An allergic reaction of the immediate hypersensitive type that results from the union of antigen and antibody, with complement present, in blood vessel walls.

artichoke [BOT] *Cynara scolymus*. A herbaceous perennial plant belonging to the order Asterales; the flower head is edible.

articulamentum [INV ZOO] The innermost layer of a calcareous plate in a chiton.

articular cartilage [ANAT] Cartilage that covers the articular surfaces of bones.

articular disk [ANAT] A disk of fibrocartilage, dividing the cavity of certain joints.

articular membrane [INV ZOO] A flexible region of the cuticle between sclerotized areas of the exoskeleton of an arthropod; functions as a joint.

Articulata [INV ZOO] **1.** A class of the Brachiopoda having hinged valves that usually bear teeth. **2.** The only surviving subclass of the echinoderm class Crinoidea.

articulated drop chute [ENG] A drop chute, for a falling stream of concrete, which consists of a vertical succession of tapered metal cylinders, so designed that the lower end of each cylinder fits into the upper end of the one below.

articulated leader [MECH ENG] A wheel-mounted transport unit with a pivotal loading element used in earth moving.

articulated structure [CIV ENG] A structure in which relative motion is allowed to occur between parts, usually by means of a hinged or sliding joint or joints.

articulated train [ENG] A railroad train whose cars are permanently or semipermanently connected.

articulation [ANAT] *See* joint. [BOT] A joint between two parts of a plant that can separate spontaneously. [COMMUN] The percentage of speech units understood correctly by a listener in a communications system; it generally applies to unrelated words, as in code messages, in distinction to intelligibility. [INV ZOO] A joint between rigid parts of an animal body, as the segments of an appendage in insects. [PHYSIO] The act of enunciating speech.

articulation equivalent [COMMUN] Of a complete telephone connection, a measure of the articulation of speech reproduced over it, expressed numerically in terms of the trunk loss of a working reference system when the latter is adjusted to give equal articulation.

articulation index [PSYCH] An indication of the percentage of speech sounds that would be heard correctly when heard without a context.

articulation point *See* cut point.

articulite *See* itacolumite.

artifact [ARCHEO] Any crafted object of common use that reflects the skills of humans in past cultures. [COMMUN] Any component of a signal that is extraneous to the variable represented by the signal. [HISTOL] A structure in a fixed cell or tissue formed by manipulation or by the reagent.

artificial aging [MET] The heat treatment of an alloy at moderately elevated temperatures to accelerate precipitation of a component from the supersaturated solid solution.

artificial antenna *See* dummy antenna.

artificial asteroid [AERO ENG] An object made by humans and placed in orbit about the sun.

artificial atmosphere [CHEM ENG] A mixture of gases used in industrial operations in place of air; classified as an active, or process, atmosphere, or an inactive, or protective, atmosphere.

artificial camphor *See* terpene hydrochloride.

artificial delay line *See* delay line.

artificial echo [ELECTROMAG] **1.** Received reflections of a transmitted pulse from an artificial target, such as an echo box, corner reflector, or other metallic reflecting surface. **2.** Delayed signal from a pulsed radio-frequency signal generator.

artificial feel [AERO ENG] A type of force feedback incorporated in the control system of an aircraft or spacecraft whereby a portion of the forces acting on the control surfaces are transmitted to the cockpit controls.

artificial fiber [TEXT] A filament made from materials such as glass, rayon, or nylon. Also known as synthetic fiber.

artificial gold *See* stannic sulfide.

artificial gravity [AERO ENG] A simulated gravity established within a space vehicle by rotation or acceleration.

artificial harbor [CIV ENG] **1.** A harbor protected by breakwaters. **2.** A harbor formed by dredging.

artificial heart [MED] An endoprosthetic device used to replace or assist the heart.

artificial horizon [NAV] **1.** A gyro-operated flight instrument that shows the pitching and banking attitudes of an aircraft or spacecraft with respect to a reference line horizon, within limited degrees of movement, by means of the relative position of lines or marks on the face of the instrument representing the aircraft and the horizon. Also known as automatic horizon. **2.** A device, such as a spirit level or pendulum, that establishes a horizontal reference in a navigation instrument.

artificial hypothermia [MED] A surgical technique used, for example, in heart surgery, in which blood is cooled by a heat exchanger; body temperature is lowered to approximately 85°F (29.4°C), reducing oxygen requirements of tissues, particularly brain cells, and permitting temporary cessation of circulation.

artificial insemination [MED] A process by which spermatozoa are collected from males and deposited in female genitalia by instruments rather than by natural service.

artificial intelligence [COMPUT SCI] The property of a machine capable of reason by which it can learn functions normally associated with human intelligence.

artificial ionization [COMMUN] Introduction of an artificial reflecting or scattering layer into the atmosphere to permit beyond-the-horizon communications.

artificial kidney [MED] An apparatus that performs the work of the kidney in purifying blood; used only in cases of renal failure or shutdown.

artificial language [COMPUT SCI] A computer language that is specifically designed to facilitate communication in a particular field, but is not yet natural to that field; opposite of a natural language, which evolves through long usage.

artificial lift [PETRO ENG] Any method of lifting oil out of

underground reservoirs, usually by injecting gas into the rock or sand formation to force fluids from wells; an example is a gas lift.

artificial line [ELEC] Circuit made up of lumped constants, which is used to simulate various characteristics of a transmission line.

artificial line duct [ELEC] Balancing network simulating the impedance of the real line and distant terminal apparatus, which is employed in a duplex circuit to make the receiving device unresponsive to outgoing signal currents.

artificial load [ELEC] Dissipative but essentially nonradiating device having the impedance characteristics of an antenna, transmission line, or other practical utilization circuit.

artificial malachite *See* copper carbonate.

artificial monument [ENG] A relatively permanent object made by humans, such as an abutment or stone marker, used to identify the location of a survey station or corner.

artificial neroli oil *See* methyl anthranilate.

artificial nourishment [CIV ENG] The process of replenishing a beach by artificial means, such as the deposition of dredged material.

artificial parthenogenesis [PHYSIO] Activation of an egg by chemical and physical stimuli in the absence of sperm.

artificial radiation belt [GEOPHYS] High-energy electrons trapped in the earth's magnetic field as a result of high-altitude nuclear explosions.

artificial radioactivity *See* induced radioactivity.

artificial radio aurora [COMMUN] Modification of the ionosphere by high-power high-frequency radio transmitters to improve scatter and auroral long-distance communication. Also known as radio aurora.

artificial recharge [CIV ENG] The recharge of an aquifier depleted by abnormally large withdrawals, by the use of injection wells and other techniques.

artificial respiration [MED] The maintenance of breathing by artificial ventilation, in the absence of normal spontaneous respiration; effective methods include mouth-to-mouth breathing and the use of a respirator.

artificial satellite [AERO ENG] Any man-made object placed in a near-periodic orbit in which it moves mainly under the gravitational influence of one celestial body, such as the earth, sun, another planet, or a planet's moon.

artificial scheelite *See* calcium tungstate.

artificial sky [ARCH] A dome (usually hemispherical) illuminated by concealed light sources; used to illustrate and study daylighting techniques on architectural models placed near the center of the hemisphere.

artificial sweetener [FOOD ENG] A sugar substitute, such as saccharin.

artificial variable [IND ENG] One type of variable introduced in a linear program model in order to find an initial basic feasible solution; an artificial variable is used for equality constraints and for greater-than or equal inequality constraints.

artificial ventilation [MIN ENG] The inducing of a flow of air through a mine or part of a mine by mechanical or other means.

artificial voice [ENG ACOUS] **1.** Small loudspeaker mounted in a shaped baffle which is proportioned to simulate the acoustical constants of the human head; used for calibrating and testing close-talking microphones. **2.** Synthetic speech produced by a multiple tone generator; used to produce a voice reply in some real-time computer applications.

artificial weathering [ENG] The controlled production of changes in materials under laboratory conditions to simulate actual outdoor exposure.

artillery [ORD] A gun or a rocket launcher with mounting too large or too heavy to be classed as a small arm. Abbreviated arty.

artillery bogie [ORD] The portion of an artillery weapon, consisting of wheels, axles, and various supporting appurtenances, which is the principal weight-bearing unit when the weapon is being transported.

artillery cart [ORD] A trailer that carries equipment used by artillery units for fire control, communications, and mapping; it is attached to a field gun for traveling.

artillery cartridge extractor [ORD] An extractor designed for pulling an empty cartridge case or unfired cartridge out of the chamber of an artillery weapon.

artillery cleaning staff [ORD] A round wooden or metal staff with or without a metal handle and with a head unit designed for holding a piece of fabric or cotton for swabbing the bore of a mortar or a short-barrel cannon.

artillery sled [ORD] A flat-bottomed steel item usually curved up at one end; it usually has wheel welds and attaching facilities for fastening the wheels of artillery mounts; used primarily to transport weapons over snow, ice, swamps, or rough terrain.

artillery survey [ORD] The process of determining, with sufficient exactness, the relative horizontal and vertical locations of the pieces and targets so that they may be plotted on the firing chart, and of providing accurate data for the pieces.

artillery train [ORD] A number of pieces of ordnance mounted on traveling carriages.

artinite [MINERAL] $Mg_2CO_3(OH)_2 \cdot 3H_2O$ A snow-white mineral crystallizing in the orthorhombic system and occurring in crystals or fibrous aggregates.

Artinskian [GEOL] A European stage of geologic time including Lower Permian (above Sakmarian, below Kungurian).

Artiodactyla [VERT ZOO] An order of terrestrial, herbivorous mammals characterized by having an even number of toes and by having the main limb axes pass between the third and fourth toes.

artotype *See* photogelatin printing plate.

ARTS *See* automated radar terminal system.

artwork [GRAPHICS] **1.** Illustrative and decorative matter as distinguished from text. **2.** Illustrative matter and type proofs arranged on a mechanical.

arty *See* artillery.

Arundel method [MAP] A combination of graphical and analytical methods, based on radial triangulation, for point-by-point topographic mapping from aerial photographs.

arviculture [AGR] The cultivation of field crops.

aryl [ORG CHEM] An organic radical derived from an aromatic hydrocarbon by removal of one hydrogen.

aryl acid [ORG CHEM] An organic acid that has an aryl radical.

arylamine [ORG CHEM] An organic compound formed from an aromatic hydrocarbon that has at least one amine group joined to it, such as aniline.

arylated alkyl *See* aralkyl.

aryl compound [ORG CHEM] Molecules with the six-carbon aromatic ring structure characteristic of benzene or compounds derived from aromatics.

aryl diazo compound [ORG CHEM] A diazo compound bonded to the ring structure characteristic of benzene or any other aromatic derivative.

arylene [ORG CHEM] A radical that is bivalent and formed by removal of hydrogen from two carbon sites on an aromatic nucleus.

aryl halide [ORG CHEM] An aromatic derivative in which a ring hydrogen has been replaced by a halide atom.

arylide [ORG CHEM] A compound formed from a metal and an aryl radical, for example, PbR_4, where R is the aryl radical.

aryloxy compound [ORG CHEM] One of a group of compounds useful as organic weed killers, such as 2,4-dichlorophenoxyacetic acid (2,4-D).

aryne [ORG CHEM] An aromatic species in which two adjacent atoms of a ring lack substituents, with two orbitals each missing an electron. Also known as benzyne.

arytenoid [ANAT] Relating to either of the paired, pyramid-shaped, pivoting cartilages on the dorsal aspect of the larynx, in man and most other mammals, to which the vocal cords and arytenoid muscles are attached.

arzrunite [MINERAL] A bluish-green mineral consisting of a basic copper sulfate with copper chloride and lead, and occurring as incrustations.

aS *See* abmho.

As *See* altostratus cloud; arsenic.

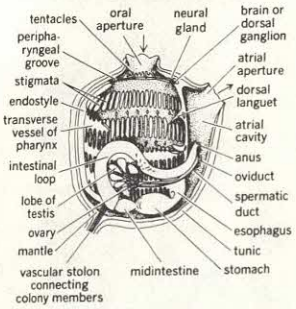
asar *See* esker.

asarone [ORG CHEM] $C_{12}H_{16}O_3$ A crystalline substance with melting point 67°C; insoluble in water, soluble in alcohol; found in plants of the genus *Asarum;* used as a constituent in essential oils such as calumus oil. Also known as 2,4,5,-trimethoxy-1-propenyl benzene.

asbestine [MATER] A material with the properties of asbestos.

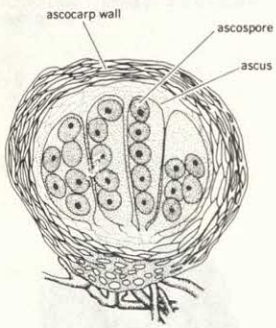
asbestos [MINERAL] A general name for the useful, fibrous varieties of a number of rock-forming silicate minerals that are heat-resistant and chemically inert; two varieties exist: amphibole asbestos, the best grade of which approaches the composi-

ASCIDIACEA



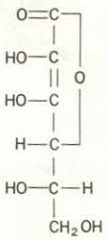
Left side of a zooid of the colonial ascidian *Perophora*. The tunic, mantle, and anterior wall of the pharynx have been removed from the left. The two arrows indicate direction of water intake and expulsion.

ASCOCARP



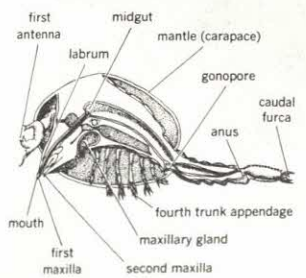
Longitudinal section showing several asci in ascocarp of *Erysiphe aggregata*.

ASCORBIC ACID



The structural formula of ascorbic acid.

ASCOTHORACICA



Ascothorax ophioctenis, a parasite in the bursae of brittle stars. *(After Wagin from A Kaestner; from R. D. Barnes, Invertebrate Zoology, 2d ed., Saunders, 1968)*

tion $Ca_2Mg_5(OH)_2Si_8O_{22}$ (tremolite), and serpentine asbestos, usually chrysotile, $Mg_3Si_2(OH)_4O_5$.

asbestos blanket [MATER] Asbestos fibers (alone or in combination with other fibers) stitched, bonded, or woven into flexible blanket form; used for high-temperature insulation or for fire barriers.

asbestos board [MATER] A sheet of fire-resistant material made from asbestos fiber and portland cement.

asbestos cement [MATER] A building material composed of a mixture of asbestos fiber, portland cement, and water made into plain sheets, corrugated sheets, tiles, and piping.

asbestos-cement cladding [BUILD] Asbestos board and component wall systems, directly supported by wall framing, forming a wall or wall facing.

asbestos-cement pipe [MATER] A concrete pipe made of a mixture of portland cement and asbestos fiber and highly resistant to corrosion; used in drainage systems, waterworks systems, and gas lines. Also known by the trade name Transite pipe.

asbestos felt [MATER] A product made by saturating felted asbestos with asphalt or other suitable binder, such as a synthetic elastomer.

asbestos insulation [MATER] A material composed of asbestos fibers bonded with mixtures of clay or sodium silicate; used as thermal insulation for temperatures above 1500°F (816°C).

asbestosis [MED] A chronic lung inflammation caused by inhalation of asbestos dust.

asbestos joint runner [MATER] An asbestos rope, wrapped around a pipe and then clamped in position; used to hold molten lead which is poured in a caulked joint. Also known as pouring rope.

asbestos plaster [MATER] A fireproof insulating material generally composed of asbestos with bentonite as the binder.

asbestos roofing [MATER] Roofing or wall cladding sheets made of asbestos cement.

asbestos shingle [MATER] A shingle composed of asbestos cement formed under pressure; used on houses for roofing and siding that resist the destructive effects of time, weather, and fire.

asbolane *See* asbolite.

asbolite [MINERAL] A black, earthy mineral aggregate containing hydrated oxides of manganese and cobalt. Also known as asbolane; black cobalt; earthy cobalt.

as-brazed [MET] A brazement prior to any additional treatment such as thermal, chemical, or mechanical treatments.

ASC *See* *N*-acetylsulfanilyl chloride.

A scale [ACOUS] A system used to filter out sound below 55 decibels; its characteristics are equal to those of the human ear.

A scan *See* A scope.

Ascaphidae [VERT ZOO] A family of amphicoelous frogs in the order Anura, represented by four living species.

ascariasis [MED] Any parasitic infection of humans or domestic mammals caused by species of *Ascaris*.

ascarid [INV ZOO] The common name for any roundworm belonging to the superfamily Ascaridoidea.

Ascaridata [INV ZOO] An equivalent name for the Ascaridina.

Ascaridida [INV ZOO] An order of parasitic nematodes in the subclass Phasmidia.

Ascarididae [INV ZOO] A family of parasitic nematodes in the superfamily Ascaridoidea.

Ascaridina [INV ZOO] A suborder of parasitic nematodes in the order Ascaridida.

Ascaridoidea [INV ZOO] A large superfamily of parasitic nematodes of the suborder Ascaridina.

ascaridole [ORG CHEM] $C_{10}H_{16}O_2$ A terpene peroxide, explosive when heated; used as an initiator in polymerization.

Ascaris [INV ZOO] A genus of roundworms that are intestinal parasites in mammals, including man.

Ascaris lumbricoides [INV ZOO] A large parasitic roundworm in the small intestine of man.

Ascaroidea [INV ZOO] An equivalent name for Ascaridoidea.

ascender [GRAPHICS] That part of some lowercase letters which extends above the main body, as in b, d, and h.

ascending aorta [ANAT] The first part of the aorta, extending from its origin in the heart to the aortic arch.

ascending branch [MECH] The portion of the trajectory between the origin and the summit on which a projectile climbs and its altitude constantly increases.

ascending chromatography [ANALY CHEM] A technique for the analysis of mixtures of two or more compounds in which the mobile phase (sample and carrier) rises through the fixed phase.

ascending node [ASTRON] Also known as northbound node. **1.** The point at which a planet, planetoid, or comet crosses to the north side of the ecliptic. **2.** The point at which a satellite crosses to the north side of the equatorial plane of its primary.

ascending series [MATH] **1.** A series each of whose terms is greater than the preceding term. **2.** *See* power series.

ascending vertical angle *See* angle of elevation.

ascent [AERO ENG] Motion of a craft in which the path is inclined upward with respect to the horizontal.

Ascheim-Zondek test [PATH] A human pregnancy test that uses the reaction of ovaries in immature white mice to an injection of urine from a woman.

Aschelmintha [INV ZOO] A theoretical grouping erected by B. G. Chitwood as a series that includes the phylum Nematoda.

Aschelminthes [INV ZOO] A heterogeneous phylum of small to microscopic wormlike animals; individuals are pseudocoelomate and mostly unsegmented and are covered with a cuticle.

aschistic [GEOL] Pertaining to rocks of minor igneous intrusions that have not been differentiated into light and dark portions but that have essentially the same composition as the larger intrusions with which they are associated.

Aschoff body [MED] The lesion of rheumatic fever found around blood vessels in the myocardium.

Ascidiacea [INV ZOO] A large class of the phylum Tunicata; adults are sessile and may be solitary or colonial.

ascidiform [BOT] Pitcher-shaped, as certain leaves.

ascidium [BOT] A pitcher-shaped plant organ or part.

ASCII *See* American Standard Code for Information Interchange.

ascites [MED] An abnormal accumulation of serous fluid in the abdominal cavity.

Asclepiadaceae [BOT] A family of tropical and subtropical flowering plants in the order Gentianales characterized by a well-developed latex system; milkweed (*Asclepias*) is a well-known member.

ascocarp [MYCOL] The mature fruiting body bearing asci with ascospores in higher Ascomycetes.

ascogenous [MYCOL] Pertaining to or producing asci.

ascogonium [MYCOL] The specialized female sexual organ in higher Ascomycetes.

Ascolichenes [BOT] A class of the lichens characterized by the production of asci similar to those produced by Ascomycetes.

Ascomycetes [MYCOL] A class of fungi in the subdivision Eumycetes, distinguished by the ascus.

ascon [INV ZOO] A sponge or sponge larva having incurrent canals leading directly to the paragaster.

A scope [ELECTR] A radarscope on which the trace appears as a horizontal or vertical range scale and the signals appear as vertical or horizontal deflections. Also known as A indicator; A scan.

ascorbic acid [BIOCHEM] $C_6H_8O_6$ A white, crystalline, water-soluble vitamin found in many plant materials, especially citrus fruit. Also known as vitamin C.

ascospore [MYCOL] An asexual spore representing the final product of the sexual process, borne on an ascus in Ascomycetes.

Ascothoracica [INV ZOO] An order of marine crustaceans in the subclass Cirripedia occurring as endo- and ectoparasites of echinoderms and coelenterates.

ascus [MYCOL] An oval or tubular spore sac bearing ascospores in members of the Ascomycetes.

asdic [ELECTR] Acronym for Anti-Submarine Detection Investigation Committee; British term for sonar and underwater listening devices.

aseismic [GEOPHYS] Not subject to the occurrence or destructive effects of earthquakes.

Aselloidea [INV ZOO] A group of free-living, fresh-water isopod crustaceans in the suborder Asellota.

Asellota [INV ZOO] A suborder of morphologically and ecologically diverse aquatic crustaceans in the order Isopoda.

asepsis [MED] The state of being free from pathogenic microorganisms.

asexual [BIOL] **1.** Not involving sex. **2.** Exhibiting absence of sex or of functional sex organs.

asexual reproduction [BIOL] Formation of new individuals from a single individual without the involvement of gametes.

ash [BOT] **1.** A tree of the genus *Fraxinus*, deciduous trees of the olive family (Oleaceae) characterized by opposite, pinnate leaflets. **2.** Any of various Australian trees having wood of great toughness and strength; used for tool handles and in work requiring flexibility. [CHEM] The incombustible matter remaining after a substance has been incinerated. [ENG] An undesirable constituent of diesel fuel whose quantitative measurement indicates degree of fuel cleanliness and freedom from abrasive material. [GEOL] Volcanic dust and particles less than 4 millimeters in diameter.

Ashby [GEOL] A North American stage of Middle Ordovician geologic time, forming the upper subdivision of Chazyan, and lying above Marmor and below Porterfield.

ash collector *See* dust chamber.

ash cone [GEOL] A volcanic cone built primarily of unconsolidated ash and generally shaped somewhat like a saucer, with a rim in the form of a wide circle and a broad central depression often nearly at the same elevation as the surrounding country.

ash content [MATER] The mass of incombustible material remaining after burning a given coal sample as a percentage of the orginal mass of the coal.

ash conveyor [MECH ENG] A device that transports refuse from a furnace by fluid or mechanical means.

ash dump [ENG] An opening in the floor of a fireplace or firebox through which ashes are swept to an ash pit below.

ashen light [ASTRON] A faint, luminous glow sometimes observed over the right side of Venus when it is close to inferior conjunction, probably due to electrical disturbances in the ionosphere of Venus.

ash fall [GEOL] **1.** A fall of airborne volcanic ash from an eruption cloud; characteristic of Vulcanian eruptions. Also known as ash shower. **2.** Volcanic ash resulting from an ash fall and lying on the ground surface.

ash field [GEOL] A thick, extensive deposit of volcanic ash. Also known as ash plain.

ash flow [GEOL] **1.** An avalanche of volcanic ash, generally a highly heated mixture of volcanic gases and ash, traveling down the flanks of a volcano or along the surface of the ground. Also known as glowing avalanche; incandescent tuff flow; **2.** A deposit of volcanic ash and other debris resulting from such a flow and lying on the surface of the ground.

ash furnace [ENG] A furnace in which materials are fritted for glassmaking.

ash fusibility [GEOL] The gradual softening and melting of coal ash that takes place with increase in temperature as a result of the melting of the constituents and chemical reactions.

Ashgillian [GEOL] A European stage of geologic time in the Upper Orodovician (above Upper Caradocian, below Llandoverian of Silurian).

ashing [ANALY CHEM] An analytical process in which the chemical material being analyzed is oven-heated to leave only noncombustible ash.

ashlar [CIV ENG] Masonry with an exposed side of square or rectangular stones.

ashlar brick [MATER] A brick having rough-hackled faces resembling stone.

ashlar line [BUILD] The outer line of a wall above any projecting base.

ash pan [ENG] A metal receptacle beneath a fireplace or furnace grating for collection and removal of ashes.

ash pit [BUILD] The ash-collecting area beneath a fireplace hearth.

ash pit door [ENG] A cast-iron door providing access to an ash pit for ash removal.

ash plain *See* ash field.

ash rock [GEOL] The material of arenaceous texture produced by volcanic explosions.

ash shower *See* ash fall.

ashstone [PETR] A rock composed of fine volcanic ash; particles are less than 0.06 millimeter in diameter.

ashtonite *See* mordenite.

ash viscosity [GEOL] The ratio of shearing stress to velocity gradient of molten ash; indicates the suitability of a coal ash for use in a slag-tap-type boiler furnace.

ashy grit [GEOL] **1.** Pyroclastic material of sand and smaller size. **2.** Mixture of ordinary sand and volcanic ash.

Asia [GEOGR] The largest continent, comprising the major portion of the broad east-west extent of the Northern Hemisphere land masses.

Asian flu [MED] An acute viral respiratory infection of man caused by influenza A-2 virus.

asiderite *See* stony meteorite.

Asilidae [INV ZOO] The robber flies, a family of predatory, orthorrhaphous, dipteran insects in the series Brachycera.

A size [ENG] One of a series of sizes to which trimmed paper and board are manufactured; for size A*N*, with *N* equal to any integer from 0 to 10, the length of the longer side is $2^{-(2N-1)/4}$ meters, while the length of the shorter side is $2^{-(2N+1)/4}$ meters, with both lengths rounded off to the nearest millimeter.

ASK *See* amplitude shift keying.

ASM *See* air-to-surface missile.

Aso lava [GEOL] A type of indurated pyroclastic deposit produced during the explosive eruptions that formed the Aso Caldera of Kyushu, Japan.

asomatognosia [MED] Lacking awareness of paralysis because the brain is damaged.

Asopinae [INV ZOO] A family of hemipteran insects in the superfamily Pentatomoidea including some predators of caterpillars.

asparaginase [BIOCHEM] An enzyme that catalyzes the hydrolysis of asparagine to asparaginic acid and ammonia.

asparagine [BIOCHEM] $C_4H_8N_2O_3$ A white, crystalline amino acid found in many plant seeds.

asparagolite *See* asparagus stone.

asparagus [BOT] *Asparagus officinalis*. A dioecious, perennial monocot belonging to the order Liliales; the shoot of the plant is edible.

asparagus stone [MINERAL] A yellow-green variety of apatite occurring in crystals. Also known as asparagolite.

aspartase [BIOCHEM] A bacterial enzyme that catalyzes the deamination of aspartic acid to fumaric acid and ammonia.

aspartate [BIOCHEM] A compound that is an ester or salt of aspartic acid.

aspartic acid [BIOCHEM] $C_4H_7NO_4$ A nonessential, crystalline dicarboxylic amino acid found in plants and animals, especially in molasses from young sugarcane and sugarbeet.

aspartokinase [BIOCHEM] An enzyme that catalyzes the reaction of aspartic acid with adenosinetriphosphate to give aspartyl phosphate.

aspartoyl [BIOCHEM] $—COCH_2CH(NH_2)CO—$ A bivalent radical derived from aspartic acid.

aspartyl phosphate [BIOCHEM] $H_2O_3POOCH_2CHNH_2COOH$ An intermediate in the biosynthesis of pyrimidines.

aspect [ARCH] The direction which a building faces with respect to the points of a compass. [ASTRON] The apparent position of a celestial body relative to another; particularly, the apparent position of the moon or a planet relative to the sun. [CIV ENG] Of railway signals, what the engineer sees when viewing the blades or lights in their relative positions or colors. [ECOL] Seasonal appearance.

aspect angle [ENG] The angle formed between the longitudinal axis of a projectile in flight and the axis of a radar beam.

aspect card [COMPUT SCI] A card on which is entered the accession numbers of documents in an information retrieval system; the documents are judged to be related importantly to the concept for which the card is established.

aspection [ECOL] Seasonal change in appearance or constitution of a plant community.

aspect ratio [AERO ENG] The ratio of the square of the span of an airfoil to the total airfoil area, or the ratio of its span to its mean chord. [DES ENG] **1.** The ratio of frame width to frame height in television; it is 4:3 in the United States and Britain. **2.** In any rectangular configuration (such as the cross section of a rectangular duct), the ratio of the longer dimension to the shorter.

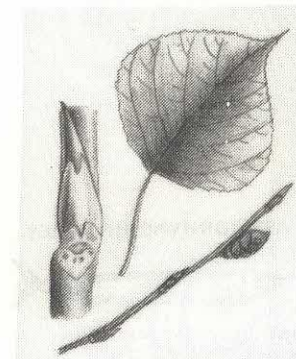
aspen [BOT] Any of several species of poplars (*Populus*) characterized by weak, flattened leaf stalks which cause the leaves to flutter in the slightest breeze.

Aspergillaceae [MYCOL] Former name for the Eurotiaceae.

Aspergillales [MYCOL] Former name for the Eurotiales.

aspergillic acid [BIOCHEM] $C_{12}H_{20}O_2N_2$ A diketo-

ASPEN



A leaf scar with axial bud, leaf, and twig of the quaking aspen (*Populus tremuloides*).

piperazine-like antifungal antibiotic produced by certain strains of *Aspergillus flavus*.

aspergillin [MYCOL] **1.** A black pigment found in spores of some molds of the genus *Aspergillus*. **2.** A broad-spectrum antibacterial antibiotic produced by the molds *Aspergillus flavus* and *A. fumigatus*.

aspergillosis [MED] A rare fungus infection of man and animals caused by several species of *Aspergillus*.

Aspergillus [MYCOL] A genus of fungi including several species of common molds and some human and plant pathogens.

Aspergillus fumigatus [MYCOL] A pathogenic fungus causing aspergillosis in man and animals; source of the antibiotic fumagillin.

Aspergillus niger [MYCOL] A pathogenic fungus causing black mold in many plants, wet stem rot in sisal, and otomycosis in man; used industrially for fermentative production of enzymes and citric acid.

asperifoliate [BOT] Rough-leaved.

asperity [GEOL] A type of surface roughness appearing along the interface of two faults.

aspermatism [MED] **1.** Failure to ejaculate or secrete semen. **2.** Defective or absent sperm formation.

asperomagnetic state [SOLID STATE] The condition of a rare-earth glass in which the spins are oriented in fixed directions, with most nearest-neighbor spins parallel or nearly parallel, so that the spin directions are distributed in one hemisphere.

asperulate [BOT] Delicately roughened.

asphalt [MATER] A brown to black, hard, brittle, or plastic bituminous material composed principally of hydrocarbons; formed in oil-bearing rocks near the Dead Sea, and in Trinidad; prepared by pyrolysis from coal tar, certain petroleums, and lignite tar; melts on heating, insoluble in water but soluble in gasoline; used for paving and roofing and in paints and varnishes.

asphalt base *See* naphthene base.

asphalt base crude [MATER] A crude oil which yields napthenic asphalt residues when processed.

asphalt block [MATER] A paving block composed of a mixture of 88–92% crushed stone with the balance asphalt cement.

asphalt cement [MATER] Fluxed or unfluxed asphalt especially prepared for direct use in making bituminous pavements.

asphalt cutter [MECH ENG] A powered machine having a rotating abrasive blade; used to saw through bituminous surfacing material.

asphalt emulsion [MATER] Asphalt cement in water containing a small amount of emulsifying agent.

asphalt-emulsion slurry seal [MATER] A mixture of slow-setting emulsified asphalt, fine aggregate, and mineral filler, with water added to produce a slurry consistency.

asphaltene [MATER] Any of the dark, solid constituents of crude oils and other bitumens which are soluble in carbon disulfide but insoluble in paraffin naphthas; they hold most of the organic constituents of bitumens.

asphalt flux [MATER] An oil used to reduce the consistency or viscosity of hard asphalt to the point required for use.

asphalt fog seal [MATER] An asphalt surface treatment consisting of a light application of liquid asphalt without a mineral aggregate cover.

asphalt heater [ENG] A piece of equipment for raising the temperature of bitumen used in paving.

asphaltic base oil [MATER] A crude oil that has asphaltum as the predominating solid residual.

asphaltic concrete [MATER] A special concrete consisting of a mixture of graded aggregate and heated asphalt; must be applied and spread while hot.

asphaltic road oil [MATER] A thick, fluid solution of asphalt.

asphaltic sand [GEOL] Deposits of sand grains cemented together with soft, natural asphalt.

asphaltite [GEOL] Any of the dark-colored, solid, naturally occurring bitumens that are insoluble in water, but more or less completely soluble in carbon disulfide, benzol, and so on, with melting points between 250 and 600°F (121–316°C); examples are gilsonite and grahamite.

asphaltite coal *See* albertite.

asphalt lamination [MATER] A laminate of sheet material, such as paper or felt, which uses asphalt as the adhesive.

asphalt leveling course [CIV ENG] A layer of an asphalt-aggregate mixture of variable thickness, used to eliminate irregularities in contour of an existing surface, prior to the placement of a superimposed layer.

asphalt macadam [MATER] Pavement made with an asphalt binder rather than tar.

asphalt mastic [MATER] A mixture of asphalt with sand, asbestos, crushed rock, or similar material; used like cement. Also known as mastic asphalt.

asphalt overlay [CIV ENG] One or more layers of asphalt construction on an existing pavement.

asphalt paint [MATER] Asphaltic material dissolved in volatile solvent with or without pigments, drying oils, resins, and so on.

asphalt paper [MATER] A paper that is coated or impregnated with asphalt.

asphalt pavement [CIV ENG] A pavement consisting of a surface layer of mineral aggregate, coated and cemented together with asphalt cement on supporting layers.

asphalt primer [MATER] Low-viscosity, liquid asphaltic material applied to and absorbed by nonbituminous surfaces, as in waterproofing.

asphalt rock [GEOL] Natural rock asphalt or asphalt-containing rock, such as porous sandstones and dolomites. Also known as asphalt stone; bituminous rock; rock asphalt.

asphalt roofing [MATER] A roofing material made by impregnating a dry roofing felt with a hot asphalt saturant, applying asphalt coatings to the weather and reverse sides, and embedding a mineral surfacing in the coating on the weather side.

asphalt shingle [MATER] A roof shingle made of felt impregnated with asphalt and covered with mineral granules.

asphalt soil stabilization [CIV ENG] The treatment of naturally occurring nonplastic or moderately plastic soil with liquid asphalt at normal temperatures to improve the load-bearing qualities of the soil.

asphalt stone *See* asphalt rock.

asphalt tile [MATER] Floor tile composed of asbestos fibers, mineral coloring pigments, and inert fillers bound together; used on rigid subfloors or hardwood floors.

asphaltum [MATER] Bituminous material in oil of turpentine; used in photomechanical work because of its ability to be rendered insoluble in light.

aspheric surface [OPTICS] A lens or mirror surface which is altered slightly from a spherical surface in order to reduce aberrations.

asphradium [INV ZOO] An organ, believed to be a chemoreceptor, in mollusks. Also spelled osphradium.

asphyxia [MED] Suffocation due to oxygen deprivation, resulting in anoxia and carbon dioxide accumulation in the body.

aspiculate [INV ZOO] Lacking spicules, referring to Porifera.

Aspidiotinae [INV ZOO] A subfamily of homopteran insects in the superfamily Coccoidea.

Aspidiphoridae [INV ZOO] An equivalent name for the Sphindidae.

Aspidobothria [INV ZOO] An equivalent name for the Aspidogastrea.

Aspidobothroidea [INV ZOO] A group of trematodes accorded class rank by W. J. Hargis.

Aspidobranchia [INV ZOO] An equivalent name for the Archaeogastropoda.

Aspidochirotacea [INV ZOO] A subclass of bilaterally symmetrical echinoderms in the class Holothuroidea characterized by tube feet and 10–30 shield-shaped tentacles.

Aspidochirotida [INV ZOO] An order of holothurioid echinoderms in the subclass Aspidochirotacea characterized by respiratory trees and dorsal tube feet converted into tactile warts.

Aspidocotylea [INV ZOO] An equivalent name for the Aspidogastrea.

Aspidodiadematidae [INV ZOO] A small family of deep-sea echinoderms in the order Diadematoida.

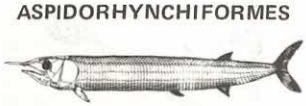
Aspidogastrea [INV ZOO] An order of endoparasitic worms in the class Trematoda having strongly developed ventral holdfasts.

Aspidogastridae [INV ZOO] A family of trematode worms in the order Aspidogastrea occurring as endoparasites of mollusks.

Aspidorhynchidae [PALEON] The single family of the Aspidorhynchiformes, an extinct order of holostean fishes.

Aspidorhynchiformes [PALEON] A small, extinct order of specialized holostean fishes.

ASPIDORHYNCHIFORMES



Aspidorhynchus acutirostris (Blainville), Upper Jurassic, Bavaria, length to 3 feet (91 centimeters); a typical fish of the order Aspidorhynchiformes. *(After Assmann)*

aspidospermine [PHARM] $C_{22}H_{30}O_2N_2$ White to brownish-yellow crystals with a melting point of 132–136°C; soluble in water, alcohol, chloroform, and ether; used in medicine.

Aspinothoracida [PALEON] The equivalent name for Brachythoraci.

aspirating *See* dedusting.

aspirating burner [ENG] A burner in which combustion air at high velocity is drawn over an orifice, creating a negative static pressure and thereby sucking fuel into the stream of air; the mixture of air and fuel is conducted into a combustion chamber, where the fuel is burned in suspension.

aspirating screen [MIN ENG] A vibrating screen from which light, liberated particles are removed by suction.

aspiration [MED] The removal of fluids from a cavity by suction. [MICROBIOL] The use of suction to draw up a sample in a pipette. [SCI TECH] Act or the result of removing, carrying along, or drawing by suction.

aspiration condenser [NUCLEO] An ion-counter collecting element consisting of a cylindrical condenser which when charged produces a radial field that collects ions from the aspirated air.

aspiration meteorograph [ENG] An instrument for the continuous recording of two or more meteorological parameters, with the ventilation being provided by a suction fan.

aspiration psychrometer [ENG] A psychrometer in which the ventilation is provided by a suction fan.

aspiration thermograph [ENG] A thermograph in which ventilation is provided by a suction fan.

aspirator [ENG] Any instrument or apparatus that utilizes a vacuum to draw up gases or granular materials. [MIN ENG] A device made of wire gauze, of cloth, or of a fibrous mass held between pieces of meshed material and used to cover the mouth and nose to keep dusts from entering the lungs.

aspirin *See* acetylsalicylic acid.

aspite [GEOL] A cratered volcano with base wide in relation to height; for example, Mauna Loa.

asporogenic mutant [MICROBIO] A bacillus that is unable to form spores due to alterations at any of several gene loci.

asporogenous [BOT] Not producing spores, especially of certain yeasts.

Aspredinidae [VERT ZOO] A family of salt-water catfishes in the order Siluriformes found off the coast of South America.

ASROC *See* antisubmarine rocket.

ass [VERT ZOO] Any of several perissodactyl mammals in the family Equidae belonging to the genus *Equus*, especially *E. hemionus* and *E. asinus*.

Assam psychrometer [ENG] A psychrometer, shielded from radiation, in which the air is blown over the bulbs of the two thermometers with a small fan.

assault [ORD] **1.** Final phase of an attack; closing with the enemy in hand-to-hand fighting. **2.** The landing of troops for attack on the enemy's beach defenses. **3.** The landing of parachute and glider elements on unsecured and unprepared drop zones and landing zones to attack and seize an airhead. **4.** A short, violent, but well-ordered attack against a local objective, such as a gun emplacement, fort, or machine gun nest.

assault aircraft [AERO ENG] Powered aircraft, including helicopters, which move assault troops and cargo into an objective area and which provide for their resupply.

assault boat [NAV ARCH] A small boat that can easily be transported on land; used for amphibious military attacks or to cross lakes and rivers in land warfare.

assault fire [ORD] **1.** Fire delivered by attacking troops as they close with an enemy to engage him at close range or in hand-to-hand fighting, usually delivered from the hip or the standing position at a sustained rate. Also known as advancing fire. **2.** In artillery, extremely accurate, short-range destruction fire at point targets.

assault gun [ORD] Any of various sizes and types of guns that are self-propelled or mounted on tanks and are used for direct fire from close range against point targets.

assault-landing model [ORD] A special form of assault model designed specifically for planning amphibious landings. Also known as amphibious-assault landing model.

assault model [ORD] Vehicle designed to provide direct fire in combat.

assay [ANALY CHEM] Qualitative or quantitative determination of the components of a material, as an ore or a drug.

assay balance [ENG] A sensitive balance used in the assaying of gold, silver, and other precious metals.

assay bar [MET] A bar of pure or nearly pure gold and silver; used by a government as a standard.

assay plan [MIN ENG] A mine map showing the assay, stope, width, and so forth of samples taken from positions marked.

assay pound [MIN ENG] A weight which varies from time to time but is sometimes 0.5 gram, and is used by assayers to proportionately represent a pound.

assay ton [MIN ENG] A unit of weight of ore equal to 29,167 milligrams; the number of milligrams of precious metal in this measure equals the number of troy ounces in a short ton.

assay value [MIN ENG] The amount of gold or silver as shown by assay of any given sample and represented by ounces per ton of ore.

assay walls [MIN ENG] The planes to which an ore body can be profitably mined, the limiting factor being the metal content of the country rock as determined from assays.

assemblage [ARCHEO] All related cultural traits and artifacts associated with one archeological manifestation. [ECOL] A group of organisms sharing a common habitant by chance. [ORD] A collection of items designed to accomplish one general function and identified and issued as a single item. [PALEON] A group of fossils occurring together at one stratigraphic level.

assemblage zone [PALEON] A biotstratigraphic unit defined and identified by a group of associated fossils rather than by a single index fossil.

assembled stone [MATER] A stone made of two or more gem materials, whether genuine or imitation.

assembler [COMPUT SCI] A program designed to convert symbolic instruction into a form suitable for execution on a computer. Also known as assembly program; assembly routine.

assembling bolt [CIV ENG] A threaded bolt for holding together temporarily the several parts of a structure during riveting.

assembly [COMPUT SCI] The automatic translation into machine language of a computer program written in symbolic language. [MECH ENG] A unit containing the component parts of a mechanism, machine, or similar device.

assembly drawing [GRAPHICS] A working-type engineering drawing depicting a complete unit, usually included with detail drawings of all parts in a set of working drawings.

assembly language [COMPUT SCI] A low-level computer language one step above the binary machine language.

assembly line [IND ENG] A mass-production arrangement whereby the work in process is progressively transferred from one operation to the next until the product is assembled.

assembly-line balancing [IND ENG] Assigning numbers of operators or machines to each operation of an assembly line so as to meet the required production rate with a minimum of idle time.

assembly list [COMPUT SCI] A printed list which is the by-product of an assembly procedure; it lists in logical instruction sequence all details of a routine, showing the coded and symbolic notation next to the actual notations established by the assembly procedure; this listing is highly useful in the debugging of a routine.

assembly method [IND ENG] The technique used to assemble a manufactured product, such as hand assembly, progressive line assembly, and automatic assembly.

assembly program *See* assembler.

assembly routine *See* assembler.

assembly system [COMPUT SCI] An automatic programming software system with a programming language and machine-language programs that aid the programmer by performing different functions such as checkout and updating.

assembly time [ENG] **1.** The elapsed time after the application of an adhesive until its strength becomes effective. **2.** The time elapsed in performing an assembly or subassembly operation.

assembly unit [COMPUT SCI] **1.** A device which performs the function of associating and joining several parts or piecing together a program. **2.** A portion of a program which is capable of being assembled into a larger program.

assessment drilling [MIN ENG] Drilling to fulfill the requirement that a prescribed amount of work be done annually on

an unpatented mining claim to retain title. Also known as annual labor.

assessment work [MIN ENG] Annual work at an unpatented mining claim in the public domain performed under law to maintain the claim title.

assets [IND ENG] All the resources, rights, and property owned by a person or a company; the book value of these items as shown on the balance sheet.

assign [COMPUT SCI] A control statement in FORTRAN which assigns a computed value i to a variable k, the latter representing the number of the statement to which control is then transferred.

assignable cause [IND ENG] Any identifiable factor which causes variation in a process outside the predicted limits, thereby altering quality.

assignment problem [COMPUT SCI] A special case of the transportation problem in a linear program, in which the number of sources (assignees) equals the number of designations (assignments) and each supply and each demand equals 1.

assili cotton [TEXT] A long-staple Egyptian cotton characterized by high tensile strength.

assimilation [GEOL] Incorporation of solid or fluid material that was originally in the rock wall into a magma. [PHYSIO] Conversion of nutritive materials into protoplasm.

assimilative nitrate reduction [MICROBIO] The reduction of nitrates by some aerobic bacteria for purposes of assimilation.

assimilative sulfate reduction [MICROBIO] The reduction of sulfates by certain obligate anaerobic bacteria for purposes of assimilation.

assisted takeoff [AERO ENG] A takeoff of an aircraft or a missile by using a supplementary source of power, usually rockets.

assize [CIV ENG] **1.** A cylindrical block of stone forming one unit in a column. **2.** A layer of stonework.

Assmann psychrometer [ENG] A special form of the aspiration psychrometer in which the thermometric elements are well shielded from radiation.

associate [PSYCH] An item or event that is linked to another in the mind of an individual.

associate curve *See* Bertrand curve.

associated automatic movement *See* synkinesia.

associated corpuscular emission [GEOPHYS] The full complement of secondary charged particles associated with the passage of an x-ray or gamma-ray beam through air.

associated gas [PETRO ENG] Gaseous hydrocarbons occurring as a free-gas phase under original oil-reservoir conditions of temperature and pressure.

associated production [PARTIC PHYS] Production of strange particles invariably in twos, never one particle alone.

associate matrix *See* Hermitian conjugate of a matrix.

associate operator *See* adjoint operator.

association [CHEM] Combination or correlation of substances or functions. [ECOL] Major segment of a biome formed by a climax community, such as an oak-hickory forest of the deciduous forest biome. [PSYCH] A connection formed through learning.

association area [PHYSIO] An area of the cerebral cortex that is thought to link and coordinate activities of the projection areas.

association center [INV ZOO] In invertebrates, a nervous center coordinating and distributing stimuli from sensory receptors.

association fiber [ANAT] One of the white nerve fibers situated just beneath the cortical substance and connecting the adjacent cerebral gyri.

association neuron [ANAT] A neuron, usually within the central nervous system, between sensory and motor neurons.

association test [PSYCH] Any test designed to determine the nature of the mental or emotional link between a stimulus and a response.

association trail [COMPUT SCI] A linkage between two or more documents or items of information, discerned during the process of their examination and recorded with the aid of an information retrieval system.

associative algebra [MATH] An algebra in which the vector multiplication obeys the associative law.

associative facilitation [PSYCH] Ease in establishing a new association because of previous associations.

associative inhibition [PSYCH] Difficulty in establishing a new association because of previous associations.

associative key [COMPUT SCI] In a computer system with an associative memory, a field used to reference items through comparing the value of the field with corresponding fields in each memory cell and retrieving the contents of matching cells.

associative law [MATH] For a binary operation designated $\circ$, the relationship expressed by $a \circ (b \circ c) = (a \circ b) \circ c$.

associative learning [PSYCH] The principle that items experienced together are mentally linked so that they tend to reinforce one another.

associative memory [COMPUT SCI] A data-storage device in which a location is identified by its informational content rather than by names, addresses, or relative positions, and from which the data may be retrieved. Also known as associative storage. [PSYCH] Recalling a previously experienced item by thinking of something that is linked with it, thus invoking the association.

associative processor [COMPUT SCI] A digital computer that consists of a content-addressable memory and means for searching rapidly changing random digital data stored within, at speeds up to 1000 times faster than conventional digital computers.

associative storage *See* associative memory.

associative thinking [PSYCH] **1.** The mental process of making associations between a given subject and all pertinent present factors without drawing on past experience. **2.** Free association.

associator [COMPUT SCI] A device for bringing like entities into conjunction or juxtaposition.

assortative mating [GEN] Nonrandom mating with respect to phenotypes.

as-spun [TEXT] Pertaining to a spun fiber that has not undergone further processing.

assumed decimal point [COMPUT SCI] For a decimal number stored in a computer or appearing on a printout, a position in the number at which place values change from positive to negative powers of 10, but to which no location is assigned or at which no printed character appears, as opposed to an actual decimal point. Also known as virtual decimal point.

assumed plane coordinates [ENG] A local plane-coordinate system set up at the convenience of the surveyor.

assumed position [NAV] In celestial navigation, a point on the surface of the earth at which a craft is assumed to be located and for which the computed altitude is determined in the solution of a celestial observation. Also known as chosen position.

assured mineral *See* developed reserves.

assyntite [PETR] A plutonic rock consisting largely of orthoclase and pyroxene, lesser amounts of sodalite and nepheline, and accessory biotite, sphene, apatite, and opaque oxides.

astable circuit [ELECTR] A circuit that alternates automatically and continuously between two unstable states at a frequency dependent on circuit constants; for example, a blocking oscillator.

astable multivibrator [ELECTR] A multivibrator in which each active device alternately conducts and is cut off for intervals of time determined by circuit constants, without use of external triggers. Also known as free-running multivibrator.

Astacidae [INV ZOO] A family of fresh-water crayfishes belonging to the section Macrura in the order Decapoda, occurring in the temperate regions of the Northern Hemisphere.

astacin [BIOCHEM] $C_{40}H_{48}O_4$ A red carotenoid ketone pigment found in crustaceans, as in the shell of a boiled lobster.

Astacinae [INV ZOO] A subfamily of crayfishes in the family Astacidae including all North American species west of the Rocky Mountains.

A stage [ORG CHEM] An early stage in a thermosetting resin reaction characterized by linear structure, solubility, and fusibility of the material.

Astartian *See* Sequanian.

astasia [MED] Lack of muscular coordination in standing.

astatic [PHYS] Without orientation or directional characteristics; having no tendency to change position.

astatic galvanometer [ENG] A sensitive galvanometer designed to be independent of the earth's magnetic field.

astatic governor *See* isochronous governor.

astatic gravimeter [ENG] A sensitive gravimeter designed to measure small changes in gravity.

astatic magnetometer [ENG] A magnetometer for determining the gradient of a magnetic field by measuring the dif-

ference in reading from two magnetometers placed at different positions.

astatic pair [ELECTROMAG] A pair of parallel magnets, equal in strength and having polarities in opposite directions, and perpendicular to an axis which bisects both of them; there is no net force or torque on the pair in a uniform field.

astatic pendulum [PHYS] A pendulum which almost never takes a position of equilibrium.

astatic wattmeter [ENG] An electrodynamic wattmeter designed to be insensitive to uniform external magnetic fields.

astatine [CHEM] A radioactive chemical element, symbol At, atomic number 85, the heaviest of the halogen elements.

A station [NAV] In loran, the designation applied to one transmitting station of a pair, the signal of which always occurs less than half a repetition period after the preceding signal and more than half a repetition period before the succeeding signal of the other station, designated a B station.

astatized gravimeter [ENG] A gravimeter, sometimes referred to as unstable, where the force of gravity is maintained in an unstable equilibrium with the restoring force.

astaxanthin [BIOCHEM] $C_{40}H_{52}O_4$ A violet carotenoid pigment found in combined form in certain crustacean shells and bird feathers.

Asteidae [INV ZOO] A small, obscure family of cyclorrhaphous myodarian dipteran insects in the subsection Acalyptera-tae.

astel [MIN ENG] An overhead boarding or arching in a mine gallery.

astelic [BOT] Lacking a stele or having a discontinuous arrangement of vascular bundles.

aster [BOT] Any of the herbaceous ornamental plants of the genus *Aster* belonging to the family Compositae.

Asteraceae [BOT] An equivalent name for the Compositae.

Asterales [BOT] An order of dicotyledonous plants in the subclass Asteridae, including aster, sunflower, zinnia, lettuce, artichoke, and dandelion; ovary is inferior, flowers are borne in involucrate, centripetally flowering heads, and the calyx, when present, is modified into a set of scale-, hair-, or bristlelike structures called the pappus.

astereognosis [MED] Loss of recognition of objects by touch, although recognition occurs through another sense, usually vision. Also known as tactile agnosia.

asteria [LAP] A gemstone that displays a star or rayed figure when cut in the cabochon style in the proper crystallographic plane.

Asteridae [BOT] A large subclass of dicotyledonous plants in the class Magnoliopsida; plants are sympetalous, with unitegmic, tenuinucellate ovules and with the stamens usually as many as, or fewer than, the corolla lobes and alternate with them.

Asteriidae [INV ZOO] A large family of echinoderms in the order Forcipulatida, including many predatory sea stars.

Asterinidae [INV ZOO] The starlets, a family of echinoderms in the order Spinulosida.

asterism [ASTRON] A constellation or small group of stars. [OPTICS] A starlike optical phenomenon seen in gemstones called star stones; due to reflection of light by lustrous inclusions reduced to sharp lines of light by a domed cabochon style of cutting. [SPECT] A star-shaped pattern sometimes seen in x-ray spectrophotographs.

astern [ENG] To the rear of an aircraft, vehicle, or vessel; behind; from the back.

asternal [ANAT] **1.** Not attached to the sternum. **2.** Without a sternum.

asteroid [ASTRON] One of the many small celestial bodies revolving around the sun, most of the orbits being between those of Mars and Jupiter. Also known as minor planet; planetoid.

asteroid belt [ASTRON] The region between 2.1 and 3.5 astronomical units from the sun where most of the asteroids are found.

Asteroidea [INV ZOO] The starfishes, a subclass of echinoderms in the subphylum Asterozoa characterized by five radial arms.

Asteroschematidae [INV ZOO] A family of ophiuroid echinoderms in the order Phrynophiurida with individuals having a small disk and stout arms.

Asterozoa [INV ZOO] A subphylum of echinoderms characterized by a star-shaped body and radially divergent axes of symmetry.

aster wilt [PL PATH] A fungus disease of asters caused by *Fusarium oxysporum* f. *callistephi*.

aster yellows [PL PATH] A widespread virus disease of asters, other ornamental plants, and many vegetables, characterized by yellowing and dwarfing; leafhoppers are vectors.

asthenia [MED] Loss or lack of strength.

asthenolith [GEOL] A body of magma locally melted at any time within any solid portion of the earth.

asthenopia [MED] Weakness of the eye muscles or of visual acuity, sometimes accompanied by pain and headache.

asthenosphere [GEOL] That portion of the upper mantle beneath the rigid lithosphere which is plastic enough for rock flowage to occur; extends from a depth of 50–100 kilometers to about 400 kilometers and is seismically equivalent to the low velocity zone.

asthma [MED] A pulmonary disease marked by labored breathing, wheezing, and coughing; cause may be emotional stress, chemical irritation, or exposure to an allergen.

Astian [GEOL] A European stage of geologic time: upper Pliocene, above Plaisancian, below the Pleistocene stage known as Villafranchian, Calabrian, or Günz.

Asticcacaulis [MICROBIO] A genus of prosthecate bacteria; cells are rod-shaped with an appendage (pseudostalk), and reproduction is by binary fission of cells.

astichous [BOT] Not arranged in rows.

astigmat *See* astigmatic lens.

astigmatic lens [OPTICS] A planocylindrical, spherocylindrical, or spherotoric lens used in eyeglasses to correct astigmatism. Also known as astigmat.

astigmatism [ELECTR] In an electron-beam tube, a focus defect in which electrons in different axial planes come to focus at different points. [MED] A defect of vision due to irregular curvatures of the refractive surfaces of the eye so that focal points of light are distorted. [OPTICS] The failure of an optical system, such as a lens or a mirror, to image a point as a single point; the system images the point on two line segments separated by an interval.

astigmatizer [OPTICS] A device, as attached to a rangefinder, for drawing out a point of light into a line or band.

astigmometer [OPTICS] An instrument which measures the amount of astigmatism in an optical system.

ASTM-CFR engine [MECH ENG] A special engine developed by the Coordinating Fuel and Equipment Research Committee of the Coordinating Research Council, Inc., to determine the knock tendency of gasolines.

ASTM gum test [CHEM ENG] **1.** Determination of the amount of existing gum in a gasoline by evaporating a sample from a glass dish or an elevated temperature bath with the aid of circulating air. **2.** Any gum test carried out in accordance with an ASTM gum test procedure.

ASTM melting point [CHEM ENG] The temperature at which wax first shows a minimum rate of temperature change.

astogeny [INV ZOO] Morphological and size changes associated with zooids of aging colonial animals.

astomatal [BOT] Lacking stomata. Also known as astomous.

Astomatida [INV ZOO] An order of mouthless protozoans in the subclass Holotrichia; all species are invertebrate parasites, typically in oligochaete annelids.

astomatous [INV ZOO] Lacking a mouth, especially a cytostome, as in certain ciliates.

astomocnidae nematocyst [INV ZOO] A stinging cell whose thread has a closed end and either is adhesive or acts as a lasso to entangle prey.

astomous [BOT] **1.** Having a capsule that bursts irregularly and is not dehiscent by an operculum. **2.** *See* astomatal.

Aston dark space [ELECTR] A dark region in a glow-discharge tube which extends for a few millimeters from the cathode up to the cathode glow.

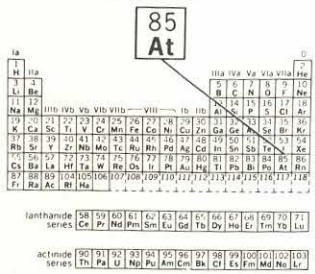
Aston process [MET] A process for making controlled-quality wrought iron synthetically.

Aston whole-number rule [PHYS] The rule which states that when expressed in atomic weight units, the atomic weights of isotopes are very nearly whole numbers, and the deviations found in samples of elements are due to the presence of several isotopes with different weights.

astraeid [INV ZOO] Of a group of corals that are imperforate.

astragal [BUILD] **1.** A small convex molding decorated with a string of beads or bead-and-reel shapes. **2.** A plain bead molding. **3.** A member, or combination of members, fixed to

ASTATINE

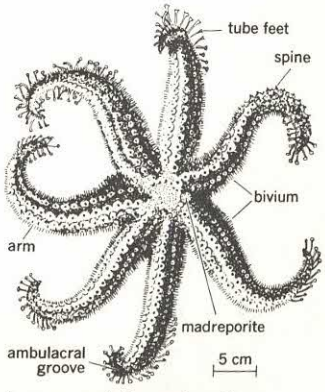


Periodic table of the chemical elements showing the position of astatine.

ASTER

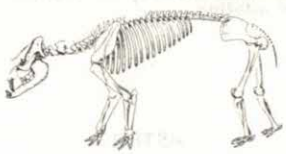
New England aster (*Aster novae-angliae*), showing ray and disk flowers. *(Courtesy of Alvin E. Staffan, from National Audubon Society)*

ASTEROIDEA



A representative asteroid, *Astrostole scabra*. Although five arms are common, species of this group may have 6–12 arms.

ASTRAPOTHERIA



Astrapotherium magnum skeleton. Genus is known from late Oligocene to late Miocene. *(From Riggs)*

one of a pair of doors or casement windows to cover the joint between the meeting stiles and to close the clearance gap.

astragal front [DES ENG] A lock front which is shaped to fit the edge of a door with an astragal molding.

astragalus [ANAT] The bone of the ankle which articulates with the bones of the leg. Also known as talus.

astrakanite *See* bloedite.

astral [ASTRON] Characteristic of a specific star or stars; stellar is the accepted term.

astral dome *See* astrodome.

astral lamp [ENG] An Argand lamp designed so that its light is not prevented from reaching a table beneath it by the flattened annular reservoir holding the oil.

astraphobia [PSYCH] Abnormal fear of lightning and thunderstorms. Also known as astrapophobia.

astrapophobia *See* astraphobia.

Astrapotheria [PALEON] A relatively small order of large, extinct South American mammals in the infraclass Eutheria.

Astrapotheroidea [PALEON] A suborder of extinct mammals in the order Astrapotheria, ranging from early Eocene to late Miocene.

Astrea [INV ZOO] A genus of mollusks in the class Gastropoda.

astre fictif [ASTRON] Any of several fictitious stars assumed to move along the celestial equator at uniform rates corresponding to the speeds of the several harmonic constituents of the tide-producing force.

astringent [MED] A substance applied to produce local contraction of blood vessels shrink mucous membranes, or to check discharges such as serum or mucus.

astrionics [ELECTR] The science of adapting electronics to aerospace flight.

astro- [ASTRON] A prefix meaning star or stars and, by extension, sometimes used as the equivalent of celestial, as in astronautics.

astroballistics [MECH] The study of phenomena arising out of the motion of a solid through a gas at speeds high enough to cause ablation; for example, the interaction of a meteoroid with the atmosphere.

astrobiology [BIOL] The study of living organisms on celestial bodies other than the earth.

astrobleme [GEOL] A circular-shaped depression on the earth's surface produced by the impact of a cosmic body.

astrochanite *See* bloedite.

astrochemistry [ASTRON] The science that applies the principles of chemistry to matter in space.

astrochronology [ASTRON] The use of stellar phenomena in chronology.

astrocompass [NAV] A direction-determining instrument into which can be set the coordinates of any celestial body and the latitude of the observer and which will then give an indication of azimuth, true north, and heading.

astrocyte [HISTOL] A star-shaped cell; specifically, a neuroglial cell.

astrocytoma [MED] A slow-growing glial tumor made up of cells resembling astrocytes; often it will undergo malignant change and assume the appearance and growth characteristics of a glioblastoma.

astrodome [AERO ENG] A transparent dome in the fuselage or body of an aircraft or spacecraft intended primarily to permit taking celestial observations in navigating. Also known as astral dome; navigation dome.

astrodynamics [AERO ENG] The practical application of celestial mechanics, astroballistics, propulsion theory, and allied fields to the problem of planning and directing the trajectories of space vehicles. [ASTROPHYS] The dynamics of celestial objects.

astrogation *See* astronavigation.

astrogeodetic [GEOD] Pertaining to direct measurements of the earth.

astrogeodetic datum orientation [GEOD] Adjustment of the ellipsoid of reference for a particular datum so that the sum of the squares of deflections of the vertical at selected points throughout the geodetic network is made as small as possible.

astrogeodetic deflection [GEOD] The angle at a point between the normal to the geoid and the normal to the ellipsoid of an astrogeodetically oriented datum. Also known as relative deflection.

astrogeodetic leveling [GEOD] A concept whereby the astrogeodetic deflections of the vertical are used to determine the separation of the ellipsoid and the geoid in studying the figure of the earth. Also known as astronomical leveling.

astrogeodetic undulations [GEOD] Separations between the geoid and astrogeodetic ellipsoid.

astrogeology [ASTRON] The science that applies the principles of geology, geochemistry, and geophysics to the moon and planets other than the earth.

astroglia [HISTOL] Neuroglia composed of astrocytes.

astrograph [ASTRON] A telescope designed to be used exclusively for astronomical photography. [MAP] A device for projecting a set of precomputed altitude curves onto a chart or plotting sheet, the curves moving with time such that if they are properly adjusted, they will remain in the correct position on the chart or plotting sheet; used in mapping the heavens.

astrographic position *See* astrometric position.

astrograph mean time [ASTRON] A form of mean time used in setting an astrograph; mean-time setting of 1200 occurs when the local hour angle of Aries is 0°.

astrogravimetric leveling [GEOD] A concept whereby a gravimetric map is used for the interpolation of the astrogeodetic deflections of the vertical to determine the separation of the ellipsoid and the geoid in studying the figure of the earth.

astrogravimetric points [GEOD] Astronomical positions corrected for the deflection of the vertical by gravimetric methods.

astrolabe [ENG] An instrument designed to observe the positions and measure the altitudes of celestial bodies.

astrometric position [ASTRON] The position of a heavenly body or space vehicle on the celestial sphere corrected for aberration but not for planetary aberration. Also known as astrographic position.

astrometry [ASTRON] The branch of astronomy dealing with the geometrical relations of the celestial bodies and their real and apparent motions.

astron [NUC PHYS] A proposed thermonuclear device in which a deuterium plasma is confined by an axial magnetic field produced by a shell of relativistic electrons.

astronaut [AERO ENG] In United States terminology, a person who rides in a space vehicle.

astronautical engineering [AERO ENG] The engineering aspects of flight in space.

astronautics [AERO ENG] **1.** The art, skill, or activity of operating spacecraft. **2.** The science of space flight.

astronavigation [NAV] The plotting and directing of the movement of a vehicle from within by means of observations of celestial bodies. Also known as astrogation; celestial navigation.

astronomic *See* astronomical.

astronomical [ASTRON] Of or pertaining to astronomy or to observations of the celestial bodies. Also known as astronomic.

astronomical almanac [ASTRON] A publication giving the tables of coordinates of a number of celestial bodies at a number of specific times during a given period.

astronomical azimuth [GEOD] The angle between the astronomical meridian plane of the observer and the plane containing the observed point and the true normal (vertical) of the observer, measured in the plane of the horizon, preferably clockwise from north.

astronomical bearing *See* true bearing.

astronomical camera [OPTICS] A camera designed to record either point sources (stars), extended sources (nebulae, galaxies, planets, or the sun and moon), or the spectra of celestial bodies.

astronomical clock [HOROL] A clock that shows sidereal time.

astronomical constants [ASTROPHYS] The elements of the orbits of the bodies of the solar system, their masses relative to the sun, their size, shape, orientation, rotation, and inner constitution, and the velocity of light.

astronomical coordinate system [ASTRON] Any system of spherical coordinates serving to locate astronomical objects on the celestial sphere.

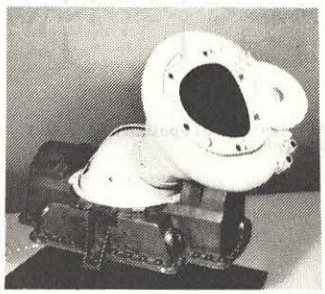
astronomical date [ASTRON] Designation of epoch by year, month, day, and decimal fraction.

astronomical day [ASTRON] A mean solar day beginning at mean noon, 12 hours later than the beginning of the civil day of the same date; astronomers now generally use the civil day.

astronomical distance [ASTRON] The distance of a celestial body expressed in units such as the light-year, astronomical unit, and parsec.

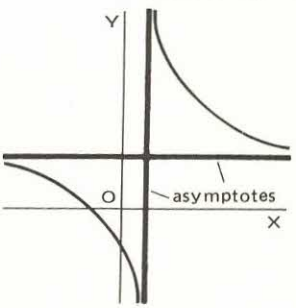
astronomical eclipse *See* eclipse.
astronomical ephemeris *See* ephemeris.
astronomical equator [GEOD] An imaginary line on the surface of the earth connecting points having 0° astronomical latitude. Also known as terrestrial equator.
astronomical instruments [ENG] Specific kinds of telescopes and ancillary equipment used by astronomers to study the positions, motions, and composition of stars and members of the solar system.
astronomical latitude [GEOD] Angular distance between the direction of gravity (plumb line) and the plane of the celestial equator; applies only to positions on the earth and is reckoned from the astronomical equator.
astronomical leveling *See* astrogeodetic leveling.
astronomical longitude [GEOD] The angle between the plane of the reference meridian and the plane of the local celestial meridian.
astronomical meridian [GEOD] A line on the surface of the earth connecting points having the same astronomical longitude. Also known as terrestrial meridian.
astronomical meridian plane [GEOD] A plane that contains the vertical of the observer and is parallel to the instantaneous rotation axis of the earth.
astronomical nutation [ASTRON] A small periodic motion of the celestial pole of celestial bodies, including the earth, with respect to the pole of the ecliptic.
astronomical observatory [ASTRON] A building designed and equipped for making observations of astronomical phenomena.
astronomical parallel [GEOD] A line connecting points having the same astronomical latitude.
astronomical photography [OPTICS] The use of the photographic process to record surface features of celestial objects, their positions and motions (for measurement), and their radiation (photometry) and spectra (spectroscopy).
astronomical position [GEOD] **1.** A point on the earth whose coordinates have been determined as a result of observation of celestial bodies. Also known as astronomical station. **2.** A point on the earth defined in terms of astronomical latitude and longitude.
astronomical refraction [GEOPHYS] The bending of a ray of celestial radiation as it passes through atmospheric layers of increasing density.
astronomical scintillation [ASTROPHYS] Any scintillation phenomena, such as irregular oscillatory motion, variation of intensity, and color fluctuation, observed in the light emanating from an extraterrestrial source. Also known as stellar scintillation.
astronomical seeing *See* seeing.
astronomical spectrograph [SPECT] An instrument used to photograph spectra of stars.
astronomical spectroscopy [SPECT] The use of spectrographs in conjunction with telescopes to obtain observational data on the velocities and physical conditions of astronomical objects.
astronomical station *See* astronomical position.
astronomical surveying [GEOD] The celestial determination of latitude and longitude; separations are calculated by computing distances corresponding to measured angular displacements along the reference spheroid.
astronomical telescope [OPTICS] A telescope designed for viewing astronomical objects.
astronomical theodolite *See* altazimuth.
astronomical tide [OCEANOGR] An equilibrium tide due to attractions of the sun and moon. Also known as astronomic tide.
astronomical time [ASTRON] Solar time in an astronomical day that begins at noon.
astronomical traverse [ENG] A survey traverse in which the geographic positions of the stations are obtained from astronomical observations, and lengths and azimuths of lines are obtained by computation.
astronomical triangle [ASTRON] A spherical triangle on the celestial sphere.
astronomical twilight [ASTRON] The period of incomplete darkness when the center of the sun is more than 6° but not more than 18° below the celestial horizon.
astronomical unit [ASTRON] Abbreviated AU. **1.** A measure for distance within the solar system equal to the mean distance between earth and sun, that is, 149,599,000 kilometers. **2.** The semimajor axis of the elliptical orbit of earth.
astronomical year *See* tropical year.
astronomic tide *See* astronomical tide.
astronomy [SCI TECH] The science concerned with celestial bodies and the observation and interpretation of the radiation received in the vicinity of the earth from the component parts of the universe.
Astropectinidae [INV ZOO] A family of echinoderms in the suborder Paxillosina occurring in all seas from tidal level downward.
astrophobia [PSYCH] Abnormal fear of stars and celestial space.
astrophyllite [MINERAL] $(K,Na)_3(Fe,Mn)_7Ti_2Si_8O_{24}(O,OH)_7$ A mineral composed of a basic silicate of potassium or sodium, iron or manganese, and titanium.
astrophysics [ASTRON] A branch of astronomy that treats of the physical properties of celestial bodies, such as luminosity, size, mass, density, temperature, and chemical composition, and with their origin and evaluation.
astropyle [INV ZOO] A small, rounded projection from the central capsule of some radiolarians.
astrosphere [CYTOL] The center of the aster exclusive of the rays.
astrotracker [NAV] An automatic sextant which has the ability to sight on and continuously to track selected stars throughout the day and night, providing continuous heading and position data with no intervention on the part of the airman. Also known as star tracker.
Asturian orogeny [GEOL] Mid-Upper Carboniferous diastrophism.
asty [INV ZOO] A bryozoan colony.
astylar [ARCH] Not having columns or pilasters.
asulam *See* methyl-4-aminobenzene sulfonylcarbamate.
asulcal [BIOL] Without a sulcus.
A supply [ELECTR] Battery, transformer filament winding, or other voltage source that supplies power for heating filaments of vacuum tubes. Also known as A power supply.
as-welded [MET] The condition of a weldment prior to any additional thermal, chemical, or mechanical treatment.
asymbolia [MED] An aphasia in which there is an inability to understand or use acquired symbols, such as speech, writing, or gestures, as a means of communication.
asymmetrical bedding [GEOL] An order in which lithologic types or facies follow one another in a circuitous arrangement so that, for example, the sequence of types 1–2–3–1–2–3–1–2–3 indicates asymmetry (while the sequence 1–2–3–2–1–2–3–2–1 indicates symmetrical bedding).
asymmetrical cell [ELECTR] A cell, such as a photoelectric cell, in which the impedance to the flow of current in one direction is greater than in the other direction.
asymmetrical deflection [ELECTR] A type of electrostatic deflection in which one deflector plate is maintained at a fixed potential and the deflecting voltage is supplied to the other plate.
asymmetrical fold [GEOL] A fold in which one limb dips more steeply than the other.
asymmetrical laccolith [GEOL] A laccolith in which the beds dip at conspicuously different angles in different sectors.
asymmetrical ripple mark [GEOL] The normal form of ripple mark, with short downstream slopes and comparatively long, gentle upstream slopes.
asymmetrical-side-band transmission *See* vestigial-sideband transmission.
asymmetrical vein [GEOL] A crustified vein of geologic material with unlike layers on each side.
asymmetric carbon atom [ORG CHEM] A carbon atom with four different radicals or atoms bonded to it.
asymmetric rotor [MECH ENG] A rotating element for which the axis (center of rotation) is not centered in the element.
asymmetric synthesis [ORG CHEM] Chemical synthesis of a pure enantiomer, or of an enantiomorphic mixture in which one enantiomer predominates, without the use of resolution.
asymmetric top [MECH] A system that has all three principal moments of inertia different.
asymmetry [PHYS CHEM] The geometrical design of a molecule, atom, or ion that cannot be divided into like portions by one or more hypothetical planes. Also known as molecular asymmetry.
asymptote [MATH] **1.** A line approached by a curve in the limit as the curve approaches infinity. **2.** The limit of the tangents to a curve as the point of contact approaches infinity.
asymptote of convergence *See* convergence line.

ASTROTRACKER



One of six course-alignment star trackers used on the orbiting astronomical observatory. *(Kollsman Instrument Co.)*

ASYMPTOTE



Asymptotes of a hyperbola.

asymptotic cone of acceptance [GEOPHYS] The solid angle in the celestial sphere from which particles have to come in order to contribute significantly to the counting rate of a given neutron monitor on the surface of the earth.

asymptotic curve [MATH] A curve on a surface whose osculating plane at each point is the same as the tangent plane to the surface.

asymptotic direction of arrival [GEOPHYS] The direction at infinity of a positively charged particle, with given rigidity, which impinges in a given direction at a given point on the surface of the earth, after passing through the geomagnetic field.

asymptotic expansion [MATH] A series of the form $a_0 + (a_1/x) + (a_2/x^2) + \ldots + (a_n/x^n) + \ldots$ is an asymptotic expansion of the function $f(x)$ if there exists a number N such that for all $n>N$ the quantity $x^n [f(x) - S_n(x)]$ approaches zero as x approaches infinity, where $S_n(x)$ is the sum of the first n terms in the series. Also known as asymptotic series.

asymptotic formula [MATH] A statement of equality between two functions which is not a true equality but which means the ratio of the two functions approaches 1 as the variable approaches some value, usually infinity.

asymptotic freedom [PARTIC PHYS] In some gauge theories, the property of the strong interactions of growing steadily weaker at high energies.

asymptotic series *See* asymptotic expansion.

asymptotic stability [MATH] The property of a vector differential equation which satisfies the conditions that: (1) whenever the magnitude of the initial condition is sufficiently small, small perturbations in the initial condition produce small perturbations in the solution; and (2) there is a domain of attraction such that whenever the initial condition belongs to this domain the solution approaches zero at large times.

asynchronous [COMPUT SCI] Operating at a speed determined by the circuit functions rather than by timing signals. [PHYS] Not synchronous.

asynchronous communications [COMMUN] The transmission and recognition of a single character at a time.

asynchronous computer [COMPUT SCI] A computer in which the performance of any operation starts as a result of a signal that the previous operation has been completed, rather than on a signal from a master clock.

asynchronous control [CONT SYS] A method of control in which the time allotted for performing an operation depends on the time actually required for the operation, rather than on a predetermined fraction of a fixed machine cycle.

asynchronous data [COMPUT SCI] Information which is sampled at irregular intervals with respect to another operation.

asynchronous device [CONT SYS] A device in which the speed of operation is not related to any frequency in the system to which it is connected.

asynchronous input/output [COMPUT SCI] The ability to receive input data while simultaneously outputting data.

asynchronous inputs [ELECTR] The terminals in a flip-flop circuit which affect the output state of the flip-flop independently of the clock.

asynchronous logic [ELECTR] A logic network in which the speed of operation depends only on the signal propagation through the network.

asynchronous machine [ELEC] An ac machine whose speed is not proportional to the frequency of the power line.

asynchronous operation [ELECTR] An operation that is started by a completion signal from a previous operation, proceeds at the maximum speed of the circuits until finished, and then generates its own completion signal.

asynchronous tie [ELEC] An installation at which power is transmitted between two alternating-current power systems, operating at the same nominal frequency but with different frequency controls, by a direct-current link.

asynchronous time-division multiplexing [COMMUN] A data-transmission technique in which several users utilize a single channel by means of a system which assigns time slots only to active channels.

asynchronous timing [IND ENG] A simulation method for queues in which the system model is updated at each arrival or departure, resulting in the master clock being increased by a variable amount.

asynchronous transmission [COMMUN] Data transmission in which each character contains its own start and stop pulses and there is no control over the time between characters.

asynchronous working [COMPUT SCI] The mode of operation of a computer in which an operation is performed only at the end of the preceding operation.

asyndetic [COMPUT SCI] **1.** Omitting conjunctions or connectives. **2.** Pertaining to a catalog without cross references.

asynergia [MED] Faulty coordination of groups of organs or muscles normally acting in unison; particularly, the abnormal state of muscle antagonism in cerebellar disease.

asystole [MED] The absence of cardiac contraction; cardiac arrest.

at *See* technical atmosphere.

At *See* astatine.

ata [MECH] A unit of absolute pressure in the metric technical system equal to 1 technical atmosphere.

ATA *See* aminotriazole.

Atabrine [PHARM] A trade name for quinacrine.

atacamite [MINERAL] $Cu_2Cl(OH)_3$ Native, green hydrous copper oxychloride crystallizing in the orthorhombic system.

atactic [ORG CHEM] Of the configuration for a polymer, having the opposite steric configurations for the carbon atoms of the polymer chain occur in equal frequency and more or less at random.

atactostele [BOT] A type of monocotyledonous siphonostele in which the vascular bundles are dispersed irregularly throughout the center of the stem.

atavism [EVOL] Appearance of a distant ancestral form of an organism or one of its parts due to reactivation of ancestral genes.

ataxia [MED] Lack of muscular coordination due to any of several nervous system diseases.

ataxic [GEOL] Pertaining to unstratified ore deposits.

ataxiophobia [PSYCH] Abnormal fear of disorder.

ataxite [GEOL] An iron meteorite that lacks the structure of either hexahedrite or octahedrite and contains more than 10% nickel. [PETR] A taxitic rock whose components are arranged in a breccialike manner, that is, there is no specific arrangement.

ATC *See* air-traffic control.

ATCRBS *See* air-traffic control radar beacon system.

ATDM *See* asynchronous time-divison multiplexing.

atectonic [GEOL] Of an event that occurs when orogeny is not taking place.

atectonic pluton [GEOL] A pluton that is emplaced when orogeny is not occurring.

atelectasis [MED] **1.** Total or partial collapsed state of the lung. **2.** Failure of the lung to expand at birth.

Ateleopoidei [VERT ZOO] A family of oceanic fishes in the order Cetomimiformes characterized by an elongate body, lack of a dorsal fin, and an anal fin continuous with the caudal fin.

atelestite [MINERAL] $Bi_8(AsO_4)_3O_5(OH)_5$ A yellow mineral consisting of basic bismuth arsenate and occurring in minute crystals; specific gravity is 6.82.

ateliosis [MED] Infantilism or dwarfism characterized by general, but proportional, underdevelopment and normal intelligence; associated with anterior pituitary deficiencies.

Atelopodidae [VERT ZOO] A family of small, brilliantly colored South and Central American frogs in the suborder Procoela.

Atelostomata [INV ZOO] A superorder of echinoderms in the subclass Euechinoidea characterized by a rigid, exocylic test and lacking a lantern, or jaw, apparatus.

Athalamida [INV ZOO] An order of naked amebas of the subclass Granuloreticulosia in which pseudopodia are branched and threadlike (reticulopodia).

Athecanephria [INV ZOO] An order of tube-dwelling, tentaculate animals in the class Pogonophora characterized by a saclike anterior coelom.

athecate [INV ZOO] Lacking a theca.

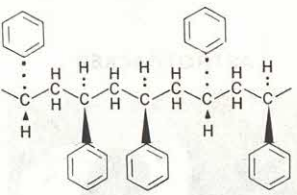
Atherinidae [VERT ZOO] The silversides, a family of actinopterygian fishes of the order Atheriniformes.

Atheriniformes [VERT ZOO] An order of actinopterygian fishes in the infraclass Teleostei, including flyingfishes, needlefishes, killifishes, silversides, and allied species.

athermalize [ENG] To make independent of temperature or of thermal effects.

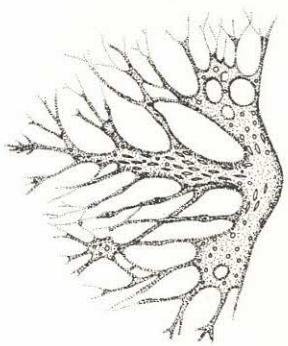
athermal transformation [PHYS] A chemical or physical change not requiring a change in the temperature of the substance, as in the formation of martensite.

ATACTIC



Atactic type of spatially oriented polymers.

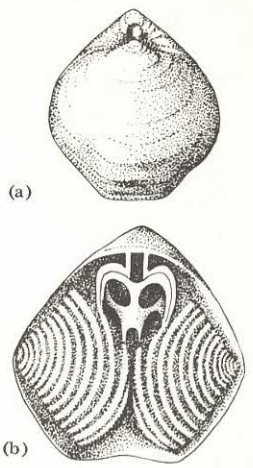
ATHALAMIDA



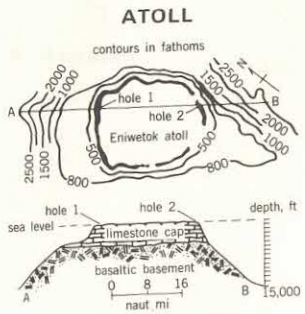
A representative athalamid, *Biomyxa vagans (after Leidy). (From R. P. Hall, Protozoology, Prentice-Hall, 1953)*

athermancy [ELECTROMAG] Property of a substance which cannot transmit infrared radiation.
atheroma [MED] **1.** Fatty degeneration of the inner arterial walls. **2.** A fatty cyst.
atherosclerosis [MED] Deposition of lipid with proliferation of fibrous connective tissue cells in the inner walls of the arteries.
athetosis [MED] Slow, recurrent, involuntary wormlike movements of various parts of the body associated with lesions of the basal ganglia.
athetotic speech [MED] Disorder of articulation rhythm involving a general jerkiness in speech production that interferes with the normal rate of speech; associated with athetosis.
Athey wheel [MECH ENG] A crawler wheel assembly used on tractors for moving over soft terrain.
Athiorhodaceae [MICROBIO] Formerly the nonsulfur photosynthetic bacteria, a family of small, gram-negative, nonsporeforming, motile bacteria in the suborder Rhodobacterineae.
athlete's foot [MED] Dermatophytosis of the feet, usually affecting the skin between the toes.
athodyd [AERO ENG] A type of jet engine, consisting essentially of a duct or tube of varying diameter and open at both ends, which admits air at one end, compresses it by the forward motion of the engine, adds heat to it by the combustion of fuel, and discharges the resulting gases at the other end to produce thrust.
athrocyte [HISTOL] A cell that engulfs extraneous material and stores it as granules in the cytoplasm.
athrogenic [PETR] Of or pertaining to pyroclastics.
athwartship [NAV ARCH] Perpendicular to the fore and aft centerline of a ship.
Athyrididina [PALEON] A suborder of fossil articulate brachiopods in the order Spiriferida characterized by laterally or, more rarely, ventrally directed spires.
A-1 time [ASTRON] A particular atomic time scale, established by the U.S. Naval Observatory, with the origin on Jan.1, 1958, at zero hours Universal Time and with the unit (second) equal to 9,192,631,770 cycles of cesium at zero field.
Atlantacea [INV ZOO] A superfamily of mollusks in the subclass Prosobranchia.
Atlantic Ocean [GEOGR] The large body of water separating the continents of North and South America from Europe and Africa and extending from the Arctic Ocean to the continent of Antarctica.
Atlantic series [PETR] A great group of igneous rocks, based on tectonic setting, found in nonorogenic areas, often associated with block sinking and great crustal instability, and erupted along faults and fissures or through explosion vents. Also known as Atlantic suite.
Atlantic standard time *See* Atlantic time.
Atlantic suite *See* Atlantic series.
Atlantic time [ASTRON] A time zone; the fourth zone west of Greenwich. Also known as Atlantic standard time.
Atlantic-type continental margin [GEOL] A continental margin typified by that of the Atlantic which is aseismic because oceanic and continental lithospheres are coupled.
atlantite [PETR] An olivine-bearing nepheline tephrite.
atlas [ANAT] The first cervical vertebra. [MAP] A collection of charts or maps kept loose or bound in a volume.
Atlas [ORD] A U.S. Air Force surface-to-surface intercontinental ballistic missile having a range of about 6000 miles (9700 kilometers) and capable of carrying nuclear warheads.
Atlas-Centaur launch vehicle [AERO ENG] A two-stage rocket consisting of an Atlas first stage and a Centaur second stage; used for launching uncrewed spacecraft.
atlas grid [MAP] A reference system that permits the designation of the location of a point or an area on a map, photo, or other graphic in terms of numbers and letters. Also known as alphanumeric grid.
Atlas-Johnson tubing joint [PETRO ENG] A tapered, screw-on joint for connecting lengths of tubing for oil-well casing strings.
atm *See* atmosphere.
atmidometer *See* atmometer.
atmoclast [GEOL] A fragment of rock broken off in place by atmospheric weathering.
atmoclastic [PETR] Of a clastic rock, composed of atmoclasts that have been recemented without rearrangement.
atmogenic [GEOL] Of rocks, minerals, and other deposits derived directly from the atmosphere by condensation, wind action, or deposition from volcanic vapors; for example, snow.
atmolith [GEOL] A rock precipitated from the atmosphere, that is, an atmogenic rock.
atmolysis [FL MECH] The separation of gas mixtures by using their relative diffusibility through a porous partition.
atmo-meter *See* meter-atmosphere.
atmometer [ENG] The general name for an instrument which measures the evaporation rate of water into the atmosphere. Also known as atmidometer; evaporation gage; evaporimeter.
atmophile element [METEOROL] **1.** Any of the most typical elements of the atmosphere (hydrogen, carbon, nitrogen, oxygen, iodine, mercury, and inert gases). **2.** Any of the elements which either occur in the uncombined state or, as volatile compounds, concentrate in the gaseous primordial atmosphere.
atmosphere [MECH] A unit of pressure equal to 1.013250×10^6 dynes/cm^2, which is the air pressure measured at mean sea level. Abbreviated atm. Also known as standard atmosphere. [METEOROL] The gaseous envelope surrounding a planet or celestial body.
atmospheric absorption [GEOPHYS] The reduction in energy of microwaves by gases and moisture in the atmosphere.
atmospheric acoustics [ACOUS] The science of sound waves in the open air.
atmospheric attenuation [GEOPHYS] A process in which the flux density of a parallel beam of energy decreases with increasing distance from the source as a result of absorption or scattering by the atmosphere.
atmospheric boil *See* terrestrial scintillation.
atmospheric boundary layer *See* surface boundary layer.
atmospheric braking [AERO ENG] **1.** Slowing down an object entering the atmosphere of the earth or other planet from space by using the drag exerted by air or other gas particles in the atmosphere. **2.** The action of the drag so exerted.
atmospheric chemistry [METEOROL] The study of the production, transport, modification, and removal of atmospheric constituents in the troposphere and stratosphere.
atmospheric composition [METEOROL] The chemical abundance in the earth's atmosphere of its constituents, including nitrogen, oxygen, argon, carbon dioxide, water vapor, ozone, neon, helium, krypton, methane, hydrogen, and nitrous oxide.
atmospheric condensation [METEOROL] The transformation of water in the air from a vapor phase to dew, fog, or cloud.
atmospheric control [ORD] **1.** Any device or system designed to operate movable aerodynamic control surfaces to direct a guided missile in an atmosphere dense enough for such controls to be effective. **2.** The control provided by such devices.
atmospheric cooler [MECH ENG] A fluids cooler that utilizes the cooling effect of ambient air surrounding the hot, fluids-filled tubes.
atmospheric corrosion [MET] The gradual destruction or alteration of a metal or alloy by contact with substances present in the atmosphere, such as oxygen, carbon dioxide, water vapor, and sulfur and chlorine compounds.
atmospheric density [METEOROL] The ratio of the mass of a portion of the atmosphere to the volume it occupies.
atmospheric diffusion [METEOROL] The exchange of fluid parcels between regions in the atmosphere in the apparently random motions of a scale too small to be treated by equations of motion.
atmospheric distillation [CHEM ENG] Distillation operation conducted at atmospheric pressure, in contrast to vacuum distillation or pressure distillation.
atmospheric disturbance [METEOROL] Any agitation or disruption of the atmospheric steady state.
atmospheric drag [FL MECH] A major perturbation of close artificial satellite orbits caused by the resistance of the atmosphere; the secular effects are decreasing eccentricity, semidiameter, and period.
atmospheric duct [GEOPHYS] A stratum of the troposphere within which the refractive index varies so as to confine within the limits of the stratum the propagation of an abnormally large proportion of any radiation of sufficiently high frequency, as in a mirage.
atmospheric electric field [GEOPHYS] The atmosphere's electric field strength in volts per meter at any specified point in time and space; near the earth's surface, in fair-weather areas, a

ATHYRIDIDINA



Composita, a genus in Athyrididina: (*a*) dorsal view, (*b*) ventral view with pedicle cut away to show spire. *(From R. C. Moore, ed., Treatise on Invertebrate Palentology, pt. H, Geological Society of America, Inc., and University of Kansas Press, 1965)*



The Eniwetok atoll in the Marshall Islands.

typical datum is about 100 and the field is directed vertically in such a way as to drive positive charges downward.

atmospheric electricity [GEOPHYS] The electrical processes occurring in the lower atmosphere, including both the intense local electrification accompanying storms and the much weaker fair-weather electrical activity over the entire globe produced by the electrified storms continuously in progress.

atmospheric entry [AERO ENG] The penetration of any planetary atmosphere by any object from outer space; specifically, the penetration of the earth's atmosphere by a crewed or uncrewed capsule or spacecraft.

atmospheric evaporation [HYD] The exchange of water between the earth's oceans, lakes, rivers, ice, snow, and soil and the atmosphere.

atmospheric gas [METEOROL] One of the constituents of air, which is a gaseous mixture primarily of nitrogen, oxygen, argon, carbon dioxide, water vapor, ozone, neon, helium, krypton, methane, hydrogen, and nitrous oxide.

atmospheric general circulation [METEOROL] The statistical mean global flow pattern of the atmosphere.

atmospheric impurity [ENG] An extraneous substance that is mixed as a contaminant with the air of the atmosphere.

atmospheric interference [GEOPHYS] Electromagnetic radiation, caused by natural electrical disturbances in the atmosphere, which interferes with radio systems. Also known as atmospherics; sferics; strays.

atmospheric ionization [GEOPHYS] The process by which neutral atmospheric molecules or atoms are rendered electrically charged chiefly by collisions with high-energy particles.

atmospheric lapse rate *See* environmental lapse rate.

atmospheric layer *See* atmospheric shell.

atmospheric noise [ELECTR] Noise heard during radio reception due to atmospheric interference.

atmospheric optics *See* meteorological optics.

atmospheric physics [GEOPHYS] The study of the physical phenomena of the atmosphere.

atmospheric pressure [PHYS] The pressure at any point in an atmosphere due solely to the weight of the atmospheric gases above the point concerned. Also known as barometric pressure.

atmospheric radiation [GEOPHYS] Infrared radiation emitted by or being propagated through the atmosphere.

atmospheric radio wave [ELECTROMAG] Radio wave that is propagated by reflection in the atmosphere; may include either the ionospheric wave or the tropospheric wave, or both.

atmospheric refraction [GEOPHYS] **1.** The angular difference between the apparent zenith distance of a celestial body and its true zenith distance, produced by refraction effects as the light from the body penetrates the atmosphere. **2.** Any refraction caused by the atmosphere's normal decrease in density with height.

atmospheric region *See* atmospheric shell.

atmospherics *See* atmospheric interference.

atmospheric scattering [GEOPHYS] A change in the direction of propagation, frequency, or polarization of electromagnetic radiation caused by interaction with the atoms of the atmosphere.

atmospheric shell [METEOROL] Any one of a number of strata or layers of the earth's atmosphere; temperature distribution is the most common criterion used for denoting the various shells. Also known as atmospheric layer; atmospheric region.

atmospheric shimmer *See* terrestrial scintillation.

atmospheric sounding [METEOROL] A measurement of atmospheric conditions aloft, above the effective range of surface weather observations.

atmospheric steam curing [ENG] The steam curing of concrete or cement products at atmospheric pressure, usually at a maximum ambient temperature between 100 and 200°F (40 and 95°C).

atmospheric structure [METEOROL] Atmospheric characteristics, including wind direction and velocity, altitude, air density, and velocity of sound.

atmospheric suspensoids [METEOROL] Moderately finely divided particles suspended in the atmosphere; dust is an example.

atmospheric tide [GEOPHYS] Periodic global motions of the earth's atmosphere, produced by gravitational action of the sun and moon; amplitudes are minute except in the upper atmosphere.

atmospheric turbulence [METEOROL] Apparently random fluctuations of the atmosphere that often constitute major deformations of its state of fluid flow.

Atokan [GEOL] A North American provincial series in lower Middle Pennsylvanian geologic time, above Morrowan, below Desmoinesian.

atoll [GEOGR] A ring-shaped coral reef that surrounds a lagoon without projecting land area and that is surrounded by open sea.

atoll texture [GEOL] The surrounding of a ring of one mineral with another mineral, or minerals, within and without the ring. Also known as core texture.

atom [COMPUT SCI] A primitive data element in a data structure. [CHEM] The individual structure which constitutes the basic unit of any chemical element. [MATH] An element, A, of a measure algebra, other than the zero element, which has the property that any element which is equal to or less than A is either equal to A or equal to the zero element.

atomic absorption coefficient [PHYS] The linear absorption coefficient divided by the number of atoms per unit volume.

atomic airburst [ORD] The explosion of an atomic weapon in the air at a height greater than the maximum radius of the fireball.

atomic ammunition [ORD] Formerly, ammunition deriving its explosive force from nuclear fission; now, all ammunition which derives its explosive force from a chain reaction of active nuclear material.

atomic battery *See* nuclear battery.

atomic beam [PHYS] A stream of atoms, which may or may not be ionized.

atomic-beam frequency standard [PHYS] A source of precisely timed signals which are derived from an atomic-beam resonance, such as a cesium-beam cell or a hydrogen maser.

atomic beam resonance [PHYS] Phenomenon in which an oscillating magnetic field, superimposed on a uniform magnetic field at right angles to it, causes transitions between states with different magnetic quantum numbers of the nuclei of atoms in a beam passing through the field; the transitions occur only when the frequency of the oscillating field assumes certain characteristic values.

atomic bomb [ORD] Also known as A bomb. **1.** A device for suddenly producing an explosively rapid neutron chain reaction in a fissile material such as uranium-235 or plutonium-239. Also known as fission bomb. **2.** Any explosive device which derives its energy from nuclear reactions, including a fusion bomb. Also known as nuclear bomb.

atomic charge [ATOM PHYS] The electric charge of an ion equal to the number of electrons the atom has gained or lost in its ionization multiplied by the charge on one electron.

atomic clock [HOROL] An electronic clock whose frequency is supplied or governed by the natural resonance frequencies of atoms or molecules of suitable substances.

atomic cloud [NUCLEO] The cloud of hot gases, smoke, dust, and other matter that is carried aloft after the explosion of a nuclear weapon in the air or near the surface; frequently has a mushroom shape.

atomic constants [PHYS] The physical constants which play a fundamental role in atomic physics, including the electronic charge, electronic mass, speed of light, Avogadro number, and Planck's constant.

atomic device *See* atomic weapon.

atomic diamagnetism [ATOM PHYS] Diamagnetic ionic susceptibility, important in providing correction factors for measured magnetic susceptibilities; calculated theoretically by considering electron density distributions summed for each electron shell.

atomic energy *See* nuclear energy.

atomic energy level [ATOM PHYS] A definite value of energy possible for an atom, either in the ground state or an excited condition.

atomic fallout *See* fallout.

atomic fission *See* fission.

atomic form factor *See* atomic scattering factor.

atomic fusion *See* fusion.

atomic gas laser [OPTICS] A gas laser, such as the helium-neon laser, in which electrons and ions accelerated between electrodes by an electric field collide and excite atoms and ions to higher energy levels; laser action occurs during subsequent decay back to lower energy levels.

atomic ground state [ATOM PHYS] The state of lowest energy

gy in which an atom can exist. Also known as atomic unexcited state.

atomic heat capacity [PHYS CHEM] The heat capacity of a gram-atomic weight of an element.

atomic hydrogen [CHEM] Gaseous hydrogen whose molecules are dissociated into atoms.

atomic hydrogen maser [PHYS] A maser in which dissociated hydrogen atoms from an electric discharge source are formed into a beam that undergoes selective magnetic processing; can be used as an atomic clock.

atomic hydrogen welding [MET] An arc welding process in which hydrogen gas dissociated by the arc recombines outside the arc to provide intense heat and protection against oxidation for the weld.

atomic magnet [ATOM PHYS] An atom which possesses a magnetic moment either in the ground state or in an excited state.

atomic magnetic moment [ATOM PHYS] A magnetic moment, permanent or temporary, associated with an atom, measured in magnetons.

atomic mass [PHYS] The mass of a neutral atom usually expressed in atomic mass units.

atomic mass unit [PHYS] An arbitrarily defined unit in terms of which the masses of individual atoms are expressed; the standard is the unit of mass equal to $\frac{1}{12}$ the mass of the carbon atom, having as nucleus the isotope with mass number 12. Abbreviated amu. Also known as dalton.

atomic moisture meter [ENG] An instrument that measures the moisture content of coal instantaneously and continuously by bombarding it with neutrons and measuring the neutrons which bounce back to a detector tube after striking hydrogen atoms of water.

atomic nucleus *See* nucleus.

atomic number [NUC PHYS] The number of protons in an atomic nucleus. Also known as proton number.

atomic orbital [ATOM PHYS] The space-dependent part of a wave function describing an electron in an atom.

atomic paramagnetism [ELECTROMAG] The result of a permanent magnetic moment in an atom.

atomic particle [ATOM PHYS] One of the particles of which an atom is constituted, as an electron, neutron, or proton.

atomic percent [CHEM] The number of atoms of an element in 100 atoms representative of a substance.

atomic photoelectric effect *See* photoionization.

atomic physics [PHYS] The science concerned with the structure of the atom, the characteristics of the elementary particles of which the atom is composed, and the processes involved in the interactions of radiant energy with matter.

atomic pile *See* nuclear reactor.

atomic polarization [PHYS CHEM] Polarization of a material arising from the change in dipole moment accompanying the stretching of chemical bonds between unlike atoms in molecules.

atomic power plant [NUCLEO] A means for converting stored nuclear energy into work, such as a nuclear electric power generating station.

atomic radius [PHYS CHEM] **1.** Half the distance of closest approach of two like atoms not united by a bond. **2.** The experimentally determined radius of an atom in a covalently bonded compound.

atomic reactor *See* nuclear reactor.

atomic rocket [AERO ENG] A rocket propelled by an engine in which the energy for the jetstream is to be generated by nuclear fission or fusion. Also known as nuclear rocket.

atomic scattering factor [PHYS] A quantity which expresses the efficiency with which x-rays of a stated wavelength are scattered into a given direction by a particular atom, measured in terms of the corresponding scattering by a point electron. Also known as atomic form factor.

atomic second [PHYS] As defined in 1967, the duration of 9,192,631,770 periods of the radiation corresponding to the two hyperfine levels of the fundamental state of the atom of cesium-133.

atomic spectroscopy [SPECT] The branch of physics concerned with the production, measurement, and interpretation of spectra arising from either emission or absorption of electromagnetic radiation by atoms.

atomic spectrum [SPECT] The spectrum of radiations due to transitions between energy levels in an atom, either absorption or emission.

atomic standard [PHYS] Any supposedly immutable property of an atom, such as the wavelength or frequency of a characteristic spectral line, in terms of which a unit of a physical quantity is defined.

atomic stopping power [NUCLEO] For an ionizing particle passing through an element, the particle's energy loss per atom within a unit area normal to the particle's path; equal to the linear energy transfer (energy loss per unit path length) divided by the number of atoms per unit volume.

atomic structure [ATOM PHYS] The arrangement of the parts of an atom, which consists of a massive, positively charged nucleus surrounded by a cloud of electrons arranged in orbits describable in terms of quantum mechanics.

atomic surface burst [ORD] An atomic missile burst at an elevation such that the fireball touches the ground.

atomic susceptibility [ELECTROMAG] The magnetization of a material per atom per unit of applied field; measured in ergs/oersted/atom.

atomic theory [CHEM] The assumption that matter is composed of particles called atoms and that these are the limit to which matter can be subdivided.

atomic time [HOROL] Any time system standardized with reference to an atomic resonance, such as the international standard cesium-133 transition.

atomic underground burst [ORD] The explosion of an atomic weapon with its center beneath the surface of the ground.

atomic underwater burst [ORD] The explosion of an atomic weapon with its center beneath the surface of the water.

atomic unexcited state *See* atomic ground state.

atomic units *See* Hartree units.

atomic vibration [ATOM PHYS] Periodic, nearly harmonic changes in position of the atoms in a molecule giving rise to many properties of matter, including molecular spectra, heat capacity, and heat conduction.

atomic volume [PHYS CHEM] The volume occupied by 1 gram-atom of an element in the solid state.

atomic weapon [ORD] Any bomb, warhead, or projectile using active nuclear material to cause a chain reaction upon detonation. Also known as atomic device; nuclear weapon.

atomic weight [CHEM] The relative mass of an atom based on a scale in which a specific carbon atom (carbon-12) is assigned a mass value of 12. Abbreviated at. wt.

atomization [MECH ENG] The mechanical subdivision of a bulk liquid or meltable solid, such as certain metals, to produce drops, which vary in diameter depending on the process from under 10 to over 1000 micrometers.

atomizer [MECH ENG] A device that produces a mechanical subdivision of a bulk liquid, as by spraying, sprinkling, misting, or nebulizing.

atomizer burner [MECH ENG] A liquid-fuel burner that atomizes the unignited fuel into a fine spray as it enters the combustion zone.

atomizer mill [MECH ENG] A solids grinder, the product from which is a fine powder.

atomizing humidifier [MECH ENG] A humidifier in which tiny particles of water are introduced into a stream of air.

atom probe [ENG] An instrument for identifying a single atom or molecule on a metal surface; it consists of a field ion microscope with a probe hole in its screen opening into a mass spectrometer; atoms that are removed from the specimen by pulsed field evaporation fly through the probe hole and are detected in the mass spectrometer.

atom smasher *See* particle accelerator.

atony [MED] Absence or extremely low degree of tonus.

atopic allergy [MED] A type of immediate hypersensitivity in humans resulting from spontaneous sensitization, usually by inhaled or ingested antigens; for example, asthma, hay fever, or hives.

atopite [MINERAL] A yellow or brown variety of romeite that contains fluorine.

atopy [MED] Clinically evident hypersensitivity.

ATP *See* adenosinetriphosphate.

ATPase *See* adenosinetriphosphatase.

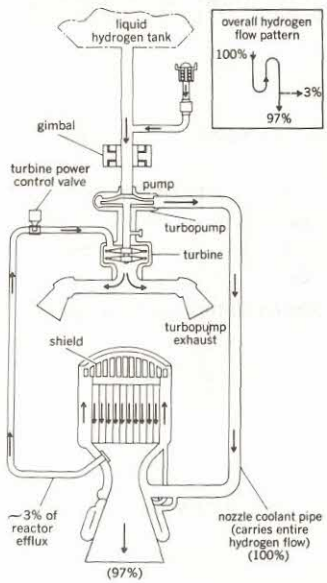
ATR *See* attenuated total reflectance.

A trace [ELECTR] The first trace of an oscilloscope, such as the upper trace of a loran indicator.

Atractidae [INV ZOO] A family of parasitic nematodes in the superfamily Oxyuroidea.

atran [NAV] An acronym for automatic terrain recognition and navigation, a system which depends upon the correlation of

ATOMIC ROCKET



Schematic diagram of the hot-bleed cycle used for the Nerva nuclear rocket engine. The Nerva engine can start and restart itself using a "bootstrap" process, wherein start-up energy is derived from the pressurized propellant and sensible heat of the reactor. *(From W. R. Corliss, Nuclear Propulsion for Space, USAEC, 1967)*

terrain images appearing on a radar cathode-ray tube with previously prepared maps or simulated radar images of the terrain.

atrazine *See* 2-chloro-4-ethylamino-6-isopropylamino-*s*-triazine.

atresia [MED] Imperforation or closure of a natural orifice or passage of the body.

atrial flutter [MED] A cardiac arrhythmia characterized by rapid, irregular atrial impulses and ineffective atrial contractions; the heartbeat varies from 60 to 180 per minute and is grossly irregular in intensity and rhythm. Also known as auricular flutter.

atrial septum [ANAT] The muscular wall between the atria of the heart. Also known as interatrial septum.

atrichia [MED] Any congenital or acquired condition in which hair is essentially absent.

Atrichornithidae [VERT ZOO] The scrubbirds, a family of suboscine perching birds in the suborder Menurae.

atrichous [CYTOL] Lacking flagella.

atriopore [ZOO] The opening of an atrium as seen in lancelets and tunicates.

atrioventricular canal [EMBRYO] The common passage between the atria and ventricles in the heart of the mammalian embryo before division of the organ into right and left sides.

atrioventricularis communis [MED] A congenital malformation of the heart in which partitioning has not occurred.

atrioventricular valve [ANAT] A structure located at the orifice between the atrium and ventricle which maintains a unidirectional blood flow through the heart.

atrium [ANAT] **1.** The heart chamber that receives blood from the veins. **2.** The main part of the tympanic cavity, below the malleus. **3.** The external chamber to receive water from the gills in lancelets and tunicates. [ARCH] An open court located within a building.

atrophic arthritis *See* rheumatoid arthritis.

atrophic gastritis [MED] Chronic inflammation of the stomach with atrophy of the mucosa.

atrophy [MED] Diminution in the size of a cell, tissue, or organ that was once fully developed and of normal size.

atropine [PHARM] $C_{17}H_{23}O_3N$ An alkaloid extracted from *Atropa belladonna* and related plants of the family Solanaceae; used to relieve muscle spasms and pain, and to dilate the pupil of the eye.

atropine sulfate [PHARM] $C_{34}H_{48}N_2O_{10}S$ In the hydrate form the compound is either granules or powder; melting point is 190–194°C; used as an anticholinergic drug for humans and as an anticholinergic drug and smooth muscle relaxant drug for animals.

atropisomer [ORG CHEM] One of two conformations of a molecule whose interconversion is slow enough to allow separation and isolation under predetermined conditions.

atropous *See* orthotropous.

ATR tube *See* anti-transmit-receive tube.

Atrypidina [PALEON] A suborder of fossil articulate brachiopods in the order Spiriferida.

ATS *See* Administrative Terminal System; applications technology satellite.

attached dune [GEOL] A dune that has formed around a rock or other geological feature in the path of windblown sand.

attached groundwater [HYD] The portion of subsurface water adhering to pore walls in the soil.

attached shock *See* attached shock wave.

attached shock wave [FL MECH] An oblique or conical shock wave that appears to be in contact with the leading edge of an airfoil or the nose of a body in a supersonic flow field. Also known as attached shock.

attached thermometer [ENG] A thermometer which is attached to an instrument to determine its operating temperature.

attachment plug [ELEC] A device having an attached flexible cord containing conductors, and capable of being inserted in a receptacle so as to form an electrical connection between the conductors in the cord and conductors permanently connected to the receptacle.

attack director [COMPUT SCI] An electromechanical analog computer which is designed for surface antisubmarine use and which computes continuous solution of several lines of submarine attack; it is part of several antisubmarine fire control systems.

attack heading [NAV] **1.** The interceptor heading during the attack phase which will achieve the desired track-crossing angle. **2.** The assigned magnetic-compass heading to be flown by aircraft during the delivery phase of an air strike.

attack plane [AERO ENG] A multiweapon carrier aircraft which can carry bombs, torpedoes, and rockets.

attapulgite [MINERAL] $(Mg,Al)_2Si_4O_{10}(OH)\cdot 4H_2O$ A clay mineral with a needlelike shape from Georgia and Florida; active ingredient in most fuller's earth, and used as a suspending agent, as an oil well drilling fluid, as a thickener in latex paint.

attar of roses *See* rose oil.

attemperation [ENG] The regulation of the temperature of a substance.

attemperation of steam [MECH ENG] The controlled cooling, in a steam boiler, of steam at the superheater outlet or between the primary and secondary stages of the superheater to regulate the final steam temperature.

attendant's switchboard [COMMUN] Switchboard of one or more positions in a central-office location which permits the central-office operator to receive, transmit, or cut in on a call to or from one of the lines which the office services.

attended time [COMPUT SCI] The time in which a computer is either switched on and capable of normal operation (including time during which it is temporarily idle but still watched over by computer personnel) or out of service for maintenance work.

attention hypothesis [PSYCH] The theory that a person's attention to objects and other persons is selectively drawn toward areas of great personal interest.

attention span [PSYCH] The period of time a person is able to concentrate his attentions on a given item, usually with respect to learning.

attenuate [ENG ACOUS] To weaken a signal by reducing its level.

attenuated total reflectance [SPECT] A method of spectrophotometric analysis based on the reflection of energy at the interface of two media which have different refractive indices and are in optical contact with each other. Abbreviated ATR. Also known as frustrated internal reflectance; internal reflectance spectroscopy.

attenuated vaccine [IMMUNOL] A suspension of weakened bacteria, viruses, or fractions thereof used to produce active immunity.

attenuation [BOT] Tapering, sometimes to a long point. [MICROBIO] Weakening or reduction of the virulence of a microorganism. [PHYS] The reduction in level of a quantity such as the intensity of a wave, over an interval of a variable such as the distance from a source.

attenuation coefficient [ELECTROMAG] The space rate of attenuation of any transmitted electromagnetic radiation.

attenuation constant [PHYS] A rating for a line or medium through which a plane wave is being transmitted, equal to the relative rate of decrease of an amplitude of a field component, voltage, or current in the direction of propagation, in nepers per unit length.

attenuation distortion [COMMUN] **1.** In a circuit or system, departure from uniform amplification or attenuation over the frequency range required for transmission. **2.** The effect of such departure on a transmitted signal.

attenuation equalizer [ELECTR] Corrective network which is designed to make the absolute value of the transfer impedance, with respect to two chosen pairs of terminals, substantially constant for all frequencies within a desired range.

attenuation factor *See* attenuation constant.

attenuation length [PHYS] The reciprocal of the attenuation coefficient.

attenuation network [ELECTR] Arrangement of circuit elements, usually impedance elements, inserted in circuitry to introduce a known loss or to reduce the impedance level without reflections.

attenuation ratio [PHYS] The magnitude of the propagation ratio.

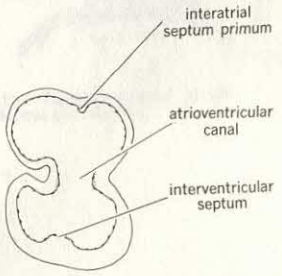
attenuator [ELECTR] An adjustable or fixed transducer for reducing the amplitude of a wave without introducing appreciable distortion.

Atterberg scale [GEOL] A geometric and decimal grade scale for classification of particles in sediments based on the limit value of 2 mm and involving a fixed ratio of 10 for each successive grade; subdivisions are geometric means of the limits of each grade.

attic [BUILD] The part of a building immediately below the roof and entirely or partly within the roof framing.

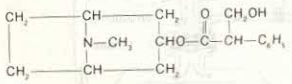
Attican orogeny [GEOL] Late Miocene diastrophism.

ATRIOVENTRICULAR CANAL



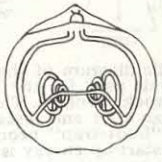
The atrioventricular canal in a 4–5 millimeter human embryo. *(Slightly modified from B. M Patten, Developmental defects at the foramen ovale, Amer. J. Pathol., 14(2):135–161, 1938)*

ATROPINE



Structural formula of atropine.

ATRYPIDINA



Spiralium of *Zygospira*.

attic tank [BUILD] An open tank which is installed above the highest plumbing fixture in a building and which supplies water to the fixtures by gravity.

atticurge [BUILD] Of a doorway, having jambs which are inclined slightly inward, so that the opening is wider at the threshold than at the top.

attic ventilator [BUILD] A mechanical fan located in the attic space of a residence; usually moves large quantities of air at a relatively low velocity.

attitude [AERO ENG] The position or orientation of an aircraft, spacecraft, and so on, either in motion or at rest, as determined by the relationship between its axes and some reference line or plane or some fixed system of reference axes. [GRAPHICS] The orientation of a camera or a photograph with respect to a given external reference system.

attitude control [AERO ENG] **1.** The regulation of the attitude of an aircraft, spacecraft, and so on. **2.** A device or system that automatically regulates and corrects attitude, especially of a pilotless vehicle.

attitude gyro [AERO ENG] Also known as attitude indicator. **1.** A gyro-operated flight instrument that indicates the attitude of an aircraft or spacecraft with respect to a reference coordinate system. **2.** Any gyro-operated instrument that indicates attitude.

attitude indicator *See* attitude gyro.

attitude jet [AERO ENG] **1.** A stream of gas from a jet used to correct or alter the attitude of a flying body either in the atmosphere or in space. **2.** The nozzle that directs this jetstream.

atto- [PHYS] A prefix representing 10^{-18}, which is 0.000 000 000 000 000 001, or one-millionth of a millionth of a millionth. Abbreviated a.

attracted-disk electrometer [ELEC] A type of electrometer in which the attraction between two oppositely charged disks is measured.

attribute [COMPUT SCI] A data item containing information about a variable.

attribute sampling [IND ENG] A quality-control inspection method in which the sampled articles are classified only as defective or nondefective.

attributes testing [ENG] A reliability test procedure in which the items under test are classified according to qualitative characteristics.

attrital coal [GEOL] A bright coal composed of anthraxylon and of attritus in which the translucent cell-wall degradation matter or translucent humic matter predominates, with the ratio of anthraxylon to attritus being less than 1:3.

attrition [GEOL] The act of wearing and smoothing of rock surfaces by the flow of water charged with sand and gravel, by the passage of sand drifts, or by the movement of glaciers. [MATER] Wear caused by rubbing or friction; for metal surfaces, also known as scoring; scouring.

attrition mill [MECH ENG] A machine in which materials are pulverized between two toothed metal disks rotating in opposite directions.

attrition minesweeping [ORD] Minesweeping designed to minimize the number of live mines at any one time in a channel or area being subjected to heavy, continuous mining attack when clearance sweeping is impossible and port closure unacceptable.

attrition rate [ORD] A factor, normally expressed as a percentage, reflecting the degree of losses of personnel or nonconsumable supplies due to various causes within a specified period of time.

attritus [GEOL] **1.** Visible-to-ultramicroscopic particles of vegetable matter produced by microscopic and other organisms in vegetable deposits, particularly in swamps and bogs. **2.** The dull gray to nearly black, frequently striped portion of material that makes up the bulk of some coals and alternate bands of bright anthraxylon in well-banded coals.

atu [PHYS] A unit of underpressure or pressure below atmospheric pressure in the metric technical system; equal to 1 technical atmosphere.

atü [PHYS] A unit of overpressure or gage pressure in the metric technical system; equal to 1 technical atmosphere.

Atwood machine [MECH ENG] A device comprising a pulley over which is passed a stretch-free cord with a weight hanging on each end.

at. wt *See* atomic weight.

Atyidae [INV ZOO] A family of decapod crustaceans belonging to the section Caridea.

A-type star [ASTRON] In star classification based on spectral characteristics, the type of star in whose spectrum the hydrogen absorption lines are at a maximum.

AU *See* astronomical unit.

Au *See* gold.

aubepine *See* anisaldehyde.

Auberger blood group system [IMMUNOL] An immunologically distinct, genetically determined human erythrocyte antigen, demonstrated by reaction with anti-Au^a (anti-Auberger) antibody.

aubrite [GEOL] An enstatite achondrite (meteorite) consisting almost wholly of crystalline-granular enstatite (and clinoenstatite) poor in lime and practically free from ferrous oxide, with accessory oligoclase. Also known as bustite.

Auchenorrhyncha [INV ZOO] A group of homopteran families and one superfamily, in which the beak arises at the anteroventral extremity of the face and is not sheathed by the propleura.

audibility [ACOUS] **1.** The state or quality of being heard. **2.** The intensity of a received audio signal, usually expressed in decibels above or below 1 milliwatt using a stated single-frequency sine wave.

audibility curve [ACOUS] **1.** The limits of hearing represented graphically as an area by plotting the minimum audible intensity of a sine wave sound versus frequency. **2.** *See* equal loudness contour.

audibility threshold [ACOUS] The sound intensity at a given frequency which is the minimum perceptible by a normal human ear under specified standard conditions.

audible frequency *See* audible tone.

audible leak detector [ENG] A device used as an auxiliary to the main leak detector for conversion of the output signal into audible sound.

audible tone [ACOUS] Sound of a frequency which the average human can hear, ranging from 30 to 16,000 hertz. Also known as audible frequency.

audio [ACOUS] **1.** Of or pertaining to sound in the range of frequencies considered audible at reasonable listening intensities to the average young adult listener, approximately 15 to 20,000 hertz. **2.** Pertaining to equipment for the recording, transmission, reproduction, or amplification of such sound.

audio amplifier *See* audio-frequency amplifier.

audio-frequency amplifier [ELECTR] An electronic circuit for amplification of signals within, and in some cases above, the audible range of frequencies in equipment used to record and reproduce sound. Also known as audio amplifier.

audio-frequency choke [ELECTROMAG] Choke used to impede the flow of audio-frequency currents; generally a coil wound on an iron core.

audio-frequency meter [ENG] One of a number of types of frequency meters usable in the audio range; for example, a resonant-reed frequency meter.

audio-frequency oscillator [ELECTR] An oscillator circuit using an electron tube, transistor, or other nonrotating device to produce an audio-frequency alternating current. Also known as audio oscillator.

audio-frequency peak limiter [ELEC] A circuit used in an audio-frequency system to cut off signal peaks that exceed a predetermined value. Also known as audio peak limiter.

audio-frequency range [ACOUS] The range of frequencies to which the human ear is sensitive, approximately 15 to 20,000 hertz. Also known as audio range.

audio-frequency shift modulation [COMMUN] System of facsimile transmission over radio, in which the frequency shift required is applied through an 800-hertz shift of an audio signal, rather than shifting the radio transmitter frequency; the radio signal is modulated by the shifting audio signal, usually at 1500 to 2300 hertz.

audio-frequency transformer [ELEC] An iron-core transformer used for coupling audio-frequency circuits. Also known as audio transformer.

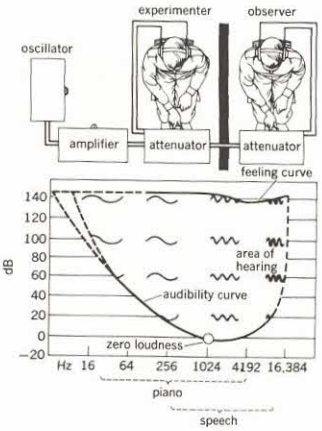
audiogenic seizure [MED] A transient episode of muscular, sensory, or psychic dysfunction induced by sound.

audiogram [ACOUS] A graph showing hearing loss, percent hearing loss, or percent hearing as a function of frequency.

audioimpedance measurement [ACOUS] The measurement of acoustic impedance, as in the direct assessment of the dynamic motor control of sound feedback of different parts of the ear.

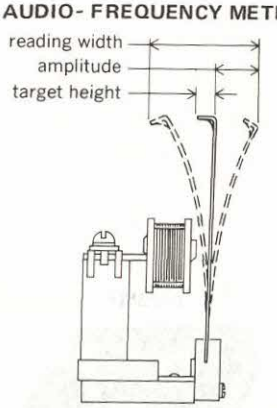
audiology [ACOUS] The science of hearing.

AUDIBILITY CURVE



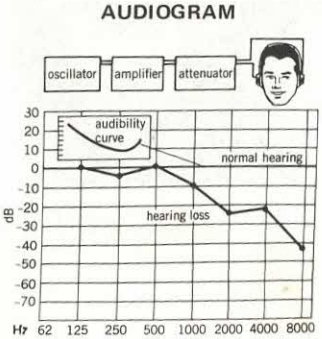
The audibility curve plotted by measuring range of sound intensities in decibels (dB) against the sound frequencies in hertz (Hz).

AUDIO- FREQUENCY METER



Reed-type frequency meter.

AUDIOGRAM



Audiogram for determining the audibility curve for pure-tone hearing loss at various frequency levels.

audio masking *See* masking.

audiometer [ENG] An instrument composed of an oscillator, amplifier, and attenuator and used to measure hearing acuity for pure tones, speech, and bone conduction.

audiometry [ACOUS] The study of hearing ability by means of audiometers.

audio-modulated radiosonde [ENG] A radiosonde with a carrier wave modulated by audio-frequency signals whose frequency is controlled by the sensing elements of the instrument.

audio oscillator *See* audio-frequency oscillator.

audio patch bay [ENG ACOUS] Specific patch panels provided to terminate all audio circuits and equipment used in a channel and technical control facility; this equipment can also be found in transmitting and receiving stations.

audio peak limiter *See* audio-frequency peak limiter.

audio range *See* audio-frequency range.

audio response [COMMUN] A form of computer output in which prerecorded spoken syllables, words, or messages are selected and put together by a computer as the appropriate verbal response to a keyboarded inquiry on a time-shared on-line information system.

audio response unit [COMMUN] A magnetic recording system that provides voice response to an inquiry made from a typewriter or telephone-type terminal connected to a computer by a data transmission line.

audio signal [ACOUS] An electric signal having the frequency of a mechanical wave that can be detected as a sound by the human ear.

audio spectrometer *See* acoustic spectrometer.

audio system *See* sound-reproducing system.

audio transformer *See* audio-frequency transformer.

audiovisual [COMMUN] Pertaining to methods of education and training that make use of both hearing and sight.

audiphone [ENG ACOUS] A device that enables persons with certain types of deafness to hear, consisting of a plate or diaphragm that is placed against the teeth and transmits sound vibrations to the inner ear.

audit [COMPUT SCI] The operations developed to corroborate the evidence as regards authenticity and validity of the data that are introduced into the data-processing problem or system.

audition [PHYSIO] Ability to hear.

auditory [PHYSIO] Pertaining to the act or the organs of hearing.

auditory association area [PHYSIO] The cortical association area in the brain just inferior to the auditory projection area, related to it anatomically and functionally by association fibers.

auditory impedance [PHYSIO] The acoustic impedance of the ear.

auditory nerve [ANAT] The eighth cranial nerve in vertebrates; either of a pair of sensory nerves composed of two sets of nerve fibers, the cochlear nerve and the vestibular nerve. Also known as acoustic nerve; vestibulocochlear nerve.

auditory perspective [ACOUS] Three-dimensional realism of sound, as produced by an actual orchestra or by a stereophonic sound system.

auditory placode [EMBRYO] An ectodermal thickening from which the inner ear develops in vertebrates.

audit trail [COMPUT SCI] A system that provides a means for tracing items of data from processing step to step, particularly from a machine-produced report or other machine output back to the original source data.

Auerbach's plexus *See* myenteric plexus.

Aufbau principle [CHEM] A description of the building up of the elements in which the structure of each in sequence is obtained by simultaneously adding one positive charge (proton) to the nucleus of the atom and one negative charge (electron) to an atomic orbital.

aufwuch [ECOL] A plant or animal organism which is attached or clings to surfaces of leaves or stems of rooted plants above the bottom stratum.

auganite [PETR] An olivine-free basalt (calcic plagioclase and augite are the essential mineral components) or an augite-bearing andesite.

augelite [MINERAL] Natural, basic aluminum phosphate.

augen [PETR] Large, lenticular eye-shaped mineral grain or mineral aggregate visible in some metamorphic rocks.

augend [MATH] A quantity to which another quantity is added.

augen kohle *See* eye coal.

augen structure [PETR] A structure found in some gneisses and granites in which certain of the constituents are squeezed into elliptic or lens-shaped forms and, especially if surrounded by parallel flakes of mica, resemble eyes.

auger [DES ENG] **1.** A wood-boring tool that consists of a shank with spiral channels ending in two spurs, a central tapered feed screw, and a pair of cutting lips. **2.** A large augerlike tool for boring into soil.

auger bit [DES ENG] A bit shaped like an auger but without a handle; used for wood boring and for earth drilling. [MIN ENG] Hard steel or tungsten carbide–tipped cutting teeth used in an auger running on a torque bar or in an auger-drill head running on a continuous-flight auger.

auger boring [ENG] **1.** The hole drilled by the use of auger equipment. **2.** *See* auger drilling.

Auger coefficient [ATOM PHYS] The ratio of the number of Auger electrons to the number of ejected x-ray photons.

auger conveyor *See* screw conveyor.

auger drilling [ENG] A method of drilling in which penetration is accomplished by the cutting or gouging action of chisel-type cutting edges forced into the substance by rotation of the auger bit. Also known as auger boring.

Auger effect [ATOM PHYS] The radiationless transition of an electron in an atom from a discrete electronic level to an ionized continuous level of the same energy. Also known as auto-ionization.

Auger electron [ATOM PHYS] An electron that is expelled from an atom in the Auger effect.

Auger electron spectroscopy [SPECT] The energy analysis of Auger electrons produced when an excited atom relaxes by a radiationless process after ionization by a high-energy electron, ion, or x-ray beam. Abbreviated AES.

auger packer [MECH ENG] A feed mechanism that uses a continuous auger or screw inside a cylindrical sleeve to feed hard-to-flow granulated solids into shipping containers, such as bags or drums.

Auger recombination [ATOM PHYS] Recombination of an electron and a hole in which no electromagnetic radiation is emitted, and the excess energy and momentum of the recombining electron and hole are given up to another electron or hole.

Auger shower [ASTRON] A very large cosmic-ray shower. Also known as extensive air shower.

auget [ENG] A priming tube, used in blasting. Also spelled augette.

augette *See* auget.

augite [MINERAL] $(Ca,Mg,Fe)(Mg,Fe,Al)(Al,Si)_2O_6$ A general name for the monoclinic pyroxenes; occurs as dark green to black, short, stubby, prismatic crystals, often of octagonal outline.

augitite [PETR] A volcanic rock consisting of abundant phenocrysts of augite in a glassy groundmass containing microlites of nepheline and plagioclase, with accessory biotite, apatite, and opaque oxides.

augitophyre [PETR] A porphyritic rock in which the phenocrysts are augite and the groundmass is potash feldspar.

augmentation [ASTRON] The apparent increase in the semidiameter of a celestial body, as observed from the earth, as the body's altitude (angular distance above the horizon) increases, due to the reduced distance from the observer. The term is used principally in reference to the moon.

augmentation correction [NAV] The sextant altitude correction due to the apparent increase in the semidiameter of a celestial body as its altitude increases.

augmentation distance [NUC PHYS] The extrapolation distance, which is the distance between the time boundary of a nuclear reactor and its boundary calculated by extrapolation.

augmentation system [AERO ENG] An electronic servomechanism or feedback control system which provides improvements in aircraft performance or pilot handling characteristics over that of the basic unaugmented aircraft.

augmented matrix [MATH] The matrix of the coefficients, together with the constant terms, in a system of linear equations.

augmented operation code [COMPUT SCI] An operation code which is further defined by information from another portion of an instruction.

augmenter tube [AERO ENG] A tube or pipe, usually one of several, through which the exhaust gases from an aircraft reciprocating engine are directed to provide additional thrust.

Augustin process [MET] A silver extraction process by

AUGITE

2.6 cm

A typical specimen of augite from Latium, Italy. *(American Museum of Natural History specimen)*

roasting to form a chloride, leaching with a salt solution, and precipitating by metallic copper.

auk [VERT ZOO] Any of several large, short-necked diving birds (*Alca*) of the family Alcidae found along North Atlantic coasts.

aulacogen [GEOL] A major fault-bounded trough considered to be one part of a three-rayed fault system on the domes above mantle hot spots; the other two rays open as proto-ocean basins.

Aulodonta [INV ZOO] An order of echinoderms proposed by R. Jackson in 1921.

aulodont dentition [INV ZOO] In echinoderms, grooved teeth with epiphyses that do not meet, so the foramen magnum of the jaw is open.

Aulolepidae [PALEON] A family of marine fossil teleostean fishes in the order Ctenothrissiformes.

aulophobia [PSYCH] Abnormal fear of flutes.

aulophyte [ECOL] A nonparasitic plant that lives in the cavity of another plant for shelter.

Auloporidae [PALEON] A family of Paleozoic corals in the order Tabulata.

A* unit [PHYS] An atomic standard unit of length, based on the tungsten $K\alpha_1$ line, approximately 10^{-11} centimeter; used for measurements of x-ray wavelengths and of crystal dimensions.

auntie *See* antimissile missile.

Aur *See* Auriga.

aura [MED] An unusual sensation preceding the appearance of more definite symptoms; in epilepsy, auras frequently precede the convulsive seizure.

aural [BIOL] Pertaining to the ear or the sense of hearing.

aural masking *See* masking.

aural null [NAV] A signal generated by the operator of a direction finder by the back-and-forth rotation of a loop antenna or the goniometer of an Adcock or other directional antenna system; the position of the rotating mechanism at which the null (minimum signal) is determined to be located indicates the azimuth or bearing of the radio station from which the emission is known to have originated.

aural radio range [ELECTR] A radio-range station providing lines of position by virtue of aural identification or comparison of signals at the output of a receiver.

aural signal [ACOUS] **1.** A signal that can be heard. **2.** The sound portion of a television signal.

aural transmitter [COMMUN] Radio equipment used for transmitting aural (sound) signals from a television broadcast station.

auramine hydrochloride [ORG CHEM] $C_{17}H_{22}ClN_3 \cdot H_2O$ A compound melting at 267°C; very soluble in water, soluble in ethanol; used as a dye and an antiseptic. Also known as yellow pyoktanin.

aurantia [ORG CHEM] $C_{12}H_8N_8O_{12}$ An orange aniline dye, used in stains in biology and in some photographic filters.

aurantiin *See* naringin.

aurelia [INV ZOO] A morphological grouping of paramecia, including the elongate, cigar-shaped species which appear to be nearly circular in cross section.

Aurelia [INV ZOO] A genus of scyphozoans.

aureofacin [MICROBIC] An antifungal antibiotic produced by a strain of *Streptomyces aureofaciens*.

aureole [GEOL] A ring-shaped contact zone surrounding an igneous intrusion. Also known as contact aureole; contact zone; exomorphic zone; metamorphic aureole; metamorphic zone; thermal aureole. [METEOROL] A poorly developed corona in the atmosphere characterized by a bluish-white disk immediately around the luminous celestial body, as around the sun or moon in the fog.

Aureomycin [MICROBIO] The trade name for the antibiotic chlortetracycline.

aureothricin [MICROBIO] $C_9H_{10}O_2N_2S_2$ An antibacterial antibiotic produced by a strain of *Actinomyces*.

aureusidin [BIOCHEM] $C_{15}H_{11}O_5$ A yellow flavonoid pigment found typically in the yellow snapdragon. Also known as 4,6,3′,4′-tetrahydroxyaurone.

Auri *See* Auriga.

aurichalcite [MINERAL] $(Zn,Cu)_5(CO_3)_2(OH)_6$ Pale-green or pale-blue mineral consisting of a basic copper zinc carbonate and occurring in crystalline incrustations. Also known as brass ore.

auricle [ANAT] **1.** An ear-shaped appendage to an atrium of the heart. **2.** Any ear-shaped structure. **3.** *See* pinna.

auric oxide *See* gold oxide.

auricular fibrillation [MED] Arrhythmic contractions of the auricles.

auricular flutter *See* atrial flutter.

auricular height [ANTHRO] Height of the cranium, measured from the auditory point to the vertex.

auricularia larva [INV ZOO] A barrel-shaped, food-gathering larval form with a winding ciliated band, common to holothurians and asteroids.

auricularis [ANAT] Any of the three muscles attached to the cartilage of the external ear.

auriferous [GEOL] Of a substance, especially a mineral deposit, bearing gold.

Auriga [ASTRON] A constellation with a right ascension of 6 hours and declination of 40°N. Abbreviated Aur; Auri.

aurin [ORG CHEM] $C_{19}H_{14}O_3$ A derivative of triphenylmethane; solid with red-brown color with green luster; melting point about 220°C; insoluble in water; used as a dye intermediate. Also known as pararosolic acid; rosolic acid.

aurintricarboxylic acid triammonium salt *See* aluminon.

aurophore [INV ZOO] A bell-shaped structure which is part of the float of certain coelenterates.

aurora [ELEC] *See* corona discharge. [GEOPHYS] The most intense of the several lights emitted by the earth's upper atmosphere, seen most often along the outer realms of the Arctic and Antarctic, where it is called the aurora borealis and aurora australis, respectively; excited by charged particles from space.

Aurora [ASTRON] An asteroid with a diameter of about 220 kilometers, mean distance from the sun of 3.153 astronomical units, and C-type surface composition.

aurora australis [GEOPHYS] The aurora of southern latitudes. Also known as southern lights.

aurora borealis [GEOPHYS] The aurora of northern latitudes. Also known as northern lights.

aurora gating [ELECTR] Operator-controlled gating to eliminate undesirable radar returns from aurora.

auroral [ASTRON] The period of dusk before sunrise.

auroral absorption event [GEOPHYS] A large increase in D-region electron density and associated radio-signal absorption, caused by electron-bombardment of the atmosphere during an aurora or a geomagnetic storm.

auroral caps [GEOPHYS] The regions surrounding the auroral poles, lying between the poles and the auroral zones.

auroral electrojet [GEOPHYS] An intense electric current in the magnetosphere, flowing along the auroral zones during a polar substorm.

auroral forms [GEOPHYS] Auroral display types, of which two are basic: ribbonlike bands and cloudlike surfaces.

auroral frequency [GEOPHYS] The percentage of nights on which an aurora is seen at a particular place, or on which one would be seen if clouds did not interfere.

auroral isochasm [GEOPHYS] A line connecting places of equal auroral frequency, averaged over a number of years.

auroral line [SPECT] A prominent green line in the spectrum of the aurora at a wavelength of 5577 angstroms, resulting from a certain forbidden transition of oxygen.

auroral oval [GEOPHYS] An oval-shaped region centered on the earth's magnetic pole in which auroral emissions occur.

auroral poles [GEOPHYS] The points on the earth's surface on which the auroral isochasms are centered; coincide approximately with the magnetic-axis poles of the geomagnetic field.

auroral region [GEOPHYS] The region within 30° geomagnetic latitude of each auroral pole.

auroral storm [GEOPHYS] A rapid succession of auroral substorms, occurring in a short period, of the order of a day, during a geomagnetic storm.

auroral substorm [GEOPHYS] A characteristic sequence of auroral intensifications and movements occurring around midnight, in which a rapid poleward movement of auroral arcs produces a bulge in the auroral oval.

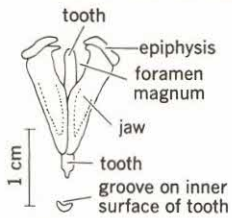
auroral zone [GEOPHYS] A roughly circular band around either geomagnetic pole within which there is a maximum of auroral activity; lies about 10–15° geomagnetic latitude from the geomagnetic poles.

auroral zone blackout [GEOPHYS] Communication fadeout in the auroral zone most often due to an increase of ionization in the lower atmosphere.

aurora polaris [GEOPHYS] A high-altitude aurora borealis or aurora australis.

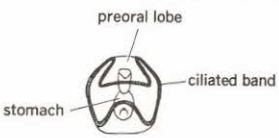
aurosmiridium [MINERAL] A brittle, silver-white, isometric

AULODONT DENTITION



Lantern structure in aulodont dentition; a single interradial jaw is shown and below it a cross section of the tooth.

AURICULARIA LARVA



Auricularia larva, showing the ciliated band.

AURORA

Photograph of aurora borealis taken at College, Alaska. *(V. P. Hessler, University of Alaska)*

mineral consisting of a solid solution of gold and osmium in iridium.

aurothioglucose [PHARM] $C_6H_{11}AuO_5S$ A compound of gold with thioglucose, used for the treatment of rheumatoid arthritis and nondisseminated lupus erythematosus; administered in oil suspension.

auscultation [MED] The act of listening to sounds from internal organs, especially the heart and lungs, to aid in diagnosing their physical state.

ausforging [MET] The forming of austenitic steel into required shapes by hammering or pressing after cooling.

ausrolling [MET] The working of austenitic steel by passing it, after cooling, between oppositely revolving rollers.

austausch coefficient *See* exchange coefficient.

austempering [MET] A process for the heat treatment of austenitic steel.

austenite [MET] Gamma iron with carbon in solution.

austenitic [MET] Composed mainly of austenite.

austenitic cast iron [MET] The product resulting from changing the basic crystalline structure of gray or ductile iron by alloying it with substantial amounts of nickel, manganese, silicon, or other elements.

austenitic manganese steel *See* Hadfield manganese steel.

austenitic stainless steel [MET] Stainless steel composed principally of austenite made stable by alloying with nickel.

austenitic steel [MET] An alloy whose structure is typically that of austenite at room temperature.

austenitize [MET] To heat steel to the temperature range in which the crystalline form of the iron is austenite.

auster *See* ostria.

austinite [MINERAL] $CaZnAsO_4(OH)$ A colorless or yellowish mineral crystallizing in the orthorhombic system; consists of a basic calcium zinc arsenate; hardness is 4.5 on Mohs scale, and specific gravity is 4.13.

austral [GEOD] Of or pertaining to south.

austral axis pole [GEOPHYS] The southern intersection of the geomagnetic axis with the earth's surface.

Australia [GEOGR] An island continent of 2,941,526 square miles (7,618,517 square kilometers), with low elevation and moderate relief, situated in the southern Pacific.

Australia antigen [IMMUNOL] An infectious agent that causes hepatitis in some people; similar to an inherited serum protein in being polymorphic.

Australian faunal region [ECOL] A zoogeographic region that includes the terrestrial animal communities of Australia and all surrounding islands except those of Asia.

Australian X disease *See* Murray Valley encephalitis.

australite [GEOL] A tektite found in southern Australia, occurring as glass balls and spheroidal dumbbell forms of green and black, similar to obsidian and probably of cosmic origin.

Australopithecinae [PALEON] The near-men, a subfamily of the family Hominidae composed of the single genus *Australopithecus*.

Australopithecus [PALEON] A genus of near-men in the subfamily Australopithecinae representing a side branch of human evolution.

austral region [ECOL] A North American biogeographic region including the region between transitional and tropical zones.

Austrian orogeny [GEOL] A short-lived orogeny during the end of the Early Cretaceous.

Austroastacidae [INV ZOO] A family of crayfish in the order Decapoda found in temperate regions of the Southern Hemisphere.

Austrodecidae [INV ZOO] A monogeneric family of marine arthropods in the subphylum Pycnogonida.

Austroriparian life zone [ECOL] The zone in which occurs the climate and biotic communities of the southeastern coniferous forests of North America.

autallotriomorphic [PETR] Pertaining to an aplitic texture in which all mineral constituents crystallized simultaneously, preventing the development of euhedral crystals.

autecology [ECOL] The ecological relations between a plant species and its environment.

authalic latitude [MAP] A latitude based on a sphere having the same area as the spheroid, and such that areas between successive parallels of latitude are exactly equal to the corresponding areas on the spheroid. Also known as equal-area latitude.

authalic map projection *See* equal-area map projection.

authentication [COMMUN] Security measure designed to protect a communications system against fraudulent transmissions and establish the authenticity of a message by an authenticator within the transmission derived from certain predetermined elements of the message itself.

authenticator [COMMUN] Letter, numeral, or groups of letters or numerals attesting to the authenticity of a message or transmission.

authigene [MINERAL] A mineral which has not been transported but has been formed in place. Also known as authigenic mineral.

authigenic [GEOL] Of constituents that came into existence with or after the formation of the rock of which they constitute a part; for example, the primary and secondary minerals of igneous rocks.

authigenic mineral *See* authigene.

authigenic sediment [GEOL] Sediment occurring in the place where it was originally formed.

authoring language [COMPUT SCI] A programming language designed to be convenient for authors of computer-based learning materials.

authoritarian character [PSYCH] A personality that asks unquestioning subordination and obedience but is intolerant of weakness in others, rejects members of groups other than his own, is very rigid, and requires all issues to be decided in black and white, yet may accept superior authority in a servile way.

authorized carrier frequency [COMMUN] A specific carrier frequency authorized for use, from which the actual carrier frequency is permitted to deviate, solely because of frequency instability, by an amount not to exceed the frequency tolerance.

autism [PSYCH] A schizophrenic symptom characterized by absorption in fantasy to the exclusion of perceptual reality.

autistic [PSYCH] **1.** Pertaining to or characterized by autism. **2.** Behavior, most commonly in children, characterized by aphonia, disregard for reality, self-manipulation, and sometimes a preoccupation with pointed or shiny objects.

auto-abstract [COMPUT SCI] **1.** To select key words from a document, commonly by an automatic or machine method, for the purpose of forming an abstract of the document. **2.** The material abstracted from a document by machine methods.

autoacceleration [ORG CHEM] The increase in polymerization rate and molecular weight of certain vinyl monomers during bulk polymerization.

autoagglutination [IMMUNOL] Agglutination of an individual's erythrocytes by his own serum. Also known as autohemagglutination.

autoagglutinin [IMMUNOL] An antibody in an individual's blood serum that causes agglutination of his own erythrocytes.

autoalarm *See* automatic alarm receiver.

autoallelopathy [PL PHYS] Inhibition of a species by self-produced toxins.

autoanalysis [PSYCH] Self-analysis, a technique of psychotherapy.

autoantibody [IMMUNOL] An antibody formed by an individual against his own tissues; common in hemolytic anemias.

autoantigen [IMMUNOL] A tissue within the body which acquires the ability to incite the formation of complementary antibodies.

autoasphyxiation [PHYSIO] Asphyxiation by the products of metabolic activity.

autobarotropy [METEOROL] The state of a fluid which is characterized by both barotropy and piezotropy when the coefficients of barotropy and piezotropy are equal.

autobasidium [MYCOL] An undivided basidium typically found in higher Basidiomycetes.

autoboat *See* motorboat.

autobrecciation [GEOL] The process whereby portions of the first consolidated crust of a lava flow are incorporated into the still-fluid portion.

autocarp [BOT] **1.** A fruit formed as the result of self-fertilization. **2.** A fruit consisting of the ripened pericarp without adnate parts.

autocarpy [BOT] Production of fruit by self-fertilization.

autocatalysis [CHEM] A catalytic reaction started by the products of a reaction that was itself catalytic.

autochory [ECOL] Active self-dispersal of individuals or their disseminules.

autochrome plate [GRAPHICS] A photographic plate once used for direct color photography on coated glass; the glass must

be viewed as a transparency, with the image formed in the film of dyed starch grains coating the glass.

autochthon [GEOL] A succession of rock beds that have been moved comparatively little from their original site of formation, although they may be folded and faulted extensively. [PALEON] A fossil occurring where the organism once lived.

autochthonous [GEOL] Having been formed or occurring in the place where found.

autochthonous coal [GEOL] Coal believed to have originated from accumulations of plant debris at the place where the plants grew. Also known as indigenous coal.

autochthonous microorganism [MICROBIO] An indigenous form of soil microorganisms, responsible for chemical processes that occur in the soil under normal conditions.

autochthonous sediment [GEOL] A residual soil deposit formed in place through decomposition.

autochthonous stream [HYD] A stream flowing in its original channel.

autoclastic [GEOL] Of rock, fragmented in place by folding due to orogenic forces when the rock is not so heavily loaded as to render it plastic.

autoclastic schist [GEOL] Schist formed in place from massive rocks by crushing and squeezing.

autoclave [ENG] An airtight vessel for heating and sometimes agitating its contents under high steam pressure; used for industrial processing, sterilizing, and cooking with moist or dry heat at high temperatures.

autoclave curing [ENG] Steam curing of concrete products, sand-lime brick, asbestos cement products, hydrous calcium silicate insulation products, or cement in an autoclave at maximum ambient temperatures generally between 340 and 420°F (170 and 215°C).

autoclave molding [ENG] A method of curing reinforced plastics that uses an autoclave with 50–100 psi (345–690 kilopascals) steam pressure to set the resin.

autoclaving [SCI TECH] Heating of liquids or sterilizing of equipment at high steam pressure.

autocode [COMPUT SCI] The process of using a computer to convert automatically a symbolic code into a machine code. Also known as automatic code.

autocoder [COMPUT SCI] A person or machine producing or using autocode as a part or the whole of some task.

autocollimation [OPTICS] A procedure for collimating a telescope or other optical instrument with objective and crosshairs, in which the instrument is directed toward a plane mirror and the crosshairs and lens are adjusted so that the crosshairs coincide with their reflected image.

autocollimator [OPTICS] **1.** A device by which a single lens collimates diverging light from a slit, and then focuses the light on an exit slit after it has passed through a prism to a mirror and been reflected back through the prism. **2.** A telescope which has a graduated reticle, enabling an observer to read off the angles subtended by distant objects. **3.** A convex mirror at the focus of the principal mirror of a reflecting telescope, which causes light to leave the telescope in a parallel beam. **4.** A telescope equipped with an eyepiece designed for autocollimation.

autoconsequent falls [HYD] Waterfalls in streams carrying a heavy load of calcium carbonate in solution which develop at particular sites along the stream course where warming, evaporation, and other factors cause part of the solution load to be precipitated.

autoconsequent stream [HYD] A stream in the process of building a fan or an alluvial plain, the course of which is guided by the slopes of the alluvium the stream itself has deposited.

autoconvection [METEOROL] The phenomenon of the spontaneous initiation of convection in an atmospheric layer in which the lapse rate is equal to or greater than the autoconvective lapse rate.

autoconvection gradient *See* autoconvective lapse rate.

autoconvective instability *See* absolute instability.

autoconvective lapse rate [METEOROL] The largely hypothetical environmental lapse rate of temperature in an atmosphere in which the density is constant with height (homogeneous atmosphere); 3°C per 100 meters in dry air. Also known as autoconvection gradient.

autocopulation [INV ZOO] Self-copulation; sometimes occurs in certain hermaphroditic worms.

autocorrelation [ELECTR] A technique used to detect cyclic activity in a complex signal.

autocorrelation function [MATH] For a function $f(t)$, the limit as T approaches infinity of $\frac{1}{2}T$ times the integral from $-T$ to T of $f(t)f(t-\tau)dt$, where τ is a time-delay parameter.

autocorrelator [ELECTR] A correlator in which the input signal is delayed and multiplied by the undelayed signal, the product of which is then smoothed in a low-pass filter to give an approximate computation of the autocorrelation function; used to detect a nonperiodic signal or a weak periodic signal hidden in noise.

autodecrement addressing [COMPUT SCI] An addressing mode of minicomputers in which the register is first decremented and then used as a pointer.

autodeme [ECOL] A plant population in which most individuals are self-fertilized.

autodyne circuit [ELECTR] A circuit in which the same tube elements serve as oscillator and detector simultaneously.

autodyne reception [COMMUN] System of heterodyne reception through the use of a device which is both an oscillator and a detector.

autoecious *See* autoicous.

Autofining process [CHEM ENG] A fixed-bed catalytic process for desulfurizing distillates; the pelleted catalyst is cobalt molybdate on alumina and may be regenerated in place.

autofocus rectifier [OPTICS] A precise, vertical photoenlarger which permits the correction of distortion in an aerial negative caused by tilt.

autofrettage [ENG] A process for manufacturing gun barrels; prestressing the metal increases the load at which its permanent deformation occurs.

autogamy [BIOL] A process of self-fertilization that results in homozygosis; occurs in some flowering plants, fungi, and protozoans.

autogenesis *See* abiogenesis.

autogenetic drainage [HYD] A self-established drainage system developed solely by headwater erosion.

autogenetic topography [GEOL] Conformation of land due to the physical action of rain and streams.

autogenous [SCI TECH] Self-generated; produced without external influence.

autogenous electrification [PHYS] The process by which net charge is built up on an object, such as an airplane, moving relative to air containing dust or ice crystals; produced by frictional effects (triboelectrification) accompanying contact between the object and the particulate matter.

autogenous grinding [MECH ENG] The secondary grinding of material by tumbling the material in a revolving cylinder, without balls or bars taking part in the operation.

autogenous healing [ENG] A natural process of closing and filling cracks in concrete or mortar while it is kept damp.

autogenous ignition temperature *See* ignition temperature.

autogenous mill *See* autogenous tumbling mill.

autogenous tumbling mill [MECH ENG] A type of ball-mill grinder utilizing as the grinding medium the coarse feed (incoming) material. Also known as autogenous mill.

autogenous vaccine [IMMUNOL] A vaccine prepared from a culture of microorganisms taken directly from the infected person.

autogenous volume change [MATER] The change in volume produced by continued hydration of cement, exclusive of effects of external forces or change of water content or temperature.

autogenous welding [MET] A fusion welding process using heat without the addition of filler metal to join two pieces of the same metal.

autogeosyncline [GEOL] A parageosyncline that subsides as an elliptical basin or trough nearly without associated highlands. Also known as intracratonic basin.

autogiro [AERO ENG] A type of aircraft which utilizes a rotating wing (rotor) to provide lift and a conventional engine-propeller combination to pull the vehicle through the air.

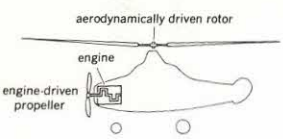
autograft [BIOL] A tissue transplanted from one part to another part of an individual's body.

autohemagglutination *See* autoagglutination.

autohemolysis [PHYSIO] The spontaneous lysis of blood which occurs during an incubation in a hematological procedure.

autohemorrhage [INV ZOO] Voluntary exudation or ejec-

AUTOGIRO



The in-flight dynamic components of a typical autogiro.

tion of nauseous or poisonous blood by certain insects as a defense against predators.

autohemotherapy [MED] Treatment of disease with the patient's own blood, withdrawn by venipuncture and then injected intramuscularly.

autoicous [BOT] Having male and female organs on the same plant but on different branches. Also spelled autoecious.

autoignition [MECH ENG] Spontaneous ignition of some or all of the fuel-air mixture in the combustion chamber of an internal combustion engine. [PHYS] *See* spontaneous combustion.

autoimmune disease [IMMUNOL] An illness involving the formation of autoantibodies which appear to cause pathological damage to the host.

autoimmunity [IMMUNOL] An immune state in which antibodies are formed against the person's own body tissues.

autoimmunization [IMMUNOL] Immunization obtained by natural processes within the body.

autoincrement addressing [COMPUT SCI] An addressing mode of minicomputers in which the operand address is gotten from the specified register which is then incremented.

autoindexing *See* automatic indexing.

autoinfection [MED] Reinfection by an organism existing within the body or transferred from one part of the body to another.

autoinjection *See* autointrusion.

autoinoculation [MED] **1.** Spread of a disease from one part of the body to another. **2.** Injection of an autovaccine.

autointoxication [MED] Poisoning by metabolic products elaborated within the body; generally, toxemia of pathologic states.

autointrusion [GEOL] A process wherein the residual liquid of a differentiating magma is drawn into rifts formed in the crystal mesh at a late stage by deformation of unspecified origin. Also known as autoinjection.

autoionization *See* Auger effect.

autolith [PETR] **1.** A fragment of igneous rock enclosed in another igneous rock of later consolidation, each being regarded as a derivative from a common parent magma. **2.** A round, oval, or elongated accumulation of iron-magnesium minerals of uncertain origin in granitoid rock.

autolithography [GRAPHICS] A lithographic process in which the artist makes a drawing onto the printing surface directly.

autologous [BIOL] Derived from or produced by the individual in question, such as an autologous protein or an autologous graft.

autoluminescence [ATOM PHYS] Luminescence of a material (such as a radioactive substance) resulting from energy originating within the material itself.

autolysis [GEOCHEM] Return of a substance to solution, as of phosphate removed from seawater by plankton and returned when these organisms die and decay. [PATH] Self-digestion by body cells following somatic or organ death or ischemic injury.

autolysosome *See* autophagic vacuole.

autolytic enzyme [BIOCHEM] A bacterial enzyme, located in the cell wall, that causes disintegration of the cell following injury or death.

Autolytinae [INV ZOO] A subfamily of errantian polychaetes in the family Syllidae.

automanual system [CIV ENG] A railroad signal system in which signals are set manually but are activated automatically to return to the danger position by a passing train.

automata theory [ENG] The theory concerning the operation principles, application, and behavior characteristics of automatic devices.

automated radar plotting aid [NAV] A marine computer-based anticollision system that automatically processes time coordinates of radar echo signals into space coordinates in digital form, determines consecutive coordinates and motion parameters of targets, calculates the predicted closest point of approach and time to closest point of approach and presents them in graphic or alphanumeric form on the radar display, and switches on alarms if there is a danger of collision.

automated radar terminal system [NAV] A system for carrying out air-traffic control in the vicinity of airports which uses both airport surveillance radar and the air-traffic radar beacon system; radar video, representing aircraft targets, is presented on the air-traffic controllers' displays, and the automation system automatically tracks controlled aircraft and presents alphanumeric information adjacent to their targets. Abbreviated ARTS.

automated tape library [COMPUT SCI] A computer storage system consisting of several thousand magnetic tapes and equipment under computer control which automatically brings the tapes from storage, mounts them on tape drives, dismounts the tapes when the job is completed, and returns them to storage.

automatic [ENG] Having a self-acting mechanism that performs a required act at a predetermined time or in response to certain conditions. [ORD] *See* automatic weapon.

automatic abstracting [COMPUT SCI] Techniques whereby, on the basis of statistical properties, a subset of the sentences in a document is selected as representative of the general content of that document.

automatic alarm receiver [ELECTR] A complete receiving, selecting, and warning device capable of being actuated automatically by intercepted radio-frequency waves forming the international automatic alarm signal. Also known as auto-alarm.

automatic-alarm-signal keying device [COMMUN] A device capable of automatically keying the radiotelegraph transmitter on board a vessel to transmit the international automatic-alarm signal, or to respond to receipt of an internationally agreed-upon distress signal and wake up the radio operator on ships not having a 24-hour radio watch.

automatic back bias [ELECTR] Radar technique which consists of one or more automatic gain control loops to prevent overloading of a receiver by large signals, whether jamming or actual radar echoes.

automatic background control *See* automatic brightness control.

automatic bass compensation [ELECTR] A circuit related to the volume control in some radio receivers and audio amplifiers to make bass notes sound properly balanced, in the audio spectrum, at low volume-control settings.

automatic batcher [MECH ENG] A batcher for concrete which is actuated by a single starter switch, opens automatically at the start of the weighing operations of each material, and closes automatically when the designated weight of each material has been reached.

automatic brazing [MET] Brazing by the use of either portable or stationary equipment which does not require constant supervision by the operator.

automatic breech mechanism [ORD] A device that utilizes the energy of recoil, or the pressure of the powder gases, to open the breech, withdraw the fired cartridge case, insert a new cartridge, and close the breech.

automatic brightness control [ELECTR] A circuit used in a television receiver to keep the average brightness of the reproduced image essentially constant. Abbreviated ABC. Also known as automatic background control.

automatic carriage [COMPUT SCI] Any mechanism designed to feed continuous paper or plastic forms through a printing or writing device, often using sprockets to engage holes in the paper.

automatic casing hanger [PETRO ENG] Unitized hanger-seal assembly latched at the lower end of an oil-well casing string to support the next smaller string and make a seal between the two strings.

automatic C bias *See* self-bias.

automatic celestial navigation *See* celestial-inertial guidance.

automatic character recognition [COMPUT SCI] The technology of using special machine systems to identify human-readable symbols, most often alphanumeric, and then to utilize this data.

automatic check [COMPUT SCI] An error-detecting procedure performed by a computer as an integral part of the normal operation of a device, with no human attention required unless an error is actually detected.

automatic check-out system [CONT SYS] A system utilizing test equipment capable of automatically and simultaneously providing actions and information which will ultimately result in the efficient operation of tested equipment while keeping time to a minimum.

automatic chroma control *See* automatic color control.

automatic chrominance control *See* automatic color control.

automatic code *See* autocode.

automatic coding [COMPUT SCI] Any technique in which a computer is used to help bridge the gap between some intelle-

AUTOLYTINAE

Procerastea of the Syllidae (Autolytinae); epitokous male, dorsal view.

tual and manual form of describing the steps to be followed in solving a given problem, and some final coding of the same problem for a given computer.

automatic color control [ELECTR] A circuit used in a color television receiver to keep color intensity levels essentially constant despite variations in the strength of the received color signal; control is usually achieved by varying the gain of the chrominance band-pass amplifier. Also known as automatic chroma control; automatic chrominance control.

automatic computer [COMPUT SCI] A computer which can carry out a special set of operations without human intervention.

automatic connection [ELECTR] Ability of electronic switching equipment to make a connection between users without human intervention.

automatic contrast control [ELECTR] A circuit that varies the gain of the radio-frequency and video intermediate-frequency amplifiers in such a way that the contrast of the television picture is maintained at a constant average level.

automatic control [CONT SYS] Control in which regulating and switching operations are performed automatically in response to predetermined conditions. Also known as automatic regulation.

automatic-control block diagram [CONT SYS] A diagrammatic representation of the mathematical relationships defining the flow of information and energy through the automatic control system, in which the components of the control system are represented as functional blocks in series and parallel arrangements according to their position in the actual control system.

automatic-control error coefficient [CONT SYS] Three numerical quantities that are used as a measure of the steady-state errors of an automatic control system when the system is subjected to constant, ramp, or parabolic inputs.

automatic-control frequency response [CONT SYS] The steady-state output of an automatic control system for sinusoidal inputs of varying frequency.

automatic controller [CONT SYS] An instrument that continuously measures the value of a variable quantity or condition and then automatically acts on the controlled equipment to correct any deviation from a desired preset value. Also known as automatic regulator; controller.

automatic-control servo valve [CONT SYS] A mechanically or electrically actuated servo valve controlling the direction and volume of fluid flow in a hydraulic automatic control system.

automatic-control stability [CONT SYS] The property of an automatic control system whose performance is such that the amplitude of transient oscillations decreases with time and the system reaches a steady state.

automatic control system [CONT SYS] A control system having one or more automatic controllers connected in closed loops with one or more processes. Also known as regulating system.

automatic-control transient analysis [CONT SYS] The analysis of the behavior of the output variable of an automatic control system as the system changes from one steady-state condition to another in terms of such quantities as maximum overshoot, rise time, and response time.

automatic coupling [MECH ENG] A device which couples rail cars when they are bumped together.

automatic cutout [ELEC] A device, usually operated by centrifugal force or by an electromagnet, that automatically shorts part of a circuit at a particular time.

automatic dam [MIN ENG] In placer mining, a dam with a gate that automatically discharges the water when it reaches a certain height behind the dam.

automatic data processing [ENG] The machine performance, with little or no human assistance, of any of a variety of tasks involving informational data; examples include automatic and responsive reading, computation, writing, speaking, directing artillery, and the running of an entire factory. Abbreviated ADP.

automatic data-processing auxiliary equipment [COMPUT SCI] Equipment which is related in function to automatic data-processing equipment, other than peripheral equipment, and whose use is not exclusively and directly used with an automatic data-processing system; when it is so used, it supports the system in off-line operations such as card-punching equipment and paper-tape-preparing equipment; for example, a flexowriter.

automatic data-processing equipment [COMPUT SCI] Electronic data-processing equipment and punched-card accounting machines, irrespective of use, application, or source of funding. Abbreviated ADPE.

automatic data-processing system [COMPUT SCI] The equipment, personnel program, and application operations involved in the utilization of electronic data-processing equipment, along with associated electric accounting machines, to solve business and logistics data-processing problems, with a minimum of human intervention.

automatic data-processing system specifications [COMPUT SCI] A description (devoid of any orientation to the specific equipment of particular suppliers) of a requirement for, and operations to be performed by, automatic data-processing equipment, and generally including a workload description in terms of representative programs (benchmarks) and extension factors.

automatic degausser [ELECTR] An arrangement of degaussing coils mounted around a color television picture tube, combined with a special circuit that energizes these coils only while the set is warming up; demagnetizes any parts of the receiver that have been affected by the magnetic field of the earth or of any nearby home appliance.

automatic dialer [ELECTR] A device in which a telephone number up to a maximum of 14 digits can be stored in a memory and then activated, directly into the line, by the caller's pressing a button. Also known as mechanical dialer.

automatic dictionary [COMPUT SCI] Any table within a computer memory which establishes a one-to-one correspondence between two sets of characters.

automatic direction finder [ELECTR] A direction finder that without manual manipulation indicates the direction of arrival of a radio signal. Abbreviated ADF. Also known as radio compass.

automatic door bottom [ENG] A movable plunger, in the form of a horizontal bar at the bottom of a door, which drops automatically when the door is closed, sealing the threshold and reducing noise transmission. Also known as automatic threshold closer.

automatic drill [DES ENG] A straight brace for bits whose shank comprises a coarse-pitch screw sliding in a threaded tube with a handle at the end; the device is operated by pushing the handle.

automatic error correction [COMMUN] A technique, usually requiring the use of special codes or automatic retransmission, which detects and corrects errors occurring in transmission; the degree of correction depends upon coding and equipment configuration.

automatic exchange [ELECTR] A telephone, teletypewriter, or data-transmission exchange in which communication between subscribers is effected, without the intervention of an operator, by devices set in operation by the originating subscriber's instrument. Also known as automatic switching system; machine switching system.

automatic-feed punch [COMPUT SCI] A card punch having a hopper, a card track, and a stacker; movement of cards through the punch is automatic.

automatic fine-tuning control [ELECTR] A circuit used in a color television receiver to maintain the correct oscillator frequency in the tuner for best color picture by compensating for drift and incorrect tuning.

automatic fire [ORD] Continuous fire from an automatic gun until the pressure on the trigger is released.

automatic fire pump [MECH ENG] A pump which provides the required water pressure in a fire standpipe or sprinkler system; when the water pressure in the system drops below a preselected value, a sensor causes the pump to start.

automatic flushing system [CIV ENG] A water tank system which provides automatically for the periodic flushing of urinals or other plumbing fixtures, or of pipes having too small a slope to drain effectively.

automatic focus [OPTICS] A device in a camera or enlarger which automatically keeps the objective lens in focus through a range of magnification.

automatic frequency control [ELECTR] Abbreviated AFC. **1.** A circuit used to maintain the frequency of an oscillator within specified limits, as in a transmitter. **2.** A circuit used to keep a superheterodyne receiver tuned accurately to a given frequency by controlling its local oscillator, as in an FM receiver. **3.** A circuit used in radar superheterodyne receivers to vary the local oscillator frequency so as to compensate for changes in the frequency of the received echo signal. **4.** A

AUTOMATIC DIALER

A card-dialer-type telephone set used in automatic dialing. *(American Telephone and Telegraph Co.)*

circuit used in television receivers to make the frequency of a sweep oscillator correspond to the frequency of the synchronizing pulses in the received signal.

automatic gain control [ELECTR] A control circuit that automatically changes the gain (amplification) of a receiver or other piece of equipment so that the desired output signal remains essentially constant despite variations in input signal strength. Abbreviated AGC.

automatic grid bias *See* self-bias.

automatic gun *See* automatic weapon.

automatic gun charger [ORD] A gun charger that includes a mechanism for the clearance of gun stoppages and for the retention of the breech mechanism to the rear of the gun receiver.

automatic horizon *See* artificial horizon.

automatic indexing [COMPUT SCI] Selection of key words from a document by computer for use as index entries. Also known as autoindexing.

automatic intercept [COMMUN] Telephone service that automatically records messages a caller may leave when the called party is away from his telephone.

automatic interrupt [COMPUT SCI] Interruption of a computer program brought about by a hardware device or executive program acting as a result of some event which has occurred independently of the interrupted program.

automatic landing system [NAV] The means for automatically guiding and controlling aircraft from an initial approach altitude to a point where safe contact is made with the landing surface.

automatic level compensation [COMMUN] System which automatically compensates for variations in a circuit.

automatic light control [ELECTR] Automatic adjustment of illumination reaching a film, television camera, or other imaging device as a function of scene brightness.

automatic mathematical translator [COMPUT SCI] An automatic-programming computer capable of receiving a mathematical equation from a remote input and returning an immediate solution.

automatic message accounting *See* automatic toll ticketing.

automatic message-switching center [COMMUN] A center in which messages are automatically routed according to information in them.

automatic microfiller [ENG] A device used to place microfilm in jackets at relatively high speeds.

automatic modulation limiting [COMMUN] A circuit that prevents overmodulation in some citizen-band radio transmitters by reducing the gain of one or more audio amplifier stages when the voice signal becomes stronger. Abbreviated AML.

automatic mold [ENG] A mold used in injection or compression molding of plastic objects so that repeated molding cycles are possible, including ejection, without manual assistance.

automatic peak limiter *See* limiter.

automatic phase control [ELECTR] Abbreviated APC. **1.** A circuit used in color television receivers to reinsert a 3.58-megahertz carrier signal with exactly the correct phase and frequency by synchronizing it with the transmitted color-burst signal. **2.** An automatic frequency-control circuit in which the difference between two frequency sources is fed to a phase detector that produces the required control signal.

automatic picture control [ELECTR] A multiple-contact switch used in some color television receivers to disconnect one or more of the regular controls and make connections to corresponding preset controls.

automatic picture transmission system [ELECTR] A system in which a meteorological satellite continuously scans and transmits a view of a transverse swath directly beneath it; transmissions can be recorded by simple ground equipment to reconstruct an image of the cloud patterns within a thousand kilometers of the ground station. Abbreviated APT system.

automatic pilot [NAV] Also known as autopilot. **1.** Equipment which automatically stabilizes the attitude of an aircraft about its pitch, roll, and yaw axes and keeps it on a predetermined heading. **2.** Equipment for automatically steering ships.

automatic pistol [ORD] A pistol able to operate as an automatic weapon.

automatic press [MECH ENG] A press in which mechanical feeding of the work is synchronized with the press action.

automatic programming [COMPUT SCI] The preparation of machine-language instructions by use of a computer.

Automatic Programming Tool [COMPUT SCI] A computer language used to program numerically controlled machine tools. Abbreviated APT.

automatic ranging *See* autoranging.

automatic record changer [ENG ACOUS] An electric phonograph that automatically plays a number of records one after another.

automatic regulation *See* automatic control.

automatic regulator *See* automatic controller.

automatic relay [COMMUN] Means of selective switching which causes automatic equipment to record and retransmit communications.

automatic rifle [ORD] A rifle capable of operating as an automatic weapon.

automatic routine [COMPUT SCI] A routine that is executed independently of manual operations, but only if certain conditions occur within a program or record, or during some other process.

automatic sampler [MECH ENG] A mechanical device to sample process streams (gas, liquid, or solid) either continuously or at preset time intervals.

automatic scanning receiver [ELECTR] A receiver which can automatically and continuously sweep across a preselected frequency, either to stop when a signal is found or to plot signal occupancy within the frequency spectrum being swept.

automatic screw machine [MECH ENG] A machine designed to automatically produce finished parts from bar stock at high production rates; the term is not an exact, specific machine-tool classification.

automatic sensitivity control [ELECTR] Circuit used for automatically maintaining receiver sensitivity at a predetermined level; it is similar to automatic gain control, but it affects the receiver constantly rather than during the brief interval selected by the range gate.

automatic sequences [COMPUT SCI] The characteristic of a computer that can perform successive operations without human intervention.

automatic short-circuiter [ELEC] Device designed to automatically short-circuit the commutator bars in some forms of single-phase commutator motors.

automatic shut-off [ENG ACOUS] A switch in some tape recorders which automatically stops the machine when the tape ends or breaks.

automatic spider [MIN ENG] A foot or hydraulically actuated drill-rod clamping device similar to a Wommer safety clamp.

automatic stability [AERO ENG] Stability achieved with the controls operated by automatic devices, as by an automatic pilot.

automatic stabilization equipment [AERO ENG] Apparatus which automatically operates control devices to maintain an aircraft in a stable condition.

automatic stoker [MECH ENG] A device that supplies fuel to a boiler furnace by mechanical means. Also known as mechanical stoker.

automatic stop [COMPUT SCI] An automatic halting of a computer processing operation as the result of an error detected by built-in checking devices.

automatic switchboard [COMMUN] Telephone switchboard in which the connections are made by using remotely controlled switches.

automatic switching system *See* automatic exchange.

automatic tank battery [PETRO ENG] Interconnected system of storage tanks with automatic controls to direct incoming oil to empty tanks in a desired sequence.

automatic tape punch [COMPUT SCI] A device that punches holes in a paper tape upon reception of electronic signals from a central processing unit.

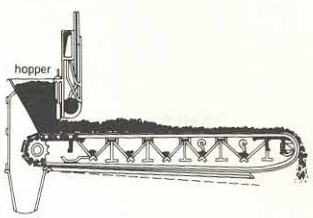
automatic telegraph transmission [COMMUN] Form of telegraphy in which telegraph signals are transmitted mechanically from a perforated tape.

automatic test equipment [ENG] Test equipment that makes two or more tests in sequence without manual intervention; it usually stops when the first out-of-tolerance value is detected.

automatic threshold closer *See* automatic door bottom.

automatic threshold variation [ELECTR] Constant false-alarm rate scheme that is an open-loop of automatic gain control in which the decision threshold is varied continuously in propor-

AUTOMATIC STOKER



A chain grate, one type of automatic stoker.

tion to the incoming intermediate frequency and video noise level.

automatic time switch [ENG] Combination of a switch with an electric or spring-wound clock, arranged to turn an apparatus on and off at predetermined times.

automatic tint control [ELECTR] A circuit used in color television receivers to maintain correct flesh tones when a station changes cameras or switches to commercials, by correcting phase errors before the chroma signal is demodulated.

automatic titrator [ANALY CHEM] **1.** Titration with quantitative reaction and measured flow of reactant. **2.** Electrically generated reactant with potentiometric, ampherometric, or colorimetric end-point or null-point determination.

automatic toll ticketing [COMMUN] System whereby toll calls are automatically recorded and timed, and toll tickets printed, under control of the calling telephone's dial pulses and without the intervention of an operator. Also known as automatic message accounting.

automatic tracking [NAV] **1.** Tracking in which a servomechanism automatically follows some characteristic of the signal; specifically, a process by which tracking or data-acquisition systems are enabled to keep their antennas continuously directed at a moving target without manual operation. **2.** An instrument which displays the actual course made good through the use of navigation derived from several sources.

automatic track shift [ENG ACOUS] A system used with multiple-track magnetic tape recorders to index the tape head, after one track is played, to the correct position for the start of the next track.

automatic transfer equipment [ELEC] Equipment which automatically transfers a load so that a source of power may be selected from one of several incoming lines.

automatic traverse computer [NAV] An instrument which, by mechanical linkages and gears, converts courses into latitudes and departures; also totals the algebraic sum of the latitudes and departures.

automatic tuning system [CONT SYS] An electrical, mechanical, or electromechanical system that tunes a radio receiver or transmitter automatically to a predetermined frequency when a button or lever is pressed, a knob turned, or a telephone-type dial operated.

automatic-type belt tensioning device [MECH ENG] Any device which maintains a predetermined tension in a conveyor belt.

automatic typewriter [ENG] An electric typewriter that produces a punched paper tape or magnetic recording simultaneously with the conventional typed copy, for subsequent automatic retyping at high speed.

automatic video noise leveling [ELECTR] Constant false-alarm rate scheme in which the video noise level at the output of the receiver is sampled at the end of each range sweep and the receiver gain is readjusted accordingly to maintain a constant video noise level at the output.

automatic voltage regulator *See* voltage regulator.

automatic volume compressor *See* volume compressor.

automatic volume control [ELECTR] An automatic gain control that keeps the output volume of a radio receiver essentially constant despite variations in input-signal strength during fading or when tuning from station to station. Abbreviated AVC.

automatic volume expander *See* volume expander.

automatic wagon control [MIN ENG] A mechanism to keep the speed of wagons within certain designed limits; may consist of small hydraulic units fixed at intervals along the inside of the track.

automatic weapon [ORD] A gun that fires, extracts, ejects, and reloads without application of power from an outside source, repeating the cycle as long as the firing mechanism is held in the proper position. Also known as automatic; automatic gun.

automatic weather station [METEOROL] A weather station at which the services of an observer are not required; usually equipped with telemetric apparatus.

automatic welding [MET] Electric-arc welding with automatic control of the arc movement along the welding line, the electrode feed, and the arc-gap length.

automatic wet-pipe sprinkler system [ENG] A sprinkler system, all of whose parts are filled with water at sufficient pressure to provide an immediate continuous discharge if the system is activated.

automation [ENG] **1.** The replacement of human or animal labor by machines. **2.** The operation of a machine or device automatically or by remote control.

automation source data [COMPUT SCI] The many methods of recording information in coded forms on paper tapes, punched cards, or tags that can be used over and over again to produce many other records without rewriting. Also known as source data automation (SDA).

automatism [BIOL] Spontaneous activity of tissues or cells. [MED] An act performed with no apparent exercise of will, as in sleepwalking and certain hysterical and epileptic states.

automaton [COMPUT SCI] A robot which functions without step-by-step guidance by a human operator.

automechanism [CONT SYS] A machine or other device that operates automatically or under control of a servomechanism.

autometamorphism [PETR] Metamorphism of an igneous rock by the action of its own volatile fluids. Also known as autometasomatism.

autometasomatism *See* autometamorphism.

automobile [MECH ENG] A four-wheeled, trackless, self-propelled vehicle for land transportation of as many as eight people. Also known as car.

automobile chassis [MECH ENG] The automobile frame, together with the wheels, power train, brakes, engine, and steering system.

automonitor [COMPUT SCI] A computer program used in debugging which instructs a computer to make a record of its own operations.

automorphic [PETR] Of minerals in igneous rock bounded by their own crystal faces. Also known as euhedral; idiomorphic.

automorphism [MATH] An isomorphism of an algebraic structure with itself.

automorphosis [PETR] Metamorphosis of solidified igneous rock by solutions from its heated interior.

automotive air conditioning [MECH ENG] A system for maintaining comfort of occupants of automobiles, buses, and trucks, limited to air cooling, air heating, ventilation, and occasionally dehumidification.

automotive alternator [ELEC] An ac generator used in an automotive vehicle to provide current for the vehicle's electrical systems.

automotive body [ENG] An enclosure mounted on and attached to the frame of an automotive vehicle, to contain passengers and luggage, or in the case of commercial vehicles the commodities being carried.

automotive brake [MECH ENG] A friction mechanism that slows or stops the rotation of the wheels of an automotive vehicle, so that tire traction slows or stops the vehicle.

automotive engine [MECH ENG] The fuel-consuming machine that provides the motive power for automobiles, airplanes, tractors, buses, and motorcycles and is carried in the vehicle.

automotive engineering [MECH ENG] The branch of mechanical engineering concerned primarily with the special problems of land transportation by a four-wheeled, trackless, automotive vehicle.

automotive frame [ENG] The basic structure of all automotive vehicles, except tractors, which is supported by the suspension and upon which or attached to which are the power plant, transmission, clutch, and body or seat for the driver.

automotive fuel [MATER] A material, generally a liquid fuel, gasoline, or distillate, whose combustion is used to supply chemical energy to provide the power for an automotive vehicle.

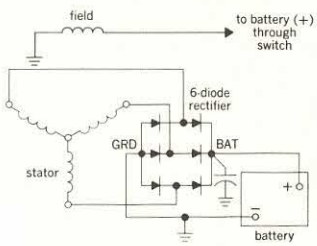
automotive ignition system [MECH ENG] A device in an automotive vehicle which initiates the chemical reaction between fuel and air in the cylinder charge.

automotive steering [MECH ENG] Mechanical means by which a driver controls the course of a moving automobile, bus, truck, or tractor.

automotive suspension [MECH ENG] The springs and related parts intermediate between the wheels and frame of an automotive vehicle that support the frame on the wheels and absorb road shock caused by passage of the wheels over irregularities.

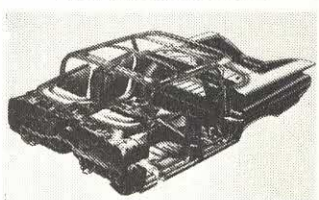
automotive transmission [MECH ENG] A device for providing different gear or drive ratios between the engine and drive wheels of an automotive vehicle, a principal function being to enable the vehicle to accelerate from rest through a

AUTOMOTIVE ALTERNATOR



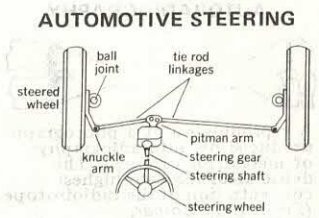
Wiring circuit of an automotive alternator. *(Delco-Remy Division, General Motors Corp.)*

AUTOMOTIVE BODY



Cutaway view showing conventional construction of all-steel, welded body for a four-door sedan. The body is bolted to a frame which carries engine and power train. *(Chevrolet Division, General Motors Corp.)*

AUTOMOTIVE STEERING



Components of a typical steering system.

wide speed range while the engine operates within its most effective range.

automotive vehicle [MECH ENG] A self-propelled vehicle or machine for land transportation of people or commodities or for moving materials, such as a passenger car, bus, truck, motorcycle, tractor, airplane, motorboat, or earthmover.

automotive voltage regulator [ELEC] A device in the automotive electrical system to prevent generator or alternator overvoltage.

autonavigator [NAV] A navigation system that automatically measures absolute vehicle motions and computes distance and direction from the departure point.

autonomic agent [MED] A compound that reduces or enhances nerve-impulse transmission across synaptic junctions, especially in the autonomic nervous system.

autonomic nervous system [ANAT] The visceral or involuntary division of the nervous system in vertebrates, which enervates glands, viscera, and smooth, cardiac, and some striated muscles.

autonomic reflex system [PHYSIO] An involuntary biological control system characterized by the uncontrolled functioning of smooth muscles and glands to maintain an acceptable internal environment.

autonomous channel operation [COMPUT SCI] The rapid transfer of data between computer peripherals and the main store in which an entire block of data is transferred, word by word; the cycles of storage time for the word transfer are stolen from those available to the central processing unit.

autooxidation [CHEM] **1.** Oxidation caused by the atmosphere. **2.** An oxidation reaction that is self-catalyzed and spontaneous. **3.** An oxidation reaction begun only by an inductor.

autopatrol [MECH ENG] A self-powered blade grader. Also known as motor grader.

autophagic vacuole [CYTOL] A membrane-bound cellular organelle that engulfs pieces of the substance of the cell itself. Also known as autolysosome.

autophagocytosis [CYTOL] The cellular process of phagocytizing a portion of protoplasm by a vacuole within the cell.

autophagy [CYTOL] The cellular process of self-digestion.

autophobia [PSYCH] Abnormal fear of one's self or of being alone.

autophytograph [GEOL] An imprint on a rock surface made by chemical activity of a plant or plant part.

autopilot *See* automatic pilot.

autoplotter [COMPUT SCI] A machine which automatically draws a graph from input data.

autopneumatolysis [GEOL] The occurrence of metamorphic changes at the pneumatolytic stage of a cooling magma when temperatures are approximately 400–600°C.

autopolarity [ELECTR] Automatic interchanging of connections to a digital meter when polarity is wrong; a minus sign appears ahead of the value on the digital display if the reading is negative.

autopolyploid [GEN] A cell or organism having three or more sets of chromosomes all derived from the same species.

autopositive [GRAPHICS] A film or paper which produces a positive image when exposed to a positive (or a negative image from a negative) and which is processed in a single development stage.

autoprotolysis [CHEM] Transfer of a proton from one molecule to another of the same substance.

autoprotolysis constant [CHEM] A constant denoting the equilibrium condition for the autoprotolysis reaction.

autopsy [PATH] A postmortem examination of the body to determine cause of death.

autoradar plot *See* chart comparison unit.

autoradiography [ENG] A technique for detecting radioactivity in a specimen by producing an image on a photographic film or plate. Also known as radioautography.

autorail [MECH ENG] A self-propelled vehicle having both flange wheels and pneumatic tires to permit operation on both rails and roadways.

autoranging [ENG] Automatic switching of a multirange meter from its lowest to the next higher range, with the switching process repeated until a range is reached for which the full-scale value is not exceeded. Also known as automatic ranging.

autoreducing tachymeter [ENG] A class of tachymeter by which horizontal and height distances are read simultaneously.

autoregressive series [MATH] A function of the form $f(t) = a_1 f(t-1) + a_2 f(t-2) + \ldots + a_m f(t-m) + k$, where k is any constant.

autorotation [MECH] **1.** Rotation about any axis of a body that is symmetrical and exposed to a uniform airstream and maintained only by aerodynamic moments. **2.** Rotation of a stalled symmetrical airfoil parallel to the direction of the wind.

autoserum [IMMUNOL] A serum obtained from a patient used for treatment of that patient.

autosexing [BIOL] Displaying differential sex characters at birth, noted particularly in fowl bred for sex-specific colors and patterns.

autoskeleton [INV ZOO] The endoskeleton of a sponge.

autosled [MECH ENG] A propeller-driven machine equipped with runners and wheels and adaptable to use on snow, ice, or bare roads.

autosome [GEN] Any chromosome other than a sex chromosome.

autostability [CONT SYS] The ability of a device (such as a servomechanism) to hold a steady position, either by virtue of its shape and proportions, or by control by a servomechanism.

autostarter [ELEC] **1.** Automatic starting and switchover generating system consisting of a standby generator coupled to the station load through an automatic power transfer control unit. **2.** *See* autotransformer starter.

autostoper [MIN ENG] A stoper, or light compressed-air rock drill, mounted on an air-leg support which not only supports the drill but also exerts pressure on the drill bit.

autostylic [VERT ZOO] Having the jaws attached directly to the cranium, as in chimeras, amphibians, and higher vertebrates.

autosyndesis [CYTOL] The act of pairing of homologous chromosomes from the same parent during meiosis in polyploids.

autotomy [MED] Surgical removal of a part of one's own body. [ZOO] The process of self-amputation of appendages in crabs and other crustaceans and tails in some salamanders and lizards under stress.

autotransductor [ELECTROMAG] A saturable reactor in which the same windings carry the main and control currents.

autotransformer [ELEC] A power transformer having one continuous winding that is tapped; part of the winding serves as the primary and all of it serves as the secondary, or vice versa; small autotransformers are used to start motors.

autotransformer starter [ELEC] Motor starter having an autotransformer to furnish a reduced voltage for starting; includes the necessary switching mechanism. Also known as autostarter.

autotroph [BIOL] An organism capable of synthesizing organic nutrients directly from simple inorganic substances, such as carbon dioxide and inorganic nitrogen.

autozooecium [INV ZOO] The tube enclosing an autozooid.

autozooid [INV ZOO] An unspecialized feeding individual in a bryozoan colony, possessing fully developed organs and exoskeleton.

autumn [ASTRON] The season of the year which is the transition period from summer to winter, occurring as the sun approaches the winter solstice; beginning is marked by the autumnal equinox. Also known as fall.

autumnal [ASTRON] Pertaining to the season autumn.

autumnal equinox [ASTRON] The point on the celestial sphere at which the sun's rays at noon are 90° above the horizon at the Equator, or at an angle of 90° with the earth's axis, and neither North nor South Pole is inclined to the sun; occurs in the Northern Hemisphere on approximately September 23 and marks the beginning of autumn.

autumn ice [OCEANOGR] Sea ice in early stage of formation; comparatively salty, and crystalline in appearance.

Autunian [GEOL] A European stage of Lower Permian geologic time, above the Stephanian of the Carboniferous and below the Saxonian.

autunite [MINERAL] $Ca(UO_2)_2(PO_4)_2 \cdot 10H_2O$ A common fluorescent mineral that occurs as yellow tetragonal plates in uranium deposits; minor ore of uranium.

Auversian *See* Ledian.

auxanogram [MICROBIO] A plate culture provided with variable growth conditions to determine the effects of specific environmental factors.

auxanography [MICROBIO] The study of growth-inhibiting or growth-promoting agents by means of auxanograms.

AUTORADIOGRAPHY

A reproduction of a photograph produced by autoradiography of metatarsus of a calf. The dense areas indicate highest concentration of the radioisotope. *(From C. L. Comar, Radioisotopes in Biology and Agriculture, McGraw-Hill, 1955)*

auxanometer [ENG] An instrument used to detect and measure plant growth rate.

auxesis [PHYSIO] Growth resulting from increase in cell size.

auxiliary anode [MET] A supplementary anode that alters the current distribution in electroplating to give a more uniform plating thickness.

auxiliary circle [ASTRON] In celestial mechanics, a circumscribing circle to an orbital ellipse with radius a, the semimajor axis.

auxiliary contacts [ELEC] Contacts, in a switching device, in addition to the main circuit contacts, which function with the movement of the latter.

auxiliary dead latch [DES ENG] A supplementary latch in a lock which automatically deadlocks the main latch bolt when the door is closed. Also known as auxiliary latch bolt; deadlocking latch bolt; trigger bolt.

auxiliary electrode [PHYS CHEM] An electrode in an electrochemical cell used for transfer of electric current to the test electrode.

auxiliary fan [MIN ENG] A small fan installed underground for ventilating narrow coal drivages or hard headings which are not ventilated by the normal air current.

auxiliary fault [GEOL] A branch fault; a minor fault ending against a major one.

auxiliary fluid ignition [AERO ENG] A method of ignition of a liquid-propellant rocket engine in which a liquid that is hypergolic with either the fuel or the oxidizer is injected into the combustion chamber to initiate combustion.

auxiliary instruction buffer [COMPUT SCI] A section of storage in the instruction unit, 16 bytes in length, used to hold prefetched instructions.

auxiliary landing gear [AERO ENG] The part or parts of a landing gear, such as an outboard wheel, which is intended to stabilize the craft on the surface but which bears no significant part of the weight.

auxiliary latch bolt *See* auxiliary dead latch.

auxiliary mineral [MINERAL] A light-colored, relatively rare or unimportant mineral in an igneous rock; examples are apatite, muscovite, corundrum, fluorite, and topaz.

auxiliary operation [COMPUT SCI] An operation performed by equipment not under continuous control of the central processing unit of a computer.

auxiliary plane [GEOL] A plane at right angles to the net slip on a fault plane as determined from analysis of seismic data for an earthquake.

auxiliary power plant [MECH ENG] Ancillary equipment, such as pumps, fans, and soot blowers, used with the main boiler, turbine, engine, waterwheel, or generator of a power-generating station.

auxiliary power unit [AERO ENG] A power unit carried on an aircraft or spacecraft which can be used in addition to the main sources of power. Abbreviated APU.

auxiliary processor [COMPUT SCI] Any equipment which performs an auxiliary operation in a computer.

auxiliary rafter [BUILD] A member strengthening the principal rafter in a truss.

auxiliary reinforcement [CIV ENG] In a prestressed structural member, any reinforcement in addition to that whose function is prestressing.

auxiliary relay [ELEC] Relay that operates in response to the opening or closing of its operating circuit to assist another relay or device in performing a function.

auxiliary rim lock [DES ENG] A secondary or extra lock that is surface-mounted on a door to provide additional security.

auxiliary rope-fastening device [MECH ENG] A device attached to an elevator car, to a counterweight, or to the overhead dead-end rope-hitch support, that automatically supports the car or counterweight in case the fastening for the wire rope (cable) fails.

auxiliary routine [COMPUT SCI] A routine designed to assist in the operation of the computer and in debugging other routines.

auxiliary ship [NAV ARCH] A naval vessel other than a combat ship, such as a troop ship, repair ship, and cargo ship.

auxiliary storage [COMPUT SCI] Storage device in addition to the main storage of a computer; for example, magnetic tape, disk, or magnetic drum.

auxiliary switch [ELEC] A switch actuated by the main device (such as a circuit breaker) for signaling, interlocking, or other purposes.

auxiliary thermometer [ENG] A mercury-in-glass thermometer attached to the stem of a reversing thermometer and read at the same time as the reversing thermometer so that the correction to the reading of the latter, resulting from change in temperature since reversal, can be computed.

auximone [BIOCHEM] Any of certain growth-promoting substances occurring principally in sphagnum peat decomposed by nitrogen bacteria.

auxin [BIOCHEM] Any organic compound which promotes plant growth along the longitudinal axis when applied to shoots free from indigenous growth-promoting substances.

auxoautotrophic [BIOL] Requiring no exogenous growth factors.

auxochrome [CHEM] Any substituent group such as $—NH_2$ and —OH which, by affecting the spectral regions of strong absorption in chromophores, enhance the ability of the chromogen to act as a dye.

auxocyte [BIOL] A gamete-forming cell, such as an oocyte or spermatocyte, or a sporocyte during its growth period.

auxograph [ENG] An automatic device that records changes in the volume of a body.

auxoheterotrophic [BIOL] Requiring exogenous growth factors.

auxometer [ENG] An instrument that measures the magnification of a lens system.

auxospore [INV ZOO] A reproductive cell in diatoms formed in association with rejuvenescence by the union of two cells that have diminished in size through repeated divisions.

auxotonic [BOT] Induced by growth rather than by exogenous stimuli.

auxotrophic mutant [GEN] An organism that requires a specific growth factor, such as an amino acid, for its growth.

av *See* arithmetic mean.

aV *See* abvolt.

availability [COMPUT SCI] Of data, data channels, and input-output devices in computers, the condition of being ready for use and not immediately committed to other tasks. [PHYS] The difference between the enthalpy per unit mass of substance and the product of entropy per unit mass multiplied by the lowest temperature available to the substance for heat discard; used in determining the ratio of actual work performed during a process by a working substance to that which theoretically should have been performed.

available chlorine [CHEM] The quantity of chlorine released by a bleaching powder when treated with acid.

available-chlorine method [MICROBIO] A technique for the standardization of chlorine disinfectants intended for use as germicidal rinses on cleaned surfaces; increments of bacterial inoculum are added to different disinfectant concentrations, and after incubation the results indicate the capacity of the disinfectant to handle an increasing bacterial load before exhaustion of available chlorine, the germicidal principle.

available draft [MECH ENG] The usable differential pressure in the combustion air in a furnace, used to sustain combustion of fuel or to transport products of combustion.

available energy [MECH ENG] Energy which can in principle be converted to mechanical work.

available heat [MECH ENG] The heat per unit mass of a working substance that could be transformed into work in an engine under ideal conditions for a given amount of heat per unit mass furnished to the working substance.

available line [ELECTR] Portion of the length of the scanning line which can be used specifically for picture signals in a facsimile system.

available machine time [COMPUT SCI] Time during which a computer has the power turned on, is not under maintenance, and is known or believed to be operating correctly.

available moisture [HYD] Moisture in soil that is available for use by plants.

available power [ELECTR] The power which a linear source of energy is capable of delivering into its conjugate impedance.

available power gain [ELECTR] Ratio, in an electronic transducer, of the available power from the output terminals of the transducer, under specified input termination conditions, to the available power from the driving generator.

available relief [GEOL] The vertical distance after uplift between the altitude of the original surface and the level at which grade is first attained.

available space list [COMPUT SCI] A pool of inactive memory cells, available for use in a list-processing system, to which cells containing items deleted from data lists are added, and from which cells needed for newly inserted data items are removed.

avalanche [ELECTR] **1.** The cumulative process in which an electron or other charged particle accelerated by a strong electric field collides with and ionizes gas molecules, thereby releasing new electrons which in turn have more collisions, so that the discharge is thus self-maintained. Also known as avalanche effect; cascade; cumulative ionization; Townsend avalanche; Townsend ionization. **2.** Cumulative multiplication of carriers in a semiconductor as a result of avalanche breakdown. Also known as avalanche effect. [HYD] A mass of snow or ice moving rapidly down a mountain slope or cliff.

avalanche breakdown [ELECTR] Nondestructive breakdown in a semiconductor diode when the electric field across the barrier region is strong enough so that current carriers collide with valence electrons to produce ionization and cumulative multiplication of carriers.

avalanche conduction [PHYSIO] Conduction of a nerve impulse through several neurons which converge, increasing the discharge intensity by summation.

avalanche diode [ELECTR] A semiconductor breakdown diode, usually made of silicon, in which avalanche breakdown occurs across the entire *pn* junction and voltage drop is then essentially constant and independent of current; the two most important types are IMPATT and TRAPATT diodes.

avalanche effect *See* avalanche.

avalanche-induced migration [ELECTR] A technique of forming interconnections in a field-programmable logic array by applying appropriate voltages for shorting selected base-emitter junctions.

avalanche noise [ELECTR] **1.** A junction phenomenon in a semiconductor in which carriers in a high-voltage gradient develop sufficient energy to dislodge additional carriers through physical impact; this agitation creates ragged current flows which are indicated by noise. **2.** The noise produced when a junction diode is operated at the onset of avalanche breakdown.

avalanche oscillator [ELECTR] An oscillator that uses an avalanche diode as a negative resistance to achieve one-step conversion from direct-current to microwave outputs in the gigahertz range.

avalanche photodiode [ELECTR] A photodiode operated in the avalanche breakdown region to achieve internal photocurrent multiplication, thereby providing rapid light-controlled switching operation.

avalanche transistor [ELECTR] A transistor that utilizes avalanche breakdown to produce chain generation of charge-carrying hole-electron pairs.

avalanche wind [METEOROL] The rush of air produced in front of an avalanche of dry snow or in front of a landslide.

avant-corps [ARCH] That part of a building which projects prominently from the main mass, for example, a pavilion.

AVC *See* automatic volume control.

aV/cm *See* abvolt per centimeter.

aven [GEOL] *See* pothole. [MIN ENG] A vertical shaft leading upward from a cave passage, sometimes connecting with passages above.

Avena [BOT] A genus of grasses (family Gramineae), including oats, characterized by an inflorescence that is loosely paniculate, two-toothed lemmas, and deeply furrowed grains.

Avena unit [BIOL] A unit for the standardization of auxins.

avenin [BIOCHEM] The glutelin of oats.

aventurine [MINERAL] **1.** A glass or mineral containing sparkling gold-colored particles, usually copper or chromic oxide. **2.** A shiny red or green translucent quartz having small, but microscopically visible, exsolved hematite or included mica particles.

average *See* arithmetic mean.

average acoustic output [ENG ACOUS] Vibratory energy output of a transducer measured by a radiation pressure balance; expressed in terms of watts per unit area of the transducer face.

average assay value [MIN ENG] The weighted result of assays obtained from a number of samples by multiplying the assay value of each sample by the width or thickness of the ore face over which it is taken and dividing the sum of these products by the total width of cross section sampled.

average bisector [NAV] A line extending through a four-course radio range station into opposing quadrants and midway between the lines (and their extensions) bisecting these two quadrants; used when the courses are not symmetrical.

average-calculating operation [COMPUT SCI] A common or typical calculating operation longer than an addition and shorter than a multiplication; often taken as the mean of nine additions and one multiplication.

average deviation [MATH] In statistics, the average or arithmetic mean of the deviation, taken without regard to sign, from some fixed value, usually the arithmetic mean of the data. Abbreviated AD. Also known as mean deviation.

average discount factor *See* discount factor.

average-edge line [COMPUT SCI] The imaginary line which traces or smooths the shape of any written or printed character to be recognized by a computer through optical, magnetic, or other means.

average effectiveness level *See* effectiveness level.

average heading [NAV] The average heading flown for a given period; it should be the same value as desired heading if the drift was predicted accurately.

average igneous rock [PETR] A hypothetical rock whose composition is thought to be similar to the average chemical composition of the outermost 10-mile (16-kilometer) shell of the earth.

average information content [COMMUN] The average of the information content per symbol emitted from a source.

average life *See* mean life.

average limit of ice [OCEANOGR] The average seaward extent of ice formation during a normal winter.

average molecular weight [ORG CHEM] The calculated number to average the molecular weights of the varying-length polymer chains present in a polymer mixture.

average noise figure [ELECTR] Ratio in a transducer of total output noise power to the portion thereof attributable to thermal noise in the input termination, the total noise being summed over frequencies from zero to infinity, and the noise temperature of the input termination being standard (290 K).

average outgoing quality limit [IND ENG] The average quality of all lots that pass quality inspection, expressed in terms of percent defective. Abbreviated AOQL.

average power output [ELECTR] Radio-frequency power, in an audio-modulation transmitter, delivered to the transmitter output terminals, averaged over a modulation cycle.

average wind [NAV] In air navigation, the resultant wind which would produce, or has produced, the same wind effect during a given period as the summation of the actual winds which will affect, or have affected, the flight of an aircraft.

averaging device [ENG] A device for obtaining the arithmetic mean of a number of readings, as on a bubble sextant.

averaging pitot tube [ENG] A flowmeter that consists of a rod extending across a pipe with several interconnected upstream holes, which simulate an array of pitot tubes across the pipe, and a downstream hole for the static pressure reference.

aversive behavior [PSYCH] Avoidance behavior.

Aves [VERT ZOO] A class of animals composed of the birds, which are warm-blooded, egg-laying vertebrates primarily adapted for flying.

avgas *See* aviation gasoline.

avianize [VIROL] To attenuate a virus by repeated culture on chick embryos.

avian leukosis [VET MED] A disease complex in fowl probably caused by viruses and characterized by autonomous proliferation of blood-forming cells.

avian pneumoencephalitis *See* Newcastle disease.

avian pseudoplague *See* Newcastle disease.

avian tuberculosis [VET MED] A tuberculosis-like mycobacterial disease of fowl caused by *Mycobacterium avium*.

aviation [AERO ENG] **1.** The science and technology of flight through the air. **2.** The world of airplane business and its allied industries.

aviation gasoline [MATER] Stable fuel with high volatility and high octane, especially suited for use in aircraft reciprocating engines. Abbreviated avgas.

aviation medicine *See* aerospace medicine.

aviation method [ENG] Determination of knock-limiting power, under lean-mixture conditions, of fuels used in spark-ignition aircraft engines.

aviation mix [MATER] Antiknock fluid containing tetraethyllead, ethylene dibromide, and dye; used in aviation gasoline.

aviation weather forecast [METEOROL] A forecast of

weather elements of particular interest to aviation, such as the ceiling, visibility, upper winds, icing, turbulence, and types of precipitation or storms. Also known as airways forecast.

aviation weather observation [METEOROL] An evaluation, according to set procedure, of those weather elements which are most important for aircraft operations. Also known as airways observation.

avicolous [ECOL] Living on birds, as of certain insects.

avicularium [INV ZOO] A specialized individual in a bryozoan colony with a beak that keeps other animals from settling on the colony.

aviculture [VERT ZOO] Care and breeding of birds, especially wild birds, in captivity.

avidin [BIOCHEM] A protein constituting 0.2% of the total protein in egg white; molecular weight is 70,000 daltons; combines firmly with biotin but loses this ability when subjected to heat.

avifauna [VERT ZOO] **1.** Birds, collectively. **2.** Birds characterizing a period, region, or environment.

avigation *See* air navigation.

aviolite [PETR] A mica-cordierite-hornfels.

avionics [ENG] The design and production of airborne electrical and electronic devices; term is derived from aviation electronics.

avitaminosis [MED] Any vitamin-deficiency disease.

avocado [BOT] *Persea americana*. A subtropical evergreen tree of the order Magnoliales that bears a pulpy pear-shaped edible fruit.

avocado oil [MATER] An oil extracted from ripe fruit of the avocado (*Persea americana*). Also known as alligator pear oil.

avogadrite [MINERAL] $(K,Cs)BF_4$ An orthorhombic fluoborate mineral occurring in small crystals on Vesuvian lava.

Avogadro's number [PHYS] The number (6.02×10^{23}) of molecules in a gram-molecular weight of a substance.

Avogadro's hypothesis *See* Avogadro's law.

Avogadro's law [PHYS] The law which states that under the same conditions of pressure and temperature, equal volumes of all gases contain equal numbers of molecules; for example, 359 cubic feet at 32°F and 1 atmosphere for a perfect gas. Also known as Avogadro's hypothesis.

avogram [MECH] A unit of mass, equal to 1 gram divided by the Avogadro number.

avoidable delay [IND ENG] An interruption under the control of the operator during the normal operating time.

avoidance-avoidance conflict [PSYCH] Conflict within a person caught between two negative goals; as one goal is avoided, the other is brought closer.

avoirdupois pound *See* pound.

avoirdupois weight [MECH] The system of units which has been commonly used in English-speaking countries for measurement of the mass of any substance except precious stones, precious metals, and drugs; it is based on the pound (approximately 453.6 grams) and includes the short ton (2000 pounds), long ton (2240 pounds), ounce (one-sixteenth pound), and dram (one-sixteenth ounce).

Avonian *See* Dinantian.

avulsion [HYD] A sudden change in the course of a stream by which a portion of land is cut off, as where a stream cuts across and forms an oxbow. [MED] Tearing one part away from the other, either by trauma or surgery.

AWACS *See* airborne warning and control system.

awaruite [MINERAL] Native nickel-iron alloy containing 57.7% nickel.

AWG *See* American wire gage.

awl [DES ENG] A point tool with a short wooden handle used to mark surfaces and to make small holes, as in leather or wood.

awn [BOT] Any of the bristles at the ends of glumes or bracts on the spikelets of oats, barley, and some wheat and grasses. Also known as beard.

awning deck [NAV ARCH] A light deck over the main deck, running the full length of a ship. Also known as hurricane deck.

awning window [BUILD] A window consisting of a series of vertically arranged, top-hinged rectangular sections; designed to admit air while excluding rain.

ax [DES ENG] An implement consisting of a heavy metal wedge-shaped head with one or two cutting edges and a relatively long wooden handle; used for chopping wood and felling trees.

axed brick [ENG] A brick, shaped with an ax, that has not been trimmed. Also known as rough-axed brick.

axenic culture [BIOL] The growth of organisms of a single species in the absence of cells or living organisms of any other species.

axes of an aircraft [AERO ENG] Three fixed lines of reference, usually centroidal and mutually perpendicular: the longitudinal axis, the normal or yaw axis, and the lateral or pitch axis. Also known as aircraft axes.

axes of inertia [PHYS] The three principal axes of inertia, namely, one about which the moment of inertia is a maximum, one about which the moment of inertia is a minimum, and one perpendicular to both.

axhammer [DES ENG] An ax having one cutting edge and one hammer face.

axial [SCI TECH] Of, pertaining to, or along an axis.

axial angle [CRYSTAL] **1.** The acute angle between the two optic axes of a biaxial crystal. Also known as optic angle; optic-axial angle. **2.** In air, the larger angle between the optic axes after refraction on leaving the crystal.

axial compression [GEOL] A compression applied parallel with the cylinder axis in experimental work involving rock cylinders.

axial culmination [GEOL] Distortion of the fold axis upward in a form similar to an anticline.

axial dipole field [GEOPHYS] A postulated magnetic field for the earth, consisting of a dipolar field centered at the earth's center, with its axis coincident with the earth's rotational axis of the earth.

axial element [CRYSTAL] The lengths, length ratios, and angles which define a crystal's unit cell.

axial fan [MECH ENG] A fan whose housing confines the gas flow to the direction along the rotating shaft at both the inlet and outlet.

axial filament [CYTOL] The central microtubule elements of a cilium or flagellum. [INV ZOO] An organic fiber which serves as the core for deposition of mineral substance to form a ray of a sponge spicule.

axial flow [FL MECH] Flow of fluid through an axially symmetric device such that the direction of the flow is along the axis of symmetry. Also known as axisymmetric flow.

axial-flow compressor [MECH ENG] A fluid compressor that accelerates the fluid in a direction generally parallel to the rotating shaft.

axial-flow jet engine [AERO ENG] **1.** A jet engine in which the general flow of air is along the longitudinal axis of the engine. **2.** A turbojet engine that utilizes an axial-flow compressor and turbine.

axial-flow pump [MECH ENG] A pump having an axial-flow or propeller-type impeller; used when maximum capacity and minimum head are desired. Also known as propeller pump.

axial force diagram [CIV ENG] In statics, a graphical representation of the axial load acting at each section of a structural member, plotted to scale and with proper sign as an ordinate at each point of the member and along a reference line representing the length of the member.

axial gland [INV ZOO] A structure enclosing the stone canal in certain echinoderms; its function is uncertain.

axial gradient [EMBRYO] In some invertebrates, a graded difference in metabolic activity along the anterior-posterior, dorsal-ventral, and medial-lateral embryonic axes.

axial hydraulic thrust [MECH ENG] In single-stage and multistage pumps, the summation of unbalanced impeller forces acting in the axial direction.

axial jet [FL MECH] A flowing, turbulent stream which mixes with standing water in three dimensions.

axial lead [ELEC] A wire lead extending from the end along the axis of a resistor, capacitor, or other component.

axial load [MECH] A force with its resultant passing through the centroid of a particular section and being perpendicular to the plane of the section.

axial mining [ORD] Continuous or intermittent nuisance mining in great depth along the axis of enemy advance.

axial moment of inertia [MECH] For any object rotating about an axis, the sum of its component masses times the square of the distance to the axis.

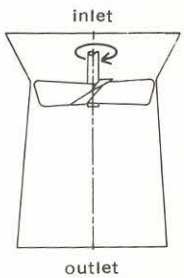
axial musculature [ANAT] The muscles that lie along the longitudinal axis of the vertebrate body.

axial plane [CRYSTAL] **1.** A plane that includes two of the

AVOCADO

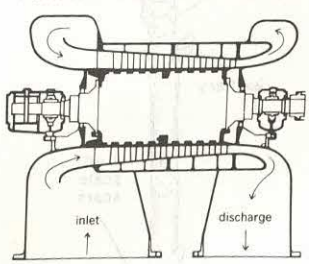
Avocado foliage and fruit.

AXIAL FAN



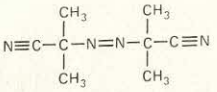
Simplified diagram of an axial fan.

AXIAL-FLOW COMPRESSOR



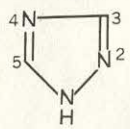
Section drawing of an axial-flow compressor.

AZOBISISOBUTYRONITRILE



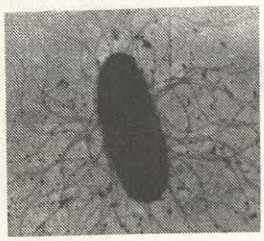
Structural formula.

AZOLE



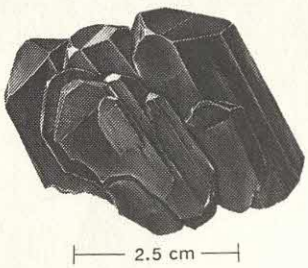
Structural formula for 1,2,4-triazole.

AZOTOBACTER



Azotobacter vinelandii with peritrichous flagella. *(From A. W. Hofer, Flagellation of Azotobacter, J. Bacteriol., 48:697-701, 1944)*

AZURITE



Crystals of azurite from Tsumeb, Southwest Africa. *(Specimen from Department of Geology, Bryn Mawr College)*

due to jamming aircraft; it is useful in making passive fixes when two or more radar sites can operate together.

azine [ORG CHEM] A compound of six atoms in a ring; at least one of the atoms is nitrogen, and the ring structure resembles benzene; an example is pyridine.

azine dyes [ORG CHEM] Benzene-type dyes derived from phenazine; members of the group, such as nigrosines and safranines, are quite varied in application.

aziridine *See* ethyleneimine.

azlactone [ORG CHEM] A compound that is an anhydride of α-acylamino acid; the basic ring structure is the 5-oxazolone type.

azlon [TEXT] Any textile fiber derived from protein, such as casein.

azo- [ORG CHEM] A prefix indicating the radical —NN—.

azobenzene [ORG CHEM] $C_6H_5N_2C_6H_5$ A compound existing in cis and trans geometric isomers; the cis form melts at 71°C; the trans form comprises orange-red leaflets, melting at 68.5°C; used in manufacture of dyes and accelerators for rubbers. Also known as azobenzol; benzeneazobenzene; diphenyldiazene.

azobenzol *See* azobenzene.

2,2′-azobisisobutyronitrile [ORG CHEM] $C_8H_{12}N_4$ Crystals that decompose at 107°C; soluble in methanol and in ethanol; used as an initiator of free radical reactions and as a blowing agent for plastics and elastomers.

azo dyes [ORG CHEM] Widely used commercial dyestuffs derived from amino compounds, with the —NN— chromophore group; can be made as acid, basic, direct, or mordant dyes.

Azoic [GEOL] That portion of the earlier Precambrian time in which there is no trace of life.

azoic dye [ORG CHEM] A water-insoluble azo dye that is formed by coupling of the components on a fiber. Also known as ice color; ingrain color.

azoic printing [GRAPHICS] The method whereby azoic compositions, that is, mixtures of napthols and diazotized products, temporarily inhibited from color development are printed on cloth; when the printed material is passed through steam containing formic acid vapor, the coupling reaction occurs and development takes place.

azoimide *See* hydrazoic acid.

azole [ORG CHEM] One of a class of organic compounds with a five-membered *N*-heterocycle containing two double bonds; an example is 1,2,4-triazole.

Azomonas [MICROBIO] A genus of large, motile, oval to spherical bacteria in the family Axotobacteraceae; do not produce cysts, and secrete large quantities of capsular slime.

azomycin [MICROBIO] $C_3H_3O_2N_3$ An antimicrobial antibiotic produced by a strain of *Nocardia mesenterica*.

azon [ORD] A glide bomb used in World War II; its control surfaces in the trail were adjusted by radio signals to control the bomb in azimuth only (hence, azon).

azonal soil [GEOL] Any group of soils without well-developed profile characteristics, owing to their youth, conditions of parent material, or relief that prevents development of normal soil-profile characteristics.

azophenylene *See* phenazine.

Azores high [METEOROL] The semipermanent subtropical high over the North Atlantic Ocean, especially when it is located over the eastern part of the ocean; when in the western part of the Atlantic, it becomes the Bermuda high.

azotemia [MED] The presence of excessive amounts of nitrogenous compounds in the blood.

Azotobacter [MICROBIO] A genus of large, usually motile, rod-shaped, oval, or spherical bacteria in the family Azotobacteraceae; form thick-walled cysts, and may produce large quantities of capsular slime.

Azotobacteraceae [MICROBIO] A family of large, bluntly rod-shaped, gram-negative, aerobic bacteria capable of fixing molecular nitrogen.

azotometer *See* nitrometer.

azoturia [MED] A condition characterized by excess amounts of urea or other nitrogenous substances in the urine.

azoxybenzene [ORG CHEM] $C_6H_5NO=N—C_6H_5$ A compound existing in cis and trans forms; the cis form melts at 87°C; the trans form comprises yellow crystals, melting at 36°C, insoluble in water, soluble in ethanol.

azulene [ORG CHEM] $C_{16}H_{26}O$ The blue coloring matter of wormwood and other essential oils; an oily, blue liquid, boiling at 170°C; insoluble in water; used in cosmetics.

azulite [MINERAL] A translucent pale-blue variety of smithsonite found in large masses in Arizona and Greece.

azurite [MINERAL] $Cu_3(CO_3)_2(OH)_2$ A blue monoclinic mineral consisting of a basic carbonate of copper; an ore of copper. Also known as blue copper ore; blue malachite; chessylite.

azurmalachite [MINERAL] A mixture of azurite and malachite, usually occurring massive with concentric banding; used as an ornamental stone.

Azusa [ENG] A continuous-wave, high-accuracy, phase-comparison, single-station tracking system operating at C-band and giving two direction cosines and slant range which can be used to determine space position and velocity of a vehicle (usually a rocket or a missile).

azygospore [MYCOL] A spore which is morphologically similar to a zygospore but is formed parthenogenetically.

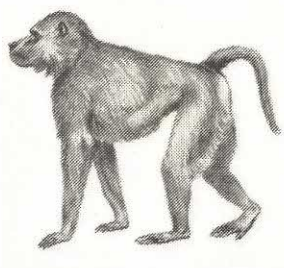
azygos vein [ANAT] A branch of the right precava which drains the intercostal muscles and empties into the superior vena cava.

azygote [BIOL] An individual produced by haploid parthenogenesis.

B

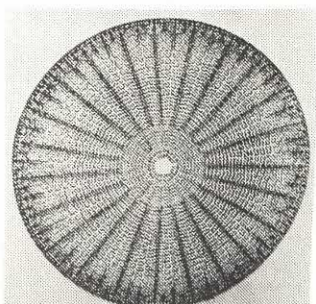
b *See* barn; bel.
B *See* bel; boron; brewster.
B-47 *See* Stratojet.
B-52 *See* Stratofortress.
Ba *See* barium.
babassu oil [MATER] A nondrying oil obtained from the kernels of the babassu palm and composed principally of lauric, myristic, and oleic acids.
babbitt metal [MET] Any of the white alloys composed primarily of tin or lead and of lesser amounts of antimony, copper, and perhaps other metals, and used for bearings.
babble [COMMUN] **1.** Aggregate crosstalk from a large number of channels. **2.** Unwanted disturbing sounds in a carrier or other multiple-channel system which result from the aggregate crosstalk or mutual interference from other channels.
Babcock coefficient of friction [FL MECH] An approximation to the coefficient of friction for steam flowing in a circular pipe of diameter d inches, given by $0.0027(1 + 3.6/d)$.
Babcock magnetograph [ASTRON] An instrument used to measure weak magnetic fields on the sun.
Babcock test [FOOD ENG] A test involving volumetric measurement of the fat content of a sample of milk; sulfuric acid is added, and the flask is heated to liquefy the fat, which is brought to the calibrated neck of the flask by centrifugal force.
Babesia [INV ZOO] The type genus of the Babesiidae, a protozoan family containing red blood cell parasites.
babesiasis [VET MED] A tick-borne protozoan disease of mammals other than humans caused by species of *Babesia*.
Babesiidae [INV ZOO] A family of protozoans in the suborder Haemosporina containing parasites of vertebrate red blood cells.
Babinet compensator [OPTICS] A device for working with polarized light, made of two quartz prisms, assembled in a rhomb, to enable the optical retardation to be adjusted to positive or negative values.
Babinet point [OPTICS] A neutral point located 15 to 20° directly above the sun.
Babinet's principle [OPTICS] The principle that the diffraction patterns produced by complementary screens are identical; two screens are said to be complementary when the opaque parts of one correspond to the transparent parts of the other.
Babinski reflex [MED] An abnormal reflex after infancy associated with a disturbance of the pyramidal tract, characterized by extension of the great toe with fanning of the other toes on sharply stroking the lateral aspect of the sole.
baboon [VERT ZOO] Any of five species of large African and Asian terrestrial primates of the genus *Papio*, distinguished by a doglike muzzle, a short tail, and naked callosities on the buttocks.
Babo's law [PHYS CHEM] A law stating that the relative lowering of a solvent's vapor pressure by a solute is the same at all temperatures.
babs *See* blind approach beacon system.
babuina [VERT ZOO] A female baboon.
baby-pig disease [VET MED] Acute hypoglycemia of newborn pigs; usually fatal if untreated.
baby spot [ELEC] A small spotlight, usually equipped with a hood, used (as in the theater) to concentrate light on an area or an object a small distance from the spotlight.
baccate [BOT] **1.** Bearing berries. **2.** Having pulp like a berry.
bacciferous [BOT] Bearing berries.
Bacillaceae [MICROBIO] The single family of endospore-forming rods and cocci.
Bacillariophyceae [BOT] The diatoms, a class of algae in the division Chrysophyta.
Bacillariophyta [BOT] An equivalent name for the Bacillariophyceae.
bacillary [MICROBIO] **1.** Rod-shaped. **2.** Produced by, pertaining to, or resembling bacilli.
bacillary dysentery [MED] A highly infectious bacterial disease of humans, localized in the bowels; caused by *Shigella*.
bacillary white diarrhea *See* pullorum disease.
bacillophobia [PSYCH] An abnormal fear of bacilli.
bacilluria [MED] The presence of bacilli in the urine.
bacillus [MICROBIO] Any rod-shaped bacterium.
Bacillus [MICROBIO] A genus of bacteria in the family Bacillaceae; rod-shaped cells are aerobes or facultative anaerobes and usually produce catalase.
Bacillus anthracis [MICROBIO] A nonmotile pathogenic species of bacteria that causes anthrax.
Bacillus brevis [MICROBIO] A gram-variable, saprophytic species of bacteria important for production of the antibiotic tyrothricin.
Bacillus Calmette-Guerin vaccine [IMMUNOL] A vaccine prepared from attenuated human tubercle bacilli and used to immunize humans against tuberculosis. Abbreviated BCG vaccine.
Bacillus licheniformis [MICROBIO] A gram-positive species of bacteria; important for production of the antibiotic bacitracin.
Bacillus megaterium [MICROBIO] A gram-positive species of bacteria that can produce levan from sucrose.
Bacillus polymyxa [MICROBIO] A gram-variable species of bacteria that produces gas from carbohydrates; important for production of the antibiotic polymyxin B.
Bacillus subtilis [MICROBIO] A gram-positive species of bacteria important for production of the antibiotic subtilin; the type species of the genus.
bacitracin [MICROBIO] A group of polypeptide antibiotics produced by *Bacillus licheniformis*.
back [ANAT] The part of the human body extending from the neck to the base of the spine. [GRAPHICS] The part of a book where the binding and pages are stitched together. [MIN ENG] **1.** The upper part of any mining cavity. **2.** A joint, usually a strike joint, perpendicular to the direction of working.
backacter *See* backhoe.
back arch [ARCH] A concealed arch which carries backing of a wall, where the exterior facing is carried by a lintel.
back azimuth [NAV] An azimuth 180° from a given azimuth.
back balance [MIN ENG] **1.** A kind of self-acting incline in a mine. **2.** The means of maintaining tension on a rope transmission or haulage system, consisting of the tension carriage, attached weight, and supporting structure.
backband [BUILD] A piece of millwork used around a rectangular window or door casing as a cover for the gap between the casing and the wall or as a decorative feature. Also known as backbend.
back beach *See* backshore.
back bearing [NAV] A bearing along the reverse direction of a line. Also known as reciprocal bearing.
backbend [BUILD] **1.** At the outer edge of a metal door or window frame, the face which returns to the wall surface. **2.** *See* backband.

BABOON



A baboon, a representative of Old World cercopithecoid monkeys.

BACILLARIOPHYCEAE



Arachnoidiscus ehrenbergii, a concentric diatom with radial symmetry. *(From H. J. Fuller and O. Tippo, College Botany, rev. ed., Holt, 1954)*

backbending [NUC PHYS] A discontinuity in the rotational levels of some rare-earth nuclei around spin 20 (where is Planck's constant divided by 2π), which appears as a backbend on a graph that plots the moment of inertia versus the square of the rotational frequency.

back-bent occlusion *See* bent-back occlusion.

back bias [ELECTR] **1.** Degenerative or regenerative voltage which is fed back to circuits before its originating point; usually applied to a control anode of a tube or other device. **2.** Voltage applied to a grid of a tube (or tubes) or electrode of another device to reduce a condition which has been upset by some external cause.

backblast area [ORD] Cone-shaped area to the rear of a recoilless weapon, rocket launcher, or rocket-assisted takeoff unit which is dangerous to personnel because of the expulsion of powder gases.

back bond [SOLID STATE] A chemical bond between an atom in the surface layer of a solid and an atom in the second layer.

backbone [ANAT] *See* spine. [GEOL] **1.** A ridge forming the principal axis of a mountain. **2.** The principal mountain ridge, range, or system of a region.

back boxing *See* back lining.

backbreak *See* overbreak.

back bulb [BOT] A pseudobulb on certain orchid plants that remains on the plant after removal of the terminal growth, and that is used for propagation.

backcast stripping [MIN ENG] A stripping method using two draglines; one strips and casts the overburden, and the other recasts a portion of the overburden.

back check [DES ENG] In a hydraulic door closer, a mechanism that slows the speed with which a door may be opened.

back-coated mirror [OPTICS] Glass with a reflective coating applied against the rear surface.

back contact [ELEC] Normally closed stationary contact on a relay that is opened when the relay is energized.

back course [NAV] In the instrument low-approach system, the course which extends from the back of a localizer antenna system to furnish guidance in the horizontal plane at the rear of the localizer.

backcross [GEN] A cross between an F_1 heterozygote and an individual of P_1 genotype.

backdeep [GEOL] An epieugeosynclinal basin; a nonvolcanic postorogenic geosynclinal basin whose sediments are derived from an uplifted eugeosyncline.

backdigger *See* backhoe.

back-door cold front [METEOROL] A front which leads a cold air mass toward the south and southwest along the Atlantic seaboard of the United States.

back draft [MET] A reversed taper given to a casting model or pattern to prevent its withdrawal from the mold.

back-draft damper [MECH ENG] A damper with blades actuated by gravity, permitting air to pass through them in one direction only.

back echo [ELECTROMAG] An echo signal produced on a radar screen by one of the minor back lobes of a search radar beam.

back echo reflection [ELECTR] A radar echo produced by radiation reflected to the target by a large, fixed obstruction; that is, the ray path is from antenna to obstruction to target to antenna, instead of antenna to target to antenna.

backed cloth [TEXT] Cloth made by weaving or knitting an extra weft or warp to the back to increase thickness or to obtain different color effects.

back edging [ENG] Cutting through a glazed ceramic pipe by first chipping through the glaze around the outside and then chipping the pipe itself.

back electromotive force *See* counterelectromotive force.

back-emission electron radiography [ELECTR] A technique used in microradiography to visualize, among other things, the presence of material of different atomic numbers in the surface of the specimen being observed; the polished side of the specimen is facing and in close contact with the emulsion side of a fine-grain photographic plate; a light-tight cover holds the specimen and plate in place to be subjected to hardened x-rays.

back end *See* thrust yoke.

backfill [CIV ENG] Earth refilling a trench or an excavation around a building, bridge abutment, and the like. [MIN ENG] Waste sand or rock used to support the mine roof after removal of ore.

back fillet [BUILD] The return of the margin of a groin, doorjamb, or window jamb when it projects beyond a wall.

backfire [ELECTR] *See* arcback. [ENG] Momentary backward burning of flame into the tip of a torch. Also known as flashback. [ORD] Rearward escapement of gases or cartridge fragments upon firing a gun.

backfire antenna [ELECTROMAG] An antenna which exhibits significant gain in a direction 180° from its principal lobe.

backflap hinge [DES ENG] A hinge having a flat plate or strap which is screwed to the face of a shutter or door. Also known as flap hinge.

backflash [CHEM] Rapid combustion of a material occurring in an area that the reaction was not intended for.

backflooding [HYD] A reversal of flow of water at the water table resulting from changes in precipitation.

backflow [CIV ENG] The flow of water or other liquids, mixtures, or substances into the distributing pipes of a potable supply of water from any other than its intended source. [FL MECH] Any flow in a direction opposite to the natural or intended direction of flow.

backflow connection [CIV ENG] Any arrangement of pipes, plumbing fixtures, and drains in which backflow can occur.

backflow preventer *See* vacuum breaker.

backflow valve *See* backwater valve.

back focal length [OPTICS] The distance from the rear surface of a lens to its focal plane.

backfolding [GEOL] Process in mountain forming in which the folds are overturned toward the interior of an orogenic belt. Also known as backward folding.

back furrow *See* esker.

back gearing [MECH ENG] The technique of using gears on machine tools to obtain an increase in the number of speed changes that can be gotten with cone belt drives.

back gouging [MET] The elimination of excess material from both weld metal and base metal on the opposite side of a partly welded joint; a groove or bevel is formed in order to facilitate complete joint penetration.

background [COMMUN] **1.** Picture white of the facsimile copy being scanned when the picture is black and white only. **2.** Undesired printing in the recorded facsimile copy of the picture being transmitted, resulting in shading of the background area. **3.** Noise heard during radio reception caused by atmospheric interference or the operation of the receiver at such high gain that inherent tube and circuit noises become noticeable.

background count [PHYS] Responses of the radiation counting system to radiation coming from sources other than the source to be measured.

background discrimination [ENG] The ability of a measuring instrument, circuit, or other device to distinguish signal from background noise.

background luminance [OPTICS] In visual-range theory, the brightness of the background against which a target is viewed.

background noise [ACOUS] The unwanted residual sound that is present whether or not the sound source being studied is in operation. [ENG] The undesired signals that are always present in an electronic or other system, independent of whether or not the desired signal is present.

background processing [COMPUT SCI] The execution of lower-priority programs when higher-priority programs are not being handled by a data-processing system.

background radiation [NUCLEO] The radiation in humans' natural environment, including cosmic rays and radiation from the naturally radioactive elements. Also known as natural radiation. [PHYS] Radiation which is due to sources other than the source of interest in a measurement of radiation and which is detected by the measuring apparatus.

background reflectance [COMPUT SCI] The reflectance, relative to a standard, of the surface on which a printed or handwritten character has been inscribed in optical character recognition.

background returns [ENG] **1.** Signals on a radar screen from objects which are of no interest. **2.** *See* clutter.

background signal [ENG] The output of a leak detector caused by residual gas to which the detector element reacts.

back gutter [BUILD] A gutter installed on the uphill side of a chimney on a sloping roof to divert water around the chimney.

backhand welding [MET] A welding technique in which the flame is directed back against the completed weld. Also known as backward welding.

back-haul [COMMUN] Use of excess circuit mileage by routing via switching centers that are not in a direct facility path from an originating office to a terminating office.

back hearth [BUILD] That part of the hearth which is contained within the fireplace itself. Also known as inner hearth.

backhoe [MECH ENG] An excavator fitted with a hinged arm to which is rigidly attached a bucket that is drawn toward the machine in operation. Also known as backacter; backdigger; dragshovel; pullshovel.

back holes [MIN ENG] The holes which are shot last in mine shaft sinking.

backing [ELECTR] Flexible material, usually cellulose acetate or polyester, used on magnetic tape as the carrier for the oxide coating. [MET] *See* backing strip. [METEOROL] **1.** Internationally, a change in wind direction in a counterclockwise sense (for example, south to east) in either hemisphere of the earth. **2.** In United States usage, a change in wind direction in a counterclockwise sense in the Northern Hemisphere, clockwise in the Southern Hemisphere. [MIN ENG] **1.** Timbers across the top of a level, supported in notches cut in the rock. **2.** Rough masonry of a wall faced with finer work. **3.** Earth placed behind a retaining wall.

backing board [BUILD] In a suspended acoustical ceiling, a flat sheet of gypsum board to which acoustical tile is attached by adhesive or mechanical means.

backing brick [CIV ENG] A relatively low-quality brick used behind face brick or other masonry.

backing cloth [GRAPHICS] Fiber material on the reverse side of photographic paper for strength.

backing deals [MIN ENG] Boards, 1–4 inches (2.5–10 centimeters) thick, of sufficient length to bridge the space between timber or steel sets or between rings in skeleton tubbing.

backing off [ENG] Removing excessive body metal from badly worn bits.

backing plate [ENG] A plate used to support the hardware for the cavity used in plastics injection molding.

backing pump [MECH ENG] A vacuum pump, in a vacuum system using two pumps in tandem, which works directly to the atmosphere and reduces the pressure to an intermediate value, usually between 100 and 0.1 pascals. Also known as fore pump.

backing space [ENG] Space between a fore pump and a diffusion pump in a leak-testing system.

backing space technique [ENG] Testing for leaks by connecting a leak detector to the backing space.

backing storage [COMPUT SCI] A computer storage device whose capacity is larger, but whose access time is slower, than that of the computer's main storage or immediate access storage; usually slower than main storage. Also known as bulk storage.

backing strip [MET] A piece of metal, asbestos, or other nonflammable material placed behind a joint to facilitate welding. Also known as backing.

backing up [CIV ENG] In masonry, the laying of backing brick. [GRAPHICS] The process of printing on the reverse side of a printed sheet.

back jamb *See* back lining.

backjoint [CIV ENG] In masonry, a rabbet such as that made on the inner side of a chimneypiece to receive a slip.

backlands [GEOL] A section of a river floodplain lying behind a natural levee.

backlash [DES ENG] The amount by which the tooth space of a gear exceeds the tooth thickness of the mating gear along the pitch circles. [ELECTR] A small reverse current in a rectifier tube caused by the motion of positive ions produced in the gas by the impact of thermoelectrons. [ENG] **1.** Relative motion of mechanical parts caused by looseness. **2.** The difference between the actual values of a quantity when a dial controlling this quantity is brought to a given position by a clockwise rotation and when it is brought to the same position by a counterclockwise rotation.

backlight [GRAPHICS] A spotlight that illuminates from behind so that the subject is separated from the background; used in photography.

backlimb [GEOL] Of the two limbs of an asymmetrical anticline, the one that is more gently dipping.

backlining [BUILD] **1.** A thin strip which lines a window casing, next to the wall and opposite the pulley stile, and provides a smooth surface for the working of the weighted sash. Also known as back boxing; back jamb. **2.** That piece of framing forming the back recess for boxing shutters. [GRAPHICS] Paper strip that is cemented to a book's backbone to bind the signatures and permit space between the backbone and the cover.

back lintel [BUILD] A lintel which supports the backing of a masonry wall, as opposed to the lintel supporting the facing material.

back lobe [ELECTROMAG] The three-dimensional portion of the radiation pattern of a directional antenna that is directed away from the intended direction.

backlog [IND ENG] **1.** An accumulation of orders promising future work and profit. **2.** An accumulation of unprocessed materials or unperformed tasks.

backmarsh [ECOL] Marshland formed in poorly drained areas of an alluvial floodplain.

back mixing [CHEM ENG] The tendency of reacted chemicals to intermingle with unreacted feed in reactors, such as stirred tanks, packed towers, and baffled tanks.

back nailing [BUILD] Nailing the plies of a built-up roof to the substrate to prevent slippage.

back nut [DES ENG] **1.** A threaded nut, one side of which is dished to retain a grommet; used in forming a watertight pipe joint. **2.** A locking nut on the shank of a pipe fitting, tap, or valve.

back off [ENG] **1.** To unscrew or disconnect. **2.** To withdraw the drill bit from a borehole. **3.** To withdraw a cutting tool or grinding wheel from contact with the workpiece.

back order [IND ENG] **1.** An order held for future completion. **2.** A new order placed for previously unavailable materials of an old order.

backout [AERO ENG] An undoing of previous steps during a countdown, usually in reverse order.

backplane [COMPUT SCI] A wiring board, usually constructed as a printed circuit, used in microcomputers and minicomputers to provide the required connections between logic, memory, and input/output modules.

backplastering [BUILD] A coat of plaster applied to the back side of lath, opposite the finished surface.

backplate [BUILD] A plate, usually metal or wood, which serves as a backing for a structural member.

backplate lamp holder [DES ENG] A lamp holder, integrally mounted on a plate, which is designed for screwing to a flat surface.

back porch [ELECTR] The period of time in a television circuit immediately following a synchronizing pulse during which the signal is held at the instantaneous amplitude corresponding to a black area in the received picture.

back pressure [MECH] Pressure due to a force that is operating in a direction opposite to that being considered, such as that of a fluid flow. [MECH ENG] Resistance transferred from rock into the drill stem when the bit is being fed at a faster rate than the bit can cut.

back-pressure curve [PETRO ENG] A graph used to arrive at the capacity of a natural-gas well to deliver gas into a pipeline at a sustained rate; uses data from back-pressure testing.

back-pressure-relief port [ENG] In a plastics extrusion die, an opening for the release of excess material.

back-pressure testing [PETRO ENG] Method of estimating open-flow capacity of natural-gas wells by relating a series of gas-flow rates and their corresponding stabilized pressures at the bottom of the well bore.

back-pressure valve [PETRO ENG] A check valve installed in a natural-gas well bore to shut off gas flow while replacing the blowout preventer (used during drilling) with a christmas tree piping arrangement, which controls gas flow out of the completed well.

back putty [MATER] The bedding of glazing compound which is placed between the face of glass and the frame or sash containing it. Also known as bed glazing.

back radiation *See* backscattering; counterradiation.

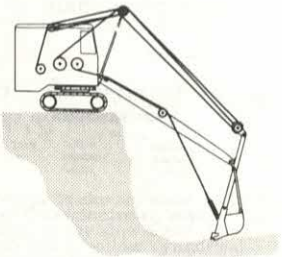
back rake [DES ENG] An angle on a single-point turning tool measured between the plane of the tool face and the reference plane.

back range [NAV] A range (distance) measured astern, particularly one used as guidance for a craft moving away from the objects from which the distance information was deduced, forming the range.

back reef [GEOGR] The area between a reef and the land.

back-reflection photography [CRYSTAL] A method of studying crystalline structure by x-ray diffraction in which the

BACKHOE



Reeving diagram for power crane fitted with backhoe. *(United States Steel Corp.)*

photographic film is placed between the source of x-rays and the crystal specimen.

back resistance [ELECTR] The resistance between the contacts opposing the inverse current of a metallic rectifier.

backrope [NAV ARCH] **1.** Either of two ropes or chains on a sailing ship, extending aft from the lower end of the dolphin striker to each side of the bows. **2.** *See* cat back.

back-run process [CHEM ENG] A process for manufacturing water gas in which part of the run is made down, by passing steam through the superheater, thence up through the carburetor, down through the generator, and direct to the scrubbers.

back rush [OCEANOGR] Return of water seaward after the uprush of the waves.

backs [MIN ENG] Ore height available above a given working level.

backsaw [DES ENG] A fine-tooth saw with its upper edge stiffened by a metal rib to ensure straight cuts.

backsawing [FOR] A method of converting timber so that the growth rings meet the face in any part of an angle of less than 45°. Also known as bastard-sawing; crown-cut; plain-sawing; slash-sawing.

backscatter gage [ENG] A radar instrument used to measure the radiation scattered at 180° to the direction of the incident wave.

backscattering Also known as back radiation; backward scattering. [COMMUN] Propagation of extraneous signals by F- or E-region reflection in addition to the desired ionospheric scatter mode; the undesired signal enters the antenna through the back lobes. [ELECTROMAG] **1.** Radar echoes from a target. **2.** Undesired radiation of energy to the rear by a directional antenna. [PHYS] The deflection of radiation or nuclear particles by scattering processes through angles greater than 90° with respect to the original direction of travel.

backscattering thickness gage [ENG] A device that uses a radioactive source for measuring the thickness of materials, such as coatings, in which the source and the instrument measuring the radiation are mounted on the same side of the material, the backscattered radiation thus being measured.

backscatter radar [ORD] An over-the-horizon radar system designed primarily to detect an enemy missile attack from far beyond the horizon, by detecting radio energy reflected from the ionosphere disturbance created by the missiles.

backset [BUILD] The horizontal distance from the face of a lock or latch to the center of the keyhole, knob, or lock cylinder.

back-set bed [GEOL] Cross bedding that dips in a direction against the flow of a depositing current.

backshore [GEOL] The upper shore zone that is beyond the advance of the usual waves and tides. Also known as back beach; backshore beach.

backshore beach *See* backshore.

backshore terrace *See* berm.

back shot [MIN ENG] A shot used for widening an entry, placed at some distance from the head of an entry.

backsight [ENG] **1.** A sight on a previously established survey point or line. **2.** Reading a leveling rod in its unchanged position after moving the leveling instrument to a different location. [NAV] A marine sextant observation of a celestial body made by facing 180° from the azimuth of the body and using the visible horizon in the direction in which the observer is facing.

backsight method [ENG] **1.** A plane-table traversing method in which the table orientation produces the alignment of the alidade on an established map line, the table being rotated until the line of sight is coincident with the corresponding ground line. **2.** Sighting two pieces of equipment directly at each other in order to orient and synchronize one with the other in azimuth and elevation.

back siphonage [CIV ENG] The flowing back of used, contaminated, or polluted water from a plumbing fixture or vessel into the pipe which feeds it; caused by reduced pressure in the pipe.

back slope *See* dip slope.

backspace [COMPUT SCI] To move a recording medium one unit in the reverse or background direction. [MECH ENG] To move a typewriter carriage back one space by depressing a back space key.

backspring [NAV ARCH] A heavy line extending forward at an acute angle with a ship from the stern or midships to a wharf.

backstay [ENG] **1.** A supporting cable that prevents a more or less vertical object from falling forward. **2.** A spring used to keep together the cutting edges of purchase shears. **3.** A rod that runs from either end of a carriage's rear axle to the reach. **4.** A leather strip that covers and strengthens a shoe's back seam. [GRAPHICS] A rope or strap that keeps the carriage of a hand printing press from moving too far forward. [NAV ARCH] A rope, wire, or cable that runs from the top of a mast to the side of a ship and slants a little aft. [TEXT] A bar having a glass rod on its top, that runs across a loom beneath the lowest motion of the warp yarns.

backstep sequence [MET] Sequential deposition of weld beads in the direction opposite to the direction of welding.

back stoping *See* shrinkage stoping.

backswamp [GEOL] Swampy depressed area of a floodplain between the natural levees and the edge of the floodplain.

backswamp depression [ECOL] A low swamp found adjacent to river levees.

back sweetening [CHEM ENG] The controlled addition of commercial-grade mercaptans to a petroleum stock having excess free sulfur in order to reduce free sulfur by forming a disulfide.

backtalk [COMPUT SCI] Passage of information from a standby computer to the active computer.

backthrusting [GEOL] The thrusting in the direction of the interior of an orogenic belt, opposite the general structural trend.

back titration [CHEM] A titration to return to the end point which was passed.

back-to-front ratio [ELECTROMAG] Ratio used in connection with an antenna, metal rectifier, or any device in which signal strength or resistance in one direction is compared with that in the opposite direction.

backtracking [COMPUT SCI] A method of solving problems automatically by a systematic search of the possible solutions; invalid solutions are eliminated and are not retried.

backup [BUILD] That part of a masonry wall behind the exterior facing. [CIV ENG] Overflow in a drain or piping system, due to stoppage. [ENG] **1.** An item under development intended to perform the same general functions that another item also under development performs. **2.** A compressible material used behind a sealant to reduce its depth and to support the sealant against sag or indentation. [GRAPHICS] **1.** An image printed on the reverse side of a printed sheet. **2.** The printing of such an image. [MET] A support used to balance the upsetting force in the workpieces during flash welding. [PETRO ENG] During drilling, the holding of one section of pipe while another is screwed out of it or into it.

backup arrangement *See* cascade.

backup relay [ELEC] A relay designed to protect a power system in case a primary relay fails to operate as desired.

backup strip [BUILD] A wood strip which is fixed at the corner of a partition or wall to provide a nailing surface for ends of lath. Also known as lathing board.

backup system [SYS ENG] A system, normally redundant but kept available to replace a system which may fail in operation.

backup tong [ENG] A heavy device used on a drill pipe to loosen the tool joints.

Backus-Naur form [COMPUT SCI] A metalanguage that specifies which sequences of symbols constitute a syntactically valid program language. Abbreviated BNF.

back veneer [MATER] In veneer plywood, the layer of veneer on the side of a plywood sheet which is opposite the face veneer; usually of lower quality.

back vent [CIV ENG] An individual vent for a plumbing fixture located on the downstream (sewer) side of a trap to protect the trap against siphonage.

backward-acting regulator [ELECTR] Transmission regulator in which the adjustment made by the regulator affects the quantity which caused the adjustment.

backward-bladed aerodynamic fan [MECH ENG] A fan that consists of several streamlined blades mounted in a revolving casing.

backward diode [ELECTR] A semiconductor diode similar to a tunnel diode except that it has no forward tunnel current; used as a low-voltage rectifier.

backward error analysis [COMPUT SCI] A form of error analysis which seeks to replace all errors made in the course of solving a problem by an equivalent perturbation of the original problem.

backward folding *See* backfolding.

backward scattering *See* backscattering.

backward wave [ELECTROMAG] An electromagnetic wave traveling opposite to the direction of motion of some other physical quantity in an electronic device such as a traveling-wave tube or mismatched transmission line.

backward-wave magnetron [ELECTR] A magnetron in which the electron beam travels in a direction opposite to the flow of the radio-frequency energy.

backward-wave oscillator [ELECTR] An electronic device which amplifies microwave signals simultaneously over a wide band of frequencies and in which the traveling wave produced is reflected backward so as to sustain the wave oscillations. Abbreviated BWO. Also known as carcinotron.

backward-wave tube [ELECTR] A type of microwave traveling-wave electron tube in which electromagnetic energy on a slow-wave circuit flows opposite in direction to the travel of electrons in a beam.

backward welding *See* backhand welding.

backwash [CHEM ENG] **1.** In an ion-exchange resin system, an upward flow of water through a resin bed that cleans and reclassifies the resin particles after exhaustion. **2.** *See* blowback. [OCEANOGR] **1.** Water or waves thrown back by an obstruction such as a ship or breakwater. **2.** The seaward return of water after a rush of waves onto the beach foreshore.

backwash mark [GEOL] A crisscross ridge pattern in beach sand, caused by backwash.

backwash ripple mark [GEOL] Ripple marks that are broad and flat and parallel to the shoreline, with narrow, shallow troughs and crests about 30 centimeters apart; formed by backwash above the maximum wave retreat level.

backwater [HYD] **1.** A series of connected lagoons, or a creek parallel to a coast, narrowly separated from the sea and connected to it by barred outlets. **2.** Accumulation of water resulting from and held back by an obstruction. **3.** Water reversed in its course by an obstruction.

backwater valve [ENG] A type of check valve in a drainage pipe; reversal of flow causes the valve to close, thereby cutting off flow. Also known as backflow valve.

back wave [COMMUN] Signal emitted from a radio telegraph transmitter during spacing portions of the code characters. Also known as spacing wave.

backweld [MET] A weld placed behind a single groove weld.

back work [MIN ENG] Any kind of operation in a mine not immediately concerned with production or transport; literally, work behind the face, such as repairs to roads.

bacteremia [MED] Presence of bacteria in the blood.

bacteremic shock [MED] A state of shock occurring during the course of bacteremia, especially if caused by gram-negative bacteria.

bacteria [MICROBIO] Extremely small, relatively simple prokaryotic microorganisms traditionally classified with the fungi as Schizomycetes.

Bacteriaceae [MICROBIO] A former designation for Brevibacteriaceae.

bacterial blight [PL PATH] Any blight disease of plants caused by bacteria, including common bacterial blight, halo blight, and fuscous blight.

bacterial bronchopneumonia [MED] Bacterial infection of the lung which has spread from infected bronchi.

bacterial brown spot [PL PATH] A bacterial blight disease of plants caused by *Pseudomonas syringae;* marked by water-soaked reddish-brown spots or cankers. Also known as bacterial canker.

bacterial canker *See* bacterial brown spot.

bacterial capsule [MICROBIO] A thick, mucous envelope, composed of polypeptides or carbohydrates, surrounding some bacteria.

bacterial coenzyme [MICROBIO] Organic molecules that participate directly in a bacterial enzymatic reaction and may be chemically altered during the reaction.

bacterial competence [MICROBIO] The ability of cells in a bacterial culture to accept and be transformed by a molecule of transforming deoxyribonucleic acid.

bacterial encephalitis [MED] Inflammation of the brain caused by primary or secondary bacterial infection.

bacterial endocarditis [MED] Inflammation of the endocardium due to bacterial invasion. Also known as subacute bacterial endocarditis.

bacterial endoenzyme [MICROBIO] An enzyme produced and active within the bacterial cell.

bacterial endospore [MICROBIO] A body, resistant to extremes of temperature and to dehydration, produced within the cells of gram-positive, sporeforming rods of *Bacillus* and *Clostridium* and by the coccus *Sporosarcina*.

bacterial enzyme [MICROBIO] Any of the metabolic catalysts produced by bacteria.

bacterial genetics [GEN] The study of inheritance and variation patterns in bacteria.

bacterial infection [MED] Establishment of an infective bacterial agent in or on the body of a host.

bacterial leaf spot [PL PATH] A bacterial disease of plants characterized by spotty discolorations on the leaves; examples are angular leaf spot and leaf blotch.

bacterial luminescence [MICROBIO] A light-producing phenomenon exhibited by certain bacteria.

bacterial metabolism [MICROBIO] Total chemical changes carried out by living bacteria.

bacterial motility [MICROBIO] Self-propulsion in bacteria, either by gliding on a solid surface or by moving the flagella.

bacterial photosynthesis [MICROBIO] Use of light energy to synthesize organic compounds in green and purple bacteria.

bacterial pigmentation [MICROBIO] The organic compounds produced by certain bacteria which give color to both liquid cultures and colonies.

bacterial pneumonia [MED] Consolidation of the lung caused by inflammatory exudation due to bacterial infection.

bacterial pustule [PL PATH] A bacterial blight of plants caused by *Xanthomonas phaseoli;* characterized by blisters on the leaves.

bacterial soft rot [PL PATH] A bacterial disease of plants marked by disintegration of tissues.

bacterial speck [PL PATH] A bacterial disease of plants characterized by small lesions on plant parts.

bacterial spot [PL PATH] Any bacterial disease of plants marked by spotting of the infected part.

bacterial vaccine [IMMUNOL] A preparation of living, attenuated, or killed bacteria used to enhance the immune reaction in an individual already infected with the same bacteria.

bacterial wilt disease [PL PATH] A common bacterial disease of cucumber and muskmelon, caused by *Erwinia tracheiphila,* characterized by wilting and shriveling of the leaves and stems.

bactericide [MATER] An agent that destroys bacteria.

bactericidin [IMMUNOL] An antibody that kills bacteria in the presence of complement.

bacterin [IMMUNOL] A suspension of killed or weakened bacteria used in artificial immunization.

bacteriochlorophyll [BIOCHEM] $C_{52}H_{70}O_6N_4Mg$ A tetrahydroporphyrin chlorophyll compound occurring in the forms *a* and *b* in photosynthetic bacteria; there is no evidence that *b* has the empirical formula given.

bacteriocyte [INV ZOO] A modified fat cell found in certain insects that contains bacterium-shaped rods believed to be symbiotic bacteria.

bacteriogenic [MICROBIO] Caused by bacteria.

bacteriological warfare [ORD] Warfare conducted with pathogenic microorganisms as offensive weapons; a type of biological warfare.

bacteriologist [MICROBIO] A specialist in the study of bacteria.

bacteriology [MICROBIO] The science and study of bacteria; a specialized branch of microbiology.

bacteriolysin [MICROBIO] An antibody that is active against and causes lysis of specific bacterial cells.

bacteriolysis [MICROBIO] Dissolution of bacterial cells.

Bacterionema [MICROBIO] A genus of bacteria in the family Actinomycetaceae; characteristically cells are rods with filaments attached and produce filamentous microcolonies; facultative anaerobes; carbohydrates are fermented.

bacteriophage [VIROL] Any of the viruses that infect bacterial cells; each has a narrow host range. Also known as phage.

bacteriophobia [PSYCH] An abnormal fear of bacteria and other microorganisms.

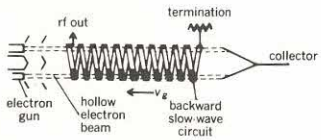
bacteriosis [PL PATH] Any bacterial disease of plants.

bacteriostasis [MICROBIO] Inhibition of bacterial growth and metabolism.

bacteriotoxin [MICROBIO] **1.** Any toxin that destroys or inhibits growth of bacteria. **2.** A toxin produced by bacteria.

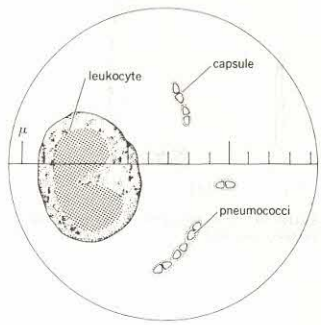
bacteriotropin [IMMUNOL] An antibody that is increased in

BACKWARD-WAVE OSCILLATOR



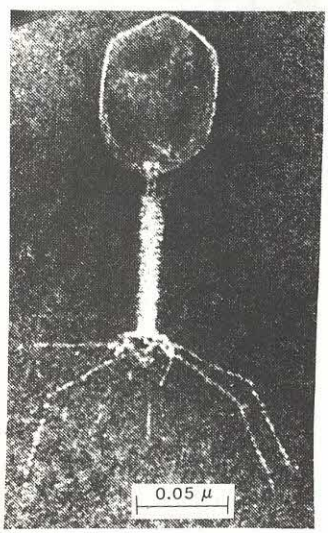
O-type backward-wave oscillator (or O-carcinotron), which uses a helix as the slow-wave circuit and has a hollow cylindrical electron beam; v_g is the velocity at which microwave energy travels along the helix toward the gun.

BACTERIAL CAPSULE



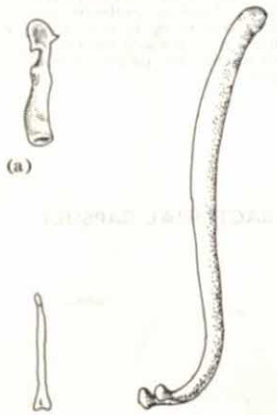
Drawing of pneumococci in sputum showing capsule surrounding the bacteria. *(From A. B. Sabin, J. Amer. Med. Assoc., 100(20):1585, 1933)*

BACTERIOPHAGE



Electron micrograph of negatively stained T2 bacteriophage showing head and tail components. *(Courtesy of H. Fernandez-Moran)*

BACULUM



Bacula of *(a)* squirrel, *(b)* cotton mouse, *(c)* otter.

BADDELEYITE

Baddeleyite crystals with jacupirangite rock from Brazil. *(Specimen from Department of Geology, Bryn Mawr College)*

amount during specific immunization and that renders the corresponding bacterium more susceptible to phagocytosis.

bacterioviridin *See* chlorobium chlorophyll.

Bacterium enteritidis *See* Salmonella enteritidis.

Bacterium paratyphosum B *See* Salmonella schottmülleri.

Bacterium paratyphosum C *See* Salmonella hirschfeldii.

Bacterium typhosum *See* Salmonella typhosum.

bacteriuria [MED] The occurrence of bacteria in the urine.

bacteroid [MICROBIO] A strange bacterial form of irregular shape, frequently associated with special conditions.

Bacteroidaceae [MICROBIO] The single family of gram-negative anaerobic bacteria; cells are nonsporeforming rods; some species are pathogenic.

Bactrian camel [VERT ZOO] *Camelus bactrianus*. The two-humped camel.

baculite [GEOL] A crystallite that looks like a dark rod.

baculum [VERT ZOO] The penis bone, or os priapi, in lower mammals.

bad break [GRAPHICS] In type composition, the setting of the first line of a page beginning with only a portion of a word or containing only a single word.

baddeleyite [MINERAL] ZrO_2 A colorless, yellow, brown, or black monoclinic zirconium oxide mineral found in Brazil and Ceylon; used as heat- and corrosion-resistant linings for furnaces and muffles.

badge meter *See* film badge.

badger [DES ENG] *See* badger plane. [ENG] A tool used inside a pipe or culvert to remove any excess mortar or deposits. [VERT ZOO] Any of eight species of carnivorous mammals in six genera comprising the subfamily Melinae of the weasel family (Mustelidae).

badge reader [COMPUT SCI] A device that can read data appearing in the form of holes in plastic badges or prepunched cards.

badger plane [DES ENG] A hand plane whose mouth is cut obliquely from side to side, so that the plane can work close up to a corner. Also known as badger.

Badger's rule [PHYS CHEM] An empirical relationship between the stretching force constant for a molecular bond and the bond length.

badlands [GEOGR] An erosive physiographic feature in semiarid regions characterized by sharp-edged, sinuous ridges separated by steep-sided, narrow, winding gullies.

bad top [MIN ENG] A weak roof in a coal mine; sometimes develops following a blast.

baeckeol [ORG CHEM] $C_{13}H_{18}O_4$ A phenolic ketone that is crystalline and pale yellow; found in oils from plants of species of the myrtle family.

Baeyer strain theory [ORG CHEM] The theory that the relative stability of penta- and hexamethylene ring compounds is caused by a propitious bond angle between carbons and a lack of bond strain.

baffle [ELEC] Device for deflecting oil or gas in a circuit breaker. [ELECTR] An auxiliary member in a gas tube used, for example, to control the flow of mercury particles or deionize the mercury following conduction. [ENG] A plate that regulates the flow of a fluid, as in a steam-boiler flue or a gasoline muffler. [ENG ACOUS] A cabinet or partition used with a loudspeaker to reduce interaction between sound waves produced simultaneously by the two surfaces of the diaphragm.

baffle plate [ELECTROMAG] Metal plate inserted in a waveguide to reduce the cross-sectional area for wave conversion purposes.

baffling wind [METEOROL] A wind that is shifting so that nautical movement by sailing vessels is impeded.

bag [ENG] **1.** A flexible cover used in bag molding. **2.** A container made of paper, plastic, or cloth without rigid walls to transport or store material.

bagasse [FOOD ENG] Remains of sugarcane after the juice has been extracted by pressure between the rolls of a mill; used to supply the fuel requirements of raw-sugar mills.

bagasse disease *See* bagassosis.

bagassosis [MED] A pneumoconiosis caused by the inhalation of bagasse dust, a dry sugarcane residue. Also known as bagasse disease.

bag filter [ENG] Filtering apparatus with porous cloth or felt bags through which dust-laden gases are sent, leaving the dust on the inner surfaces of the bags.

bagherra [TEXT] A woven or knitted velvet with uncut loop pile.

baghouse [ENG] The large chamber or room for holding bag filters used to filter gas streams from a furnace.

bag molding [ENG] A method of molding plastic or plywood-plastic combinations into curved shapes, in which fluid pressure acting through a flexible cover, or bag, presses the material to be molded against a rigid die.

Bagnold number [ENG] A dimensionless number used in saltation studies.

bag plug [ENG] An inflatable drain stopper, located at the lowest point of a piping system, that acts to seal a pipe when inflated.

bag powder [MATER] An explosive loaded in bags.

Bagridae [VERT ZOO] A family of semitropical catfishes in the suborder Siluroidei.

bag trap [ENG] An S-shaped trap in which the vertical inlet and outlet pipes are in alignment.

baguette *See* bead molding.

bahada *See* bajada.

bahamite [PETR] A consolidated limestone formed of sediment similar to a type currently found accumulating in the Bahamas.

bahiaite [PETR] Holocrystalline igneous rock formed mainly of hypersthene with subordinate hornblende and sometimes minor amounts of other minerals.

bahut [ARCH] **1.** In a masonry wall or parapet, the rounded upper course. **2.** A low wall surmounting a cornice to carry the roof structure.

bai [METEOROL] A yellow mist prevalent in China and Japan in spring and fall, when the loose surface of the interior of China is churned up by the wind, and clouds of sand rise to a great height and are carried eastward, where they collect moisture and fall as a yellow mist.

baikerite [MINERAL] A waxlike mineral from the vicinity of Lake Baikal, Siberia; apparently about 60% ozocerite with other tarry, waxy, and resinous hydrocarbons.

bail [ENG] A loop of heavy wire snap-fitted around two or more parts of a connector or other device to hold the parts together.

bailer [ENG] A long, cylindrical vessel fitted with a bail at the upper end and a flap or tongue valve at the lower extremity; used to remove water, sand, and mud- or cuttings-laden fluids from a borehole. Also known as bailing bucket.

Bailey bridge [CIV ENG] A lattice bridge built of interchangeable panels connected at the corners with steel pins, permitting rapid construction; developed in Britain about 1942 as a military bridge.

Bailey meter [ENG] A flowmeter consisting of a helical quarter-turn vane which operates a counter to record the total weight of granular material flowing through vertical or near-vertical ducts, spouts, or pipes.

bailing [ENG] Removal of the cuttings from a well during cable-tool drilling, or of the liquid from a well, by means of a bailer.

bailing bucket *See* bailer.

bailout [AERO ENG] The exiting from a flying aircraft and descending by parachute in an emergency.

bailout bottle [AERO ENG] A personal supply of oxygen usually contained in a cylinder under pressure and utilized when the individual has left the central oxygen system, as in a parachute jump.

Baily's beads [ASTRON] Bright points of sunlight appearing around the edge of the moon just before and after the central phase of a total solar eclipse.

Bainbridge reflex [PHYSIO] A poorly understood reflex acceleration of the heart rate due to rise of pressure in the right atrium and vena cavae, possibly mediated through afferent vagal fibers.

bainite [MET] Steel formed by austempering, having an acicular structure of ferrite and carbides, exhibiting considerable toughness, and combining high strength with high ductility.

Bairdiacea [INV ZOO] A superfamily of ostracod crustaceans in the suborder Podocopa.

Baire function [MATH] The smallest class of functions on a topological space which contains the continuous functions and is closed under pointwise limits.

Bairstow number [FL MECH] A term previously used for Mach number.

bajada [GEOL] An alluvial plain formed as a result of lateral growth of adjacent alluvial fans until they finally coalesce to

form a continuous inclined deposit along a mountain front. Also spelled bahada.

bajada breccia [PETR] An imperfectly stratified accumulation of coarse, angular rock fragments mixed with mud that formed in arid climates and results from a mudflow containing considerable water.

Bajocian [GEOL] A European stage: the middle Middle or lower Middle Jurassic geologic time; above Toarcian, below Bathonian.

Bakanae disease [PL PATH] A fungus disease of rice in Japan, caused by *Gibberella fujikurae;* a foot rot disease.

baked core [MET] In sand castings, a core which has been heated in core stoves or by dielectric heating to attain uniform physical properties.

baked finish [ENG] A paint or varnish finish obtained by baking, usually at temperatures above 150°F (65°C), thereby developing a tough, durable film.

baked permeability [MET] The property of a molded mass of sand which permits passage of gases through it when molten metal is poured in a mold, baked above 230°F (110°C), and then cooled.

baked strength [MET] The strength of a molded sand mixture when baked above 230°F (110°C) and then cooled to ambient temperature.

bakeout [ENG] The degassing of surfaces of a vacuum system by heating during the pumping process.

baker bell dolphin [CIV ENG] A dolphin consisting of a heavy bell-shaped cap pivoted on a group of piles; a blow from a ship will tilt the bell, thus absorbing energy.

bakerite [MINERAL] $8CaO \cdot 5B_2O_3 \cdot 6SiO_2 \cdot 6H_2O$ White mineral, occurring in fine-grained, nodular masses, resembling marble and unglazed porcelain, and consisting of hydrous calcium borosilicate.

Baker-Nunn camera [OPTICS] A large camera with a Schmidt-type lens system used to track earth satellites.

Baker-Schmidt telescope [OPTICS] A type of Schmidt telescope in which the light reflected from the near-spheroidal primary mirror is again reflected from a smaller, near-spheroidal secondary mirror, producing an image that is free of astigmatism and distortion.

bakers' yeast [FOOD ENG] An industrial yeast used for baking purposes because of maximum growth and low alcohol production; composed of dry cells of one or more strains of *Saccharomyces cerevisiae*.

baking [ENG] The use of heat on fresh paint films to speed the evaporation of thinners and to promote the reaction of binder components so as to form a hard polymeric film. Also known as stoving. [FOOD ENG] The use of heat in an oven to convert flour, water, yeast, and such, into baked goods. [MET] Heating metal at low temperatures to remove gases.

baking finish [MATER] Varnish or paint that must be baked at temperatures greater than 150°F (66°C) to develop desired final properties of strength and hardness.

baking powder [FOOD ENG] A yeast substitute of sodium bicarbonate plus potassium tartrate, tartaric acid, anhydrous sodium aluminum sulfate, monocalcium phosphate, or any combination of these acids so formulated as to release carbon dioxide from the sodium bicarbonate (baking soda) when moistened.

baking soda *See* sodium bicarbonate.

baking varnish [MATER] A chemical-resistant varnish made of synthetic resins that requires baking to be dried.

BAL *See* dimercaprol.

Balaenicipitidae [VERT ZOO] A family of wading birds composed of a single species, the shoebill stork (*Balaeniceps rex*), in the order Ciconiiformes.

Balaenidae [VERT ZOO] The right whales, a family of cetacean mammals composed of five species in the suborder Mysticeti.

balance [ACOUS] The condition in a stereo system wherein both speakers produce the same average sound levels. [AERO ENG] **1.** The equilibrium attained by an aircraft, rocket, or the like when forces and moments are acting upon it so as to produce steady flight, especially without rotation about its axes. **2.** The equilibrium about any specified axis that counterbalances something, especially on an aircraft control surface, such as a weight installed forward of the hinge axis to counterbalance the surface aft of the hinge axis. [CHEM] To bring a chemical equation into balance so that reaction substances and reaction products obey the laws of conservation of mass and charge. [ELEC] The state of an electrical network when it is adjusted so that voltage in one branch induces or causes no current in another branch. [ENG] An instrument for measuring mass or weight. [MIN ENG] The counterpoise or weight attached by cable to the drum of a winding engine to balance the weight of the cage and hoisting cable and thus assist the engine in lifting the load out of the shaft.

Balance *See* Libra.

balance arm [BUILD] On a projected window, a side supporting arm which is constructed so that the center of gravity of the sash is not changed appreciably when the window is opened.

balance bar *See* balance beam

balance beam [CIV ENG] A long beam, attached to a gate (or drawbridge, and such) so as to counterbalance the weight of the gate during opening or closing. Also known as balance bar.

balance car [MIN ENG] In quarrying, a car loaded with iron or stone and connected by means of a steel cable with a channeling machine operating on an inclined track; used to counteract the force of gravity and thus enable the channeling machine to operate with equal ease uphill and downhill.

balance coil [ELEC] An iron-core solenoid with adjustable taps near the center; used to convert a two-wire circuit to a three-wire circuit, the taps furnishing a neutral terminal for the latter.

balance control [ELECTR] A control used in a stereo sound system to vary the volume of one loudspeaker system relative to the other while maintaining their combined volume essentially constant.

balanced amplifier [ELECTR] An electronic amplifier in which there are two identical signal branches connected so as to operate with the inputs in phase opposition and with the output connections in phase, each balanced to ground.

balanced anesthesia [MED] Anesthesia produced by safe doses of two or more agents or methods of anesthesia, each of which contributes to the total desired effect.

balanced armature unit [ENG ACOUS] Driving unit used in magnetic loudspeakers, consisting of an iron armature pivoted between the poles of a permanent magnet and surrounded by coils carrying the audio-frequency current; variations in audio-frequency current cause corresponding changes in armature magnetism and corresponding movements of the armature with respect to the poles of the permanent magnet.

balanced bridge [ELEC] Wheatstone bridge circuit which, when in a quiescent state, has an output voltage of zero.

balanced circuit [ELEC] A circuit whose two sides are electrically alike and symmetrical with respect to a common reference point, usually ground.

balanced cloth [TEXT] A fabric made up of equal numbers and sizes of warp and filling yarns.

balanced construction [BUILD] A plywood or sandwich-panel construction which has an odd number of plies laminated together so that the construction is identical on both sides of a plane through the center of the panel.

balanced converter *See* balun.

balanced currents [ELEC] Currents flowing in the two conductors of a balanced line which, at every point along the line, are equal in magnitude and opposite in direction. Also known as push-pull currents.

balanced detector [ELECTR] A detector used in frequency-modulation receivers; in one form the audio output is the rectified difference between voltages produced across two resonant circuits, one being tuned slightly above the carrier frequency and one slightly below.

balanced digit system [MATH] A number system in which the allowable digits in each position range in value from $-n$ to n, where n is some positive integer, and $n + 1$ is greater than one-half the base.

balanced door [BUILD] A door equipped with double-pivoted hardware which is partially counterbalanced to provide easier operation.

balanced draft [ENG] The maintenance of a constant draft in a furnace by monitoring both the incoming air and products of combustion.

balanced earthwork [CIV ENG] Cut-and-fill work in which the amount of fill equals the amount of material excavated.

balanced fertilizer [MATER] A material of varying composition added to soil so as to provide essential mineral elements at required levels, improve soil structure, or enhance microbial activity.

balanced gasoline [MATER] An automotive gasoline blended from petroleum hydrocarbons of varying volatilities to

provide desired performance for engine starting, warm-up, acceleration, and mileage.

balanced input [ELECTR] A symmetrical input circuit having equal impedance from both input terminals to reference.

balanced line [ELEC] A transmission line consisting of two conductors capable of being operated so that the voltages of the two conductors at any transverse plane are equal in magnitude and opposite in polarity with respect to ground. [IND ENG] A production line for which the time cycles of the operators are made approximately equal so that the work flows at a desired steady rate from one operator to the next.

balanced method [ENG] Method of measurement in which the reading is taken at zero; it may be a visual or audible reading, and in the latter case the null is the no-sound setting.

balanced modulator [ELECTR] A modulator in which the carrier and modulating signal are introduced in such a way that the output contains the two sidebands without the carrier.

balanced network [ELEC] Hybrid network in which the impedances of the opposite branches are equal.

balanced oscillator [ELECTR] Any oscillator in which, at the oscillator frequency, the impedance centers of the tank circuits are at ground potential, and the voltages between either end and their centers are equal in magnitude and opposite in phase.

balanced output [ELECTR] A three-conductor output (as from an amplifier) in which the signal voltage alternates above and below a third, neutral wire.

balanced polymorphism [GEN] Maintenance in a population of two or more alleles in equilibrium at frequencies too high to be explained, particularly for the rarer of them, by mutation balanced by selection; for example, the selective advantage of heterozygotes over both homozygotes.

balanced range of error [STAT] A range of error in which the maximum and minimum possible errors are opposite in sign and equal in magnitude.

balanced reinforcement [CIV ENG] An amount and distribution of steel reinforcement in a flexural reinforced concrete member such that the allowable tensile stress in the steel and the allowable compressive stress in the concrete are attained simultaneously.

balanced ring modulator [ELECTR] A modulator that uses tubes or diodes to suppress the carrier signal while providing double-sideband output.

balanced rock *See* perched block.

balanced rudder [NAV ARCH] A rudder, part of whose area is forward of the vertical axis, to counterbalance water pressure abaft of the axis.

balanced sash [BUILD] In a double-hung window, a sash which opens by being raised or lowered and which is balanced with counterweights or pretensioned springs so that little force is required to move the sash.

balanced step [BUILD] One of a series of winders arranged so that the width of each winder tread (at the narrow end) is almost equal to the tread width in the straight portion of the adjacent stair flight. Also known as dancing step; dancing winder.

balanced stock [ORD] **1.** That condition in supply when availability and requirements are in equilibrium for specific items. **2.** Accumulation of supplies in quantities determined necessary to meet requirements for a fixed period of time.

balanced surface [AERO ENG] A control surface that extends on both sides of the axis of the hinge or pivot, or that has auxiliary devices or extensions connected with it, in such a manner as to effect a small or zero resultant moment of the air forces about the hinge axis.

balanced translocation [GEN] Positional change of one or more chromosome segments in cells or gametes without alteration of the normal diploid or haploid complement of genetic material.

balanced transmission line [ELEC] Transmission line having equal conductor resistances per unit length and equal impedances from each conductor to earth and to other electrical circuits.

balanced valve [ENG] A valve having equal fluid pressure in both the opening and closing directions.

balanced voltages [ELEC] Voltages that are equal in magnitude and opposite in polarity with respect to ground. Also known as push-pull voltages.

balanced wire circuit [ELEC] Circuit wherein the two sides are electrically alike and symmetrical with respect to ground and other conductors.

balance equation [MATH] An equation expressing a balance of quantities in the sense that the local or individual rates of change are zero. [METEOROL] A diagnostic equation expressing a balance between the pressure field and the horizontal field of motion of the atmosphere.

balance error [COMPUT SCI] An error voltage that arises at the output of analog adders in an analog computer and is directly proportional to the drift error.

balance method *See* null method.

balancer [ELEC] A mechanism for equalizing the loads on the outer lines of a three-wire system for electric power distribution, consisting of two similar shunt or compound machines which are coupled together with the armatures connected in series across the outer lines. [INV ZOO] *See* haltere. [VERT ZOO] Either of a pair of rodlike lateral appendages on the heads of some larval salamanders.

balance shot [MIN ENG] In coal mining, a shot for which the drill hole is parallel to the face of the coal that is to be broken by it.

balance spring [HOROL] An oscillating spring of spiral or (in a chronometer) cylindrical shape which governs the movement of a balance wheel in a timepiece. Also known as hairspring.

balance tool [MECH ENG] A tool designed for taking the first cuts when the external surface of a piece in a lathe is being machined; it is supported in the tool holder at an unvarying angle.

balance-to-unbalance transformer [ELEC] Device for matching a pair of lines, balanced with respect to earth, to a pair of lines not balanced with respect to earth.

balance wheel [MECH ENG] **1.** A wheel which governs or stabilizes the movement of a mechanism. **2.** *See* flywheel.

balancing a survey [ENG] Distributing corrections through any traverse to eliminate the error of closure and to obtain an adjusted position for each traverse station. Also known as traverse adjustment.

balancing band [NAV ARCH] A band at the balancing point of an anchor on either side of the shank, fitted with a ring.

balancing capacitor [ELECTR] A variable capacitor used to improve the accuracy of a radio direction finder. Also known as compensating capacitor.

balancing delay [IND ENG] In motion study, idleness of one hand while the other is active to catch up.

balancing plug cock *See* balancing valve.

balancing unit [ELEC] **1.** Antenna-matching device used to permit efficient coupling of a transmitter or receiver having an unbalanced output circuit to an antenna having a balanced transmission line. **2.** Device for converting balanced to unbalanced transmission lines, and vice versa, by placing suitable discontinuities at the junction between the lines instead of using lumped components.

balancing valve [ENG] A valve used in a pipe for controlling fluid flow; not usually used to shut off the flow. Also known as balancing plug cock.

Balanidae [INV ZOO] A family of littoral, sessile barnacles in the suborder Balanomorpha.

balanitis [MED] Inflammation of the glans of the penis or of the clitoris.

Balanoglossus [INV ZOO] A cosmopolitan genus of tongue worms belonging to the class Enteropneusta.

Balanomorpha [INV ZOO] The symmetrical barnacles, a suborder of sessile crustaceans in the order Thoracica.

Balanopaceae [BOT] A small family of dioecious dicotyledonous plants in the order Fagales characterized by exstipulate leaves, seeds with endosperm, and the pistillate flower solitary in a multibracteate involucre.

Balanopales [BOT] An ordinal name suggested for the Balanopaceae in some classifications.

Balanophoraceae [BOT] A family of dicotyledonous terrestrial plants in the order Santalales characterized by dry nutlike fruit, one to five ovules, unisexual flowers, attachment to the stem of the host, and the lack of chlorophyll.

balanoposthitis [MED] Inflammation of the glans penis and of the prepuce.

Balanopsidales [BOT] An order in some systems of classification which includes only the Balanopaceae of the Fagales.

balantidiasis [MED] An intestinal infection of humans caused by the protozoan *Balantidium coli*.

Balantidium [INV ZOO] A genus of protozoans in the order Trichostomatida containing the only ciliated protozoan species parasitic in humans, *Balantidium coli*.

Balanus [INV ZOO] A genus of barnacles composed of sessile acorn barnacles; the type genus of the family Balanidae.

balata [MATER] A hard substance, similar to gutta-percha, used mainly in golf balls and belting, which is made by drying the milky juice of the bully tree (*Manilkara bidentata*). Also known as gutta-balata.

Balbiani rings [CYTOL] Localized swellings of a polytene chromosome.

balbriggan [TEXT] Knitted yarn made of cotton, wool, rayon, or other fiber and which is characteristically lightweight and unbleached.

balconet [BUILD] A pseudobalcony; a low ornamental railing at a window, projecting only slightly beyond the threshold or sill.

balcony [BUILD] A deck which projects from a building wall above ground level.

balcony outlet [BUILD] In a vertical rainwater pipe that passes through an exterior balcony, a fitting which provides an inlet for the drainage of rainwater from the balcony.

bald [GEOGR] An elevated grassy, treeless area, as on the top of a mountain. [MIN ENG] **1.** Without framing. **2.** A mine timber which has a flat end.

baldheaded anticline [GEOL] An upfold with a crest that has been deeply eroded before later deposition.

baldness [MED] Loss or absence of hair.

Baldwin spot *See* bitter pit.

bale [IND ENG] **1.** A large package of material, pressed tightly together, tied with rope, wire, or hoops and usually covered with wrapping. **2.** The amount of material in a bale; sometimes used as a unit of measure, as 500 pounds (227 kilograms) of cotton in the United States.

baleen [VERT ZOO] A horny substance, growing as fringed filter plates suspended from the upper jaws of whalebone whales. Also known as whalebone.

baler [MECH ENG] A machine which takes large quantities of raw or finished materials and binds them with rope or metal straps or wires into a large package.

Balfour's law [EMBRYO] The law that the speed with which any part of the ovum segments is roughly proportional to the protoplasm's concentration in that area; the segment's size is inversely proportional to the protoplasm's concentration.

baling [CIV ENG] A technique used to convert loose refuse into heavy blocks by compaction; the blocks are then burned and are buried in sanitary landfill.

Bali wind [METEOROL] A strong east wind at the eastern end of Java.

balk [BUILD] A squared timber used in building construction. [CIV ENG] A low ridge of earth that marks a boundary line. [MIN ENG] A sudden thinning out, for a certain distance, of a bed of coal.

balking [IND ENG] The refusal of a customer to enter a queue for some reason, such as insufficient waiting room.

ball [GEOL] **1.** A low sand ridge, underwater by high tide, which extends generally parallel with the shoreline; usually separated by an intervening trough from the beach. **2.** A spheroidal mass of sedimentary material. **3.** Common name for a nodule, especially of ironstone. [MECH ENG] In fine grinding, one of the crushing bodies used in a ball mill. [ORD] **1.** A bullet for general use, as distinguished from bullets for special uses such as armor-piercing, incendiary, or high explosive. **2.** A small-arms solid propellant which is oblate spheroidal in shape, generally a double-base propellant.

ball-and-race-type pulverizer [MECH ENG] A grinding machine in which balls rotate under an applied force between two races to crush materials, such as coal, to fine consistency. Also known as ball-bearing pulverizer.

ball and ring method *See* ring and ball test.

ball-and-socket joint [ANAT] *See* enarthrosis. [GEOL] *See* cup-and-ball joint. [MECH ENG] A joint in which a member ending in a ball is joined to a member ending in a socket so that relative movement is permitted within a certain angle in all planes passing through a line. Also known as ball joint.

ballas [MINERAL] A spherical aggregate of small diamond crystals; used in diamond drill bits and other diamond tools.

ballast [AERO ENG] A relatively dense substance that is placed in the car of a vehicle and can be thrown out to reduce the load or can be shifted to change the center of gravity. [CIV ENG] Crushed stone used in a railroad bed to support the ties, hold the track in line, and help drainage. [ELEC] A circuit element that serves to limit an electric current or to provide a starting voltage, as in certain types of lamps, such as in fluorescent ceiling fixtures. [MATER] Coarse gravel used as an ingredient in concrete. [NAV ARCH] **1.** A relatively heavy material such as lead, iron, or water placed in a ship to ensure stability or to maintain the proper draft or trim. **2.** To pump seawater into empty fuel tanks of a ship to ensure its stability or suitable draft and trim for seaworthiness.

ballast factor [ELEC] The ratio of the luminous output of a lamp when operated on a ballast to its luminous output when operated under standardized rating conditions.

ballast lamp [ELEC] A light-producing electrical resistance device which maintains nearly constant current by increasing in resistance as the current increases.

ballast line [NAV ARCH] A ship's water line when the ship is ballasted.

ballast pump [NAV ARCH] A pump designed to discharge water ballast.

ballast reactor [ELEC] A coil wound on an iron core and connected in series with a fluorescent lamp to compensate for the negative-resistance characteristics of the lamp by providing an increased voltage drop as the current through the lamp is increased.

ballast resistor [ELEC] A resistor that increases in resistance as current through it increases, and decreases in resistance as current decreases. Also known as barretter (British usage).

ballast tank [NAV ARCH] **1.** One of several tanks in the hold of a ship which may be pumped full of water as ballast. **2.** One of the tanks in a submarine that are filled with water or air to submerge or surface.

ballast tube [ELEC] A ballast resistor mounted in an evacuated glass or metal envelope, like that of a vacuum tube, to reduce radiation of heat from the resistance element and thereby improve the voltage-regulating action.

ball bearing [MECH ENG] An antifriction bearing permitting free motion between moving and fixed parts by means of balls confined between outer and inner rings.

ball-bearing hinge [MECH ENG] A hinge which is equipped with ball bearings between the hinge knuckles in order to reduce friction.

ball-bearing pulverizer *See* ball-and-race-type pulverizer.

ball bonding [ENG] The making of electrical connections in which a flame is used to cut a wire, the molten end of which solidifies as a ball, which is pressed against the bonding pad on an integrated circuit.

ball breaker [ENG] **1.** A steel or iron ball that is hoisted by a derrick and allowed to fall on blocks of waste stone to break them or to swing against old buildings to demolish them. Also known as skull cracker; wrecking ball. **2.** A coring and sampling device consisting of a hollow glass ball, 3 to 5 inches (7.5 to 12.5 centimeters) in diameter, held in a frame attached to the trigger line above the triggering weight of the corer; used to indicate contact between corer and bottom.

ball burnishing [MET] A method of giving small stainless steel parts a lustrous finish by rotating them in a wood-lined barrel with water, burnishing soap, and hardened steel balls.

ball bushing [MECH ENG] A type of ball bearing that allows motion of the shaft in its axial direction.

ball catch [DES ENG] A door fastener having a contained metal ball which is under pressure from a spring; the ball engages a striking plate and keeps the door from opening until force is applied.

ball check valve [ENG] A valve having a ball held by a spring against a seat; used to permit flow in one direction only.

ball clay [MATER] A clay used in ceramics that is characterized by strong binding properties, a tendency to ball, and excellent plasticity.

ball coal [GEOL] A variety of coal occurring in spheroidal masses.

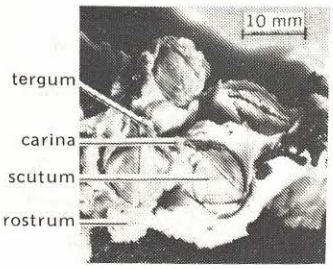
ball float [MECH ENG] A floating device, usually approximately spherical, which is used to operate a ball valve.

ball-float liquid-level meter [ENG] A float which rises and falls with liquid level, actuating a pointer adjacent to a calibrated scale in order to measure the level of a liquid in a tank or other container.

ball grinder *See* ball mill.

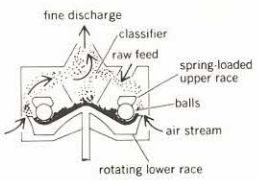
ballhead [MECH ENG] That part of the governor which con-

BALANUS



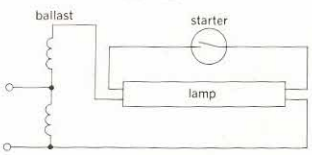
Balanus balanoides, apical view. *(From D. P. Henry, Studies on the sessile Cirripedia of the Pacific coast of North America, Univ. Wash. Publ. Oceanogr., 4(3):99–131, 1942)*

BALL-AND-RACE-TYPE PULVERIZER



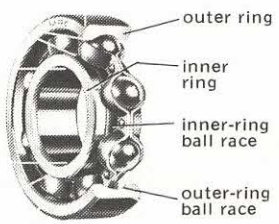
Coarse raw material is ground by crushing and attrition between balls and races and is then withdrawn from the pulverizer by an air stream.

BALLAST



Position of the ballast in preheat lamp circuit.

BALL BEARING

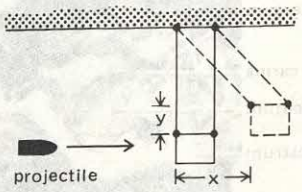


Deep-groove ball bearing. *(Marlin-Rockwell)*

BALL BUSHING

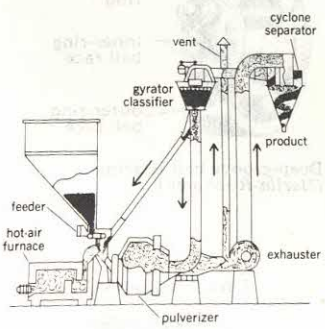
Ball bushing that permits unlimited travel and linear motion. *(Thomson Industries)*

BALLISTIC PENDULUM



Ballistic pendulum before (solid lines) and after (broken lines) projectile impact. Measurements of x or y and knowledge of mass and length of the pendulum determine the initial momentum of the projectile.

BALL MILL



Conical ball mill pulverizer in closed circuit with classifier. *(Hardinge Co., Inc.)*

tains flyweights whose force is balanced, at least in part, by the force of compression of a speeder spring.

ball ice [OCEANOGR] Numerous floating spheres of sea ice having diameters of 1–2 inches (2.5–5 centimeters), generally in belts similar to slush which forms at the same time.

balling up [MET] Formation of balls of molten brazing filler metal when the base material has not been sufficiently wetted.

ballistic area [ORD] Space lying between the centers of impact of two groups of shots, one consisting entirely of shots over the target and the other entirely of shots short of the target.

ballistic body [ENG] A body free to move, behave, and be modified in appearance, contour, or texture by ambient conditions, substances, or forces, such as by the pressure of gases in a gun, by rifling in a barrel, by gravity, by temperature, or by air particles.

ballistic camera [OPTICS] A ground-based camera using multiple exposures on the same plate to record the trajectory of a rocket.

ballistic case [ORD] Any shell or casing with efficient ballistic characteristics, used to enclose elements for delivery on a target; any bomb, projectile, or rocket case.

ballistic coefficient [MECH] The numerical measure of the ability of a missile to overcome air resistance; dependent upon the mass, diameter, and form factor.

ballistic conditions [MECH] Conditions which affect the motion of a projectile in the bore and through the atmosphere, including muzzle velocity, weight of projectile, size and shape of projectile, rotation of the earth, density of the air, temperature or elasticity of the air, and the wind.

ballistic correction [ORD] An adjustment in firing data that is based on ballistic conditions, affecting the flight of a projectile; does not include adjustment based on observation of fire.

ballistic curve [MECH] The curve described by the path of a bullet, a bomb, or other projectile as determined by the ballistic conditions, by the propulsive force, and by gravity.

ballistic deflection [MECH] The deflection of a missile due to its ballistic characteristics.

ballistic density [MECH] A representation of the atmospheric density encountered by a projectile in flight, expressed as a percentage of the density according to the standard artillery atmosphere.

ballistic efficiency [MECH] **1.** The ability of a projectile to overcome the resistance of the air; depends chiefly on the weight, diameter, and shape of the projectile. **2.** The external efficiency of a rocket or other jet engine of a missile.

ballistic entry [MECH] Movement of a ballistic body from without to within a planetary atmosphere.

ballistic galvanometer [ELEC] A galvanometer having a long period of swing so that the deflection may measure the electric charge in a current pulse or the time integral of a voltage pulse.

ballistic instrument [ENG] Any instrument, such as a ballistic galvanometer or a ballistic pendulum, that measures an impact or sudden pulse of energy.

ballistic lead [ORD] The correction or allowance for wind effects and gravity made when computing a lead angle.

ballistic limit [MECH] The minimum velocity at which a particular armor-piercing projectile is expected to consistently and completely penetrate armor plate of given thickness and physical properties at a specified angle of obliquity.

ballistic magnetometer [ENG] A magnetometer designed to employ the transient voltage induced in a coil when either the magnetized sample or coil are moved relative to each other.

ballistic measurement [MECH] Any measurement in which an impulse is applied to a device such as the bob of a ballistic pendulum, or the moving part of a ballistic galvanometer, and the subsequent motion of the device is used to determine the magnitude of the impulse, and, from this magnitude, the quantity to be measured.

ballistic missile [ORD] A missile capable of guiding and propelling itself in a direction and to a velocity such that it will follow a ballistic trajectory to a desired point.

ballistic missile defense [ORD] A system utilizing laser beams and other esoteric techniques to detect, identify, and destroy ballistic missiles. Abbreviated BMD.

ballistic mortar [ORD] A heavy, short-barreled mortar, pendulum-mounted, for determining the relative power of explosives; a small sample of a test explosive is placed in the detonation chamber and a projectile is located forward of the charge; upon detonation the projectile is driven into a sand bank and the mortar swings through an arc; a marker records the maximum weight of the test explosive required to produce the same rise as 10 grams of TNT.

ballistic pendulum [ENG] A device which uses the deflection of a suspended weight to determine the momentum of a projectile.

ballistic range [ORD] A long, instrumented enclosure wherein tests of gun-launched projectiles are conducted.

ballistics [MECH] Branch of applied mechanics which deals with the motion and behavior characteristics of missiles, that is, projectiles, bombs, rockets, guided missiles, and so forth, and of accompanying phenomena.

ballistic separator [CIV ENG] A device that takes out noncompostable material like stones, glass, metal, and rubber, from solid waste by passing the waste over a rotor that has impellers to fling the material in the air; the lighter organic (compostable) material travels a shorter distance than the heavier (noncompostable) material.

ballistics of penetration [MECH] That part of terminal ballistics which treats of the motion of a projectile as it forces its way into targets of solid or semisolid substances, such as earth, concrete, or steel.

ballistic table [MECH] Compilation of ballistic data from which trajectory elements such as angle of fall, range to summit, time of flight, and ordinate at any time, can be obtained.

ballistic temperature [MECH] That temperature (in °F) which, when regarded as a surface temperature and used in conjunction with the lapse rate of the standard artillery atmosphere, would produce the same effect on a projectile as the actual temperature distribution encountered by the projectile in flight.

ballistic test [ORD] Proof test of weapons or ammunition to determine suitability.

ballistic trajectory [MECH] The trajectory followed by a body being acted upon only by gravitational forces and resistance of the medium through which it passes.

ballistic tube [ORD] Gun tube used for ballistic tests; usually selected because of certain demonstrated characteristics.

ballistic uniformity [MECH] The capability of a propellant, when fired under identical conditions from round to round, to impart uniform muzzle velocity and produce similar interior ballistic results.

ballistic vehicle [ENG] A nonlifting vehicle; a vehicle that follows a ballistic trajectory.

ballistic wave [MECH] An audible disturbance caused by compression of air ahead of a missile in flight.

ballistic weapon [ORD] Any missile weapon, as a bomb, rocket, projectile, or bullet, affected by ballistic conditions.

ballistic wind [MECH] That constant wind which would produce the same effect upon the trajectory of a projectile as the actual wind encountered in flight.

ballistite [MATER] A smokeless propellant containing nitrocellulose and nitroglycerin; used in some rocket, mortar, and small-arms ammunition.

ballistocardiogram [MED] The recording made by a ballistocardiograph.

ballistocardiograph [MED] A device to measure the volume of blood passing through the heart in a given period of time.

ballistophobia [PSYCH] An abnormal fear of projectiles or missiles.

ballistospore [MYCOL] A type of fungal spore that is forcibly discharged at maturity.

ball joint *See* ball-and-socket joint.

ball lightning [GEOPHYS] A relatively rare form of lightning, consisting of a reddish, luminous ball, of the order of 1 foot (30 centimeters) in diameter, which may move rapidly along solid objects or remain floating in midair. Also known as globe lightning.

ball mill [MECH ENG] A pulverizer that consists of a horizontal rotating cylinder, up to three diameters in length, containing a charge of tumbling or cascading steel balls, pebbles, or rods. Also known as ball grinder.

ballonet [AERO ENG] One of the air cells in a blimp, fastened to the bottom or sides of the envelope, which are used to maintain the required pressure in the envelope without adding or valving gas as the ship ascends or descends. Also spelled ballonnet.

balloon [AERO ENG] A nonporous, flexible spherical bag inflated with a gas such as helium that is lighter than air, so that it

will rise and float in the atmosphere; a large-capacity balloon can be used to lift a payload suspended from it.

balloon apron [ORD] An antiaircraft device consisting of cables hanging perpendicularly from other cables extending between two or more balloons.

balloon astronomy [ASTRON] The observation of celestial objects from instruments mounted on balloons and carried to altitudes up to 30 kilometers, to detect electromagnetic radiation at wavelengths which do not penetrate to the earth's surface.

balloon barrage [ORD] An antiaircraft defense consisting of a number of balloons, usually together and equipped with balloon aprons, held captive by steel cables and strategically moored near vital areas or installations.

balloon ceiling [METEOROL] The ceiling classification applied when the ceiling height is determined by timing the ascent and disappearance of a ceiling balloon or pilot balloon in United States weather observing practice.

balloon cover [AERO ENG] A cover which fits over a large, inflated balloon to facilitate handling in high or gusty winds. Also known as balloon shroud.

balloon drag [METEOROL] A small balloon, loaded with ballast and inflated so that it will explode at a predetermined altitude, which is attached to a larger balloon; frequently used to retard the ascent of a radiosonde during the early part of the flight so that more detailed measurements may be obtained.

balloon framing [CIV ENG] Framing for a building in which each stud is one piece from roof to foundation.

balloon shroud *See* balloon cover.

balloon-type rocket [AERO ENG] A liquid-fuel rocket, such as the Atlas, that requires the pressure of its propellants (or other gases) within it to give it structural integrity.

balloting [MECH] A tossing or bounding movement of a projectile, within the limits of the bore diameter, while moving through the bore under the influence of the propellant gases.

ball-peen hammer [ENG] A hammer with a ball at one end of the head; used in riveting and forming metal.

ball pendulum test [ENG] A test for measuring the strength of explosives; consists of measuring the swing of a pendulum produced by the explosion of a weighed charge of material.

ball sealers [PETRO ENG] Balls of rubber, plastic, or metal that are dropped down the well bore to aid the acidizing of impermeable zones of an oil reservoir; they wedge into and plug the bottomhole tubing perforations that are adjacent to the more permeable reservoir zones.

ball sizing [MET] Finishing a hole to a precise diameter and burnishing the surface by forcing a steel ball through it.

ballstone [GEOL] **1.** Large mass or concretion of fine, unstratified limestone resulting from growth of coral colonies. **2.** A nodule of rock, especially ironstone, in a stratified unit.

ball test [CIV ENG] In a drain, a test for freedom from obstruction and for circularity in which a ball (less than the diameter of the drain by a specified amount) is rolled through the drain.

balluster [GRAPHICS] One of the sections of wood used to make the frames on which silk, or some other material, is stretched in the silk-screen process.

ballute [AERO ENG] A cross between a balloon and a parachute, used to brake the free fall of sounding rockets.

ball valve [MECH ENG] A valve in which the fluid flow is regulated by a ball moving relative to a spherical socket as a result of fluid pressure and the weight of the ball.

balm [GEOL] A concave cliff or precipice that forms a shelter. [MED] A soothing or healing medication.

Balmer lines [SPECT] Lines in the hydrogen spectrum, produced by transitions between $n=2$ and $n>2$ levels either in emission or absorption; here n is the principal quantum number.

Balmer series [SPECT] The set of Balmer lines.

balsa [BOT] *Ochroma lagopus*. A tropical American tree in the order Malvales; its wood is strong and lighter than cork.

balsam [MATER] An exudate of the balsam tree; a mixture of resins, essential oils, cinnamic acid, and benzoic acid.

Balsaminaceae [BOT] A family of flowering plants in the order Geraniales, including touch-me-not (*Impatiens*); flowers are irregular with five stamens and five carpels, leaves are simple with pinnate venation, and the fruit is an elastically dehiscent capsule.

balsam of Peru *See* Peru balsam.

Baltic Sea [GEOGR] An intracontinental, Mediterranean-type sea, connected with the North Sea and surrounded by Sweden, Denmark, Germany, Poland, the Baltic States, and Finland.

Baltimore oil *See* wormseed oil.

balun [ELEC] A device used for matching an unbalanced coaxial transmission line or system to a balanced two-wire line or system. Also known as balanced converter; bazooka; line-balance converter.

baluster [BUILD] A post which supports a handrail and encloses the open sections of a stairway.

balustrade [BUILD] The railing assembly of a stairway consisting of the handrail, balusters, and usually a bottom rail.

Bamberga [ASTRON] An asteroid with a diameter of about 215 kilometers, mean distance from the sun of 2.686 astronomical units, and C-type surface composition.

Bamberger's formula [ORG CHEM] A structural formula for naphthalene that shows the valencies of the benzene rings pointing toward the centers.

bamboo [BOT] The common name of various tropical and subtropical, perennial, ornamental grasses in five genera of the family Gramineae characterized by hollow woody stems up to 6 inches (15 centimeters) in diameter.

Bambusoideae [BOT] A subfamily of grasses, composed of bamboo species, in the family Gramineae.

Banach algebra [MATH] An algebra which is a Banach space satisfying the property that for every pair of vectors, the norm of the product of those vectors does not exceed the product of their norms.

Banach space [MATH] A real or complex vector space in which each vector has a non-negative length, or norm, and in which every Cauchy sequence converges to a point of the space. Also known as complete normed linear space.

Banach-Steinhaus theorem [MATH] If a sequence of bounded linear transformations of a Banach space is pointwise bounded, then it is uniformly bounded.

banakite [PETR] An alkalic basalt made up of plagioclase, sanidine, and biotite, with small quantities of analcime, augite, and olivine; quartz or leucite may be present.

banana [BOT] Any of the treelike, perennial plants of the genus *Musa* in the family Musaceae; fruit is a berry characterized by soft, pulpy flesh and a thin rind.

banana freckle [PL PATH] A fungus disease of the banana caused by *Macrophoma musae*, producing brown or black spots on the fruit and leaves.

banana jack [ELEC] A jack that fits a banana plug; generally designed for panel mounting.

banana oil [ORG CHEM] **1.** A solution of nitrocellulose in amyl acetate having a bananalike odor. **2.** *See* amyl acetate.

banana plug [ELEC] A plug having a spring-metal tip shaped like a banana and used on test leads or as terminals for plug-in components.

Banbury mixer [MECH ENG] Heavy-duty batch mixer, with two counterrotating rotors, for doughy material; used mainly in the plastics and rubber industries.

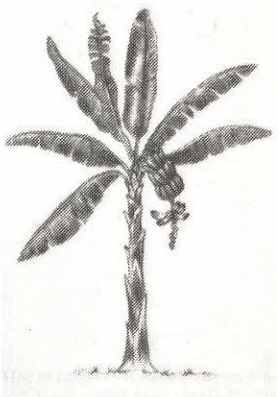
banco [HYD] A meander or oxbow lake separated from a river by a change in its course.

Bancroft's filariasis *See* wuchereriasis.

band [ANALY CHEM] The position and spread of a solute within a series of tubes in a liquid-liquid extraction procedure. Also known as zone. [BUILD] Any horizontal flat member or molding or group of moldings projecting slightly from a wall plane and usually marking a division in the wall. Also known as band course; band molding. [COMMUN] A range of electromagnetic-wave frequencies between definite limits, such as that assigned to a particular type of radio service. [COMPUT SCI] A set of circular or cyclic recording tracks on a storage device such as a magnetic drum, disk, or tape loop. [DES ENG] A strip or cord crossing the back of a book to which the sections are sewn. [GEOD] Any latitudinal strip, designated by accepted units of linear or angular measurement, which circumscribes the earth. [GEOL] A thin layer or stratum of rock that is noticeable because its color is different from the colors of adjacent layers. [ORD] A metal sleeve joining together the barrel and stock of a gun. [SOLID STATE] A restricted range in which the energies of electrons in solids lie, or from which they are excluded, as understood in quantum-mechanical terms. [SPECT] *See* band spectrum.

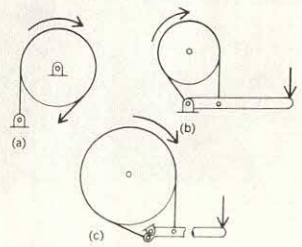
bandage [BUILD] A strap, band, ring, or chain placed around a structure to secure and hold its parts together, as around the springing of a dome. [ELEC] Rubber ribbon about 4 inches (10 centimeters) wide for temporarily protecting a tele-

BANANA



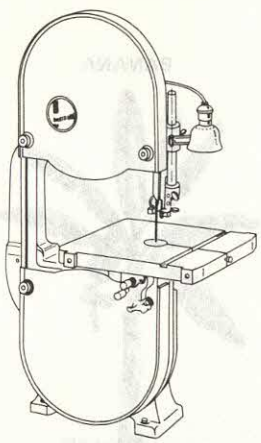
Pseudostem of commercial banana plant (*Musa sapientum*), showing characteristic foliage and single stem of bananas. Plant grows to height of 30 feet (9 meters) or more.

BAND BRAKE



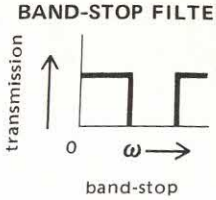
Band brakes. *(a)* Basic structure. *(b)* With direct-action lever. *(c)* Differential self-assisting feature.

BAND SAW



The narrow band saw, a flexible band of steel, can make curved as well as straight cuts even in thick pieces. *(Delta)*

BAND-STOP FILTER



Transmission function of a band-stop filter. Frequency (ω) components are largely attenuated at the stop band.

phone or coaxial splice from moisture. [MED] A strip of gauze, muslin, flannel, or other material, usually in the form of a roll, but sometimes triangular or tailed, used to hold dressing in place, to apply pressure, to immobilize a part, to support a dependent or injured part, to obliterate tissue cavities, or to check hemorrhage.

bandaite [PETR] A dacite type of extrusive rock composed of hypersthene and labradorite.

band brake [MECH ENG] A brake in which the frictional force is applied by increasing the tension in a flexible band to tighten it around the drum.

band chain [ENG] A steel or Invar tape, graduated in feet and at least 100 feet (30.5 meters) long, used for accurate surveying.

band clamp [DES ENG] A two-piece metal clamp, secured by bolts at both ends; used to hold riser pipes.

band clutch [MECH ENG] A friction clutch in which a steel band, lined with fabric, contracts onto the clutch rim.

band course *See* band.

banded [PETR] Pertaining to the appearance of rocks that have thin and nearly parallel bands of different textures, colors, and minerals.

banded anteater *See* marsupial anteater.

banded coal [GEOL] A variety of bituminous and subbituminous coal made up of a sequence of thin lenses of highly lustrous coalified wood or bark interspersed with layers of more or less striated bright or dull coal.

banded differentiate [PETR] A type of igneous rock made up of bands of different composition, frequently alternating between two varieties as in a layered intrusion.

banded ore [GEOL] Ore made up of layered bands composed either of the same minerals that differ from band to band in color or textures or proportion, or of different minerals.

banded peat [GEOL] Peat formed of alternate layers of vegetable debris.

banded structure [MET] The appearance of a metal showing light and dark parallel bands in the direction of rolling or working. [METEOROL] The appearance of precipitation echoes in the form of long bands as presented on radar plan position indicator (PPI) scopes. [PETR] An outcrop feature in igneous and metamorphic rocks due to alternation of layers, stripes, flat lenses, or streaks that obviously differ in mineral composition or texture.

banded vein [GEOL] A vein composed of layers of different minerals that lie parallel to the walls. Also known as ribbon vein.

band-elimination filter *See* band-stop filter.

band gap [SOLID STATE] An energy difference between two allowed bands of electron energy in a metal.

band groove [ORD] One of the channels cut into the rotating band of a projectile during the process of engraving.

band head [SPECT] A location on the spectrogram of a molecule at which the lines of a band pile up.

bandicoot [VERT ZOO] **1.** Any of several large Indian rats of the genus *Nesokia* and related genera. **2.** Any of several small insectivorous and herbivorous marsupials comprising the family Peramelidae and found in Tasmania, Australia, and New Guinea.

banding [DES ENG] A strip of fabric which is used for bands. [HYD] In a glacier, a structure of alternate ice layers of different textures and appearance. [PETR] **1.** The series of layers occurring in a banded structure. **2.** In sedimentary rocks, the thin bedding of alternate layers of different materials. [SCI TECH] A pattern of bands.

band land [ORD] The raised portion of the rotating band of a projectile after engraving has taken place, produced by the rifling groove of the gun tube.

band lightning *See* ribbon lightning.

band molding *See* band.

band of position [NAV] An area which extends to either side of a line of position of imperfect accuracy and within which a craft is considered to be located.

bandoleer [ORD] A closed loop of fabric, provided with pockets designed to accommodate small-arms ammunition; used by the individual soldier for carrying ammunition, by suspending one or more bandoleers over the shoulders.

band-pass [ELECTR] A range, in hertz or kilohertz, expressing the difference between the limiting frequencies at which a desired fraction (usually half power) of the maximum output is obtained.

band-pass amplifier [ELECTR] An amplifier designed to pass a definite band of frequencies with essentially uniform response.

band-pass filter [ELECTR] An electric filter which transmits more or less uniformly in a certain band, outside of which the frequency components are attenuated. [OPTICS] *See* Christiansen filter.

band-pass response [ELECTR] Response characteristics in which a definite band of frequencies is transmitted uniformly. Also known as flat top response.

band printer [COMPUT SCI] A line printer that uses a band of type characters as its printing mechanism.

band-rejection filter *See* band-stop filter.

band saw [MECH ENG] A power-operated woodworking saw consisting of a flexible band of steel having teeth on one edge, running over two vertical pulleys, and operated under tension.

band scheme [SOLID STATE] The identification of energy bands of a solid with the levels of independent atoms from which they arise as the atoms are brought together to form the solid, together with the width and spacing of the bands.

band selector [ELECTR] A switch that selects any of the bands in which a receiver, signal generator, or transmitter is designed to operate and usually has two or more sections to make the required changes in all tuning circuits simultaneously. Also known as band switch.

B and S gage *See* American wire gage.

band spectrum [SPECT] A spectrum consisting of groups or bands of closely spaced lines in emission or absorption, characteristic of molecular gases and chemical compounds. Also known as band.

band spreading [COMMUN] Method of double-sideband transmission in which the frequency band of the modulating wave is shifted upward in frequency so that the sidebands produced by modulation are separated in frequency from the carrier by an amount at least equal to the bandwidth of the original modulating wave, and second order distortion products may be filtered from the demodulator output.

band-spread tuning control [ELECTR] A tuning control provided on some shortwave receivers to spread the stations in a single band of frequencies over an entire tuning dial.

band-stop filter [ELECTR] An electric filter which transmits more or less uniformly at all frequencies of interest except for a band within which frequency components are largely attenuated. Also known as band-elimination filter; band-rejection filter.

band switch *See* band selector.

band theory of solids [SOLID STATE] A quantum-mechanical theory of the motion of electrons in solids that predicts certain restricted ranges or bands for the energies of these electrons.

band wheel [MECH ENG] In a drilling operation, a large wheel that transmits power from the engine to the walking beam.

bandwidth [COMMUN] The difference between the frequency limits of a band containing the useful frequency components of a signal. Abbreviated BW.

bandwidth reduction *See* bit-rate reduction.

bandylite [MINERAL] $CuB_2O_4 \cdot CuCl_2 \cdot 4H_2O$ A tetragonal mineral that is deep blue with greenish lights and consists of a hydrated copper borate-chloride.

Bangalore torpedo [ORD] A metal tube or pipe packed with a high-explosive charge; chiefly used to clear a path through barbed wire or minefields.

bang-bang circuit [ELECTR] An operational amplifier with double feedback limiters that drive a high-speed relay (1–2 milliseconds) in an analog computer; involved in signal-controlled programming.

bang-bang control [COMPUT SCI] Control of programming in an analog computer through a bang-bang circuit. [CONT SYS] A type of automatic control system in which the applied control signals assume either their maximum or minimum values.

Bangiophyceae [BOT] A class of red algae in the plant division Rhodophyta.

Bang's disease *See* contagious abortion.

banister [BUILD] A handrail for a staircase.

bank [AERO ENG] The lateral inward inclination of an airplane when it rounds a curve. [CIV ENG] *See* embankment. [ELEC] **1.** A number of similar electrical devices, such as resistors, connected together for use as a single device. **2.** An

assemblage of fixed contacts over which one or more wipers or brushes move in order to establish electrical connections in automatic switching. [GEOL] **1.** The edge of a waterway. **2.** The rising ground bordering a body of water. **3.** A steep slope or face, generally consisting of unconsolidated material. [IND ENG] The amount of material allowed to accumulate at a point on a production line where it is not employed or worked upon, to permit reasonable fluctuations in line speed before and after the point. Also known as float. [MIN ENG] **1.** The top of the shaft. **2.** The surface around the mouth of a shaft. **3.** The whole, or sometimes only one side or one end, of a working place underground. **4.** To manipulate materials such as coal, gravel, or sand on a bank. **5.** A terrace-like bench in open-pit mining. [OCEANOGR] A relatively flat-topped raised portion of the sea floor occurring at shallow depth and characteristically on the continental shelf or near an island.

bank and turn indicator [AERO ENG] A device used to advise the pilot that the aircraft is turning at a certain rate, and that the wings are properly banked to preclude slipping or sliding of the aircraft as it continues in flight. Also known as bank indicator.

bank-and-wiper switch [ELEC] Switch in which electromagnetic ratchets or other mechanisms are used, first, to move the wipers to a desired group of terminals, and second, to move the wipers over the terminals of the group to the desired bank contacts.

bank cushion [NAV] In nautical navigation, a force acting on the bow of a ship in a manner which forces the ship away from the bank in a restricted channel, especially where the banks are steep; it is a force which opposes bank suction.

bank deposit [GEOL] Mounds, ridges, and terraces of sediment rising above and about the surrounding sea bottom.

banked winding [ELECTR] A radio-frequency coil winding which proceeds from one end of the coil to the other without return by having, side by side, many flat spirals formed by winding single turns one over the other, thereby reducing the distributed capacitance of the coil.

banker [ENG] The bench or table upon which bricklayers and stonemasons prepare and shape their material.

banket [GEOL] A conglomerate containing valuable metal to be exploited.

bank-full stage [HYD] The flow stage of a river in which the stream completely fills its channel and the elevation of the water surface coincides with the bank margins.

bank gravel *See* bank-run gravel

bank height [MIN ENG] The vertical height of a bank as measured between its highest point or crest and its toe at the digging level or bench. Also known as bench height; digging height.

bank indicator *See* bank and turn indicator.

banking pin [HOROL] One of the erect pins in the bottom plate of a watch that restrict the movement of the lever.

bank-inset reef [GEOL] A coral reef situated on island or continental shelves well inside the outer edges.

bank material [CIV ENG] Soil or rock in place before excavation or blasting.

bank reef [GEOL] A reef which rises at a distance back from the outer margin of rimless shoals.

bank-run gravel [GEOL] A natural deposit comprising gravel or sand. [MATER] Aggregate taken directly from natural deposits; contains both large and small stones. Also known as bank gravel; run-of-bank gravel.

bank sand [GEOL] Deposits occurring in banks or pits and containing a low percentage of clay; used in core making.

bank slope [MIN ENG] The angle, measured in degrees of deviation from the horizontal, at which the earthy or rock material will stand in an excavated, terracelike cut in an open-pit mine or quarry. Also known as bench slope.

banksman *See* lander.

banks oil *See* cod-liver oil.

bank storage [HYD] Water absorbed in the permeable bed and banks of a lake, reservoir, or stream.

bank suction [NAV] The bodily movement of a ship toward the near bank due to a decrease in pressure as a result of increased velocity of flow of water past the hull in a restricted channel.

banner [BOT] The fifth or posterior petal of a butterfly-shaped (papilionaceous) flower.

banner cloud [METEOROL] A cloud plume often observed to extend downwind from isolated mountain peaks, even on otherwise cloud-free days. Also known as cloud banner.

bantam tube [ELECTR] Vacuum tube having a standard octal base, but a considerably smaller glass tube than a standard glass tube.

Banti's disease [MED] Portal hypertension, congestive splenomegaly, and hypersplenism due to an obstructive lesion in the splenic vein, portal vein, or intrahepatic veins.

bar [GEOL] Any of the various submerged or partially submerged ridges, banks, or mounds of sand, gravel, or other unconsolidated sediment built up by waves or currents within stream channels, at estuary mouths, and along coasts. **2.** Any band of hard rock, for example, a vein or dike, that extends across a lode. [MECH] A unit of pressure equal to 10^5 pascals, or 10^5 newtons per square meter, or 10^6 dynes per square centimeter. [MET] An elongated piece of metal of simple uniform cross-section dimensions, usually rectangular, circular, or hexagonal, produced by forging or hot rolling. Also known as barstock. [MIN ENG] *See* bar drill.

BAR *See* Browning automatic rifle.

baraboo [GEOL] A monadnock buried by a series of strata and then reexposed by the partial erosion of these younger strata.

Bárány chair [ENG] A chair in which a person is revolved to test his susceptibility to vertigo.

bararite [MINERAL] $(NH_4)_2SiF_6$ A white, hexagonal mineral consisting of ammonium silicon fluoride; occurs in tabular, arborescent, and mammillary forms.

barat [METEOROL] A heavy northwest squall in Manado Bay on the north coast of the island of Celebes, prevalent from December to February.

barathea [TEXT] Material, such as silk, cotton, or rayon, made with a pebble weave.

barb [METEOROL] A means of representing wind speed in the plotting of a synoptic chart, being a short, straight line drawn obliquely toward lower pressure from the end of a wind-direction shaft. Also known as feather. [VERT ZOO] A side branch on the shaft of a bird's feather.

Barbados earth [GEOL] A deposit of fossil radiolarians.

barban [ORG CHEM] $C_{11}H_9O_2NCl_2$ A white, crystalline compound with a melting point of 75–76°C; used as a postemergence herbicide of wild oats in barley, flax, lentil, mustard, and peas. Also known as 4-chloro-2-butynyl-*meta*-chlorocarbanilate.

barb bolt [DES ENG] A bolt having jagged edges to prevent its being withdrawn from the object into which it is driven. Also known as rag bolt.

bar beach [GEOL] A straight beach of offshore bars that are separated by shallow bodies of water from the mainland.

barbed tributary [HYD] A tributary that enters the main stream in an upstream direction instead of pointing downstream.

barbed wire [MATER] Two or more wires twisted together with addition of sharp hooks or points (or a single wire furnished with barbs); used for fences. Also known as barbwire.

barbel [VERT ZOO] **1.** A slender, tactile process near the mouth in certain fishes, such as catfishes. **2.** Any European fresh-water fish in the genus *Barbus*.

barbellate [BIOL] Having short, stiff, hooked bristles.

bar bending [CIV ENG] In reinforced concrete construction, the process of bending reinforcing bars to various shapes.

barber [METEOROL] A severe storm at sea during which spray and precipitation freeze onto the decks and rigging of ships.

barberite [MET] A nonferrous alloy with good resistance to sulfuric acid, sea water, and mine waters; 88.5% copper, 5% nickel, 5% tin, 1.5% silicon.

barbertonite [MINERAL] $Mg_6Cr_2(OH)_{16}CO_3 \cdot 4H_2O$ A lilac to rose pink, hexagonal mineral consisting of a hydrated carbonate-hydroxide of magnesium and chromium; occurs in massive form or in masses of fibers or plates.

barbette [NAV ARCH] A nonrotating cylinder of armor that protects the rotating part of the turret of a warship below the gunhouse. [ORD] A mound of earth or a platform upon which guns are mounted to fire over a wall or parapet.

barbicel [VERT ZOO] One of the small, hook-bearing processes on a barbule of the distal side of a barb or a feather.

barbierite [MINERAL] $NaAlSi_3IO_8$ A hypothetical soda feldspar thought to be isomorphous with orthoclase.

barbital [ORG CHEM] $C_8H_{12}N_2O_3$ A compound crystallizing in needlelike form from water; has a faintly bitter taste;

melting point 188–192°C; used to make sodium barbital, a long-duration hypnotic and sedative. Also known as diethylbarbituric acid; diethylmalonylurea.

barbiturate [PHARM] Any of a group of ureides, such as phenobarbital, Amytal, or Seconal, that act as central nervous system depressants.

barbituric acid [ORG CHEM] $C_4H_4O_3N_2$ 2,4,6-Trioxypyrimidine, the parent compound of the barbiturates; colorless crystals melting at 245°C, slightly soluble in water. Also known as malonyl urea.

barbiturism [MED] Intoxication following an overdose of barbiturates; characterized by delirium, coma, and sometimes death.

bar buoy [NAV] A buoy marking the location of a bar at the mouth of a river or approach to a harbor.

barbwire *See* barbed wire.

bar chair *See* bar support.

barchan [GEOL] A crescent-shaped dune or drift of wind-blown sand or snow, the arms of which point downwind; formed by winds of almost constant direction and of moderate speeds. Also known as barchane; barkhan; crescentic dune.

barchane *See* barchan.

bar chart *See* bar graph.

bar clamp [DES ENG] A clamping device consisting of a long bar with adjustable clamping jaws; used in carpentry.

bar code [COMPUT SCI] The representation of alphanumeric characters by series of adjacent stripes of various widths, for example, the universal product code.

bar-code reader *See* bar-code scanner.

bar-code scanner [COMPUT SCI] An optical scanning device that reads texts which have been converted into a special bar code. Also known as bar-code reader.

Bardeen-Cooper-Schrieffer theory [SOLID STATE] A theory of superconductivity that describes quantum-mechanically those states of the system in which conduction electrons cooperate in their motion so as to reduce the total energy appreciably below that of other states by exploiting their effective mutual attraction; these states predominate in a superconducting material. Abbreviated BCS theory.

bar drawing [MET] An operation in which a metallic bar is pulled through a die so that the cross-sectional area of the bar is reduced.

bar drill [MIN ENG] A small diamond type or other type of rock drill mounted on a bar and used in an underground workplace. Also known as bar.

bareboat charter [IND ENG] An agreement to charter a ship without its crew or stores; the fee for its use for a predetermined period of time is based on the price per ton of cargo handled.

bare charge [ORD] An explosive charge without casing prepared for use in determining explosive blast characteristics.

bare charm [PARTIC PHYS] Charm that is carried by a quark and is not canceled by the charm of the corresponding antiquark, so that the hadron of which the quark is a constituent has net charm different from zero.

bare electrode [MET] An uncoated electrode used in submerged arc automatic welding with a gas-shielded arc or a granular flux deposited in an elongated mound over a joint.

barefaced tenon [ENG] A tenon having a shoulder cut on one side only.

bareface fabric [TEXT] Any perfectly smooth fabric that has no nap.

baren [GRAPHICS] A pad for pressing paper against an inked wooden block to produce a print.

bare rock [NAV] In U.S. Coast and Geodetic Survey terminology, a rock extending above the plane of mean high water.

bare value [QUANT MECH] The value which some physical property of a particle, such as its mass or charge, is supposed to have in the absence of any interactions with fields.

bar finger sand [GEOL] An elongated lenticular sand body that lies beneath a distributory in a birdfoot delta.

Barfoed's test [ANALY CHEM] A test for monosaccharides conducted in an acid solution; cupric acetate is reduced to cuprous oxide, a red precipitate.

bar folder [MET] A machine used to bend a metal sheet into a sharp, narrow, and accurate fold, or a rounded fold, along the edge.

barge [NAV ARCH] A large cargo-carrying craft which is towed or pushed by a tug on both seagoing and inland waters.

barge couple [BUILD] **1.** One of two rafters that support that part of a gable roof which projects beyond the gable wall. **2.** One of the rafters (under the barge course) which serve as grounds for the vergeboards and carry the plastering or boarding of the soffits. Also known as barge rafter.

barge course [BUILD] **1.** The coping of a wall, formed by a course of bricks set on edge. **2.** In a tiled roof, the part of the tiling which projects beyond the principal rafters where there is a gable.

bar generator [ELECTR] Generator of pulses or repeating waves which are equally separated in time; these pulses are synchronized by the synchronizing pulses of a television system, so that they can produce a stationary bar pattern on a television screen.

barge rafter *See* barge couple.

barge spike *See* boat spike.

barge stone [BUILD] One of the stones, generally projecting, which form the sloping top of a gable built of masonry.

bar graph [STAT] A diagram of frequency-table data in which a rectangle with height proportional to the frequency is located at each value of a variate that takes only certain discrete values. Also known as bar chart.

bar hole [ENG] A small-diameter hole made in the ground along the route of a gas pipe in a bar test survey.

baric topography *See* height pattern.

baric wind law *See* Buys-Ballot's law.

barines [METEOROL] Westerly winds in eastern Venezuela.

baring *See* overburden.

bar iron [MET] Wrought iron formed into bars.

Bari-Sol process [CHEM ENG] Removal of waxes from liquid hydrocarbons by extraction of the wax with a mixed ethylene dichloride–benzene solvent, followed by separation from the hydrocarbon in a centrifuge.

barite [MINERAL] $BaSO_4$ A white, yellow, or colorless orthorhombic mineral occurring in tabular crystals, granules, or compact masses; specific gravity is 4.5; used in paints and drilling muds and as a source of barium chemicals; the principal ore of barium. Also known as baryte; barytine; cawk; heavy spar.

barite dollar [MINERAL] Barite in the form of rounded disk-shaped masses; formed in a sandstone or sandy shale.

BARITT diode *See* barrier injection transit-time diode.

barium [CHEM] A chemical element, symbol Ba, with atomic number 56 and atomic weight of 137.34.

barium-140 [NUC PHYS] A radioactive isotope of barium with atomic mass 140; the half-life is 12.8 days, and the decay is by negative beta-particle emission.

barium acetate [INORG CHEM] $Ba(C_2H_3O_2)_2 \cdot H_2O$ A barium salt made by treating barium sulfide or barium carbonate with acetic acids; it forms colorless, triclinic crystals that decompose upon heating; used as a reagent for sulfates and chromates.

barium azide [INORG CHEM] $Ba(N_3)_2$ A crystalline compound soluble in water; used in high explosives.

barium-base grease [MATER] A lubricating material made from lubricating oil and barium soap.

barium binoxide *See* barium peroxide.

barium bromate [INORG CHEM] $Ba(BrO_3)_2 \cdot H_2O$ A poisonous compound that forms colorless, monoclinic crystals, decomposing at 260°C; used for preparing other bromates.

barium bromide [INORG CHEM] $BaBr_2 \cdot 2H_2O$ Colorless crystals soluble in water and alcohol; used in photographic compounds.

barium carbonate [INORG CHEM] $BaCO_3$ A white powder with a melting point of 174°C; soluble in acids (except sulfuric acid); used in rodenticides, ceramic flux, optical glass, and television picture tubes.

barium chlorate [INORG CHEM] $Ba(ClO_3)_2 \cdot H_2O$ A salt prepared by the reaction of barium chloride and sodium chlorate; it forms colorless, monoclinic crystals, soluble in water; used in pyrotechnics.

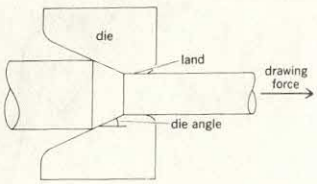
barium chloride [INORG CHEM] $BaCl_2$ A toxic salt obtained as colorless, water-soluble cubic crystals, melting at 963°C; used as a rat poison, in metal surface treatment, and as a laboratory reagent.

barium chromate [INORG CHEM] $BaCrO_4$ A toxic salt that forms yellow, rhombic crystals, insoluble in water; used as a pigment in overglazes.

barium citrate [ORG CHEM] $Ba_3(C_6H_5O_7)_2 \cdot 2H_2O$ A grayish-white, toxic, crystalline powder; used as a stabilizer for latex paints.

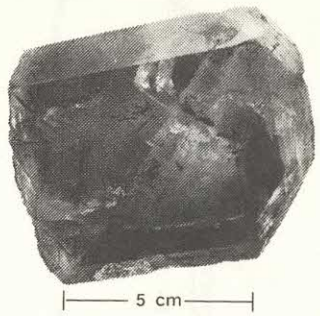
barium cyanide [ORG CHEM] $Ba(CN)_2$ A white, crys-

BAR DRAWING



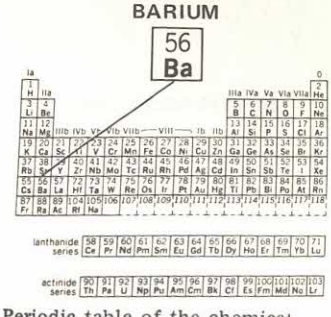
A cross section of a drawing die in operation showing the reduction in cross-sectional area of the bar being pulled through the die.

BARITE



A barite specimen from Dufton, Westmoreland, England. *(American Museum of Natural History)*

BARIUM



Periodic table of the chemical elements showing the position of barium.

talline powder; soluble in water and alcohol; used in metallurgy and electroplating.

barium dioxide *See* barium peroxide.

barium enema [MED] A suspension of barium sulfate administered as an enema into the lower bowel to render it radiopaque.

barium fluoride [INORG CHEM] BaF_2 Colorless, cubic crystals, slightly soluble in water; used in enamels.

barium fluosilicate [INORG CHEM] $BaSiF_6H$ A white, crystalline powder; insoluble in water; used in ceramics and insecticides. Also known as barium silicofluoride.

barium fuel cell [ELEC] A fuel cell in which barium is used with either oxygen or chlorine to convert chemical energy into electrical energy.

barium glass [MATER] Glass which differs from lime-soda glass in that barium oxide replaces part of the calcium oxide.

barium hydroxide [INORG CHEM] $Ba(OH)_2 \cdot 8H_2O$ Colorless, monoclinic crystals, melting at 78°C; soluble in water, insoluble in acetone; used for fat saponification and fusing of silicates.

barium hypophosphite [PHARM] $BaH_4(PO_2)_2$ A toxic, white, crystalline powder; soluble in water; used in medicine.

barium hyposulfite *See* barium thiosulfate.

barium manganate [INORG CHEM] $BaMnO_4$ A toxic, emerald-green powder which is used as a paint pigment. Also known as Cassel green; manganese green.

barium meal [MED] A suspension of barium sulfate taken orally to render the upper gastrointestinal tract radiopaque.

barium mercury iodide *See* mercuric barium iodide.

barium molybdate [INORG CHEM] $BaMoO_4$ A toxic, white powder with a melting point of approximately 1600°C; used in electronic and optical equipment and as a paint pigment.

barium monosulfide [INORG CHEM] BaS A colorless, cubic crystal that is soluble in water; used in pigments.

barium monoxide *See* barium oxide.

barium nitrate [INORG CHEM] $Ba(NO_3)_2$ A toxic salt occurring as colorless, cubic crystals, melting at 592°C, and soluble in water; used as a reagent, in explosives, and in pyrotechnics. Also known as nitrobarite.

barium oxide [INORG CHEM] BaO A white to yellow powder that melts at 1923°C; it forms the hydroxide with water; may be used as a dehydrating agent. Also known as barium monoxide; barium protoxide.

barium perchlorate [INORG CHEM] $Ba(ClO_4)_2 \cdot 4H_2O$ Tetrahydrate variety which forms colorless hexagons; used in pyrotechnics.

barium permanganate [INORG CHEM] $Ba(MnO_4)_2$ Brownish-violet, toxic crystals; soluble in water; used as a disinfectant.

barium peroxide [INORG CHEM] BaO_2 A compound formed as white toxic powder, insoluble in water; used as a bleach and in the glass industry. Also known as barium binoxide; barium dioxide; barium superoxide.

barium plaster [MATER] A special mill-mixed gypsum plaster containing barium salts; used to plaster walls of x-ray rooms.

barium protoxide *See* barium oxide.

barium rhodanide *See* barium thiocyanate.

barium silicide [INORG CHEM] $BaSi_2$ A compound that has the appearance of metal-gray lumps; melts at white heat; used in metallurgy to deoxidize steel.

barium-sodium niobate [MATER] Synthetic electrooptical crystals used to produce coherent green light in lasers and to manufacture devices such as electrooptical modulators and optical polarimetric oscillators.

barium stearate [ORG CHEM] $Ba(C_{18}H_{35}O_2)_2$ A white, crystalline solid; melting point 160°C; used as a lubricant in manufacturing plastics and rubbers, in greases, and in plastics as a stabilizer against deterioration caused by heat and light.

barium sulfate [INORG CHEM] $BaSO_4$ A salt occurring in the form of white, rhombic crystals, insoluble in water; used as a white pigment, as an opaque contrast medium for roentgenographic processes, and as an antidiarrheal.

barium sulfite [INORG CHEM] $BaSO_3$ A toxic, white powder; soluble in dilute hydrochloric acid; used in paper manufacturing.

barium sulfocyanate *See* barium thiocyanate.

barium sulfocyanide *See* barium thiocyanate.

barium superoxide *See* barium peroxide.

barium tetrasulfide [INORG CHEM] $BaS_4 \cdot H_2O$ Red or yellow, rhombic crystals, soluble in water.

barium thiocyanate [INORG CHEM] $Ba(SCN) \cdot 2H_2O$ White crystals that deliquesce; used in dyeing and in photography. Also known as barium rhodanide; barium sulfocyanate; barium sulfocyanide.

barium thiosulfate [INORG CHEM] $BaS_2O_3 \cdot H_2O$ A white powder that decomposes upon heating; used to make explosives and in matches. Also known as barium hyposulfite.

barium titanate [INORG CHEM] $BaTiO_3$ A grayish powder that is insoluble in water but soluble in concentrated sulfuric acid; used as a ferroelectric ceramic.

barium tungstate [INORG CHEM] $BaWO_4$ A toxic, white powder used as a pigment and in x-ray photography. Also known as barium white; barium wolframate; tungstate white; wolfram white.

barium white *See* barium tungstate.

barium wolframate *See* barium tungstate.

bar joist [BUILD] A small steel truss with wire or rod web lacing used for roof and floor supports.

bark [BOT] The tissues external to the cambium in a stem or root. [MET] The decarburized layer formed beneath the scale on the surface of steel heated in air. [NAV ARCH] A three-masted sailing ship whose foremast and mainmast are square-rigged and whose mizzenmast is fore-and-aft-rigged.

bark cloth [TEXT] Fabric made from inner tree bark by beating it to a smooth, wearable thinness.

bark crepe [TEXT] A crepe fabric textured to simulate the appearance of tree bark.

bar keel [NAV ARCH] A solid keel with a rectangular cross section in an iron or steel ship.

barker [DES ENG] *See* bark spud. [ENG] A machine, used mainly in pulp mills, which removes the bark from logs. [FOR] **1.** A worker who subjects logs and pulpwood to water pressure in a stream barker or tumbling in a drum barker, in order to free them from bark and dirt. Also known as power barker. **2.** A worker who prepares or shovels bark for tanning.

Barker method [CRYSTAL] A method utilizing a number of convenient rules which allow two observers to choose the same reference system to describe the same noncubic crystal.

barkevikite [MINERAL] A brown or black member of the amphibole mineral group; looks like basaltic hornblende but differs from it in its iron concentration.

bark graft [BOT] A graft made by slipping the scion beneath a slit in the bark of the stock.

barkhan *See* barchan.

Barkhausen effect [ELECTROMAG] The succession of abrupt changes in magnetization occurring when the magnetizing force acting on a piece of iron or other magnetic material is varied.

Barkhausen interference [COMMUN] Interference caused by Barkhausen oscillations.

Barkhausen-Kurz oscillator [ELECTR] An oscillator of the retarding-field type in which the frequency of oscillation depends solely on the transit time of electrons oscillating about a highly positive grid before reaching the less positive anode. Also known as Barkhausen oscillator; positive-grid oscillator.

Barkhausen oscillation [ELECTR] Undesired oscillation in the horizontal output tube of a television receiver, causing one or more ragged dark vertical lines on the left side of the picture.

Barkhausen oscillator *See* Barkhausen-Kurz oscillator.

barkometer [CHEM ENG] A hydrometer calibrated to test the strength of tanning liquors used in tanning leather.

bark-splitting disease *See* Armillaria root rot.

bark spud [DES ENG] A tool which peels off bark. Also known as barker.

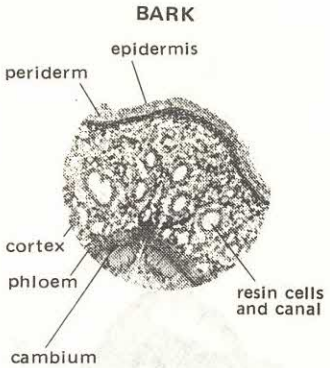
barley [BOT] A plant of the genus *Hordeum* in the order Cyperales that is cultivated as a grain crop; the seed is used to manufacture malt beverages and as a cereal.

barley coal [MIN ENG] A stream size of anthracite sized on a round punched plate; passes through quarter-inch (6.4 millimeter) holes. Also known as buckwheat no. 3.

barley scald [PL PATH] A fungus disease of barley caused by *Rhynchosporium secalis* and characterized by bluish-green to yellow blotches and blighting of the foliage.

barley smut [PL PATH] **1.** A loose smut disease of barley caused by *Ustilago nuda*. **2.** A covered smut disease of barley caused by *U. hordei*.

barley stripe [PL PATH] A fungus disease of barley characterized by light green or yellow stripes on the leaves; incited by the diffusible toxin of *Helminthosporium gramineum*.



Tranverse section of young twig of balsam fir *(Abies balsamae* L.) showing tissues often considered to compose the bark. *(Forest Products Laboratory, USDA)*

bar linkage [MECH ENG] A set of bars joined together at pivots by means of pins or equivalent devices; used to transmit power and information.

Barlow lens [OPTICS] A lens with one plane surface and one concave surface that is placed between the objective and eyepiece of a telescope to decrease the convergence of the beam from the objective and thereby increase the effective focal length.

Barlow's equation [MECH] A formula, $t = DP/2S$, used in computing the strength of cylinders subject to internal pressures, where t is the thickness of the cylinder in inches, D the outside diameter in inches, P the pressure in pounds per square inch, and S the allowable tensile strength in pounds per square inch.

Barlow's rule [PHYS CHEM] The rule that the volume occupied by the atoms in a given molecule is proportional to the valences of the atoms, using the lowest valency values.

bar magnet [ELECTROMAG] A bar of hard steel that has been strongly magnetized and holds its magnetism, thereby serving as a permanent magnet.

bar mining [MIN ENG] The mining of river bars, usually between low and high waters, although the stream is sometimes deflected and the bar worked below water level.

barn [AGR] A farm building used for storage of agricultural products and equipment or for housing farm animals. [NUC PHYS] A unit of area equal to 10^{-24} square centimeter; used in specifying nuclear cross sections. Symbolized b.

barnacle [INV ZOO] The common name for a number of species of crustaceans which compose the subclass Cirripedia.

Barnard's star [ASTRON] A star 6.1 light-years away from earth, of visual magnitude 9.5 and proper motion of 10.31 seconds of arc annually.

Barnett effect [ELECTROMAG] The development of a slight magnetization in an initially unmagnetized iron rod when it is rotated at high speed about its axis.

Barnett method [ELETROMAG] Use of the Barnett effect to determine the gyromagnetic moment of ferromagnetic material.

barney [MIN ENG] A small car or truck, attached to a rope or cable, used to push cars up a slope or an inclined plane. Also known as bullfrog; donkey; groundhog; larry; mule; ram; truck.

baroclinic [PHYS] Of, pertaining to, or characterized by baroclinity.

baroclinic disturbance [METEOROL] Any migratory cyclone associated with strong baroclinity of the atmosphere, evidenced on synoptic charts by temperature gradients in the constant-pressure surfaces, vertical wind shear, tilt of pressure troughs with height, and concentration of solenoids in the frontal surface near the ground. Also known as baroclinic wave.

baroclinic field [METEOROL] A distribution of atmospheric pressure and mass such that the specific volume, or density, of air is a function not solely of pressure.

baroclinic instability [METEOROL] A hydrodynamic instability arising from the existence of a meridional temperature gradient (and hence of a thermal wind) in an atmosphere in quasi-geostrophic equilibrium and possessing static stability.

baroclinicity *See* baroclinity.

baroclinic model [METEOROL] A concept of stratification in the atmosphere, involving surfaces of constant pressure intersecting surfaces of constant density.

baroclinic wave *See* baroclinic disturbance.

baroclinity [PHYS] The state of stratification in a fluid in which surfaces of constant pressure (isobaric surfaces) intersect surfaces of constant density (isosteric surfaces). Also known as baroclinicity; barocliny.

barocliny *See* baroclinity.

baroduric bacteria [MICROBIO] Bacteria that can tolerate conditions of high hydrostatic pressure.

barodynamics [MECH] The mechanics of heavy structures which may collapse under their own weight.

barogram [ENG] The record of an aneroid barograph.

barograph *See* aneroid barograph.

barometer [ENG] An absolute pressure gage specifically designed to measure atmospheric pressure.

barometer elevation [METEOROL] The vertical distance above mean sea level of the ivory point (zero point) of a weather station's mercurial barometer; frequently the same as station elevation. Also known as elevation of ivory point.

barometric [ENG] Pertaining to a barometer or to the results obtained by using a barometer. [PHYS] Loosely, pertaining to atmospheric pressure; for example, barometric gradient (meaning pressure gradient).

barometric altimeter *See* pressure altimeter.

barometric condenser [MECH ENG] A contact condenser that uses a long, vertical pipe into which the condensate and cooling liquid flow to accomplish their removal by the pressure created at the lower end of the pipe.

barometric corrections [PHYS] The corrections which must be applied to the reading of a mercury barometer in order that the observed value may be rendered accurate. Also known as barometric errors.

barometric draft regulator [MECH ENG] A damper usually installed in the breeching between a boiler and chimney; permits air to enter the breeching automatically as required, to maintain a constant overfire draft in the combustion chamber.

barometric elevation [ENG] An elevation above mean sea level estimated from the difference in atmospheric pressure between the point in question and an elevation of known value.

barometric errors *See* barometric corrections.

barometric fuel control [AERO ENG] A device that maintains the correct flow of fuel to an engine by adjusting to atmospheric pressure at different altitudes, as well as to impact pressure.

barometric fuse [ENG] A fuse that functions as a result of change in the pressure exerted by the surrounding air.

barometric gradient *See* pressure gradient.

barometric hypsometry [ENG] The determination of elevations by means of either mercurial or aneroid barometers.

barometric leveling [ENG] The measurement of approximate elevation differences in surveying with the aid of a barometer; used especially for large areas.

barometric pressure *See* atmospheric pressure.

barometric surface [PHYS] A surface at each point of which the barometric pressure is the same.

barometric switch *See* baroswitch.

barometric tendency *See* pressure tendency.

barometric tide [GEOPHYS] A daily variation in atmospheric pressure due to the gravitational attraction of the sun and moon.

barometric wave [METEOROL] Any wave in the atmospheric pressure field; the term is usually reserved for short-period variations not associated with cyclonic-scale motions or with atmospheric tides.

barometrograph *See* aneroid barograph.

barometry [ENG] The study of the measurement of atmospheric pressure, with particular reference to ascertaining and correcting the errors of the different types of barometer.

baromil [MECH] The unit of length used in graduating a mercury barometer in the centimeter-gram-second system.

barophile [MICROBIO] An organism that thrives under conditions of high hydrostatic pressure.

barophobia [PSYCH] Abnormal fear of gravity.

baroscope [ENG] An apparatus which demonstrates the equality of the weight of air displaced by an object and its loss of weight in air.

barosinusitis [MED] Inflammation of the sinuses, characterized by edema and hemorrhage, due to expansion of air within the sinuses at decreased barometric pressure. Also known as aerosinusitis.

barostat [ENG] A mechanism which maintains constant pressure inside a chamber.

baroswitch [ENG] **1.** A pressure-operated switching device used in a radiosonde which determines whether temperature, humidity, or reference signals will be transmitted. **2.** Any switch operated by a change in barometric pressure. Also known as barometric switch.

barotaxis [BIOL] Orientation movement of an organism in response to pressure changes.

barothermogram [ENG] The record made by a barothermograph.

barothermograph [ENG] An instrument which automatically records pressure and temperature.

barothermohygrogram [ENG] The record made by a barothermohygrograph.

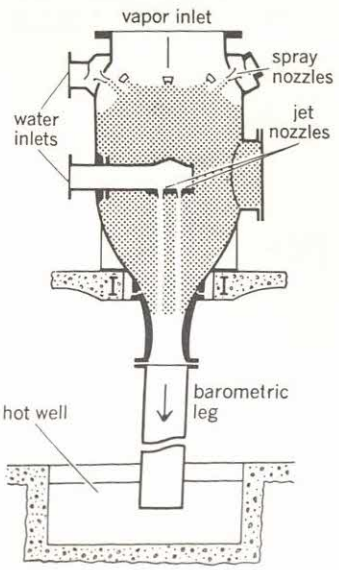
barothermohygrograph [ENG] An instrument that produces graphs of atmospheric pressure, temperature, and humidity on a single sheet of paper.

barotitis [MED] Inflammation of the ear, or a part of it, caused by changes in atmospheric pressure. Also known as aerootitis.

BARNACLE

Top view of adult stage of *Balanus*, the acorn barnacle.

BAROMETRIC CONDENSER



A multijet barometric condenser—one of three types of contact condensers. *(Schutte and Koerting Co.)*

barotrauma [MED] Injury to air-containing structures, such as the middle ears, sinuses, lungs, and gastrointestinal tract, due to unequal pressure differences across their walls.

barotropic [PHYS] Of, pertaining to, or characterized by a condition of barotropy.

barotropic disturbance [METEOROL] Also known as barotropic wave. **1.** A wave disturbance in a two-dimensional nondivergent flow; the driving mechanism lies in the variation of either vorticity of the basic current or the variation of the vorticity of the earth about the local vertical. **2.** An atmospheric wave of cyclonic scale in which troughs and ridges are approximately vertical.

barotropic field [METEOROL] A distribution of atmospheric pressures and mass such that the specific volume, or density, of air is a function solely of pressure.

barotropic model [METEOROL] Any of a number of model atmospheres in which some of the following conditions exist throughout the motion: coincidence of pressure and temperature surfaces, absence of vertical wind shear, absence of vertical motions, absence of horizontal velocity divergence, and conservation of the vertical component of absolute vorticity.

barotropic wave *See* barotropic disturbance.

barotropy [PHYS] The state of a fluid in which surfaces of constant density (or temperature) are coincident with surfaces of constant pressure; it is the state of zero baroclinity.

bar pattern [ELECTR] Pattern of repeating lines or bars on a television screen.

bar plain [GEOL] A plain formed by a stream without a low-water channel or an alluvial cover.

bar post [CIV ENG] One of the posts driven into the ground to form the sides of a field gate.

barracuda [VERT ZOO] The common name for about 20 species of fishes belonging to the genus *Sphyraena* in the order Perciformes.

barrage [CIV ENG] An artificial dam which increases the depth of water of a river or watercourse, or diverts it into a channel for navigation or irrigation. [ORD] A prearranged barrier of fire designed to protect friendly troops and installations by impeding enemy movement across defensive lines or areas.

barrage balloon [ORD] A balloon restrained from free flight by means of a cable attaching it to the earth; used to support wires or nets as protection against air attacks.

barrage jamming [COMMUN] The simultaneous jamming of a number of radio or radar bands of frequencies.

barrage reception [COMMUN] A type of radio reception in which interference from certain directions is reduced by selecting from a system of directional antennas those which yield the greatest signal-to-interference ratio.

barrage-type spillway [CIV ENG] A passage for surplus water with sluice gates across the width of the entrance.

barranca [GEOL] A hole or deep break made by heavy rain; a ravine.

Barr body [CYTOL] A condensed, inactivated X chromosome inside the nuclear membrane in interphase somatic cells of women and most female mammals.

barre [TEXT] **1.** A pattern of bars or stripes parallel to the weft of a fabric. **2.** A defect in the production of a fabric that results in a streak parallel to the weft.

barred-and-braced gate [CIV ENG] A gate with a diagonal brace to reinforce the horizontal timbers.

barred basin *See* restricted basin.

barred beach sequence [GEOL] A sequence comprising longshore bars, barrier beaches, and lagoons that develop when, under low-energy conditions, waves cross a broad continental shelf before impinging on a shoreline where sand-sized sediments are abundant.

barred gate [CIV ENG] A gate with one or more horizontal timber rails.

barred spiral galaxy [ASTRON] A spiral galaxy whose spiral arms originate at the ends of a bar-shaped structure centered at the nucleus of the galaxy.

barrel [DES ENG] **1.** A container having a circular lateral cross section that is largest in the middle, and ends that are flat; often made of staves held together by hoops. **2.** A piece of small pipe inserted in the end of a cartridge to carry the squib to the powder. **3.** That portion of a pipe having a constant bore and wall thickness. [MECH] Abbreviated bbl. **1.** The unit of liquid volume equal to 31.5 gallons (approximately 119 liters). **2.** The unit of liquid volume for petroleum equal to 42 gallons (approximately 158 liters). **3.** The unit of dry volume equal to 105 quarts (approximately 116 liters). **4.** A unit of weight that varies in size according to the commodity being weighed. [NAV ARCH] The central part of a windlass or capstan about which the cable is wound. [OPTICS] A tapering cylindrical housing which contains the lenses of a camera and the iris diaphragm. [ORD] The cylindrical metallic part of a gun which controls the initial direction of a projectile.

barrel arch [ARCH] A plain arch with a barrellike cross section in which the length is greater than the span (diameter).

barrel assembly [ORD] The gun barrel together with the other parts necessary to attach it to the rest of the gun.

barrel bolt [DES ENG] A door bolt which moves in a cylindrical casing; not driven by a key. Also known as tower bolt.

barrel ceiling [ARCH] A ceiling of semicylindrical shape.

barrel chest *See* emphysematous chest.

barrel copper [MIN ENG] Copper in lumps small enough to be picked out of the mass of rock and put in the furnace without dressing.

barrel distortion [OPTICS] A defect in an optical system whereby lateral magnification decreases with object size; the image of a square then appears barrel-shaped.

barrel drain [CIV ENG] Any drain which is cylindrical.

barrel erosion [ORD] Wearing away of the interface of the bore due to the combined effects of gas washing, scoring, and mechanical abrasion; causes a reduction in muzzle velocity.

barrel extension [ORD] Metal projection fixed to the rear of the barrel in certain automatic guns; extends backward and holds the breech locked against the gas pressure in the chamber when the gun is fired.

barrel fitting [DES ENG] A short length of threaded connecting pipe.

barrelhead [DES ENG] The flat end of a barrel.

barreling [MET] *See* tumbling. [ORD] Expansion of the body of a cartridge case when the gun chamber recovers longitudinally following firing and the mouth of the case is not free to move in the chamber.

barrel life [ORD] As applied to small arms and automatic weapons, the number of rounds which may be fired through a barrel at a particular firing schedule before the barrel becomes unserviceable; varies with the firing schedule.

barrel plating [MET] An electroplating process by which articles are brought into contact with an electrolyte while rotating in a perforated hardwood barrel.

barrel printer [COMPUT SCI] A computer printer in which the entire set of characters is placed around a rapidly rotating cylinder at each print position; computer-controlled print hammers opposite each print position strike the paper and press it against an inked ribbon between the paper and the cylinder when the appropriate character reaches a position opposite the print hammer.

barrel roof [BUILD] **1.** A roof of semicylindrical section; capable of spanning long distances parallel to the axis of the cylinder. **2.** *See* barrel vault.

barrels per calendar day [CHEM ENG] A unit measuring the average rate of oil processing in a petroleum refinery, with allowances for downtime over a period of time. Abbreviated BCD.

barrels per day [CHEM ENG] A unit measuring the rate at which petroleum is produced at the refinery. Abbreviated BD; bpd.

barrels per month [CHEM ENG] A unit measuring the rate at which petroleum is produced at the refinery. Abbreviated BM; bpm.

barrels per stream day [CHEM ENG] A measurement used to denote rate of oil or oil-product flow while a fluid-processing unit is in continuous operation. Abbreviated BSD.

barrel vault [ARCH] A masonry vault of plain, semicircular cross section, supported by parallel walls or arcades and adapted to longitudinal areas. Also known as barrel roof; cradle vault; tunnel vault; wagonhead vault; wagon vault.

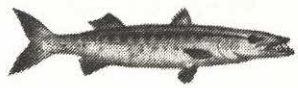
barrel whip [ORD] The movement of a gun barrel in a plane normal to the longitudinal axis of the gun bore, as the gun operates through a complete firing cycle.

Barremian [GEOL] Lower Cretaceous geologic age, between Hauterivian and Aptian.

barren liquor [CHEM ENG] Liquid (liquor) from filter-cake washing in which there is little or no recovery value; for example, barren cyanide liquor from washing of gold cake slimes.

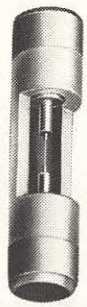
barrens [GEOGR] An area that because of adverse environ-

BARRACUDA



The great or predatory barracuda *(Sphyraena barracuda)*, with a long jaw and numerous sharp teeth.

BARRETTER



Cutaway view of commercial barretter about 1 inch (2.5 centimeters) in length. *(Sperry Division, Sperry Rand Corp.)*

mental conditions is relatively devoid of vegetation compared with adjacent areas.

barretter [ELEC] **1.** Bolometer that consists of a fine wire or metal film having a positive temperature coefficient of resistivity, so that resistance increases with temperature; used for making power measurements in microwave devices. **2.** *See* ballast resistor.

barricade [ENG] Structure composed essentially of concrete, earth, metal, or wood, or any combination thereof, and so constructed as to reduce or confine the blast effect and fragmentation of an explosion.

barricade shield [ENG] A type of movable shield made of a material designed to absorb ionizing radiation, for protection from radiation.

barrier [ECOL] Any physical or biological factor that restricts the migration or free movement of individuals or populations. [NAV] Anything which obstructs or prevents passage of a craft. [PHYS] *See* potential barrier.

Barrier [ORD] A passive acoustic detection system for submarines, consisting of hydrophones positioned on the ocean floor and connected by undersea cable to a land-based computer center.

barrier bar [GEOL] Ridges whose crests are parallel to the shore and which are usually made up of water-worn gravel put down by currents in shallow water at some distance from the shore.

barrier basin [GEOL] A basin formed by natural damming, for example, by landslides or moraines.

barrier beach [GEOL] A single, long, narrow ridge of sand which rises slightly above the level of high tide and lies parallel to the shore, from which it is separated by a lagoon. Also known as offshore beach.

barrier chain [GEOL] A series of barrier spits, barrier islands, and barrier beaches extending along a coastline.

barrier curb [CIV ENG] A curb with vertical sides high enough to keep vehicles from crossing it.

barrier flat [GEOL] An area which is relatively flat and frequently occupied by pools of water that separate the seaward edge of the barrier from a lagoon on the landward side.

barrier-grid storage tube *See* radechon.

barrier ice *See* shelf ice.

barrier injection transit-time diode [ELECTR] A microwave diode in which the carriers that traverse the drift region are generated by minority carrier injection from a forward-biased junction instead of being extracted from the plasma of an avalanche region. Abbreviated BARITT diode.

barrier island [GEOL] **1.** An island similar to an offshore bar but differing from it in having multiple ridges, areas of vegetation, and swampy terraces extending toward the lagoon. **2.** A detached portion of offshore bar between two inlets.

barrier lagoon [GEOGR] A shallow body of water that separates the shore and a barrier reef.

barrier lake [HYD] A small body of water that lies in a basin, retained there by a natural dam or barrier.

barrier layer *See* depletion layer.

barrier-layer cell *See* photovoltaic cell.

barrier-layer photocell *See* photovoltaic cell.

barrier-layer rectification *See* depletion-layer rectification.

barrier marsh [ECOL] A type of marsh that restricts or prevents invasion of the area beyond it by new species of animals.

barrier material [MATER] Packing material impervious to moisture, vapor, or other liquids and gases. [ORD] An inert material placed in an explosive charge to shape the detonation wave.

barrier penetration [QUANT MECH] The passage of a particle through a potential barrier, that is, through a region of finite extent in which the particle's potential energy is greater than its total energy.

barrier reef [GEOL] A coral reef that runs parallel to the coast of an island or continent, from which it is separated by a lagoon.

barrier separation [CHEM ENG] The separation of a two-component gaseous mixture by selective diffusion of one component through a separative barrier (microporous metal or nonporous polymeric).

barrier shield [ENG] A wall or enclosure made of a material designed to absorb ionizing radiation, shielding the operator from an area where radioactive material is being used or processed by remote-control equipment.

barrier spit [GEOL] A barrier of sand joined at one of its ends to the mainland.

barrier theory of cyclones [METEOROL] A theory of cyclone development, proposed by F.M. Exner, which states that a slow-moving mass of cold air in the path of rapidly eastward-moving warmer air will bring about the formation of low pressure on the lee side of the cold air; analogous to the formation of a dynamic trough on the lee side of an orographic barrier. Also known as drop theory.

barrier voltage [ELECTR] The voltage necessary to cause electrical conduction in a junction of two dissimilar materials, such as *pn* junction diode.

barrier zone [BOT] In a tree, new tissue formed by the cambium after it has been wounded; serves as both an anatomical and a chemical wall.

Barrovian metamorphism [GEOL] A regional metamorphism that can be zoned into facies that are metamorphic.

barrow *See* handbarrow; wheelbarrow.

barrow run [CIV ENG] A temporary pathway of wood planks or sheets to provide a smooth access for wheeled materials-handling carriers on a building site.

bar sash lift [BUILD] A type of handle, attached to the bottom rail of a sash, for raising or lowering it.

bar scale *See* graphic scale.

bar screen [MECH ENG] A sieve with parallel steel bars for separating small from large pieces of crushed rock.

bar sight [ORD] The rear sight of a firearm, consisting of a movable bar, usually with an open notch.

bar steel [MET] Steel formed into bars.

barstock *See* bar.

Barstovian [GEOL] Upper Miocene geologic time.

bar strainer [DES ENG] A screening device consisting of a bar or a number or parallel bars; used to prevent objects from entering a drain.

bar support [CIV ENG] A device used to support or hold steel reinforcing bars in proper position before or during the placement of concrete. Also known as bar chair.

bar test survey [ENG] A leakage survey in which bar holes are driven or bored at regular intervals along the way of an underground gas pipe and the atmosphere in the holes is tested with a combustible gas detector or such.

bar theory [GEOL] A theory that accounts for thick deposits of salt, gypsum, and other evaporites in terms of increased salinity of a solution in a lagoon caused by evaporation.

Barth plan [IND ENG] A wage incentive plan intended for a low task and for all efficiency points and defined as: earning = rate per hour × square root of the product (hours standard × hours actual).

Bartlett force [NUC PHYS] A force between nucleons in which spin is exchanged.

Bartonella [MICROBIO] A genus of the family Bartonellaceae; parasites in or on red blood cells and within fixed tissue cells; found in humans and in the arthropod genus *Phlebotomus*.

Bartonellaceae [MICROBIO] A family of the order Rickettsiales; rod-shaped, coccoid, ring- or disk-shaped cells; parasites of human and other vertebrate red blood cells.

bartonellosis *See* Carrion's disease.

Bartonian [GEOL] A European stage: Eocene geologic time above Auversian, below Ludian. Also known as Marinesian.

Bart reaction [ORG CHEM] Formation of an aryl arsonic acid by treating the aryl diazo compound with trivalent arsenic compounds, such as sodium arsenite.

bar turret lathe [MECH ENG] A turret lathe in which the bar stock is slid through the headstock and collet on line with the turning axis of the lathe and held firmly by the closed collet.

bar-type grating [CIV ENG] An open grid assembly of metal bars in which the bearing bars (running in one direction) are spaced by rigid attachment to crossbars.

bar winding [ELEC] An armature winding made up of a series of metallic bars connected at their ends.

barycenter [ASTRON] The center of gravity of the earth-moon system. [MATH] The center of mass of a system of finitely many equal point masses distributed in euclidean space in such a way that their position vectors are linearly independent.

barycentric coordinates [MATH] The coefficients in the representation of a point in a simplex as a linear combination of the vertices of the simplex.

barycentric element [ASTROPHYS] An orbital element referred to the center of mass of the solar system.

barycentric energy [MECH] The energy of a system in its center-of-mass frame.

Barychilinidae [PALEON] A family of Paleozoic crustaceans in the suborder Platycopa.

barye [MECH] The pressure unit of the centimeter-gram-second system of physical units; equal to 1 dyne/cm^2 (0.001 millibar). Also known as microbar.

Barylambdidae [PALEON] A family of late Paleocene and early Eocene aquatic mammals in the order Pantodonta.

baryon [PARTIC PHYS] Any elementary particle which can be transformed into a nucleon and some number of mesons and lighter particles. Also known as heavy particle.

baryon number [PARTIC PHYS] A conserved quantum number, equal to the number of baryons minus the number of antibaryons in a system; neutrons and protons have baryon number one; mesons and leptons have baryon number zero.

baryon octet [PARTIC PHYS] The group of one lambda, three sigma, and two xi hyperons and two nucleons, all having spin ½ and positive parity, and forming a symmetrical pattern as suggested by SU_3 symmetry.

baryon resonance [PARTIC PHYS] A cross section anomaly indicating the existence of an unstable baryon.

baryon spectroscopy [PARTIC PHYS] The science of the energy levels and changes of state occurring among baryon particles.

baryon-to-photon ratio [ASTRON] The estimated ratio of the number of baryons (mostly protons and neutrons) to photons (mostly in the cosmic microwave radiation) in the universe.

barysphere *See* centrosphere.

baryta feldspar *See* hyalophane.

baryta water [CHEM] A solution of barium hydroxide.

baryte *See* barite.

Barytheriidae [PALEON] A family of extinct proboscidean mammals in the suborder Barytherioidea.

Barytherioidea [PALEON] A suborder of extinct mammals of the order Proboscidea, in some systems of classification.

barytine *See* barite.

barytocalcite [MINERAL] $CaBa(CO_3)_2$ A colorless to white, grayish, greenish, or yellowish monoclinic mineral consisting of calcium and barium carbonate,

basal [BIOL] Of, pertaining to, or located at the base. [PHYSIO] Being the minimal level for, or essential for maintenance of, vital activities of an organism, such as basal metabolism.

basal arkose [PETR] Partially reworked feldspathic residuum in the lower section of a sandstone that overlies granitic rock.

basal body [CYTOL] A cellular organelle that induces the formation of cilia and flagella and is similar to and sometimes derived from a centriole. Also known as kinetosome.

basal-cell carcinoma [MED] A locally invasive, rarely metastatic nevoid tumor of the epidermis. Also known as basal-cell epithelioma.

basal-cell epithelioma *See* basal-cell carcinoma.

basal cleavage [CRYSTAL] Cleavage parallel to the base of the crystal structure or to the lattice plane which is normal to one of the lattice axes.

basal conglomerate [GEOL] A coarse gravelly sandstone or conglomerate forming the lowest member of a series of related strata which lie unconformably on older rocks; records the encroachment of the seabeach on dry land.

basal coplane [GRAPHICS] The condition of exposure of a pair of photographs in which the two photographs lie in a common plane parallel to the air base.

basal disc [BIOL] The expanded basal portion of the stalk of certain sessile organisms, used for attachment to the substrate.

basal ganglia [ANAT] The corpus striatum, or the corpus striatum and the thalamus considered together as the important subcortical centers.

basal groundwater [HYD] A large body of groundwater that floats on and is in hydrodynamic equilibrium with sea water.

basalia [VERT ZOO] The cartilaginous rods that support the base of the pectoral and pelvic fins in elasmobranchs.

basalis [HISTOL] The basal portion of the endometrium; it is not shed during menstruation.

basal lamina [EMBRYO] The portion of the gray matter of the embryonic neural tube from which motor nerve roots develop.

basal membrane [ANAT] The tissue beneath the pigment layer of the retina that forms the outer layer of the choroid.

basal metabolic rate [PHYSIO] The amount of energy utilized per unit time under conditions of basal metabolism; expressed as calories per square meter of body surface or per kilogram of body weight per hour. Abbreviated BMR.

basal metabolism [PHYSIO] The sum total of anabolic and catabolic activities of an organism in the resting state providing just enough energy to maintain vital functions.

basal orientation [CRYSTAL] A crystal orientation in which the surface is parallel to the base of the lattice or to the lattice plane which is normal to one of the lattice axes.

basal plane [CRYSTAL] The plane perpendicular to the long, or c, axis in all crystals except those of the isometric system.

basal rot [PL PATH] Any rot that affects the basal parts of a plant, especially bulbs.

basalt [PETR] An aphanitic crystalline rock of volcanic origin, composed largely of plagioclase feldspar (labradorite or bytownite) and dark minerals such as pyroxene and olivine; the extrusive equivalent of gabbro.

basalt glass *See* tachylite.

basaltic dome *See* shield volcano.

basaltic hornblende [PETR] A black or brown variety of hornblende rich in ferric iron and occurring in basalts and other iron-rich basic igneous rocks. Also known as basaltine; lamprobolite; oxyhornblende.

basaltic lava [PETR] A volcanic fluid rock of basaltic composition.

basaltic magma [GEOL] Mobile rock material of basaltic composition.

basaltic rock [PETR] Igneous rock that is fine-grained and contains basalt, diabase, and dolerite; if andesite is included the rock is dark in color.

basaltic shell [GEOL] The lower crystal layer of basalt underlying the oceans and beneath the sialic layer of continents.

basaltiform [GEOL] Similar to basalt in form.

basaltine *See* basaltic hornblende.

basalt obsidian *See* tachylite.

basal tunnel [ENG] A water supply tunnel constructed along the basal water table.

basaluminite [MINERAL] $Al_4(SO_4)(OH)_{10}\cdot 5H_2O$ A white mineral consisting of hydrated basic aluminum sulfate; occurs in compact masses.

basal wall [BOT] The wall dividing the oospore into an anterior and a posterior half in plants bearing archegonia.

basal water table [HYD] The water table of basal groundwater.

basanite [PETR] A basaltic extrusive rock closely allied to chert, jasper, or flint. Also known as Lydian stone; lydite.

basculating fault *See* wrench fault.

bascule [ENG] A structure that rotates about an axis, as a seesaw, with a counterbalance (for the weight of the structure) at one end.

bascule bridge [CIV ENG] A movable bridge consisting primarily of a cantilever span extending across a channel; it rotates about a horizontal axis parallel with the waterway.

bascule leaf [CIV ENG] The span of a bascule bridge.

base [CHEM] Any chemical species, ionic or molecular, capable of accepting or receiving a proton (hydrogen ion) from another substance; the other substance acts as an acid in giving of the proton; the hydroxyl ion is a base. [CHEM ENG] The primary substance in solution in crude oil, and remaining after distillation. [COMPUT SCI] *See* root. [ELECTR] **1.** The region that lies between an emitter and a collector of a transistor and into which minority carriers are injected. **2.** The part of an electron tube that has the pins, leads, or other terminals to which external connections are made either directly or through a socket. **3.** The plastic, ceramic, or other insulating board that supports a printed wiring pattern. **4.** A plastic film that supports the magnetic powder of magnetic tape or the emulsion of photographic film. [ENG] Foundation or part upon which an object or instrument rests. [LAP] *See* pavilion. [ORD] Station or installation from which military forces operate and from which supplies are obtained.

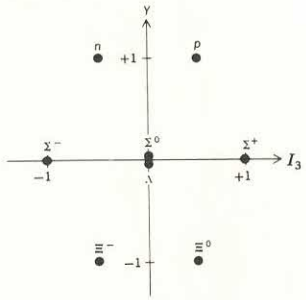
base address *See* address constant.

base-altitude ratio [GRAPHICS] The ratio between the air-base length and the flight attitude of a stereoscopic pair of photographs. Also known as base-height ratio; K factor.

base anchor [BUILD] The metal piece attached to the base of a doorframe for the purpose of securing the frame to the floor.

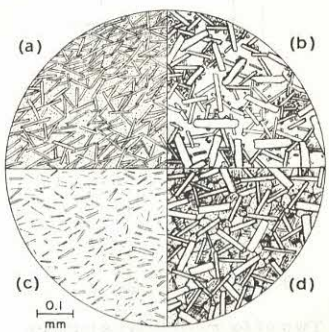
base apparatus [ENG] Any apparatus designed for use in measuring with accuracy and precision the length of a base line in triangulation, or the length of a line in first- or second-order traverse.

BARYON OCTET



The baryon octet, arrayed with respect to I_3 as abscissa and Y as ordinate. The charge number Q is given by $Q = I_3 + Y/2$.

BASALT



Textures of basalt. *(a)* Pilotaxitic texture with feldspar microlites and some interstitial, microcrystalline material. *(b)* Intersertal texture with feldspar microlites and some granular pyroxene and much interstitial glass. *(c)* Hyalopilitic texture with feldspar microlites in glass. *(d)* Intergranular texture with feldspar laths and some interstitial granular pyroxene.

baseball [PL PHYS] A machine used in controlled fusion research to confine a plasma; consists of a linear magnetic bottle sealed by magnetic mirrors at both ends, and has current-carrying structures, which resemble the seams of a baseball in shape, to stabilize the plasma.

baseband [COMMUN] The band of frequencies occupied by all transmitted signals used to modulate the radio wave that is produced by the transmitter in the absence of the signals.

baseband frequency response [COMMUN] Frequency response characteristics of the frequency band occupied by all of the signals used to modulate a transmitted carrier.

base bias [ELECTR] The direct voltage that is applied to the majority-carrier contact (base) of a transistor.

base block [BUILD] **1.** A block of any material, generally with little or no ornament, forming the lowest member of a base, or itself fulfilling the functions of a base, as a member applied to the foot of a door or to window trim. **2.** A rectangular block at the base of a casing or column which the baseboard abuts. **3.** *See* skirting block.

baseboard [BUILD] A finish board covering the interior wall at the junction of the wall and the floor.

baseboard heater [BUILD] Heating elements installed in panels along the baseboard of a wall.

baseboard radiator [CIV ENG] A heating unit located at the lower portion of a wall, and to which heat is supplied by hot water, warm air, steam, or electricity.

base box [MET] A unit of area used for tin-plated steel sheet; one base box is equivalent to 112 sheets, 14 by 20 inches (35.6 by 50.8 centimeters), or 62,720 square inches of surface, coated on two sides; 1 pound (0.454 kilogram) of tin per base box is equal to a coating of tin 0.000059 inch (0.0014986 millimeter) thick.

base bullion [MET] Crude lead that has enough silver in it to make the extraction of silver worthwhile; gold may be present.

base cap *See* base molding.

base-centered lattice [CRYSTAL] A space lattice in which each unit cell has lattice points at the centers of each of two opposite faces as well as at the vertices; in a monoclinic crystal, they are the faces normal to one of the lattice axes.

base circle [DES ENG] The circle on a gear such that each tooth-profile curve is an involute of it.

base conditions [PETRO ENG] Standard conditions of 14.65 psia pressure and 60°F (15.6°C) used to calculate the amount of gas contained in oil from a well (the gas-oil ratio).

base correction [ENG] The adjustment made to reduce measurements taken in field exploration to express them with reference to the base station values.

base course [BUILD] The lowest course or first course of a wall. [CIV ENG] The first layer of material laid down in construction of a pavement.

Basedow's disease *See* exophthalmic goiter.

base drag [FL MECH] Drag owing to a base pressure lower than the ambient pressure; it is a part of the pressure drag.

base elbow [DES ENG] A cast-iron pipe elbow having a baseplate or flange which is cast on it and by which it is supported.

base electrode [ELECTR] An ohmic or majority carrier contact to the base region of a transistor.

base exchange [GEOCHEM] Replacement of certain ions by others in clay.

base flashing [BUILD] **1.** The flashing provided by upturned edges of a watertight membrane on a roof. **2.** Any metal or composition flashing at the joint between a roofing surface and a vertical surface, such as a wall or parapet.

base flow [HYD] The flow of water entering stream channels from groundwater sources in the drainage of large lakes.

base fracture [MIN ENG] In quarrying, the broken condition of the base after a blast; it may be a good or bad base fracture.

base fuse [ORD] A fuse installed in the bottom of a projectile.

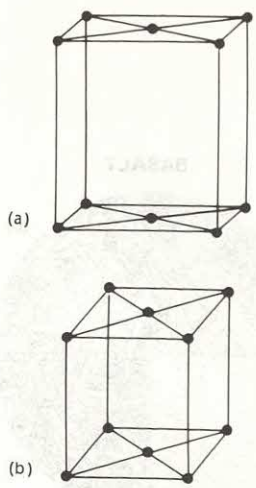
base-height ratio *See* base-altitude ratio.

base initiation [ORD] Detonation initiated at the base (rear) of the charge.

base insulator [ELEC] Heavy-duty insulator used to support the weight of an antenna mast and insulate the mast from the ground or some other surface.

base language [COMPUT SCI] The component of an extensible language which provides a complete but minimal set of primitive facilities, such as elementary data types, and simple operations and control constructs.

BASE-CENTERED LATTICE



Two of fourteen Bravais lattices. (*a*) Base-centered orthorhombic. (*b*) Base-centered monoclinic.

base level [GEOL] That critical plane of erosion and deposition represented by river level on continents and by wave or current base in the sea.

base-leveled plain [GEOL] Any land surface changed almost to a plain by subaerial erosion. Also known as peneplain.

base-leveling epoch *See* gradation period.

base line Abbreviated BL. [ELECTR] The line traced on amplitude-modulated indicators which corresponds to the power level of the weakest echo detected by the radar; it is retraced with every pulse transmitted by the radar but appears as a nearly continuous display on the scope. [ENG] **1.** A surveyed line, established with more than usual care, to which surveys are referred for coordination and correlation. **2.** A cardinal line extending east and west along the astronomic parallel passing through the initial point, along which standard township, section, and quarter-section corners are established. [NAV] The geodesic line joining the two stations between which electrical phase or time is compared in determining navigational coordinates. [SCI TECH] A line drawn in the graphical representation of a varying physical quantity, such as a voltage or current, to indicate a reference value, such as the voltage value of a bias.

base-line break [ELECTR] Technique in radar which uses the characteristic break in the base line on an A-scope display due to a pulse signal of significant strength in noise jamming.

base-line check *See* ground check.

base-line delay [NAV] The time interval which elapses while a signal travels from a loran master station to a slave station.

base-line extension [NAV] In the loran navigation system, the extension in both directions of a line passing through a slave station and its master; on this line the maximum time interval between the reception of signals from the master and slave stations may be received.

base-line technique [ANALY CHEM] A method for measurement of absorption peaks for quantitative analysis of chemical compounds in which a base line is drawn tangent to the spectrum background; the distance from the base line to the absorption peak is the absorbence due to the sample under study.

baseload [ELEC] Minimum load of a power generator over a given period of time.

base-loaded antenna [ELECTROMAG] Vertical antenna having an impedance in series at the base for loading the antenna to secure a desired electrical length.

base magnification [OPTICS] The ratio of the distance between the centers of the objectives of a pair of binoculars to the distance between the centers of the eyepieces.

base map [MAP] A map having essential outlines and onto which additional geographical or topographical data may be placed for comparison or correlation. Also known as mother map.

basement [BUILD] A building story which is wholly or less than half below ground; it is generally used for living space. [GEOL] **1.** A complex, usually of igneous and metamorphic rocks, that is overlain unconformably by sedimentary strata. **2.** A crustal layer beneath a sedimentary one and above the Mohorovičić discontinuity.

basement membrane [HISTOL] A delicate connective-tissue layer underlying the epithelium of many organs.

basement wall [BUILD] A foundation wall which encloses a usable area under a building.

base metal [CHEM] Any of the metals on the lower end of the electrochemical series. [MET] **1.** The metal that is to be worked. **2.** The principal metal of an alloy. **3.** Any metal that will oxidize when heated in air. **4.** The metal of parts to be welded. **5.** Metal to which cladding or plating is applied. Also known as basis metal.

base modulation [ELECTR] Amplitude modulation produced by applying the modulating voltage to the base of a transistor amplifier.

base molding [BUILD] Molding used to trim the upper edge of interior baseboard. Also known as base cap.

base mortar [ORD] Mortar in a platoon for which initial firing data are computed and with reference to which data for other mortars in the unit are computed.

basendite [INV ZOO] In crustaceans, either of a pair of lobes at the end of each specialized paired appendage.

base net [ENG] A system, in surveying, of quadrilaterals and triangles that include and are quite close to a base line in a triangulation system.

base notation *See* radix notation.

base of a logarithm [MATH] The number of which the logarithm is the exponent.

base of a number system [MATH] The number whose powers determine place value.

base of a topological space [MATH] A collection of sets, unions of which form all open sets.

base of projectile [ORD] The rearmost section of a projectile; for projectiles having a rotating band, it is the section located to the rear thereof.

base ore [MIN ENG] Ore in which the gold is associated with sulfides, as contrasted with free-milling ores in which the sulfides have been removed by leaching.

base pairing [MOL BIO] The hydrogen bonding of complementary purine and pyrimidine bases—adenine with thymine, guanine with cytosine—in double-stranded deoxyribonucleic acids (DNA) or ribonucleic acids (RNA) or in DNA/RNA hybrid molecules.

base piece [ORD] The gun first selected after calibration fire whose center of burst or impact is taken as the reference point in determining calibration corrections for the remaining guns of the battery.

base pin *See* pin.

base plate [DES ENG] The part of a theodolite which carries the lower ends of the three foot screws and attaches the theodolite to the tripod for surveying. [ENG] A metal plate that provides support or a foundation.

base point [ORD] A well-defined point in the target area used as a point of reference from which range and direction adjustments of artillery fire are made.

base pressure [FL MECH] The pressure exerted on the base or extreme aft end of a body, as of a cylindrical or boat-tailed body or of a blunt-trailing-edge wing in fluid flow. [MECH] A pressure used as a reference base, for example, atmospheric pressure.

base quantity [PHYS] One of a small number of physical quantities in a system of measurement that are defined, independent of other physical quantities, by means of a physical standard and by procedures for comparing the quantity to be measured with the standard. Also known as fundamental quantity.

base rate area [COMMUN] Area within the telephone exchange in which all types of service are given without mileage charges; the area does not necessarily follow the same lines or the same area as city limits; an extension of city limits, for example, would have no bearing on the base rate area boundary; customers located outside the area pay for the extra cost of providing service.

base register *See* index register.

base screed [ENG] A metal screed with expanded or short perforated flanges that serves as a dividing strip between plaster and cement and acts as a guide to indicate proper thickness of cement or plaster.

base sequence [GEN] The specific order of purine and pyrimidine bases in a polynucleotide.

base sheet [BUILD] Saturated or coated felt sheeting which is laid as the first ply in a built-up roofing membrane.

base shoe [BUILD] A molding at the base of a baseboard.

base shoe corner [BUILD] A molding piece or block applied in the corner of a room to eliminate the need for mitering the base shoe.

base spray [ORD] Fragments of a bursting projectile that are thrown to the rear in the line of flight, in contrast to nose spray and side spray.

base-spreading resistance [ELECTR] Resistance which is found in the base of any transistor and acts in series with it, generally a few ohms in value.

base station [COMMUN] **1.** A land station, in the land mobile service, carrying on a service with land mobile stations, (a base station may secondarily communicate with other base stations incident to communications with land mobile stations). **2.** A station in a land mobile system which remains in a fixed location and communicates with the mobile stations. [ENG] The point from which a survey begins. [GEOD] A geographic position whose absolute gravity value is known.

base tee [DES ENG] A pipe tee with a connected baseplate for supporting it.

base tile [BUILD] The lowest course of tiles in a tiled wall.

base time *See* normal elemental time; normal time.

base-timing sequencing [NAV] The control of the time sharing of a single transponder between several ground transmitters through the use of suitable coded timing signals.

base unit [PHYS] One of a small number of units in a system of measurement that are defined, independent of other units, by means of a physical standard; equivalently, a unit of a base quantity. Also known as fundamental unit.

BASF process [CHEM ENG] Production of acetylene by controlled burning of light hydrocarbons (for example, natural gas) with oxygen.

bashing [MIN ENG] **1.** The building of walls and nonporous stoppings for the complete isolation of a district of a mine in which a fire has occurred. **2.** The complete stowing of old mine workings or roadways after all equipment has been removed.

basic [CHEM] Of a chemical species that has the properties of a base. [PETR] Of igneous rocks, having low silica content (generally less than 54%) and usually rich in iron, magnesium, or calcium.

BASIC [COMPUT SCI] A procedure-level computer language well suited for conversational mode on a terminal usually connected with a remotely operated computer. Derived from Beginners All-purpose Symbolic Instruction Code.

basic batch [COMPUT SCI] The least complex level of computer processing, in which application systems are normally made up of small programs that are run through the computer one at a time and that can process transactions only from sequential files.

basic bismuth carbonate *See* bismuth subcarbonate.

basic bismuth gallate *See* bismuth subgallate.

basic bismuth nitrate *See* bismuth subnitrate.

basic bismuth pyrogallate *See* bismuth pyrogallate.

basic bismuth salicylate *See* bismuth subsalicylate.

basic converter *See* basic-lined converter.

basic copper carbonate *See* copper carbonate.

basic dye [MATER] Any of the dyes which are salts of the colored organic bases containing amino and imino groups, combined with a colorless acid, such as hydrochloric or sulfuric.

basic feasible solution [IND ENG] A basic solution to a linear program model in which all the variables are nonnegative.

basic frequency [PHYS] Frequency, in any wave, which is considered the most important; in a driven system, it would generally be the driving frequency, while in most periodic waves it would correspond to the fundamental frequency.

basic front [GEOL] An advancing zone of granitization enriched in calcium, magnesium, and iron.

basic group [CHEM] A chemical group (for example, OH^-) which, when freed by ionization in solution, produces a pH greater than 7.

basic hornfels [PETR] A type of hornfels derived from a basic igneous rock.

basichromatic [BIOL] Staining readily with basic dyes.

basic instruction [COMPUT SCI] An instruction in a computer program which is systematically changed by the program to obtain the instructions which are actually carried out. Also known as presumptive instruction; unmodified instruction.

basic-lined [MET] Pertaining to the walls and bottom of a melting furnace made of refractory materials, such as lime or dolomite, that have a basic reaction in the melting process.

basic-lined converter [MET] A converter, such as the Peirce-Smith copper converter, which has a basic refractory lining. Also known as basic converter.

basic linkage [COMPUT SCI] Computer coding that provides a standard means of connecting a given routine or program with other routines and that can be used repeatedly according to the same rules.

basic motion [IND ENG] A single, complete movement of a body member; determined by motion studies.

basic motion-time study [IND ENG] A system of predetermined motion-time standards for basic motions. Abbreviated BMT study.

basic open-hearth process [MET] An open-hearth process for steelmaking under basic slag; used for pig iron and scrap with a phosphorus content too low for the Bessemer process and too high for the acid open-hearth process.

basic oxide [INORG CHEM] A metallic oxide that is a base, or that forms a hydroxide when combined with water, such as sodium oxide to sodium hydroxide.

basic processing unit [COMMUN] Principal controller and data processor within the communications system.

basic pulse repetition rate [NAV] In the loran navigation system, the lowest pulse repetition rate used by a chain of

stations; the chain has a number of stations, all operating on the same radio frequency; one of these stations uses the basic rate while the others use rates that differ by fractional numbers of pulses per second.

basic Q *See* nonloaded Q.

basic refractory [MATER] Any heat-resistant material used for basic linings; examples are dolomite and magnesite.

basic research [SCI TECH] Fundamental theoretical or experimental investigation to advance scientific knowledge, immediate practical application not being a direct objective. Also known as pure research.

basic rock [PETR] An igneous rock with a relatively low silica content, and rich in iron, magnesium, or calcium.

basic salt [INORG CHEM] A compound that is a base and a salt because it contains elements of both, for example, $Cu_2(OH)_2CO_3$.

basic schist [PETR] A schistose rock that forms from the metamorphism of a basic igneous rock.

basic sediment and water [PETRO ENG] Oil, water, and foreign matter that collects in the bottom of petroleum storage tanks. Abbreviated BS&W. Also known as bottoms; bottom settlings; sediment and water.

basic slag [MET] A slag resulting from the steelmaking process; rich in phosphorus, it is ground and used as a nutrient in grasslands.

basic software [COMPUT SCI] Software requirements that are taken into account in the design of the data-processing hardware and usually provided by the original equipment manufacturer.

basic solution [IND ENG] A solution to a linear program model, consisting of m equations in n variables, obtained by solving for m variables in terms of the remaining $(n - m)$ variables and setting the $(n - m)$ variables equal to zero.

basic steel [MET] Steel made by the basic process, in a furnace with a basic lining.

basic titanium sulfate *See* titanium sulfate.

basic titrant [CHEM] A standard solution of a base used for titration.

basic variables [COMPUT SCI] The m variables in a basic feasible solution for a linear programming model.

basic zirconium chloride *See* zirconium oxychloride.

basic zirconium phosphate *See* zirconium phosphate.

basidiocarp [MYCOL] The fruiting body of a fungus in the class Basidiomycetes.

Basidiolichenes [BOT] A class of the Lichenes characterized by the production of basidia.

Basidiomycetes [MYCOL] A class of fungi in the subdivision Eumycetes; important as food and as causal agents of plant diseases.

basidiophore [MYCOL] A basidia-bearing sporophore.

basidiospore [MYCOL] A spore produced by a basidium.

basidium [MYCOL] A cell, usually terminal, occurring in Basidiomycetes and producing spores (basidiospores) by nuclear fusion followed by meiosis.

BASIDIUM

A drawing of the basidiospores and basidium in fungi.

basification [GEOL] Development of a more basic rock, usually with more hornblende, biotite, and oligoclase, by contamination of a granitic magma in the assimilation of country rock.

basifixed [BOT] Attached at or near the base.

basil [BOT] The common name for any of the aromatic plants in the genus *Ocimum* of the mint family; leaves of the plant are used for food flavoring. [MATER] Sheephide tanned with bark.

basilar [BIOL] Of, pertaining to, or situated at the base.

basilar groove [ANAT] The cavity which is located on the upper surface of the basilar process of the brain and upon which the medulla rests.

basilar index [ANTHRO] The ratio of the distance from the basion to the alveolar point to the total skull length × 100.

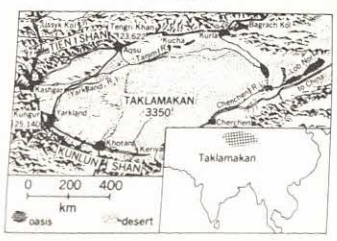
basilar membrane [ANAT] A membrane of the mammalian inner ear supporting the organ of Corti and separating two cochlear channels, the scala media and scala tympani.

basilar meningitis [MED] Inflammation of the meninges which affects chiefly the base of the brain, or in which exudate collects predominantly at the basal cisterns.

basilar papilla [ANAT] **1.** A sensory structure in the lagenar portion of an amphibian's membranous labyrinth between the oval and round windows. **2.** The organ of Corti in mammals.

basilar plate [EMBRYO] An embryonic cartilaginous plate in vertebrates that is formed from the parachordals and anterior notochord and gives rise to the ethmoid and other bones of the skull.

BASIN



Tarim Basin in central Asia, an example of a mountain-rimmed basin of interior drainage. The Taklamakan desert occupies the

basilar process [ANAT] A strong, quadrilateral plate of bone forming the anterior portion of the occipital bone, in front of the foramen magnum.

basilic vein [ANAT] The large superficial vein of the arm on the medial side of the biceps brachii muscle.

basil oil [MATER] Any of the yellow, aromatic essential oils derived from the leaves of sweet basil; used for flavors and perfumes and in medicines. Also known as sweet basil oil.

basimesostasis [GEOL] A process of the partial or entire enclosure of plagioclase crystals in a diabase by augite.

basin [CIV ENG] **1.** A dock employing floodgates to keep water level constant during tidal variations. **2.** A harbor for small craft. [DES ENG] An open-top vessel with relatively low sloping sides for holding liquids. [GEOL] **1.** A low-lying area, wholly or largely surrounded by higher land, that varies from a small, nearly enclosed valley to an extensive, mountain-rimmed depression. **2.** An entire area drained by a given stream and its tributaries. **3.** An area in which the rock strata are inclined downward from all sides toward the center. **4.** An area in which sediments accumulate. [MET] The mouth of a sprue in a gating system of castings into which the molten metal is first poured. [OCEANOGR] Deep portion of sea surrounded by shallower regions.

basin accounting *See* hydrologic accounting.

basin-and-range structure [GEOL] Regional structure dominated by fault-block mountains separated by basins filled with sediment.

basin fold [GEOL] Synclinal and anticlinal folds in structural basins.

basining [GEOL] A settlement of earth in the form of basins due to the solution and transportation of underground deposits of salt and gypsum.

basin length [GEOL] Length in a straight line from the mouth of a stream to the farthest point on the drainage divide of its basin.

basin order [GEOL] A classification of basins according to stream drainage; for example, a first-order basin contains all of the drainage area of a first-order stream.

basin peat *See* local peat.

basin perimeter [MAP] The length of a map line that encloses the catchment area of a drainage basin.

basin range [GEOL] A mountain range characteristic of the Great Basin in the western United States and formed by a faulted and tilted block of strata.

basin swamp [ECOL] A fresh-water swamp at the margin of a small calm lake, or near a large lake protected by shallow water or a barrier.

basin valley [GEOL] The filled-in depression of large intermountain areas; an example is Salt Lake Valley in Utah.

basion [ANAT] In craniometry, the point on the anterior margin of the foramen magnum where the midsagittal plane of the skull intersects the plane of the foramen magnum.

basion-bregma height [ANTHRO] Distance between basion and bregma.

basipetal [BIOL] Movement or growth from the apex toward the base.

basipodite [INV ZOO] The distal segment of the protopodite of a biramous appendage in arthropods.

basipterygium [VERT ZOO] A basal bone or cartilage supporting one of the paired fins in fishes.

basis [MATH] A set of linearly independent vectors in a vector space such that each vector in the space is a linear combination of vectors from the set.

basis metal *See* base metal.

basisternum [INV ZOO] In insects, the anterior one of the two sternal skeletal plates.

basistyle [INV ZOO] Either of a pair of flexible processes on the hypopygium of certain male Diptera.

basis weight [GRAPHICS] The weight in pounds of 500 sheets of standard-size paper; certain sizes for a given class of paper are accepted as standard.

basitarsus [INV ZOO] The basal segment of the tarsus in arthropods.

basket [DES ENG] A lightweight container with perforations. [MECH ENG] A type of single-tube core barrel made from thin-wall tubing with the lower end notched into points, which is intended to pick up a sample of granular or plastic rock material by bending in on striking the bottom of the borehole or

solid layer; may be used to recover an article dropped into a borehole. Also known as basket barrel; basket tube; sawtooth barrel.

basket barrel *See* basket.

basket cell [HISTOL] A type of cell in the cerebellum whose axis-cylinder processes terminate in a basketlike network around the cells of Purkinje.

basket coil *See* basket winding.

basket-handle arch [ARCH] An arch whose width is much greater than its height and which resembles an ellipse and is drawn from three or more centers. Also known as multicenter arch.

basket star [INV ZOO] The common name for ophiuroid echinoderms belonging to the family Gorgonocephalidae.

basket strainer [CHEM ENG] A porous-sided or screen-covered vessel used to screen solid particles out of liquid or gas streams.

basket tube *See* basket.

basket-weave [BUILD] A checkerboard pattern of bricks, flat or on edge. [TEXT] Pertaining to fabric in which two or more yarns are worked in warp and weft.

basket winding [ELECTR] A crisscross coil winding in which successive turns are far apart except at points of crossing, giving low distributed capacitance. Also known as basket coil.

Basommatophora [INV ZOO] An order of mollusks in the subclass Pulmonata containing many aquatic snails.

basonym [SYST] The original, validly published name of a taxon.

basophil [HISTOL] A white blood cell with granules that stain with basic dyes and are water-soluble.

basophilia [BIOL] An affinity for basic dyes. [MED] An increase in the number of basophils in the circulating blood. [PATH] Stippling of the red cells with basic staining granules, representing a degenerative condition as seen in severe anemia, leukemia, malaria, lead poisoning, and other toxic states.

basophilous [BIOL] Staining readily with the basic dyes. [ECOL] Of plants, growing best in alkaline soils.

basophobia [PSYCH] Abnormal fear of walking or standing erect.

bas-relief *See* low relief.

bass [ACOUS] Sounds having frequencies at the lower end of the audio range, below about 250 hertz. [VERT ZOO] The common name for a number of fishes assigned to two families, Centrarchidae and Serranidae, in the order Perciformes.

bassanite [MINERAL] A white mineral consisting of hydrated calcium sulfate; a pseudomorph of gypsum.

bass boost [ELECTR] A circuit that emphasizes the lower audio frequencies, generally by attenuating higher audio frequencies.

bass compensation [ELECTR] A circuit that emphasizes the low-frequency response of an audio amplifier at low volume levels to offset the lower sensitivity of the human ear to weak low frequencies.

bass control [ELECTR] A manual tone control that attenuates higher audio frequencies in an audio amplifier and thereby emphasizes bass frequencies.

basset [GEOL] The outcropping edge of a layer of rock exposed to the surface. [VERT ZOO] A French breed of short-legged hunting dogs with long ears and a typical hound coat.

basse-taille [GRAPHICS] Having a background carved in low relief.

bassetite [MINERAL] A transparent, yellow, monoclinic mineral presumably consisting of a hydrated uranium phosphate containing divalent iron; occurs in groups of thin tablets.

basso [GRAPHICS] A printing plate used in electrotyping of currency, made by depositing a layer of nickel, followed by a thick layer of iron.

bassora gum [MATER] A type of high-colored gum similar to tragacanth gum; includes Indian gum.

bass reflex baffle [ENG ACOUS] A loudspeaker baffle having an opening of such size that bass frequencies from the rear of the loudspeaker emerge to reinforce those radiated directly forward.

bass response [ELECTR] A measure of the output of an electronic device or system as a function of an input of low audio frequencies.

basswood [BOT] A common name for trees of the genus *Tilia* in the linden family of the order Malvales. Also known as linden.

bassy [ENG ACOUS] Pertaining to sound reproduction that overemphasizes low-frequency notes.

bast *See* phloem.

bastard-cut file [DES ENG] A file that has coarser teeth than a rough-cut file.

bastard pointing *See* bastard tuck pointing.

bastard sawing *See* backsawing.

bastard thread [DES ENG] A screw thread that does not match any standard threads.

bastard tuck pointing [BUILD] An imitation tuck pointing in which the external face is parallel to the wall, but projects slightly and casts a shadow. Also known as bastard pointing.

bast fiber [BOT] Any fiber stripped from the inner bark of plants, such as flax, hemp, jute, and ramie; used in textile and paper manufacturing.

bastion [GEOL] A prominent aggregation of bedrock extending from the mouth of a hanging glacial trough and reaching well into the main glacial valley.

bastite [MINERAL] A hydrated magnesium silicate, a variety of serpentine occurring from the alteration of orthorhombic pyroxenes such as enstatite.

bastnaesite [MINERAL] $(Ce,La)CO_3(F,OH)$ A greasy yellow to reddish-brown fluorocarbonate rare-earth metal mineral; source of rare earths, for example, cerium and lanthanum.

bat [VERT ZOO] The common name for all members of the mammalian order Chiroptera.

Batales [BOT] A small order of dicotyledonous plants in the subclass Caryophillidae of the class Magnoliopsida containing a single family with only one genus, *Batis*.

bat bolt [DES ENG] A bolt whose butt or tang is bashed or jagged.

batch [COMPUT SCI] A set of items, records, or documents to be processed as a single unit. [ENG] **1.** The quantity of material required for or produced by one operation. **2.** An amount of material subjected to some unit chemical process or physical mixing process to make the final product substantially uniform.

batch box [ENG] A container of known volume used to measure and mix the constituents of a batch of concrete, plaster, or mortar, to ensure proper proportions.

batch distillation [CHEM ENG] Distillation where the entire batch of liquid feed is placed into the still at the beginning of the operation, in contrast to continuous distillation, where liquid is fed continuously into the still.

batched water [ENG] The mixing water added to a concrete or mortar mixture before or during the initial stages of mixing.

batcher [MECH ENG] A machine in which the ingredients of concrete are measured and combined into batches before being discharged to the concrete mixer.

batching [COMPUT SCI] Grouping records for the purpose of processing them in a computer. [ENG] Weighing or measuring the volume of the ingredients of a batch of concrete or mortar, and then introducing these ingredients into a mixer.

Batchinsky relation [FL MECH] The relation stating that the fluidity of a liquid is proportional to the difference between the specific volume and a characteristic specific volume, approximately equal to the specific volume appearing in the van der Waals equation.

batch mixer [MECH ENG] A machine which mixes concrete or mortar in batches, as opposed to a continuous mixer.

batch oil [MATER] A pale, lemon-colored, low-viscosity mineral oil used particularly in the manufacture of cordage.

batch-oriented applications [COMMUN] Applications of data communications that involve the transfer of thousands or even millions of bytes of data and are usually point-to-point and computer-to-computer.

batch plant [ENG] An operating installation of equipment including batchers and mixers as required for batching or for batching and mixing concrete materials.

batch process [ENG] A process that is not in continuous or mass production; operations are carried out with discrete quantities of material or a limited number of items.

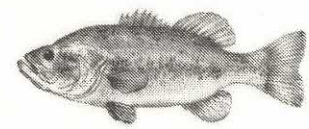
batch processing [COMPUT SCI] A technique that uses a single program loading to process many individual jobs, tasks, or requests for service.

batch production *See* series production.

batch rectification [CHEM ENG] Batch distillation in which the boiled-off vapor is re-condensed into liquid form and refluxed back into the still to make contact with the rising vapors.

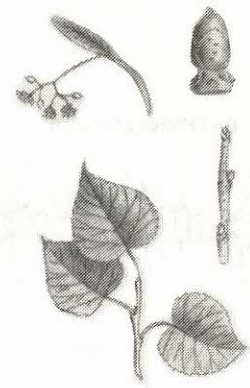
batch terminal [COMPUT SCI] A computer terminal that

BASS



The largemouth bass *(Micropterus salmoides)*, a game fish found in parts of the United States.

BASSWOOD



American basswood *(Tilia americana)*.

BAT

Epauletted fruit bat. *(Epomophorus wahlbergi)*.

provides access similar to that provided by the computer's input/output devices, but at a location convenient to the user, so that an entire task or job can be submitted at one time.

batch total [COMPUT SCI] The total for a specified constituent quantity in a batch; used to verify the accuracy of operations on the batch.

batch-type furnace [MECH ENG] A furnace used for heat treatment of materials, with or without direct firing; loading and unloading operations are carried out through a single door or slot.

batea [MIN ENG] A conical-shaped wood unit (12.3 inches or 31 centimeters in diameter with about 150° apex angle) used to recover valuable metals from river channels and bars.

Batesian mimicry [ECOL] Resemblance of an innocuous species to one that is distasteful to predators.

bat-handle switch [ELEC] A toggle switch having an actuating lever shaped like a baseball bat.

bathochromatic shift [PHYS CHEM] The shift of the fluorescence of a compound toward the red part of the spectrum due to the presence of a bathochrome radical in the molecule.

batholite [GEOL] An older massive protrusion of magma that solidifies as coarse crystalline rock in the deep horizons of the earth's crust.

batholith [GEOL] A body of igneous rock, 40 square miles (100 square kilometers) or more in area, emplaced at great or intermediate depth in the earth's crust.

bathometer [ENG] A mechanism which measures depths in water.

Bathonian [GEOL] A European stage of geologic time: Middle Jurassic, below Callovian, above Bajocian. Also known as Bathian.

bathophobia [PSYCH] Abnormal fear of depths.

Bathornithidae [PALEON] A family of Oligocene birds in the order Gruiformes.

bathtub capacitor [ELEC] A capacitor enclosed in a metal housing having broadly rounded corners like those on a bathtub.

bathtub curve [IND ENG] An equipment failure-rate curve with an initial sharply declining failure rate, followed by a prolonged constant-average failure rate, after which the failure rate again increases sharply.

bathvillite [MINERAL] An oxygenated hydrocarbon mineral, found in Tortane Hill, Scotland, that is amorphous, fawn-brown, opaque, and quite friable.

bathyal zone [OCEANOGR] The biogeographic realm of the ocean depths between 100 and 1000 fathoms (180 and 1800 meters).

bathyclinograph [ENG] A mechanism which measures vertical currents in the deep sea.

bathyconductograph [ENG] A device to measure the electrical conductivity of sea water at various depths from a moving ship.

Bathyctenidae [INV ZOO] A family of bathypelagic coelenterates in the phylum Ctenophora.

Bathyergidae [VERT ZOO] A family of mammals, including the South African mole rats, in the order Rodentia.

bathygram [ENG] A graph recording the measurements of sonic sounding instruments.

Bathylaconoidei [VERT ZOO] A suborder of deep-sea fishes in the order Salmoniformes.

bathymetric biofacies [GEOL] The lateral distribution and character of underwater sedimentary strata.

bathymetric chart [MAP] A topographic map of the floor of the ocean.

bathymetry [ENG] The science of measuring ocean depths in order to determine the sea floor topography.

Bathynellacea [INV ZOO] An order of crustaceans in the superorder Syncarida found in subterranean waters in England and central Europe.

Bathynellidae [INV ZOO] The single family of the crustacean order Bathynellacea.

bathyorographical [GEOD] Concerned with depths of oceans and heights of mountains.

bathypelagic zone [OCEANOGR] The biogeographic realm of the ocean lying between depths of 900 and 3700 meters.

Bathypteroidae [VERT ZOO] A family of benthic, deep-sea fishes in the order Salmoniformes.

bathyscaph [NAV ARCH] A free, crewed vehicle having a spherical cabin on the underside for exploring the deep ocean.

bathysphere [NAV ARCH] A spherical chamber in which persons are lowered for observation and study of ocean depths.

Bathysquillidae [INV ZOO] A family of mantis shrimps, with one genus (*Bathysquilla*) and two species, in the order Stomatopoda.

bathythermogram [ENG] The record that is made by a bathythermograph.

bathythermograph [ENG] A device for obtaining a record of temperature against depth (actually, pressure) in the ocean from a ship underway. Abbreviated BT. Also known as bathythermosphere.

bathythermosphere *See* bathythermograph.

bathyvessel [NAV ARCH] A ship, such as a bathysphere or submarine, designed to operate far below the surface of the water.

batik [TEXT] **1.** A method of dyeing fabric in which parts of the cloth not intended to be dyed are covered with removable wax. **2.** The print so produced. **3.** The dyed cloth.

bating [CHEM ENG] Cleaning of depilated leather hides by the action of tryptic enzymes.

batiste [TEXT] A plain-woven, sheer fabric made from fibers of relatively small diameter; texture is very soft.

Batoidea [VERT ZOO] The skates and rays, an order of the subclass Elasmobranchii.

batophobia [PSYCH] Abnormal fear of being near something of great height, such as a mountain or tall building.

Batrachoididae [VERT ZOO] The single family of the order Batrachoidiformes.

Batrachoidiformes [VERT ZOO] The toadfishes, an order of teleostean fishes in the subclass Actinopterygii.

batt [MATER] A blanket of insulating material usually 16 inches (41 centimeters) wide and 3 to 6 inches (8 to 15 centimeters) thick, used to insulate building walls and roofs. [MIN ENG] A thin layer of coal occurring in the lower part of shale strata that lie above and close to a coal bed.

batted work [ENG] A hand-dressed stone surface scored from top to bottom in narrow parallel strokes (usually 8–10 per inch or 20–25 per centimeter) by use of a batting tool.

batten [AERO ENG] Metal, wood, or plastic panels laced to the envelope of a blimp in the nose cone to add rigidity to the nose and provide a good point of attachment for mooring. [BUILD] **1.** A sawed timber strip of specific dimension—usually 7 inches (18 centimeters) broad, less than 4 inches (10 centimeters) thick, and more than 6 feet (1.8 meters) long—used for outside walls of houses, flooring, and such. **2.** A strip of wood nailed across a door or other structure made of parallel boards to strengthen it and prevent warping.

battenberg [TEXT] A coarse type of renaissance lace made from linen braid tape and linen thread.

batten door [BUILD] A wood door without stiles which is constructed of vertical boards held together by horizontal battens on the back side. Also known as ledged door.

battened column [CIV ENG] A column consisting of two longitudinal shafts, rigidly connected to each other by batten plates.

battened wall [BUILD] A wall to which battens have been affixed. Also known as strapped wall.

batten plate [CIV ENG] A rectangular plate used to connect two parallel structural steel members by riveting or welding.

batten roll [BUILD] In metal roofing, a roll joint formed over a triangular-shaped wood piece. Also known as conical roll.

batten seam [BUILD] A seam in metal roofing which is formed around a wood strip.

Batten system [COMPUT SCI] A system of information retrieval that uses cards in which holes have been punched. Also known as Cordonnier system; peekaboo system.

batter [CIV ENG] A uniformly steep slope in a retaining wall or pier; inclination is expressed as 1 foot horizontally per vertical unit (in feet).

batter board [CIV ENG] Horizontal boards nailed to corner posts located just outside the corners of a proposed building to assist in the accurate layout of foundation and excavation lines.

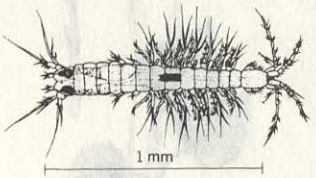
batter brace [CIV ENG] A diagonal brace which reinforces one end of a truss. Also known as batter post.

battered-child syndrome [MED] A clinical condition in young children due to serious physical abuse, generally from a parent or foster parent.

batter level [ENG] A device for measuring the inclination of a slope.

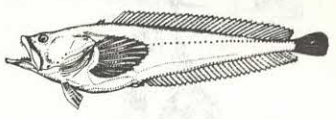
batter pile [CIV ENG] A pile driven at an inclination to the vertical to provide resistance to horizontal forces. Also known as brace pile; spur pile.

BATHYNELLACEA



Bathynella natans, female.

BATRACHOIDIFORMES



Atlantic midshipman *(Porichthys porosissimus)*, about 8 inches (20 centimeters) long. *(After D. S. Jordan)*

batter post [CIV ENG] **1.** A post at one side of a gateway or at a corner of a building for protection against vehicles. **2.** *See* batter brace.

batter stick [CIV ENG] A tapered board which is hung vertically and used to test the batter of a wall surface.

battery [CHEM ENG] A series of distillation columns or other processing equipment operated as a single unit. [ELEC] A direct-current voltage source made up of one or more units that convert chemical, thermal, nuclear, or solar energy into electrical energy. [ORD] A group of guns or other weapons, such as mortars, machine guns, artillery pieces, or of searchlights, set up under one tactical commander in a certain area.

battery amalgamation [MET] Amalgamation by means of mercury placed in the mortar box of a stamp battery.

battery assay [MIN ENG] An assay of samples taken from ore as crushed in a stamp battery.

battery charger [ELEC] A rectifier unit used to change alternating to direct power for charging a storage battery. Also known as charger.

battery clip [ELEC] A terminal of a connecting wire having spring jaws that can be quickly snapped on a terminal of a device, such as a battery, to which a temporary wire connection is desired.

battery command periscope [OPTICS] An optical instrument consisting of dual telescope tubes positioned vertically on a common mounting; it provides periscopic vision for the observer, and may be used to observe artillery fire.

battery depolarizer *See* depolarizer.

battery electrolyte [PHYS CHEM] A liquid, paste, or other conducting medium in a battery, in which the flow of electric current takes place by migration of ions.

battery eliminator [ELECTR] A device which supplies electron tubes with voltage from electric power supply mains.

battery limits [CHEM ENG] An area in a refinery or chemical plant encompassing a processing unit or battery of units along with their related utilities and services.

battery manganese *See* manganese dioxide.

battery of genes [GEN] The set of producer genes which is activated when a particular sensor gene activates its set of integrator genes.

battery reefs *See* Kimberley reefs.

battery separator [ELEC] An insulating plate inserted between the positive and negative plates of a battery to prevent them from touching.

Battey disease [MED] A tuberculosislike disease of man caused by *Mycobacterium intracellulare*.

batting tool [ENG] A mason's chisel usually 3–4½ inches (7.6–11.4 centimeters) wide, used to dress stone to a striated surface.

battlefield recovery [ORD] Removal of disabled or abandoned material, either enemy or friendly, from the battlefield and moving it to a recovery collecting point or to a maintenance or supply establishment.

battleship [NAV ARCH] One of a class of heaviest and most extensively armed and armored vessels, with at least 10-inch (25 centimeter) armor plating and guns of 12-inch (30 centimeter) or larger caliber.

battle short [ELEC] Switch for short-circuiting safety interlocks and lighting a red warning light.

battle sight [ORD] A predetermined sight setting, carried on a weapon, that enables the firer to engage targets effectively at battle ranges when conditions do not permit exact sight settings.

batture [GEOL] An elevation of the bed of a river under the surface of the water; sometimes used to signify the same elevation when it has risen above the surface.

baud [COMMUN] A unit of telegraph signaling speed equal to the number of code elements (pulses and spaces) per second or twice the number of pulses per second. Also known as unit pulse.

Baudot code [COMMUN] A teleprinter code that uses a combination of five or six marking and spacing intervals of equal duration for each character.

Baumé hydrometer scale [PHYS CHEM] A calibration scale for liquids that is reducible to specific gravity by the following formulas: for liquids heavier than water, specific gravity = 145 ÷ 145 − n (at 60°F); for liquids lighter than water, specific gravity = 140 ÷ 130 + n (at 60°F); n is the reading on the Baumé scale, in degrees Baumé. Baumé is abbreviated Bé.

baumhauerite [MINERAL] $Pb_4As_6S_{13}$ A lead to steel gray, monoclinic mineral consisting of lead arsenic sulfide.

Bauschinger effect [MET] A phenomenon by which the plastic deformation of a metal increases the tensile yield strength and decreases the compressive yield strength.

bauxite [PETR] A whitish, grayish, brown, yellow, or reddish-brown rock composed of hydrous aluminum oxides and aluminum hydroxides and containing impurities such as free silica, silt, iron hydroxides, and clay minerals; the principal commercial source of aluminum.

bauxite treating [CHEM ENG] A catalytic petroleum process in which a vaporized petroleum fraction is passed through beds of bauxite; conversion of many different sulfur compounds, particularly mercaptans into hydrogen sulfide, takes place.

bauxitization [GEOL] Bauxite development from either primary aluminum silicates or secondary clay minerals.

bavenite *See* duplexite.

Baveno twin law [CRYSTAL] An uncommon twin law applicable in feldspar, in which the twin plane and composition surface are (021); a Baveno twin usually consists of two individuals.

b axis [CRYSTAL] A crystallographic axis that is oriented horizontally, right to left. [PETR] A direction in the plane of movement that is at a right angle to the tectonic transport direction.

bay [AERO ENG] A space formed by structural partitions on an aircraft. [ARCH] Division of a building between adjacent beams or columns. [BOT] *Laurus nobilis*. An evergreen tree of the laurel family. [ELECTROMAG] One segment of an antenna array. [ENG] A housing used for equipment. [GEOGR] **1.** A body of water, smaller than a gulf and larger than a cove in a recess in the shoreline. **2.** A narrow neck of water leading from the sea between two headlands. [GEOPHYS] A simple transient magnetic disturbance, usually an hour in duration, whose appearance on a magnetic record has the shape of a V or a bay of the sea.

Bayard-Alpert ionization gage [ELECTR] A type of ionization vacuum gage using a tube with an electrode structure designed to minimize x-ray-induced electron emission from the ion collector.

bay bar *See* baymouth bar.

bay barrier [GEOL] A narrow shoal or small point of land projecting from the shore across the mouth of a bay and severing the bay's connection with the main body of water.

bayberry [BOT] **1.** *Pimenta acris*. A West Indian tree related to the allspice; a source of bay oil. Also known as bay-rum tree; Jamaica bayberry; wild cinnamon. **2.** Any tree of the genus *Myrica*.

bayberry tallow *See* bayberry wax.

bayberry wax [MATER] Green, bitter-tasting wax derived from boiling of wax myrtle (*Myrica*) berries; used for candles, soaps, medicine. Also known as bayberry tallow; laurel wax; myrtle wax.

bay delta [GEOL] A usually triangular alluvial deposit formed at the point where the mouth of a stream enters the head of a drowned valley.

Bayer letter [ASTRON] The Greek (or Roman) letter used in a Bayer name.

Bayer name [ASTRON] The Greek (or Roman) letter and the possessive form of the Latin name of a constellation, used as a star name; examples are α Cygni (Deneb), β Orionis (Rigel), and η Ursae Majoris (Alkaid).

Bayer process [MET] A method of producing alumina from bauxite by heating it in a sodium hydroxide solution.

Bayer's constellations [ASTRON] Thirteen constellations in the southern hemisphere named by J. Bayer.

Bayes decision rule [STAT] A decision rule under which the strategy chosen from among several available ones is the one for which the expected value of payoff is the greatest.

bay head [GEOL] A swampy region at the head of a bay.

bay head bar [GEOL] A bar formed a short distance from the shore at the head of a bay.

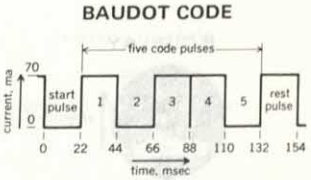
bay head beach [GEOL] A beach formed around a bay head by storm waves; layers of sediment cover the bay floor and bare rock benches front the headland cliffs.

bay head delta [GEOL] A delta at the head of an estuary or a bay into which a river discharges because of the margin of the land's late partial submergence.

bay ice [OCEANOGR] Sea ice that is young and flat but sufficiently thick to impede navigation.

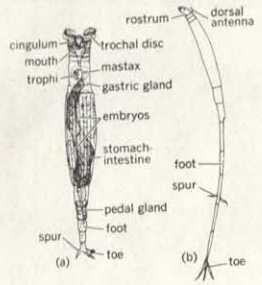
bayldonite [MINERAL] $Cu_3(AsO_4)_2(OH)_2$ An apple green to yellowish-green monoclinic mineral consisting of a basic

BAUDOT CODE



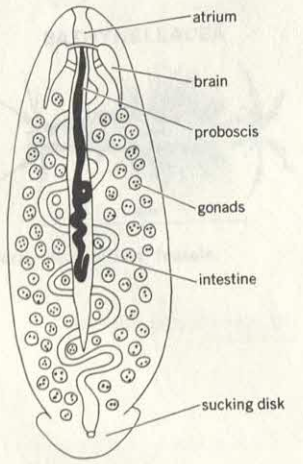
The five-unit stop-start telegraph code, seven-unit code pattern. This combination represents letter F.

BDELLOIDEA



Bdelloid rotifers, with elongated, segmented bodies. *(a) Rotaria. (b) R. neptunia. (After Weber, 1898; from L. Hyman, The Invertebrates, vol. 3, McGraw-Hill, 1951)*

BDELLOMORPHA



Malacobdella grossa. (From W. R. Coe, Biology of the nemerteans of the Atlantic coast of North America, Trans. Conn. Acad. Arts Sci., 35:308, 1943)

B DISPLAY

Type B radar display.

arsenate of copper and lead; occurs in minute mammillary concretions, in massive form, and as crusts.

bay leaf [FOOD ENG] An herb; the dried leaf of the bay tree (*Laurus nobilis*).

bayleyite [MINERAL] $Mg_2(UO_2)(CO_3)_3 \cdot 18H_2O$ A sulfur yellow monoclinic mineral consisting of a hydrated carbonate of magnesium and uranium; occurs as minute, short-prismatic crystals.

baymouth bar [GEOL] A bar extending entirely or partially across the mouth of a bay. Also known as bay bar.

bay oil [MATER] Yellow essential oil with clovelike odor and pungent taste; derived from distillation of West Indian bayberry (*Pimenta acris*) leaves and used in flavors and perfumes. Also known as myrica oil.

bayonet [ORD] An edged steel blade with a tapered point and a formed handle with an underhand grip, designed to be attached to the muzzle end of a rifle, shotgun, or the like for use in hand-to-hand combat.

bayonet base [ELEC] A tube base or lamp base having two projecting pins on opposite sides of a smooth cylindrical surface to engage in corresponding slots in a bayonet socket and hold the base firmly in the socket.

bayonet coupling [DES ENG] A coupling in which two or more pins extend out from a plug and engage in grooves in the side of a socket.

bayonet socket [DES ENG] A socket, having J-shaped slots on opposite sides, into which a bayonet base or coupling is inserted against a spring and rotated until its pins are seated firmly in the slots.

bayonet-tube exchanger [MECH ENG] A dual-tube apparatus with heating (or cooling) fluid flowing into the inner tube and out of the annular space between the inner and outer tubes; can be inserted into tanks or other process vessels to heat or cool the liquid contents.

bayou [HYD] A small, sluggish secondary stream or lake that exists often in an abandoned channel or a river delta.

bay rum [MATER] A product originally prepared from the distillation of rum and water mixed with bayberry (*Pimenta acris*) leaves but now made from a mixture of bay oil, orange oil, pimenta oil, alcohol, and water; used in shaving lotions and alcohol rubs.

bay-rum tree *See* bayberry.

bayside beach [GEOL] A beach formed at the side of a bay by materials eroded from nearby headlands and deposited by longshore currents.

bay window [ARCH] A window that projects outward from the wall of a building and forms a small indoor alcove.

bazooka [ELECTR] *See* balun. [ORD] Popular name applied to the 2.36-inch (60-millimeter) rocket launcher.

bazzite [MINERAL] $Sc_2Be_3Si_6O_{18}$ An azure-blue mineral that crystallizes in the hexagonal system; the rare scandium analog of beryl.

B battery [ELECTR] The battery that furnishes required direct-current voltages to the plate and screen-grid electrodes of the electron tubes in a battery-operated circuit.

BBC *See* bromobenzylcyanide.

BBD *See* bucket brigade device.

B-B fraction [CHEM ENG] A mixture of butanes and butenes distilled from a solution of light liquid hydrocarbons.

BB gun *See* air rifle.

B bit [MIN ENG] A nonstandard core bit no longer in common use except in drilling deep boreholes to sample gold-bearing deposits in South Africa; the set outside and inside diameters are about 2 1/16 and 1 3/8 inches (52 and 35 millimeters), respectively.

bbl *See* barrel.

B blasting powder [MATER] A mixture of nitrate of soda, charcoal, and sulfur; used in coal mines. Also known as soda blasting powder.

B box *See* index register.

BCAS *See* beacon collision avoidance system.

BCD *See* barrels per calendar day.

BCD system *See* binary coded decimal system.

B cell [IMMUNOL] One of a heterogeneous population of bone-marrow-derived lymphocytes which participates in the immune responses.

b-c fracture [GEOL] A tension fracture parallel with the fabric plane and normal to the *a* axis.

BCG vaccine *See* Bacillus Calmette-Guerin vaccine.

B chain *See* light chain.

b-c plane [GEOL] A plane that is perpendicular to the plane of movement and parallel to the *b* direction in that plane.

BCS theory *See* Bardeen-Cooper-Schrieffer theory.

BD *See* barrels per day.

B damage [ORD] Combat damage such that the aircraft is unable to return to its base.

BDC *See* bottom dead center.

Bdelloidea [INV ZOO] An order of the class Rotifera comprising animals which resemble leeches in body shape and manner of locomotion.

Bdellomorpha [INV ZOO] An order of ribbonlike worms in the class Enopla containing the single genus *Malacobdella*.

Bdellonemertini [INV ZOO] An equivalent name for the Bdellomorpha.

Bdellovibrio [MICROBIO] A genus of bacteria of uncertain affiliation; parasites of other bacteria; curved, motile rods with a polar flagellum in parasitic state; in nonparasitic state, cells are helical.

bdft *See* board-foot.

B display [ELECTR] The presentation of radar output data in rectangular coordinates in which range and azimuth are plotted on the coordinate axes. Also known as range-bearing display.

Be *See* beryllium.

Bé *See* Baumé hydrometer scale.

BE *See* binding energy.

beach [GEOL] The zone of unconsolidated material that extends landward from the low-water line to where there is marked change in material or physiographic form or to the line of permanent vegetation. [NAV] To intentionally run a craft ashore, as a landing ship.

beach cusp *See* cusp.

beach cycle [GEOL] Periodic retreat and outbuilding of beaches resulting from waves and tides.

beach drift [GEOL] The material transported by drifting of beach.

beach face *See* foreshore.

beach gravel [GEOL] Gravels in which most of the particles cluster about one size.

beachhead [ORD] An area on an enemy shoreline which opposing troops have landed upon and occupied.

beach marker [NAV] Usually a light, buoy, panel, or electronic device, used to identify a beach, for incoming water traffic.

beach mining [MIN ENG] The mining of the heavy minerals, such as rutile, zircon, monazite, ilmenite, and sometimes gold, which occur in sand dunes, beaches, coastal plains, and deposits located inland from the shoreline.

beach plain [GEOL] Embankments of wave-deposited material added to a prograding shoreline.

beach platform *See* wave-cut bench.

beach profile [GEOL] Intersection of a beach's ground surface with a vertical plane perpendicular to the shoreline.

beach ridge [GEOL] A continuous mound of beach material behind the beach that was heaped up by waves or other action.

beachrock [PETR] A friable to well-cemented rock made of calcareous skeletal debris that is cemented together by calcium carbonate.

beach scarp [GEOL] A nearly vertical slope along the beach caused by wave erosion.

beacon [NAV] **1.** A light, group of lights, electronic apparatus, or other device which emits identifying signals related to their positions so that the information so produced can be used by the navigator or pilots of aircraft and ships for guidance orientation or warning. **2.** A structure where such a device is mounted or located.

beaconage [NAV] A system of beacons.

beacon collision avoidance system [NAV] An airborne collision avoidance system that makes use of the air-traffic control radio beacon system (ATCRBS) transponders. Abbreviated BCAS.

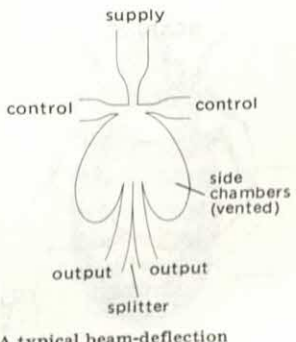
beacon delay [ELECTR] The amount of transponding delay within a beacon, that is, the time between the arrival of a signal and the response of the beacon.

beacon presentation [ELECTR] The radarscope presentation resulting from radio-frequency waves sent out by a radar beacon.

beacon skipping [ELECTR] A condition where transponder return pulses from a beacon are missing at the interrogating radar.

beacon stealing [ELECTR] Loss of beacon tracking by one radar due to stronger signals from an interfering radar.
beacon tracking [ENG] The tracking of a moving object by means of signals emitted from a transmitter or transponder within or attached to the object.
beacon-tracking radar [NAV] Radar equipment used in air-traffic control facilities for beacon tracking.
bead [DES ENG] A projecting rim or band. [ELECTROMAG] A glass, ceramic, or plastic insulator through which passes the inner conductor of a coaxial transmission line and by means of which the inner conductor is supported in a position coaxial with the outer conductor. [MET] **1.** The drop of precious metal obtained by cupellation in fire assaying. **2.** *See* weld bead.
bead and butt [BUILD] Framed work in which the panel is flush with the framing and has a bead run on two edges in the direction of the grain; the ends are left plain. Also known as bead butt; bead butt work.
bead-and-flush panel *See* beadflush panel.
bead and quirk *See* quirk bead.
bead and reel [BUILD] A semiround convex molding decorated with a pattern of disks alternating with round or elongated beads. Also known as reel and bead.
bead butt *See* bead and butt.
bead, butt, and square [BUILD] Framed work similar to bead and butt but having the panels flush on the beaded face only, and showing square reveals on the other.
bead butt work *See* bead and butt.
beaded lake *See* paternoster lake.
beaded molding [BUILD] A molding or cornice bearing a cast plaster string of beads.
beaded transmission line [ELECTROMAG] Line using beads to support the inner conductor in coaxial transmission lines.
beaded tube end [MECH ENG] The exposed portion of a rolled tube which is rounded back against the sheet in which the tube is rolled.
beadflush panel [BUILD] A panel which is flush with the surrounding framing and finished with a flush bead on all edges of the panel. Also known as bead-and-flush panel.
beading [BUILD] Collectively, the bead moldings used in ornamenting a given surface. [MET] The placing of a bead on a piece of sheet metal for either decorative or strengthening purposes.
beading plane [DES ENG] A plane having a curved cutting edge for shaping beads in wood. Also known as bead plane.
bead-jointed [ENG] Of a carpentry joint, having a bead along the edge of one piece to make the joint less conspicuous.
bead molding [BUILD] A small, convex molding of semicircular or greater profile. Also known as baguette.
bead plane *See* beading plane.
bead test [ANALY CHEM] In mineral identification, a test in which borax is fused to a transparent bead, by heating in a blowpipe flame, in a small loop formed by platinum wire; when suitable minerals are melted in this bead, characteristic glassy colors are produced in an oxidizing or reducing flame and serve to identify elements.
bead thermistor [ELEC] A thermistor made by applying the semiconducting material to two wire leads as a viscous droplet, which cements the leads upon firing.
beak [BOT] Any pointed projection, as on some fruits, that resembles a bird bill. [INV ZOO] The tip of the umbo in bivalves. [VERT ZOO] **1.** The bill of a bird or some other animal, such as the turtle. **2.** A projecting jawbone element of certain fishes, such as the sawfish and pike.
beaker [NAV ARCH] A shipboard vessel, usually used for storing water. [SCI TECH] A deep, open-mouthed, cylindrical vessel with thin walls, which usually has a projecting lip for pouring.
beaker sampler [PETRO ENG] A small, cylindrical vessel with a tapered top used to collect crude oil samples; it is made of low-sparking metal or glass, the bottom is weighted, and there is a small stoppered opening at the top.
beakhead [NAV ARCH] A space forward of the forecastle of a ship where latrines for crewmen are located.
beaking joint [BUILD] A joint formed by several heading joints occurring in one continuous line; especially used in connection with the laying of floor planks.
beam [CIV ENG] A body, with one dimension large compared with the other dimensions, whose function is to carry lateral loads (perpendicular to the large dimension) and bending movements. [NAV ARCH] The width of a ship at its widest point. [PHYS] A concentrated, nearly unidirectional flow of particles, or a like propagation of electromagnetic or acoustic waves. [TEXT] Spool-shaped holder, 8 to 12 feet (2.4 to 3.7 meters) in length, on which is wrapped yarn that is to be transferred to the warp holder of a loom.
beam-and-girder construction [BUILD] A system of floor construction in which the load is distributed by slabs to spaced beams and girders.
beam-and-slab floor [BUILD] A floor system in which a concrete floor slab is supported by reinforced concrete beams.
beam angle *See* beam width.
Beaman stadia arc [ENG] An attachment to an alidade consisting of a stadia arc on the outer edge of the visual vertical arc; enables the observer to determine the difference in elevation of the instrument and stadia rod without employing vertical angles.
beam antenna [ELECTROMAG] An antenna that concentrates its radiation into a narrow beam in a definite direction.
beam approach beacon system *See* blind approach beacon system.
beam attack [ORD] An attack directed against the side of an aircraft, a tank, or a ship.
beam attenuator [SPECT] An attachment to the spectrophotometer that reduces reference to beam energy to accommodate undersized chemical samples.
beam-balanced pump [PETRO ENG] An oil well pumping unit having a center-pivoted beam with the sucker rod plunger (pump) at the front end and a counterweight on the rearward extension.
beam bearing plate [CIV ENG] A foundation plate (usually of metal) placed beneath the end of a beam, at its point of support, to distribute the end load at the point.
beam blocking [BUILD] **1.** Boxing-in or covering a joist, beam, or girder to give the appearance of a larger beam. **2.** Strips of wood used to create a false beam.
beam bolster [CIV ENG] A rod which provides support for steel reinforcement in formwork for a reinforced concrete beam.
beam bracketing *See* beam-rider guidance.
beam brick [BUILD] A face brick which is used to bond to a poured-in-place concrete lintel.
beam bridge [CIV ENG] A fixed structure consisting of a series of steel or concrete beams placed parallel to traffic and supporting the roadway directly on their top flanges.
beam building [MIN ENG] A process of rock bolting in flat-lying deposits where the bolts are installed in bedded rock to bind the strata together to act as a single beam capable of supporting itself, thus stabilizing the overlying rock.
beam ceiling [ARCH] A ceiling having the beams exposed to view.
beam-climber guidance *See* beam-rider guidance.
beam column [CIV ENG] A structural member subjected simultaneously to axial load and bending moments produced by lateral forces or eccentricity of the longitudinal load.
beam compass [GRAPHICS] A compass for drawing large circles, consisting of a beam with sliding sockets carrying steel or pencil points.
beam-condensing unit [SPECT] An attachment to the spectrophotometer that condenses and remagnifies the beam to provide reduced radiation at the sample.
beam coupling [ELECTR] The production of an alternating current in a circuit connected between two electrodes that are close to, or in the path of, a density-modulated electron beam.
beam current [ELECTR] The electric current determined by the number and velocity of electrons in an electron beam.
beam-deflection amplifier [MECH ENG] A jet-interaction fluidic device in which the direction of a supply jet is varied by flow from one or more control jets which are oriented at approximately 90° to the supply jet.
beam-deflection tube [ELECTR] An electron-beam tube in which the current to an output electrode is controlled by transversely moving the electron beam.
beam drop [ELECTROMAG] Distortion of the normal rectilinear fan pattern of a detection radar in which a portion of the fan is at a lower elevation than the rest of the fan.
beam fill [BUILD] Masonry, brickwork, or cement fill, usually between joists or horizontal beams at their supports; provides increased fire resistance.

BEAM-DEFLECTION AMPLIFIER



A typical beam-deflection amplifier.

beam-foil spectroscopy [ATOM PHYS] A method of studying the structure of atoms and ions in which a beam of ions energized in a particle accelerator passes through a thin carbon foil from which the ions emerge with various numbers of electrons removed and in various excited energy levels; the light or Auger electrons emitted in the deexcitation of these levels are then observed by various spectroscopic techniques. Abbreviated BFS.

beam form [CIV ENG] A form which gives the necessary shape, suppport, and finish to a concrete beam.

beam-forming electrode [ELECTR] Electron-beam focusing elements in power tetrodes and cathode-ray tubes.

beam hanger [PETRO ENG] An attachment at the end of a walking beam above a well casing to lift the pump rods or sacked rods.

beam holding [ELECTR] Use of a diffused beam of electrons to regenerate the charges stored on the screen of a cathode-ray storage tube.

beam hole [NUCLEO] A hole through the shield, and usually the reflector, of a nuclear reactor which allows a beam of radiation, especially fast neutrons, to escape for experimental purposes. Also known as glory hole.

beamhouse [CHEM ENG] A place where the initial wet operations of tanning, involving soaking in water and solutions of alkali, are carried out.

beam-indexing tube [ELECTR] A single-beam color television picture tube in which the color phosphor strips are arranged in groups of red, green, and blue.

beam lead [ELECTR] A flat thick-film lead, sometimes of gold, deposited on a semiconductor chip chemically or by evaporation, as a connecting lead for a semiconductor device or integrated circuit.

beam lobe switching [ELECTR] Method of determining the direction of a remote object by comparison of the signals corresponding to two or more successive beam angles, differing slightly from the direction of the object.

beam magnet *See* convergence magnet.

beam parametric amplifier [ELECTR] Parametric amplifier that uses a modulated electron beam to provide a variable reactance.

beam pattern *See* directivity pattern.

beam pocket [CIV ENG] **1.** In a vertical structural member, an opening to receive a beam. **2.** An opening in the form for a column or girder where the form for an intersecting beam is framed.

beam power tube [ELECTR] An electron-beam tube which uses directed electron beams to provide most of its power-handling capability and in which the control grid and screen grid are essentially aligned. Also known as beam tetrode.

beam recording [ELECTR] A method of using an electron beam to write data generated by a computer directly on microfilm.

beam rider [AERO ENG] A missile for which the guidance system consists of standard reference signals transmitted in a radar beam which enable the missile to sense its location relative to the beam, correct its course, and thereby stay on the beam.

beam-rider guidance [NAV] A system for guiding aircraft or spacecraft in which a craft follows a radar beam, light beam, or other kind of beam along the desired path. Also known as beam bracketing; beam-climber guidance.

beam riding [AERO ENG] The maneuver of a spacecraft or other vehicle as it follows a beam.

beam sea [NAV] Waves moving in a direction approximately 90° from the heading.

beam splice [CIV ENG] A connection between two lengths of a beam or girder; may be shear or moment connections.

beam splitter [OPTICS] A mirror that reflects part of a beam of light falling on it and transmits part.

beam splitting [ELECTR] Process for increasing accuracy in locating targets by radar; by noting the azimuths at which one radar scan first discloses a target and at which radar data from it ceases, beam splitting calculates the mean azimuth for the target. [OPTICS] The division of a beam of light into two beams by placing a special type of mirror in the path of the beam that reflects part of the light falling on it and transmits part.

beam spread [ENG] The angle of divergence from the central axis of an electromagnetic or acoustic beam as it travels through a material.

beam steering [ELECTR] Changing the direction of the major lobe of a radiation pattern, usually by switching antenna elements.

beam storage [COMPUT SCI] A magnetic storage device that employs electron beams to enter information into, or retrieve information from, storage cells; for example, a cathode-ray-tube storage.

beam switching [ELECTR] Method of obtaining more accurately the bearing or elevation of an object by comparing the signals received when the beam is in directions differing slightly in bearing or elevation; when these signals are equal, the object lies midway between the beam axes. Also known as lobe switching.

beam-switching tube [ELECTR] An electron tube which has a series of electrodes arranged around a central cathode and in which an electron beam is switched from one electrode to another. Also known as cyclophon.

beam test [CIV ENG] A test of the flexural strength (modulus of rupture) of concrete from measurements on a standard reinforced concrete beam.

beam tetrode *See* beam-power tube.

beam well [PETRO ENG] A well pumped by a walking beam.

beam width [ELECTROMAG] The angle, measured in a horizontal plane, between the directions at which the intensity of an electromagnetic beam, such as a radar or radio beam, is one-half its maximum value. Also known as beam angle.

beam wind [NAV] Nautical term for a crosswind, especially a wind blowing 90° from a ship's heading.

bean [BOT] The common name for various leguminous plants used as food for man and livestock; important commercial beans are true beans (*Phaseolus*) and California blackeye (*Vigna sinensis*).

bean anthracnose [PL PATH] A fungus disease of the bean caused by *Colletotrichum lindemuthianum*, producing pink to brown lesions on the pod and seed and dark discolorations on the veins on the lower surface of the leaf.

bean blight [PL PATH] A bacterial disease of the bean caused by *Xanthomonas phaseoli*, producing water-soaked lesions that become yellowish-brown spots on all plant parts.

bean ore [GEOL] A lenticular, pisolitic aggregate of limonite.

bear [MIN ENG] To underhole or undermine; to drive in at the top or side of a working. [VERT ZOO] The common name for a few species of mammals in the family Ursidae.

beard *See* awn.

bearded needle [TEXT] A fine steel needle for machine knitting that has a butt at one end and a long, flexible hook at the other that curves back to the shank of the needle. Also known as spring needle.

bearding [NAV ARCH] **1.** Cutting a timber so as to form an inclined surface that fits the angle of a ship's side. **2.** The forward edge of a rudder or sternpost.

bearding line [NAV ARCH] A line on the side of the sternpost, keel, deadwoods, and stem of a ship that indicates the intersection of these members with the outer face of the frames.

Bear Driver *See* Boötes.

bearer [CIV ENG] Any horizontal beam, joist, or member which supports a load. [GRAPHICS] **1.** In photoengraving, the metal left on a plate to protect the printing surface while molding. **2.** In composition, one of the type-high slugs locked inside a chase to protect the printing surface. **3.** In printing presses, one of the surface-to-surface ends of cylinders that come in contact.

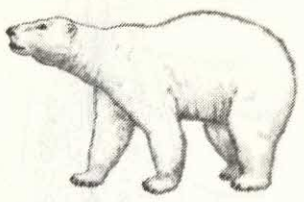
bearing [CIV ENG] That portion of a beam, truss, or other structural member which rests on the supports. [MECH ENG] A machine part that supports another part which rotates, slides, or oscillates in or on it. [MIN ENG] The direction of a mine drivage, usually given in terms of the horizontal angle turned off a datum direction, such as the true north and south line. [NAV] The horizontal direction from one terrestrial point to another; basically synonymous with azimuth.

bearing angle [NAV] Horizontal direction measured from 0° at the reference direction clockwise or counterclockwise through 90° or 180°.

bearing bar [BUILD] A wrought-iron bar placed on masonry to provide a level support for floor joists. [CIV ENG] A load-carrying bar which supports a grating and which extends in the direction of the grating span. [ENG] *See* azimuth instrument.

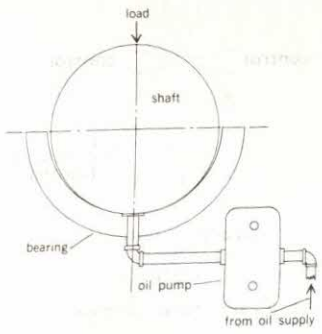
bearing capacity [MECH] Load per unit area which can be safely supported by the ground.

BEAR



The polar bear (*Thalarctos maritimus*); unlike most bears, it is somewhat slender and has good vision.

BEARING



Fluid-film hydrostatic bearing. Hydrostatic oil lift can reduce starting friction drag to less than one-tenth of usual starting drag. (*From W. Staniar, ed., Plant Engineering Handbook, 2d ed., McGraw-Hill, 1959*)

bearing circle [ENG] A ring designed to fit snugly over a compass or compass repeater, and provided with vanes for observing compass bearings.

bearing cursor [ENG] Of a radar set, the radial line inscribed on a transparent disk which can be rotated manually about an axis coincident with the center of the plan position indicator; used for bearing determination. Also known as mechanical bearing cursor.

bearing distance [CIV ENG] The length of a beam between its bearing supports.

bearing partition [BUILD] A partition which supports a vertical load.

bearing pile [ENG] A vertical post or pile which carries the weight of a foundation, transmitting the load of a structure to the bedrock or subsoil without detrimental settlement.

bearing plate [CIV ENG] A flat steel plate used under the end of a wall-bearing beam to distribute the load over a broader area.

bearing pressure [MECH] Load on a bearing surface divided by its area. Also known as bearing stress.

bearing resolution [ELECTR] Minimum angular separation in a horizontal plane between two targets at the same range that will allow an operator to obtain data on either target.

bearing strain [MECH] The deformation of bearing parts subjected to a load.

bearing strength [MECH] The maximum load that a column, wall, footing, or joint will sustain at failure, divided by the effective bearing area.

bearing stress *See* bearing pressure.

bearing test [ENG] A test of the bearing capacities of pile foundations, such as a field loading test of an individual pile; a laboratory test of soil samples for bearing capacities.

bearing wall [CIV ENG] A wall capable of supporting an imposed load. Also known as structural wall.

bear trap gate [CIV ENG] A type of crest gate with an upstream leaf and a downstream leaf which rest in a horizontal position, one leaf overlapping the other, when the gate is lowered.

beat [PHYS] The periodic variation in amplitude of a wave that is the superposition of two simple harmonic waves of different frequencies.

beater [AGR] **1.** A device for chopping or pulverizing unwanted parts of crops such as cornstalks or potato vines. **2.** The part of a thresher that strikes the grains. [ENG] **1.** A tool for packing in material to fill a blasthole containing a charge of powder. **2.** A laborer who shovels or dumps asbestos fibers and sprays them with water in order to prepare them for the beating. [MECH ENG] A machine that cuts or beats paper stock. [TEXT] The section of a loom that drives the weft from the shed into the cloth.

beater mill *See* hammer mill.

beat frequency [ELECTR] The frequency of a signal equal to the difference in frequencies of two signals which produce the signal when they are combined in a nonlinear circuit.

beat-frequency oscillator [ELECTR] An oscillator in which a desired signal frequency, such as an audio frequency, is obtained as the beat frequency produced by combining two different signal frequencies, such as two different radio frequencies. Abbreviated BFO. Also known as heterodyne oscillator.

beating [ENG] A process that reduces asbestos fibers to pulp for making asbestos paper.

beating-in [ELECTR] Interconnecting two transmitter oscillators and adjusting one until no beat frequency is heard in a connected receiver; the oscillators are then at the same frequency.

beat note [ELECTR] The beat frequency whose signal is produced by two signals having waves that are sinusoidal.

beat reception *See* heterodyne reception.

Beattie and Bridgman equation [THERMO] An equation that relates the pressure, volume, and temperature of a real gas to the gas constant.

beat-time programming [COMPUT SCI] A type of programming which requires that data be made available to the computer during some ongoing process prior to a particular point in time.

beat tone [ENG ACOUS] Musical tone due to beats, produced by the heterodyning of two high-frequency wave trains.

Beaufort force [METEOROL] A number denoting the speed (or so-called strength) of the wind according to the Beaufort wind scale. Also known as Beaufort number.

Beaufort number *See* Beaufort force.

Beaufort wind scale [METEOROL] A system of code numbers from 0 to 12 classifying wind speeds into groups from 0–1 mile per hour or 0–1.6 kilometers per hour (Beaufort 0) to those over 75 miles per hour or 121 kilometers per hour (Beaufort 12).

beaver [VERT ZOO] The common name for two different and unrelated species of rodents, the mountain beaver (*Aplodontia rufa*) and the true or common beaver (*Castor canadensis*).

beaver cloth *See* melton.

beaverite [MINERAL] $Pb(Cu,Fe,Al)_3(SO_4)_2(OH)_6$ A canary yellow, hexagonal mineral consisting of a basic sulfate of lead, copper, iron, and aluminum.

beavertail [ELECTROMAG] Fan-shaped radar beam, wide in the horizontal plane and narrow in the vertical plane, which is swept up and down for height finding.

bebeerine [ORG CHEM] $C_{36}H_{38}N_2O_6$ An alkaloid derived from the bark of the tropical tree *Nectandra rodiaei*; the dextro form is soluble in acetone, the levo form is soluble in benzene and is an antipyretic; the dextro form is also known as chondrodendrin; the levo, as curine.

Béchamp reduction [ORG CHEM] Reduction of nitro groups to amino groups by the use of ferrous salts or iron and dilute acid.

bêche [MECH ENG] A pneumatic forge hammer having an air-operated ram and an air-compressing cylinder integral with the frame.

Becker and Kornetzki effect [PHYS] A reduction in the internal friction of a ferromagnetic substance when it is subjected to a magnetic field that is large enough to produce magnetic saturation.

Becke test [MINERAL] A microscope test in which indices of refraction are compared for minerals; the Becke line appears to move toward the material of higher refractivity as the tube of the microscope is raised.

beckerite [MINERAL] A brown variety of the fossil resin retinite with a very high oxygen content.

Beckmann rearrangement [ORG CHEM] An intramolecular change of a ketoxime into its isomeric amide when treated with phosphorus pentachloride.

Beckmann thermometer [ENG] A sensitive thermometer with an adjustable range so that small differences in temperature can be measured.

becquerel [NUCLEO] The International System unit of activity of a radionuclide, equal to the activity of a quantity of a radionuclide having one spontaneous nuclear transition per second. Symbolized Bq.

Becquerel effect [ELEC] The phenomenon of a current flowing between two unequally illuminated electrodes of a certain type when they are immersed in an electrolyte.

becquerelite [MINERAL] $CaU_6O_{19}\cdot 11H_2O$ An orthorhombic mineral consisting of a hydrated oxide of uranium; occurs in tabular, elongated, striated, and massive form.

Becquerel rays [NUC PHYS] Formerly, radiation emitted by radioactive substances; later renamed alpha, beta, and gamma rays.

bed [CHEM] The ion-exchange resin contained in the column in an ion-exchange system. [CIV ENG] **1.** In masonry and bricklaying, the side of a masonry unit on which the unit lies in the course of the wall; the underside when the unit is placed horizontally. **2.** The layer of mortar on which a masonry unit is set. [GEOL] **1.** The smallest division of a stratified rock series, marked by a well-defined divisional plane from its neighbors above and below. **2.** An ore deposit, parallel to the stratification, constituting a regular member of the series of formations; not an intrusion. [GRAPHICS] The surface of a flatbed printing press on which the chase of composed type is secured for printing. [HYD] The bottom of a channel for the passage of water. [MECH ENG] The part of a machine having precisely machined ways or bearing surfaces which support or align other machine parts.

Bedaux plan [IND ENG] A wage incentive plan in which work is standardized into man-minute units called bedaux (B); 60 B per hour is 100% productivity, and earnings are based on work units per length of time.

bedbug [INV ZOO] The common name for a number of species of household pests in the insect family Cimicidae that infest bedding, and by biting humans obtain blood for nutrition.

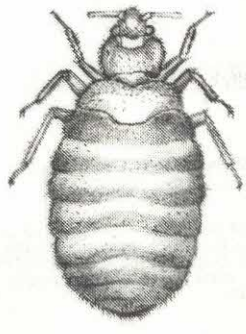
bed charge [MET] The primary charge of fuel in a cupola to initiate the melting process.

bed coke [MET] The primary layer of coke placed in a

BEAVER

The common beaver (*Castor canadensis*), showing characteristic webbed hindfeet and broad, flat tail.

BEDBUG

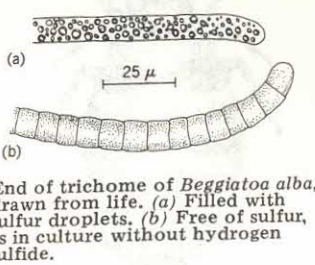


Cimex lectularius, a species of bedbug parasitic on humans in many temperate and subtropical regions.

BEECH

American beech *(Fagus grandifolia)*, showing slender scaly winter buds, a leaf, an open spiny involucre containing a pair of edible three-sided nuts, and a three-sided nut.

BEGGIATOA



End of trichome of *Beggiatoa alba*, drawn from life. *(a)* Filled with sulfur droplets. *(b)* Free of sulfur, as in culture without hydrogen sulfide.

cupola at a preselected height above the tuyeres for the initial combustion and melting operation.

bedded [GEOL] Pertaining to rocks exhibiting depositional layering or bedding formed from consolidated sediments.

bedded chert [PETR] Chert of brittle, close-jointed, rhythmically layered character found over large areas in thick deposits, the usually even-bedded layers separated by partings of dark siliceous shale or by siderite layers.

bedded vein [GEOL] A lode occupying the position of a bed that is parallel with the enclosing rock stratification.

bed detector [PETRO ENG] Apparatus to detect and measure the extent of underground formations that are potential oil and gas reservoirs; methods include induction logs, gamma-ray logs, and sonic logs.

bedding [CIV ENG] **1.** Mortar, putty, or other substance used to secure a firm and even bearing, such as putty laid in the rabbet of a window frame, or mortar used to lay bricks. **2.** A base which is prepared in soil or concrete for laying masonry or concrete. [GEOL] Condition where planes divide sedimentary rocks of the same or different lithology.

bedding cleavage [GEOL] Cleavage parallel to the rock bedding.

bedding course [CIV ENG] The first layer of mortar at the bottom of masonry.

bedding dot [BUILD] A small spot of plaster built out to the face of a finished wall or ceiling; serves as a screed for leveling and plumbing in the application of plaster.

bedding fault [GEOL] A fault whose fault surface is parallel to the bedding plane of the constituent rocks. Also known as bedding-plane fault.

bedding fissility [GEOL] Primary foliation parallel to the bedding of sedimentary rocks.

bedding joint [GEOL] A joint parallel to the rock bedding.

bedding plane [GEOL] Any of the division planes which separate the individual strata or beds in sedimentary or stratified rock.

bedding-plane fault *See* bedding fault.

bedding-plane slip *See* flexural slip.

bedding schistosity [GEOL] Schistosity that is parallel to the rock bedding.

bedding thrust [GEOL] A thrust fault parallel to bedding.

bedding void [GEOL] A void formed between successive batches of lava that are discharged in a single short activity of a volcano, as well as between flows made a long time apart.

bede [MIN ENG] A miner's pick.

bedford cord [TEXT] A closely woven, sturdy ribbed fabric with a raised effect; may be made of wool, cotton, silk, acrylic, or polyesters.

Bedford limestone *See* spergenite.

bed glazing *See* back putty.

bediasite [GEOL] A black to brown tektite found in Texas.

bed joint [CIV ENG] **1.** A horizontal layer of mortar on which masonry units are laid. **2.** One of the radial joints in an arch.

bed load [GEOL] Particles of sand, gravel, or soil carried by the natural flow of a stream on or immediately above its bed.

bed molding [ARCH] A molding of the cornice of an entablature situated beneath the corona and immediately above the frieze. [BUILD] **1.** The lowest member of a band of moldings. **2.** Any molding under a projection, such as between eaves and sidewalls.

Bedoulian [GEOL] Lower Cretaceous (lower Aptian) geologic time in Switzerland.

bedrock [GEOL] General term applied to the solid rock underlying soil or any other unconsolidated surficial cover.

Bedsonia [MICROBIO] The psittacosis-lymphogranuloma-trachoma (PLT) group of bacteria belonging to the Chlamydozoaceae; all are obligatory intracellular parasites.

bedsore *See* decubitus ulcer.

bedspring array *See* billboard array.

bee [INV ZOO] Any of the membranous-winged insects which compose the superfamily Apoidea in the order Hymenoptera characterized by a hairy body and by sucking and chewing mouthparts.

beech [BOT] Any of various deciduous trees of the genus *Fagus* in the beech family (Fagaceae) characterized by smooth gray bark, triangular nuts enclosed in burs, and hard wood with a fine grain.

beech bark disease [PL PATH] A disease of beech caused by the beech scale (*Cryptococcus fagi*) and a fungus (*Nectria coccinea faginata*) acting together; bark is destroyed, foliage wilts, and the tree eventually dies.

beef [AGR] The flesh of a bovine animal, used as food.

beef stearin *See* oleostearin.

beegerite [MINERAL] $Pb_6Bi_2S_9$ A light to dark gray mineral consisting of lead bismuth sulfide; usually occurs in granular to dense massive form.

beehive Also known as hive. [AGR] A container that is constructed to house a colony of honeybees. [INV ZOO] A colony of bees.

Beehive *See* Praesepe.

beehive oven [ENG] An arched oven that carbonizes coal into coke by using the heat of combustion of gases that are formed, and of a small part of the coke that is formed, with no recovery of by-products.

beekeeping [AGR] The management and maintenance of colonies of honeybees.

beekite [MINERAL] **1.** A concretionary form of calcite or silica that occurs in small rings on the surface of a fossil shell which has weathered out of its matrix. **2.** White, opaque accretions of silica found on silicified fossils or along joint surfaces as a replacement of organic matter.

beer [FOOD ENG] A lightly hopped, fermented malt beverage brewed by bottom fermentation.

beerbachite [PETR] A hornfels with large poikiloblastic crystals of olivine.

beer drinkers' cardiomyopathy [MED] Congestive heart failure and nonspecific cardiomyopathy presumed due to cobalt added to beer.

Beer-Lambert-Bouguer law *See* Bouguer-Lambert-Beer law.

Beer's law [PHYS CHEM] The law which states that the absorption of light by a solution changes exponentially with the concentration, all else remaining the same.

beer stone [FOOD ENG] A mixture of calcium oxalate and organic material that deposits on container surfaces during brewing operations. Also known as beer scale.

beeswax [MATER] Yellow to grayish-brown solid wax obtained from bee honeycombs by boiling and straining; used in floor waxes, waxed paper, and textile finishes and in pharmacy. Also known as yellow wax.

beet [BOT] *Beta vulgaris*. The red or garden beet, a cool-season biennial of the order Caryophyllales grown for its edible, enlarged fleshy root.

Beethoven exploder [ENG] A machine for the multishot firing of series-connected detonators in tunneling and quarrying.

beetle [INV ZOO] The common name given to members of the insect order Coleoptera. [MIN ENG] A powerful, cable-hauled propulsion unit, operated under remote control, for moving a train of wagons at the mine surface.

beetle stone *See* septarium.

beetling [TEXT] Beating cloth with hammers to force the fibers together and produce a lustrous, linenlike effect.

beet sugar [FOOD ENG] Sugar made from sugarbeets by crystallization of the syrup extracted from the roots.

before the wind [NAV] In a direction approximating that toward which the wind is blowing; applies particularly to the situation where the wind is aft, and the craft is being aided by it.

Beggiatoa [MICROBIO] A genus of bacteria in the family Beggiatoaceae; filaments are individual, and cells contain sulfur granules when grown on media containing hydrogen sulfide.

Beggiatoaceae [MICROBIO] A family of bacteria in the order Cytophagales; cells are in chains in colorless, flexible, motile filaments; microcysts are not known.

Beggiatoales [MICROBIO] Formerly an order of motile, filamentous bacteria in the class Schizomycetes.

BEGIN [COMPUT SCI] An enclosing statement of ALGOL used to indicate the beginning of a block; any variable in a block enclosed by BEGIN and END is normally local to this block.

beginning-of-information marker [COMPUT SCI] A section of magnetic tape covered with reflective material that indicates the beginning of the area on which information is to be recorded.

Begoniaceae [BOT] A family of dicotyledonous plants in the order Violales characterized by an inferior ovary, unisexual flowers, stipulate leaves, and two to five carpels.

behavior [PSYCH] Any overt activity of an organism.

behavioral psychophysics [PSYCH] A branch of psychology concerned primarily with the measurement of sensory capacities of normal, intact animals.

behavior disorder *See* abnormal behavior.

behaviorism [PSYCH] A school of psychology concerned with observable, tangible, and measurable data regarding behavior and human activities, but excluding ideas and emotions as purely subjective phenomena.

beheaded stream [HYD] A water course whose upper portion, through erosion, has been cut off and captured by another water course.

behenic acid *See* docosanoic acid.

behenyl alcohol [ORG CHEM] $CH_3(CH_2)_{20}CH_2OH$ A saturated fatty alcohol; colorless, waxy solid with a melting point of 71°C; soluble in ethanol and chloroform; used for synthetic fibers and lubricants. Also known as 1-docosanol.

Behrens-Fisher problem [STAT] The problem of calculating the probability of drawing two random samples whose means differ by some specified value (which may be zero) from normal populations, when one knows the difference of the means of these populations but not the ratio of their variances.

beidellite [MINERAL] A clay mineral of the montmorillonite group in which Si^{4+} has been replaced by Al^{3+} and in which there is virtual absence of Mg or Fe replacing Al.

bei function [MATH] One of the functions defined by $\mathrm{ber}_n(z) \pm i\,\mathrm{bei}_n(z) = J_n(ze^{\pm 3\pi i/4})$, where J_n is the nth Bessel function.

Beijerinckia [MICROBIO] A genus of bacteria in the family Azotobacteraceae; slightly curved or pear-shaped rods with large, refractile lipoid bodies at the ends of the cell.

Beilby layer [MET] An amorphous layer formed on a polished metal surface.

bejel [MED] An infectious nonvenereal treponemal disease occurring principally in children in the Middle East.

Békésy audiometry [ACOUS] A subject-controlled auditory threshold testing procedure.

bel [PHYS] A dimensionless unit expressing the ratio of two powers or intensities, or the ratio of a power to a reference power, such that the number of bels is the common logarithm of this ratio. Symbolized b; B.

belat [METEOROL] A strong land wind from the north or northwest which sometimes blows across the southeastern coast of Arabia and is accompanied by a hazy atmosphere due to sand blown from the interior desert.

belaying pin [NAV ARCH] A pin-shaped metal rod about which ropes are secured on shipboard.

Belemnoidea [PALEON] An order of extinct dibranchiate mollusks in the class Cephalopoda.

Belfast truss [CIV ENG] A bowstring beam for large spans, having the upper member bent and the lower member horizontal; constructed entirely of timber components.

Belgian block [MATER] **1.** A stone block used for paving, having the shape of a truncated pyramid, with a depth of 7–8 inches (18–20 centimeters), a base of 5–6 inches (13–15 centimeters) square, and a face opposite the base that is 1 inch (2.5 centimeters) or less smaller than the base. **2.** Any stone block used for paving.

Belgian retort process *See* horizontal retort process.

B eliminator [ELECTR] Power pack that changes the alternating-current powerline voltage to the direct-current source required by plant circuits of vacuum tubes or semiconductor devices.

Belinuracea [PALEON] An extinct group of horseshoe crabs; arthropods belonging to the Limulida.

belite *See* larnite.

bell [ENG] **1.** A hollow metallic cylinder closed at one end and flared at the other; it is used as a fixed-pitch musical instrument or signaling device and is set vibrating by a clapper or tongue which strikes the lip. **2.** *See* bell tap. [MET] A conical device that seals the top of a blast furnace.

belladonna [BOT] *Atropa belladonna*. A perennial poisonous herb that belongs to the family Solanaceae; atropine is produced from the roots and leaves; used as an antispasmodic, as a cardiac and respiratory stimulant, and to check secretions. Also known as deadly nightshade.

Bellamy drift [NAV] The net drift angle of an aircraft calculated between any two pressure soundings; it is that drift attributable only to the cross-wind component of the wind; the actual drift may be greater or less, but the difference is small for winds normally encountered.

bell-and-spigot joint [ENG] A pipe joint in which a pipe ending in a bell-like shape is joined to a pipe ending in a spigotlike shape.

bell arch [ARCH] A round arch supported on large corbels, giving rise to a bell-shaped appearance.

Bellatrix [ASTRON] A bluish-white star of stellar magnitude 1.7, spectral classification B2-III, in the constellation Orion; the star γ Orionis.

bell buoy [NAV] A channel buoy with a bell which rings as the buoy swings in the waves, usually marking rocks or shoals.

bell cap [CHEM ENG] A hemispherical or triangular metal casting used on distillation-column trays to force upflowing vapors to bubble through layers of downcoming liquid.

belled caisson [CIV ENG] A type of drilled caisson with a flared bottom.

Bellerophontacea [PALEON] A superfamily of extinct gastropod mollusks in the order Aspidobranchia.

bell glass *See* bell jar.

bell hole [MIN ENG] **1.** One of the holes or excavations made at the section joints of a pipeline for the purpose of repairs. **2.** A conical cavity in a coal mine roof caused by the falling of a large concretion.

bellingerite [MINERAL] $3Cu(IO_3)_2 \cdot 2H_2O$ A light green triclinic mineral consisting of hydrated copper iodate.

bellite [MATER] An explosive consisting of five parts of ammonium nitrate to one part of metadinitrobenzene with some potassium nitrate.

bell jar [ENG] A bell-shaped vessel, usually made of glass, which is used for enclosing a vacuum, holding gases, or covering objects. Also known as bell glass.

bell jar testing [ENG] A leak testing method in which a vessel is filled with tracer gas and placed in a vacuum chamber; leaks are evidenced by gas drawn into the vacuum chamber.

bell joint clamp [ENG] A clamp applied to a bell-and-spigot joint to prevent leakage.

Bellman's principle of optimality [IND ENG] The principle that an optimal sequence of decisions in a multistage decision process problem has the property that whatever the initial state and decisions are, the remaining decisions must constitute an optimal policy with regard to the state resulting from the first decisions.

bell metal [MET] An alloy of copper and tin, containing 15–25% tin but 20–24% for best tonal quality.

bell-metal ore *See* stannite.

bell mouth [DES ENG] A flared mouth on a pipe opening or other orifice. [ENG] A defect which occurs during metal drilling in which a twist drill produces a hole that is not a perfect circle.

bell nipple [PETRO ENG] A bell-mouthed nipple inserted into the top of oil well casing to allow easy entry of drilling tools and to protect the top of the casing during drilling.

bellows [ENG] **1.** A mechanism that expands and contracts, or has a rising and falling top, to suck in air through a valve and blow it out through a tube. **2.** Any of several types of enclosures which have accordionlike walls, allowing one to vary the volume. **3.** *See* aneroid capsule. [OPTICS] An accordionlike component of a camera which forms a passage between the lens and the film and allows one to vary the distance between them.

bellows expansion joint [DES ENG] In a run of piping, a joint formed with a flexible metal bellows which compress or stretch to compensate for linear expansion or contraction of the run of piping.

bellows gage [ENG] A device for measuring pressure in which the pressure on a bellows, with the end plate attached to a spring, causes a measurable movement of the plate.

bellows gas meter [ENG] A device for measuring the total volume of a continuous gas flow stream in which the motion of two bellows, alternately filled with and exhausted of the gas, actuates a register.

bellows seal [MECH ENG] A boiler seal in the form of a bellows which prevents leakage of air or gas.

bell screw *See* bell tap.

Bell's law [PHYSIO] **1.** The law that in the spinal cord the ventral roots are motor and the dorsal roots sensory in function. **2.** The law that in a reflex arc the nerve impulse can be conducted in one direction only.

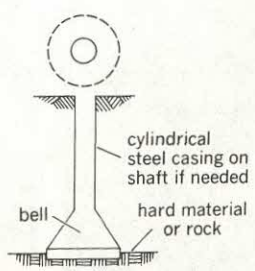
bell socket *See* bell tap.

bell tap [ENG] A cylindrical fishing tool having an upward-tapered inside surface provided with hardened threads; when slipped over the upper end of lost, cylindrical, downhole drilling equipment and turned, the threaded inside surface of the bell tap cuts into and grips the outside surface of the lost equip-

BELLADONNA

Belladonna (*Atropa belladonna*), flowering branch and isolated flowers (two views).

BELLED CAISSON



A drawing of a belled caisson, showing top view and cross section from side.

ment. Also known as bell; bell screw; bell socket; box bill; die; die collar; die nipple.

bell-type manometer [ENG] A differential pressure gage in which one pressure input is fed into an inverted cuplike container floating in liquid, and the other pressure input presses down upon the top of the container so that its level in the liquid is the measure of differential pressure.

belly [ANAT] **1.** The abdominal cavity or the abdomen. **2.** The most prominent, fleshy, central portion of a muscle. [GRAPHICS] A downward curve in the center of a type line.

belonephobia [PSYCH] Abnormal fear of sharp-pointed objects.

Beloniformes [VERT ZOO] The former ordinal name for a group of fishes now included in the order Atheriniformes.

belonite [GEOL] A rod- or club-shaped microscopic embryonic crystal in a glassy rock.

Belostomatidae [INV ZOO] The giant water bugs, a family of hemipteran insects in the subdivision Hydrocorisae.

below minimums [METEOROL] Below operational weather limits for aircraft.

belt [CIV ENG] In brickwork, a projecting row (or rows) of bricks, or an inserted row made of a different kind of brick. [ECOL] **1.** Any altitudinal vegetation zone or band from the base to the summit of a mountain. **2.** Any benthic vegetation zone or band from sea level to the ocean depths. **3.** Any of the concentric vegetation zones around bodies of fresh water. [HYD] A long area or strip of pack ice, with a width of 1 kilometer to more than 100 kilometers. [MECH ENG] A flexible band used to connect pulleys or to convey materials by transmitting motion and power.

belt conveyor [MECH ENG] A heavy-duty conveyor consisting essentially of a head or drive pulley, a take-up pulley, a level or inclined endless belt made of canvas, rubber, or metal, and carrying and return idlers.

belt course *See* string course.

belt dressing [MATER] A material, usually beeswax, applied to leather belts to increase friction between the belt and pulley surface.

belt drive [MECH ENG] The transmission of power between shafts by means of a belt connecting pulleys on the shafts.

belted plain [GEOL] A plain whose surface has been slowly worn down and sculptured into bands or belts of different levels.

belteroporic [GEOL] Of crystals in rocks whose growth was determined by the direction of easiest growth.

belt feeder [MECH ENG] A short belt conveyor used to transfer granulated or powdered solids from a storage or supply point to an end-use point; for example, from a bin hopper to a chemical reactor.

belt grinding [MET] Grinding with an abrasive-coated continuous belt. Also known as linishing.

belting [MATER] **1.** A sturdy fabric, usually of cotton, used in belts. **2.** A heavy leather, made from hides of cattle, used in power transmission belts. Also known as belting leather.

belting leather *See* belting.

belt of cementation *See* zone of cementation.

belt of soil moisture *See* belt of soil water.

belt of soil water [GEOL] The upper subdivision of the zone of aeration limited above by the land surface and below by the intermediate belt; this zone contains plant roots and water available for plant growth. Also known as belt of soil moisture; discrete film zone; soil-water belt; soil-water zone; zone of soil water.

belt sander [MECH ENG] A portable sanding tool having a power-driven abrasive-coated continuous belt.

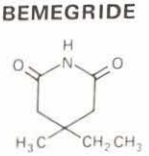
belt shifter [MECH ENG] A device with fingerlike projections used to shift a belt from one pulley to another or to replace a belt which has slipped off a pulley.

belt slip [MECH ENG] The difference in speed between the driving drum and belt conveyor.

belt tightener [MECH ENG] In a belt drive, a device that takes up the slack in a belt that has become stretched and permanently lengthened.

bemegride [PHARM] $C_8H_{13}NO_2$ Platelets which melt at 127°C and sublime at 100°C (2 mmHg pressure); soluble in water and in acetone; used as an analeptic drug in barbiturate poisoning for humans and as an analeptic drug and central nervous system stimulant in animals. Also known as methetharimide; β,β-methylethylglutarimide.

BEMEGRIDE



Structural formula.

bempa [ORG CHEM] $C_6H_{18}N_3PO$ A white solid soluble in water; used as chemosterilant for insects. Also known as hexamethylphosphorictriamide.

Bénard convection cells [PHYS] A regular array of hexagonal cells which sometimes appear in convection in a layer of liquid heated from below.

Bence-Jones protein [PATH] An abnormal group of globulins appearing in the serum and urine, usually in association with multiple myeloma and characterized by coagulation at 50–60°C.

Bence-Jones proteinuria [MED] The presence of Bence-Jones protein in the urine.

bench [GEOL] A terrace of level earth or rock that is raised and narrow and that breaks the continuity of a declivity. [MIN ENG] **1.** One of two or more divisions of a coal seam, separated by slate and so forth or simply separated by the process of cutting the coal, one bench or layer being cut before the adjacent one. **2.** A long horizontal ledge of ore in an underground working place. **3.** A ledge in an open-pit mine from which excavation takes place at a constant level.

bench assembly [ENG] A technique of fitting and joining parts using a bench as a work surface.

bench blasting [MIN ENG] A mining system used either underground or in surface pits whereby a thick ore or waste zone is removed by blasting a series of successive horizontal layers called benches.

bench check [IND ENG] A workshop or servicing bay check which includes the typical check or actual functional test of an item to ascertain what is to be done to return the item to a serviceable condition or ascertain the item's temporary or permanent disposition.

bench dog [ENG] A wood or metal peg, placed in a slot or hole at the end of a bench; used to keep a workpiece from slipping.

bench gravel [GEOL] Gravel beds found on the sides of valleys above the present stream bottoms, representing parts of the bed of the stream when it was at a higher level.

bench height *See* bank height.

bench hook [ENG] Any device used on a carpenter's bench to keep work from moving toward the rear of the bench. Also known as side hook.

benching [CIV ENG] **1.** Concrete laid on the side slopes of drainage channels where the slopes are interrupted by manholes, and so forth. **2.** Concrete laid on sloping sites as a safeguard against sliding. **3.** Concrete laid along the sides of a pipeline to provide additional support. [MIN ENG] A method of working small quarries or opencast pits in steps or benches.

bench lathe [MECH ENG] A small engine or toolroom lathe suitable for attachment to a workbench; bed length usually does not exceed 6 feet (1.8 meters) and workpieces are generally small.

bench lava [GEOL] Semiconsolidated, crusted basaltic lava forming raised platforms and crags about the edges of lava lakes. Also known as bench magma.

bench magma *See* bench lava.

bench mark [ENG] A relatively permanent natural or artificial object bearing a marked point whose elevation above or below an adopted datum—for example, sea level—is known. Abbreviated BM.

bench-mark problem [COMPUT SCI] A problem to be run on computers to evaluate their performances relative to one another.

bench photometer [ENG] A device which uses an optical bench with the two light sources to be compared mounted one at each end; the comparison is made by a device moved along the bench until matching brightnesses appear.

bench placer [GEOL] A placer in ancient stream deposits from 50 to 300 feet (15 to 90 meters) above present streams.

bench plane [DES ENG] A plane used primarily in bench-work on flat surfaces, such as a block plane or jack plane.

bench sander [MECH ENG] A stationary power sander, usually mounted on a table or stand, which is equipped with a rotating abrasive disk or belt.

bench-scale testing [ENG] Testing of materials, methods, or chemical processes on a small scale, such as on a laboratory worktable.

bench slope *See* bank slope.

bench stop [ENG] A bench hook which is used to fasten work in place, often by means of a screw.

bench table [BUILD] A projecting course of masonry at the

foot of an interior wall or around a column; generally wide enough to form a seat.

bench vise [ENG] An ordinary vise fixed to a workbench.

benchwork [ENG] Any work performed at a workbench rather than on machines or in the field.

bend [DES ENG] **1.** The characteristic of an object, such as a machine part, that is curved. **2.** A section of pipe that is curved. **3.** A knot formed by a rope fastened to an object or another rope. [ELECTROMAG] A smooth change in the direction of the longitudinal axis of a waveguide. [GEOL] **1.** A curve or turn occurring in a stream course, bed, or channel which has not yet become a meander. **2.** The land area partly encircled by a bend or meander. [NAV] The departure of a defined navigation course or bearing from a straight line.

bend allowance [DES ENG] Length of the arc of the neutral axis between the tangent points of a bend in any material.

Benday plate [GRAPHICS] A printing plate treated with the Benday process.

Ben Day process *See* Benday process.

Benday process [GRAPHICS] A process for printing shadings consisting of patterns of lines, dots, stipples, and so on, which involves inking a Benday screen (a rectangle of hardened gelatin with the pattern in relief), printing it on portions of the metal plate on which an outline drawing has been photoprinted, and then etching the metal as a line plate. Also spelled Ben Day process.

bender *See* bending machine.

bender element [ELECTR] A combination of two thin strips of different piezoelectric materials bonded together so that when a voltage is applied, one strip increases in length and the other becomes shorter, causing the combination to bend.

Bender process [CHEM ENG] Treatment of petroleum liquids with lead sulfide catalyst to sweeten (to convert mercaptans to disulfides) by oxidation.

bending [ENG] **1.** The forming of a metal part, by pressure, into a curved or angular shape, or the stretching or flanging of it along a curved path. **2.** The forming of a wooden member to a desired shape by pressure after it has been softened or plasticized by heat and moisture. [HYD] Movement of sea ice up or down resulting from lateral pressure exerted by wind or tide. [OCEANOGR] The first stage in the formation of pressure ice caused by the action of current, wind, tide, or air temperature changes.

bending brake [MECH ENG] A press brake for making sharply angular linear bends in sheet metal.

bending iron [ENG] A tool used to straighten or to expand flexible pipe, especially lead pipe.

bending machine [MECH ENG] A machine for bending a metal or wooden part by pressure. Also known as bender.

bending moment [MECH] Algebraic sum of all moments located between a cross section and one end of a structural member; a bending moment that bends the beam convex downward is positive, and one that bends it convex upward is negative.

bending moment diagram [MECH] A diagram showing the bending moment at every point along the length of a beam plotted as an ordinate.

bending schedule [CIV ENG] A chart showing the shapes and dimensions of every reinforcing bar and the number of bars required on a particular job for the construction of a reinforced concrete structure.

bending shackle *See* anchor shackle.

bending slab [NAV ARCH] A slab that is made up of a number of large cast-iron blocks with holes for pins about which frames and other structural members of ships are bent.

bending stress [MECH] An internal tensile or compressive longitudinal stress developed in a beam in response to curvature induced by an external load.

bendiocarb *See* 2,2-dimethyl-1,3-benzodioxol-4-yl-*N*-methylcarbamate.

Bendix-Weiss universal joint [MECH ENG] A universal joint that provides for constant angular velocity of the driven shaft by transmitting the torque through a set of four balls lying in the plane that contains the bisector of, and is perpendicular to, the plane of the angle between the shafts.

bend radius [DES ENG] The radius corresponding to the curvature of a bent specimen or part, as measured at the inside surface of the bend.

bends *See* caisson disease.

bend test [MET] A ductility test in which a specimen is bent through an arc of known radius and angle.

bend wheel [MECH ENG] A wheel used to interrupt and change the normal path of travel of the conveying or driving medium; most generally used to effect a change in direction of conveyor travel from inclined to horizontal or a similar change.

Benedicks effect [PHYS] An electromotive force produced in a circuit containing one metal only, but having impurities or internal strains, in the presence of an asymmetrical temperature distribution.

Benedict equation of state [PHYS CHEM] An empirical equation relating pressures, temperatures, and volumes for gases and gas mixtures; superseded by the Benedict-Webb-Rubin equation of state.

Benedict's solution [ANALY CHEM] A solution of potassium and sodium tartrates, copper sulfate, and sodium carbonate; used to detect reducing sugars.

beneficiation [MET] Improving the chemical or physical properties of an ore so that metal can be recovered at a profit. Also known as mineral dressing.

benefin *See* *N*-butyl-*N*-ethyl-α,α,α-trifluoro-2,6-dinitro-*para*-toluidine.

benequinox [ORG CHEM] $C_{13}H_{11}N_3O_2$ A yellow-brown powder that decomposes at 195°C; used as a fungicide for grain seeds and seedlings. Also known as 1,4-benzoquinone-*N'*-benzoylhydrazone oxime.

Bengal lights [MATER] Constituent of pyrotechnics made of sulfur, sugar, and potassium nitrate, with barium or strontium salts added for green or red light.

bengaline [TEXT] A warp-faced fabric with distinct, fully covered crosswise ribs that are formed by coarse filling.

Benger unit [BIOL] A unit for the standardization of hyaluronidase.

Benguela Current [OCEANOGR] A strong current flowing northward along the southwestern coast of Africa.

Benham top [OPTICS] A disk whose surface has black and white portions and which, when rotated at certain speeds and subjected to certain lighting, produces sensations of color.

benign [MED] Of no danger to life or health.

benign lymphoreticulosis *See* cat scratch disease.

benign myalgic encephalomyelitis *See* neuromyasthenia.

benign tertian malaria *See* vivax malaria.

benign tumor [MED] A nonmalignant neoplasm.

Benioff extensometer [ENG] A linear strainmeter for measuring the change in distance between two reference points separated by 20–30 meters or more; used to observe earth tides.

Benioff zone [GEOPHYS] A zone of earthquake hypocenters distributed on well-defined planes that dips from a shallow depth into the earth's mantle to depths as great as 700 kilometers.

benitoite [MINERAL] $BaTi(SiO_3)_3$ A blue to violet barium-titanium silicate mineral; at one time it was cut and sold as sapphire.

benjamin gum *See* benzoin gum.

benjaminite [MINERAL] $Pb_2(Cu,Ag)_2Bi_4S_9$ A gray mineral occurring in granular massive form.

benne oil *See* sesame oil.

Bennettitales [PALEOBOT] An equivalent name for the Cycadeoidales.

Bennettitatae [PALEOBOT] A class of fossil gymnosperms in the order Cycadeoidales.

ben oil [MATER] Oil from seeds of ben (*Moringa*) trees; used in foods, cosmetics, perfumes, and laxatives and as a lubricant.

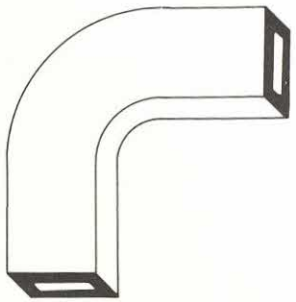
bensulide [ORG CHEM] $C_{14}H_{24}O_4NPS_3$ An *S*-(*O*,*O*-diisopropyl phosphorodithioate) ester of *N*-(2-mercaptoethyl)-benzenesulfonamide; an amber liquid slightly soluble in water; melting point is 34.4°C; used as a preemergent herbicide for annual grasses and for broadleaf weeds in lawns and vegetable and cotton crops.

bent [CIV ENG] A framework support transverse to the length of a structure.

bent-back occlusion [METEOROL] An occluded front that has reversed its direction of motion as a result of the development of a new cyclone (usually near the point of occlusion) or, less frequently, as the result of the displacement of the old cyclone along the front. Also known as back-bent occlusion.

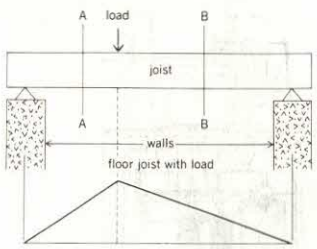
bent bar [CIV ENG] A longitudinal reinforcing bar which is bent to pass from one face of a structural member to the other face.

BEND



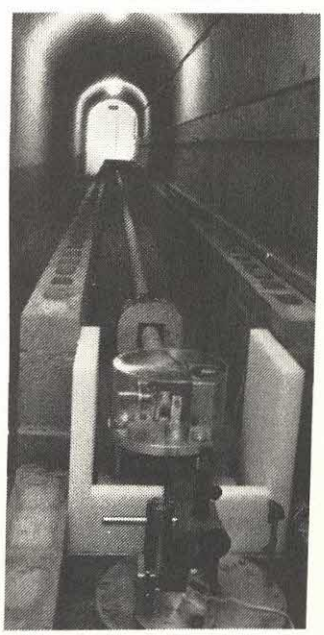
H-plane 90° bend for a rectangular waveguide.

BENDING MOMENT



Schematic of bending moment on an end-supported joist with a concentrated load. Bending moment at section A-A is upward reactive force of left wall times distance from wall to A-A. Bending moment at section B-B is upward reactive force of left wall times the distance from wall to B-B plus the moment produced by the downward load acting at its distance from B-B. The resulting bending moment at each cross section is shown on the lower portion of the diagram.

BENIOFF EXTENSOMETER



Benioff linear strain seismograph.

BENT-TUBE BOILER

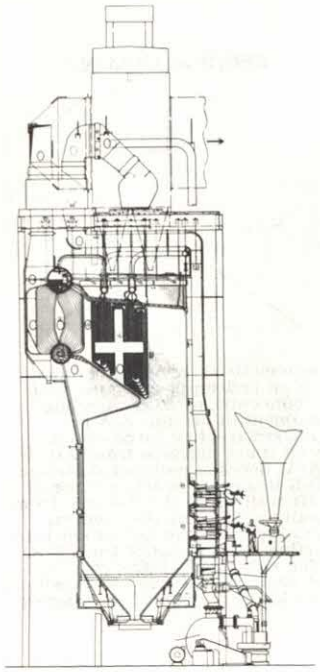


Diagram of a bent-tube boiler.

benthic [OCEANOGR] Of, pertaining to, or living on the bottom or at the greatest depths of a large body of water. Also known as benthonic.

benthiocarb [ORG CHEM] $C_{12}H_{16}NOCl$ An amber liquid with a boiling point of 126–129°C; slightly soluble in water; used as an herbicide to control aquatic weeds in rice crops. Also known as *S*-(4-chlorobenzyl)-*N*,*N*-diethylthiocarbamate.

benthonic *See* benthic.

benthos [ECOL] Bottom-dwelling forms of marine life. Also known as bottom fauna. [OCEANOGR] The floor or deepest part of a sea or ocean.

bentonite [GEOL] A clay formed from volcanic ash decomposition and largely composed of montmorillonite and beidellite. Also known as taylorite.

bentonite slurry [MATER] Slurry composed of water and clay powder consisting chiefly of montmorillonite minerals.

bentranil *See* 2-phenyl-3,1-benzoxazinone-(4).

bent-tube boiler [MECH ENG] A water-tube steam boiler in which the tubes terminate in upper and lower steam-and-water drums. Also known as drum-type boiler.

bentu de soli [METEOROL] An east wind on the coast of Sardinia.

bentwood [ENG] Wood formed to shape by bending, rather than by carving or machining.

benzadox [ORG CHEM] $C_6H_5CONHOCH_2COOH$ White crystals with a melting point of 140°C; soluble in water; used as an herbicide to control kochia in sugarbeets. Also known as benzamidoxyacetic acid.

benzalacetaldehyde *See* cinnamaldehyde.

benzalacetic acid *See* cinnamic acid.

benzalactone *See* benzylideneacetone.

benzal chloride [ORG CHEM] $C_6H_5CHCl_2$ A colorless liquid that is refractive and fumes in air; boiling point 207°C; used to make benzaldehyde and cinnamic acid. Also known as benzylidene chloride; chlorobenzal.

benzaldehyde [ORG CHEM] C_6H_5CHO A colorless, liquid aldehyde, boiling at 170°C and possessing the odor of bitter almonds; used as a flavoring agent and an intermediate in chemical syntheses.

benzaldehyde cyanohydrin *See* mandelonitrile.

benzaldoxime [ORG CHEM] C_6H_5CHNOH An oxime of benzaldehyde; the antiisomeric form melts at 130°C, the syn form at 34°C; both forms are soluble in ethyl alcohol and ether; used in synthesis of other organic compounds.

benzalkonium [ORG CHEM] $C_6H_5CH_2N(CH_3)_2R^+$ An organic radical in which R may range from C_8H_{17} to $C_{18}H_{37}$; found in surfactants, as the chloride salt.

benzalkonium chloride [ORG CHEM] $C_6H_5CH_2(CH_3)_2NRCl$ A yellow-white powder soluble in water; used as a fungicide and bactericide; the R is a mixture of alkyls from C_8H_{17} to $C_{18}H_{37}$. Also known as alkyldimethylbenzylammonium chloride.

benzamide [ORG CHEM] $C_6H_5CONH_2$ A compound with melting point 132.5° to 133.5°C; slightly soluble in water, soluble in ethyl alcohol and carbon tetrachloride; used in chemical synthesis.

benzamidoxyacetic acid *See* benzadox.

benzanilide [ORG CHEM] $C_6H_5CONHC_6H_5$ Leaflet crystals with a melting point of 163°C; soluble in alcohol; used to manufacture dyes and perfumes. Also known as *N*-benzoylaniline.

benzanthracene [ORG CHEM] $C_{18}H_{14}$ A weakly carcinogenic material that is isomeric with naphthacene; melting point 162°C; insoluble in water, soluble in benzene. Also known as 1,2-benzanthracene; 2,3-benzophenanthrene.

1,2-benzanthracene *See* benzanthracene.

benzanthrone [ORG CHEM] $C_{17}H_{10}O$ A compound with melting point 170°C; insoluble in water; used in dye manufacture.

Benzedrine *See* amphetamine.

benzene [ORG CHEM] C_6H_6 A colorless, liquid, flammable, aromatic hydrocarbon that boils at 80.1°C and freezes at 5.4–5.5°C; used to manufacture styrene and phenol. Also known as benzol.

benzene azimide *See* 1,2,3-benzotriazole.

benzeneazoanilide *See* diazoaminobenzene.

benzeneaz obenzene *See* azobenzene.

benzene carbonitrile *See* benzonitrile.

benzenediazonium chloride [ORG CHEM] $C_6H_5N(N)Cl$ An ionic salt soluble in water; used as a dye intermediate.

1,4-benzenedicarbonyl chloride *See* terephthaloyl chloride.

benzene-*ortho*-dicarboxylic acid *See* phthalic acid.

benzene-*para*-dicarboxylic acid *See* terephthalic acid.

benzene hexachloride *See* 1,2,3,4,5,6-hexachlorocyclohexane.

benzenephosphonic acid [ORG CHEM] $C_6H_5H_2PO_3$ Colorless, combustible crystals with a melting point of 158°C; soluble in water, alcohol, ether, and acetone; used in antifouling paints. Also known as phenylphosphonic acid.

benzenephosphorus dichloride [ORG CHEM] $C_6H_5PCl_2$ An irritating, colorless liquid with a boiling point of 224.6°C; soluble in inert organic solvents; used in organic synthesis and oil additives.

benzene ring [ORG CHEM] The six-carbon ring structure found in benzene, C_6H_6, and in organic compounds formed from benzene by replacement of one or more hydrogen atoms by other chemical atoms or radicals.

benzene series [ORG CHEM] A series of carbon-hydrogen compounds based on the benzene ring, with the general formula C_nH_{2n-6}, where n is 6 or more; examples are benzene, C_6H_6; toluene, C_7H_8; and xylene, C_8H_{10}.

benzenesulfonate [ORG CHEM] Any salt or ester of benzenesulfonic acid.

benzenesulfonic acid [ORG CHEM] $C_6H_5SO_3H$ An organosulfur compound, strongly acidic, water soluble, nonvolatile, and hygroscopic; used in the manufacture of detergents and phenols.

1,2,3,4,5-benzenetetracarboxylic acid *See* pyromellitic acid.

benzene-toluene-xylene [MATER] An admixture of three aromatic chemicals formed during the catalytic reforming of petroleum naphthas. Abbreviated BTX.

benzene-1,2,3-tricarboxylic acid *See* hemimellitic acid.

1,2,4-benzenetricarboxylic acid [ORG CHEM] $C_6H_3(COOH)_3$ Crystals with a melting point of 218–220°C; crystallizes from acetic acid or from dilute alcohol; used as an intermediate in the preparation of adhesives, plasticizers, dyes, inks, and resins. Also known as trimellitic acid.

1,2,4-benzenetriol [ORG CHEM] $C_6H_3(OH)_3$ Monoprismatic leaflets with a melting point of 141°C; freely soluble in water, ether, alcohol, and ethylacetate; used in gas analysis. Also known as hydroxyhydroquinone; hydroxyquinol.

benzenoid [ORG CHEM] Any substance which has the electronic character of benzene.

benzenyl trichloride *See* benzotrichloride.

benzestrol [PHARM] $C_{20}H_{26}O_62$ A white powder; melting point 162–166°C; soluble in ethanol and acetone, insoluble in water; used as a medicine. Also known as 2,4-bis(4-hydroxyphenyl)-3-ethyl hexane.

benzethonium chloride [PHARM] $C_{27}H_{42}ClNO_2$ Crystallizes as thin, hexagonal plates; melting point is 164–166°C; soluble in water, alcohol, chloroform, and acetone; used as a topical antiseptic on humans and animals. Also known as diisobutylphenoxyethoxyethyl dimethyl benzyl ammonium chloride.

benzhydrol [ORG CHEM] $(C_6H_5)_2CHOH$ Colorless needles; melting point 69°C; slightly soluble in water, very soluble in ethanol and ether; used in preparation of other organic compounds including antihistamines. Also known as diphenylcarbinol.

benzidine [ORG CHEM] $NH_2C_6H_4C_6H_4NH_2$ Anaromatic amine with a melting point of 128°C; used as an intermediate in syntheses of direct dyes for cotton.

benzil [ORG CHEM] $C_6H_5COCOC_6H_5$ A yellow powder; melting point 95°C; insoluble in water, soluble in ethanol, ether, and benzene; used in organic synthesis. Also known as dibenzoyl; diphenylglyoxal.

benzilic acid [ORG CHEM] $(C_6H_5)_2C(OH)CO_2H$ A white, crystalline acid, synthesized by heating benzil with alcohol and potassium hydroxide; used in organic synthesis.

benzimidazole [ORG CHEM] $C_7H_6N_2$ Colorless crystals; melting point 170°C; slightly soluble in water, soluble in ethanol; used in organic synthesis. Also known as 1,3-benzodiazole; benzoglyoxaline.

benzin *See* petroleum benzin.

benzine *See* petroleum benzin.

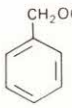
benzoate [ORG CHEM] A salt or ester of benzoic acid, formed by replacing the acidic hydrogen of the carboxyl group with a metal or organic radical.

benzocaine *See* ethyl-*para*-amino benzoate.

1,4-benzodiazine *See* quinoxaline.

2,3-benzodiazine *See* phthalazine.
β-benzo-*ortho*-diazine *See* phthalazine.
benzo-*para*-diazine *See* quinoxaline.
1,3-benzodiazole *See* benzimidazole.
benzodihydropyrone [ORG CHEM] $C_9H_8O_2$ A white to light yellow, oily liquid having a sweet odor; soluble in alcohol, chloroform, and ether; used in perfumery. Also known as dihydrocoumarin.
benzofuran *See* coumarone.
benzoglycolic acid *See* mandelic acid.
benzoglyoxaline *See* benzimidazole.
benzoic acid [ORG CHEM] C_6H_5COOH An aromatic carboxylic acid that melts at 122.4°C, boils at 250°C, and is slightly soluble in water and relatively soluble in alcohol and ether; derivatives are valuable in industry, commerce, and medicine.
benzoic anhydride [ORG CHEM] $(C_6H_5CO)_2O$ An acid anhydride that melts at 42°C, boils at 360°C, and crystallizes in colorless prisms; used in synthesis of a variety of organic chemicals, including some dyes.
benzoin [MATER] A balsamic resin obtained from trees of the genus *Styrax;* used as an expectorant, as an inhalant in respiratory tract inflammations, and as an antiseptic. Also known as benjamin gum; benzoinam; gum benzoin. [ORG CHEM] $C_{14}H_{12}O_2I$ An optically active compound; white or yellowish crystals, melting point 137°C; soluble in acetone, slightly soluble in water; used in organic synthesis. Also known as benzoylphenyl carbinol; 2-hydroxy-2-phenyl acetophenone; phenyl benzoyl carbinol.
benzoinam *See* benzoin.
α-benzoin oxime [ORG CHEM] $C_6H_5CH(OH)C(NOH)C_6H_5$ Crystallizes as prisms from benzene; melting point is 151–152°C; soluble in alcohol and in aqueous ammonium hydroxide solution; used in the detection and determination of copper, molybdenum, and tungsten.
benzol *See* benzene.
benzol-acetone process [CHEM ENG] A solvent dewaxing process in which a mixture of the solvent and oil containing wax is cooled until the wax solidifies and is then removed by filtration.
benzoline *See* normal benzine.
benzomate [ORG CHEM] $C_{18}H_{18}O_5N$ A white solid that melts at 71.5–73°C; used as a wettable powder as a miticide. Also known as 3-chloro-*N*-ethoxy-2,6-dimethoxybenzimidic acid anhydride with benzoic acid.
benzonitrile [ORG CHEM] C_6H_5CN A colorless liquid with an almond odor; made by heating benzoic acid with lead thiocyanate and used in the synthesis of organic chemicals. Also known as benzene carbonitrile; phenyl cyanide.
2,3-benzophenanthrene *See* benzanthracene.
benzophenone [ORG CHEM] $C_6H_5COC_6H_6$ A diphenyl ketone, boiling point 305.9°C, occurring in four polymorphic forms (α, β, γ, and δ) each with different melting point; used as a constituent of synthetic perfumes and as a chemical intermediate. Also known as diphenyl ketone; phenyl ketone.
benzopyrene [ORG CHEM] $C_{20}H_{12}$ A five-ring aromatic hydrocarbon found in coal tar, in cigarette smoke, and as a product of incomplete combustion; yellow crystals with a melting point of 179°C; soluble in benzene, toluene, and xylene.
1,2-benzopyrone *See* coumarin.
2,3-benzopyrrole *See* indole.
5,6-benzoquinoline [ORG CHEM] $C_{13}H_9N$ Crystals which are soluble in dilute acids, alcohol, ether, or benzene; melting point is 93°C; used as a reagent for the determination of cadmium. Also known as benzo[*f*]quinoline; naphthopyridine; β-naphthoquinoline.
benzo[*f*]quinoline *See* 5,6-benzoquinoline.
benzoquinone *See* quinone.
1,4-benzoquinone-*N'*-benzoylhydrazone oxime *See* benequinox.
benzoresorcinol [ORG CHEM] $C_{13}H_{10}O_3$ A compound crystallizing as needles from hot-water solution; used in paints and plastics as an ultraviolet light absorber. Also known as resbenzophenone.
benzosulfimide *See* saccharin.
benzothiazole [ORG CHEM] C_6H_4SCHN A thiazole fused to a benzene ring; can be made by ring closure from *o*-amino thiophenols and acid chlorides; derivatives are important industrial products.
4-benzothienyl-*N*-methylcarbamate [ORG CHEM] $C_{10}H_9NO_2S$ A white powder compound with a melting point of 128°C; used as an insecticide for crop insects.
benzothiofuran *See* thianaphthene.
1,2,3-benzotriazole [ORG CHEM] $C_6H_5N_3$ A compound with melting point 98.5°C; soluble in ethanol, insoluble in water; derivatives are ultraviolet absorbers; used as a chemical intermediate. Also known as azimidobenzene; benzene azimide.
benzotrichloride [ORG CHEM] $C_6H_5CCl_3$ A colorless to yellow liquid that fumes upon exposure to air; has penetrating odor; insoluble in water, soluble in ethanol and ether; used to make dyes. Also known as benzenyl trichloride; phenylchloroform; toluene trichloride.
benzotrifluoride [ORG CHEM] A colorless liquid with a boiling point of 102.1°C; used for dyes and pharmaceuticals, as a solvent and vulcanizing agent, and in insecticides. Also known as toluene trifluoride; trifluoromethyl benzene.
benzoyl [ORG CHEM] The radical $C_6H_5ICO^-$ found, for example, in benzoyl chloride.
***N*-benzoylaniline** *See* benzanilide.
benzoylation [ORG CHEM] Introduction of the aryl radical (C_6H_5CO) into a molecule.
benzoyl chloride [ORG CHEM] C_6H_5COCl Colorless liquid whose vapor induces tears; soluble in ether, decomposes in water; used as an intermediate in chemical synthesis.
benzoyl chloride 2,4,6-trichlorophenylhydrazone [ORG CHEM] $C_6H_5CClN_2HC_6H_2Cl_3$ A white to yellow solid with a melting point of 96.5–98°C; insoluble in water; used as an anthelminthic for citrus.
benzoylformaldoxime *See* isonitrosoacetophenone.
benzoyl peroxide [ORG CHEM] $(C_6H_5CO)_2O_2$ A white, crystalline solid; melting point 103–105°C; explodes when heated above 105°C; slightly soluble in water, soluble in organic solvents; used as a bleaching and drying agent and a polymerization catalyst. Also known as dibenzoyl peroxide.
benzoylpropethyl [ORG CHEM] $C_{18}H_{17}Cl_2NO_3$ An off-white, crystalline compound with a melting point of 72°C; used as a preemergence herbicide for control of wild oats. Also known as ethyl-*N*-benzoyl-*N*-(3,4-dichlorophenyl)-2-aminopropionate.
benzozone *See* acetyl benzoyl peroxide.
3,4-benzpyrene [ORG CHEM] $C_{20}H_{12}$ A polycyclic hydrocarbon; a chemical carcinogen that will cause skin cancer in many species when applied in low dosage.
benzthiazuron [ORG CHEM] $C_9H_9N_3SO$ A white powder that decomposes at 287°C; slightly soluble in water; used as a preemergent herbicide for sugarbeets and fodder beet crops. Also known as gatinon; 1-methyl-3-(2-benzothiazolyl)-urea.
benzyl [ORG CHEM] The radical $C_6H_5CH_2^-$ found, for example, in benzyl alcohol, $C_6H_5CH_2OH$.
benzyl acetate [ORG CHEM] $C_6H_5CH_2OOCCH_3$ A colorless liquid with a flowery odor; used in perfumes and flavorings and as a solvent for plastics and resins, inks, and polishes. Also known as phenylmethyl acetate.
benzylacetone [ORG CHEM] $C_6H_5(CH_2)_2COCH_3$ A liquid with a melting point of 233–234°C; used as an attractant to trap melon flies.
benzyl alcohol [ORG CHEM] $C_6H_5CH_2OH$ An alcohol that melts at 15.3°C, boils at 205.8°C, and is soluble in water and readily soluble in alcohol and ether; valued for the esters it forms with acetic, benzoic, and sebacic acids and used in the soap, perfume, and flavor industries. Also known as phenylmethanol.
benzylamine [ORG CHEM] $C_6H_5CH_2NH_2$ A liquid that is soluble in water, ethanol, and ether; boils at 185°C (770 mmHg) and at 84°C (24 mmHg); it is toxic; used as a chemical intermediate in dye production. Also known as aminotoluene.
benzylbenzene *See* diphenyl methane.
benzyl benzoate [ORG CHEM] $C_6H_5COOCH_2C_6H_5$ An oily, colorless liquid ester; used as an antispasmodic drug and as a scabicide.
benzyl bromide [ORG CHEM] $C_6H_5CH_2Br$ A toxic, irritating, corrosive clear liquid with a boiling point of 198–199°C; acts as a lacrimator; soluble in alcohol, benzene, and ether; used to make foaming and frothing agents. Also known as α-bromotoluene.
benzyl carbinol *See* phenethyl alcohol.
benzylcarbonylchloride *See* benzyl chloroformate.

BENZYL CHLOROFORMATE



Structural formula.

benzyl chloride [ORG CHEM] $C_6H_5CH_2Cl$ A colorless liquid with a pungent odor produced by the chlorination of toluene.

benzyl chloroformate [ORG CHEM] $C_8H_7ClO_2$ An oily liquid with an acrid odor which causes eyes to tear; boiling point is 103°C (20 mmHg pressure); used to block the amino group in peptide synthesis. Also known as benzylcarbonyl chloride; carbobenzoxy chloride; chloroformic acid benzyl ester.

benzyl cinnamate [ORG CHEM] $C_8H_7COOCH_2C_6H_5$ White crystals; melting point 39°C; insoluble in water, soluble in ethanol; used in perfumery. Also known as cinnamein.

benzyl cyanide [ORG CHEM] $C_6H_5CH_2CN$ A toxic, colorless liquid; insoluble in water, soluble in alcohol and ethanol; boils at 234°C; used in organic synthesis. Also known as phenylacetonitrile; α-tolunitrile.

benzyl dichloride *See* benzal chloride.

***N*-benzyl-*N*-(3,4-dichlorophenyl)-*N'*,*N'*-dimethylurea** [ORG CHEM] $C_{14}H_{18}ONCl_2$ A 50% wettable powder; used as a preemergent herbicide for rice, cotton, fruit trees, vineyards, soybeans, and flax.

benzyldisulfide *See* dibenzyldisulfide.

α-(benzyldithio)toluene *See* dibenzyl disulfide.

benzyleneglycol *See* hydrobenzoin.

benzyl ether [ORG CHEM] $(C_6H_5CH_2)_2O$ A liquid unstable at room temperature; boiling point 295–298°C; used in perfumes and as a plasticizer for nitrocellulose. Also known as dibenzyl ether.

1-benzyl-3-ethyl-6,7-dimethoxy isoquinoline *See* eupavarine.

benzyl ethyl ether [ORG CHEM] $C_6H_5CH_2OC_2H_5$ A colorless, oily, combustible liquid with a boiling point of 185°C; used in organic synthesis and as a flavoring.

benzyl fluoride [ORG CHEM] $C_6H_5CH_2F$ A toxic, irritating, colorless liquid with a boiling point of 139.8°C at 753 mmHg; used in organic synthesis.

benzyl formate [ORG CHEM] $C_6H_5CH_2OOCH$ A colorless liquid with a fruity-spicy odor and a boiling point of 203°C; used in perfumes and as a flavoring.

benzylhydroperoxide *See* perbenzoic acid.

benzylideneacetone [ORG CHEM] $C_6H_5CH{=}CHCOCH_3$ A crystalline compound soluble in alcohol, benzene, chloroform, and ether; melting point is 41–45°C; used in perfume manufacture and in organic synthesis. Also known as acetocinnamone; benzalacetone; cinnamyl methyl ketone; methyl styryl ketone.

3-benzylideneamino-4-4-phenylthiazoline-2-thione *See* fentiazon.

benzylidene chloride *See* benzal chloride.

benzyl isoeugenol [ORG CHEM] $CH_3CHCHC_6H_3(OCH_3)OCH_2C_6H_5$ A white, crystalline compound with a floral odor; soluble in alcohol and ether; used in perfumery.

benzyl mercaptan [ORG CHEM] $C_6H_5CH_2SH$ A colorless liquid with a boiling point of 195°C; soluble in alcohol and carbon disulfide; used as an odorant and for flavoring.

benzyl penicillinic acid [ORG CHEM] $C_{16}H_{18}N_2O_4S$ An amorphous white powder extracted with ether or chloroform from an acidified aqueous solution of benzyl penicillin.

benzyl penicillin potassium [MICROBIO] $C_{16}H_{17}KN_2O_4S$ Moderately hygroscopic crystals; soluble in water; inactivated by acids and alkalies; obtained from fermentation of *Penicillium chrysogenum*; used as an antimicrobial drug in human and animal disease. Also known as penicillin G_1 potassium; potassium benzyl penicillinate; potassium penicillin G_1.

benzyl penicillin sodium [MICROBIO] $C_{16}H_{17}N_2NaO_4S$ Crystals obtained from a methanol-ethyl acetate acidified extract of fermentation broth of *Penicillium chrysogenum*; used as an antimicrobial in human and animal disease. Also known as penicillin; sodium benzyl penicillinate; sodium penicillin G_1.

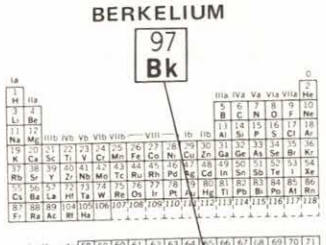
***ortho*-benzylphenol** *See* 2-(hydroxydiphenyl)methane.

benzyl propionate [ORG CHEM] $C_2H_5COOCH_2C_6H_5$ A combustible liquid with a sweet odor and a boiling point of 220°C; used in perfumes and for flavoring.

benzyl salicylate [ORG CHEM] $C_{14}H_{12}O_3$ A thick liquid with a slight, pleasant odor; used as a fixer in perfumery and in sunburn preparations.

benzyne [ORG CHEM] C_6H_4 A chemical species whose structure consists of an aromatic ring in which four carbon atoms are bonded to hydrogen atoms and two adjacent carbon atoms lack substitutents; a member of a class of compounds known as arynes.

BERKELIUM



Periodic table of the chemical elements showing the position of berkelium.

Beranek scale [ACOUS] A scale which measures the subjective loudness of a noise; noises are arranged into six arbitrary categories: very quiet, quiet, moderately quiet, noisy, very noisy, and intolerably noisy.

beraunite [MINERAL] $Fe^{2+}Fe^{3+}(PO_4)_3(OH)_5{\cdot}3H_2O$ A reddish-brown to blood red, monoclinic mineral consisting of hydrated basic phosphate of ferric and ferrous iron.

berbamine [ORG CHEM] $C_{37}H_{40}N_2O_6$ An alkaloid; melting point 170°C; slightly soluble in water, soluble in alcohol and ether.

Berberidaceae [BOT] A family of dicotyledonous herbs and shrubs in the order Ranunculales characterized by alternate leaves, perfect, well-developed flowers, and a seemingly solitary carpel.

berberine [ORG CHEM] $C_{20}H_{19}NO_5$ A toxic compound; melting point 145°C; the anhydrous form is insoluble in water, soluble in alcohol and ether; an alkaloid whose sulfate or hydrochloride might have some use in medicine.

Berenice's Hair *See* Coma Berenices.

beresorite *See* phoenicochroite.

ber function [MATH] One of the functions that is defined by $\mathrm{ber}_n(z) \pm i\mathrm{bei}_n(z) = J_n(ze^{\pm 3\pi i/4})$, where J_n is the nth Bessel function.

bergamot oil [MATER] A yellow-green essential oil from the rind of bergamot (*Citrus bergamia*) fruit; it is volatile, contains linalyl acetate, limonene, and livalol, and is used in perfumes.

berg crystal *See* rock crystal.

Bergeron-Findeisen theory [METEOROL] The theoretical explanation that precipitation particles form within a mixed cloud (composed of both ice crystals and liquid water drops) because the equilibrium vapor pressure of water vapor with respect to ice is less than that with respect to liquid water at the same temperature. Also known as ice-crystal theory; Wedener-Bergeron process.

Bergius process [CHEM ENG] Treatment of carbonaceous matter, such as coal or cellulosic materials, with hydrogen at elevated pressures and temperatures in the presence of a catalyst, to form an oil similar to crude petroleum. Also known as coal hydrogenation.

Bergmann's rule [ECOL] The principle that in a polytypic wide-ranging species of warm-blooded animals the average body size of members of each geographic race varies with the mean environmental temperature.

Bergman-Turner unit [BIOL] A unit for the standardization of thyroid extract.

bergmehl *See* rock milk.

bergschrund [HYD] A type of crevice in a glacier; formed when ice and snow break away from a rock face.

Berg's diver method *See* diver method.

berg till *See* floe till.

beriberi [MED] A disorder resulting from the deficiency of vitamin B_1 and characterized by neurologic symptoms, cardiovascular abnormalities, edema, and cerebral manifestations.

Bering Sea [GEOGR] A body of water north of the Pacific Ocean, bounded by Siberia, Alaska, and the Aleutian Islands.

Berkefeld filter [MICROBIO] A diatomaceous-earth filter used for sterilization of heat-labile liquids, such as blood serum, enzyme solutions, and antibiotics.

berkelium [CHEM] A radioactive element, symbol Bk, atomic number 97, the eighth member of the actinide series; properties resemble those of the rare-earth cerium.

berkeyite *See* lazulite.

berlinite [MINERAL] $Al(PO_4)$ A colorless to gray or pale rose, hexagonal mineral consisting of aluminum orthophosphate; occurs in massive form.

Berl saddle [CHEM ENG] A type of column packing used in distillation columns.

BERL SADDLE

The shape of the Berl saddle.

berm [CIV ENG] A horizontal ledge cut between the foot and top of an embankment to stabilize the slope by intercepting sliding earth. [GEOL] **1.** A narrow terrace which originates from the interruption of an erosion cycle with rejuvenation of a stream in the mature stage of its development and renewed dissection. **2.** A horizontal portion of a beach or backshore formed by deposit of material as a result of wave action. Also known as backshore terrace; coastal berm.

bermanite [MINERAL] $Mn^{2+}Mn_2{}^{3+}(PO_4)_2(OH)_2{\cdot}4H_2O$ A reddish-brown, orthorhombic mineral consisting of a hydrated

basic phosphate of manganese; occurs in crystal aggregates and as lamellar masses.

berm crest [GEOL] The seaward limit and usually the highest spot on a coastal berm. Also known as berm edge.

berm edge *See* berm crest.

Bermuda grass [BOT] *Cynodon dactylon*. A long-lived perennial in the order Cyperales.

Bermuda high [METEOROL] The semipermanent subtropical high of the North Atlantic Ocean, especially when it is located in the western part of that ocean area.

Bernoulli differential equation *See* Bernoulli equation.

Bernoulli distribution *See* binomial distribution.

Bernoulli effect [FL MECH] As a consequence of the Bernoulli theorem, the pressure of a stream of fluid is reduced as its speed of flow is increased.

Bernoulli equation [FL MECH] *See* Bernoulli theorem. [MATH] A nonlinear first-order differential equation of the form $(dy/dx) + yf(x) = y^n g(x)$, where n is a number different from unity and f and g are given functions. Also known as Bernoulli differential equation.

Bernoulli-Euler law [MECH] A law stating that the curvature of a beam is proportional to the bending moment.

Bernoulli law *See* Bernoulli theorem.

Bernoulli number [MATH] Numerical value of the coefficient of $x^{2n}/(2n)!$ is the expansion of $xe^x/(e^x - 1)$.

Bernoulli polynomial [MATH] The nth one is

$$\sum_{k=0}^{n} \binom{n}{k} B_k Z^{n-k}$$

where $\binom{n}{k}$ is a binomial coefficient, and B_k is a Bernoulli number.

Bernoulli's lemniscate [MATH] A curve shaped like a figure eight whose equation in rectangular coordinates is expressed as $(x^2 + y^2)^2 = a^2(x^2 - y^2)$.

Bernoulli theorem [FL MECH] An expression of the conservation of energy in the steady flow of an incompressible, inviscid fluid; it states that the quantity $(p/\rho) + gz + (v^2/2)$ is constant along any streamline, where p is the fluid pressure, v is the fluid velocity, ρ is the mass density of the fluid, g is the acceleration due to gravity, and z is the vertical height. Also known as Bernoulli equation; Bernoulli law. [STAT] *See* law of large numbers.

Beroida [INV ZOO] The single order of the class Nuda in the phylum Ctenophora.

Berriasian [GEOL] Part of or the underlying stage of the Valanginian at the base of the Cretaceous.

berry [BOT] A usually small, simple, fleshy or pulpy fruit, such as a strawberry, grape, tomato, or banana.

berrylate [INORG CHEM] A salt such as potassium beryllate, formed by action of a strong base, such as potassium hydroxide, and beryllium oxide.

berth deck [NAV ARCH] **1.** The deck on a warship where hammocks were formerly swung. **2.** A space in which lie the crew's sleeping quarters.

Berthelot equation [PHYS CHEM] A form of the equation of state which relates the temperature, pressure, and volume of a gas with the gas constant.

Berthelot relation [PHYS] A relationship between molecular attraction constants of like and unlike species.

Berthelot-Thomsen principle [PHYS CHEM] The principle that of all chemical reactions possible, the one developing the greatest amount of heat will take place, with certain obvious exceptions such as changes of state.

berthierite [MINERAL] $FeSb_2S_4$ A dark steel gray, orthorhombic mineral consisting of iron antimony sulfide.

berthollide [CHEM] A compound whose solid phase exhibits a range of composition.

Berthon dynamometer [ENG] An instrument for measuring the diameters of small objects, consisting of two metal straightedges inclined at a small angle and rigidly joined together; a scale on one of the straightedges is used to read the diameters of objects inserted between them.

berthonite *See* bournonite.

Bertrand curve [MATH] One of a pair of curves having the same principal normals. Also known as associate curve; conjugate curve.

bertrandite [MINERAL] $Be_4Si_2O_7(OH)_2$ A colorless or pale-yellow mineral consisting of a beryllium silicate occurring in prismatic crystals; hardness is 6–7 on Mohs scale, and specific gravity is 2.59–2.60.

Bertrand lens [OPTICS] An auxiliary lens that can be inserted in the tube of a polarizing microscope to obtain interference figures.

Bertrand's postulate [MATH] The proposition that there exists at least one prime number between any integer greater than three and twice the integer minus two.

Bertrand's rule [MICROBIO] The rule stating that in those compounds, and only in those compounds, having cis secondary alcoholic groups containing at least one carbon atom of D configuration which is subtended by a primary alcohol group, or having a methyl-substituted primary alcohol group of D configuration, the D-carbon atom will be dehydrogenated by the vinegar bacteria *Acetobacter suboxydans*, yielding a ketone.

Beryciformes [VERT ZOO] An order of actinopterygian fishes in the infraclass Teleostei.

Berycomorphi [VERT ZOO] An equivalent name for the Beryciformes.

beryllia *See* beryllium oxide.

beryllide [INORG CHEM] A chemical combination of beryllium with a metal, such as zirconium or tantalum.

berylliosis [MED] Chronic lung inflammation due to inhalation of beryllium oxide dust.

beryllium [CHEM] A chemical element, symbol Be, atomic number 4, atomic weight 9.0122. [MET] A rare metal, occurring naturally in combinations, with density about one-third of aluminum; used most commonly in the manufacture of beryllium-copper alloys which find numerous industrial and scientific applications.

beryllium alloy [MET] Any dilute alloy of base metals containing a few percent of beryllium in a precipitation-hardening system.

beryllium bronze *See* beryllium copper.

beryllium copper [MET] **1.** An alloy of copper and beryllium containing not more than about 3% beryllium; used for springs, tools, and plastic molds. Also known as beryllium bronze. **2.** An alloy of copper and beryllium specifically for addition to metals in the foundry.

beryllium detector [ENG] An instrument designed to detect and analyze for beryllium by gamma-ray activation analysis. Also known as berylometer.

beryllium fluoride [INORG CHEM] BeF_2 A hygroscopic, amorphous solid with a melting point of 800°C; soluble in water; used in beryllium metallurgy.

beryllium monel [MET] A nickel-copper alloy containing beryllium.

beryllium nitrate [INORG CHEM] $Be(NO_3)_2 \cdot 3H_2O$ A compound that forms colorless, deliquescent crystals that are soluble in water; used to introduce beryllium oxide into materials used in incandescent mantles.

beryllium nitride [INORG CHEM] Be_3N_2 Refractory, white crystals with a melting point of 2200±40°C; used in the manufacture of radioactive carbon-14 and in experimental rocket fuels.

beryllium oxide [INORG CHEM] BeO An amorphous white powder, insoluble in water; used to make beryllium salts and as a refractory. Also known as beryllia.

beryllonite [MINERAL] $NaBe(PO_4)$ A colorless or yellow mineral occurring in short, prismatic or tabular, monoclinic crystals with two good pinacoidal cleavages at right angles; hardness is 5.5–6 on Mohs scale, and specific gravity is 2.85.

berylometer *See* beryllium detector.

Berytidae [INV ZOO] The stilt bugs, a small family of hemipteran insects in the superfamily Pentatomorpha.

berzelianite [MINERAL] Cu_2Se A silver-white mineral composed of copper selenide and found in igneous rock; specific gravity is 4.03.

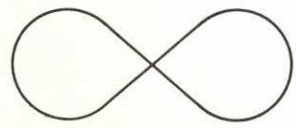
Bessel ellipsoid of 1841 [GEOD] The reference ellipsoid of which the semimajor axis is 6,377,397.2 meters, the semiminor axis is 6,356,079.0 meters, and the flattening or ellipticity equals 1/299.15. Also known as Bessel spheroid of 1841.

Bessel equation [MATH] The differential equation $z^2 f''(z) + zf'(z) + (z^2 - n^2) f(z) = 0$.

Bessel function [MATH] A solution of the Bessel equation. Symbolized $J_n(z)$.

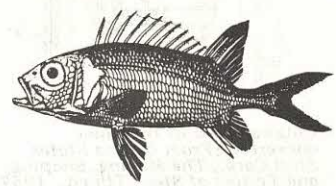
Besselian elements [ASTRON] Data on a solar eclipse, giving, for selected times, the coordinates of the axis of the moon's shadow with respect to the fundamental plane, and the radii of umbra and penumbra in that plane; the data allow one to derive local circumstances of the eclipse at any point on the earth's surface.

BERNOULLI'S LEMNISCATE



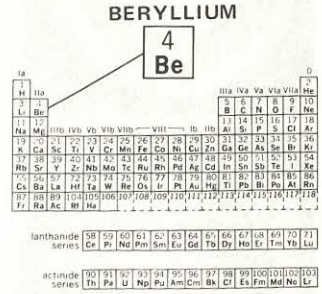
Curve known as Bernoulli's lemniscate.

BERYCIFORMES



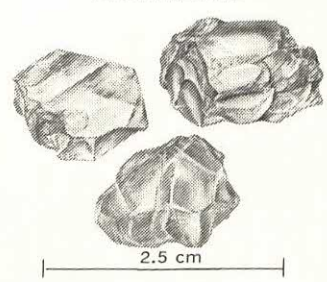
Squirrelfish *(Holocentrus ascensionis)* of the family Holocentridae that are nocturnal fishes found in shallow tropical and subtropical reefs. *(After G. B. Goode, Fishery Industries of the United States, 1884)*

BERYLLIUM



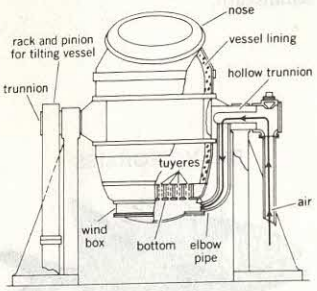
Periodic table of the chemical elements showing the position of beryllium.

BERYLLONITE



Beryllonite crystals, Stoneham, Maine. *(Specimen from Department of Geology, Bryn Mawr College)*

BESSEMER CONVERTER



Cutaway view of Bessemer converter. *(From United States Steel Corp., The Making, Shaping, and Testing of Steel, 7th ed., 1957)*

Besselian star numbers [ASTRON] Constants used in the reduction of a mean position of a star to an apparent position; used to account for short-term variations in precession, nutation, aberration, and parallax.

Besselian year *See* fictitious year.

Bessel inequality [MATH] The statement that the sum of the squares of the inner product of a vector with the members of an orthonormal set is no larger than the square of the norm of the vector.

Bessel spheroid of 1841 *See* Bessel ellipsoid of 1841.

Bessel transform *See* Hankel transform.

Bessemer converter [MET] A pear-shaped, basic-lined, cylindrical vessel for producing steel by the Bessemer process.

Bessemer iron [MET] Pig iron with about 1% silicon and a sulfur and a phosphorus content below 0.10%; used to make steel by the Bessemer or the acid open-hearth process. Also known as Bessemer pig iron.

Bessemer matte [MET] Product of the oxidation of furnace matte; contains nickel, copper, cobalt, precious metals, and about 22% sulfur.

Bessemer ore [MET] An iron ore containing very little phosphorus, considered suitable for refining by the Bessemer process.

Bessemer pig iron *See* Bessemer iron.

Bessemer process [MET] A steelmaking process in which carbon, silicon, phosphorus, and manganese contained in molten pig iron are oxidized by a strong blast of air.

Bessemer steel [MET] Steel manufactured by the Bessemer process.

Bessey unit [BIOL] A unit for the standardization of phosphatase.

Be star [ASTRON] A star of spectral type B in the Draper catalog that has emission lines indicating mass loss and a surrounding gaseous shell.

best commercial practice [ENG] A manufacturing standard for a process vessel which has not been designed according to standard codes, such as the ASME Boiler Code.

beta [ELECTR] The current gain of a transistor that is connected as a grounded-emitter amplifier, expressed as the ratio of change in collector current to resulting change in base current, the collector voltage being constant. [SCI TECH] The second letter of the Greek alphabet; β, B.

beta-absorption gage *See* beta gage.

beta blocker [PHYSIO] An adrenergic blocking agent capable of blocking nerve impulses to special sites (beta receptors) in the cerebellum; reduces the rate of heartbeats and the force of heart contractions.

beta brass [MET] A type of brass containing nearly equal proportions of copper and zinc.

beta carotene [BIOCHEM] $C_{40}H_{56}$ A carotenoid hydrocarbon pigment found widely in nature, always associated with chlorophylls; converted to vitamin A in the liver of many animals.

beta cell [HISTOL] **1.** Any of the basophilic chromophiles in the anterior lobe of the adenohypophysis. **2.** One of the cells of the islets of Langerhans which produce insulin.

beta chalcocite *See* chalcocite.

beta coefficient [STAT] Also known as beta weight. **1.** One of the coefficients in a regression equation. **2.** A moment ratio, especially one used to describe skewness and kurtosis.

betacyanin [BIOCHEM] A group of purple plant pigments found in leaves, flowers, and roots of members of the order Caryophyllales.

beta decay [NUC PHYS] Radioactive transformation of a nuclide in which the atomic number increases or decreases by unity with no change in mass number; the nucleus emits or absorbs a beta particle (electron or positron). Also known as beta disintegration.

beta decay spectrum [NUC PHYS] The distribution in energy or momentum of the beta particles arising from a nuclear disintegration process.

beta disintegration *See* beta decay.

beta distribution [STAT] The probability distribution of a random variable with density function $f(x) = [x^{\alpha-1}(1-x)^{\beta-1}]/B(\alpha,\beta)$, where B represents the beta function, α and β are positive real numbers, and $0<x<1$. Also known as Pearson Type I distribution.

beta emitter [NUC PHYS] A radionuclide that disintegrates by emission of a negative or positive electron.

beta factor [PL PHYS] In plasma physics, the ratio of the plasma kinetic pressure to the magnetic pressure.

betafite *See* ellsworthite.

beta function [MATH] A function of two positive variables, defined by

$$B(m,n) = \int_0^1 x^{m-1}(1-x)^{n-1}dx.$$

beta gage [NUCLEO] A penetration-type thickness gage that measures the absorption of beta rays in the sample. Also known as beta-absorption gage.

beta-gamma survey meter [NUCLEO] An ionization-chamber type of monitor that is sensitive primarily to beta particles and gamma rays.

beta globulin [BIOCHEM] A heterogeneous fraction of serum globulins containing transferrin and various complement components.

beta hemolysis [MICROBIO] A sharply defined, clear, colorless zone of hemolysis surrounding certain streptococci colonies growing on blood agar.

betaine [ORG CHEM] $C_5H_{11}O_2N$ An alkaloid; very soluble in water, soluble in ethyl alcohol and methanol; the hydrochloride is used as a source of hydrogen chloride and in medicine. Also known as lycine; oxyneurine.

beta interaction *See* weak interaction.

betalain [BIOCHEM] The name for a group of 35 red or yellow compounds found only in plants of the family Caryophyllales, including red beets, red chard, and cactus fruits.

betamethasone [PHARM] A white, crystalline powder with a melting point of 240°C; a corticosteroid hormone.

betanin [BIOCHEM] An anthocyanin that contains nitrogen and constitutes the principal pigment of garden beets.

beta particle [NUC PHYS] An electron or positron emitted from a nucleus during beta decay.

beta plane [GEOPHYS] The model, introduced by C.G. Rossby, of the spherical earth as a plane whose rate of rotation (corresponding to the Coriolis parameter) varies linearly with the north-south direction.

beta ray [NUC PHYS] A stream of beta particles.

beta-ray spectrometer [SPECT] An instrument used to determine the energy distribution of beta particles and secondary electrons. Also known as beta spectrometer.

beta rhythm [PHYSIO] An electric current of low voltage from the brain, with a pulse frequency of 13–30/sec, encountered in a person who is aroused and anxious.

beta rule *See* reduction rule.

beta spectrometer *See* beta-ray spectrometer.

beta taxonomy [SYST] The level of taxonomic study dealing with the arrangement of species into lower and higher taxa.

betatron [NUCLEO] A device for accelerating electrons in an evacuated ring by means of a time-varying magnetic flux encircled by the ring. Also known as induction accelerator; rheotron.

beta weight *See* beta coefficient.

betaxanthin [BIOCHEM] The name given to any of the yellow pigments found only in plants of the family Caryophyllales; they always occur with betacyanins.

Betelgeuse [ASTRON] An orange-red giant star of stellar magnitude 0.1–1.2, 650 light-years from the sun, spectral classification M2-Iab, in the constellation Orion; the star α Orionis.

betel nut [BOT] A dried, ripe seed of the palm tree *Areca catechu* in the family Palmae; contains a narcotic.

BET equation *See* Brunauer-Emmett-Teller equation.

Bethell process *See* full-cell process.

Bethe-Salpeter equation [PARTIC PHYS] The relativistic analog of the integral form of the two-body Schrödinger equation, the two-particle interaction kernel being the analog of the potential.

Bethylidae [INV ZOO] A small family of hymenopteran insects in the superfamily Bethyloidea.

Bethyloidea [INV ZOO] A superfamily of hymenopteran insects in the suborder Apocrita.

betrunked river [GEOL] A river that is shorn of its lower course as a result of submergence of the land margin by the sea.

Betterton-Kroll process [CHEM ENG] A method for obtaining pure bismuth from softened and desilverized lead.

Betti group *See* homology group.

Betti number *See* connectivity number.

Betti reciprocal theorem [MECH] A theorem in the mathematical theory of elasticity which states that if an elastic body is

subjected to two systems of surface and body forces, then the work that would be done by the first system acting through the displacements resulting from the second system equals the work that would be done by the second system acting through the displacements resulting from the first system.

Betti's method [MECH] A method of finding the solution of the equations of equilibrium of an elastic body whose surface displacements are specified; it uses the fact that the dilatation is a harmonic function to reduce the problem to the Dirichlet problem.

Betts' process [MET] A refining process for electrolytically purifying lead.

Betula [BOT] The birches, a genus of deciduous trees composing the family Betulaceae.

Betulaceae [BOT] A small family of dicotyledonous plants in the order Fagales characterized by stipulate leaves, seeds without endosperm, and by being monoecious with female flowers mostly in catkins.

betula oil *See* methyl salicylate.

betulinic acid [ORG CHEM] $C_{30}H_{48}O_3$ A dibasic acid, slightly soluble in water, ethyl alcohol, and acetone.

between decks [NAV ARCH] **1.** The space beneath the main deck of a ship. **2.** A deck beneath the main deck; in particular, a raised deck in a cargo ship's hold.

betwixt mountains *See* median mass.

Betz cell [HISTOL] Any of the large conical cells composing the major histological feature of the precentral motor cortex in humans.

Betz momentum theory [MECH ENG] A theory of windmill performance that considers the deceleration in the air traversing the windmill disk.

beudantite [MINERAL] $PbFe_3(AsO_4)(SO_4)(OH)_6$ A black, dark green, or brown, hexagonal mineral consisting of a basic sulfate-arsenate of lead and ferric iron; occurs as rhombohedral crystals.

BeV [PHYS] A billion (10^9) electron volts, a unit used in the United States; international unit is GeV (giga electron volts), which has the same value.

Bevatron [NUCLEO] Name of the 6-GeV proton synchrotron at the University of California at Berkeley.

bevel [DES ENG] **1.** The angle between one line or surface and another line or surface, or the horizontal, when this angle is not a right angle. **2.** A sloping surface or line. [GRAPHICS] An instrument composed of two rules joined together, opening to any angle, which is used to draw angles and measure and lay off bevels.

bevel gear [MECH ENG] One of a pair of gears used to connect two shafts whose axes intersect.

beveling [GEOL] Planing by erosion of the outcropping edges of strata. [MECH ENG] *See* chamfering.

Beveloid gear [DES ENG] An involute gear, of the Vinco Corporation, with tapered outside diameter, root diameter, and tooth thickness; used to reduce backlash in the drives of precision instruments.

Beverage antenna *See* wave antenna.

beyerite [MINERAL] $(Ca,Pb)Bi_2(CO_3)_2O_2$ A bright yellow to lemon yellow, tetragonal mineral consisting of bismuth and calcium carbonate; occurs as thin plates and compact earthy masses.

beyond-the-horizon communication *See* scatter propagation.

Beyrichacea [PALEON] A superfamily of extinct ostracods in the suborder Beyrichicopina.

Beyrichicopina [PALEON] A suborder of extinct ostracods in the order Paleocopa.

Beyrichiidae [PALEON] A family of extinct ostracods in the superfamily Beyrichacea.

bezel [DES ENG] **1.** A grooved rim used to hold a transparent glass or plastic window or lens for a meter, tuning dial, or some other indicating device. **2.** A sloping face on a cutting tool. [LAP] The oblique face of a cut gem, between the table and the girdle.

BFO *See* beat-frequency oscillator.

BFS *See* beam-foil spectroscopy.

B girdle [PETR] A circular pattern in petrofabric diagrams that indicates a B axis.

BHA *See* butylated hydroxy anisole.

Bhabha scattering [PARTIC PHYS] Scattering of positrons by electrons.

BHC *See* 1,2,3,4,5,6-hexachlorocyclohexane.

B-H curve [ELECTROMAG] A graphical curve showing the relation between magnetic induction B and magnetizing force H for a magnetic material. Also known as magnetization curve.

B-H meter [ENG] A device used to measure the intrinsic hysteresis loop of a sample of magnetic material.

B horizon [GEOL] The zone of accumulation in soil below the A horizon (zone of leaching). Also known as illuvial horizon; subsoil; zone of accumulation; zone of illuviation.

bhp *See* boiler horsepower; brake horsepower.

BHT *See* butylated hydroxytoluene.

Bi *See* abampere; bismuth.

biacetyl *See* diacetyl.

Bial's test [PATH] A test for the presence of a pentose in urine, utilizing oracin, hydrochloric acid, and ferric chloride; a green color or green precipitate indicates pentose.

biamperometry [ANALY CHEM] Amperometric titration that uses two polarizing or indicating electrodes to detect the end point of a redox reaction between the substance being titrated and the titrant.

Bianchi identity [MATH] A differential identity satisfied by the Riemann curvature tensor: the antisymmetric first covariant derivative of the Riemann tensor vanishes identically.

bianchite [MINERAL] $(Fe,Zn)SO_4 \cdot 6H_2O$ A white, monoclinic mineral consisting of iron and zinc sulfate hexahydrate; occurs in crusts of indistinct crystals.

bias [ELEC] **1.** A direct-current voltage used on signaling or telegraph relays or electromagnets to secure desired time spacing of transitions from marking to spacing. **2.** The restraint of a relay armature by spring tension to secure a desired time spacing of transitions from marking to spacing. **3.** The effect on teleprinter signals produced by the electrical characteristics of the line and equipment. **4.** The force applied to a relay to hold it in a given position. [ELECTR] **1.** A direct-current voltage applied to a transistor control electrode to establish the desired operating point. **2.** *See* grid bias. [STAT] In estimating the value of a parameter of a probability distribution, the difference between the expected value of the estimator and the true value of the parameter.

bias cell [ELECTR] A small dry cell used singly or in series to provide the required negative bias for the grid circuit of an electron tube. Also known as grid-bias cell.

bias current [ELECTR] **1.** An alternating electric current above about 40,000 hertz added to the audio current being recorded on magnetic tape to reduce distortion. **2.** An electric current flowing through the base-emitter junction of a transistor and adjusted to set the operating point of the transistor.

bias distortion [COMMUN] *See* bias telegraph distortion. [ELECTR] Distortion resulting from the operation on a nonlinear portion of the characteristic curve of a vacuum tube or other device, due to improper biasing.

biased automatic gain control *See* delayed automatic gain control.

biased statistic [STAT] A statistic whose expected value, as obtained from a random sampling, does not equal the parameter or quantity being estimated.

bias error [STAT] A measurement error that remains constant in magnitude for all observations; a kind of systematic error.

bias meter [COMMUN] A meter used in teletypewriter work for measuring signal bias directly in percent; a positive reading indicates a marking signal bias; a negative reading, a spacing signal bias.

bias oscillator [ELECTR] An oscillator used in a magnetic recorder to generate the alternating-current signal that is added to the audio current being recorded on magnetic tape to reduce distortion.

bias resistor [ELECTR] A resistor used in the cathode or grid circuit of an electron tube to provide a voltage drop that serves as the bias.

bias telegraph distortion [COMMUN] A distortion that causes telegraph mark-and-space pulses to be lengthened or shortened; often caused by changes in the amplitude of incoming pulses. Also known as bias distortion; spacing bias.

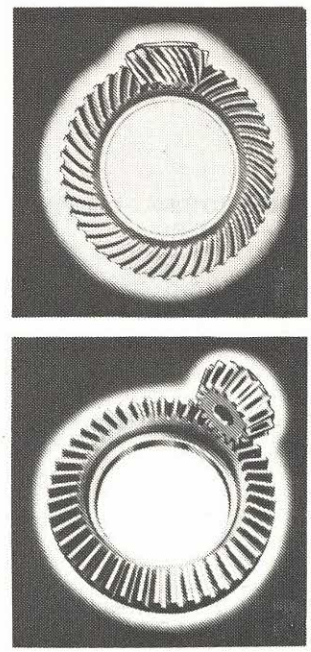
bias voltage [ELECTR] A voltage applied or developed between two electrodes as a bias.

bias winding [ELEC] A control winding that carries a steady direct current which serves to establish desired operating conditions in a magnetic amplifier or other magnetic device.

biaxial crystal [CRYSTAL] A crystal of low symmetry in which the index ellipsoid has three unequal axes.

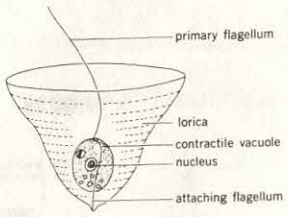
biaxial indicatrix [CRYSTAL] An ellipsoid whose three axes

BEVEL GEAR



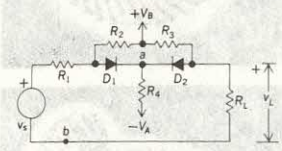
Types of bevel gears. *(Gleason Gear Works)*

BICOSOECIDA



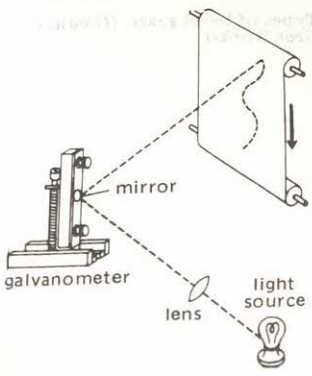
A bicosoecid, *Codomonas annulata.*

BIDIRECTIONAL CLIPPING CIRCUIT



Circuit diagram of bidirectional clipping obtained by connecting two diodes.

BIFILAR ELECTROMAGNETIC OSCILLOGRAPH



Bifilar electromagnetic oscillograph with light-beam, photographic-film recorder. *(General Electric Co.)*

at right angles to each other are proportional to the refractive indices of a biaxial crystal.

biaxial stress [MECH] The condition in which there are three mutually perpendicular principal stresses; two act in the same plane and one is zero.

Biazzi process [CHEM ENG] A continuous-flow process for the nitration of glycerin to nitroglycerin; also used to produce glycol dinitrate and diethylene glycol nitrate.

bibb cock *See* bibcock.

bibcock [DES ENG] A faucet or stopcock whose nozzle is bent downward. Also spelled bibb cock.

bibenzyl [ORG CHEM] $C_{14}H_{14}$ A hydrocarbon consisting of two benzene rings attached to ethane. Also known as dibenzyl.

Bibionidae [INV ZOO] The March flies, a family of orthorrhaphous dipteran insects in the series Nematocera.

bibliophobia [PSYCH] An abnormal fear of books.

bicable tramway [MECH ENG] A tramway consisting of two stationary cables on which the wheeled carriages travel, and an endless rope, which propels the carriages.

bicameral [BIOL] Having two chambers, as the heart of a fish.

bicapsular [BIOL] **1.** Having two capsules. **2.** Having a capsule with two locules.

bicarbonate [INORG CHEM] A salt obtained by the neutralization of one hydrogen in carbonic acid.

bicarinate [BIOL] Having two keellike projections.

bicaudal [ZOO] Having two tails.

bicellular [BIOL] Having two cells.

bicephalous [ZOO] Having two heads.

biceps [ANAT] **1.** A bicipital muscle. **2.** The large muscle of the front of the upper arm that flexes the forearm; biceps brachii. **3.** The thigh muscle that flexes the knee joint and extends the hip joint; biceps femoris.

bichloride of mercury *See* mercuric chloride.

biciliate [BIOL] Having two cilia.

bicipital [ANAT] **1.** Pertaining to muscles having two origins. **2.** Pertaining to ribs having double articulation with the vertebrae. [BOT] Having two heads or two supports.

bicipital groove *See* intertubercular sulcus.

bicipital tuberosity [ANAT] An eminence on the anterior inner aspect of the neck of the radius; the tendon of the biceps muscle is inserted here.

bicolorin *See* esculin.

bicompact set *See* compact set.

bicomponent fiber [TEXT] A fiber manufactured from two different polymers by spinning and joining them in a simultaneous process from one spinneret. Also known as conjugate fiber.

biconcave lens *See* double concave lens.

biconditional gate *See* equivalence gate.

biconical antenna [ELECTROMAG] An antenna consisting of two metal cones having a common axis with their vertices coinciding or adjacent and with coaxial-cable or waveguide feed to the vertices.

biconnected graph [MATH] A connected graph in which two points must be removed to disconnect the graph.

biconstituent fiber [TEXT] A manufactured fiber composed of two or more dissimilar fibers combined before the extrusion process. Also known as matrix fiber.

bicontinuous function *See* homeomorphism.

biconvex lens *See* double convex lens.

bicornuate uterus [ANAT] A uterus with two horn-shaped processes on the superior aspect.

Bicosoecida [INV ZOO] An order of colorless, free-living protozoans, each member having two flagella, in the class Zoomastigophorea.

bicostate [BOT] Of a leaf, having two principal longitudinal ribs.

bicuspid [ANAT] Any of the four double-pointed premolar teeth in man. [BIOL] Having two points or prominences.

bicyclic compound [ORG CHEM] A compound having two rings which share a pair of bridgehead carbon atoms.

bid [ENG] An estimate of costs for specified construction, equipment, or services proposed to a customer company by one or more supplier or contractor companies.

bidalotite *See* anthophyllite.

Bidder's organ [VERT ZOO] A structure in the males of some toad species that may develop into an ovary in older individuals.

bidentate [BIOL] Having two teeth or teethlike processes.

bidentate ligand [INORG CHEM] A chelating agent having two groups capable of attachment to a metal ion.

bidirectional [ENG] Being directionally responsive to inputs in opposite directions.

bidirectional antenna [ELECTROMAG] An antenna that radiates or receives most of its energy in only two directions.

bidirectional clamping circuit [ELECTR] A clamping circuit that functions at the prescribed time irrespective of the polarity of the signal source at the time the pulses used to actuate the clamping action are applied.

bidirectional clipping circuit [ELECTR] An electronic circuit that prevents transmission of the portion of an electrical signal that exceeds a prescribed maximum or minimum voltage value.

bidirectional counter *See* forward-backward counter.

bidirectional microphone [ENG ACOUS] A microphone that responds equally well to sounds reaching it from the front and rear, corresponding to sound incidences of 0 and 180°.

bidirectional pulse-amplitude modulation *See* double-polarity pulse-amplitude modulation.

bidirectional transducer [ELECTR] A transducer capable of measuring in both positive and negative directions from a reference position. Also known as bilateral transducer.

bidirectional transistor [ELECTR] A transistor that provides switching action in either direction of signal flow through a circuit; widely used in telephone switching circuits.

bidirectional triode thyristor [ELECTR] A gate-controlled semiconductor switch designed for alternating-current power control.

bieberite [MINERAL] $CoSO_4 \cdot 7H_2O$ A rose red or flesh red, monoclinic mineral consisting of cobalt sulfate heptahydrate; occurs as crusts and stalactites.

Biebrich red *See* scarlet red.

Biedenharn identity [NUC PHYS] A relationship among the six-*j* symbols of Wigner.

Biela Comet [ASTRON] A comet seen in 1852 at one perihelion passage; presumed to have separated into two bodies.

Bielids *See* Andromedids.

Bienayme-Chebyshev inequality [STAT] The probability that the magnitude of the difference between the mean of the sample values of a random variable and the mean of the variable is less than st, where s is the standard deviation and t is any number greater than 1, is equal to or greater than $1 - (1/t^2)$.

biennial plant [BOT] A plant that requires two growing seasons to complete its life cycle.

Bierbaum scratch hardness test [ENG] A test for the hardness of a solid sample by microscopic measurement of the width of scratch made by a diamond point under preset pressure.

biface tool [DES ENG] A tool, as an ax, made from a coil flattened on both sides to form a V-shaped cutting edge.

bifacial [BOT] Of a leaf, having dissimilar tissues on the upper and lower surfaces. [DES ENG] Of a tool, having both sides alike.

bifanged [ANAT] Of a tooth, having two roots.

bifenox [ORG CHEM] $C_{14}H_9Cl_2NO_5$ A tan, crystalline compound with a melting point of 84–86°C; insoluble in water, used as a preemergence herbicide for weed control in soybeans, corn, and sorghum, and as a pre- and postemergence herbicide in rice and small greens. Also known as methyl 5-(2′,4′-dichlorophenoxy)-2-nitrobenzoate.

bifid [BIOL] Divided into two equal parts by a median cleft.

Bifidobacterium [MICROBIO] A genus of bacteria in the family Actinomycetaceae; branched, bifurcated, club-shaped or spatulate rods forming smooth microcolonies; metabolism is saccharoclastic.

bifilar electromagnetic oscillograph [ELECTROMAG] A writing low-frequency light-beam oscillograph usually using a moving coil with a single U-shaped turn (bifilar type).

bifilar electrometer [ENG] An electrostatic voltmeter in which two conducting quartz fibers, stretched by a small weight or spring, are separated by their attraction in opposite directions toward two plate electrodes carrying the voltage to be measured.

bifilar micrometer *See* filar micrometer.

bifilar resistor [ELEC] A resistor wound with a wire doubled back on itself to reduce the inductance.

bifilar suspension [ENG] The suspension of a body from two parallel threads, wires, or strips.

bifilar transformer [ELEC] A transformer in which wires for the two windings are wound side by side to give extremely tight coupling.

bifilar winding [ELEC] A winding consisting of two insulated wires, side by side, with currents traveling through them in opposite directions.

biflabellate [INV ZOO] The shape of certain insect antennae, characterized by short joints with long, flattened processes on opposite sides.

biflagellate [BIOL] Having two flagella.

bifluoride [INORG CHEM] An acid fluoride whose formula has the form MHF_2, such as sodium bifluoride, $NaHF_2$.

bifocal lens [OPTICS] **1.** A lens with two parts having different focal lengths. **2.** In particular, an eyeglass lens having one part that corrects for distant vision and one part for near vision.

bifoliate [BOT] Two-leaved.

biforate [BIOL] Having two perforations.

bifurcated contact [ELEC] A contact having a forked shape such that it can slide over and interlock with an identical mating contact.

bifurcation [SCI TECH] **1.** Division into two branches, parts, or aspects. **2.** Point at which division occurs.

bifurcation buoy [NAV] A red and black horizontally banded buoy used to mark the point at which a channel divides into two branches when proceeding from seaward.

bifurcation ratio [HYD] The ratio of number of stream segments of one order to the number of the next higher order.

big bang theory [ASTRON] A theory of the origin and evolution of the universe which holds that approximately 2×10^{10} years ago all the matter in the universe was packed into a small agglomeration of extremely high density and temperature which exploded, sending matter in all directions and giving rise to the expanding universe. Also known as superdense theory.

big bud [PL PATH] **1.** A parasitic disease of currants caused by a gall mite (*Eriophyes ribis*) and characterized by abnormal swelling of the buds. **2.** A virus disease of the tomato characterized by swelling of the buds.

big crunch [ASTRON] A singularity at the origin of a black hole into which all the matter and radiation in a closed universe would eventually collapse.

Big Dipper [ASTRON] A group of stars that is part of the constellation Ursa Major. Also known as Charles' wain.

bigeminal pulse [PHYSIO] A pulse that is characterized by a double impulse produced by coupled heartbeats, that is, an extra heartbeat occurs just after the normal beat.

Big Four [ASTRON] A group of large asteroids including Ceres, Pallas, Vesta, and Juno, the first four that were discovered.

bight [GEOL] **1.** A long, gradual bend or recess in the coastline which forms a large, open receding bay. **2.** A bend in a river or mountain range. [OCEANOGR] An indentation in shelf ice, fast ice, or a floe.

big inch pipe [PETRO ENG] A pipeline 24 inches (61 centimeters) in diameter which carries oil or gas, usually for great distances.

big M method [COMPUT SCI] A technique for solving linear programming problems in which artificial variables are assigned cost coefficients which are a very large number M, say, $M = 10^{35}$.

Bignoniaceae [BOT] A family of dicotyledonous trees or shrubs in the order Scrophulariales characterized by a corolla with mostly five lobes, mature seeds with little or no endosperm and with wings, and opposite or whorled leaves.

big vein [PL PATH] A soil-borne virus disease of lettuce characterized by enlargement and yellowing of the leaf veins.

bigwoodite [PETR] A medium-grained plutonic rock consisting of microcline, microcline-microperthite, sodic plagioclase, and hornblende, aegirine-augite, or biotite.

biharmonic function [MATH] A solution to the partial differential equation $\Delta^2 u(x,y,z) = 0$, where Δ is the Laplacian operator; occurs frequently in problems in electrostatics.

bijection [MATH] A mapping f from a set A onto a set B which is both an injection and a surjection; that is, for every element b of B there is a unique element a of A for which $f(a) = b$. Also known as bijective mapping.

bijective mapping *See* bijection.

bijugate [BOT] Of a pinnate leaf, having two pairs of leaflets.

bilabial [ANTHRO] Distance between the highest point on the upper lip and lowest point on the lower lip.

bilabiate [BOT] Having two lips, such as certain corollas.

bilateral [BIOL] Of or relating to both right and left sides of an area, organ, or organism. [ELECTR] Having a voltage current characteristic curve that is symmetrical with respect to the origin.

bilateral amplifier [ELECTR] An amplifier capable of receiving as well as transmitting signals; used primarily in transceivers.

bilateral antenna [ELECTROMAG] An antenna having maximum response in exactly opposite directions, 180° apart, such as a loop.

bilateral circuit [ELEC] Circuit wherein equipment at opposite ends is managed, operated, and maintained by different services.

bilateral cleavage [EMBRYO] The division pattern of a zygote that results in a bilaterally symmetrical embryo.

bilateral hermaphroditism [ZOO] The presence of an ovary and a testis on each side of the animal body.

bilateral Laplace transform [MATH] A generalization of the Laplace transform in which the integration is done over the negative real numbers as well as the positive ones.

bilateral observation [ORD] System for determining deviation of impacts or bursts from the target by using two instruments and observers located at a distance from each other.

bilateral symmetry [BIOL] Symmetry such that the body can be divided by one median, or sagittal, dorsoventral plane into equivalent right and left halves, each a mirror image of the other.

bilateral tolerance [DES ENG] The amount that the size of a machine part is allowed to vary above or below a basic dimension; for example, 3.650 ± 0.003 centimeters indicates a tolerance of $\pm$ 0.003 centimeter.

bilateral transducer *See* bidirectional transducer.

Bilateria [ZOO] A major division of the animal kingdom embracing all forms with bilateral symmetry.

bilayer [CHEM] A layer two molecules thick, such as that formed on the surface of the aqueous phase by phospholipids in aqueous solution.

bile [PHYSIO] An alkaline fluid secreted by the liver and delivered to the duodenum to aid in the emulsification, digestion, and absorption of fats. Also known as gall.

bile acid [BIOCHEM] Any of the liver-produced steroid acids, such as taurocholic acid and glycocholic acid, that appear in the bile as sodium salts.

bile duct [ANAT] Any of the major channels in the liver through which bile flows toward the hepatic duct.

bile pigment [BIOCHEM] Either of two colored organic compounds found in bile: bilirubin and biliverdin.

bile salt [BIOCHEM] The sodium salt of glycocholic and taurocholic acids found in bile.

bilge [NAV ARCH] **1.** Part of the underwater body of a ship between the flat of the bottom and the straight vertical sides. **2.** Internally, the lowest part of the hull, next to the keelson.

bilge block [CIV ENG] A wooden support under the turn of a ship's bilge in dry dock.

bilge board [NAV ARCH] **1.** A wood or metal board that slides in a case like a centerboard, but is built into each bilge of a ship. **2.** *See* limber board.

bilge keel [NAV ARCH] A keel extending outside of the hull and fastened along a ship near the turn of the bilge to reduce rolling. Also known as rolling chock.

bilge keelson [NAV ARCH] A keelson close to the turn of the bilge.

bilge pump [NAV ARCH] A pump to remove water that collects in the bottom of a ship.

bilge water [NAV ARCH] Water that builds up in a ship's bilges.

biliary atresia [MED] Failure of the bile ducts to develop in the embryo.

biliary cirrhosis [MED] A progressive inflammatory disease of the liver due to obstruction of bile ducts.

biliary colic [MED] Severe abdominal pain caused by passage of a gallstone through the bile ducts into the duodenum.

biliary diskinesia [MED] A functional spasticity of the sphincter of Oddi with disturbances in the speed of evacuation of the biliary tract.

biliary system [ANAT] The complex of canaliculi, or microscopic bile ducts, that empty into the larger intrahepatic bile ducts.

bilicyanin [BIOCHEM] A blue pigment found in gallstones; an oxidation product of biliverdin or bilirubin.

bilification [PHYSIO] Formation and excretion of bile.

bilinear concomitant [MATH] An expression $B(u,v)$, where u, v are functions of x, satisfying $vL(u) - uL(v) = (d/dx)B(u,v)$, where L, L are given adjoint differential equations.

bilinear expression [MATH] An expression which is linear in each of two variables separately.

bilinear transformations *See* Möbius transformations.

bilinite [MINERAL] $Fe^{2}Fe_{2}^{3}(SO_4)_4 \cdot 22H_2O$ A white to yellowish mineral consisting of a hydrated sulfate of divalent and trivalent iron; occurs in radial-fibrous aggregates.

biliprotein [BIOCHEM] The generic name for the organic compounds in certain algae that are composed of phycobilin and a conjugated protein.

bilirubin [BIOCHEM] $C_{33}H_{36}N_4O_6$ An orange, crystalline pigment occurring in bile; the major metabolic breakdown product of heme.

bilirubinemia [MED] The presence of bilirubin in the blood.

biliverdin [BIOCHEM] $C_{33}H_{34}N_4O_6$ A green, crystalline pigment occurring in the bile of amphibians, birds, and humans; oxidation product of bilirubin in humans.

bill [DES ENG] One blade of a pair of scissors. [INV ZOO] A flattened portion of the shell margin of the broad end of an oyster. [NAV ARCH] The point at the end of an anchor fluke. [VERT ZOO] The jaws, together with the horny covering, of a bird. [ZOO] Any jawlike mouthpart.

billboard array [ELECTROMAG] A broadside antenna array consisting of stacked dipoles spaced 1/4 to 3/4 wavelength apart in front of a large sheet-metal reflector. Also known as bedspring array; mattress array.

billet [ENG] In a hydraulic extrusion press, a large cylindrical cake of plastic material placed within the pressing chamber. [MET] A semifinished, short, thick bar of iron or steel in the form of a cylinder or rectangular prism produced from an ingot; limited to 1.5 inches (3.8 centimeters) in width and thickness with a cross-sectional area up to 36 square inches (232 square centimeters).

Billet furnace [MET] A furnace for heating steel in sizes between a bloom and a bar.

billet mill [MET] A rolling mill for making billets from ingots.

Billet split lens [OPTICS] A lens cut into two halves, along the optic axis; used in interferometry.

billiard cloth [TEXT] A heavy-weight wool fabric with a smooth, even surface; used on billiard tables.

billibit *See* gigabit.

Billingsellacea [PALEON] A group of extinct articulate brachiopods in the order Orthida.

billion [MATH] **1.** The number 10^9. **2.** In British usage, the number 10^{12}.

billow cloud [METEOROL] Broad, nearly parallel lines of cloud oriented normal to the wind direction, with cloud bases near an inversion surface. Also known as undulatus.

bilobate [BIOL] Divided into two lobes.

bilobular [BIOL] Having two lobules.

bilocular [BIOL] Having two cells or compartments.

bilophodont [ZOO] Having two transverse ridges, as the molar teeth of certain animals.

bimaceral [GEOL] A coal microlithotype that consists of a mixture of two macerals.

bimag core *See* bistable magnetic core.

Bimat film [GRAPHICS] A polyester transfer film, by Kodak Company, coated with gelatin containing physical development nuclei; it is soaked in solvent developer and rolled up in contact with an exposed roll of film, which it develops to a negative, while a positive can be produced on the Bimat film.

bimaxillary [ANTHRO] Pertaining to the distance between the lower margins of the sutures of the maxilla and malar bones. [ZOO] Pertaining to the two halves of the maxilla.

bimetal [MATER] A laminate of two dissimilar metals, with different coefficients of thermal expansion, bonded together.

bimetallic corrosion [MET] Corrosion of two different metals exposed to an electrolyte while in electrical contact.

bimetallic plate [GRAPHICS] Printing plate in planographic printing composed of two metals; one rejects ink, the other does not.

bimetallic strip [ENG] A strip formed of two dissimilar metals welded together; different temperature coefficients of expansion of the metals cause the strip to bend or curl when the temperature changes.

bimetallic thermometer [ENG] A temperature-measuring instrument in which the differential thermal expansion of thin, dissimilar metals, bonded together into a narrow strip and coiled into the shape of a helix or spiral, is used to actuate a pointer. Also known as differential thermometer.

bimolecular [CHEM] Referring to two molecules.

bimolecular reaction [CHEM] A chemical transformation or change involving two molecules.

bimorph cell [ELECTR] Two piezoelectric plates cemented together in such a way that an applied voltage causes one to expand and the other to contract so that the cell bends in proportion to the applied voltage; conversely, applied pressure generates double the voltage of a single cell; used in phonograph pickups and microphones.

bin [COMPUT SCI] A magnetic-tape memory in which a number of tapes are stored in a single housing. [ENG] An enclosed space, box, or frame for the storage of bulk substance.

binapacryl [ORG CHEM] $C_{15}H_{18}O_6N_2$ A light tan solid with a melting point of 68–69°C; insoluble in water; used for powdery mildew and for mites on fruits.

binary [COMPUT SCI] Possessing a property for which there exists two choices or conditions, one choice excluding the other. [SCI TECH] Composed of or characterized by two parts or elements.

binary alloy [MET] An alloy composed of two principal metallic components.

binary arithmetic operation [COMPUT SCI] An arithmetical operation in which the operands are in the form of binary numbers. Also known as binary operation.

binary cell [COMPUT SCI] An elementary unit of computer storage that can have one or the other of two stable states and can thus store one bit of information.

binary chain [COMPUT SCI] A series of binary circuit elements so arranged that each can change the state of the one following it.

binary code [COMPUT SCI] A code in which each allowable position has one of two possible states, commonly 0 and 1; the binary number system is one of many binary codes.

binary coded character [COMPUT SCI] One element of a notation system representing alphanumeric characters such as decimal digits, alphabetic letters, and punctuation marks by a predetermined configuration of consecutive binary digits.

binary coded decimal system [COMPUT SCI] A system of number representation in which each digit of a decimal number is represented by a binary number. Abbreviated BCD system.

binary coded decimal-to-decimal converter [COMPUT SCI] A computer circuit which selects one of ten outputs corresponding to a four-bit binary coded decimal input, placing it in the 0 state and the other nine outputs in the 1 state.

binary coded octal system [COMPUT SCI] Octal numbering system in which each octal digit is represented by a three-place binary number.

binary compound [CHEM] A compound that has two elements; it may contain two or more atoms; examples are KCl and $AlCl_3$.

binary counter *See* binary scaler.

binary dump [COMPUT SCI] The operation of copying the contents of a computer memory in binary form onto an external storage device.

binary encoder [ELECTR] An encoder that changes angular, linear, or other forms of input data into binary-coded output.

binary encounter approximation [ATOM PHYS] An approximation for predicting the probability that an incident proton will eject an inner shell electron from an atom; it uses a semiclassical treatment of momentum transfer from the incident proton to the ejected electron.

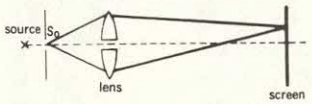
binary explosive [MATER] A high explosive composed of a mixture of two high explosives, to secure an explosive which is superior to its components in regard to sensitivity, fragmentation, blast, or loadability.

binary fission [BIOL] A method of asexual reproduction accomplished by the splitting of a parent cell into two equal, or nearly equal, parts, each of which grows to parental size and form.

binary granite [PETR] **1.** A granite made up of quartz and feldspar. **2.** A granite containing muscovite mica and biotite.

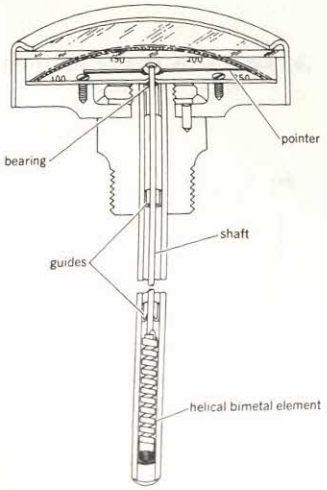
binary image [COMPUT SCI] A representation in a computer storage device of each of the holes in a punch card or paper tape (for example, by indicating the places where there are holes with a 1 and the places where there are no holes with a 0), to be differentiated from the characters represented by the combinations of holes.

BILLET SPLIT LENS



Billet split-lens interference.

BIMETALLIC THERMOMETER



Cutaway view of bimetallic thermometer. *(Weston Instruments, Division of Daystrom, Inc.)*

binary incremental representation [COMPUT SCI] A type of incremental representation in which the value of change in a variable is represented by one binary digit which is set equal to 1 if there is an increase in the variable and to 0 if there is a decrease.

binary loader [COMPUT SCI] A computer program which transfers to main memory an exact image of the binary pattern of a program held in a storage or input device.

binary logic [ELECTR] An assembly of digital logic elements which operate with two distinct states.

binary magnetic core [SOLID STATE] A ferromagnetic core that can be made to take either of two stable magnetic states.

binary notation *See* binary number system.

binary number [MATH] A number expressed in the binary number system of positional notation.

binary number system [MATH] A representation for numbers using only the digits 0 and 1 in which successive digits are interpreted as coefficients of successive powers of the base 2. Also known as binary notation; binary system.

binary operation [COMPUT SCI] *See* binary arithmetic operation. [MATH] A rule for combining two elements of a set to obtain a third element of that set, for example, addition and multiplication.

binary phase-shift keying [COMMUN] Keying of binary data or Morse code dots and dashes by $\pm 90°$ phase deviation of the carrier. Abbreviated BPSK.

binary point [COMPUT SCI] The character, or the location of an implied symbol, that separates the integral part of a numerical expression from its fractional part in binary notation.

binary pulsar [ASTRON] A pulsar which forms one component of a binary star.

binary row [COMPUT SCI] Pertaining to the binary representation of data on punched cards in which adjacent positions in a row correspond to adjacent bits of the data.

binary scaler [ELECTR] A scaler that produces one output pulse for every two input pulses. Also known as binary counter; scale-of-two circuit.

binary search [COMPUT SCI] A dichotomizing search in which the set of items to be searched is divided at each step into two equal, or nearly equal, parts.

binary separation [CHEM ENG] Separation by distillation or solvent extraction of a fully miscible liquid mixture of two chemical compounds.

binary signal [ELECTR] A voltage or current which carries information by varying between two possible values, corresponding to 0 and 1 in the binary system.

binary star [ASTRON] A pair of stars located sufficiently near each other in space to be connected by the bond of mutual gravitational attraction, compelling them to describe an orbit around their common center of gravity. Also known as binary system.

binary system [ASTRON] *See* binary star. [ENG] Any system containing two principal components. [MATH] *See* binary number system.

binary-to-decimal conversion [MATH] The process of converting a number written in binary notation to the equivalent number written in ordinary decimal notation.

binary tree [MATH] A rooted tree in which each vertex has a maximum of two successors.

binary weapon [ORD] A weapon that operates by storing less-than-lethal chemicals in separate compartments of a projectile; the wall between the compartments breaks after the munition is fired, allowing the chemicals to combine in a lethal mixture.

binary word [COMPUT SCI] A group of bits which occupies one storage address and is treated by the computer as a unit.

binate [BOT] Growing in pairs.

binaural [ACOUS] Pertaining to sound that reaches the listener over two paths, to give the effect of auditory perspective.

binaural hearing [PHYSIO] The perception of sound by stimulation of two ears.

binaural intensity effect [ACOUS] The relationship wherein, if sound of the same frequency and phase is incident at both ears, the angle between the apparent direction of the sound and the median plane of the line joining the ears is proportional to the logarithm of the ratio of the intensities of sound received at the left and right ears.

binaural phase effect [ACOUS] A displacement in the apparent direction of a sound that results when a difference in phase is introduced between otherwise identical sound signals applied to the two ears; the angular displacement from the median plane is proportional to the phase difference.

binaural sound [ACOUS] The sound resulting from a reproduction system which has two channels, each fed into a different earphone or loudspeaker, so that a listener hears sounds coming from their original directions (with reference to the separated microphones used in recording the original sounds).

binche lace [TEXT] A durable, firm bobbin lace which has a mesh background interspersed with appliqued simple snowflake motifs.

binder [MATER] A resin or other cementlike material used to hold particles together and provide mechanical strength or to ensure uniform consistency, solidification, or adhesion to a surface coating; typical binders are resin, glue, gum, and casein.

binder course [CIV ENG] Coarse aggregate with a bituminous binder between the foundation course and the wearing course of a pavement.

binderless briquetting [ENG] The briquetting of coal by the application of pressure without the addition of a binder.

bindheimite [MINERAL] $Pb_2Sb_2O_6(O,OH)$ A hydrous lead antimonate mineral produced from natural oxidation of jamesonite; found in Nevada.

B indicator *See* B scope.

binding coal *See* caking coal.

binding energy [PHYS] Abbreviated BE. Also known as total binding energy (TBE). **1.** The net energy required to remove a particle from a system. **2.** The net energy required to decompose a system into its constituent particles.

binding post [ELEC] A manually turned screw terminal used for making electrical connections.

binding site *See* active site.

binding time [COMPUT SCI] The instant when a symbolic expression in a computer program is reduced to a form which is directly interpretable by the hardware.

bind-seize *See* freeze.

Binet age [PSYCH] An individual's mental age as determined by the Binet-Simon intelligence scale.

Binet's formula [PSYCH] The premise that children under 9 years of age whose mental development is retarded by 2 years are probably mentally deficient, and children of 9 years or older retarded by 3 years are definitely deficient.

Binet-Simon intelligence scale [PSYCH] Test for determining the relative mental development of children between 3 and 12 years of age; results are expressed as an intelligence quotient, the ratio of mental to chronological age.

Bingham number [FL MECH] A dimensionless number used to study the flow of Bingham plastics.

Bingham plastic [FL MECH] A non-Newtonian fluid exhibiting a yield stress which must be exceeded before flow starts; thereafter the rate-of-shear versus shear stress curve is linear.

bing ore [GEOL] The purest lead ore, with the largest crystals of galena.

binistor [ELECTR] A silicon *npn* tetrode that serves as a bistable negative-resistance device.

binnacle [NAV ARCH] A stand, case, or box for a ship's magnetic compass, which may contain nonmagnetic gear such as a lamp.

binocular [BIOL] **1.** Of, pertaining to, or used by both eyes. **2.** Of a type of visual perception which provides depth-of-field focus due to angular difference between the two retinal images. [OPTICS] Any optical instrument designed for use with both eyes to give enhanced views of distant objects, whose distinguishing performance feature is the depth perception obtainable.

binocular accommodation [PHYSIO] Automatic lens adjustment by both eyes simultaneously for focusing on distant objects.

binocular microscope [OPTICS] A microscope having two oculars, allowing the use of both eyes at once.

binode [ELECTR] An electron tube with two anodes and one cathode used as a full-wave rectifier. Also known as double diode.

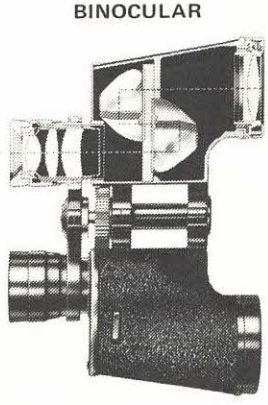
binomen [SYST] A binomial name assigned to species, as *Canis familiaris* for the dog.

binomial [MATH] A polynomial with only two terms.

binomial array *See* Pascal triangle.

binomial array antenna [ELECTROMAG] Directional anten-

BINOCULAR



Modern prism binocular. *(Bausch and Lomb Optical Co.)*

na array for reducing minor lobes and providing maximum response in two opposite directions.

binomial coefficient [MATH] A coefficient in the expansion of $(x+y)_n$, where n is a positive integer; the $(k+1)$st coefficient is equal to the number of ways of choosing k objects out of n without regard for order. Symbolized $\binom{n}{k}$; ${}_nC_k$; $C(n,k)$; $C\ {}^n_k$.

binomial differential [MATH] A differential of the form $x^p(a + bx^q)^r dx$, where p, q, r are integers.

binomial distribution [STAT] The distribution of a binomial random variable; the distribution (n,p) is given by $P(B = r) = \binom{n}{r} p^r q^{n-r}$, $p+q = 1$. Also known as Bernoulli distribution.

binomial equation [MATH] An equation of the form $x^n - a = 0$.

binomial expansion *See* binomial series.

binomial law [MATH] The probability of an event occurring r times in n Bernoulli trials is equal to $\binom{n}{r} p^r(1-p)^{n-r}$, where p is the probability of the event.

binomial nomenclature [SYST] The Linnean system of classification requiring the designation of a binomen, the genus and species name, for every species of plant and animal.

binomial series [MATH] The expansion of $(x + y)^n$ when n is neither a positive integer nor zero. Also known as binomial expansion.

binomial surd [MATH] A polynomial having two terms, at least one of which is a surd.

binomial theorem [MATH] The rule for expanding $(x+y)^n$.

binomial trials [STAT] A sequence of trials, on each trial of which a certain result may or may not happen.

binomial trials model [STAT] A product model in which each factor has two simple events with probabilities p and $q = 1 - p$.

binormal [MATH] A vector on a curve at a point so that, together with the positive tangent and principal normal, it forms a system of right-handed rectangular cartesian axes.

binuclear [CYTOL] Having two nuclei.

binucleolate [CYTOL] Having two nucleoli.

bioacoustics [BIOL] The study of the relation between living organisms and sound.

bioassay [ANALY CHEM] A method for quantitatively determining the concentration of a substance by its effect on the growth of a suitable animal, plant, or microorganism under controlled conditions.

bioastronautics [BIOL] The study of biological, behavioral, and medical problems pertaining to astronautics.

bioautography [ANALY CHEM] A bioassay based upon the ability of some compounds (for example, vitamin B_{12}) to enhance the growth of some organisms or compounds and to repress the growth of others; used to assay certain antibiotics.

biobubble [ECOL] A model concept of the ecosphere in which all living things are considered as particles held together by nonliving forces.

biocatalyst [BIOCHEM] A biochemical catalyst, especially an enzyme.

biocenology [ECOL] The study of natural communities and of interactions among the members of these communities.

biocenose *See* biotic community.

biochemical deposit [GEOL] A precipitated deposit formed directly or indirectly from vital activities of organisms, such as bacterial iron ore and limestone.

biochemical fuel cell [ELEC] An electrochemical power generator in which the fuel source is bioorganic matter; air is the oxidant at the cathode, and microorganisms catalyze the oxidation of the bioorganic matter at the anode.

biochemical oxygen demand [MICROBIO] The amount of dissolved oxygen required to meet the metabolic needs of anaerobic microorganisms in water rich in organic matter, such as sewage. Abbreviated BOD. Also known as biological oxygen demand.

biochemical oxygen demand test [MICROBIO] A standard laboratory procedure for measuring biochemical oxygen demand; standard measurement is made for 5 days at 20°C. Abbreviated BOD test.

biochemistry [CHEM] The study of chemical substances occurring in living organisms and the reactions and methods for identifying these substances.

biochemorphology [BIOCHEM] The science dealing with the chemical structure of foods and drugs and their reactions on living organisms.

biochore [ECOL] A group of similar biotopes.

biochrome [BIOCHEM] Any naturally occurring plant or animal pigment.

biochron [PALEON] A fossil of relatively short range of time.

biochronology [GEOL] The relative age dating of rock units based on their fossil content.

biociation [ECOL] A subdivision of a biome distinguished by the predominant animal species.

biocide *See* pesticide.

bioclastic rock [PETR] Rock formed from material broken or arranged by animals, humans, or sometimes plants; a rock composed of broken calcareous remains of organisms.

bioclimatic law [ECOL] The law which states that phenological events are altered by about 4 days for each 5° change of latitude northward or longitude eastward; events are accelerated in spring and retreat in autumn.

bioclimatograph [ECOL] A climatograph showing the relation between climatic conditions and some living organisms.

bioclimatology [ECOL] The study of the effects of the natural environment on living organisms.

biocoenosis [ECOL] A group of organisms that live closely together and form a natural ecologic unit.

biocycle [ECOL] A group of similar biotopes composing a major division of the biosphere; there are three biocycles: terrestrial, marine, and fresh-water.

biocytin [BIOCHEM] $C_{16}H_{28}N_4O_4S$ Crystals with a melting point of 241–243°C; obtained from dilute methanol or acetone solutions; characterized by its utilization by *Lactobacillus casei* and *L. delbrückii* LD5 as a biotin source, and by its unavailability as a biotin source to *L. arabinosus*. Also known as biotin complex of yeast.

biocytinase [BIOCHEM] An enzyme present in the blood and liver which hydrolyzes biocytin into biotin and lysine.

biodegradability [MATER] The characteristic of a substance that can be broken down by microorganisms.

biodynamic [AGR] Of or pertaining to a system of organic farming. [BIOPHYS] Of or pertaining to the dynamic relation between an organism and its environment.

biodynamics [BIOPHYS] The study of the effects of dynamic processes (motion, acceleration, weightlessness, and so on) on living organisms.

bioelectric current [PHYSIO] A self-propagating electric current generated on the surface of nerve and muscle cells by potential differences across excitable cell membranes.

bioelectricity [PHYSIO] The generation by and flow of an electric current in living tissue.

bioelectric model [PHYSIO] A conceptual model for the study of animal electricity in terms of physical principles.

bioelectrochemistry [PHYSIO] The study of the control of biological growth and repair processes by electrical stimulation.

bioelectronics [BIOPHYS] The application of electronic theories and techniques to the problems of biology.

bioenergetics [BIOCHEM] The branch of biology dealing with energy transformations in living organisms.

bioengineering [ENG] The application of engineering knowledge to the fields of medicine and biology.

biofacies [GEOL] **1.** A rock unit differing in biologic aspect from laterally equivalent biotic groups. **2.** Lateral variation in the biologic aspect of a stratigraphic unit.

bioflavonoid [BIOCHEM] A group of compounds obtained from the rinds of citrus fruits and involved with the homeostasis of the walls of small blood vessels; in guinea pigs a marked reduction of bioflavonoids results in increased fragility and permeability of the capillaries; used to decrease permeability and fragility in capillaries in certain conditions. Also known as citrus flavonoid compound; vitamin P complex.

biofog [METEOROL] A type of steam fog caused by contact between extremely cold air and the warm, moist air surrounding human or animal bodies or generated by human activity.

biogalvanic battery [MED] A battery that is implanted in the body and depends on interaction of metal electrodes with oxygen and fluids of the body to generate sufficient power for a heart pacemaker or other implanted medical device.

biogenesis [BIOL] Development of a living organism from a similar living organism.

biogenetic law *See* recapitulation theory.

biogenic [BIOL] **1.** Essential to the maintenance of life. **2.** Produced by actions of living organisms.

biogenic chert [PETR] Chert derived from the tests of pelagic silica-secreting organisms, particularly diatoms and radiolarians.

biogenic mineral [MINERAL] A mineral in sediments or sedimentary rock which represents the hard parts of dead organisms.

biogenic reef [GEOL] A mass consisting of the hard parts of organisms, or of a biogenically constructed frame enclosing detrital particles, in a body of water; most biogenic reefs are made of corals or associated organisms.

biogenic sediment [GEOL] A deposit resulting from the physiological activities of organisms.

biogeochemical cycle [GEOCHEM] The chemical interactions that exist between the atmosphere, hydrosphere, lithosphere, and biosphere.

biogeochemical prospecting [GEOCHEM] A prospecting technique for subsurface ore deposits based on interpretation of the growth of certain plants which reflect subsoil concentrations of some elements.

biogeochemistry [GEOCHEM] A branch of geochemistry that is concerned with biologic materials and their relation to earth chemicals in an area.

biogeography [ECOL] The science concerned with the geographical distribution of animal and plant life.

bioherm [GEOL] A circumscribed mass of rock exclusively or mainly constructed by marine sedimentary organisms such as corals, algae, and stromatoporoids. Also known as organic mound.

biohermal limestone [PETR] Reefs or reeflike mounds of carbonate that accumulated much in the same fashion as modern reefs and atolls of the Pacific Ocean.

biohermite [PETR] Limestone formed of debris from a bioherm.

biohydrology [ECOL] Study of the interactions between water, plants, and animals, including the effects of water on biota as well as the physical and chemical changes in water or its environment produced by biota.

bioinstrumentation [ENG] The use of instruments attached to animals and man to record biological parameters such as breathing rate, pulse rate, body temperature, or oxygen in the blood.

biolite [GEOL] A concretion formed of concentric layers through the action of living organisms. [PETR] *See* biolith.

biolith [PETR] A rock formed from or by organic material. Also known as biolite.

biolithite [PETR] An inclusive category for all organic limestone.

biological [BIOL] Of or pertaining to life or living organisms. [IMMUNOL] A biological product used to induce immunity to various infectious diseases or noxious substances of biological origin.

biological agent [ORD] Any of the viruses, microorganisms, and toxic substances derived from living organisms and used as offensive weapons to produce death or disease in humans, animals, and growing plants.

biological balance [ECOL] Dynamic equilibrium that exists among members of a stable natural community.

biological clock [PHYSIO] Any physiologic factor that functions in regulating body rhythms.

biological control [ECOL] Natural or applied regulation of populations of pest organisms, especially insects, through the role or use of natural enemies.

biological corrosion [MET] Deterioration of metals as a result of the metabolic activity of microorganisms.

biological equilibrium [BIOPHYS] A state of body balance for an actively moving animal, when internal and external forces are in equilibrium.

biological half-life [PHYSIO] The time required by the body to eliminate half of the amount of an administered substance through normal channels of elimination.

biological oceanography [OCEANOGR] The study of the flora and fauna of oceans in relation to the marine environment.

biological oil-spill control [ECOL] The use of cultures of microorganisms capable of living on oil as a means of degrading an oil slick biologically.

biological oxidation [BIOCHEM] Energy-producing reactions in living cells involving the transfer of hydrogen atoms or electrons from one molecule to another.

biological oxygen demand *See* biochemical oxygen demand.

biological productivity [ECOL] The quantity of organic matter or its equivalent in dry matter, carbon, or energy content which is accumulated during a given period of time.

biological shield [MICROBIO] A structure designed to prevent the migration of living organisms from one part of a system to another; used on sterilized space probes. [NUCLEO] A radiation-absorbing shield used to protect personnel from the effects of nuclear particles or radiation in the vicinity of a nuclear reactor.

biological specificity [BIOL] The principle that defines the orderly patterns of metabolic and developmental reactions giving rise to the unique characteristics of the individual and of its species.

biological standardization [PHARM] The standardization of drugs or biological products that cannot be chemically analyzed by studying the drugs' pharmacologic action on animals.

biological value [BIOCHEM] A measurement of the efficiency of the protein content in a food for the maintenance and growth of the body tissues of an individual.

biological warfare [ORD] Abbreviated BW. **1.** Employment of living microorganisms, toxic biological products, and plant growth regulators to produce death or injury in man, animals, or plants. **2.** Defense against such action.

biologic artifact [ORG CHEM] An organic compound with a chemical structure that demonstrates the compound's derivation from living matter.

biologic weathering *See* organic weathering.

biology [SCI TECH] A division of the natural sciences concerned with the study of life and living organisms.

bioluminescence [BIOL] The emission of visible light by living organisms.

biolysis [BIOL] **1.** Death and the following tissue disintegration. **2.** Decomposition of organic materials, such as sewage, by living organisms.

biomass [ECOL] The dry weight of living matter, including stored food, present in a species population and expressed in terms of a given area or volume of the habitat.

biome [ECOL] A complex biotic community covering a large geographic area and characterized by the distinctive life-forms of important climax species.

biomechanics [BIOPHYS] The study of the mechanics of living things.

biomedical engineering [ENG] The application of engineering technology to the solution of medical problems; examples are the development of prostheses such as artificial valves for the heart, various types of sensors for the blind, and automated artificial limbs.

biomedicine [MED] The science concerned with the study of the environment required for astronauts in space vehicles.

biomere [ECOL] A biostratigraphic unit bounded by abrupt nonevolutionary changes in the dominant elements of a single phylum.

biometeorology [BIOL] The study of the relationship between living organisms and atmospheric phenomena.

biometrics [STAT] The use of statistics to analyze observations of biological phenomena.

biomicrite [PETR] A limestone resembling biosparite except that the microcrystalline calcite matrix exceeds calcite cement.

biomicrosparite [PETR] **1.** Biomicrite in which the micrite groundmass has recrystallized to microspar. **2.** Microsparite containing fossil fragments or fossils.

biomicrudite [PETR] Biomicrite with fossil fragments or fossils greater than 1 millimeter in diameter.

bion [ECOL] An independent, individual organism.

bionavigation [VERT ZOO] The ability of animals such as birds to find their way back to their roost, even if the landmarks on the outward-bound trip were effectively concealed from them.

bionics [ENG] The study of systems, particularly electronic systems, which function after the manner of living systems.

biopak [ENG] A container for housing a living organism in a habitable environment and for recording biological functions during space flight.

biopelite *See* black shale.

biopelmicrite [PETR] A limestone similar to biopelsparite but with a microcrystalline matrix that exceeds calcite cement.

biopelsparite [PETR] A limestone similar to biosparite but with the ratio of fossils and fossil fragments to pellets between 3:1 and 1:3.

biophage *See* macroconsumer.

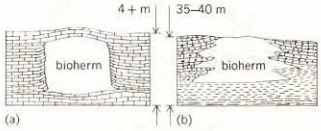
biophagous [ZOO] Feeding on living organisms.

biophile [BIOCHEM] Any element concentrated or found in the bodies of living organisms and organic matter; examples are carbon, nitrogen, and oxygen.

BIOGENIC REEF

A biogenic reef, the Ine Anchorage Reef, Arno Atoll, Marshall Islands.

BIOHERM



Bioherms. *(a)* Small stumplike mass of cavernous dolostone in midst of thin-bedded dolomitic limestone of Middle Silurian near Lomira, Wis. *(b)* Coelenterate bioherm in midst of shale and thin-bedded cherty limestone of Middle Silurian of Wabash, Ind. *(From R. R. Shrock, Sequence in Layered Rocks, McGraw-Hill, 1948)*

biophysics [SCI TECH] The hybrid science involving the application of physical principles and methods to study and explain the structures of living organisms and the mechanics of life processes.

biopolymer [BIOCHEM] A biological macromolecule such as a protein or nucleic acid.

biopotency [BIOCHEM] Capacity of a chemical substance, as a hormone, to function in a biological system.

biopotential [PHYSIO] Voltage difference measured between points in living cells, tissues, and organisms.

biopsy [PATH] The removal and examination of tissues, cells, or fluids from the living body for the purposes of diagnosis.

biorheology [BIOPHYS] The study of the deformation and flow of biological fluids, such as blood, mucus, and synovial fluid.

biosatellite [AERO ENG] An artificial satellite designed to contain and support humans, animals, or other living material in a reasonably normal manner for a period of time and to return safely to earth.

biosensor [ENG] A sensor used to provide information about a life process.

bioseries [EVOL] A historical sequence produced by the changes in a single hereditary character.

biosonar [PHYSIO] A guidance system in certain animals, such as bats, utilizing the reflection of sounds that they produce as they move about.

biosparite [PETR] A limestone made up of less than 25% oolites and less than 25% intraclasts, with the ratio by volume of fossils and fragments to pellets being more than 3:1 and the calcite cement content being greater than the microcrystalline calcite content.

biosphere [ECOL] The life zone of the earth, including the lower part of the atmosphere, the hydrosphere, soil, and the lithosphere to a depth of about 2 kilometers.

biostabilizer [CIV ENG] A component in mechanized composting systems; consists of a drum in which moistened solid waste is comminuted and tumbled for about 5 days until the aeration and biodegradation turns the waste into a fine dark compost.

biostasy [ECOL] Maximum development of organisms when, during tectonic repose, residual soils form extensively on the land and calcium carbonate deposition is widespread in the sea.

biostratigraphic unit [GEOL] A stratum or body of strata that is defined and identified by one or more distinctive fossil species or genera without regard to lithologic or other physical features or relations.

biostratigraphy [PALEON] A part of paleontology concerned with the study of the conditions and deposition order of sedimentary rocks.

biostromal limestone [GEOL] Biogenic carbonate accumulations that are laterally uniform in thickness, in contrast to the moundlike nature of bioherms.

biostrome [GEOL] A bedded structure or layer (bioclastic stratum) composed of calcite and dolomitized calcarenitic fossil fragments distributed over the sea bottom as fine lentils, independent of or in association with bioherms or other areas of organic growth.

biosynthesis [BIOCHEM] Production, by synthesis or degradation, of a chemical compound by a living organism.

biot [ELEC] *See* abampere. [OPTICS] A unit of rotational strength in substances exhibiting circular dichroism, equal to 10^{-40} times the corresponding centimeter-gram-second unit.

biota [BIOL] **1.** Animal and plant life characterizing a given region. **2.** Flora and fauna, collectively.

biotar lens [OPTICS] A modern camera lens which is a modified Gauss objective with a large aperture and a field of about 24°.

biotechnology [ENG] The application of engineering and technological principles to the life sciences.

biotelemetry [ENG] The use of telemetry techniques, especially radio waves, to study behavior and physiology of living things.

Biot-Fourier equation [THERMO] An equation for heat conduction which states that the rate of change of temperature at any point divided by the thermal diffusivity equals the Laplacian of the temperature.

biotherapy [MED] Treatment of disease with biologicals, that is, materials produced by living organisms.

biotic [BIOL] **1.** Of or pertaining to life and living organisms. **2.** Induced by the actions of living organisms.

biotic community [ECOL] An aggregation of organisms characterized by a distinctive combination of both animal and plant species in a particular habitat. Also known as biocenose.

biotic district [ECOL] A subdivision of a biotic province.

biotic environment [ECOL] That environment comprising living organisms, which interact with each other and their abiotic environment.

biotic isolation [ECOL] The occurrence of organisms in isolation from others of their species.

biotic potential [ECOL] The maximum possible growth rate of living things under ideal conditions.

biotic province [ECOL] A community, according to some systems of classification, occupying an area where similarity of climate, physiography, and soils leads to the recurrence of similar combinations of organisms.

biotin [BIOCHEM] $C_{10}H_{16}N_2O_3S$ A colorless, crystalline vitamin of the vitamin B complex occurring widely in nature, mainly in bound form.

biotin carboxylase [BIOCHEM] An enzyme which condenses bicarbonate with biotin to form carboxybiotin.

biotin complex of yeast *See* biocytin.

biotite [MINERAL] A black, brown, or dark green, abundant and widely distributed species of rock-forming mineral of the mica group; its chemical composition is variable: $K_2[Fe(II),Mg]_{6-4}[Fe(III),Al,Ti]_{0-2}(Si_{6-5},Al_{2-3})O_{20-22}(OH,F)_{4-2}$. Also known as black mica; iron mica; magnesia mica; magnesium-iron mica.

biotite schist [PETR] A schist composed of biotite.

Biot number [FL MECH] A dimensionless group, used in the study of mass transfer between a fluid and a solid, which gives the ratio of the mass-transfer rate at the interface to the mass-transfer rate in the interior of a solid wall of specified thickness.

biotope [ECOL] An area of uniform environmental conditions and biota.

biotron [ENG] A test chamber used for biological research within which the environmental conditions can be completely controlled, thus allowing observations of the effect of variations in environment on living organisms.

Biot-Savart law [ELECTROMAG] A law that gives the intensity of the magnetic field due to a wire carrying a constant electric current.

Biot's law [OPTICS] The law that an optically active substance rotates plane-polarized light through an angle inversely proportional in its wavelength.

bioturbation [GEOL] The disruption of marine sedimentary structures by the activities of benthic organisms.

biotype [GEN] A group of organisms having the same genotype.

biozone [PALEON] The range of a single taxonomic entity in geologic time as reflected by its occurrence in fossiliferous rocks.

bipack [GRAPHICS] A photographic film composed of two sensitive emulsions; each is sensitive to a different color when exposed simultaneously.

biparasitic [ECOL] Parasitic upon or in a parasite.

biparietal [ANTHRO] Distance between the most distant opposite points of the parietal bone.

biparous [BOT] Bearing branches on dichotomous axes. [VERT ZOO] Bringing forth two young at a birth.

bipartite cubic [MATH] The points satisfying the equation $y^2 = x(x-a)(x-b)$.

bipartite graph [MATH] A linear graph (network) in which the nodes can be partitioned into two groups G_1 and G_2 such that for every arc (i,j) node i is in G_1 and node j in G_2.

bipartite uterus [ANAT] A uterus divided into two parts almost to the base.

bipectinate [INV ZOO] Of the antennae of certain moths having two margins with comblike teeth. [ZOO] Branching like a feather on both sides of a main shaft.

biped [VERT ZOO] **1.** A two-footed animal. **2.** Any two legs of a quadruped.

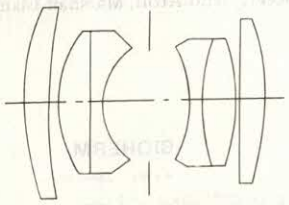
bipedal [BIOL] Having two feet.

bipedal dinosaur [PALEON] A dinosaur having two long, stout hindlimbs for walking and two relatively short forelimbs.

bipeltate [BOT] Having two shield-shaped parts. [ZOO] Having a shell or other covering resembling a double shield.

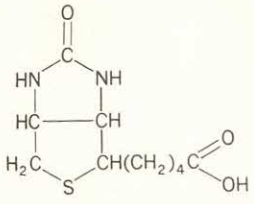
bipenniform [ANAT] Of the arrangement of muscle fibers resembling a feather barbed on both sides.

BIOTAR LENS



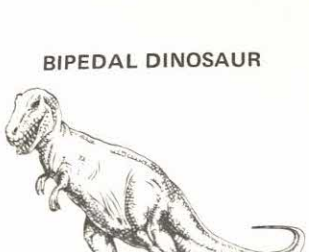
Biotar camera lens.

BIOTIN



Structural formula for biotin.

BIPEDAL DINOSAUR



Restored bipedal carnivorous saurischian *Allosaurus* (about 40 feet or 9 meters long), Late Jurassic, North America.

biphasic [BOT] Possessing both a sporophyte and a gametophyte generation in the life cycle.

biphenyl [ORG CHEM] $C_{12}H_{10}$ A white or slightly yellow crystalline hydrocarbon, melting point 70.0°C, boiling point 255.9°C, and density 1.9896, which gives plates or monoclinic prismatic crystals; used as a heat-transfer medium and as a raw material for chlorinated diphenyls. Also known as diphenyl; phenylbenzene.

***para*-biphenylamine** [ORG CHEM] $C_{12}H_{11}N$ Leaflets with a melting point of 53°C; readily soluble in hot water, alcohol, and chloroform; used in the detection of sulfates and also as a carcinogen in cancer research. Also known as *para*-aminodiphenyl; xenylamine.

biphyletic [EVOL] Descended in two branches from a common ancestry.

Biphyllidae [INV ZOO] The false skin beetles, a family of coleopteran insects in the superfamily Cucujoidea.

bipinnaria [INV ZOO] The complex, bilaterally symmetrical, free-swimming larval stage of most asteroid echinoderms.

bipinnate [BOT] Pertaining to a leaf that is pinnate for both its primary and secondary divisions.

biplane [AERO ENG] An aircraft with two wings fixed at different levels, especially one above and one below the fuselage.

bipolar [SCI TECH] **1.** Having two poles. **2.** Capable of assuming positive or negative values, such as an electric charge, or pertaining to a quantity with this property, such as a bipolar transistor.

bipolar amplifier [ELECTR] An amplifier capable of supplying a pair of output signals corresponding to the positive or negative polarity of the input signal.

bipolar circuit [ELECTR] A logic circuit in which zeros and ones are treated in a symmetric or bipolar manner, rather than by the presence or absence of a signal; for example, a balanced arrangement in a square-loop-ferrite magnetic circuit.

bipolar electrode [ELEC] Electrode, without metallic connection with the current supply, one face of which acts as anode surface and the opposite face as a cathode surface when an electric current is passed through a cell.

bipolar flagellation [MICROBIO] The presence of flagella at both poles in certain bacteria.

Bipolarina [INV ZOO] A suborder of protozoan parasites in the order Myxosporida.

bipolar integrated circuit [ELECTR] An integrated circuit in which the principal element is the bipolar junction transistor.

bipolar magnetic driving unit [ENG ACOUS] Headphone or loudspeaker unit having two magnetic poles acting directly on a flexible iron diaphragm.

bipolar memory [COMPUT SCI] A computer memory employing integrated-circuit bipolar junction transistors as bistable memory cells.

bipolar power supply [ELEC] A high-precision, regulated, direct-current power supply that can be set to provide any desired voltage between positive and negative design limits, with a smooth transition from one polarity to the other.

bipolar signal [COMMUN] A signal in which different logical states are represented by electrical voltages of opposite polarity.

bipolar transistor [ELECTR] A transistor that uses both positive and negative charge carriers.

bipotential [BIOL] Having the potential to develop in either of two mutually exclusive directions.

bipotential electrostatic lens [ELECTR] An electron lens in which image and object space are field-free, but at different potentials; examples are the lenses formed between apertures of cylinders at different potentials. Also known as immersion electrostatic lens.

bipotentiality [BIOL] **1.** Capacity to function either as male or female. **2.** Hermaphroditism.

biprism [OPTICS] A prism with apex angle only a little less than 180°, which produces a double image of a point source, giving rise to interference fringes on a nearby screen.

biprism interference [OPTICS] Light interference fringes seen on a screen near a biprism.

bipropellant [MATER] A rocket propellant consisting of two unmixed or uncombined chemicals (fuel and oxidizer) fed to the combustion chamber separately.

2,2′-bipyridine *See* 2,2′-dipyridyl.

biquadratic [MATH] Any fourth-degree algebraic expression. Also known as quartic.

biquadratic equation *See* quartic equation.

biquartic filter [ELECTR] An active filter that uses operational amplifiers in combination with resistors and capacitors to provide infinite values of Q and simple adjustments for bandpass and center frequency.

biquartz [OPTICS] A device consisting of two adjoining pieces of quartz of equal thickness that rotate the plane of polarization of light in opposite directions; used with a Nicol prism or other analyzer to increase the accuracy of the latter in determining the properties of polarized light.

biquinary abacus [MATH] An abacus in which the frame is divided into two parts by a bar which separates each wire into two- and five-counter segments.

biquinary notation [MATH] A mixed-base notation system in which the first of each pair of digits counts 0 or 1 unit of five, and the second counts 0, 1, 2, 3, or 4 units. Also known as biquinary number system.

biquinary number system *See* biquinary notation.

biradial symmetry [BIOL] Symmetry both radial and bilateral. Also known as disymmetry.

biradical [CHEM] A chemical species having two independent odd-electron sites.

biramous [BIOL] Having two branches, such as an arthropod appendage.

birch [BOT] The common name for all deciduous trees of the genus *Betula* that compose the family Betulaceae in the order Fagales.

birch tar oil [MATER] A toxic liquid mixture of guaiacol, phenols, cresol, xylenol, and creosol; derived from distillation of birch tar and by dry distillation of the wood of *Betula alba*; used as a disinfectant, in leather dressing, and in medicine.

bird [VERT ZOO] Any of the warm-blooded vertebrates which make up the class Aves.

Bird centrifuge [MIN ENG] A dewatering machine for fine coal or other fine materials such as potash minerals, clays, and cement rock. Also known as Bird coal filter.

Bird coal filter *See* Bird centrifuge.

bird-foot delta [GEOL] A delta formed by the outgrowth of fingers or pairs of natural levees at the mouth of river distributaries; an example is the Mississippi delta.

bird-hipped dinosaur [PALEON] Any member of the order Ornithischia, distinguished by the birdlike arrangement of their hipbones.

bird louse [INV ZOO] The common name for any insect of the order Mallophaga. Also known as biting louse.

birdnesting [ORD] Clumping together of chaff dipoles after they have been dispensed from an aircraft.

bird of prey [VERT ZOO] Any of various carnivorous birds of the orders Falconiformes and Strigiformes which feed on meat taken by hunting.

birdseye [TEXT] A fabric woven on a Dobby loom that is characterized by diamond-shaped spots.

bird's eye rot [PL PATH] A fungus disease of the grape caused by *Elsinoe ampelina* and characterized by small, dark, sunken spots with light centers on the fruit.

bird's eye spot [PL PATH] **1.** A plant disease characterized by dark, round spots surrounded by lighter tissue. **2.** A fungus disease of tea leaves caused by *Orcospora theae*. **3.** A leaf spot of the hevea rubber tree caused by the fungus *Helminthosporium heveae*.

Bird unit [BIOL] Unit for the standardization of leuteotropin.

birectangular [MATH] Property of a geometrical object that has two right angles.

birefringence [OPTICS] Splitting of a light beam into two components, which travel at different velocities, by a material. Also known as double refraction.

birefringent filter [OPTICS] A filter consisting of alternate layers of polarizing films and plates cut from a birefringent crystal; transmits light in a series of sharp, widely spaced wavelength bands. Also known as Lyot filter; monochromatic filter.

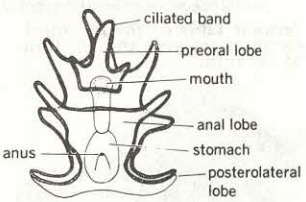
birefringent plate [OPTICS] A piece of birefringent optical material with parallel plane surfaces.

birimose [BOT] Opening by two slits, as an anther.

Birkeland-Eyde process [CHEM ENG] An arc process of nitrogen fixation in which air passes through an alternating-current arc flattened by a magnetic field to form about 1% nitric oxide.

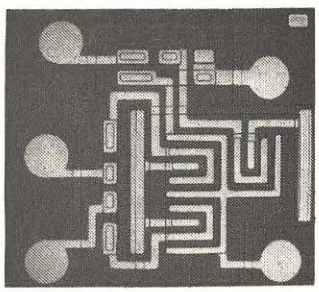
Birmingham wire gage [DES ENG] A system of standard sizes of brass wire, telegraph wire, steel tubing, seamless tub-

BIPINNARIA

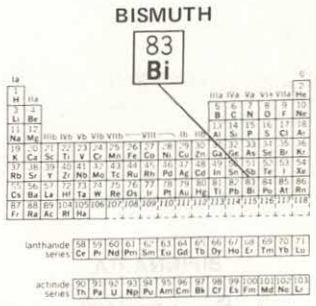


Bipinnaria larva showing component parts.

BIPOLAR INTEGRATED CIRCUIT



Photomicrograph of three-input bipolar logic gate circuit — one of the earliest digital integrated circuits. *(Fairchild Semiconductor)*



Periodic table of the chemical elements showing the position of bismuth.

ing, sheet spring steel, strip steel, and steel plates, bands, and hoops. Abbreviated BWG.

birotulate [INV ZOO] A sponge spicule characterized by two wheel-shaped ends.

birth [BIOL] The emergence of a new individual from the body of its parent.

birth canal [ANAT] The channel in mammals through which the fetus is expelled during parturition; consists of the cervix, vagina, and vulva.

birth control [MED] Limitation of the number of children born by preventing or reducing the frequency of impregnation.

birth-death process [IND ENG] A simple queuing model in which units to be served arrive (birth) and depart (death) in a completely random manner.

birth defect *See* congenital anomaly.

birthmark [MED] Any abnormal cellular or vascular benign nevus that is present at birth or that appears sometime later.

birth rate [BIOL] The ratio between the number of live births and a specified number of people in a population over a given period of time.

bis- [CHEM] A prefix indicating doubled or twice.

1,2-bis(benzylamino)ethane *See N,N′*-dibenzylethylenediamine.

***O,O*-bis(*para*-chlorophenyl)acetimidoylphosphoramidothioate** *See* phosazetim.

2,2-bis(*para*-chlorophenyl)-1,1-dichloroethane [ORG CHEM] $C_{14}H_{10}Cl_4$ A colorless, crystalline compound with a melting point of 109-111°C; insoluble in water; used as an insecticide on fruits and vegetables. Also known as DDD; TDE.

1,1-bis(4-chlorophenyl)ethanol *See* chlorofenethol.

1,1-bis(*para*-chlorophenyl)methyl carbinol *See p,p′*-dichlorodiphenylmethyl carbinol.

α,α-bis(*para*-chlorophenyl)-3-pyridine methanol *See* parinol.

1,1-bis(*para*-chlorophenyl)-2,2,2-trichloroethanol *See* dicofol.

bischofite [MINERAL] $MgCl_2 \cdot 6H_2O$ A colorless to white, monoclinic mineral consisting of magnesium chloride hexahydrate.

biscuit [ENG ACOUS] *See* preform. [MATER] **1.** A clay object fired once prior to glazing. **2.** Pottery that is unglazed in its final form. [MET] An upset blank for drop forging.

biscuit cutter [MIN ENG] A short (6–8 inches or 15–20 centimeters) core barrel that is sharpened at the bottom and forced into the rocks by the jars.

bis(diethylthiocarbamyl)disulfide *See* tetraethylthiuram disulfide.

bis(dimethylthiocarbamoyl)disulfide *See* thiram.

bis(dimethylthiocarbamyl)sulfide *See* tetramethylthiuram monosulfide.

bis(dimethylthiocarbamoylthio)methylarsine *See* urbacid.

bise [METEOROL] A cold, dry wind which blows from a northerly direction in the winter over the mountainous districts of southern Europe. Also spelled bize.

bisection algorithm [MATH] A procedure for determining the root of a function to any desired accuracy by repeatedly dividing a test interval in half and then determining in which half the value of the function changes sign.

bisector [MATH] The ray dividing an angle into two equal angles.

bisectrix [CRYSTAL] A line that is the bisector of the angle between the optic axes of a biaxial crystal.

biserial [BIOL] Arranged in two rows or series.

biserrate [BIOL] **1.** Having serrated serrations. **2.** Serrate on both sides.

bisexual [BIOL] Of or relating to two sexes. [PSYCH] **1.** Possessing mental and behavioral characteristics of both sexes. **2.** Having sexual desires for members of both sexes.

Bishop's ring [METEOROL] A faint, broad, reddish-brown corona occasionally seen in dust clouds, especially those which result from violent volcanic eruptions.

bishydroxycoumarin *See* dicoumarin.

3,3-bis(hydroxymethyl)pentane *See* 2,2-diethyl-1,3-propanediol.

1,3-bishydroxymethylurea *See* dimethylolurea.

bisilicate [MET] A type of slag whose silicate degree is 2. [MINERAL] *See* metasilicate.

2,4-bis(isopropylamino)-6-(methylthio)-*S*-triazine *See* prometryn.

bismanol [MET] A magnetic alloy of bismuth and manganese.

1,4-bis(methanesulfonoxy)butane *See* busulfan.

bismite [MINERAL] Bi_2O_3 A monoclinic mineral composed of bismuth trioxide; native bismuth ore, occurring as a yellow earth. Also known as bismuth ocher.

bismuth [CHEM] A metallic element, symbol Bi, of atomic number 83 and atomic weight 208.980. [MINERAL] The brittle, rhombohedral mineral form of the native element bismuth.

bismuth alloy [MET] A group of low-melting alloys (many below 100°C) of bismuth combined with lead, tin, and cadmium; used in automatic sprinklers, special solders, safety plugs in compressed-gas cylinders, automatic shutoffs for water-heating systems, castings, and type metal.

bismuthate [INORG CHEM] A compound of bismuth in which the bismuth has a valence of +5; an example is sodium bismuthate, $NaBiO_3$.

bismuth blende *See* eulytite.

bismuth carbonate *See* bismuth subcarbonate.

bismuth chloride [INORG CHEM] $BiCl_3$ A deliquescent material that melts at 230–232°C and decomposes in water to form the oxychloride; used to make bismuth salts. Also known as bismuth trichloride.

bismuth chromate [INORG CHEM] $Bi_2O_3 \cdot Cr_2O_3$ An orange-red powder, soluble in alkalies and acids; used as a pigment.

bismuth citrate [ORG CHEM] $BiC_6H_5O_7$ A salt of citric acid that forms white crystals, insoluble in water; used as an astringent.

bismuth glance *See* bismuthinite.

bismuth hydroxide [INORG CHEM] $Bi(OH)_3$ A water-insoluble, white powder; precipitated by hydroxyl ion from bismuth salt solutions.

bismuthinite [MINERAL] Bi_2S_3 A mineral consisting of bismuth trisulfide, which has an orthorhombic structure and is usually found in fibrous or leafy masses that are lead gray with a yellowish tarnish and a metallic luster. Also known as bismuth glance.

bismuth iodide [INORG CHEM] BiI_3 A bismuth halide that sublimes in grayish-black hexagonal crystals melting at 408°C, insoluble in water; used in analytical chemistry.

bismuth nitrate [INORG CHEM] $Bi(NO_3)_3 \cdot 5H_2O$ White, triclinic crystals that decompose in water; used as an astringent and antiseptic.

bismuth ocher *See* bismite.

bismuth oleate [ORG CHEM] $Bi(C_{17}H_{33}COO)_3$ A salt of oleic acid obtained as yellow granules; used in medicines to treat skin diseases.

bismuth oxide *See* bismuth trioxide.

bismuth oxycarbonate *See* bismuth subcarbonate.

bismuth oxychloride [INORG CHEM] BiOCl A white powder; insoluble in water, soluble in acid; a toxic material if ingested; used in pigments and cosmetics.

bismuth phenate [ORG CHEM] $C_6H_5O \cdot Bi(OH)_2$ An odorless, tasteless, gray-white powder; used in medicine. Also known as bismuth phenolate; bismuth phenylate.

bismuth phenolate *See* bismuth phenate.

bismuth phenylate *See* bismuth phenate.

bismuth potassium tartrate *See* potassium bismuth tartrate.

bismuth pyrogallate [ORG CHEM] $Bi(OH)C_6H_3(OH)O_2$ An odorless, tasteless, yellowish-green, amorphous powder; used in medicine as intestinal antiseptic and dusting powder. Also known as basic bismuth pyrogallate; helcosol.

bismuth spar *See* bismutite.

bismuth subcarbonate [INORG CHEM] $(BiO)_2CO_3$ or $Bi_2O_3 \cdot CO_2 \cdot \frac{1}{2}H_2O$ A white powder; dissolves in hydrochloric or nitric acid, insoluble in alcohol and water; used as opacifier in x-ray diagnosis, in ceramic glass, and in enamel fluxes. Also known as basic bismuth carbonate; bismuth carbonate; bismuth oxycarbonate.

bismuth subgallate [ORG CHEM] $C_6H_2(OH)_3COO\text{-}Bi(OH)_2$ A yellow powder; dissolves in dilute alkali solutions, but is insoluble in water, ether, and alcohol; used in medicine. Also known as basic bismuth gallate.

bismuth subnitrate [INORG CHEM] $4BiNO_3(OH)_2 \cdot BiO(OH)$ A white, hygroscopic powder; used in bismuth salts, perfumes, cosmetics, ceramic enamels, pharmaceuticals, and analytical chemistry. Also known as basic bismuth nitrate; Spanish white.

bismuth subsalicylate [INORG CHEM] $Bi(C_7H_5O)_3$-Bi_2O_3 A white powder that is insoluble in ethanol and water; used in medicine and as a fungicide for tobacco crops. Also known as basic bismuth salicylate.

bismuth telluride [INORG CHEM] Bi_2Te_3 Gray, hexagonal platelets with a melting point of 573°C; used for semiconductors, thermoelectric cooling, and power generation applications.

bismuth trichloride *See* bismuth chloride.

bismuth trioxide [INORG CHEM] Bi_2O_3 A yellow powder; melting point 820°C; insoluble in water, dissolves in acid; used to make enamels and to color ceramics. Also known as bismuth oxide; bismuth yellow.

bismuth yellow *See* bismuth trioxide.

bismutite [MINERAL] $(BiO)_2CO_3$ A dull-white, yellowish, or gray, earthy, amorphous mineral consisting of basic bismuth carbonate. Also known as bismuth spar.

bismutotantalite [MINERAL] $Bi(Ta,Nb)O_4$ A pitch black, orthorhombic mineral consisting of an oxide of bismuth and tantalum and occurring in crystals.

bison [VERT ZOO] The common name for two species of the family Bovidae in the order Artiodactyla; the wisent or European bison (*Bison bonasus*), and the American species (*Bison bison*).

bisphenoid [CRYSTAL] A form apparently consisting of two sphenoids placed together symmetrically.

bisphenol A [ORG CHEM] $(CH_3)_2C(C_6H_5OH)_2$ Brown crystals that are insoluble in water; used in the production of phenolic and epoxy resins. Also known as *p,p'*-dihydroxydiphenyldimethylene.

***N,N*-bis(phosphonomethyl)glycine** *See* glyphosine.

bisporangiate [BOT] Having two different types of sporangia.

bispore [BOT] In certain red algae, an asexual spore that is produced in pairs.

bistable [SCI TECH] Able to assume either of two stable states.

bistable circuit [ELECTR] A circuit with two stable states such that the transition between the states cannot be accomplished by self-triggering.

bistable magnetic core [ELECTR] A magnetic core that can be in either of two possible states of magnetization. Also known as bimag core.

bistable multivibrator [ELECTR] A multivibrator in which either of the two active devices may remain conducting, with the other nonconducting, until the application of an external pulse. Also known as Eccles-Jordan circuit; Eccles-Jordan multivibrator; flip-flop circuit; trigger circuit.

bistable system [CHEM] A chemical system with two relatively stable states which permits an oscillation between domination by one of these states to domination by the other.

bistable unit [ENG] A physical element that can be made to assume either of two stable states; a binary cell is an example.

bistatic radar [ENG] Radar system in which the receiver is some distance from the transmitter, with separate antennas for each.

bistatic reflectivity [OPTICS] The characteristic of a reflector which reflects energy along a line, or lines, different from or in addition to that of the incident ray.

1,3-bis(trimethylamino)-2-propanol diiodide *See* propiodal.

bisulfate [INORG CHEM] A compound that has the HSO_4^- radical; derived from sulfuric acid.

bit [COMPUT SCI] **1.** A unit of information content equal to one binary decision or the designation of one of two possible and equally likely values or states of anything used to store or convey information. **2.** A dimensionless unit of storage capacity specifying that the capacity of a storage device is expressed by the logarithm to the base 2 of the number of possible states of the device. [DES ENG] **1.** A machine part for drilling or boring. **2.** The cutting plate of a plane. **3.** The blade of a cutting tool such as an ax. **4.** A removable tooth of a saw. **5.** Any cutting device which is attached to or part of a drill rod or drill string to bore or penetrate rocks. [MET] In soldering, the portion of the iron that transfers either heat or solder to the joint involved.

bitartrate [ORG CHEM] A salt with the radical $HC_4H_4O_6^-$. Also known as acid tartrate.

bit blank [DES ENG] A steel bit in which diamonds or other cutting media may be inset by hand peening or attached by a mechanical process such as casting, sintering, or brazing. Also known as bit shank; blank; blank bit; shank.

bit buffer unit [COMMUN] A unit that terminates bit-serial communications lines coming from and going to technical control.

bit count appendage [COMPUT SCI] One of the two-byte elements replacing the parity bit stripped off each byte transferred from main storage to disk volume (the other element is the cyclic check); these two elements are appended to the block during the write operation; on a subsequent read operation these elements are calculated and compared to the appended elements for accuracy.

bit density [COMPUT SCI] Number of bits which can be placed, per unit length, area, or volume, on a storage medium; for example, bits per inch of magnetic tape. Also known as record density.

bit drag [DES ENG] A rotary-drilling bit that has serrated teeth. Also known as drag bit.

bite [BIOL] **1.** To seize with the teeth. **2.** Closure of the lower teeth against the upper teeth. [GRAPHICS] In photoengraving, the various stages of etching accomplished through the action of acid. [MED] Skin injury produced by an animal's teeth or the mouthparts of an insect.

bitegmic [BOT] Having two integuments, especialiy in reference to ovules.

biternate [BOT] Of a leaf, having each division ternate.

bitewing [MED] A dental x-ray film having a central wing on which the teeth can close to hold it in place.

bithionol [ORG CHEM] A halogenated form of bisphenol used as an ingredient in germicidal soaps and as a medicine in the treatment of clonorchiases.

biting angle [ORD] Smallest angle of impact at which a projectile will penetrate or pierce armor.

biting-in [GRAPHICS] In etching, the action of dilute nitric acid or other mordant upon the bare steel or copper plate.

biting louse *See* bird louse.

bit location [COMPUT SCI] Storage position on a record capable of storing one bit.

Bitot's spots [MED] The silver-gray, shiny, triangular spots on the cornea characteristic of xerosis conjunctivae.

bit parallel [COMMUN] Simultaneous transmission of character-forming bits over parallel paths.

bit pattern [COMPUT SCI] A combination of binary digits arranged in a sequence.

bit position [COMPUT SCI] The position of a binary digit in a word, generally numbered from the least significant bit.

bit rate [COMMUN] Quantity, per unit time, of binary digits (or pulses representing them) which will pass a given point on a communications line or channel in a continuous stream.

bit-rate reduction [COMMUN] Reduction of the rate required for digital transmission of video signals by eliminating from transmission the redundant information normally contained in the signals. Also known as bandwidth reduction.

bit serial [COMMUN] Sequential transmission of character-forming bits.

bit shank *See* bit blank.

bit-sliced microprocessor [COMPUT SCI] A microprocessor in which the major logic of the central processor is partitioned into a set of large-scale-integration circuits, as opposed to being placed on a single chip.

bit stream [COMPUT SCI] **1.** A consecutive line of bits transmitted over a circuit in a transmission method in which character separation is accomplished by the terminal equipment. **2.** A binary signal without regard to grouping by character.

bit-stream generator [COMMUN] An algorithmic procedure for producing an unending sequence of binary digits to implement a stream cipher.

bit string [COMPUT SCI] A set of consecutive binary digits representing data in coded form, in which the significance of each bit is determined by its position in the sequence and its relation to the other bits.

bit synchronization [COMMUN] Element of a message header used to synchronize all of the bits and characters that follow.

bitt [NAV ARCH] **1.** A short metal or wood post on the deck of a ship used to secure mooring or other lines; usually in a pair. **2.** To secure a line about a ship's bitt.

bitter end [NAV ARCH] The end of a line or cable, especially the inboard end.

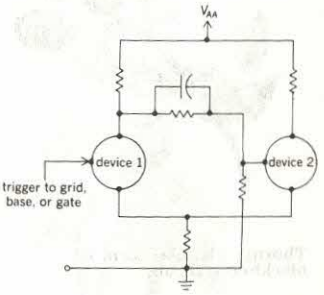
bitter lake [HYD] A lake rich in alkaline carbonates and sulfates.

bittern [CHEM ENG] Concentrated sea water or brine con-

BISON

North American bison (*Bison bison*), with enormous forequarter development and hump behind the head.

BISTABLE MULTIVIBRATOR



Circuit diagram of an unsymmetrical bistable multivibrator.

taining the bromides and magnesium and calcium salts left in solution after sodium chloride has been removed by crystallization. [VERT ZOO] Any of various herons of the genus *Botaurus* characterized by streaked and speckled plumage.

bitter orange oil [MATER] An essential oil from the rind or peel of the orange (*Citrus vulgaris*); insoluble in water; used as a flavoring and in some perfumes.

Bitter pattern [SOLID STATE] A pattern produced when a drop of a colloidal suspension of ferromagnetic particles is placed on the surface of a ferromagnetic crystal; the particles collect along domain boundaries at the surface.

bitter pit [PL PATH] A disease of uncertain etiology affecting apple, pear, and quince; spots of dead brown tissue appear in the flesh of the fruit and discolored depressions are seen on its surface. Also known as Baldwin spot; stippen.

bitter rot [PL PATH] A fungus disease of apples, grapes, and other fruit caused by *Glomerella cingulata*.

Bittner milk factor *See* milk factor.

bitumastic [MATER] A combination of asphalt and filler used mainly to coat metals to protect them against corrosion and weathering.

bitumen [MATER] Naturally occurring or pyrolytically obtained substances of dark to black color consisting almost entirely of carbon and hydrogen, with very little oxygen, nitrogen, or sulfur.

bitumenite *See* torbanite.

bituminization *See* coalification.

bituminous [MATER] **1.** Containing much organic, or at least carbonaceous, matter, mostly in the form of tarry hydrocarbons which are usually described as bitumen. **2.** Similar to bitumen. **3.** Giving off volatile bituminous substances on heating, as in bituminous coal. [MINERAL] Of a mineral, having the odor of bitumen.

bituminous cement [MATER] A bituminous material suitable for use as a binder, having cementing qualities which are dependent mainly on its bituminous character.

bituminous coal [GEOL] A dark brown to black coal that is high in carbonaceous matter and has 15–50% volatile matter. Also known as soft coal.

bituminous coating [MATER] A coating made principally of bituminous material and used as a surfacing for roads and as a water-repellent barrier in buildings.

bituminous concrete [MATER] A concrete made with bituminous material as a binder for sand and gravel.

bituminous lignite [GEOL] A brittle, lustrous bituminous coal. Also known as pitch coal.

bituminous paint [MATER] Paint with a high proportion of bitumen; usually dark in color.

bituminous rock *See* asphalt rock.

bituminous sand [GEOL] Sand containing bituminous-like material, such as the tar sands at Athabasca, Canada, from which oil is extracted commercially.

bituminous sandstone [PETR] A sandstone containing bituminous matter.

bituminous shale [PETR] A shale containing bituminous material.

bituminous wood [GEOL] A variety of brown coal having the fibrous structure of wood. Also known as board coal; wood coal; woody lignite; xyloid coal; xyloid lignite.

bit zone [COMPUT SCI] **1.** One of the two left-most bits in a commonly used system in which six bits are used for each character; related to overpunch. **2.** Any bit in a group of bit positions that are used to indicate a specific class of items; for example, numbers, letters, special signs, and commands.

biuret [ORG CHEM] $NH_2CONHCONH_2$ Colorless needles that are soluble in hot water and decompose at 190°C; a condensation product of urea. Also known as allophanamide; carbamylurea; dicarbamylamine.

bivalent [CHEM] Possessing a valence of two.

bivalent chromosome [CYTOL] The structure formed following synapsis of a pair of homologous chromosomes from the zygotene stage of meiosis up to the beginning of anaphase.

bivalve [INV ZOO] The common name for a number of diverse, bilaterally symmetrical animals, including mollusks, ostracod crustaceans, and brachiopods, having a soft body enclosed in a calcareous two-part shell.

Bivalvia [INV ZOO] A large class of the phylum Mollusca containing the clams, oysters, and other bivalves.

bivane [ENG] A double-jointed vane which measures vertical as well as horizontal wind direction.

biventer [ANAT] A muscle having two bellies.

bivittate [ZOO] Having a pair of longitudinal stripes.

bivium [INV ZOO] The pair of starfish rays that extend on either side of the madreporite.

bivoltine [INV ZOO] **1.** Having two broods in a season, used especially of silkworms. **2.** Of insects, producing two generations a year.

bivouac [ORD] An encampment set up for a short period of time by using tents.

bixbyite [MINERAL] $(Mn,Fe)_2O_3$ A manganese-iron oxide mineral; black cubic crystals found in cavities in rhyolite. Also known as partridgeite; sitaparite.

bixin [ORG CHEM] $C_{25}H_{30}O_4$ A carotenoid acid occurring in the seeds of *Bixa orellano;* used as a fat and food coloring agent.

bize *See* bise.

Bk *See* berkelium.

BL *See* base line.

black [CHEM] Fine particles of impure carbon that are made by the incomplete burning of carbon compounds, such as natural gas, naphthas, acetylene, bones, ivory, and vegetables. [COMMUN] *See* black signal. [OPTICS] Quality of an object which uniformly absorbs large percentages of light of all visible wavelengths.

black acids [MATER] Sulfonates in the sludge formed during treatment of petroleum products with sulfuric acid; soluble in water but insoluble in naphtha, benzene, and carbon tetrachloride.

black alkali [GEOL] A deposit of sodium carbonate that has formed on or near the surface in arid to semiarid areas.

black amber *See* jet coal.

black-and-white groups *See* Shubnikov groups.

black-and-white television *See* monochrome television.

black annealing [MET] A type of box annealing used to impart a black color to the metal surface; first process in tin plating.

black antimony *See* antimony trisulfide.

black area [COMMUN] Area with only encrypted signal present.

black ash [MATER] A carbon product made by furnace heating of black liquor from papermaking processes.

black balsam *See* Peru balsam.

blackband [GEOL] An earthy carbonate of iron that is present with coal beds.

blackberry [BOT] Any of the upright or trailing shrubs of the genus *Rubus* in the order Rosales; an edible berry is produced by the plant.

blackbird [VERT ZOO] Any bird species in the family Icteridae, of which the males are predominantly or totally black.

black blight [PL PATH] Any of several diseases of tropical plants caused by superficial sooty molds.

blackboard [MATER] A panel, usually black but sometimes colored, for writing on with chalk. Also known as chalkboard.

blackbody [THERMO] An ideal body which would absorb all incident radiation and reflect none. Also known as hohlraum; ideal radiator.

blackbody radiation [THERMO] The emission of radiant energy which would take place from a blackbody at a fixed temperature; it takes place at a rate expressed by the Stefan-Boltzmann law, with a spectral energy distribution described by Planck's equation.

blackbody temperature [THERMO] The temperature of a blackbody that emits the same amount of heat radiation per unit area as a given object; measured by a total radiation pyrometer. Also known as brightness temperature.

black box [ENG] Any component, usually electronic and having known input and output, that can be readily inserted into or removed from a specific place in a larger system without knowledge of the component's detailed internal structure.

black-bulb thermometer [ENG] A thermometer whose sensitive element has been made to approximate a blackbody by covering it with lampblack.

black buran *See* karaburan.

black canker *See* ink disease.

black carbon counter [NUCLEO] The original type of radiation counter used in radiocarbon dating, in which the sample, whose carbon has first been converted to carbon black, is mounted on the inside of a steel cylinder which is inserted into a sensitive Geiger counter. Also known as Libby counter.

black chaff [PL PATH] A bacterial disease of wheat caused by

BITTER PATTERN

Bitter powder patterns on a (100) surface of silicon-iron. *(Photograph by H. J. Williams)*

BLACKBERRY

Thorny, biennial stem of blackberry shrub.

Xanthomonas translucens undulosa and characterized by dark, longitudinal stripes on the chaff.

black coal *See* natural coke.

black cobalt *See* asbolite.

black copper [MET] The more or less impure metallic copper (70–99% copper) produced in blast furnaces when running on oxide ores or roasted sulfide material.

black coral [INV ZOO] The common name for antipatharian coelenterates having black, horny axial skeletons.

black cotton soil *See* regur.

black cyanide *See* calcium cyanide.

blackdamp [MIN ENG] A nonexplosive mixture of carbon dioxide with other gases, especially with 85–90% nitrogen, which is heavier than air and cannot support flame or life. Also known as chokedamp.

black death *See* plague.

black diamond *See* carbonado.

black disease [VET MED] Necrotic hepatitis of sheep, resulting from infection with *Clostridium novyi* type B, with the necessary conditions for the growth of the clostridia provided by the damaged liver tissue produced by the fluke *Fasciola hepatica*.

black drop [ASTRON] As seen through a telescope, an apparent dark elongation of the image of Venus or Mercury when the planets' images are at the sun's limb.

black durain [GEOL] A durain that has high hydrogen content and volatile matter, many microspores, and some vitrain fragments.

black dwarf [ASTRON] A star that cannot generate thermonuclear energy.

black end [PL PATH] **1.** A disease of the pear marked by blackening of the epidermis and flesh in the region of the calyx; believed to be a result of a disturbed water relation. **2.** A fungus disease of the banana caused by several species, especially *Gloesporium musarum*, characterized by discoloration of the stem of the fruit.

blacker-than-black level [COMMUN] In television, a level of greater instantaneous amplitude than the black level, used for synchronization and control signals.

blackeye bean *See* cowpea.

blackfire [PL PATH] A bacterial disease of tobacco caused by *Pseudomonas angulata* and characterized by angular leaf spots which gradually darken and may fall out, leaving ragged holes.

black frost [HYD] A dry freeze with respect to its effects upon vegetation, that is, the internal freezing of vegetation unaccompanied by the protective formation of hoarfrost. Also known as hard frost.

black granite *See* diorite.

black grease [MATER] Grease which has black coloration due to use of asphalt, either naturally occurring or from residues used in the manufacture of the grease.

blackhead *See* comedo.

blackhead disease [PL PATH] **1.** A parasitic disease of the banana caused by eelworms of the family Tylenchidae. **2.** A rot disease of the banana rootstock that is caused by the fungus *Thielaviopsis paradoxa*.

blackheart malleable iron *See* whiteheart malleable iron.

black hole [RELAT] A region of space-time from which nothing can escape, according to classical physics; quantum corrections indicate a black hole radiates particles with a temperature inversely proportional to the mass and directly proportional to Planck's constant.

black ice [HYD] A type of ice forming on lake or salt water; compact, and dark in appearance because of its transparency.

blacking [MET] Carbonaceous material, such as powdered graphite, used to coat the inner surfaces of a dry-sand mold to improve the separation and finish of a casting.

black iron oxide *See* ferrous oxide.

black kernel [PL PATH] A fungus disease of rice caused by *Curvularia lunata* and characterized by dark discoloration of the kernels.

black knot [PL PATH] A fungus disease of certain fruit and nut trees that is characterized by black excrescences on the branches; destructive to plum, cherry, gooseberry, filbert, and hazel.

black lead *See* graphite.

blackleg [VET MED] An acute, usually fatal bacterial disease of cattle, and occasionally of sheep, goats, and swine, caused by *Clostridium chauvoei*.

black level [ELECTR] The level of the television picture signal corresponding to the maximum limit of black peaks.

black light [OPTICS] Invisible light, such as ultraviolet rays which fall on fluorescent materials and cause them to emit visible light.

black lignite [GEOL] A lignite with a fixed carbon content of 35–60% and a total carbon content of 73.6–76.2% that contains between 6300 and 8300 Btu per pound; higher in rank than brown lignite. Also known as lignite A.

black line [PL PATH] A disease of walnuts, especially of English varieties grafted to black walnuts, characterized by a black line of dead tissue at the graft union, eventually leading to death of the tree.

black liquor [MATER] **1.** The liquid material remaining from pulpwood cooking in the soda or sulfate papermaking process. **2.** *See* iron acetate liquor.

blacklung *See* anthracosis.

black measles [MED] *See* hemorrhagic measles. [PL PATH] A disease of California grapevines of uncertain etiology; characterized by black spotting of the skin of the fruit, browning and dropping of the leaves, and dying back of the canes from the tip.

black mica *See* biotite.

black mold [MYCOL] Any dark fungus belonging to the order Mucorales. [PL PATH] A fungus disease of rose grafts and onion bulbs marked by black appearance due to the mold.

black mud [GEOL] A mud formed where there is poor circulation or weak tides, such as in lagoons, sounds, or bays; the color is due to iron sulfides and organic matter.

blacknose [PL PATH] A physiological disease of the date, with the distal end of the fruit becoming dark, cracking, and shriveling.

black ocher *See* wad.

black oil [MATER] Low-grade, black petroleum oil used to lubricate slow-moving or rough-surfaced machinery where high-grade lubricants are impractical or too expensive.

black opal [MINERAL] A variety of gem-quality opal displaying internal reflections against a dark background.

blackout [COMMUN] *See* radio blackout. [ELEC] The shutting off of power in an electrical power transmission system, either deliberately or through failure of the system.

black patch [PL PATH] A fungus disease of red clover characterized by simultaneous blackening of plants in groups.

black peak [COMMUN] A peak excursion of the television picture signal in the black direction.

black pepper [FOOD ENG] A spice; the dried unripe berries of *Piper nigrum*, a vine of the pepper family (Piperaceae) in the order Piperales.

black pepper oil [MATER] An essential oil obtained from the fruit of the black pepper plant; colorless to slightly greenish with a pepper odor and mild taste.

black pod [PL PATH] A pod rot of cacao caused by the fungus *Phytophthora faveri*.

black point [PL PATH] A disease of wheat and other cereals characterized by blackening of the embryo ends of the grains.

black powder [MATER] A low explosive consisting of an intimate mixture of potassium nitrate or sodium nitrate, charcoal, and sulfur.

black print [GRAPHICS] The film having the black component in a four-color separation process, or the comparable plate in the four-color printing process.

black ring [PL PATH] **1.** A virus disease of cabbage and other members of the family Cruciferae characterized by dark necrotic and often sunken rings on the surface of the leaf. **2.** A virus disease of the tomato characterized in the early stage by small black rings on young leaves.

black root [PL PATH] Any plant disease characterized by black discolorations of the roots.

black root rot [PL PATH] **1.** Any of several plant diseases characterized by dark lesions of the root. **2.** A fungus disease of the apple caused by *Xylaria mali*. **3.** A fungus disease of tobacco and other plants caused by *Thielaviopsis basicola*.

black rot [PL PATH] Any fungal or bacterial disease of plants characterized by dark brown discoloration and decay of a plant part.

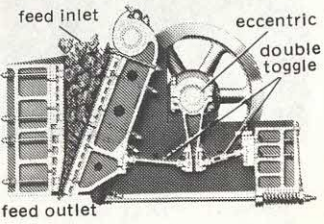
black sand [GEOL] Heavy, dark, sandlike minerals found on beaches and in stream beds; usually magnetite and ilmenite and sometimes gold, platinum, and monazite are present.

black scope [ELECTR] Cathode-ray tube operating at the

BLACK PEPPER

Berries on a branch of *Piper nigrum*.

BLAKE JAW CRUSHER



Drawing of a Blake jaw crusher. *(Allis Chalmers Co.)*

threshold of luminescence when no video signals are being applied.

black scour [VET MED] Hemorrhagic enteritis of sheep, swine, and cattle, usually associated with a heavy worm burden but sometimes caused by bacterial infection.

Black Sea [GEOGR] A large inland sea, area 423,000 square kilometers (163,400 square miles), bounded on the north and east by the U.S.S.R., on the south and southwest by Turkey, and on the west by Bulgaria and Rumania.

black shale [PETR] Very thinly bedded shale rich in sulfides such as pyrite and organic material deposited under barred basin conditions so that there was an anaerobic accumulation. Also known as biopelite.

black shank [PL PATH] A black rot disease of tobacco caused by *Phytophthora parasitica* var. *nicotianae*.

black signal [COMMUN] Signal at any point in a facsimile system produced by the scanning of a maximum density area of the subject copy. Also known as black; picture black.

black silver *See* stephanite.

black smoke [ENG] A smoke that has many particulates in it from inefficient combustion; comes from burning fossil fuel, either coal or oil.

black snow [HYD] Snow that falls through a particulate-laden atmosphere.

black spot [PL PATH] Any bacterial or fungal disease of plants characterized by black spots on a plant part.

black stem [PL PATH] Any of several fungal diseases of plants characterized by blackening of the stem.

black storm *See* karaburan.

blackstrap molasses [FOOD ENG] Syrupy mother liquor left after all economical sucrose has been removed from cane- or beet-sugar juice; used as raw material for butanol, acetone, citric acid, and ethyl alcohol manufacture.

black stripe *See* black thread.

black-surface enclosure [THERMO] An enclosure for which the interior surfaces of the walls possess the radiation characteristics of a blackbody.

black-surface field [ELECTR] A layer of p^+ material which is applied to the back surface of a solar cell to reduce hole-electron recombinations there and thereby increase the cell's efficiency.

black tellurium *See* nagyagite.

black thread [PL PATH] A fungus disease affecting the para rubber tree at the point where the tree is tapped, caused by *Phytophthora meadii* and characterized by black stripes extending through the exposed bast into the cambium or wood. Also known as black stripe; stripe canker.

black tip [PL PATH] Any of several plant diseases characterized by dark necrotic areas at the tip of the seed or fruit.

blacktongue [VET MED] A niacin-deficiency disease of dogs characterized by black discoloration of the tongue.

blacktop [MATER] A black bituminous material that is used to pave roadways; it is spread over a layer of crushed rocks and packed down into a level surface; it may be spread over small areas of roadways in need of repair.

blacktop paver [MECH ENG] A construction vehicle that spreads a specified thickness of bituminous mixture over a prepared surface.

black vomit [MED] Dark vomited matter, consisting of digested blood and gastric contents.

blackwater [MED] Any disease that is characterized by dark-colored urine.

blackwater fever [MED] A complication of falciparum malaria, characterized by intravascular hemolysis, hemoglobinuria, tachycardia, high fever, and poor prognosis.

bladder [ANAT] Any saclike structure in humans and animals, such as a swimbladder or urinary bladder, that contains a gas or functions as a receptacle for fluid. [GEOL] *See* vesicle.

bladder cell [INV ZOO] Any of the large vacuolated cells in the outer layers of the tunic in some tunicates.

bladder press [MECH ENG] A machine which simultaneously molds and cures (vulcanizes) a pneumatic tire.

blade [BOT] The broad, flat portion of a leaf. [ELEC] A flat moving conductor in a switch. [ENG] **1.** A broad, flat arm of a fan, turbine, or propeller. **2.** The broad, flat surface of a bulldozer or snowplow by which the material is moved. **3.** The part of a cutting tool, such as a saw, that cuts. [VERT ZOO] A single plate of baleen.

bladed-surface aerator [CIV ENG] A bladed, rotating component of a water treatment plant; used to infuse air into the water.

blade loading [AERO ENG] A rotor's thrust in a rotary-wing aircraft divided by the total area of the rotor blades.

Blagden's law [PHYS CHEM] The law that the lowering of a solution's freezing point is proportional to the amount of dissolved substance.

Blaine formation [GEOL] A Permian red bed formation containing red shale and gypsum beds of marine origin in Oklahoma, Texas, and Kansas.

blairmorite [PETR] A porphyritic extrusive rock consisting mainly of analcite phenocrysts in a groundmass of sanidine, analcite, and alkalic pyroxene, with accessory sphene, melanite, and nepheline.

blakeite [MINERAL] A deep reddish-brown to deep brown mineral consisting of anhydrous ferric tellurite; occurs in massive form, as microcrystalline crusts.

Blake jaw crusher [MECH ENG] A crusher with one fixed jaw plate and one pivoted at the top so as to give the greatest movement on the smallest lump.

Blake number [FL MECH] A dimensionless number used in the study of beds of particles.

Blancan [GEOL] Upper Pliocene or lowermost Pleistocene geologic time.

blanc fixe [INORG CHEM] $BaSO_4$ A commercial name for barium sulfate, with some use in pure form in the paint, paper, and pigment industries as a pigment extender.

blanching [FOOD ENG] A hot-water or steam direct-scalding treatment of raw foodstuffs of particulate type to inactivate enzymes which otherwise might cause quality deterioration, particularly of flavor, during processing or storage.

Blanc rule [ORG CHEM] The rule that glutaric and succinic acids yield cyclic anhydrides on pyrolysis, while adipic and pimelic acids yield cyclic ketones; there are certain exceptions.

blandel *See* apostilb.

blank [DES ENG] *See* bit blank. [ELECTR] To cut off the electron beam of a television picture tube, camera tube, or cathode-ray oscilloscope tube during the process of retrace by applying a rectangular pulse voltage to the grid or cathode during each retrace interval. Also known as beam blank. [ENG] **1.** The result of the final cutting operation on a natural crystal. **2.** *See* blind. [MET] **1.** A semifinished piece of metal to be stamped or forged into a tool or implement. **2.** A semifinished, pressed, compacted mass of powdered metal. **3.** Metal sheet prepared for a forming operation. [ORD] Ammunition which contains no projectile but which does contain a charge of low explosive, such as black powder, to produce a noise.

blank bit *See* bit blank.

blank carburizing [MET] A simulated carburizing procedure carried out without a carburizing medium. Also known as pseudocarburizing.

blank character [COMPUT SCI] A character, either printed or appearing as a blank, used to denote a blank space among printed characters. Also known as space character.

blanket [COMMUN] To blank out or obscure weak radio signals by a stronger signal. [GRAPHICS] In offset lithography, a rubber sheet covering the cylinder of an offset press that transfers the image from the plate to the paper. [MIN ENG] A textile material used in ore treatment plants for catching coarse free gold and sometimes associated minerals, for example, pyrite. [NUCLEO] A layer of fertile uranium-238 or thorium-232 material placed around or within the core of a nuclear reactor to breed new fuel.

blanket cloth [TEXT] **1.** Heavyweight reversible fabric commonly woven with jacquard figures of one color on a ground of another color; filling is thick and softspun. **2.** Heavyweight overcoating fabric with soft, raised finish.

blanket cylinder [GRAPHICS] The cylinder on which the blanket is mounted in offset lithography.

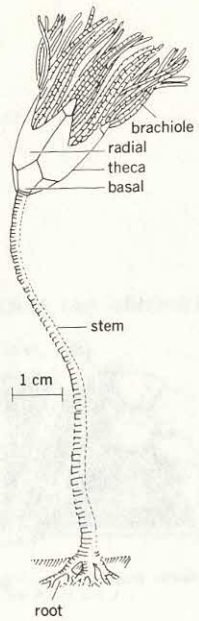
blanket deposit [GEOL] A flat deposit of ore; its length and width are relatively great compared with its thickness.

blanketing [COMMUN] Interference due to a nearby transmitter whose signals are so strong that they override other signals over a wide band of frequencies. [MIN ENG] The material caught on the blankets that are used in concentrating gold-bearing sands or slimes.

blanket insulation [MATER] Insulation in the form of a rolled sheet sometimes having a vapor-barrier treated paper backing.

blanket sand [GEOL] A relatively thin body of sand or sandstone covering a large area. Also known as sheet sand.
blank form *See* blank medium.
blank holder [MET] A tool to prevent the edge of a sheet metal blank from wrinkling during deep-drawing operations.
blankholder slide [MECH ENG] The outer slide of a double-action power press; it is usually operated by toggles or cams.
blanking [ENG] **1.** The closing off of flow through a liquid-containing process pipe by the insertion of solid disks at joints or unions; used during maintenance and repair work as a safety precaution. Also known as blinding. **2.** Cutting of plastic or metal sheets into shapes by striking with a punch. Also known as die cutting.
blanking circuit [ELECTR] A circuit preventing the transmission of brightness variations during the horizontal and vertical retrace intervals in television scanning.
blanking level [ELECTR] The level that separates picture information from synchronizing information in a composite television picture signal; coincides with the level of the base of the synchronizing pulses. Also known as pedestal; pedestal level.
blanking pulse [ELECTR] A positive or negative square-wave pulse used to switch off a part of a television or radar set electronically for a predetermined length of time.
blanking signal [ELECTR] The signal rendering the return trace invisible on the picture tube of a television receiver.
blanking time [ELECTR] The length of time that the electron beam of a cathode-ray tube is shut off.
blank medium [COMPUT SCI] An empty position on the medium concerned, such as a column without holes on a punch tape, used to indicate a blank character. Also known as blank form.
blank nitriding [MET] Simulation of nitriding without the introduction of nitrogen; achieved by use of an inert material or by application of a coating to the piece.
blank tape [COMPUT SCI] A portion of a paper tape having sprocket holes only, to indicate a blank character.
blank tape halting problem [COMPUT SCI] The problem of finding an algorithm that, for any Turing machine, decides whether the machine eventually stops if it started on an empty tape; it has been proved that no such algorithm exists.
Blasius theorem [AERO ENG] A theorem that provides formulas for finding the force and moment on the airfoil profiler.
blast [COMPUT SCI] To release internal or external memory areas from the control of a computer program in the course of dynamic storage allocation, making these areas available for reallocation to other programs. [ENG] The setting off of a heavy explosive charge. [PHYS] **1.** The brief and rapid movement of air or other fluid away from a center of outward pressure, as in an explosion. **2.** The characteristic instantaneous rise in pressure, followed by a sudden decrease, that results from this movement, differentiated from less rapid pressure changes.
blast area [ORD] **1.** Area affected by the blast of an explosion. **2.** Scorched area of ground around the muzzle of a gun, caused by repeated blasts.
blast burner [ENG] A burner in which a controlled burst of air or oxygen under pressure is supplied to the illuminating gas used. Also known as blast lamp.
blast cell [HISTOL] An undifferentiated precursor of a human blood cell in the reticuloendothelial tissue.
blast chamber [AERO ENG] A combustion chamber, especially in a gas-turbine, jet, or rocket engine.
blast deflector [AERO ENG] A device used to divert the exhaust of a rocket fired from a vertical position.
blast ditching [CIV ENG] The use of explosives to aid in ditch excavation, such as for laying pipelines.
blast effect [PHYS] Violent air movements and pressure changes and the destruction or damage resulting therefrom, generally caused by an explosion on or above the surface of the earth.
blastema [EMBRYO] **1.** A mass of undifferentiated protoplasm capable of growth and differentiation. **2.** *See* anlage.
blaster [ENG] A device for detonating an explosive charge; usually consists of a machine by which an operator, by pressing downward or otherwise moving a handle of the device, may generate a powerful transient electric current which is transmitted to an electric blasting cap. Also known as blasting machine.
blast furnace [MET] A tall, cylindrical smelting furnace for reducing iron ore to pig iron; the blast of air blown through solid fuel increases the combustion rate.
blast-furnace coke [MATER] Coke which supplies carbon monoxide to reduce the ore in a blast furnace and supplies heat to melt the iron.
blast-furnace gas [MATER] The gas product from iron ore smelting when hot air passes over coke in blast ovens; contains carbon dioxide, carbon monoxide, hydrogen, and nitrogen and is used as fuel gas.
blast gate [MET] A sliding plate in a cupola blast pipe to channel airflow in the proper proportion.
blasthole [ENG] **1.** A hole that takes a heavy charge of explosive. **2.** The hole through which water enters in the bottom of a pump stock.
blastic deformation [GEOL] Rock deformation involving recrystallization in which space lattices are destroyed or replaced.
blasticidin-S [ORG CHEM] A compound with a melting point of 235–236°C; soluble in water; used as a fungicide for rice crops. Also known as blasticidin-*S*-benzylaminobenzenesulfonate.
blasticidin-*S*-benzylaminobenzenesulfonate *See* blasticidin-S.
blasting [COMMUN] Distortion due to overloading of any part of a radio transmitter, receiver, or audio amplifier. [ENG] **1.** Cleaning materials by a blast of air that blows small abrasive particles against the surface. **2.** The act of detonating an explosive. [GEOL] Abrasion caused by movement of fine particles against a stationary fragment.
blasting agent [MATER] A compound or mixture, such as ammonium nitrate or black powder, that detonates as a result of heat or shock; used in mining, blasting, pyrotechnics, and propellants.
blasting barrel [MIN ENG] A piece of iron pipe, usually about one-half inch in diameter, used to provide a smooth passageway through the stemming for the miner's squib; it is recovered after each blast and used until destroyed.
blasting cap [ENG] A copper shell closed at one end and containing a charge of detonating compound, which is ignited by electric current or the spark of a fuse; used for detonating high explosives.
blasting fuse [ENG] A core of gunpowder in the center of jute, yarn, and so on for igniting an explosive charge in a shothole.
blasting gelatin [MATER] A plastic dynamite that contains 5–10% nitrocellulose added to nitroglycerin; used principally in submarine work.
blasting machine *See* blaster.
blasting powder [MATER] A powder containing less nitrate, and in its place more charcoal than black powder; composition is 65–75% sodium or nitrate, potassium nitrate, 10–15% sulfur, and 15–20% charcoal.
blast lamp *See* blast burner; blowtorch.
blasto- [EMBRYO] A germ or bud, with reference to early embryonic stages of development. [PETR] A prefix indicating the presence in a rock of residual structures somewhat modified by metamorphism.
Blastobacter [MICROBIO] A genus of budding bacteria; cells are rod-, wedge-, or club-shaped, and several attach at the narrow end to form a rosette; reproduce by budding at the rounded end.
Blastobasidae [INV ZOO] A family of lepidopteran insects in the superfamily Tineoidea.
blastocarpous [BOT] Germinating in the pericarp.
blastochyle [EMBRYO] The fluid filling the blastocoele.
Blastocladiales [MYCOL] An order of aquatic fungi in the class Phycomycetes.
blastocoele [EMBRYO] The cavity of a blastula. Also known as segmentation cavity.
blastocone [EMBRYO] An incomplete blastomere.
blastocyst [EMBRYO] A modified blastula characteristic of placental mammals.
blastocyte [EMBRYO] An embryonic cell that is undifferentiated. [INV ZOO] An undifferentiated cell capable of replacing damaged tissue in certain lower animals.
blastoderm [EMBRYO] The blastodisk of a fully formed vertebrate blastula.
blastodisk [EMBRYO] The embryo-forming, protoplasmic disk on the surface of a yolk-filled egg, such as in reptiles, birds, and some fish.
blast-off [AERO ENG] The takeoff of a rocket or missile.

BLASTOIDEA



A drawing of a blastoid, *Pentremites*.

blastogranitic rock [PETR] A metamorphic granitic rock which still has parts of the original granitic texture.

Blastoidea [PALEON] A class of extinct pelmatozoan echinoderms in the subphylum Crinozoa.

blastokinesis [INV ZOO] Movement of the embryo into the yolk in some insect eggs.

blastoma [MED] **1.** A tumor whose parenchymal cells have certain embryonal characteristics. **2.** A true tumor.

blastomere [EMBRYO] A cell of a blastula.

blastomycosis [MED] A term for two infectious, yeastlike fungus diseases of man: North American blastomycosis, caused by *Blastomyces dermatitidis*, and South American (paracoccidioidomycosis) caused by *Blastomyces brasiliensis*.

blastomylonite [PETR] Rock which has recrystallized after granulation.

blastopelitic [PETR] Descriptive of the structure of metamorphosed argillaceous rocks.

blastophitic [PETR] A metamorphosed rock which once contained lath-shaped crystals partly or wholly enclosed in augite and in which part of the original texture remains.

blastophore [CYTOL] The cytoplasm that is detached from a spermatid during its transformation to a spermatozoon. [INV ZOO] An amorphose core of cytoplasm connecting cells of the male morula of developing germ cells in oligochaetes.

blastopore [EMBRYO] The opening of the archenteron.

blastoporphyritic [PETR] Applied to the textures of metamorphic rocks that are derived from porphyritic rocks; the porphyritic character still remains as a relict feature.

blastopsammite [GEOL] A relict fragment of sandstone that is contained in a metamorphosed conglomerate.

blastopsephitic [GEOL] Descriptive of the structure of metamorphosed conglomerate or breccia.

blastospore [MYCOL] A fungal resting spore that arises by budding.

blastostyle [INV ZOO] A zooid on certain hydroids that lacks a mouth and tentacles and functions to produce medusoid buds.

blastotomy [EMBRYO] Separation of cleavage cells during early embryogenesis.

blastozooid [INV ZOO] A zooid produced by budding.

blast pressure [PHYS] The impact pressure of the air set in motion by an explosion.

blast roasting [MIN ENG] The roasting of finely divided ores by means of a blast to maintain internal combustion within the charge. Also known as roast sintering.

blastula [EMBRYO] A hollow sphere of cells characteristic of the early metazoan embryo.

blastulation [EMBRYO] Formation of a blastula from a solid ball of cleaving cells.

blast wall [ENG] A heavy wall used to isolate buildings or areas which contain highly combustible or explosive materials or to protect a building or area from blast damage when exposed to explosions.

blast wave [PHYS] An air wave set in motion by an explosion.

Blattabacterium [MICROBIO] A genus of the tribe Wolbachiae; straight or slightly curved rod-shaped cells; symbiotic in cockroaches.

Blattidae [INV ZOO] The cockroaches, a family of insects in the order Orthoptera.

blaze-of-grating technique [OPTICS] A technique whereby the ruled grooves of a diffraction grating are given a controlled shape so that they reflect as much as 80% of the incoming light into one particular order for a given wavelength.

BLC *See* boundary-layer control.

bleaching [FOOD ENG] *See* decolorizing. [GRAPHICS] An afterprocess in the production of direct positive photographs, in which an oxidizing solution dissolves the negative silver. [TEXT] A process in which natural coloring matter is removed from a fiber, yarn, or fabric to make it white.

bleaching agent [CHEM] An oxidizing or reducing chemical such as sodium hypochlorite, sulfur dioxide, sodium acid sulfite, or hydrogen peroxide. [FOOD ENG] A chemical, such as an aromatic acyl peroxide or monoperoxyphthalic acid, used to bleach flour, fats, oils, and other edibles.

bleaching assistant [MATER] A material added to textile bleach baths to cause better penetration by the bleach; includes pine oils, borax, and sulfonated oils.

bleaching clay [MATER] Absorbent clay contacted with petroleum and vegetable and other oils to make decolorized products.

bleaching powder [MATER] A mixture of calcium hydroxide, calcium chloride, and calcium hypochlorite that is used as a bleaching agent. Also known as chloride of lime; chlorinated lime.

bleach liquor [MATER] A water solution of calcium hypochlorite used as a laundry and textile bleach, germicide, and deodorant.

bleach spot [GEOL] A green or yellow area in red rocks formed by reduction of ferric oxide around an organic particle. Also known as deoxidation sphere.

bleb [MED] A localized collection of fluid, as serum or blood, in the epidermis.

bleed [CHEM] Diffusion of coloring matter from a substance. [COMPUT SCI] In optical character recognition, the flow of ink in printed characters beyond the limits specified for their recognition by a character reader. [ENG] To let a fluid, such as air or liquid oxygen, escape under controlled conditions from a pipe, tank, or the like through a valve or outlet. [GRAPHICS] The extension of a photograph or other artwork to the very edge of the printed page. [MED] To exude blood from a wound.

bleeder [ENG] A connection located at a low place in an air line or a gasoline container so that, by means of a small valve, the condensed water or other liquid can be drained or bled off from the line or container without discharging the air or gas. [ELECTR] A high resistance connected across the dc output of a high-voltage power supply which serves to discharge the filter capacitors after the power supply has been turned off, and to provide a stabilizing load. [MED] **1.** A person subject to frequent hemorrhages, as a hemophiliac. **2.** A blood vessel from which there is persistent uncontrolled bleeding. **3.** A blood vessel which has escaped closure by cautery or ligature during a surgical procedure.

bleeder current [ELEC] Current drawn continuously from a voltage source to lessen the effect of load changes or to provide a voltage drop across a resistor.

bleeder resistor [ELEC] A resistor connected across a power pack or other voltage source to improve voltage regulation by drawing a fixed current value continuously; also used to dissipate the charge remaining in filter capacitors when equipment is turned off.

bleeder turbine [MECH ENG] A multistage turbine where steam is extracted (bled) at pressures intermediate between throttle and exhaust, for process or feedwater heating purposes.

bleeding [ENG] Natural separation of a liquid from a liquid-solid or semisolid mixture; for example, separation of oil from a stored lubricating grease, or water from freshly poured concrete. [TEXT] Referring to a fabric in which the dye is not fast and therefore comes out when the fabric is wet.

bleeding canker [PL PATH] A fungus disease of hardwoods caused by *Phytophthora cactorum* and characterized by cankers which exude a reddish ooze on the trunk and branches.

bleeding cycle [MECH ENG] A steam cycle in which steam is drawn from the turbine at one or more stages and used to heat the feedwater. Also known as regenerative cycle.

bleeding disease [PL PATH] A fungus disease of the coconut palm caused by *Ceratostomella paradoxa*, characterized by a rust-colored exudation from cracks on the stem.

bleeding time [PHYSIO] The time required for bleeding to stop after a small puncture wound.

bleed line [GRAPHICS] A line-width change usually due to overexposure or overdeveloping in photography.

bleed-through [GRAPHICS] Of records printed on both sides, the obtrusive show-through of printed matter from one side to the other.

bleed valve [ENG] A small-flow valve connected to a fluid process vessel or line for the purpose of bleeding off small quantities of contained fluid.

blend [MATER] A mixture so combined as to render the parts indistinguishable from one another.

blende *See* sphalerite.

blended data [ENG] Q point that is the combination of scan data and track data to form a vector.

blended fuel oil [MATER] A mixture of petroleum residual and distillate fuel oils.

blended unconformity [GEOL] An unconformity that is not sharp because the original erosion surface was covered by a thick residual soil that graded downward into the underlying rock.

blended whiskey [FOOD ENG] Whiskey containing at least

20% by volume of 100 proof straight whiskey and mixed with other whiskey or neutral spirits, the mixture being not less than 80 proof at the time of bottling.

blending [TEXT] Producing uniform yarn and fabric by bringing together two or more distinctive types of fibers of different lengths.

blending inheritance [GEN] Inheritance in which the character of the offspring is a blend of those in the parents; a common feature for quantitative characters, such as stature, determined by large numbers of genes and affected by environmental variation.

blending naphtha [MATER] A petroleum distillate used to thin or dilute heavy petroleum stocks (for example, lubricating oil) to simplify handling and processing.

blending problem [IND ENG] A linear programming problem in which it is required to find the least costly mix of ingredients which yields the desired product characteristics.

blending stock [CHEM ENG] Any substance used for compounding gasoline, including natural gasoline, catalytically reformed products, and additives.

blending value [ENG] Measure of the ability of an added component (for example, tetraethyllead, isooctane, and aromatics) to affect the octane rating of a base gasoline stock.

blend stop [BUILD] A thin wood strip fastened to the exterior vertical edge of the pulley stile or jamb to hold the sash in position.

Blenniidae [VERT ZOO] The blennies, a family of carnivorous marine fishes in the suborder Blennioidei.

Blennioidei [VERT ZOO] A large suborder of small marine fishes in the order Perciformes that live principally in coral and rock reefs.

blennorrhagia [MED] Excessive discharge of mucus. Also known as blennorrhea.

blennorrhea *See* blennorrhagia.

Blephariceridae [INV ZOO] A family of dipteran insects in the suborder Orthorrhapha.

blepharism [MED] Spasm of the eyelids causing rapid, repetitive involuntary winking.

blepharitis [MED] Inflammation of the eyelids.

blepharoconjunctivitis [MED] Inflammation of the eyelids and the conjunctiva.

blepharoplast [MICROBIO] A cytoplasmic granule bearing a bacterial flagellum.

blepharospasm [MED] Spasmodic winking due to spasms of the orbicular muscle of the eyelid.

blight [PL PATH] Any plant disease or injury that results in general withering and death of the plant without rotting.

blight canker [PL PATH] A phase of fire blight characterized by cankers.

blimp [AERO ENG] A name originally applied to nonrigid, pressure-type airships, usually of small size; now applied to airships with volumes of approximately 1,500,000 cubic feet (42,000 cubic meters).

blind [ENG] A solid disk inserted at a pipe joint or union to prevent the flow of fluids through the pipe; used during maintenance and repair work as a safety precaution. Also known as blank. [GEOL] Referring to a mineral deposit with no surface outcrop.

blind approach beacon system [NAV] A pulse-type, ground-based navigation beacon used for runway approach at airports, which sends out signals that produce range and runway position information on the L-scan cathode-ray indicator of an aircraft making an instrument approach. Also known as beam approach beacon system (British usage). Abbreviated babs.

blind bombing *See* bombing through overcast.

blind coal *See* natural coke.

blind controller system [CONT SYS] A process control arrangement that separates the in-plant measuring points (for example, pressure, temperature, and flow rate) and control points (for example, a valve actuator) from the recorder or indicator at the central control panel.

blind drainage *See* closed drainage.

blind drift [MIN ENG] In a mine, a horizontal passage not yet connected with the other workings.

blind embossing [GRAPHICS] A design that is stamped on a material to give the effect of a bas-relief without ink or gold leaf.

blind hole [DES ENG] A hole which does not pass completely through a workpiece. [ENG] A type of borehole that does not have the drilling mud or other circulating medium carry the cuttings to the surface.

blind image [GRAPHICS] A lithographic image that can no longer receive ink.

blinding [ENG] *See* blanking. [MIN ENG] Interference with the functioning of a screen mesh by a matting of fine materials during screening. Also known as blocking; plugging.

blind joint [ENG] A joint which is not visible from any angle.

blind landing [AERO ENG] Landing an aircraft solely by the use of instruments because of poor visibility.

blindness [MED] **1.** Loss or absence of the ability to perceive visual images. **2.** The condition of a person having less than 1/10 (20/200 on the Snellen test) normal vision.

blind nipple [MECH ENG] A short piece of piping or tubing having one end closed off; commonly used in boiler construction.

blind riser [MET] An internal riser that does not extend to the outer surface of a mold.

blind rollers [OCEANOGR] Long, high swells which have increased in height, almost to the breaking point, as they pass over shoals or run in shoaling water. Also known as blind seas.

blind seas *See* blind rollers.

blind seed [PL PATH] A fungus disease of forage grasses caused by *Phealea temulenta,* resulting in abortion of the seed.

blind spot [ENG] An area on a filter screen where no filtering occurs. Also known as dead area. [PHYSIO] A place on the retina of the eye that is insensitive to light, where the optic nerve passes through the eyeball's inner surface.

blind trial [STAT] A trial in which experimenters and subjects are kept uninformed as to whether or not treatment has been given.

blind valley [GEOL] A valley that has been made by a spring from an underground channel which emerged to form a surface stream, and that is enclosed at the head of the stream by steep walls.

blind zone [COMMUN] Area from which echoes cannot be received; generally, an area shielded from the transmitter by some natural obstruction and therefore from which there can be no return.

B line *See* index register.

blink [MECH] A unit of time equal to 10^{-5} day or to 0.864 second. [METEOROL] A brightening of the base of a cloud layer, caused by the reflection of light from a snow- or ice-covered surface.

blink comparator [OPTICS] An optical instrument used to alternately view two pictures in the same visual field in rapid succession, to detect small differences in similar images.

blinker light [COMMUN] A light that can be flashed on and off to send a coded message, especially from ship to ship.

blinking [COMMUN] Method of providing information in pulse systems by modifying the signal at its source so that signal presentation on the display scope alternately appears and disappears; in loran, this indicates that a station is malfunctioning. [ELECTR] Electronic-countermeasures technique employed by two aircraft separated by a short distance and within the same azimuth resolution so as to appear as one target to a tracking radar; the two aircraft alternately spot-jam, causing the radar system to oscillate from one place to another, making an accurate solution of a fire control problem impossible. [NAV] Regular shifting right and left or alternate appearance and disappearance of a loran signal to indicate that the signals of a pair of stations are out of synchronization.

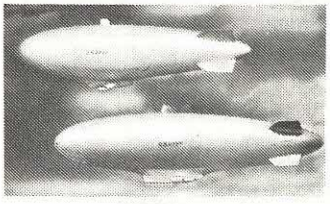
blink microscope [OPTICS] A blink comparator which magnifies the compared pictures.

blip [ELECTR] **1.** The display of a received pulse on the screen of a cathode-ray tube. Also known as pip. **2.** An ideal infrared radiation detector that detects with unit quantum efficiency all of the radiation in the signal for which the detector was designed, and responds only to the background radiation noise that comes from the field of view of the detector.

blip-scan ratio [ELECTR] The ratio of the number of times a target appears on a radarscope to the number of times it could have been seen.

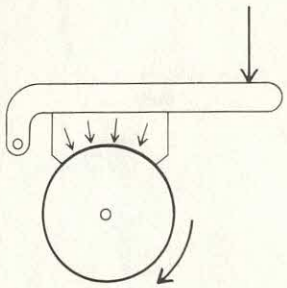
blister [ENG] A raised area on the surface of a metallic or plastic object caused by the pressure of gases developed while the surface was in a partly molten state, or by diffusion of high-pressure gases from an inner surface. [GEOL] A domelike protuberance caused by the buckling of the cooling crust of a molten lava before the flowing mass has stopped. [MED] A local swelling of the skin resulting from the accumulation of serous fluid between the epidermis and true skin. [MIN ENG] A protrusion, more or less circular in plan, extending downward

BLIMP



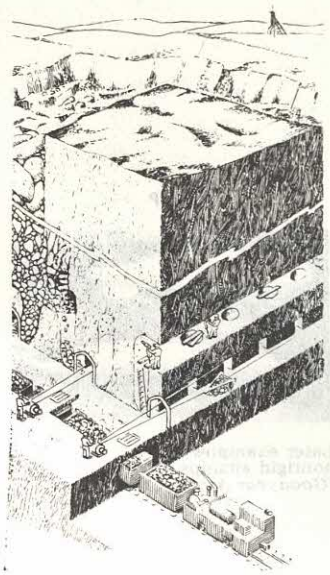
Later examples of nonrigid airships. *(Goodyear Aircraft Corp.)*

BLOCK BRAKE



Single-block brake. Block is fixed to operating lever, where force is applied in direction of top arrow.

BLOCK CAVING



Block caving technique in underground mining showing the block on the left undercut and caved in; broken ore is drawn off through bell-shaped draw points.

into a coal seam. [NUCLEO] A protuberance that sometimes develops on the surface of a nuclear-reactor fuel element during use, generally because of entrapped gases.

blister blight [PL PATH] **1.** A fungus disease of the tea plant caused by *Exobasidium vexans* and characterized by blisterlike lesions on the leaves. **2.** A rust disease of Scotch pine caused by *Cronartium asclepiadeum* and characterized by blisterlike lesions on the twigs.

blister canker [PL PATH] A fungus disease of the apple tree caused by *Nummularia discreta* and characterized by rough, black cankers on the trunk and large branches. Also known as apple pox.

blister copper [MET] Copper having 96–99% purity and a blistered appearance and formed by forcing air through molten copper matte.

blister furnace [MET] A furnace for smelting ore to produce blister copper.

blister gas [MATER] Any of several war gases, such as lewisite, which cause burning, inflammation, or tissue destruction internally or externally.

blister hypothesis [GEOL] A theory of the formation of compressional mountains by a process in which radiogenic heat expands and melts a portion of the earth's crust and subcrust, causing a domed regional uplift (blister) on a foundation of molten material that has no permanent strength.

blistering [ENG] The appearance of enclosed or broken macroscopic cavities in a body or in a glaze or other coating during firing.

blister rust [PL PATH] Any of several diseases of pines caused by rust fungi of the genus *Cronartium;* the sapwood and inner bark are affected and blisters are produced externally.

blister spot [PL PATH] A bacterial disease of the apple caused by *Pseudomonas papulans* and characterized by dark-brown blisters on the fruit and cankers on the branches.

blister steel [MET] Raw steel, made from wrought iron by cementation followed by slow cooling, in which blisters are formed by gas attempting to escape from the metal.

blizzard [METEOROL] A severe weather condition characterized by low temperatures and by strong winds bearing a great amount of snow (mostly fine, dry snow picked up from the ground).

BL Lacertae objects [ASTRON] A class of extragalactic sources of extremely intense, highly variable electromagnetic radiation which are related to quasars but have a featureless optical spectrum, and display strong optical polarization and a radio spectrum that increases in intensity at shorter wavelengths.

BL method [ENG] Research test for gasoline road octanes; the material is tested at five different speeds in an engine of given compression ratio.

bloat [VET MED] Distension of the rumen in cattle and other ruminants due to excessive gas formation following heavy fermentation of legumes eaten wet.

blob [METEOROL] In radar, oscilloscope evidence of a fairly small-scale temperature and moisture inhomogeneity produced by turbulence within the atmosphere.

Bloch equations [SOLID STATE] Approximate equations for the rate of change of magnetization of a solid in a magnetic field due to spin relaxation and gyroscopic precession.

Bloch function [SOLID STATE] A wave function for an electron in a periodic lattice, of the form $u(\mathbf{r}) \exp [i\mathbf{k}\cdot\mathbf{r}]$ where $u(\mathbf{r})$ has the periodicity of the lattice.

Bloch theorem [QUANT MECH] The theorem that the lowest state of a quantum-mechanical system without a magnetic field can carry no current. [SOLID STATE] The theorem that, in a periodic structure, every electronic wave function can be represented by a Bloch function.

Bloch wall [SOLID STATE] A transition layer, with a finite thickness of a few hundred lattice constants, between adjacent ferromagnetic domains. Also known as domain wall.

block [COMPUT SCI] **1.** A group of information units (such as records, words, characters, or digits) that are transported or considered as a single unit by virtue of their being stored in successive storage locations; for example, a group of logical records constituting a physical record. **2.** The section of a computer memory or storage device that stores such a group of information units. Also known as storage block. **3.** To combine two or more information units into a single unit. [DES ENG] **1.** A metal or wood case enclosing one or more pulleys; has a hook with which it can be attached to an object. **2.** *See* cylinder block. [MIN ENG] A division of a mine, usually bounded by workings but sometimes by survey lines or other arbitrary limits. [PETRO ENG] The subdivision of a sea area for the licensing of oil and gas exploration and production rights.

block and block *See* chockablock.

block and fall *See* block and tackle.

block and tackle [MECH ENG] Combination of a rope or other flexible material and independently rotating frictionless pulleys. Also known as block and fall.

block body [COMPUT SCI] A list of statements that follows the block head in a computer program with block structure.

block brake [MECH ENG] A brake which consists of a block or shoe of wood bearing upon an iron or steel wheel.

block brazing [MET] The process of joining metals by applying heated blocks to the joint and using a nonferrous filler metal with a melting point above 800°F (427°C).

block caving [MIN ENG] A method of caving where a block, 150–250 feet (46–77 meters) on a side and several hundred feet high, is induced to cave in after it is undercut; the broken ore is drawn off at a bell-shaped draw point.

block chaining *See* chained block encryption.

block cipher [COMMUN] A cipher that transforms a string of input bits of fixed length into a string of output bits of fixed length.

block clay *See* melange.

block coal [MIN ENG] **1.** A bituminous coal that breaks into large lumps or cubical blocks. **2.** Coal that passes over 5-, 6-, and 8-inch (127, 152, and 203 millimeter) block screens; used in smelting iron.

block coefficient [NAV ARCH] The ratio of the volume of water displaced by a ship to the product of the ship's length, breadth, and draft.

block correction [MAP] A corrected reproduction of a small area of a nautical chart that is pasted to the chart for which it is issued.

block data [COMPUT SCI] A statement in FORTRAN which declares that the program following is a data specification subprogram.

block diagram [ENG] A diagram in which the essential units of any system are drawn in the form of rectangles or blocks and their relation to each other is indicated by appropriate connecting lines.

blocked F-format data set *See* FB data set.

blocked impedance [ELEC] The impedance at the input of a transducer when the impedance of the output system is made infinite, as by blocking or clamping the mechanical system.

blocked operation [CHEM ENG] The use of a single chemical or refinery process unit alternately in more than one operation; for example, a catalytic reactor will first produce a chemical product and then will be blocked from the main process stream during catalyst regeneration.

blocked-out ore *See* developed reserves.

blocked resistance [ENG ACOUS] Resistance of an audio-frequency transducer when its moving elements are blocked so they cannot move; represents the resistance due only to electrical losses.

block encryption [COMMUN] The use of a block cipher, usually employing the data encryption standard (DES), in which each 64-bit block of data is enciphered or deciphered separately, and every bit in a given output block depends on every bit in its respective input block and on every bit in the key, but on no other bits. Also known as electronic codebook mode (ECB).

blocker-type forging [ENG] A type of forging for designs involving the use of large radii and draft angles, smooth contours, and generous allowances.

blockette [COMPUT SCI] A subdivision of a group of consecutive machine words transferred as a unit, particularly with reference to input and output.

block faulting [GEOL] A type of faulting in which fault blocks are displaced at different orientations and elevations.

block glide [GEOL] A translational landslide in which the slide mass moves outward and downward as an intact unit.

block grease [MATER] High-melting-point grease that can be handled as a block or stick at normal temperatures; used for journal bearings. Also known as brick grease.

block-grid keying [COMMUN] Method of keying a continuous-wave transmitter by operating the amplifier stage as an electronic switch; during the spacing interval when the key is open, the bias on the control grid becomes highly negative and

prevents the flow of plate current so that the tube has no output; during the marking interval when the key is closed, this bias is removed and full plate current flows.

block head [COMPUT SCI] A list of declarations at the beginning of a computer program with block structure.

block hole [ENG] A small hole drilled into a rock or boulder into which an anchor bolt or a small charge or explosive may be placed; used in quarries for breaking large blocks of stone or boulders.

blockhouse [ENG] **1.** A reinforced concrete structure, often built underground or half-underground, and sometimes dome-shaped, to provide protection against blast, heat, or explosion during rocket launchings or related activities, and usually housing electronic equipment used in launching the rocket. **2.** The activity that goes on in such a structure.

block identifier [COMPUT SCI] A means of identifying an area of storage in FORTRAN so that this area may be shared by a program and its subprograms.

block ignore character [COMPUT SCI] A character associated with a block which indicates the presence of errors in the block.

blocking [CHEM] Undesired adhesion of granular particles; often occurs with damp powders or plastic pellets in storage bins or during movement through conduits. [COMPUT SCI] Combining two or more computer records into one block. [ELECTR] **1.** Applying a high negative bias to the grid of an electron tube to reduce its anode current to zero. **2.** Overloading a receiver by an unwanted signal so that the automatic gain control reduces the response to a desired signal. **3.** Distortion occurring in a resistance-capacitance-coupled electron tube amplifier stage when grid current flows in the following tube. [ENG] Undesired adhesion between layers of plastic materials in contact during storage or use. [HISTOL] **1.** The process of embedding tissue in a solid medium, such as paraffin. **2.** A histochemical process in which a portion of a molecule is treated to prevent it from reacting with some other agent. [MET] **1.** A preliminary hot-forging operation which imparts an approximate shape to the rough stock. **2.** Reducing the oxygen content of the bath in an open-hearth furnace. [MIN ENG] *See* blinding. [SOLID STATE] The hindering of motion of dislocations in a solid substance by small particles of a second substance included in the solid; this results in hardening of the substance. [STAT] The grouping of sample data into subgroups with similar characteristics.

blocking and wedging [MIN ENG] A method of holding mine timber sets in place; blocks of wood are set on the caps directly over the post supports and have a grain of block parallel with the top of the cap; wedges are driven tightly between the blocks and the roof.

blocking anticyclone *See* blocking high.

blocking capacitor *See* coupling capacitor.

blocking factor [COMPUT SCI] The largest possible number of records of a given size that can be contained within a single block.

blocking group [ORG CHEM] In peptide synthesis, a group that is reacted with a free amino or carboxyl group on an amino acid to prevent its taking part in subsequent formation of peptide bonds.

blocking high [METEOROL] Any high (or anticyclone) that remains nearly stationary or moves slowly compared to the west-to-east motion upstream from its location, so that it effectively blocks the movement of migratory cyclones across its latitudes. Also known as blocking anticyclone.

blocking layer *See* depletion layer.

blocking oscillator [ELECTR] A relaxation oscillator that generates a short-time-duration pulse by using a single transistor or electron tube and associated circuitry. Also known as squegger; squegging oscillator.

blocking oscillator driver [ELECTR] Circuit which develops a square pulse used to drive the modulator tubes, and which usually contains a line-controlled blocking oscillator that shapes the pulse into the square wave.

block input [COMPUT SCI] **1.** A block of computer words considered as a unit and intended or destined to be transferred from an internal storage medium to an external destination. **2.** *See* output area.

block lava [GEOL] Lava flows which occur as a tumultuous assemblage of angular blocks.

block length [COMPUT SCI] The total number of records, words, or characters contained in one block.

block loading [COMPUT SCI] A program loading technique in which the control sections of a program or program segment are loaded into contiguous positions in main memory.

block mark [COMPUT SCI] A special character that indicates the end of a block.

block mountain [GEOL] A mountain formed by the combined processes of uplifting, faulting, and tilting. Also known as fault-block mountain.

block plane [DES ENG] A small type of hand plane, designed for cutting across the grain of the wood and for planing end grains.

block polymer [ORG CHEM] A copolymer whose chain is composed of alternating sequences of identical monomer units.

block printing [GRAPHICS] The earliest form of printing, involving the cutting of crude pictures and lettering on blocks of wood.

block protector [ELEC] Rectangular piece of carbon, bakelite with a metal insert, or porcelain with a carbon insert which, in combination with each other, make one element of a protector; they form a gap which will break down and provide a path to ground for excessive voltages.

block sequence [MET] A procedure by which a continuous multiple-pass joint is completed by alternating the deposition of intermittent cross-sectional buildup and intervening lengths of weld metal.

block signal system [CONT SYS] An automatic railroad traffic control system in which the track is sectionalized into electrical circuits to detect the presence of trains, engines, or cars.

block sort [COMPUT SCI] A method of sorting a file, usually with punched card sorters, in which the file is first sorted according to the value of the digit in the highest digit position of the key; the resulting collections of records can next be sorted independently in smaller operations, and the separate sections then joined.

block standby [COMPUT SCI] Locations always set aside in storage for communication with buffers in order to make more efficient use of such buffers.

block structure [COMPUT SCI] In computer programming, a conceptual tool used to group sequences of statements into single compound statements and to allow the programmer explicit control over the scope of the program variables.

block system [MIN ENG] A system of pillars in which a series of entries, rooms, and crosscuts are driven to divide the coal into blocks of about equal size which are then extracted on retreat.

block transfer [COMPUT SCI] The movement of data in blocks instead of by individual records.

blocky iceberg [OCEANOGR] An iceberg with steep, precipitous side and with a horizontal or nearly horizontal upper surface.

blödite *See* bloedite.

bloedite [MINERAL] $MgSO_4 \cdot Na_2SO_4 \cdot 4H_2O$ A white or colorless monoclinic mineral consisting of magnesium sodium sulfate. Also spelled blödite. Also known as astrakanite; astrochanite.

blomstrandine *See* priorite.

blondel *See* apostilb.

Blondel-Rey law [OPTICS] A law utilized to determine the apparent point brilliance of a flashing light.

blood [HISTOL] A fluid connective tissue consisting of the plasma and cells that circulate in the blood vessels.

blood agar [MICROBIO] A nutrient microbiologic culture medium enriched with whole blood and used to detect hemolytic strains of bacteria.

blood bank [ENG] A place for storing whole blood or plasma under refrigeration.

blood blister [MED] A blister that is filled with blood.

blood cell [HISTOL] An erythrocyte or a leukocyte.

blood chimerism [GEN] Having red blood cells of two genetic types.

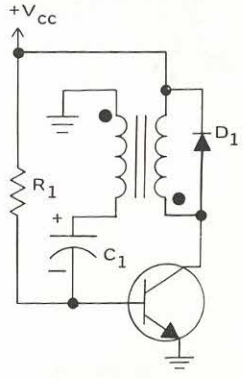
blood count [PATH] Determination of the number of white and red blood cells in a definite volume of blood.

blood crisis [MED] The sudden appearance of large numbers of nucleated erythrocytes in the circulating blood.

blood disease [PL PATH] A bacterial disease affecting the vascular tissues of the banana in the Celebes; believed to be caused by *Xanthomonas celebensis* and characterized by blighting of the leaves and reddish-brown rot of the fruit.

blood dyscrasia [MED] Any abnormal condition of the

BLOCKING OSCILLATOR



Circuit diagram of a typical free-running blocking oscillator.

formed elements of blood or of the constituents required for clotting.

blood gas [ORD] War gas which, when absorbed into the body, primarily by breathing, affects body functions by interfering with transfer of oxygen from the lungs via the blood to tissues.

blood group [IMMUNOL] An immunologically distinct, genetically determined class of human erythrocyte antigens, identified as A, B, AB, and O.

blood island [EMBRYO] One of the areas in the yolk sac of vertebrate embryos allocated to the production of the first blood cells.

blood-plate hemolysis [MICROBIO] Destruction of red blood cells in a blood agar medium by a bacterial toxin.

blood platelet *See* thrombocyte.

blood poisoning *See* septicemia.

blood pressure [PHYSIO] Pressure exerted by blood on the walls of the blood vessels.

blood rain [METEOROL] Rain of a reddish color caused by dust particles containing iron oxide that were picked up by the raindrops during descent.

bloodstone [MINERAL] **1.** A form of deep green chalcedony flecked with red jasper. Also known as heliotrope; oriental jasper. **2.** *See* hematite.

bloodstream [PHYSIO] The flow of blood in its circulation through the body.

blood sugar [BIOCHEM] The carbohydrate, principally glucose, of the blood.

blood test [PATH] **1.** A serologic test for syphilis. **2.** A blood count. **3.** A test for detection of blood, usually one based on the peroxidase activity of blood, such as the benzidine test or guaiac test.

blood typing [IMMUNOL] Determination of an individual's blood group.

blood vessel [ANAT] A tubular channel for blood transport.

bloom [BOT] **1.** An individual flower. Also known as blossom. **2.** To yield blossoms. **3.** The waxy coating that appears as a powder on certain fruits, such as plums, and leaves, such as cabbage. [ECOL] A colored area on the surface of bodies of water caused by heavy planktonic growth. [ENG] **1.** Fluorescence in lubricating oils or a cloudy surface on varnished or enameled surfaces. **2.** To apply an antireflection coating to glass. [GEOL] *See* blossom. [GRAPHICS] A milky or foggy defect that may appear on the surface of a varnished painting; caused by moisture. [MINERAL] *See* efflorescence. [MET] **1.** A semifinished bar of metal formed from an ingot and having a rectangular cross section exceeding 36 square inches (232 square centimeters). **2.** To hammer or roll metal in order to make its surface bright. [OPTICS] Color of oil in reflected light, differing from its color in transmitted light. Also known as fluorescence.

bloomer [MET] A furnace used to shape wrought iron directly from ore.

blooming [ELECTR] **1.** Defocusing of television picture areas where excessive brightness results in enlargement of spot size and halation of the fluorescent screen. **2.** An increase in radarscope spot size due to an increase in signal intensity.

blooming mill [MET] A rolling mill for making blooms from ingots. Also known as cogging mill.

blooper [COMMUN] An oscillating radio receiver that is radiating an undesired signal.

blossom [BOT] *See* bloom. [GEOL] The oxidized or decomposed outcrop of a vein or coal bed. Also known as bloom.

blossom-end rot [PL PATH] **1.** Any rot disease of fruit that originates at the blossom end. **2.** A physiological disease of tomato believed to be caused by extreme fluctuations in available moisture; characterized by shallow leathery depressions with a water-soaked appearance around the tip end of the fruit.

blotch print [TEXT] Cloth that is printed with both the ground color and the design.

blotter [ENG] A disk of compressible material used between a grinding wheel and its flanges to avoid concentrated stress.

blotter model [PETRO ENG] An analysis device in which the analogous movement of copper ammonium or zinc ammonium ions in blotting paper or gelatin indicates oil-well injection-fluid movement through porous underground reservoirs.

blotter press [CHEM ENG] A plate-and-frame filter in which the filter medium is blotting paper.

blotting paper [MATER] An unsized paper used to absorb excess ink from penned letters or signatures; also used for other applications where a soft, spongy paper is required.

blow [ELEC] Opening of a circuit because of excess current, particularly when the current is heavy and a melting or breakdown point is reached.

blowback [CHEM ENG] **1.** A continuous stream of liquid or gas bled through air lines from instruments and to the process line being monitored; prevents process fluid from backing up and contacting the instrument. **2.** Reverse flow of fluid through a filter medium to remove caked solids. Also known as backwash. [GRAPHICS] To enlarge, or make an enlargement of, an image.

blowback gun [ORD] An automatic gun utilizing the pressure of the propellant gases to force the bolt to the rear, independently of the barrel which does not move relative to the receiver.

blowball [BOT] A fluffy seed ball, as of the dandelion.

blowby [MECH ENG] Leaking of fluid between a cylinder and its piston during operation.

blowcase [CHEM ENG] A cylindrical or spherical corrosion- and pressure-resistant container from which acid is forced by compressed air to the agitator; used in manufacture of acids but largely superseded by centrifugal pumps. Also known as acid blowcase; acid egg.

blowdown [CHEM ENG] Removal of liquids or solids from a process vessel or storage vessel or a line by the use of pressure. [MECH ENG] The difference between the pressure at which the safety valve opens and the closing pressure. [METEOROL] A wind storm that causes trees or structures to be blown down.

blowdown line [CHEM ENG] A large conduit to receive and confine fluids forced by pressure from process vessels.

blowdown stack [CHEM ENG] A vertical stack or chimney into which the contents of a chemical or petroleum process unit are emptied in case of an operational emergency.

blowdown tunnel [AERO ENG] A wind tunnel in which stored compressed gas is allowed to expand through a test section to provide a stream of gas or air for model testing.

blowdown turbine [AERO ENG] A turbine attached to a reciprocating engine which receives exhaust gases separately from each cylinder, utilizing the kinetic energy of the gases.

blower [MECH ENG] A fan which operates where the resistance to gas flow is predominantly downstream of the fan.

blowhole [GEOL] A longitudinal tunnel opening in a sea cliff, on the upland side away from shore; columns of sea spray are thrown up through the opening, usually during storms. [MET] A pocket of air or gas formed in a metal during solidification. [VERT ZOO] The nostril on top of the head of cetacean mammals.

blow in [MET] To put a blast furnace into operation. [PETRO ENG] Of an oil well, to begin sending forth oil or gas.

blowing [CHEM ENG] The introduction of compressed air near the bottom of a tank or other container in order to agitate the liquid therein. [ENG] *See* blow molding.

blowing agent [MATER] A chemical added to plastics and rubbers that generates inert gases on heating, causing the resin to assume a cellular structure. Also known as foaming agent.

blowing boundary-layer control [AERO ENG] A technique that is used in addition to purely geometric means to control boundary-layer flow; it consists of reenergizing the retarded flow in the boundary layer by supplying high-velocity flow through slots or jets on the surface of the body.

blowing cave [GEOL] A cave with an alternating air movement. Also known as breathing cave.

blowing dust [METEOROL] Dust picked up locally from the surface of the earth and blown about in clouds or sheets.

blowing fan *See* forcing fan.

blowing pressure [ENG] Pressure of the air or other gases used to inflate the parison in blow molding.

blowing sand [METEOROL] Sand picked up from the surface of the earth by the wind and blown about in clouds or sheets.

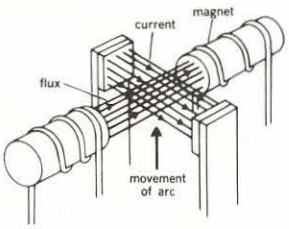
blowing snow [METEOROL] Snow lifted from the surface of the earth by the wind to a height of 6 feet (1.8 meters) or more (higher than drifting snow) and blown about in such quantities that horizontal visibility is restricted.

blowing spray [METEOROL] Spray lifted from the sea surface by the wind and blown about in such quantities that horizontal visibility is restricted.

blowing still [CHEM ENG] A still or process column in which blown or oxidized asphalt is made.

blowing-up furnace [MET] A furnace used for sintering ore and for the volatilization of lead and zinc.
blow molding [ENG] A method of fabricating hollow plastic objects, such as bottles, by forcing a parison into a mold cavity and shaping by internal air pressure. Also known as blowing.
blown asphalt [MATER] Asphalt which is treated or heated with air or steam within a blowing still at relatively high temperature.
blown film [MATER] Film that has been produced by extruding a tube of plastic material which is then expanded in diameter and reduced in thickness by internal air pressure, and then slit along one side.
blown foam [MATER] A cellular plastic consisting of an expanded matrix resembling natural foam.
blown-fuse indicator [ELEC] A neon warning light connected across a fuse so that it lights when the fuse is blown.
blown glass [ENG] Glassware formed by blowing air into a ball of liquefied glass until it reaches the desired shape.
blown oil [MATER] A vegetable or animal oil that has been agitated and partially oxidized by a current of warm air or oxygen, including castor, whale, fish, rape, and linseed oils; used in paints, lubricants, and plasticizers.
blown tubing [ENG] A flexible thermoplastic film tube made by applying pressure inside a molten extruded plastic tube to expand it prior to cooling and winding flat onto rolls.
blowoff [AERO ENG] The action of applying an explosive force and separating a package section away from the remaining part of a rocket vehicle or reentry body, usually to retrieve an instrument or to obtain a record made during early flight.
blowoff valves [MECH ENG] Valves in boiler piping which facilitate removal of solid matter present in the boiler water.
blowout [ELEC] The melting of an electric fuse because of excessive current. [ELECTROMAG] The extinguishing of an electric arc by deflection in a magnetic field. Also known as magnetic blowout. [ENG] **1.** The bursting of a container (such as a tube pipe, pneumatic tire, or dam) by the pressure of the contained fluid. **2.** The rupture left by such bursting. **3.** The abrupt escape of air from the working chamber of a pneumatic caisson. [GEOL] Any of the various trough-, saucer-, or cuplike hollows formed by wind erosion on a dune or other sand deposit. [HYD] A bubbling spring which bursts from the ground behind a river levee when water at flood stage is forced under the levee through pervious layers of sand or silt. Also known as sand boil. [PETRO ENG] A sudden, unplanned escape of oil or gas from a well during drilling.
blowout coil [ELECTROMAG] A coil that produces a magnetic field in an electrical switching device for the purpose of lengthening and extinguishing an electric arc formed as the contacts of the switching device part to interrupt the current.
blowout dune *See* parabolic dune.
blowout magnet [ELECTROMAG] An electromagnet or permanent magnet used to deflect and extinguish the arc formed when a high-current circuit breaker or switch is opened.
blowpipe [BIOL] A small tube, tapering to a straight or slightly curved tip, used in anatomy and zoology to reveal or clean a cavity. [ENG] **1.** A long, straight tube, used in glass blowing, on which molten glass is gathered and worked. **2.** A small, tapered, and frequently curved tube that leads a jet, usually of air, into a flame to concentrate and direct it; used in flame tests in analytical chemistry and in brazing and soldering of fine work. **3.** *See* blowtorch.
blowpipe reaction analysis [ANALY CHEM] A method of analysis in which a blowpipe is used to heat and decompose a compound or mineral; a characteristic color appears in the flame or a colored crust appears on charcoal.
blowpit *See* blowtank.
blow pressure [ENG] Air pressure required for plastics blow molding.
blow rate [ENG] The speed of the cycle at which air or an inert gas is applied intermittently during the forming procedure of blow molding.
blowtank [CHEM ENG] A tank or pit, used in papermaking, into which the contents of a digester are blown upon completion of a cook. Also known as blowpit.
blowtorch [ENG] A small, portable blast burner which operates either by having air or oxygen and gaseous fuel delivered through tubes or by having a fuel tank which is pressured by a hand pump. Also known as blast lamp; blowpipe.
blowup [GRAPHICS] An enlargement of a photographic print, or of a detail of the print.
blowup ratio [ENG] **1.** In blow molding of plastics, the ratio of the diameter of the mold cavity to the diameter of the parison. **2.** In blown tubing, the ratio of the diameter of the finished product to the diameter of the die.
blubber [INV ZOO] A large sea nettle or medusa. [VERT ZOO] A thick insulating layer of fat beneath the skin of whales and other marine mammals.
blubber oil *See* whale oil.
blue [OPTICS] The hue evoked in an average observer by monochromatic radiation having a wavelength in the approximate range from 455 to 492 nanometers; however, the same sensation can be produced in a variety of other ways.
blue annealing [MET] Softening metal sheets by heating in an open furnace and cooling in air; bluish oxide forms on the metal surface.
blue asbestos *See* crocidolite.
blue baby [MED] An infant with congenital cyanosis due to cardiac or pulmonary defect, causing shunting of unoxygenated blood into the systemic circulation.
blue band [ASTRON] A dark band which appears around the polar caps of Mars as they shrink during the spring and early summer. [GEOL] **1.** A layer of bubble-free, dense ice found in a glacier. **2.** A bluish clay found as a thin, persistent bed near the base of No. 6 coal everywhere in the Illinois-Indiana coal basin.
blueberry [BOT] Any of several species of plants in the genus *Vaccinium* of the order Ericales; the fruit, a berry, occurs in clusters on the plant.
blue brittleness [MET] Loss of ductility noted for some steels when heated to 400–600°F (204–316°C), the blue heat range.
blue cap [MIN ENG] The characteristic blue halo, or tip, of the flame of a safety lamp when firedamp is present in the air.
blue comb [VET MED] A disease of domestic fowl and other birds that resembles Bright's disease in humans; may be a viral disease or caused by excessive salt intake.
blue copper ore *See* azurite.
bluefish [VERT ZOO] *Pomatomus saltatrix*. A predatory fish in the order Perciformes. Also known as skipjack.
blue flash *See* green flash.
blue gas [MATER] A gas consisting chiefly of carbon monoxide and hydrogen, formed by the action of steam upon hot coke; used mainly as a source of hydrogen and in synthesis of other chemical compounds. Also known as blue water gas.
blue glow [ELECTR] A glow normally seen in electron tubes containing mercury vapor, due to ionization of the mercury molecules. [MET] Luminescence emitted by certain metallic oxides when heated.
bluegrass [BOT] The common name for several species of perennial pasture and lawn grasses in the genus *Poa* of the order Cyperales.
blue-green algae [BOT] The common name for members of the Cyanophyceae.
blue-green flame *See* green flash.
blue ground [GEOL] **1.** The decomposed peridotite or kimberlite that carries the diamonds in the South African mines. **2.** Strata of the coal measures, consisting principally of beds of hard clay or shale.
blue ice [HYD] Pure ice in the form of large, single crystals that is blue owing to the scattering of light by the ice molecules; the purer the ice, the deeper the blue.
blueing *See* bluing.
blue iron earth *See* vivianite.
blue lead *See* galena.
blueline [GRAPHICS] A blue image or outline printed on paper or plastic sheeting and used as a guide for drafting, stripping, or layout; it does not reproduce when the finished work is photographed.
blue magnetism [GEOPHYS] The magnetism displayed by the south-seeking end of a freely suspended magnet; this is the magnetism of the earth's north magnetic pole.
blue malachite *See* azurite.
blue metal [GEOL] The common fine-grained blue-gray mudstone which is part of many of the coal beds of England.
blue mold [MYCOL] Any fungus of the genus *Penicillium*.
blue mud [GEOL] A combination of terrigenous and deep-sea sediments having a bluish gray color due to the presence of organic matter and finely divided iron sulfides.
blue nevus [MED] A nevus composed of spindle-shaped

BLOWOUT COIL

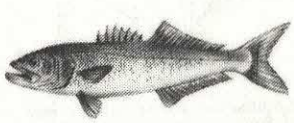


The relation of direction of current, magnetic flux, and movement of arc in a blowout coil.

BLUEBERRY

A cluster of blueberries.

BLUEFISH



The bluefish, an excellent food and game fish.

pigmented melanocytes in the middle and lower two-thirds of the dermis.

blue ocher *See* vivianite.

blueprint [GRAPHICS] **1.** A contact print, with white lines on a blue background, of a drawing; made on linen or on ferroprussiate paper and developed in water or a special solution. **2.** A photoprint used in offset lithography or photoengraving for use in checking positions of image elements.

blueprint machine [GRAPHICS] A machine which exposes and develops blueprint paper.

blue rot [PL PATH] A fungus disease of conifers caused by members of the genus *Ceratostomella*, characterized by blue discoloration of the wood. Also known as bluing.

blueschist facies [PETROL] High-pressure, low-temperature metamorphism associated with subduction zones which produces a broad mineral association including glaucophane, actinolite, jadeite, aegirine, lawsonite, and pumpellyite.

blue-sky scale *See* Linke scale.

blue spar *See* lazulite.

blue stain [PL PATH] A bluish stain of the sapwood of many trees that is caused by several fungi, especially of the genera *Fusarium*, *Ceratostomella*, and *Penicillium*.

blue star [ASTRON] A star of spectral type O, B, A, or F according to the Draper catalog.

bluestem grass [BOT] The common name for several species of tall, perennial grasses in the genus *Andropogon* of the order Cyperales.

bluestone [MINERAL] *See* chalcanthite. [PETR] **1.** A sandstone that is highly argillaceous and of even texture and bedding. **2.** The commercial name for a feldspathic sandstone that is dark bluish gray; it is easily split into thin slabs and used as flagstone.

blue tetrazolium [ORG CHEM] $C_{40}H_{32}Cl_2N_8O_2$ Lemon yellow crystals that decompose at 242–245°C; soluble in chloroform, ethanol, and methanol; used in seed germination research, as a stain for molds and bacteria, and in histochemical studies. Also known as dimethoxy neotetrazolium; ditetrazolium chloride; tetrazolium blue.

bluetongue [VET MED] **1.** A disease of African horses characterized by lesions that are most pronounced about the head. Also known as thickhead. **2.** A virus disease of African sheep characterized by hyperemia, cyanosis, and punctate hemorrhages and by swelling and sloughing of the epithelium about the mouth and tongue.

blue vitriol [MATER] A hydrous solution of copper sulfate that is applied to the surface of a metal for layout purposes. [MINERAL] *See* chalcanthite.

blue water gas *See* blue gas.

bluff [GEOGR] **1.** A steep, high bank. **2.** A broad-faced cliff.

bluff body [AERO ENG] A body having a broad, flattened front, as in some reentry vehicles.

bluff-bowed ship [NAV ARCH] A ship that has a full broad bow.

bluing [MET] Also spelled blueing. **1.** Formation of a bluish oxide film on polished steel; improves appearance and provides some corrosion resistance. **2.** Heating of formed springs to reduce internal stress. **3.** A blue oxide film formed on the polished surface of a metal due to extremely high temperatures. [PL PATH] *See* blue rot.

blunger [ENG] **1.** A large spatula-shaped wooden implement used to mix clay with water. **2.** A vat, containing a rotating shaft with fixed knives, for mixing clay and water into slip.

blunging [ENG] The mixing or suspending of ceramic material in liquid by agitation, to form slip.

blunt dissection [MED] In surgery, the exposure of structures or separation of tissues without cutting.

blunt file [DES ENG] A file whose edges are parallel.

blunting [DES ENG] Slightly rounding a cutting edge to reduce the probability of edge chipping.

BM *See* barrels per month; bench mark.

BM-AGA coal test [ENG] A laboratory test developed jointly by the United States Bureau of Mines and a committee of the American Gas Association which forecasts the quality of coke producible in commercial practice.

BMD *See* ballistic missile defense.

B meson [PARTIC PHYS] An elementary particle with strong nuclear interactions, baryon number $B = 0$, and mass 1237 MeV.

BMR *See* basal metabolic rate.

BMT *See* basic motion-time study.

BNF *See* Backus-Naur form.

BNOA *See* β-naphthoxyacetic acid.

boa [VERT ZOO] Any large, nonvenomous snake of the family Boidae in the order Squamata.

boar *See* wild boar.

board coal *See* bituminous wood.

board drop hammer [MECH ENG] A type of drop hammer in which the ram is attached to wooden boards which slide between two rollers; after the ram falls freely on the forging, it is raised by friction between the rotating rollers. Also known as board hammer.

board-foot [ENG] Unit of volume in measuring lumber; equals 144 cubic inches (2360 cubic centimeters), or the volume of a board 1 foot square and 1 inch thick. Abbreviated bd-ft.

board hammer *See* board drop hammer.

boarding [ENG] **1.** A batch of boards. **2.** Covering with boards.

board measure [ENG] Measurement of lumber in board-feet. Abbreviated bm.

Board of Trade unit *See* kilowatt-hour.

boast [ENG] **1.** To shape stone or curve furniture roughly in preparation for finer work later on. **2.** To finish the face of a building stone by cutting a series of parallel grooves.

Boas' test [PATH] A test that uses an alcoholic solution of resorcinol and sucrose to determine the presence of free hydrochloric acid in gastric juices.

boasting chisel [DES ENG] A broad chisel used in boasting stone.

boat [CHEM] A platinum or ceramic vessel for holding a substance for analysis by combustion. [NAV ARCH] A small watercraft.

boat boom [NAV ARCH] A spar swung out from the side of a vessel, to which boats can be securely attached. Also known as boat spar; riding boom.

boat conformation [ORG CHEM] A boat-shaped conformation in space which can be assumed by cyclohexane or similar compounds; a relatively unstable form.

boat deck [NAV ARCH] The deck on a ship that usually is used to stow lifeboats.

boat fall [NAV ARCH] One of a pair of tackles used in lowering or hoisting a boat from or to the davits of a ship.

boat hook [NAV ARCH] A long rod with a knob on one end and a metal point and hook at the other; used to push or pull other boats, logs, or objects from or to the side of a boat or to engage lines, rings, or buoys.

boat plug [NAV ARCH] A threaded plug that stops up the drainage hole of a boat near the keel and can be removed when the boat is dry-docked to drain out bilge water.

boat spar *See* boat boom.

boat spike [DES ENG] A long, square spike used in construction with heavy timbers. Also known as barge spike.

boattail [AERO ENG] Of an elongated body such as a rocket, the rear portion having decreasing cross-sectional area.

bob [MET] A feeding device for providing molten metal to a casting during solidification to prevent shrinkage.

Bobasatranidae [PALEON] A family of extinct palaeonisciform fishes in the suborder Platysomoidei.

bobbin [ELECTROMAG] An insulated spool serving as a support for a coil. [TEXT] A cylinder with projecting edges at one or both ends and a hole along the axis, used for winding twisted strands of textile fiber, thread, or yarn.

bobbin core [ELECTROMAG] A magnetic core having a form or bobbin on which the ferromagnetic tape is wrapped for support of the tape.

bobbinet [TEXT] A machine-made net fabric with a hexagonal mesh; made of cotton, silk, rayon, or nylon and used in the manufacture of garments or as a base for embroidered or appliqued laces.

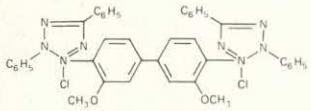
bobbing [ELECTR] Fluctuation of the strength of a radar echo, or its indication on a radarscope, due to alternate interference and reinforcement of returning reflected waves.

bobbin lace [TEXT] A lace made by hand from thread wound on bobbins by following a pattern denoted by pins, usually worked over a fabric pillow. Also known as pillow lace.

bobierrite [MINERAL] $Mg_3(PO_4)_2 \cdot 8H_2O$ A transparent, colorless or white, monoclinic mineral consisting of octahydrated magnesium phosphate.

Bobillier's law [MECH] The law that, in general plane rigid motion, when a and b are the respective centers of curvature of points A and B, the angle between Aa and the tangent to the

BLUE TETRAZOLIUM

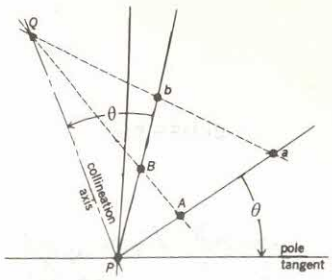


Structural formula.

BOA

The boa constrictor *(Constrictor constrictor)*, an arboreal-aquatic member of the boa family.

BOBILLIER'S LAW



Application of Bobillier's law of four-bar linkage consisting of fixed member ab, cranks aA and bB and connecting rod AB. Law states that angle θ between Aa and pole tangent equals angle θ between Bb and collineation axis joining centrode P and intersection Q of AB and ab.

centrode of rotation (pole tangent) and the angle between Bb and a line from the centrode to the intersection of AB and ab (collineation axis) are equal and opposite.

bock beer [FOOD ENG] A dark, heavy, rich beer.

BOD *See* biochemical oxygen demand.

Bodansky unit [BIOL] A unit for the standarization of phosphatase based on the activity of phosphatase toward β-glycerophosphate.

Bode diagram [ELECTR] A diagram in which the phase shift or the gain of an amplifier, a servomechanism, or other device is plotted against frequency to show frequency response; logarithmic scales are customarily used for gain and frequency.

bodenite [MINERAL] A metallic, steel-gray mineral consisting of cobalt, nickel, iron, arsenic, and bismuth; occurs in granular to fibrous masses.

Bodenstein number [FL MECH] A numberless group used in the study of diffusion in reactors.

Bode's law [ASTRON] An empirical law giving mean distances of planets to the sun by the formula $a = 0.4 + 0.3 \times 2^n$, where a is in astronomical units and n equals $-\infty$ for Mercury, 0 for Venus, 1 for Earth, and so on; the asteroids are included as planets. Also known as Titius-Bode law.

bodily tide *See* earth tide.

Bodonidae [INV ZOO] A family of protozoans in the order Kinetoplastida characterized by two unequally long flagella, one of them trailing.

BOD test *See* biochemical oxygen demand test.

body [AERO ENG] **1.** The main part or main central portion of an airplane, airship, rocket, or the like; a fuselage or hull. **2.** Any fabrication, structure, or other material form, especially one aerodynamically or ballistically designed; for example, an airfoil is a body designed to produce an aerodynamic reaction. [GEOGR] A separate entity or mass of water, such as an ocean or a lake. [GEOL] An ore body, or pocket of mineral deposit. [MATER] The consistency or viscosity of fluid materials, such as lubricating oils, paints, and cosmetics. [MECH ENG] The part of a drill which runs from the outer corners of the cutting lips to the shank or neck.

body angle [AERO ENG] The angle which the longitudinal axis of the airframe makes with some selected line.

body axis [AERO ENG] Any one of a system of mutually perpendicular reference axes fixed in an aircraft or a similar body and moving with it.

body burden [NUCLEO] The amount of radioactive material present in the body of a human or animal.

body capacitance [ELEC] Capacitance existing between the human hand or body and a circuit.

body cavity [ANAT] The peritoneal, pleural, or pericardial cavities, or the cavity of the tunica vaginalis testis.

body-centered lattice [CRYSTAL] A space lattice in which the point at the intersection of the body diagonals is identical to the points at the corners of the unit cell.

body cone [MECH] The cone in a rigid body that is swept out by the body's instantaneous axis during Poinsot motion. Also known as Polhode cone.

body force [MECH] An external force, such as gravity, which acts on all parts of a body.

body motion [IND ENG] Motion of parts of a human body requiring a change of posture or weight distribution.

body of revolution [MATH] A symmetrical body having the form described by rotating a plane curve about an axis in its plane.

body rhythm [PHYSIO] Any bodily process having some degree of regular periodicity.

body-righting reflex [PHYSIO] A postural reflex, initiated by the asymmetric stimulation of the body surface by the weight of the body, so that the head tends to assume a horizontal position.

body wave [GEOPHYS] A seismic wave that travels within the earth, as distinguished from one that travels along the surface.

boehmite [MINERAL] AlO(OH) Gray, brown, or red orthorhombic mineral that is a major constituent of some bauxites.

boehm lamellae [GEOL] Lines or bands with dusty inclusions that are subparallel to the basal plane of quartz.

Boettger's test [ANALY CHEM] A test for the presence of saccharides, utilizing the reduction of bismuth subnitrate to metallic bismuth, a precipitate.

bog [ECOL] A plant community that develops and grows in areas with permanently waterlogged peat substrates. Also known as moor; quagmire.

bogen structure [GEOL] The structure of vitric tuffs composed largely of shards of glass.

bogey *See* bogie.

bog harrow [AGR] A type of disk harrow with extra-large notched disks.

boghead cannel shale [GEOL] A coaly shale that contains much waxy or fatty algae.

boghead coal [GEOL] Bituminous or subbituminous coal containing a large proportion of algal remains and volatile matter; similar to cannel coal in appearance and combustion.

bogie Also spelled bogey; bogy. [AERO ENG] A type of landing-gear unit consisting of two sets of wheels in tandem with a central strut. [ENG] **1.** A supporting and aligning wheel or roller on the inside of an endless track. **2.** A low truck or cart of solid build. **3.** A truck or axle to which wheels are fixed, which supports a railroad car, the leading end of a locomotive, or the end of a vehicle (such as a gun carriage) and which is allowed to swivel under it. **4.** A railroad car or locomotive supported by a bogie. [MECH ENG] The drive-wheel assembly and supporting frame comprising the four rear wheels of a six-wheel truck, mounted so that they can self-adjust to sharp curves and irregularities in the road. [MIN ENG] A small truck or trolley upon which a bucket is carried from the shaft to the spoil bank.

bog iron ore [MINERAL] A soft, spongy, porous deposit of impure hydrous iron oxides formed in bogs, marshes, swamps, peat mosses, and shallow lakes by precipitation from iron-bearing waters and by the oxidation action of algae, iron bacteria, or the atmosphere. Also known as lake ore; limnite; marsh ore; meadow ore; morass ore; swamp ore.

bog manganese *See* wad.

bog-mine ore *See* bog ore.

bog moss [ECOL] Moss of the genus *Sphagnum* occurring as the characteristic vegetation of bogs.

bog ore [MINERAL] A poorly stratified accumulation of earthy metallic mineral substances, consisting mainly of oxides, that are formed in bogs, marshes, swamps, and other low-lying moist places. Also known as bog-mine ore.

bogy *See* bogie.

Bohemian glass *See* hard glass.

Bohemian ruby *See* rose quartz.

Bohemian topaz *See* citrine.

Bohr atom [ATOM PHYS] An atomic model having the structure postulated in the Bohr theory.

Bohr-Breit-Wigner theory *See* Breit-Wigner theory.

Bohr effect [BIOCHEM] The effect of carbon dioxide and pH on the oxygen equilibrium of hemoglobin; increase in carbon dioxide prevents an increase in the release of oxygen from oxyhemoglobin.

Bohr magneton [ATOM PHYS] The amount $he/4\pi mc$ of magnetic moment, where h is Plank's constant, e and m are the charge and mass of the electron, and c is the speed of light.

Bohr orbit [ATOM PHYS] One of the electron paths about the nucleus in Bohr's model of the hydrogen atom.

Bohr radius [ATOM PHYS] The radius of the ground-state orbit of the hydrogen atom in the Bohr theory.

Bohr's correspondence principle *See* correspondence principle.

Bohr-Sommerfeld theory [ATOM PHYS] A modification of the Bohr theory in which elliptical as well as circular orbits are allowed.

Bohr theory [ATOM PHYS] A theory of atomic structure postulating an electron moving in one of certain discrete circular orbits about a nucleus with emission or absorption of electromagnetic radiation necessarily accompanied by transitions of the electron between the allowed orbits.

Bohr–van Leeuwen theorem [QUANT MECH] The theorem that magnetism is inexplicable in classical physics and is a quantum phenomenon.

Bohr-Wheeler theory of fission [NUC PHYS] A theory accounting for the stability of a nucleus against fission by treating it as a droplet of incompressible and uniformly charged liquid endowed with surface tension.

Boidae [VERT ZOO] The boas, a family of nonvenomous reptiles of the order Squamata, having teeth on both jaws and hindlimb rudiments.

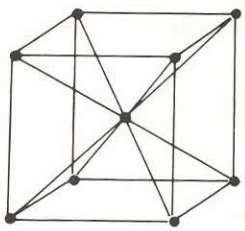
boil *See* furuncle.

BODONIDAE

20 μ

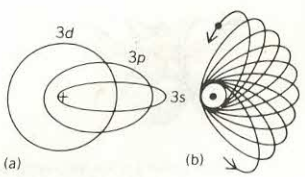
Bodo, a genus in the family Bodonidae, showing the two unequally long flagella.

BODY-CENTERED LATTICE



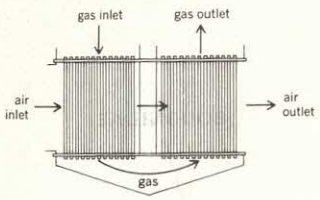
Drawing of a body-centered cubic lattice.

BOHR-SOMMERFELD THEORY



Possible elliptical orbits, according to the Bohr-Sommerfeld theory. *(a)* The three permitted orbits for $n=3$. *(b)* Precession of the $3s$ orbit caused by the relativistic variation of mass.

BOILER AIR HEATER



A two-gas single-air-pass tubular heater, a recuperative type of boiler air heater.

boil disease [VET MED] A protozoan disease of fish caused by *Myxobolus pfeiffer* that forms large tumorous masses in the muscles and connective tissues, finally causing death.

boiled oil [MATER] A drying oil in which metallic driers are added during the cooking; the reaction releases water, resulting in a boiling of the batch.

boiler [MECH ENG] A water heater for generating steam.

boiler air heater [MECH ENG] A component of a steam-generating unit that transfers heat from the products of combustion after they have passed through the steam-generating and superheating sections to combustion air, which recycles heat to the furnace.

boiler casing [MECH ENG] The gas-tight structure surrounding the component parts of a steam generator.

boiler circulation [MECH ENG] Circulation of water and steam in a boiler, which is required to prevent overheating of the heat-absorbing surfaces; may be provided naturally by gravitational forces, mechanically by pumps, or by a combination of both methods.

boiler cleaning [ENG] A mechanical or chemical process for removal of grease, scale, and other deposits from steam boiler surfaces.

boiler code [MECH ENG] A code, established by professional societies and administrative units, which contains the basic rules for the safe design, construction, and materials for steam-generating units, such as the ASME code.

boiler compound [CHEM] Any chemical used to treat boiler water to prevent corrosion, the fouling of heat-absorbing surfaces, foaming, and the contamination of steam.

boiler controls [MECH ENG] Either manual or automatic devices which maintain desired boiler operating conditions with respect to variables such as feedwater flow, firing rate, and steam temperature.

boiler draft [MECH ENG] The difference between atmospheric pressure and some lower pressure existing in the furnace or gas passages of a steam-generating unit.

boiler economizer [MECH ENG] A component of a steam-generating unit that transfers heat from the products of combustion after they have passed through the steam-generating and superheating sections to the feedwater, which it receives from the boiler feed pump and delivers to the steam-generating section of the boiler.

boiler efficiency [MECH ENG] The ratio of heat absorbed in steam to the heat supplied in fuel, usually measured in percent.

boiler feedwater [MECH ENG] Water supplied to a steam-generating unit.

boiler feedwater regulation [MECH ENG] Addition of water to the steam-generating unit at a rate commensurate with the removal of steam from the unit.

boiler fuel [MATER] Natural gas, residual oil, and various solid fuels used to heat a boiler, usually the most economical fuel available.

boiler furnace [MECH ENG] An enclosed space provided for the combustion of fuel to generate steam in a boiler. Also known as steam-generating furnace.

boiler heat balance [MECH ENG] A means of accounting for the thermal energy entering a steam-generating system in terms of its ultimate useful heat absorption or thermal loss.

boiler horsepower [MECH ENG] A measurement of water evaporation rate; 1 boiler horsepower equals the evaporation per hour of 34½ pounds (15.7 kilograms) of water at 212°F (100°C) into steam at 212°F. Abbreviated bhp.

boiler hydrostatic test [MECH ENG] A procedure that employs water under pressure, in a new boiler before use or in old equipment after major alterations and repairs, to test the boiler's ability to withstand about 1½ times the design pressure.

boiler layup [MECH ENG] A significant length of time during which a boiler is inoperative in order to allow for repairs or preventive maintenance.

boiler plate [GEOL] A fairly smooth surface on a cliff, consisting of flush or overlapping slabs of rock, having little or no foothold. [HYD] A crusty, frozen surface of snow. [MET] Flat-rolled steel, usually ¼ to ½ inch (6 to 13 millimeters) thick; used mainly for covering ships and making boilers and tanks. Also known as boiler steel.

boiler-plate model [AERO ENG] A metal copy of a flight vehicle, the structure or components of which are heavier than the flight model.

boiler scale [CHEM] Deposits from silica and other contaminants in boiler water that form on the internal surfaces of heat-absorbing components, increase metal temperatures, and result in eventual failure of the pressure parts because of overheating.

boiler setting [MECH ENG] The supporting steel and gas-tight enclosure for a steam generator.

boiler steel *See* boiler plate.

boiler storage [MECH ENG] A steam-generating unit that, when out of service, may be stored wet (filled with water) or dry (filled with protective gas).

boiler superheater [MECH ENG] A boiler component, consisting of tubular elements, in which heat is added to high-pressure steam to increase its temperature and enthalpy.

boiler trim [MECH ENG] Piping or tubing close to or attached to a boiler for connecting controls, gages, or other instrumentation.

boiler tube [MECH ENG] One of the tubes in a boiler that carry water (water-tube boiler) to be heated by the high-temperature gaseous products of combustion or that carry combustion products (fire-tube boiler) to heat the boiler water that surrounds them.

boiler walls [MECH ENG] The refractory walls of the boiler furnace, usually cooled by circulating water and capable of withstanding high temperatures and pressures.

boiler water [MECH ENG] Water in the steam-generating section of a boiler unit.

boiling [ASTRON] The telescopic appearance of the limbs of the sun and planets when the earth's atmosphere is turbulent, characterized by a constant rippling motion and lack of a clearly defined edge. [PHYS CHEM] The transition of a substance from the liquid to the gaseous phase, taking place at a single temperature in pure substances and over a range of temperatures in mixtures.

boiling point [PHYS CHEM] Abbreviated bp. **1.** The temperature at which the transition from the liquid to the gaseous phase occurs in a pure substance at fixed pressure. **2.** *See* bubble point.

boiling point elevation [CHEM] The raising of the normal boiling point of a pure liquid compound by the presence of a dissolved substance, the elevation being in direct relation to the dissolved substance's molecular weight.

boiling range [CHEM] The temperature range of a laboratory distillation of an oil from start until evaporation is complete.

boiling spring [HYD] **1.** A spring which emits water at a high temperature or at boiling point. **2.** A spring located at the head of an interior valley and rising from the bottom of a residual clay basin. **3.** A rapidly flowing spring that develops strong vertical eddies.

boiling-water reactor [NUCLEO] A nuclear reactor in which the coolant is water, maintained at such a pressure as to allow it to boil and form steam. Abbreviated BWR.

boil-off [TEXT] Removal of impurities from fabric by boiling the material in a solution. [THERMO] The vaporization of a liquid, such as liquid oxygen or liquid hydrogen, as its temperature reaches its boiling point under conditions of exposure, as in the tank of a rocket being readied for launch.

boil-off assistant [MATER] A material used to facilitate the removal of natural glue from silk during boiling in soap solution (degumming); examples are sulfonated oils, pine oils, and solvents and other wetting agents.

boil smut [PL PATH] A fungus disease of corn caused by *Ustilago maydis*, characterized by galls containing black spores.

bojite [PETR] **1.** A gabbro with primary hornblende substituting for augite. **2.** Hornblende diorite.

boldface [GRAPHICS] A type that has thick heavy lines so that it has a conspicuous black appearance.

bole [GEOL] Any of various red, yellow, or brown earthy clays consisting chiefly of hydrous aluminum silicates. Also known as bolus; terra miraculosa. [GRAPHICS] The foundation laid for gold leaf.

boleite [MINERAL] A deep Prussian blue, tetragonal mineral consisting of a hydroxide-chloride of lead, copper, and silver.

boletic acid *See* fumaric acid.

bolide [ASTRON] A brilliant meteor, especially one which explodes; a detonating fireball meteor.

boll [BOT] A pod or capsule (pericarp), as of cotton and flax.

bollard [CIV ENG] A heavy post on a dock or ship used in mooring ships.

boll rot [PL PATH] A fungus rot of cotton bolls caused by *Glomerella gossypii* and *Xanthomonas malvacearum*.

boll weevil [INV ZOO] A beetle, *Anthonomus grandis*, of the order Coleoptera; larvae destroy cotton plants and are the most important pests in agriculture.

boll-weevil hanger [PETRO ENG] A screw-on connector used to connect and seal the lower end of a length of oil-well casing to the next smaller casing string.

bolometer [ENG] An instrument that measures the energy of electromagnetic radiation in certain wavelength regions by utilizing the change in resistance of a thin conductor caused by the heating effect of the radiation. Also known as thermal detector.

bolometric correction [ASTRON] The difference between the bolometric and visual magnitude.

bolometric magnitude [ASTRON] The magnitude of a celestial object, as calculated from the total amount of radiation received from the object at all wavelengths.

bolson [GEOL] In the southwestern United States, a basin or valley having no outlet.

bolster [MET] A block of steel to which drop-forging dies are attached.

bolster plate [MECH ENG] A plate fixed on the bed of a power press to locate and support the die assembly.

bolt [DES ENG] A rod, usually of metal, with a square, round, or hexagonal head at one end and a screw thread on the other, used to fasten objects together. [MIN ENG] *See* bolthole. [ORD] The sliding part in a breechloading weapon that pushes a cartridge into position and holds it there as the gun is fired. [TEXT] The entire length of cloth from a loom.

bolted joint [ENG] The assembly of two or more parts by a threaded bolt and nut or by a screw that passes through one member and threads into another.

bolted rail crossing [CIV ENG] A crossing whose running surfaces are made of rolled rail and whose parts are joined with bolts.

bolt face [ORD] That portion of a gun bolt that abuts the base of the cartridge case.

bolthole [MIN ENG] A short, narrow opening made to connect the main working with the airhead or ventilating drift of a coal mine. Also known as bolt.

bolting [ENG] A fastening system using screw-threaded devices such as nuts, bolts, or studs. [FOOD ENG] The process of refining or purifying, especially of sifting flour or meal through a sieve. [MIN ENG] The use of vibrating sieves to separate particles of different sizes.

bolting cloth [MATER] A sieve cloth made of wire, hair, or silk or other thread used to remove lumps from flour or to make screen prints or needlework.

boltwoodite [MINERAL] $K_2(UO_2)_2(SiO_3)_2(OH)_2 \cdot 5H_2O$ Yellow mineral consisting of hydrous potassium uranyl silicate.

Boltzmann constant [STAT MECH] The ratio of the universal gas constant to the Avogadro number.

Boltzmann distribution [STAT MECH] A function giving the probability that a molecule of a gas in thermal equilibrium will have generalized position and momentum coordinates within given infinitesimal ranges of values, assuming that the molecules obey classical mechanics.

Boltzmann entropy hypothesis [STAT MECH] The hypothesis that the entropy of a system in a given state is directly proportional to the logarithm of the probability of finding it in that state.

Boltzmann H theorem [STAT MECH] The theorem that the entropy of a system never decreases; Boltzmann proved this for a classical gas of colliding particles. Also known as H theorem of Boltzmann.

Boltzmann statistics *See* Maxwell-Boltzmann statistics.

Boltzmann transport equation [STAT MECH] An equation used to study the nonequilibrium behavior of a collection of particles; it states that the rate of change of a function which specifies the probability of finding a particle in a unit volume of phase space is equal to the sum of terms arising from external forces, diffusion of particles, and collisions of the particles. Also known as Maxwell-Boltzmann equation.

Boltzmann-Vlasov equations [PL PHYS] The equations that govern a high-temperature plasma in which the collisional mean free path is much larger than all the characteristic lengths of the system.

bolus [GEOL] *See* bole. [PHARM] A pill of large size. [PHYSIO] The mass of food prepared by the mouth for swallowing.

bolus alba *See* kaolin.

Bolyai geometry *See* Lobachevski geometry.

Bolzano's theorem [MATH] The theorem that a single-valued, real-valued, continuous function of a real variable is equal to zero at some point in an interval if its values at the end points of the interval have opposite sign.

Bolzano-Weierstrass theorem [MATH] The theorem that every bounded, infinite set in finite dimensional euclidean space has a cluster point.

bomb [COMPUT SCI] *See* abend. [GEOL] Any large (greater than 64 millimeters) pyroclast ejected while viscous. [ORD] An explosive or other lethal agent, together with its container or holder, which is planted or thrown by hand, dropped from an aircraft, or projected by some other slow-speed device (such as a mortar) and used to destroy, damage, injure, or kill.

Bombacaceae [BOT] A family of dicotyledonous tropical trees in the order Malvales with dry or fleshy fruit usually having woolly seeds.

bomb adapter-booster [ORD] A device consisting of an adapter and an auxiliary explosive charge, used in an explosive train to detonate a bomb.

bombard [NUCLEO] To direct a stream of particles or photons against a target. [ORD] To carry out a sustained attack upon a city, fort, or the like with bombs, projectiles, rockets, or other explosive missiles.

bombardment [ELECTR] The use of induction heating to heat electrodes of electron tubes to drive out gases during evacuation.

bombardment aircraft *See* bomber.

Bombay blood group system [IMMUNOL] A system comprising an immunologically distinct, genetically determined group of human erythrocytes characterized by the lack of A, B, or H antigens.

bombazine [TEXT] A fine English fabric with a plain or twill weave, often with silk warp and worsted filling.

bomb ballistics [MECH] The special branch of ballistics concerned with bombs dropped from aircraft.

bomb bay [AERO ENG] The compartment or bay in the fuselage of a bomber where the bombs are carried for release.

bomb calorimeter [ENG] A calorimeter designed with a strong-walled container constructed of a corrosion-resistant alloy, called the bomb, immersed in about 2.5 liters of water in a metal container; the sample, usually an organic compound, is ignited by electricity, and the heat generated is measured.

bomb carpet [ORD] The fall of bombs, or the bombfall pattern produced, in carpet bombing; the area struck by carpet bombing.

bomb casing [ORD] The principal container, usually metal, for the main charge of a bomb.

bomb complete round [ORD] A complete aerial bomb, including all of the components such as arming wires and fuses, necessary to attach the bomb to a release mechanism and to make the bomb function after release.

bomb dispenser [ORD] An aerodynamically shaped unit that is externally mounted but not permanently fixed on high-speed aircraft to carry and eject bombs.

bomb ejection cartridge [ORD] An explosive item used to eject a bomb from a bomb cluster or bomb station.

bomber [AERO ENG] An airplane specifically designed to carry and drop bombs. Also known as bombardment aircraft.

bomb fin [ORD] A fin attached to a bomb in order to afford directional stability.

bombiccite *See* hartite.

Bombidae [INV ZOO] A family of relatively large, hairy, black and yellow bumblebees in the hymenopteran superfamily Apoidea.

bombing [ORD] The action of dropping bombs from an aircraft with the purpose of hitting a target.

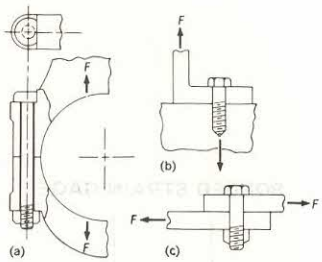
bombing table [ORD] A table giving the bombsight settings required for dropping a particular type of bomb at various speeds and altitudes.

bombing through overcast [ORD] Blind bombing through clouds, using radar, infrared equipment, or other electronic equipment for guidance. Abbreviated BTO. Also known as blind bombing.

bomb load [ORD] **1.** The weight or number of bombs carried by an aircraft. **2.** The bomb or bombs carried.

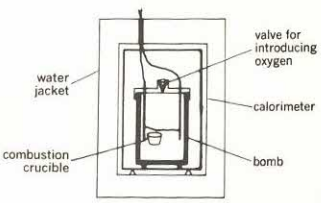
bombproof [ENG] Referring to shelter, building, or other installation resistant or impervious to the effects of bomb explosions.

BOLTED JOINT



Forms of bolted joint (*F* represents force). *(a)* Direct tension. *(b)* Eccentric loading. *(c)* Single shear.

BOMB CALORIMETER



Schematic diagram of bomb calorimeter.

BOMBIDAE

A drawing of a hairy, black and yellow bumblebee. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

bomb rack [ORD] A mechanical device, fitted to an airplane in the bomb bay or suspended underneath the plane, that releases and arms bombs at the bombardier's or pilot's command.

bomb reconnaissance [ORD] Reconnoitering to determine the presence of an unexploded missile, ascertaining its nature, applying all practicable protective measures for the protection of personnel, installations, and equipment, and finally reporting essential information to the authority directing explosive ordnance disposal operations.

bomb-release line [ORD] An imaginary line around a target area at which a bomber, traveling toward it at a constant speed and altitude, releases its first bomb so that it and others will strike the target area.

bomb-release point [ORD] The point in flight on a bomb run at which a bombing airplace releases its bomb load.

bomb run [ORD] The flight course of a bombing airplane just before the release of bombs.

bomb sag [GEOL] Depressed and deranged laminae mainly found in beds of fine-grained ash or tuff around an included volcanic bomb or block which fell on and became buried in the deposit.

bomb shelter [CIV ENG] A bomb-proof structure for protection of people.

bombsight [ORD] A device which determines, or enables a bombardier to determine, the point in space at which a bomb must be released from an aircraft in order to hit a target.

bomb test [ENG] A leak-testing technique in which the vessel to be tested is immersed in a pressurized fluid which will be driven through any leaks present.

Bombycidae [INV ZOO] A family of lepidopteran insects of the superorder Heteroneura that includes only the silkworms.

Bombyliidae [INV ZOO] The bee flies, a family of dipteran insects in the suborder Orthorrhapha.

Bombyx [INV ZOO] The type genus of Bombycidae.

Bombyx mori [INV ZOO] The commercial silkworm.

bond [CHEM] The strong attractive force that holds together atoms in molecules and crystalline salts. Also known as chemical bond. [ELEC] The connection made by bonding electrically. [ENG] **1.** A wire rope that fixes loads to a crane hook. **2.** Adhesion between cement or concrete and masonry or reinforcement. [MET] **1.** Material added to molding sand to impart bond strength. **2.** Junction of the base metal and filler metal, or the base metal beads, in a welded joint.

Bond and Wang theory [MECH ENG] A theory of crushing and grinding from which the energy, in horsepower-hours, required to crush a short ton of material is derived.

bond angle [PHYS CHEM] The angle between bonds sharing a common atom. Also known as valence angle.

bond clay [MATER] A type of clay with high plasticity and high dry strength used to bond nonplastic materials; may be refractory.

bond distance [PHYS CHEM] The distance separating the two nuclei of two atoms bonded to each other in a molecule. Also known as bond length.

bonded coating [MATER] A finishing or protecting layer of any compound affixed to a surface.

bonded NR diode [ELECTR] An n^+ junction semiconductor device in which the negative resistance arises from a combination of avalanche breakdown and conductivity modulation which is due to the current flow through the junction.

bonded-phase chromatography [ANALY CHEM] A type of high-pressure liquid chromatography which employs a stable, chemically bonded stationary phase.

bonded strain gage [ENG] A strain gage in which the resistance element is a fine wire, usually in zigzag form, embedded in an insulating backing material, such as impregnated paper or plastic, which is cemented to the pressure-sensing element.

bonded transducer [ENG] A transducer which employs a bonded strain gage for sensing pressure.

bond energy [PHYS CHEM] The heat of formation of a molecule from its constituent atoms.

bonderize [MET] To coat steel with a solution of phosphates for corrosion protection.

bond hybridization [CHEM] The linear combination of two or more simple atomic orbitals.

bonding [CHEM] The joining together of atoms to form molecules or crystalline salts. [ELEC] The use of low-resistance material to connect electrically a chassis, metal shield cans, cable shielding braid, and other supposedly equipotential points to eliminate undesirable electrical interaction resulting from high-impedance paths between them. [ENG] **1.** The fastening together of two components of a device by means of adhesives, as in anchoring the copper foil of printed wiring to an insulating baseboard. **2.** *See* cladding. [TEXT] The joining of two fabrics, usually a face fabric and a lining fabric.

bonding agent [MATER] Any substance that fixes one material to another.

bonding electron [PHYS CHEM] An electron whose orbit spans the entire molecule and so assists in holding it together.

bonding orbital [PHYS CHEM] A molecular orbital formed by a bonding electron whose energy decreases as the nuclei are brought closer together, resulting in a net attraction and chemical bonding.

bonding pad [ELECTR] A metallized area on the surface of a semiconductor device, to which connections can be made.

bonding strength [MECH] Structural effectiveness of adhesives, welds, solders, glues, or of the chemical bond formed between the metallic and ceramic components of a cermet, when subjected to stress loading, for example, shear, tension, or compression.

bonding wire [ELEC] Wire used to connect metal objects so they have the same potential (usually ground potential).

bond length *See* bond distance.

Bond number [FL MECH] A dimensionless number used in the study of atomization and the study of bubbles and drops, equal to $(\rho - \rho')L^2g/\sigma$, where ρ is the density of a bubble or drop, ρ' is the density of the surrounding medium, L is a characteristic dimension, g is the acceleration of gravity, and σ is the surface tension of the bubble or drop.

bond paper [MATER] A paper used for writing paper, business forms, and typewriter paper; the less expensive bond papers are made from wood sulfite pulps; rag-content bonds contain 25, 50, 75, or 100% of pulp made from rags, and offer greater permanence and strength.

Bond's law [MECH ENG] A statement that relates the work required for the crushing of solid materials (for example, rocks and ore) to the product size and surface area and the lengths of cracks formed. Also known as Bond's third theory.

Bond's third theory *See* Bond's law.

bondstone [BUILD] A stone joining the coping above a gable to the wall. [CIV ENG] A stone that passes through a masonry wall in order to hold the wall together.

bone [ANAT] One of the parts constituting a vertebrate skeleton. [HISTOL] A hard connective tissue that forms the major portion of the vertebrate skeleton.

Bone Age [ARCHEO] A prehistoric period of human culture characterized by the use of implements made of bone and antler.

bone ash [CHEM] A white ash consisting primarily of tribasic calcium phosphate obtained by burning bones in air; used in cleaning jewelry and in some pottery.

bone bed [GEOL] Several thin strata or layers with many fragments of fossil bones, scales, teeth, and also organic remains.

bone black [MATER] A black substance made by carbonizing crushed, defatted bones in closed vessels; used as a paint and varnish pigment, as a decolorizing absorbent in clarifying shellac, in cementation, and in gas masks. Also known as animal black; bone char.

bone char *See* bone black.

bone chert [PETR] A weathered residual chert that appears chalky and porous with a white color but may be stained red or other colors.

bone coal [GEOL] Argillaceous coal or carbonaceous shale that is found in coal seams.

bone conduction [BIOPHYS] Transmission of sound vibrations to the internal ear via the bones of the skull.

Bonellidae [INV ZOO] A family of wormlike animals belonging to the order Echiuroinea.

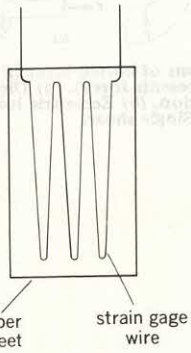
bone marrow [HISTOL] A vascular modified connective tissue occurring in the long bones and certain flat bones of vertebrates.

bone meal [MATER] A substance made by grinding animal bones; steamed meal, made from pressure-steamed bones, is used as a fertilizer; raw meal is used in animal feed.

bone oil [MATER] Dark brown oil with a disagreeable odor, derived by destructive distillation of bones or other animal substances; used as an alcohol denaturant, an insecticide, or a source of pyrrole and for organic preparations. Also known as animal oil; Dippel's oil; hartshorn oil; Jeppel's oil.

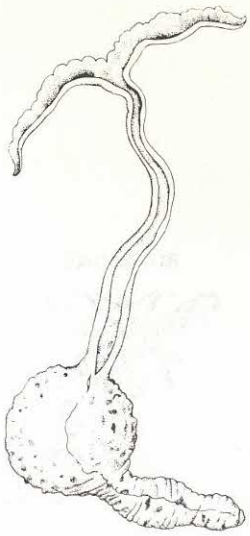
bone seeker [NUCLEO] A radioisotope that tends to ac-

BONDED STRAIN GAGE



Elements of a bonded strain gage.

BONELLIDAE



Bonellia species, half size, showing the long and cleft (at the top) prostomium characteristic of the Bonellidae.

cumulate in the bones when it is introduced into the body; an example is strontium-90, which behaves chemically like calcium.

boninite [PETR] An andesitic rock that contains much glass and abundant phenocrysts of bronzite and less of olivine and augite.

bonnaz [TEXT] A machine used for embroidery in which the fabric is held tightly and the needle moves freely to outline a design with the chain stitch.

Bonne projection [MAP] A type of conical map projection; meridians are plotted as curves and the parallels are spaced along them at true distances.

Bononian [GEOL] Upper Jurassic (lower Portlandian) geologic time.

bonus [PETRO ENG] Payment by a lessee of an oil- or gas-production royalty to the landowner at a rate greater than the customary one-eighth of the value of the oil or gas withdrawn.

bony fish [VERT ZOO] The name applied to all members of the class Osteichthyes.

bony labyrinth [ANAT] The system of canals within the otic bones of vertebrates that houses the membranous labyrinth of the inner ear.

Boo *See* Boötes.

booby trap [ORD] An explosive charge such as a mine, grenade, demolition block, shell, or bulk explosive fitted with a detonator and a firing device, and usually concealed and set to explode when an unsuspecting person touches off its firing mechanism by stepping upon, lifting, or moving a harmless-looking object.

Boodleaceae [BOT] A family of green marine algae in the order Siphonocladales.

book *See* mica book.

book capacitor [ELEC] A trimmer capacitor consisting of two plates which are hinged at one end; capacitance is varied by changing the angle between them.

book gill [INV ZOO] A type of gill in king crabs consisting of folds of membranous tissue arranged like the leaves of a book.

bookkeeping operation [COMPUT SCI] A computer operation which does not directly contribute to the result, that is, arithmetical, logical, and transfer operations used in modifying the address section of other instructions in counting cycles and in rearranging data. Also known as red-tape operation.

book louse [INV ZOO] A common name for a number of insects belonging to the order Psocoptera; important pests in herbaria, museums, and libraries.

book lung [INV ZOO] A saccular respiratory organ in many arachnids consisting of numerous membranous folds arranged like the pages of a book.

book mold [MET] A mold made in two halves hinged together like a book.

book structure [GEOL] A rock structure of numerous parallel sheets of slate alternating with quartz.

Boolean [COMPUT SCI] A scalar declaration in ALGOL defining variables similar to FORTRAN's logical variables.

Boolean algebra [MATH] An algebraic system with two binary operations and one unary operation important in representing a two-valued logic.

Boolean calculus [MATH] Boolean algebra modified to include the element of time.

Boolean data type *See* logical data type.

Boolean function [MATH] A function $f(x,y,\ldots,z)$ assembled by the application of the operations AND, OR, NOT on the variables x, y, ..., z and elements whose common domain is a Boolean algebra.

Boolean search [COMPUT SCI] A search for selected information, that is, information satisfying conditions that can be expressed by AND, OR, and NOT functions.

boom [COMMUN] A movable mechanical support, usually in a television or motion picture studio, to suspend a microphone within range of the performers but above the field of view of the camera. [NAV ARCH] **1.** A spar attached to a mast or kingpost of a ship carrying cargo-hoisting gear. **2.** A spar upon which the lower side of a sail is bent.

boom cat [MECH ENG] A tractor supporting a boom and used in laying pipe.

boom crutch [NAV ARCH] A movable prop for supporting the free end of the boom of a ship when it is not being used.

boomer [MIN ENG] In placer mining, an automatic gate in a dam that holds the water until the reservoir is filled, then opens automatically and allows the escape of such a volume that the soil and upper gravel of the placer are washed away.

boomerang sediment corer [ENG] A device, designed for nighttime recovery of a sediment core, which automatically returns to the surface after taking the sample.

Boopidae [INV ZOO] A family of lice in the order Mallophaga, parasitic on Australian marsupials.

Boord synthesis [CHEM ENG] A method of producing alpha olefins by the reduction of alpha bromo ethers with zinc.

boorga *See* burga.

boost [AERO ENG] **1.** An auxiliary means of propulsion such as by a booster. **2.** To supercharge. **3.** To launch or push along during a portion of a flight. **4.** *See* boost pressure. [ELECTR] To augment in relative intensity, as to boost the bass response in an audio system. [ENG] To bring about a more potent explosion of the main charge of an explosive by using an additional charge to set it off.

boost charge [ELEC] Partial charge of a storage battery, usually at a high current rate for a short period.

booster [AERO ENG] *See* booster engine; booster rocket; launch vehicle. [ELEC] A small generator inserted in series or parallel with a larger generator to maintain normal voltage output under heavy loads. [ELECTR] **1.** A separate radio-frequency amplifier connected between an antenna and a television receiver to amplify weak signals. **2.** A radio-frequency amplifier that amplifies and rebroadcasts a received television or communication radio carrier frequency for reception by the general public. [IMMUNOL] The dose of an immunizing agent given to stimulate the effects of a previous dose of the same agent. [ORD] An assembly of metal parts and explosive charge provided to augment the explosive component of a fuse, to cause detonation of the main explosive charge of the munition.

booster battery [ELECTR] A battery which increases the sensitivity of a crystal detector by maintaining a certain voltage across it and thereby adjusting conditions to increase the response to a given input.

booster brake [MECH ENG] An auxiliary air chamber, operated from the intake manifold vacuum, and connected to the regular brake pedal, so that less pedal pressure is required for braking.

booster ejector [MECH ENG] A nozzle-shaped apparatus from which a high-velocity jet of steam is discharged to produce a continuous-flow vacuum for process equipment.

booster engine [AERO ENG] An engine, especially a booster rocket, that adds its thrust to the thrust of the sustainer engine. Also known as booster.

booster fan [MECH ENG] A fan used to increase either the total pressure or the volume of flow.

booster pump [MECH ENG] A machine used to increase pressure in a water or compressed-air pipe.

booster response *See* anamnestic response.

booster rocket [AERO ENG] Also known as booster. **1.** A rocket motor, either solid- or liquid-fueled, that assists the normal propulsive system or sustainer engine of a rocket or aeronautical vehicle in some phase of its flight. **2.** A rocket used to set a vehicle in motion before another engine takes over.

booster stations [ENG] Booster pumps or compressors located at intervals along a liquid-products or gas pipeline to boost the pressure of the flowing fluid to keep it moving toward its destination.

booster voltage [ELECTR] The additional voltage supplied by the damper tube to the horizontal output, horizontal oscillator, and vertical output tubes of a television receiver to give greater sawtooth sweep output.

booster well [ORD] A hollow space, in the main explosive charge of an item of ammunition, into which the booster fits.

boost-glide vehicle [AERO ENG] An air vehicle capable of aerodynamic lift which is projected to an extreme altitude by reaction propulsion and then coasts down with little or no propulsion, gliding to increase its range when it reenters the sensible atmosphere.

boost pressure [AERO ENG] Manifold pressure greater than the ambient at atmospheric pressure, obtained by supercharging. Also known as boost.

boot [ELEC] A protective covering over any portion of a cable, wire, or connector. [MIN ENG] **1.** A projecting portion of a reinforced concrete beam acting as a corbel to support the facing material, such as brick or stone. **2.** The lower end of a bucket elevator. [PETRO ENG] *See* surge column.

Boot *See* Boötes.

boot button *See* bootstrap button.

Boötes [ASTRON] A constellation which lies south and east of Ursa Major. The star Arcturus is a member of the group. Abbreviated Boo; Boot. Also known as Bear Driver.

boothite [MINERAL] $CuSO_4 \cdot 7H_2O$ A blue, monoclinic mineral consisting of copper sulfate heptahydrate; usually occurs in massive or fibrous form.

α **Boötis** *See* Arcturus.

bootjack [ENG] A fishing tool used in drilling wells.

bootleg [MIN ENG] A hole, shaped somewhat like the leg of a boot, caused by a blast that has failed to shatter the rock properly.

bootstrap [ENG] A technique or device designed to bring itself into a desired state by means of its own action.

bootstrap button [COMPUT SCI] The first button pressed when a computer is turned on, causing the operating system to be loaded into memory. Also known as boot button; initial program load button; IPL button.

bootstrap circuit [ELECTR] A single-stage amplifier in which the output load is connected between the negative end of the anode supply and the cathode, while signal voltage is applied between grid and cathode; a change in grid voltage changes the input signal voltage with respect to ground by an amount equal to the output signal voltage.

bootstrap driver [ELECTR] Electronic circuit used to produce a square pulse to drive the modulator tube; the duration of the square pulse is determined by a pulse-forming line.

bootstrap instructor technique [COMPUT SCI] A technique permitting a system to bring itself into an operational state by means of its own action. Also known as bootstrap technique.

bootstrap integrator [ELECTR] A bootstrap sawtooth generator in which an integrating amplifier is used in the circuit. Also known as Miller generator.

bootstrap loader [COMPUT SCI] A very short program loading routine, used for loading other loaders in a computer; often implemented in a read-only memory.

bootstrap memory [COMPUT SCI] A device that provides for the automatic input of new programs without erasing the basic instructions in the computer.

bootstrapping [ELECTR] A technique for lifting a generator circuit above ground by a voltage value derived from its own output signal.

bootstrap process [AERO ENG] A self-generating or self-sustaining process; specifically, the operation of liquid-propellant rocket engines in which, during main-stage operation, the gas generator is fed by the main propellants pumped by the turbopump, and the turbopump in turn is driven by hot gases from the gas generator system.

bootstrap program *See* loading program.

bootstrap sawtooth generator [ELECTR] A circuit capable of generating a highly linear positive sawtooth waveform through the use of bootstrapping.

bootstrap scheme [PARTIC PHYS] A theory of elementary particles in which the existence of each particle contributes to forces between it and other particles; these forces lead to bound systems which are the particles themselves.

bootstrap technique *See* bootstrap instructor technique.

Bopyridae [INV ZOO] A family of epicaridean isopods in the tribe Bopyrina known to parasitize decapod crustaceans.

Bopyrina [INV ZOO] A tribe of dioecious isopods in the suborder Epicaridea.

Bopyroidea [INV ZOO] An equivalent name for Epicaridea.

bora [METEOROL] A fall wind whose source is so cold that when the air reaches the lowlands or coast the dynamic warming is insufficient to raise the air temperature to the normal level for the region; hence it appears as a cold wind.

boracic acid *See* boric acid.

boracite [MINERAL] $Mg_3B_7O_{13}Cl$ A white, yellow, green, or blue orthorhombic borate mineral occurring in crystals which appear isometric in external form; it is strongly pyroelectric, has a hardness of 7 on Mohs scale, and a specific gravity of 2.9.

bora fog [METEOROL] A dense fog caused when the bora lifts a spray of small drops from the surface of the sea.

Boraginaceae [BOT] A family of flowering plants in the order Lamiales comprising mainly herbs and some tropical trees.

Boralf [GEOL] A suborder of the soil order Alfisol, dull brown or yellowish brown in color; occurs in cool or cold regions, chiefly at high latitudes or high altitudes.

borane [INORG CHEM] **1.** A class of binary compounds of boron and hydrogen; boranes are used as fuels. Also known as boron hydride. **2.** A substance which may be considered a derivative of a boron-hydrogen compound, such as BCl_3 and $B_{10}H_{12}I_2$.

borate [CHEM] **1.** A generic term referring to salts or esters of boric acid. **2.** Related to boric oxide, B_2O_3, or commonly to only the salts of orthoboric acid, H_3BO_3.

borate mineral [MINERAL] Any of the large and complex group of naturally occurring crystalline solids in which boron occurs in chemical combination with oxygen.

borax [MINERAL] $Na_2B_4O_7 \cdot 10H_2O$ A white, yellow, blue, green, or gray borate mineral that is an ore of boron and occurs as an efflorescence or in monoclinic crystals; when pure it is used as a cleaning agent, antiseptic, and flux. Also known as diborate; pyroborate; sodium (1:2) borate; sodium tetraborate; tincal.

borax glass [MATER] A glassy, transparent solid formed by fusing borax.

borazole [INORG CHEM] $B_3N_3H_6$ A colorless liquid boiling at 53°C; with water it hydrolyzes to form boron hydrides; the borazole molecule is the inorganic analog of the benzene molecule.

borazon [INORG CHEM] A form of boron nitride with a zinc blende structure produced by subjecting the ordinary form to high pressure and temperature.

Borda mouthpiece [FL MECH] A reentrant tube in a hydraulic reservoir, whose contraction coefficient (the ratio of the cross section of the issuing jet of liquid to that of the opening) can be calculated more simply than for other discharge openings.

Bordeaux mixture [MATER] A fungicide made from a mixture of lime, copper sulfate, and water.

bordered [BOT] Having a margin with a distinctive color or texture; used especially of a leaf.

bordered pit [BOT] A wood-cell pit having the secondary cell wall arched over the cavity of the pit.

border facies [GEOL] The outer portion of an igneous intrusion which differs in composition and texture from the main body.

borderland [GEOL] One of the crystalline, continental landmasses postulated to have existed on the exterior (oceanward) side of geosynclines.

borderland slope [GEOL] A declivity which indicates the inner margin of the borderland of a continent.

borderline mental retardation [PSYCH] Below-normal intellectual functioning associated with an intelligence quotient of about 68–85.

borderline psychosis [PSYCH] The psychiatric diagnosis of an individual whose symptoms are severe but are not clearly psychotic or neurotic.

borderline syndrome [PSYCH] An impairment of ego function noted in individuals who have been angry most of their lives and who cannot relate meaningfully to or love other people, and who in consequence develop nonpsychotic but deviant mechanisms, such as withdrawal while expressing angry concern, or showing passive compliance at the price of real involvement, to maintain a precarious mental equilibrium.

border-punched card *See* edge-notched card.

Bordetella [MICROBIO] A genus of gram-negative, aerobic bacteria of uncertain affiliation; minute coccobacilli, parasitic and pathogenic in the respiratory tract of mammals.

Bordetella parapertussis [MICROBIO] A small, nonmotile coccobacillus that causes parapertussis.

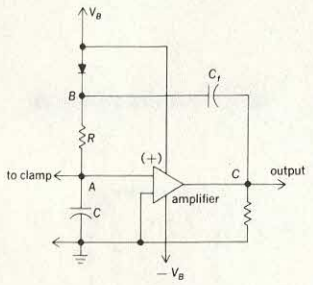
Bordetella pertussis [MICROBIO] A small, nonmotile coccobacillus that causes whooping cough.

Bordet-Gengou bacillus *See* Hemophilus pertussis.

Bordini effect [MET] A phenomenon that takes place when metals having a close-packed crystal structure are subjected to an oscillating stress; there is a peak in the internal friction at a particular frequency of the stress.

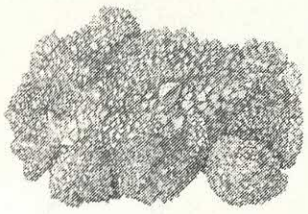
bore [DES ENG] Inside diameter of a pipe or tube. [MECH ENG] **1.** The diameter of a piston-cylinder mechanism as found in reciprocating engines, pumps, and compressors. **2.** To penetrate or pierce with a rotary tool. **3.** To machine a workpiece to increase the size of an existing hole in it. [MIN ENG] **1.** A tunnel under construction. **2.** To cut or drill a hole for blasting, water infusion, exploration, or water or firedamp drainage. [OCEANOGR] **1.** A high, breaking wave of water, advancing rapidly up an estuary. Also known as eager; mas-

BOOTSTRAP SAWTOOTH GENERATOR



Circuit diagram of bootstrap sawtooth generator.

BORACITE



Specimen of boracite from Segeberg, Germany. *(Specimen from Department of Geology, Bryn Mawr College)*

BORATE MINERAL

Structural elements of meyerhofferite, a borate mineral.

caret; tidal bore. **2.** A submarine sand ridge, in very shallow water, whose crest may rise to intertidal level. [ORD] The interior of a gun barrel or tube.

boreal [ECOL] Of or relating to northern geographic regions.

Boreal life zone [ECOL] The zone comprising the climate and biotic communities between the Arctic and Transitional zones.

bore axis [ORD] The longitudinal center line of a gunbore.

bore diameter [ORD] The interior diameter or caliber of a gun or launching tube.

bore evacuation [ORD] Clearing of the bore of propellant gases and extraneous material after firing.

bore evacuator [ORD] A device placed on the tube of artillery weapons to force propellant gases to flow outward through the muzzle end of the bore from a cylindrical chamber around the gun tube; the chamber encloses a series of jets around the cannon tube through which the gases flow.

bore expansion [ORD] Permanent enlargement of the bore of a gun due to interior pressure; it does not include enlargement due to bore erosion.

borehole [ENG] A hole made by boring into the ground to study stratification, to obtain natural resources, or to release underground pressures.

borehole bit *See* noncoring bit.

borehole mining [PETRO ENG] Extraction of minerals as liquid or gas from the earth's crust by means of boreholes and suction pumps.

borehole survey [ENG] Also known as drillhole survey. **1.** Determining the course of and the target point reached by a borehole, using an azimuth-and-dip recording apparatus small enough to be lowered into a borehole. **2.** The record of the information thereby obtained.

Borell unit [BIOL] A unit for the standardization of thyroid extracts.

Borel measurable function [MATH] **1.** A real-valued function such that the inverse image of the set of real numbers greater than any given real number is a Borel set. **2.** More generally, a function to a topological space such that the inverse image of any open set is a Borel set.

Borel set [MATH] A member of the smallest σ-algebra containing the compact subsets of a topological space.

Borel sigma algebra [MATH] The smallest sigma algebra containing the compact subsets of a topological space.

bore premature [ORD] The premature explosion of a projectile occurring within the bore.

borer [INV ZOO] Any insect or other invertebrate that burrows into wood, rock, or other substances. [MECH ENG] An apparatus used to bore openings into the earth up to about 8 feet (2.4 meters) in diameter.

bore riding pin [ORD] A safety pin which is held in place in the fuse while the projectile or missile is within the gun barrel or launching tube and then ejected from the fuse by centrifugal force or spring action beyond the muzzle.

borescope [ENG] A straight-tube telescope using a mirror or prism, used to visually inspect a cylindrical cavity, such as the cannon bore of artillery weapons for defects of manufacture and erosion caused by firing.

boresight [ORD] A telescopic device utilizing a boresighting reticle to align the axis of a weapon with a target; it is attached to the exterior of a weapon barrel or tube by a mount.

boresight camera [OPTICS] A camera mounted in the optical axis of a tracking radar to photograph rockets being tracked or known, fixed targets while in camera range and thus to provide a correction for the alignment of the radar.

boresighting [ENG] Initial alignment of a directional microwave or radar antenna system by using an optical procedure or a fixed target at a known location. [ORD] The process by which the axis of a gun bore and the line of sight of a gunsight are made parallel or are made to converge on a point.

Borhyaenidae [VERT ZOO] A family of carnivorous mammals in the superfamily Borhyaenoidea.

Borhyaenoidea [VERT ZOO] A superfamily of carnivorous mammals in the order Marsupialia.

boric acid [INORG CHEM] H_3BO_3 An acid derived from boric oxide in the form of white, triclinic crystals, melting at 185°C, soluble in water. Also known as boracic acid; orthoboric acid.

boric acid ester [ORG CHEM] Any compound readily hydrolyzed to yield boric acid and the respective alcohol; for example, trimethyl borate hydrolyzes to boric acid and methyl alcohol.

borickite [MINERAL] $CaFe_5(PO_4)_2(OH)_{11}\cdot 3H_2O$ A reddish-brown, isotropic mineral consisting of a hydrated basic phosphate of calcium and iron; occurs in compact reniform masses.

boric oxide [INORG CHEM] B_2O_3 A trioxide of boron obtained as rhombic crystals melting at 460°C; used as an intermediate in the production of boron halides and metallic borides and as a thermal neutron absorber in nuclear engineering. Also known as boron oxide.

boride [INORG CHEM] A binary compound of boron and a metal formed by heating a mixture of the two elements.

boring bar [MECH ENG] A rigid tool holder used to machine internal surfaces.

boring log *See* drill log.

boring machine [MECH ENG] A machine tool designed to machine internal work such as cylinders, holes in castings, and dies; types are horizontal, vertical, jig, and single.

boring mill [MECH ENG] A boring machine tool used particularly for large workpieces; types are horizontal and vertical.

boring sponge [INV ZOO] Marine sponge of the family Clionidae represented by species which excavate galleries in mollusks, shells, corals, limestone, and other calcareous matter.

Born approximation [QUANT MECH] A method used for the computation of cross sections in scattering problems; the interactions are treated as perturbations of free-particle systems.

borneol [ORG CHEM] $C_{10}H_{17}OH$ White lumps with camphor odor; insoluble in water, soluble in alcohol; melting point 203°C; used in perfumes, medicine, and chemical synthesis. Also known as bornyl alcohol; 2-camphanol; 2-hydroxycamphane.

Born equation [PHYS CHEM] An equation for determining the free energy of solvation of an ion in terms of the Avogadro number, the ionic valency, the ion's electronic charge, the dielectric constant of the electrolytic, and the ionic radius.

Born-Haber cycle [SOLID STATE] A sequence of chemical and physical processes by means of which the cohesive energy of an ionic crystal can be deduced from experimental quantities; it leads from an initial state in which a crystal is at zero pressure and 0 K to a final state which is an infinitely dilute gas of its constituent ions, also at zero pressure and 0 K.

bornite [MINERAL] Cu_5FeS_4 A primary mineral in many copper ore deposits; specific gravity 5.07; the metallic and brassy color of a fresh surface rapidly tarnishes upon exposure to air to an iridescent purple.

Born-Madelung model [SOLID STATE] A classical theory of cohesive energy, lattice spacing, and compressibility of ionic crystals.

Born-Mayer equation [SOLID STATE] An equation for the cohesive energy of an ionic crystal which is deduced by assuming that this energy is the sum of terms arising from the Coulomb interaction and a repulsive interaction between nearest neighbors.

Born-Oppenheimer method [PHYS CHEM] A method for calculating the force constants between atoms by assuming that the electron motion is so fast compared with the nuclear motions that the electrons follow the motions of the nuclei adiabatically.

Born–von Kármán theory [SOLID STATE] A theory of specific heat which considers an acoustical spectrum for the vibrations of a system of point particles distributed like the atoms in a crystal lattice.

bornyl acetate [ORG CHEM] $C_{10}H_{17}OOCCH_3$ A colorless liquid that forms crystals at 10°C; has characteristic piny-camphoraceous odor; used in perfumes and for flavoring.

bornyl alcohol *See* borneol.

bornyl isovalerate [ORG CHEM] $C_{10}H_{17}OOC_5H_9$ An aromatic fluid with a boiling point of 255–260°C; soluble in alcohol and ether; used in medicine and as a flavoring.

boroarsenate [MINERAL] One of a group of borate minerals containing arsenic; cahnite is an example.

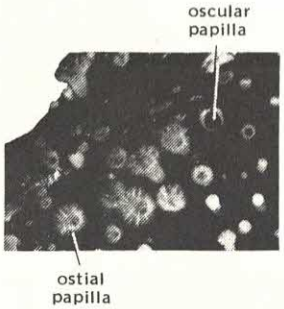
boroethane *See* diborane.

borolanite [PETR] A hypabyssal rock that is essentially orthoclase and melanite with subordinate nepheline, biotite, and pyroxene.

Boroll [GEOL] A suborder of the soil order Mollisol, characterized by a mean annual soil temperature of less than 8°C and by never being dry for 60 consecutive days during the 90-day period following the summer solstice.

boron [CHEM] A chemical element, symbol B, atomic number 5, atomic weight 10.811; it has three valence electrons and is nonmetallic.

BORING SPONGE

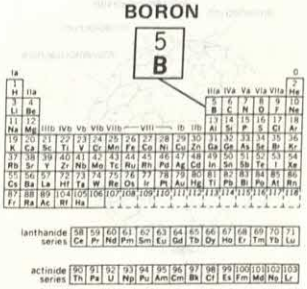


Cliona celata, a common boring sponge living on an oyster shell, showing several expanded ostial and oscular papillae. *(After W. D. Hartman, 1958)*

BORNITE

A sample of bornite from Messina, Transvaal, South Africa. *(Specimen from Department of Geology, Bryn Mawr College)*

BORON



Periodic table of the chemical elements showing the position of boron.

boron-10 [NUC PHYS] A nonradioactive isotope of boron with a mass number of 10; it is a good absorber for slow neutrons, simultaneously emitting high-energy alpha particles, and is used as a radiation shield in Geiger counters.

boron alloy [MET] Alloy of boron and iron used to increase the high-temperature strength characteristics of alloy steel.

boronatrocalcite *See* ulexite.

boron carbide [ORG CHEM] Any compound of boron and carbon, especially B_4C (used as an abrasive, alloying agent, and neutron absorber).

boron chamber [NUCLEO] An ionization chamber that is lined with boron or boron compounds or filled with a gaseous boron compound.

boron counter tube [NUCLEO] A counter tube filled with boron fluoride or having electrodes coated with boron or boron compounds; used for detecting slow neutrons.

boron fiber [CHEM] Fiber produced by vapor-deposition methods; used in various composite materials to impart a balance of strength and stiffness. Also known as boron filament.

boron filament *See* boron fiber.

boron fluoride [INORG CHEM] BF_3 A colorless pungent gas in a dry atmosphere; used in industry as an acidic catalyst for polymerizations, esterifications, and alkylations. Also known as boron trifluoride.

boron fluoride etherate *See* boron trifluoride etherate.

boron fuel [MATER] The boron compounds alkyl decaborane, diborane, and pentaborane; used for ramjet engines and afterburners.

boron hydride *See* borane.

boron nitride [INORG CHEM] BN A binary compound of boron and nitrogen, especially a white, fluffy powder with high chemical and thermal stability and high electrical resistance.

boron nitride fiber [INORG CHEM] Inorganic, high-strength fiber, made of boron nitride, that is resistant to chemicals and electricity but susceptible to oxidation above 1600°F (870°C); used in composite structures for yarns, fibers, and woven products.

boron oxide *See* boric oxide.

boron polymer [ORG CHEM] Macromolecules formed by polymerization of compounds containing, for example, boron-nitrogen, boron-phosphorus, or boron-arsenic bonds.

boron steel [MET] Alloy steel with a small amount (as little as 0.0005%) of boron added to increase hardenability; can be used to replace other alloys in short supply.

boron thermopile [NUCLEO] A thermopile in which alternate thermocouple junctions are coated with boron; exposure to a flux of slow neutrons generates heat in these junctions, producing an output voltage proportional to neutron flux.

boron trichloride [INORG CHEM] BCl_3 A colorless liquid used as a catalyst and in refining of aluminum, magnesium, zinc, and copper.

boron triethoxide *See* ethyl borate.

boron triethyl *See* triethylborane.

boron trifluoride *See* boron fluoride.

boron trifluoride etherate [ORG CHEM] $C_4H_{10}BF_3O$ A fuming liquid hydrolyzed by air immediately; boiling point is 125.7°C; used as a catalyst in reactions involving condensation, dehydration, polymerization, alkylation, and acetylation. Also known as boron fluoride etherate; ethyl ether–boron trifluoride complex.

borosilicate glass [MATER] A type of glass containing at least 5% boric oxide; used in glassware that resists heat.

Borrelia [MICROBIO] A genus of bacteria in the family Spirochaetaceae; helical cells with uneven coils and parallel fibrils coiled around the cell body for locomotion; many species cause relapsing fever in humans.

Borrman effect [PHYS] The irregular transmission of x-rays when a single crystal of high perfection is placed in a monochromatic x-ray beam in a reflecting position.

borrow [CIV ENG] Earth material such as sand and gravel that is taken from one location to be used as fill at another. [MATH] An arithmetically negative carry; it occurs in direct subtraction by raising the low-order digit of the minuend by one unit of the next-higher-order digit; for example, when subtracting 67 from 92, a tens digit is borrowed from the 9, to raise the 2 to a factor of 12; the 7 of 67 is then subtracted from the 12 to yield 5 as the units digit of the difference; the 6 is then subtracted from 8, or 9 − 1, yielding 2 as the tens digit of the difference.

borrow pit [CIV ENG] An excavation dug to provide material (borrow) for fill elsewhere.

bort [MINERAL] Imperfectly crystallized diamond material unsuitable for gems because of its shape, size, or color and because of flaws or inclusions; used for abrasive and cutting purposes.

bort bit *See* diamond bit.

Bosanquet's law [ELECTROMAG] The statement that, in analogy to Ohm's law for the resistance of an electric circuit, in a magnetic circuit the ratio of the magnetomotive force to the magnetic flux is a constant known as the reluctance.

Bosch fuel injection pump [MECH ENG] A pump in the fuel injection system of an internal combustion engine, whose pump plunger and barrel are a very close lapped fit to minimize leakage.

Bosch metering system [MECH ENG] A system having a helical groove in the plunger which covers or uncovers openings in the barrel of the pump; most usually applied in diesel engine fuel-injection systems.

Bose distribution *See* Bose-Einstein distribution.

Bose-Einstein condensation [CRYO] A phenomenon that occurs in the study of systems of bosons; there is a critical temperature below which the ground state is highly populated. Also known as condensation; Einstein condensation.

Bose-Einstein distribution [STAT MECH] For an assembly of independent bosons, such as photons or helium atoms of mass number 4, a function that specifies the number of particles in each of the allowed energy states. Also known as Bose distribution.

Bose-Einstein statistics [STAT MECH] The statistical mechanics of a system of indistinguishable particles for which there is no restriction on the number of particles that may exist in the same state simultaneously. Also known as Einstein-Bose statistics.

Bose gas [STAT MECH] An assemblage of noninteracting or weakly interacting bosons.

bosh [MET] **1.** Tapering lower portion of a blast furnace, from the blast holes of the hearth up to the maximum internal diameter at the bottom of the stack. **2.** Quartz deposited on the furnace lining during the smelting of copper ore.

boson [STAT MECH] A particle that obeys Bose-Einstein statistics; includes photons, pi mesons, and all nuclei having an even number of particles and all particles with integer spin.

bosporus [GEOGR] A strait connecting two seas or a lake and a sea.

bosque *See* temperate and cold scrub.

boss [DES ENG] Protuberance on a cast metal or plastic part to add strength, facilitate assembly, provide for fastenings, or so forth. [GEOL] A large, irregular mass of crystalline igneous rock that formed some distance below the surface but is now exposed by denudation. [NAV ARCH] *See* bossing.

bossing [NAV ARCH] **1.** A faired structural extension of the hull covering the propeller shaft where it emerges from the main hull and housing the main shaft bearing. **2.** The hub of a screw propeller. Also known as boss.

bostonite [PETR] A rock with coarse trachytic texture formed almost wholly of albite and microcline and with accessory pyroxene.

Boston ridge [BUILD] A method of applying shingles to the ridge of a house by which the shingles alternate in overlap from one side of the ridge to the other.

Bostrichidae [INV ZOO] The powder-post beetles, a family of coleopteran insects in the superfamily Bostrichoidea.

Bostrichoidea [INV ZOO] A superfamily of beetles in the coleopteran suborder Polyphaga.

botallackite [MINERAL] $Cu_2(OH)_3Cl{\cdot}3H_2O$ A pale bluish-green to green, orthorhombic mineral consisting of a basic copper chloride; occurs as crusts of crystals.

botanical garden [BOT] An institution for the culture of plants collected chiefly for scientific and educational purposes.

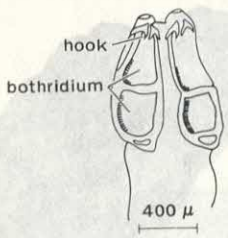
botany [BIOL] A branch of the biological sciences which embraces the study of plants and plant life. [TEXT] *See* merino.

bothridium [INV ZOO] A muscular holdfast organ, often with hooks, on the scolex of tetraphyllidean tapeworms.

Bothriocephaloidea [INV ZOO] The equivalent name for the Pseudophyllidea.

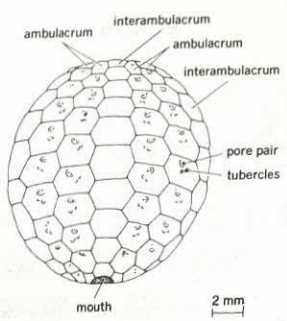
Bothriocidaroida [PALEON] An order of extinct echinoderms in the subclass Perischoechinoidea in which the ambulacra consist of two columns of plates, the interambulacra of one column, and the madreporite is placed radially.

BOTHRIDIUM



A drawing of the scolex of *Acanthobothrium* species showing the hooks on the bothridium.

BOTHRIOCIDAROIDA



A reconstruction of the test of *Bothriocidaris*.

bothrium [INV ZOO] A suction groove on the scolex of pseudophyllidean tapeworms.

botryogen [MINERAL] $MgFe(SO_4)_2(OH)\cdot 7H_2O$ An orange-red, monoclinic mineral consisting of a hydrated basic sulfate of magnesium and trivalent iron.

botryoid [GEOL] **1.** A mineral formation shaped like a bunch of grapes. **2.** Specifically, such a formation of calcium carbonate occurring in a cave. Also known as clusterite.

botryoidal [SCI TECH] Of formations and structures, shaped like a bunch of grapes.

botryomycosis [VET MED] A chronic infectious bacterial disease of horses caused by *Staphylococcus aureus* and characterized by localized fibromatous tumors.

Botrytis disease [PL PATH] Any of various fungus diseases of plants caused by fungi of the genus *Botrytis;* characterized by soft rotting.

bottle [ENG] A container made from pipe or plate with drawn, forged, or spun end closures, and used for storing or transporting gas.

bottle centrifuge [ENG] A centrifuge in which the mixture to be separated is poured into small bottles or test tubes; they are then placed in a rotor assembly which is spun rapidly.

bottled gas [MATER] Butane, propane, or butane-propane mixtures liquefied and bottled under pressure for use as a domestic cooking or heating fuel. Also known as bugas.

bottle graft [BOT] A plant graft in which the scion is a detached branch and is protected from wilting by keeping the base of the branch in a bottle of water until union with the stock.

bottleneck assignment problem [IND ENG] A linear programming problem in which it is required to assign machines to jobs (or vice versa) so that the efficiency of the least efficient operation is maximized.

bottle thermometer [ENG] A thermoelectric thermometer used for measuring air temperature; the name is derived from the fact that the reference thermocouple is placed in an insulated bottle.

bottom [GEOL] **1.** The bed of a body of running or still water. **2.** *See* root.

bottom blow [ENG] A type of plastics blow molding machine in which air is injected into the parison from the bottom of the mold.

bottom break [BOT] A branch that arises from the base of a plant stem. [MIN ENG] The break or crack that separates a block of stone from a quarry floor.

bottom chord [CIV ENG] Any of the bottom series of truss members parallel to the roadway of a bridge.

bottom dead center [MECH ENG] The position of the crank of a vertical reciprocating engine, compressor, or pump when the piston is at the end of its downstroke. Abbreviated BDC.

bottom dump [ENG] A construction wagon with movable gates in the bottom to allow vertical discharge of its contents.

bottomed hole [ENG] A completed borehole, or a borehole in which drilling operations have been discontinued.

bottom fauna *See* benthos.

bottom fermentation [FOOD ENG] A slow alcoholic fermentation during which yeast cells accumulate at the bottom of the fermenting liquid; occurs during fermentation of lager beer and wines of low alcoholic content.

bottom flow [ENG] A molding apparatus that forms hollow plastic articles by injecting the blowing air at the bottom of the mold. [HYD] A density current that is denser than any section of the surrounding water and that flows along the bottom of the body of water. Also known as underflow.

bottom-hole cash [PETRO ENG] Cash which is contributed by mineral-rights lessees adjacent to a drilling lessee and which is payable when the well reaches a specified depth, regardless of whether or not the completed well is a producer.

bottom-hole packer [PETRO ENG] An anchored-in-place seal used to provide liquid-proof packing in the annular space between the outside of the oil-producing tubing and the inside of the drill casing.

bottom-hole pressure [PETRO ENG] Gas-drive pressure recorded at the bottom of an oil-well shaft; used to analyze oil-reservoir performance and evaluate the performance of downhole equipment.

bottom-hole samples [PETRO ENG] Fluid samples from gas-condensate-well reservoirs; used to study the state of the hydrocarbon system under reservoir conditions and to estimate total hydrocarbons in place.

bottom ice *See* anchor ice.

bottoming drill [DES ENG] A flat-ended twist drill designed to convert a cone at the bottom of a drilled hole into a cylinder.

bottomland [GEOL] A lowland formed by alluvial deposit about a lake basin or a stream.

bottom load [GEOL] An obsolete term for the material rolled and pushed along the bottom of a stream.

bottom moraine *See* ground moraine.

bottom pillar [MIN ENG] A large block of solid coal left unworked around the shaft.

bottom rot [PL PATH] **1.** A fungus disease of lettuce, caused by *Pellicularia filamentosa,* that spreads from the base upward. **2.** A fungus disease of tree trunks caused by pore fungi.

bottoms *See* basic sediment and water.

bottom sampler [ENG] Any instrument used to obtain a sample from the bottom of a body of water.

bottom sediment [PETRO ENG] A mixture of liquids and solids which form in the bottom of oil storage tanks.

bottomset beds [GEOL] Horizontal or gently inclined layers of finer material carried out and deposited on the bottom of a lake or sea in front of a delta.

bottom settlings *See* basic sediment and water.

bottom steam [CHEM] Steam piped into the bottom of the still during oil distillation.

bottom tap [DES ENG] A tap with a chamfer 1–1½ threads in length. [MET] A hole in the bottom of a furnace for draining out the slag.

bottom terrace [GEOL] A landform deposited by streams with moderate or small bottom loads of coarse sand and gravel, and characterized by a broad, sloping surface in the direction of flow and a steep escarpment facing downstream.

bottom-up analysis [COMPUT SCI] A reductive method of syntactic analysis which attempts to reduce a string to a root symbol.

bottom water [HYD] Water lying beneath oil or gas in productive formations. [OCEANOGR] The water mass at the deepest part of a water column in the ocean.

botulin [MICROBIO] The neurogenic toxin which is produced by *Clostridium botulinum* and *C. parabotulinum* and causes botulism. Also known as botulinus toxin.

botulinus [MICROBIO] A bacterium that causes botulism.

botulinus toxin *See* botulin.

botulism [MED] Food poisoning due to intoxication by the exotoxin of *Clostridium botulinum* and *C. parabotulinum.*

boturon [ORG CHEM] $C_{12}H_{13}N_2OCl$ A white solid with a melting point of 145–146°C; used as pre- and postemergence herbicide in cereals, orchards, and vineyards. Also known as butyron.

bouclé [TEXT] **1.** Yarn made with loose loops. **2.** A fabric made from bouclé yarn.

boudin [GEOL] One of a series of sausage-shaped segments found in a boudinage.

boudinage [GEOL] A structure in which beds set in a softer matrix are divided by cross fractures into segments resembling pillows.

bough [BOT] A main branch on a tree.

bougie decimale [OPTICS] Formerly, a unit of luminous intensity equal to 0.96 international standard candle.

Bouguer correction *See* Bouguer reduction.

Bouger gravity anomaly [GEOPHYS] A value that corrects the observed gravity for latitude and elevation variations, as in the free-air gravity anomaly, plus the mass of material above some datum (usually sea level) within the earth and topography.

Bouguer-Lambert-Beer law [ANALY CHEM] The intensity of a beam of monochromatic radiation in an absorbing medium decreases exponentially with penetration distance. Also known as Beer-Lambert-Bouguer law; Lambert-Beer law.

Bouguer-Lambert law [ANALY CHEM] The law that the change in intensity of light transmitted through an absorbing substance is related exponentially to the thickness of the absorbing medium and a constant which depends on the sample and the wavelength of the light. Also known as Lambert's law.

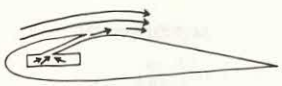
Bouguer reduction [GEOL] A correction made in gravity work to take account of the station's altitude and the rock between the station and sea level. Also known as Bouguer correction.

Bouguer's halo [METEOROL] A faint, white circular arc of light of about 39° radius around the antisolar point. Also known as Ulloa's ring.

Bouin's solution [MATER] A picric acid–acetic acid–formaldehyde fixative and preserving fluid for contractile forms.

boulangerite [MINERAL] $Pb_5Sb_4S_{11}$ A bluish-lead-gray, monoclinic mineral consisting of lead antimony sulfide.
boulder [GEOL] A worn rock with a diameter exceeding 256 millimeters. Also spelled bowlder.
boulder barricade [GEOL] An accumulation of large boulders that is visible along a coast between low and half tide.
boulder belt [GEOL] A long, narrow accumulation of boulders elongately transverse to the direction of glacier movement.
boulder buster [ENG] A heavy, pyramidical- or conical-point steel tool which may be attached to the bottom end of a string of drill rods and used to break, by impact, a boulder encountered in a borehole. Also known as boulder cracker.
boulder clay *See* till.
boulder cracker *See* boulder buster.
boulder pavement [GEOL] A surface of till with boulders; the till has been abraded to flatness by glacier movement.
boulder train [GEOL] Glacial boulders derived from one locality and arranged in a right-angled line or lines leading off in the direction in which the drift agency operated.
boule [CRYSTAL] A pure crystal, such as silicon, having the atomic structure of a single crystal, formed synthetically by rotating a small seed crystal while pulling it slowly out of molten material in a special furnace.
bounce cast [GEOL] A short ridge underneath a stratum fading out gradually in both directions.
bounce table [MECH ENG] A testing device which subjects devices and components to impacts such as might be encountered in accidental dropping.
bouncing putty [MATER] A silicone polymer in a soft elastic mass; the material's elasticity will increase as the applied force increases.
boundary [ELECTR] An interface between *p*- and *n*-type semiconductor materials, at which donor and acceptor concentrations are equal. [GEOL] A line between areas occupied by rocks or formations of different type and age. [SCI TECH] A line or area which determines inclusion in a system.
boundary condition [MATH] A requirement to be met by a solution to a set of differential equations on a specified set of values of the independent variables.
boundary-layer control [FL MECH] Control over the development of a boundary layer by reduction of surface roughness and choice of surface contours. Abbreviated BLC.
boundary-layer flow [FL MECH] The flow of that portion of a viscous fluid which is in the neighborhood of a body in contact with the fluid and in motion relative to the fluid.
boundary-layer photocell *See* photovoltaic cell.
boundary-layer separation [FL MECH] That point where the boundary layer no longer continues to follow the contour of the boundary because the residual momentum of the fluid (left after overcoming viscous forces) may be insufficient to allow the flow to proceed into regions of increasing pressure. Also known as flow separation.
boundary-layer theory *See* film theory.
boundary line [MAP] A line of demarcation along which two areas meet. [PHYS CHEM] On a phase diagram, the line along which any two phase areas adjoin in a binary system, or the line along which any two liquidus surfaces intersect in a ternary system.
boundary lubrication [ENG] A lubricating condition that is a combination of solid-to-solid surface contact and liquid-film shear.
boundary map [MAP] A map constructed for the purpose of delineating a boundary line and adjacent territory.
boundary marker [NAV] A radio transmitter operating at 75 megahertz and installed near the approach end of landing runway (3.9 nautical miles ±1000 feet, or 7123 ±305 meters) and approximately on the localizer course line.
boundary monument [ENG] A material object placed on or near a boundary line to preserve and identify the location of the boundary line on the ground.
boundary of a set *See* frontier of a set in a topological space.
boundary pillar [MIN ENG] A pillar left in mines between adjoining properties.
boundary point [MATH] In a topological space, a point of a set with the property that every neighborhood of the point contains points of both the set and its complement.
boundary survey [ENG] A survey made to establish or to reestablish a boundary line on the ground or to obtain data for constructing a map or plat showing a boundary line.
boundary value component *See* perfectly mobile component.
boundary value problem [MATH] A problem, such as the Dirichlet or Neumann problem, which involves finding the solution of a differential equation or system of differential equations which meets certain specified requirements, usually connected with physical conditions, for certain values of the independent variable.
boundary wave [GEOPHYS] A seismic wave that propagates along a free surface or an interface between defined layers.
bound barrel [ORD] A barrel that is touching parts of the stock in such a manner that expansion due to heat from firing causes the barrel to bind and bend, resulting in inaccurate fire.
bound charge [ELEC] Electric charge which is confined to atoms or molecules, in contrast to free charge, such as metallic conduction electrons, which is not. Also known as polarization charge.
bounded function [MATH] **1.** A function whose image is a bounded set. **2.** A function of a metric space to itself which moves each point no more than some constant distance.
bounded linear transformation [MATH] A linear transformation T for which there is some positive number A such that the norm of $T(x)$ is equal to or less than A times the norm of x for each x.
bounded set [MATH] **1.** A collection of numbers whose absolute values are all smaller than some constant. **2.** A set of points, the distance between any two of which is smaller than some constant.
bounded variation [MATH] A real-valued function is of bounded variation on an interval if its total variation there is bounded.
bound electron [ATOM PHYS] An electron whose wave function is negligible except in the vicinity of an atom.
bound glue state *See* glueball.
bounding mine [ORD] Type of antipersonnel mine usually buried just below the surface of the ground; it has a small charge which throws the case up into the air; this case explodes at a height of 3 or 4 feet, throwing shrapnel or fragments in all directions.
bound level [NUC PHYS] An energy level in a nucleus so close to the ground state that it can only decay by gamma emission.
bound particle [PHYS] A particle which is confined to some finite region.
bounds register [COMPUT SCI] A device which stores the upper and lower bounds on addresses in the memory of a given computer program in a time-sharing system.
bound symbol [COMMUN] A contextual symbol either not preceded or not followed, or neither preceded nor followed, by space.
bound symbol sequence [COMMUN] A symbol sequence either not preceded or not followed, or neither preceded nor followed, by space.
bound variable [MATH] In logic, a variable that occurs within the scope of a quantifier, and cannot be replaced by a constant.
bound vector [MECH] A vector whose line of application and point of application are both prescribed, in addition to its direction.
bound water [CHEM] Water that is a portion of a system such as tissues or soil and does not form ice crystals until the material's temperature is lowered to about $-20°C$.
bourbon [FOOD ENG] A whiskey distilled from a corn mash containing at least 51% corn, with malt and rye composing the remaining ingredients, and aged in containers made of charred oak.
Bourdon pressure gage [ENG] A mechanical pressure-measuring instrument employing as its sensing element a curved or twisted metal tube, flattened in cross section and closed. Also known as Bourdon tube.
Bourdon tube *See* Bourdon pressure gage.
Bourges process [GRAPHICS] A process used in art and color preparation for fake color work; transparent films in a variety of colors and densities are used as overlays for the black and white art work.
Bournesville's disease *See* tuberous sclerosis.
bournonite [MINERAL] $PbCuSbS_3$ Steel-gray to black orthorhombic crystals; mined as an ore of copper, lead, and antimony. Also known as berthonite; cogwheel ore.
Bourquin-Sherman unit [BIOL] A unit for the standardization of riboflavin.
bourrelet [ORD] The cylindrical surface of a projectile on which the projectile bears while in the bore of the weapon.

BOUNDARY-LAYER CONTROL



In this airfoil, retarded flow in the boundary layer is reenergized by supplying high-velocity flow through a slot in the surface.

BOURNONITE

2.5 cm

Crystals of bournonite with rhodochrosite and quartz from Pribram, Bohemia, Czechoslovakia. *(Specimen from Department of Geology, Bryn Mawr College)*

Boussinesq approximation [FL MECH] The assumption (frequently used in the theory of convection) that the fluid is incompressible except insofar as the thermal expansion produces a buoyancy, represented by a term $g\alpha T$, where g is the acceleration of gravity, α is the coefficient of thermal expansion, and T is the perturbation temperature.

Boussinesq equation [ENG] A relation used to calculate the influence of a concentrated load on the backfill behind a retaining wall.

Boussinesq number [FL MECH] A dimensionless number used to study wave behavior in open channels.

boussingaultite [MINERAL] $(NH_4)_2Mg(SO_4)_2 \cdot 6H_2O$ A colorless to yellowish-pink, monoclinic mineral consisting of a hydrated sulfate of ammonium and magnesium; usually occurs in massive form, as crusts or stalactites.

bouton [ANAT] A club-shaped enlargement at the end of a nerve fiber. Also known as end bulb.

boutonneuse fever *See* fièvre boutonneuse.

Bouveault-Blanc method [ORG CHEM] A laboratory method for preparing alcohols by reduction of esters utilizing sodium dissolved in alcohol.

Bovidae [VERT ZOO] A family of pecoran ruminants in the superfamily Bovoidea containing the true antelopes, sheep, and goats.

bovine [VERT ZOO] **1.** Any member of the genus *Bos*. **2.** Resembling or pertaining to a cow or ox.

bovine mastitis [VET MED] Inflammation of the udder of a cow; may result from injury or bacterial infection.

bovine staggers [VET MED] A disease of cattle in southern Africa caused by eating the poisonous herb *Matricaria nigellaefolia* and characterized by staggering, emaciation, and finally paralysis.

Bovoidea [VERT ZOO] A superfamily of pecoran ruminants in the order Artiodactyla comprising the pronghorns and bovids.

bow [AERO ENG] The forward section of an aircraft. [ARCH] A part of a building shaped as an arc or a polygon and projecting from a straight wall. [NAV ARCH] The forward part of a ship.

bow compass [GRAPHICS] A small compass whose legs are connected by a spring shaped like a bow, rather than by a joint.

Bowden cable [MECH ENG] A wire made of spring steel which is enclosed in a helical casing and used to transmit longitudinal motions over distances, particularly around corners.

bow divider [GRAPHICS] A small divider whose legs are connected by a bow-shaped spring, rather than by a joint.

bowel [ANAT] The intestine.

Bowen reaction series [MINERAL] A series of minerals wherein any early-formed phase will react with the melt later in the differentiation to yield a new mineral further in the series.

Bowen's disease [MED] **1.** Intraepithelial squamous-cell carcinoma of the skin, forming distinctive plaques. **2.** A similar carcinoma occurring in mucous membranes.

Bower-Barff process [MET] A method of coating iron or steel with magnetic oxide, such as Fe_3O_4, in order to minimize atmospheric corrosion.

bowfin [VERT ZOO] *Amia calva*. A fish recognized as the only living species of the family Amiidae. Also known as dogfish; grindle; mudfish.

bow flare slamming [NAV ARCH] An extreme pitch-and-heave motion of a ship in which the keel emerges from the water but the forefoot does not.

bow gun [ORD] Gun mounted at the front of a ship or armored vehicle, especially a semifixed, forward-firing gun in tanks.

Bowie formula [GEOPHYS] A correction used for calculation of the local gravity anomaly on earth.

bowk *See* hoppit.

bowl classifier [CHEM ENG] A shallow bowl with a concave bottom so that a liquid-solid suspension can be fed to the center; coarse particles fall to the bottom, where they are raked to a central discharge point, and liquid and fine particles overflow the edges and are collected.

bowl crater [ASTRON] A type of lunar crater whose interior cross section is a smooth curve, with no flat floor.

bowlder *See* boulder.

bow light [NAV ARCH] A white light near the bow of a ship at anchor or under way.

bowline [NAV ARCH] **1.** A rope attached to the vertical edge of a square sail near its midpoint, and used to keep the sail's weather edge taut forward when the vessel is close-hauled. **2.** A knot forming a loop that does not slip under tension, used particularly for mooring and hauling.

bowlingite *See* saponite.

bowl mill *See* bowl-mill pulverizer.

bowl-mill pulverizer [MECH ENG] A type of pulverizer which directly feeds a coal-fired furnace, in which springs press pivoted stationary rolls against a rotating bowl grinding ring, crushing the coal between them. Also known as a bowl mill.

bowl scraper [MECH ENG] A towed steel bowl hung within a fabricated steel frame, running on four or two wheels; transports soil, in addition to spreading and leveling it.

Bowman's capsule [ANAT] A two-layered membranous sac surrounding the glomerulus and constituting the closed end of a nephron in the kidneys of all higher vertebrates.

bow-on [ORD] Facing the firer; a bow-on target presents its narrower dimension exactly toward the gun firing at it; when an enemy tank is headed exactly at the gun firing at it, the tank is a bow-on target.

bowshock [ASTROPHYS] The shock wave set up by the interaction of the supersonic solar wind with a planet's magnetic field.

Bow's notation [MECH] A graphical method of representing coplanar forces and stresses, using alphabetical letters, in the solution of stresses or in determining the resultant of a system of concurrent forces.

bowsprit [NAV ARCH] A large spar that projects forward from the forward end of a sailing ship, used to carry sails and support the masts by stays.

bowstring beam [CIV ENG] A steel, concrete, or timber beam or girder shaped in the form of a bow and string; the string resists the horizontal forces caused by loads on the arch.

bow wave [FL MECH] A shock wave occurring in front of a body, such as an airfoil, or apparently attached to the forward tip of the body.

box [DES ENG] *See* boxing. [ENG] A protective covering or housing.

box annealing [MET] Slow heating of metal sheets in a closed metal box to prevent oxidation, followed by cooling; usually limited to iron-base alloys.

box barrage [ORD] In antiaircraft artillery fire, an antiaircraft barrage delivered in a box-shape pattern by guns surrounding a defended target.

box beam *See* box girder.

box bill *See* bell tap.

boxboard [MATER] Paperboard used for making cardboard boxes.

box caisson [CIV ENG] A floating steel or concrete box with an open top which will be filled and sunk at a foundation site in a river or seaway. Also known as American caisson; stranded caisson.

box camera [OPTICS] A camera that consists of a box, an arrangement for loading and winding film, a simple lens of fixed focus, and a simple shutter with a speed of about 1/30 second.

box canyon [GEOGR] A canyon with steep rock sides and a zigzag course, that is usually closed upstream.

boxcar [COMMUN] One of a series of long signal-wave pulses which are separated by very short intervals of time. [ENG] A railroad car with a flat roof and vertical sides, usually with sliding doors, which carries freight that needs to be protected from weather and theft.

boxcar circuit [ELECTR] A circuit used in radar for sampling voltage waveforms and storing the latest value sampled; the term is derived from the flat, steplike segments of the output voltage waveform.

boxcar function [MATH] A function whose value is zero except for a finite interval of its argument, for which it has a constant nonzero value.

box-coking test [ENG] A laboratory test which forecasts the quality of coke producible in commercial practice; uses a specially designed sheet-steel box containing about 60 pounds (27 kilograms) of coal in a commercial coke oven.

box fold [GEOL] A fold in which the broad, flat top of an anticline or the broad, flat bottom of a syncline is bordered by steeply dipping limbs.

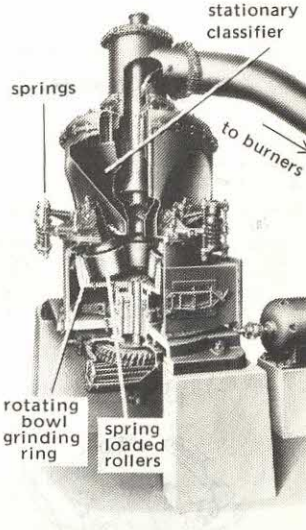
box girder [CIV ENG] A hollow girder or beam with a square or rectangular cross section. Also known as box beam.

box-girder bridge [CIV ENG] A fixed bridge consisting of steel girders fabricated by welding four plates into a box section.

BOWFIN

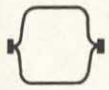
Bowfin (*Amia calva*), which may attain 2½ feet (76 centimeters) and is found only in some parts of the United States.

BOWL-MILL PULVERIZER



Medium-speed bowl-mill coal pulverizer, which feeds burners. (*Combustion Engineering Co.*)

BOX PILES

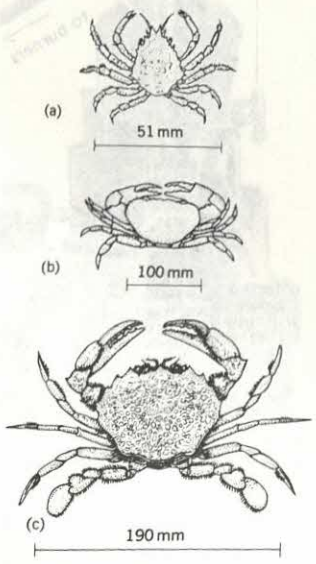


Box-pile cross section.

BRACED-RIB ARCH

The Bayonne Bridge, a braced-rib arch, across the Kill Van Kull in New Jersey. *(Port of New York Authority)*

BRACHYGNATHA



Representative crabs of the Brachygnatha: *(a)* spider crab, *Mithrax acuticornis;* *(b)* fresh-water crab, *Epilobocera sinuatifrons;* *(c)* swimming crab, *Ovalipes ocellatus.* *(Smithsonian Institution)*

box header boiler [MECH ENG] A horizontal boiler with a front header and rear inclined rectangular header connected by tubes.

Box Hole [GEOL] A meteorite crater in central Australia, 575 feet (244 meters) in diameter.

boxing [DES ENG] The threaded nut for the screw of a mounted auger drill. Also known as box. [ENG] A method of securing shafts solely by slabs and wooden pegs. [MET] Continuing a fillet weld around a corner. Also known as end turning.

boxing shutter [BUILD] A window shutter which can be folded into a boxlike enclosure or recess at the side of the window frame.

boxing the compass [NAV] In nautical practice, calling out in sequence the names of the points (and sometimes the half and quarter points) indicated by the compass of a maneuvering vessel.

box loom [TEXT] A loom that uses several shuttles to weave fabric with more than one type of filling yarn or with a regular filling pattern.

box piles [CIV ENG] Pile foundations made by welding together two sections of steel sheet piling or combinations of beams, channels, and plates.

boxwork [GEOL] Limonite and other minerals which formed at one time as blades or plates along cleavage or fracture planes, after which the intervening material dissolved, leaving the intersecting blades or plates as a network.

box wrench [ENG] A closed-end wrench designed to fit a variety of sizes and shapes of bolt heads and nuts.

Boyle's law [PHYS] The law that the product of the volume of a gas times its pressure is a constant at fixed temperature. Also known as Mariotte's law.

Boyle's temperature [THERMO] For a given gas, the temperature at which the virial coefficient B in the equation of state $Pv = RT\,[1 + (B/v) + (C/v^2) + \ldots]$ vanishes.

Boys camera [OPTICS] A type of camera used for the observation of lightning flashes.

bp *See* boiling point.

bpd *See* barrels per day.

bpm *See* barrels per month.

BPMC *See* 2-*sec*-butyl phenyl-*N*-methyl carbamate.

B power supply *See* B supply.

BPSK *See* binary phase-shift keying.

Bq *See* becquerel.

Br *See* bromine.

BRA *See* β-resorcylic acid.

brace [DES ENG] A cranklike device used for turning a bit. [ENG] A diagonally placed structural member that withstands tension and compression, and often stiffens a structure against wind.

brace and bit [DES ENG] A small hand tool to which is attached a metal- or wood-boring bit.

braced framing [CIV ENG] Framing a building with post and braces for stiffness.

braced-rib arch [CIV ENG] A type of steel arch, usually used in bridge construction, which has a system of diagonal bracing.

brace head [ENG] A cross handle attached at the top of a column of drill rods by means of which the rods and attached bit are turned after each drop in chop-and-wash operations while sinking a borehole through overburden. Also known as brace key.

brace key *See* brace head.

brace pile *See* batter pile.

brace root *See* prop root.

brachial [ZOO] Of or relating to an arm or armlike process.

brachial artery [ANAT] An artery which originates at the axillary artery and branches into the radial and ulnar arteries; it distributes blood to the various muscles of the arm, the shaft of the humerus, the elbow joint, the forearm, and the hand.

brachial cavity [INV ZOO] The anterior cavity which is located inside the valves of brachiopods and into which the brachia are withdrawn.

brachial plexus [ANAT] A plexus of nerves located in the neck and axilla and composed of the anterior rami of the lower four cervical and first thoracic nerves.

Brachiata [INV ZOO] A phylum of deuterostomous, sedentary bottom-dwelling marine animals that live encased in tubes.

brachiate [BOT] Possessing widely divergent branches. [ZOO] Having arms.

brachiolaria [INV ZOO] A transitional larva in the development of certain starfishes that is distinguished by three anterior processes homologous with those of the adult.

Brachiopoda [INV ZOO] A phylum of solitary, marine, bivalved coelomate animals.

brachioradialis [ANAT] The muscle of the arm that flexes the elbow joint; origin is the lateral supracondylar ridge of the humerus, and insertion is the lower end of the radius.

brachistochrone [MECH] The curve along which a smooth-sliding particle, under the influence of gravity alone, will fall from one point to another in the minimum time.

brachium [ANAT] The upper arm or forelimb, from the shoulder to the elbow. [INV ZOO] **1.** A ray of a crinoid. **2.** A tentacle of a cephalopod. **3.** Either of the paired appendages constituting the lophophore of a brachiopod.

Brachyarchus [MICROBIO] A genus of bacteria of uncertain affiliation; rod-shaped cells bent in a bowlike configuration and usually arranged in groups of two, four, or more cells.

brachyaxis [CRYSTAL] The shorter lateral axis, usually the *a* axis, of an orthorhombic or triclinic crystal. Also known as brachydiagonal.

brachyblast [BOT] A short shoot often bearing clusters of leaves.

brachycephalic [ANTHRO] Being short- or broad-headed, that is, having a cephalic index of over 80.

brachycephaly [ANTHRO] The state of being brachycephalic.

brachycerebral [ANTHRO] Having a round or short brain.

brachycranial [ANTHRO] Being short- or broad-skulled, that is, with a cephalic index of over 80.

brachydactylia [MED] Abnormal shortening of fingers or toes.

brachydiagonal *See* brachyaxis.

brachydont [ANAT] Of teeth, having short crowns, well-developed roots, and narrow root canals; characteristic of man.

brachyfacial [ANTHRO] Having a short or broad face.

Brachygnatha [INV ZOO] A subsection of brachyuran crustaceans to which most of the crabs are assigned.

brachypinacoid [GEOL] A pinacoid parallel to the vertical and the shorter lateral axis.

Brachypsectridae [INV ZOO] A family of coleopteran insects in the superfamily Cantharoidea represented by a single species.

Brachypteraciidae [VERT ZOO] The ground rollers, a family of colorful Madagascan birds in the order Coraciiformes.

brachypterous [INV ZOO] Having rudimentary or abnormally small wings, referring to certain insects.

brachysclereid [BOT] A sclereid that is more or less isodiametric and is found in certain fruits and in the pith, cortex, and bark of many stems. Also known as stone cell.

brachyskelic [ANTHRO] Having legs short in proportion to trunk length, with a skelic index of 75–80.

brachysm [BOT] Plant dwarfing in which there is shortening of the internodes only.

brachysyncline [GEOL] A broad, short syncline.

brachytherapy [MED] Radiation treatment using a solid or enclosed radioisotopic source on the surface of the body or at a short distance from the area to be treated.

Brachythoraci [PALEON] An order of the joint-neck fishes, now extinct.

Brachyura [INV ZOO] The section of the crustacean order Decapoda containing the true crabs.

bracing [ENG] The act or process of strengthening or making rigid.

brackebuschite [MINERAL] $Pb_4MnFe(VO_4)_4 \cdot 2H_2O$ A dark brown to black, monoclinic mineral consisting of a hydrated vanadate of lead, manganese, and iron.

bracket [BUILD] A vertical board to support the tread of a stair. [CIV ENG] A projecting support. [ORD] **1.** The distance between two strikes or series of strikes, one of which is over the target and the other short of it, or one of which is to the right and the other to the left of the target. **2.** A group of shots (or bombs) which fall both over and short of the target.

bracket fungus [MYCOL] A basidiomycete characterized by shelflike sporophores, sometimes seen on tree trunks.

bracketing method [ORD] A method of adjusting artillery and mortar fire in which a bracket is established by obtaining an over and a short strike, with respect to the observer, then successively splitting the bracket in half until a target hit is obtained or the smallest practicable range change has been made.

bracketing salvo [ORD] A series of shots in which the number of shots going over the target equals the number falling short of it.

Brackett series [SPECT] A series of lines in the infrared spectrum of atomic hydrogen whose wave numbers are given by $R_H[(1/16) - (1/n^2)]$, where R_H is the Rydberg constant for hydrogen and n is any integer greater than 4.

brackish [HYD] **1.** Of water, having salinity values ranging from approximately 0.50 to 17.00 parts per thousand. **2.** Of water, having less salt than sea water, but undrinkable.

Braconidae [INV ZOO] The braconid wasps, a family of hymenopteran insects in the superfamily Ichneumonoidea.

bract [BOT] A modified leaf associated with plant reproductive structures.

bracteolate [BOT] Having bracteoles.

bracteole [BOT] A small bract, especially if on the floral axis. Also known as bractlet.

bractlet *See* bracteole.

Bradford breaker [MIN ENG] A machine which combines coal crushing and screening.

Bradfordian [GEOL] Uppermost Devonian geologic time.

Bradford preferential separation process [MIN ENG] A flotation process for the treatment of mixed sulfides in which certain mineral salts, such as thiosulfates, are added to the water used in the flotation cells.

Bradford spinning [TEXT] A process for spinning wool into worsted yarn, in which oil is applied to the wool before combing so that the yarn will be smooth.

Bradley aberration [ASTRON] Stellar aberration with a maximum of 20.5 seconds of arc; can be used to compute an approximate velocity for light.

bradleyite [MINERAL] $Na_3Mg(PO_4)(CO_3)$ A light gray mineral consisting of a phosphate-carbonate of sodium and magnesium; occurs as fine-grained masses.

bradyauxesis [BIOL] Allometric growth in which a part lags behind the body as a whole in development.

bradycardia [MED] Slow heart rate.

bradykinin [BIOCHEM] $C_{50}H_{73}N_{15}O_{11}$ A polypeptide kinin; forms an amorphous precipitate in glacial acetic acid; released from plasma precursors by plasmin; acts as a vasodilator. Also known as callideic I; kallidin I.

Bradyodonti [PALEON] An order of Paleozoic cartilaginous fishes (Chondrichthyes), presumably derived from primitive sharks.

Bradypodidae [VERT ZOO] A family of mammals in the order Edentata comprising the true sloths.

bradytely [EVOL] Evolutionary change that is either arrested or occurring at a very slow rate over long geologic periods.

Bragg angle [SOLID STATE] One of the characteristic angles at which x-rays reflect specularly from planes of atoms in a crystal.

Bragg cell *See* acoustooptic modulator.

Bragg curve [ATOM PHYS] **1.** A curve showing the average number of ions per unit distance along a beam of initially monoenergetic ionizing particles, usually alpha particles, passing through a gas. Also known as Bragg ionization curve. **2.** A curve showing the average specific ionization of an ionizing particle of a particular kind as a function of its kinetic energy, velocity, or residual range.

Bragg diffraction *See* Bragg scattering.

Bragg ionization curve *See* Bragg curve.

braggite [MINERAL] PtS A steel-gray platinum sulfide mineral with tetragonal crystals.

Bragg-Kleeman rule *See* Bragg rule.

Bragg-Pierce law [PHYS] A relationship for determining an element's atomic absorption coefficient for x-rays when the atomic number of the element and the wavelength of the x-rays are known.

Bragg reflection *See* Bragg scattering.

Bragg rule [ATOM PHYS] An empirical rule according to which the mass stopping power of an element for alpha particles is inversely proportional to the square root of the atomic weight. Also known as Bragg-Kleeman rule.

Bragg scattering [SOLID STATE] Scattering of x-rays or neutrons by the regularly spaced atoms in a crystal, for which constructive interference occurs only at definite angles called Bragg angles. Also known as Bragg diffraction; Bragg reflection.

Bragg's equation *See* Bragg's law.

Bragg's law [SOLID STATE] A statement of the conditions under which a crystal will reflect a beam of x-rays with maximum intensity. Also known as Bragg's equation; Bravais' law.

Bragg spectrometer [ENG] An instrument for x-ray analysis of crystal structure and measuring wavelengths of x-rays and gamma rays, in which a homogeneous beam of x-rays is directed on the known face of a crystal and the reflected beam is detected in a suitably placed ionization chamber. Also known as crystal spectrometer; crystal diffraction spectrometer; ionization spectrometer.

braided stream [HYD] A stream flowing in several channels that divide and reunite.

braided wire [ELEC] A tube of fine wires woven around a conductor or cable for shielding purposes or used alone in flattened form as a grounding strap.

Braille [COMMUN] A system of written communication for the blind in which letters are represented by raised dots over which the trained blind person moves the fingertips.

Brailsford-Morquio syndrome *See* Morquio's syndrome.

brain [ANAT] The portion of the vertebrate central nervous system enclosed in the skull. [ZOO] The enlarged anterior portion of the central nervous system in most bilaterally symmetrical animals.

braincase *See* cranium.

brain coral [INV ZOO] A reef-building coral resembling the human cerebrum in appearance.

brain hormone [INV ZOO] A neurohormone secreted by the insect brain that regulates the release of ecdysone from the prothoracic glands.

brainstem [ANAT] The portion of the brain remaining after the cerebral hemispheres and cerebellum have been removed.

brainstorming [IND ENG] A procedure used to find a solution for a problem by collecting all the ideas, without regard for feasibility, which occur from a group of people meeting together.

brain wave [PHYSIO] A rhythmic fluctuation of voltage between parts of the brain, ranging from about 1 to 60 hertz and 10 to 100 microvolts.

brake [MECH ENG] A machine element for applying friction to a moving surface to slow it (and often, the containing vehicle or device) down or bring it to rest.

brake band [MECH ENG] The contracting element of the band brake.

brake drum [MECH ENG] A rotating cylinder attached to a rotating part of machinery, which the brake band or brake shoe presses against.

brake fluid [MATER] The liquid in the cylinder of an automotive brake which, under the action of a piston, is forced through tubing into cylinders at each car wheel, moving a pair of pistons outward so that the brake shoes are thrust against the revolving brake drums.

brake horsepower [MECH ENG] The power developed by an engine as measured by the force applied to a friction brake or by an absorption dynamometer applied to the shaft or flywheel. Abbreviated bhp.

brake lining [MECH ENG] A covering, riveted or molded to the brake shoe or brake band, which presses against the rotating brake drum; made of either fabric or molded asbestos material.

brake mean-effective pressure [MECH ENG] Applied to reciprocating piston machinery, the average pressure on the piston during the power stroke, derived from the measurement of brake power output.

brake shoe [MECH ENG] The renewable friction element of a shoe brake. Also known as shoe.

brake thermal efficiency [MECH ENG] The ratio of brake power output to power input.

braking ellipses [AERO ENG] A series of ellipses, decreasing in size due to aerodynamic drag, followed by a spacecraft in entering a planetary atmosphere.

braking rocket *See* retrorocket.

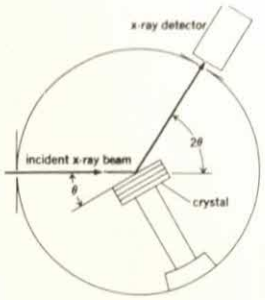
brale [MET] A conical diamond indenter with an angle of 120° used in the Rockwell hardness test.

bramble [BOT] **1.** A plant of the genus *Rubus*. **2.** A rough, prickly vine or shrub.

brammalite [MINERAL] A mica-type clay mineral that is different from illite because it has soda instead of potash; it is the sodium analog of illite. Also known as sodium illite.

branch [BOT] A shoot or secondary stem on the trunk or a limb of a tree. [COMPUT SCI] **1.** Any one of a number of instruction sequences in a program to which computer control is passed, depending upon the status of one or more variables. **2.**

BRAGG SPECTROMETER



Schematic of Bragg spectrometer. θ is angle between incident beam and crystallographic planes; 2θ is angle between incident and diffracted beams.

BRAILLE

Sketch showing Braille alphabet. Combinations of dots (up to six per letter) represent letters. The trained blind person runs the fingers over the raised dots.

See jump. [ELEC] A portion of a network consisting of one or more two-terminal elements in series. Also known as arm. [HYD] A small stream that merges into another, generally bigger, stream. [MATH] A complex function which is analytic in some domain and which takes on one of the values of a multiple-valued function in that domain. [NUC PHYS] A product resulting from one mode of decay of a radioactive nuclide that has two or more modes of decay. [ORG CHEM] A carbon side chain attached to a molecule's main carbon chain. [SCI TECH] An area of study representing an independent offshoot of a related basic discipline.

branch-and-bound technique [IND ENG] A technique in nonlinear programming in which all sets of feasible solutions are divided into subsets, and those having bounds inferior to others are rejected.

branch circuit [ELEC] A portion of a wiring system in the interior of a structure that extends from a final overload protective device to a plug receptable or a load such as a lighting fixture, motor, or heater.

branch-circuit distribution center [COMMUN] Distribution center at which branch circuits are supplied.

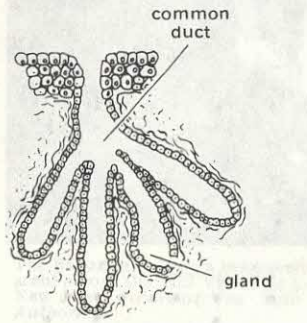
branch cut [MATH] A line or curve of singular points used in defining a branch of a multiple-valued complex function.

branched acinous gland [ANAT] A multicellular structure with saclike glandular portions connected to the surface of the containing organ or structure by a common duct.

branched-chain ketoaciduria *See* maple syrup urine disease.

branched tubular gland [ANAT] A multicellular structure with tube-shaped glandular portions connected to the surface of the containing organ or structure by a common secreting duct.

BRANCHED TUBULAR GLAND



A simple branched tubular gland.

branch gain *See* branch transmittance.

branchia *See* gill.

branchial [ZOO] Of or pertaining to gills.

branchial arch [VERT ZOO] One of the series of paired arches on the sides of the pharynx which support the gills in fishes and amphibians.

branchial basket [ZOO] A cartilaginous structure that supports the gills in protochordates and certain lower vertebrates such as cyclostomes.

branchial cleft [EMBRYO] A rudimentary groove in the neck region of air-breathing vertebrate embryos. [VERT ZOO] One of the openings between the branchial arches in fishes and amphibians.

branchial heart [INV ZOO] A muscular enlarged portion of a vein of a cephalopod that contracts and forces the blood into the gills.

branchial plume [INV ZOO] An accessory respiratory organ that extends out under the mantle in certain Gastropoda.

branchial pouch [ZOO] In cyclostomes and some sharks, one of the respiratory cavities occurring in the branchial clefts.

branchial sac [INV ZOO] In tunicates, the dilated pharyngeal portion of the alimentary canal that has vascular walls pierced with clefts and serves as a gill.

branchial segment [EMBRYO] Any of the paired pharyngeal segments indicating the visceral arches and clefts posterior to and including the third pair in air-breathing vertebrate embryos.

branchiate [VERT ZOO] Having gills.

branching [COMPUT SCI] The selection, under control of a computer program, of one of two or more branches. [NUC PHYS] The occurrence of two or more modes by which a radionuclide can undergo radioactive decay. Also known as multiple decay; multiple disintegration.

branching adaptation *See* divergent adaptation.

branching bay *See* estuary.

branching fraction [NUC PHYS] That fraction of the total number of atoms involved which follows a particular branch of the disintegration scheme; usually expressed as a percentage.

branching process [STAT] A stochastic process in which the members of a population may have offspring and the lines of descent branch out as the new members are born.

branching ratio [NUC PHYS] The ratio of the number of parent atoms or particles decaying by one mode to the number decaying by another mode; the ratio of two specified branching fractions.

branch instruction [COMPUT SCI] An instruction that makes the computer choose between alternative subprograms, depending on the conditions determined by the computer during the execution of the program.

branchiocranium [VERT ZOO] The division of the fish skull constituting the mandibular and hyal regions and the branchial arches.

branchiomere [EMBRYO] An embryonic metamere that will differentiate into a visceral arch and cleft; a branchial segment.

branchiomeric musculature [VERT ZOO] Those muscles derived from branchial segments in vertebrates.

Branchiopoda [INV ZOO] A subclass of crustaceans containing small or moderate-sized animals commonly called fairy shrimps, clam shrimps, and water fleas.

branchiostegite [INV ZOO] A gill cover and chamber in certain malacostracan crustaceans, formed by lateral expansion of the carapace.

Branchiostoma [ZOO] A genus of lancelets formerly designated as amphioxus.

Branchiotremata [INV ZOO] The hemichordates, a branch of the subphylum Oligomera.

branchite *See* hartite.

Branchiura [INV ZOO] The fish lice, a subclass of fish ectoparasites in the class Crustacea.

branch joint [ELEC] Joint used for connecting a branch conductor or cable, where the latter continues beyond the branch.

branch point [COMPUT SCI] A point in a computer program at which there is a branch instruction. [ELEC] A terminal in an electrical network that is common to more than two elements or parts of elements of the network. Also known as junction point; node. [MATH] A point at which two or more sheets of a Riemann surface join together.

branch sewer [CIV ENG] A part of a sewer system that is larger in diameter than the lateral sewer system; receives sewage from both house connections and lateral sewers.

branch transmittance [CONT SYS] The amplification of current or voltage in a branch of an electrical network; used in the representation of such a network by a signal-flow graph. Also known as branch gain.

brandtite [MINERAL] $Ca_2Mn(AsO_4)_2 \cdot 2H_2O$ A colorless to white, monoclinic mineral consisting of a hydrated arsenate of calcium and manganese.

brandy [CHEM ENG] A potable alcoholic beverage distilled from wine or fermented fruit juice, usually after the aging of the wine in wooden casks; cognac is a brandy distilled from wines made from grapes from the Cognac region of France.

Branhamella [MICROBIO] A genus of bacteria in the family Neisseriaceae; cocci occur in pairs with flattened adjacent sides; parasites of mammalian mucous membranes.

brannerite [MINERAL] A complex, black, opaque titanite of uranium and other elements in which the weight of uranium exceeds the weight of titanium; monoclinic and possibly $(U,Ca,Fe,Y,Th)_3Ti_5O_6$.

Brans-Dicke theory [RELAT] A theory of gravitation in which the gravitational field is described by the tensor field of general relativity and by a new scalar field, which is determined by the distribution of mass-energy in the universe and replaces the gravitational constant.

brass [GEOL] A British term for sulfides of iron (pyrites) in coal. Also known as brasses. [MET] A copper-zinc alloy of varying proportions but typically containing 67% copper and 33% zinc.

brass chills *See* metal fume fever.

brasses *See* brass.

brass founder's ague *See* metal fume fever.

Brassica [BOT] A large genus of herbs in the family Cruciferae of the order Capparales, including cabbage, watercress, and sweet alyssum.

Brassicaceae [BOT] An equivalent name for the Cruciferae.

brassin [BIOCHEM] Any of a class of plant hormones characterized as long-chain fatty-acid esters; brassins act to induce both cell elongation and cell division in leaves and stems.

brass ore *See* aurichalcite.

Brathinidae [INV ZOO] The grass root beetles, a small family of coleopteran insects in the superfamily Staphylinoidea.

brattice [MIN ENG] A temporary board or cloth partition in any mine passage to confine the air and force it into the working places. Also spelled brattish; brettice; brettis.

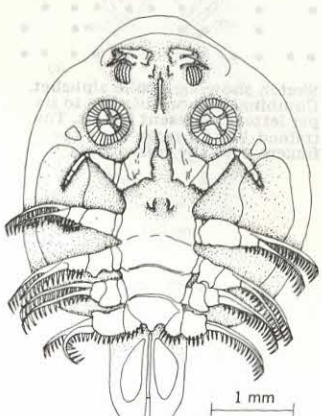
brattice cloth [MIN ENG] Fire-resistant canvas or duck used to erect a brattice.

brattish *See* brattice.

Braulidae [INV ZOO] The bee lice, a family of cyclorrhaphous dipteran insects in the section Pupipara.

braunite [MINERAL] $3Mn_2O_3 \cdot MnSiO_3$ Brittle mineral that forms tetragonal crystals; commonly found as steel-gray or

BRANCHIURA



Argulus japonicus Thiele, male fish louse, of the Branchiura. *(After O. L. Meehean, 1940)*

brown-black masses in the United States, Europe, and South America; it is an ore of manganese.

Braun tube *See* cathode-ray tube.

Bravais indices [CRYSTAL] A modification of the Miller indices; frequently used for hexagonal and trigonal crystalline systems; they refer to four axes: the *c*-axis and three others at 120° angles in the basal plane.

Bravais lattice [CRYSTAL] One of the 14 possible arrangements of lattice points in space such that the arrangement of points about any chosen point is identical with that about any other point.

Bravais' law *See* Bragg's law.

bra vector [QUANT MECH] A vector describing the state of a dynamic system in Hilbert space; the dual of a ket vector.

brave west winds [METEOROL] A nautical term for the strong and rather persistent westerly winds over the oceans in temperate latitudes, between 40° and 50°S.

bravoite [MINERAL] $(Ni,Fe)S_2$ A yellow sulfide ore of nickel containing iron.

brayer [GRAPHICS] A soft rubber roller attached to a wooden or metal handle; used to ink blocks, stones, or printing plates.

Brayton cycle [THERMO] A thermodynamic cycle consisting of two constant-pressure processes interspersed with two constant-entropy processes. Also known as complete-expansion diesel cycle; Joule cycle.

braze [MET] To solder metals by melting a nonferrous filler metal, such as brass or brazing alloy (hard solder), with a melting point lower than that of the base metals, at the point of contact. Also known as hard-solder.

brazed joint [MET] The joining of two or more metallic components by brazing or braze welding.

brazed shank tool [MECH ENG] A metal cutting tool made of a material different from the shank to which it is brazed.

braze welding [MET] A method of welding in which coalescence is produced by heating above 800°F (427°C) and by using a nonferrous filler metal having a melting point below that of the base metals; in distinction to brazing, capillary attraction does not distribute the filler metal in the joint.

Brazil Current [OCEANOGR] The warm ocean current that flows southward along the Brazilian coast below Natal; the western boundary current in the South Atlantic Ocean.

brazilianite [MINERAL] $NaAl_3(PO_4)_2(OH)_4$ A chartreuse yellow to pale yellow, monoclinic mineral consisting of a basic phosphate of sodium and aluminum.

Brazil nut [BOT] *Bertholettia excelsa*. A large broad-leafed evergreen tree of the order Lecythedales; an edible seed is produced by the tree fruit.

Brazil wax *See* carnauba wax.

brazing alloy [MET] **1.** An alloy used as a filler metal for brazing; copper alloys and nickel alloys are used for brazing of steels. **2.** Solder that does not melt below red heat. Formerly known as hard solder.

brazing brass *See* spelter solder.

brazing metal [MET] A nonferrous metal to be added to a joint in braze welding; can be a pure metal such as copper, zinc, or nickel, or a brazing alloy.

brazing sheet [MET] **1.** Brazing filler metal in sheet form. **2.** Flat-rolled metal clad with brazing filler metal on one or both sides.

breached anticline [GEOL] An anticline that has been more deeply eroded in the center. Also known as scalped anticline.

breached cone [GEOL] A cinder cone in which lava has broken through the sides and broken material has been carried away.

breadboarding [ELECTR] Assembling an electronic circuit in the most convenient manner, without regard for final locations of components, to prove the feasibility of the circuit and to facilitate changes when necessary.

breadboard model [ENG] Uncased assembly of an instrument or other piece of equipment, such as a radio set, having its parts laid out on a flat surface and connected together to permit a check or demonstration of its operation.

breadcrust [GEOL] A surficial structure resembling a crust of bread, as the concretions formed by evaporation of salt water.

breadcrust bomb [GEOL] A volcanic bomb with a cracked exterior.

breadfruit [BOT] *Artocarpus altilis*. An Indo-Malaysian tree, a species of the mulberry family (Moraceae). The tree produces a multiple fruit which is edible.

bread mold [MYCOL] Any fungus belonging to the family Mucoraceae in the order Mucorales.

breadth-height index [ANTHRO] Ratio of the maximum breadth of the skull to its maximum height multiplied by 100.

break [COMMUN] An interruption of a radio, telegraph, or telephone communication, as for sending in the opposite direction. [ELEC] **1.** A fault in a circuit. **2.** The minimum distance in a circuit-opening device between the stationary and movable contacts when these contacts are in the open position. [ELECTR] A reflected radar pulse which appears on a radarscope as a line perpendicular to the base line. [GEOGR] A significant variation of topography, such as a deep valley. [GEOL] *See* knickpoint. [METEOROL] **1.** A sudden change in the weather; usually applied to the end of an extended period of unusually hot, cold, wet, or dry weather. **2.** A hole or gap in a layer of clouds. [MIN ENG] **1.** A plane of discontinuity in the coal seam such as a slip, fracture, or cleat; the surfaces are in contact or slightly separated. **2.** A fracture or crack in the roof beds as a result of mining operations.

breakage and reunion [CYTOL] The classical model of crossing over by means of physical breakage and crossways reunion of completed chromatids during the process of meiosis.

breakaway phenomenon *See* breakoff phenomenon.

break-before-make contact [ELEC] One of a pair of contacts that interrupt one circuit before establishing another.

breakbone fever *See* dengue.

break-bulk cargo [IND ENG] Miscellaneous goods packed in boxes, bales, crates, cases, bags, cartons, barrels, or drums; may also include lumber, motor vehicles, pipe, steel, and machinery.

break contact [ELEC] The contact of a switching device which opens a circuit upon the operation of the device.

breakdown [ELEC] A large, usually abrupt rise in electric current in the presence of a small increase in voltage; can occur in a confined gas between two electrodes, a gas tube, the atmosphere (as lightning), an electrical insulator, and a reverse-biased semiconductor diode. [MET] The initial process of rolling and drawing, or a series of such processes, which reduce a casting or extruded shape before its final reduction to desired size.

breakdown diode [ELEC] A semiconductor diode in which the reverse-voltage breakdown mechanism is based either on the Zener effect or the avalanche effect.

breakdown impedance [ELECTR] Of a semiconductor, the small-signal impedance at a specified direct current in the breakdown region.

breakdown law [STAT] The law that if the event E is broken down into the exclusive events $E_1, E_2, \ldots$ so that E is the event E_1 or E_2 or ..., then if F is any event, the probability of F is the sum of the products of the probabilities of E_i and the conditional probability of F given E_i.

breakdown potential *See* breakdown voltage.

breakdown region [ELECTR] Of a semiconductor diode, the entire region of the volt-ampere characteristic beyond the initiation of breakdown for increasing magnitude of bias.

breakdown voltage [ELEC] **1.** The voltage measured at a specified current in the electrical breakdown region of a semiconductor diode. Also known as Zener voltage. **2.** The voltage at which an electrical breakdown occurs in a dielectric. **3.** The voltage at which an electrical breakdown occurs in a gas. Also known as breakdown potential; sparking potential; sparking voltage.

breaker [MIN ENG] **1.** In anthracite mining, the structure in which the coal is broken, sized, and cleaned for market. Also known as coalbreaker. **2.** One of a row of drill holes above the mining holes in a tunnel face. [OCEANOGR] A wave breaking on a shore, over a reef, or other mass in a body of water.

breaker-and-a-half [ELEC] A substation switching arrangement that involves two buses between which three breaker bays are installed.

breaker-and-a-third [ELEC] A substation switching arrangement having four breakers and three connections per bay.

breaker cam [MECH ENG] A rotating, engine-driven device in the ignition system of an internal combustion engine which causes the breaker points to open, leading to a rapid fall in the primary current.

breaker depth [OCEANOGR] The still-water depth measured at the point where a wave breaks. Also known as breaking depth.

breaker plate [ENG] In plastics die forming, a perforated

BREADFRUIT

Breadfruit (*Artocarpus altilis*); end of branch with multiple fruits.

plate at the end of an extruder head; often used to support a screen to keep foreign particles out of the die.

breaker points [ELEC] Low-voltage contacts used to interrupt the current in the primary circuit of a gasoline engine's ignition system.

breaker terrace [GEOL] A type of shore found in lakes in glacial drift; the terrace is formed from stones deposited by waves.

break-even analysis [IND ENG] Determination of the break-even point.

break-even point [IND ENG] The point at which a company neither makes a profit nor suffers a loss from the operations of the business, and at which total costs are equal to total sales volume.

break for color [GRAPHICS] In artwork and composition, the separation of parts for printing in different colors.

break frequency [CONT SYS] The frequency at which a graph of the logarithm of the amplitude of the frequency response versus the logarithm of the frequency has an abrupt change in slope. Also known as corner frequency; knee frequency.

break-in device [ELECTR] A device in a radiotelegraph communication system allowing an operator to receive signals in intervals between his own transmission signals.

breaking depth *See* breaker depth.

breaking-down rolls [MET] A rolling mill unit used for breakdown operations.

breaking-drop theory [GEOPHYS] A theory of thunderstorm charge separation based upon the suggested occurrence of the Lenard effect in thunderclouds, that is, the separation of electric charge due to the breakup of water drops.

breaking load [MECH] The stress which, when steadily applied to a structural member, is just sufficient to break or rupture it.

breaking pin device [ENG] A device designed to relieve pressure resulting from inlet static pressure by the fracture of a loaded part of a pin.

breaking strength [MECH] The ability of a material to resist breaking or rupture from a tension force.

breaking stress [MECH] The stress required to fracture a material whether by compression, tension, or shear.

break-in operation [COMMUN] A method of radio communication in which it is possible for the receiving operator to interrupt or break into the transmission.

breakoff phenomenon [AERO ENG] The feeling which sometimes occurs during high-altitude flight of being totally separated and detached from the earth and human society. Also known as breakaway phenomenon.

breakout [ELEC] A joint at which one or more conductors are brought out from a multiconductor cable. [MIN ENG] To pull drill rods or casing from a borehole and unscrew them at points where they are joined by threaded couplings to form lengths that can be stacked in the drill tripod or derrick.

breakout block [PETRO ENG] A heavy plate fitting in a rotary table that holds a drill bit being unscrewed from a drill collar.

breakoutput [COMPUT SCI] An ALGOL procedure which causes all bytes in a device buffer to be sent to the device rather than wait until the buffer is full.

breakover [ELECTR] In a silicon controlled rectifier or related device, a transition into forward conduction caused by the application of an excessively high anode voltage.

breakover voltage [ELECTR] The positive anode voltage at which a silicon controlled rectifier switches into the conductive state with gate circuit open.

break period [COMMUN] Of a dial telephone, the time interval during which the circuit contacts are open.

breakpoint [CHEM ENG] *See* breakthrough. [COMPUT SCI] A point in a program where an instruction, instruction digit, or other condition enables a programmer to interrupt the run by external intervention or by a monitor routine.

breakpoint switch [COMPUT SCI] A manually operated switch which controls conditional operation at breakpoints, used primarily in debugging.

breakpoint symbol [COMPUT SCI] A symbol which may be optionally included in an instruction, as an indication, tag, or flag, to designate it as a breakpoint.

breaks in overcast [METEOROL] In United States weather observing practice, a condition wherein the cloud cover is more than 0.9 but less than 1.0.

breakthrough [CHEM ENG] **1.** A localized break in a filter cake or precoat that permits fluid to pass through without being filtered. Also known as breakpoint. **2.** In an ion-exchange system, the first appearance of unadsorbed ions of the type which deplete the activity of the resin bed; this indicates that the bed must be regenerated. [COMPUT SCI] An interruption in the intended character stroke in optical character recognition. [MIN ENG] A passage cut through the pillar to allow the ventilating current to pass from one room to another; larger than a doghole. Also known as room crosscut.

breakthrough sweep efficiency [PETRO ENG] The completeness with which an oil-field waterflood sweeps through a reservoir area; related to the critical water saturation (point beyond which oil will not be pushed ahead of the water flow).

break thrust [GEOL] A thrust fault cutting across one limb of a fold.

breakup [HYD] The spring melting of snow, ice, and frozen ground; specifically, the destruction of the ice cover on rivers during the spring thaw.

breakwater [CIV ENG] A wall built into the sea to protect a shore area, harbor, anchorage, or basin from the action of waves.

breast [ANAT] The human mammary gland. [MIN ENG] **1.** In coal mines, a chamber driven in the seam from the gangway, for the extraction of coal. **2.** *See* face.

breastbeam [NAV ARCH] A beam at the edge of the quarterdeck or forecastle.

breast boards [CIV ENG] Timber planks used to support the tunnel face when excavation is in loose soil.

breast drill [DES ENG] A small, portable hand drill customarily used by handsetters to drill the holes in bit blanks in which diamonds are to be set; it includes a plate that is pressed against the worker's breast.

breast hole [MET] A hole for raking cinders out of a smelting cupola.

breasting dolphin [CIV ENG] A pile or other structure against which a moored ship rests.

breast wall [CIV ENG] A low wall built to retain the face of a natural bank of earth.

breastwork [ORD] Earthwork, constructed wholly or partly above the surface of the ground, which gives protection for defenders in a standing position, firing over the crest.

breather pipe [MECH ENG] A pipe that opens into a container for ventilation, as in a crankcase or oil tank.

breath-hold diving [ENG] A form of diving without the use of any artificial breathing mixtures.

breathing [ENG] **1.** Opening and closing of a plastics mold in order to let gases escape during molding. Also known as degassing. **2.** Movement of gas, vapors, or air in and out of a storage-tank vent line as a result of liquid expansions and contractions induced by temperature changes. [MATER] Permeability of plastic sheeting to air, bubbles, voids, or trapped gas globules. [PHYSIO] Inhaling and exhaling.

breathing apparatus [ENG] An appliance that enables a person to function in irrespirable or poisonous gases or fluids; contains a supply of oxygen and a regenerator which removes the carbon dioxide exhaled.

breathing cave *See* blowing cave.

breathing line [CIV ENG] A level of 5 feet (1.5 meters) above the floor; suggested temperatures for various occupancies of rooms and other chambers are usually given at this level.

breccia [PETR] A rock made up of very angular coarse fragments; may be sedimentary or may be formed by grinding or crushing along faults.

breccia dike [GEOL] A dike formed of breccia injected into the country rock.

breccia marble [PETR] Any marble containing angular fragments.

breccia pipe *See* pipe.

breech [ORD] The rear part of the bore of a gun, especially the opening that permits the projectile to be inserted at the rear of the bore.

breechblock [ORD] A movable steel block in the mechanism of a breech-loading gun that seals the breech opening of the barrel during firing.

breech bolt [ORD] A mechanism which opens and closes the breech in a carbine, machine gun, rifle, and the like; designed to push a cartridge into the chamber by sliding action.

breeches buoy [NAV ARCH] A device for carrying people from a stranded ship to shore or between ships.

breech flash [ORD] Flames and gas flash occurring at the breech of a weapon.

breeching [MECH ENG] A duct through which the products of combustion are transported from the furnace to the stack; usually applied in steam boilers.

breech interlock [ORD] A safety device used with weapons that are loaded or rammed automatically or in weapons in which the position of the breechblock cannot be readily seen by the loader; prevents the loading or ramming of a round when the breechblock is not fully open.

breech loading [ORD] A method of loading a weapon in which the ammunition is inserted at the rear of the bore.

breech mechanism [ORD] The assembly at the rear of a gun which receives the round of ammunition, inserts it in the chamber, fires the round by detonating the primer, and extracts the empty case.

breech preponderance [ORD] Unbalance of the tipping parts of a weapon when the weight of the breech exerts a greater moment about the trunnions than does the weight of the muzzle end.

breech pressure [ORD] In interior ballistics, the pressure from the propellant gases acting against the inner face of the breechblock.

breeder reactor [NUCLEO] A nuclear reactor that produces more fissionable material that it consumes.

breeding [AGR] The application of genetic principles to the improvement of farm animals and of cultivated plants. [GEN] Controlled mating and selection, or hybridization of plants and animals in order to improve the species. [NUCLEO] The production of nuclear fuel, by absorption of neutrons in a nuclear reactor, at a rate exceeding that at which fuel is being consumed.

breeding factor *See* breeding ratio.

breeding gain [NUCLEO] The excess of fissionable atoms produced per fissionable atom consumed in a breeder reactor.

breeding ratio [NUCLEO] The ratio of the number of fissionable atoms produced in a breeder reactor to the number of fissionable atoms consumed in the reactor; breeding gain is the breeding ratio minus 1. Also known as breeding factor.

breeze [METEROL] **1.** A light, gentle, moderate, fresh wind. **2.** In the Beaufort scale, a wind speed ranging from 4 to 31 miles (6.4 to 49.6 kilometers) per hour.

B register *See* index register.

bregma [ANAT] The point at which the coronal and sagittal sutures of the skull meet.

breithauptite [MINERAL] NiSb A light copper red mineral consisting of nickel antimonide; commonly occurs in association with silver minerals.

Breit-Wigner formula [NUC PHYS] A formula which relates the cross section of a particular nuclear reaction with the energy of the incident particle, when the energy is near that required to form a discrete resonance level of the component nucleus.

Breit-Wigner theory [NUC PHYS] A theory of nuclear reactions from which the Breit-Wigner formula is derived. Also known as Bohr-Breit-Wigner theory.

bremsstrahlung [ELECTROMAG] Radiation that is emitted by an electron accelerated in its collision with the nucleus of an atom.

Brennan monorail car [MECH ENG] A type of car balanced on a single rail so that when the car starts to tip, a force automatically applied at the axle end is converted gyroscopically into a strong righting moment which forces the car back into a position of lateral equilibrium.

brennschluss [AERO ENG] **1.** The cessation of burning in a rocket, resulting from consumption of the propellants, from deliberate shutoff, or from other cause. **2.** The time at which this cessation occurs.

Brentidae [INV ZOO] The straight-snouted weevils, a family of coleopteran insects in the superfamily Curculionoidea.

Bretonian orogeny [GEOL] Post-Devonian diastrophism that is found in Nova Scotia.

Bretonian strata [GEOL] Upper Cambrian strata in Cape Breton, Nova Scotia.

bretonne lace [TEXT] A type of lace having a net ground with designs embroidered in heavy thread, often colored.

brettice *See* brattice.

brettis *See* brattice.

breunnerite [MINERAL] $(Mg,Fe,Mn)CO_3$ A carbonate mineral consisting of an isomorphous system of the metallic components.

Brevibacteriaceae [MICROBIO] Formerly a family of gram-positive, rod-shaped, schizomycetous bacteria in the order Eubacteriales.

Brevibacterium [MICROBIO] A genus of short, unbranched, rod-shaped bacteria in the coryneform group.

brevitoxin [BIOCHEM] One of several icthyotoxins produced by the dinoflagellate *Ptychodiscus brevis*.

brevity code [COMMUN] Code which has as its sole purpose the shortening of messages rather than the concealment of their content.

Brewer anaerobic jar [MICROBIO] A glass container in which petri dish cultures are stacked and maintained under anaerobic conditions.

brewers' yeast [FOOD ENG] Dried yeast cells recovered as a by-product of the brewing of beer and used as a natural source of vitamin B and protein.

brewing [FOOD ENG] The process of making beer, ale, and other malt beverages by boiling mashed malt to produce a wort, flavoring the wort with hops, fermenting this mixture with yeast, and drawing off the fermented wort for bottling.

brewster [OPTICS] A unit of stress optical coefficient of a material; it is equal to the stress optical coefficient of a material in which a stress of 1 bar produces a relative retardation between the components of a linearly polarized light beam of 1 angstrom when the light passes through a thickness of 1 millimeter in a direction perpendicular to the stress. Abbreviated B.

brewsterite [MINERAL] $Sr(Al_2Si_6O_{18})\cdot 5H_2O$ A member of the zeolite family of minerals; crystallizes in the monoclinic system and usually contains some calcium.

Brewster point [OPTICS] A neutral point located 15 to 20° directly below the sun.

Brewster process [CHEM ENG] Concentration of dilute acetic acid by use of an extraction solvent (for example, isopropyl ether), followed by distillation.

Brewster's angle [OPTICS] The angle of incidence of light reflected from a dielectric surface at which the reflectivity for light whose electrical vector is in the plane of incidence becomes zero; given by Brewster's law. Also known as polarizing angle.

Brewster's law [OPTICS] The law that the index of refraction for a material is equal to the tangent of the polarizing angle for the material.

Brewster window [OPTICS] A special glass window used at opposite ends of some gas lasers to transmit one polarization of the laser output beam without loss.

Brianchon's theorem [MATH] The theorem that if a hexagon circumscribes a conic section, the three lines joining three pairs of opposite vertices are concurrent (or are parallel).

brick [MATER] A building material usually made from clay, molded as a rectangular block, and baked or burned in a kiln.

brickfielder [METEOROL] A hot, dry, dusty north wind blowing from the interior across the southern coast of Australia.

brick grease *See* block grease.

bricking curb [MIN ENG] A curb set in a circular shaft to support the brick walling.

brick walling [MIN ENG] A permanent support for circular shafts by walling or casing.

bridge [CIV ENG] A structure erected to span natural or artificial obstacles, such as rivers, highways, or railroads, and supporting a footpath or roadway for pedestrian, highway, or railroad traffic. [ELEC] **1.** An electrical instrument having four or more branches, by means of which one or more of the electrical constants of an unknown component may be measured. **2.** An electrical shunt path. [MATH] A line whose removal disconnects a component of a graph. Also known as isthmus. [MIN ENG] A piece of timber held above the cap of a set by blocks and used to facilitate the driving of spiling in soft or running ground. [NAV ARCH] An elevated structure extending across or over the weather deck of a vessel, containing stations for control and visual communications.

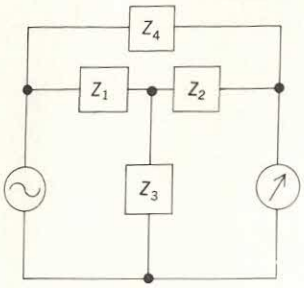
bridge abutment [CIV ENG] The end foundation upon which the bridge superstructure rests.

bridge bearing [CIV ENG] The support at a bridge pier carrying the weight of the bridge; may be fixed or seated on expansion rollers.

bridge cable [CIV ENG] Cable from which a roadway or truss is suspended in a suspension bridge; may be of pencil-thick wires laid parallel or strands of wire wound spirally.

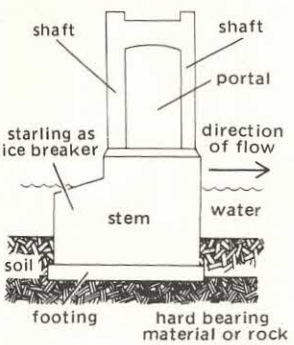
bridge circuit [ELEC] An electrical network consisting basically of four impedances connected in series to form a

BRIDGED-T NETWORK



Schematic circuit of bridged-T network.

BRIDGE PIER



Large bridge pier—vertical shafts with heavy portal and base.

BRIDGMAN ANVIL

Configuration of Bridgman anvil, a basic type of static high-pressure equipment.

rectangle, with one pair of diagonally opposite corners connected to an input device and the other pair to an output device.

bridge crane [MECH ENG] A hoisting machine in which the hoisting apparatus is carried by a bridgelike structure spanning the area over which the crane operates.

bridge deck [NAV ARCH] A partial deck above the main deck on merchant ships, usually near the middle of the ship.

bridged tap [ELEC] Portion of a cable pair connected to a circuit which is not a part of the useful path.

bridged-T network [ELEC] A T network with a fourth branch connected between an input and an output terminal and across two branches of the network.

bridge foundation [CIV ENG] The piers and abutments of a bridge, on which the superstructure rests.

bridge graft [BOT] A plant graft in which each of several scions is grafted in two positions on the stock, one above and the other below an injury.

bridge house [NAV ARCH] A structure above the main deck near the middle of a ship whose top forms the bridge deck.

bridge hybrid *See* hybrid junction.

bridge limiter [ELECTR] A device employed in analog computers to keep the value of a variable within specified limits.

bridge magnetic amplifier [ELECTR] A magnetic amplifier in which each of the gate windings is connected in series with an arm of a bridge rectifier; the rectifiers provide self-saturation and direct-current output.

bridge oscillator [ELECTR] An oscillator using a balanced bridge circuit as the feedback network.

bridge pier [CIV ENG] The main support for a bridge, upon which the bridge superstructure rests; constructed of masonry, steel, timber, or concrete founded on firm ground below river mud.

bridge rectifier [ELECTR] A full-wave rectifier with four elements connected as a bridge circuit with direct voltage obtained from one pair of opposite junctions when alternating voltage is applied to the other pair.

bridge trolley [MECH ENG] Either of the wheeled attachments at the ends of the bridge of an overhead traveling crane, permitting the bridge to move backward and forward on elevated tracks.

bridge vibration [MECH] Mechanical vibration of a bridge superstructure due to natural and human-produced excitations.

bridgewall [MECH ENG] A wall in a furnace over which the products of combustion flow.

bridging [ELEC] **1.** Connecting one electric circuit in parallel with another. **2.** The action of a selector switch whose movable contact is wide enough to touch two adjacent contacts so that the circuit is not broken during contact transfer. [MATH] The operation of carrying in addition or multiplication. [MET] **1.** Formation of arched cavities in a powder compact. **2.** Jamming of the charge in a blast or a cupola furnace due to adherence of fine ore particles to the inner walls. **3.** Formation of solidified metal over the top of the charge in a mold or crucible. [MIN ENG] The obstruction of the receiving opening in a material-crushing device by two or more pieces wedged together, each of which could easily pass through.

bridging amplifier [ELECTR] Amplifier with an input impedance sufficiently high so that its input may be bridged across a circuit without substantially affecting the signal level of the circuit across which it is bridged.

bridging connection [ELECTR] Parallel connection by means of which some of the signal energy in a circuit may be withdrawn frequently, with imperceptible effect on the normal operation of the circuit.

bridging contacts [ELEC] A contact form in which the moving contact touches two stationary contacts simultaneously during transfer.

bridging ligand [ORG CHEM] A ligand in which an atom or molecular species which is able to exist independently is simultaneously bonded to two or more metal atoms.

bridging loss [ELECTR] Loss resulting from bridging an impedance across a transmission system; quantitatively, the ratio of the signal power delivered to that part of the system following the bridging point, and measured before the bridging, to the signal power delivered to the same part after the bridging.

Bridgman anvil [PHYS] A device for producing high static pressures using two large massive opposed pistons bearing on a small thin sample confined by a gasket material.

Bridgman effect [SOLID STATE] The phenomenon that when an electric current passes through an anisotropic crystal, there is an absorption or liberation of heat due to the nonuniformity in current distribution.

Bridgman relation [SOLID STATE] $P = QT\sigma$ in a metal or semiconductor, where P is the Ettingshausen coefficient, Q the Nernst-Ettingshausen coefficient, T the temperature, and σ the thermal conductivity in a transverse magnetic field.

Bridgman sampler [MIN ENG] A mechanical device that automatically selects two samples as the ore passes through.

Bridgman technique [SOLID STATE] A method of growing single crystals in which a vertical cylinder that tapers conically to a point at the bottom and contains the substance to be crystallized in molten form is slowly lowered into a cold zone, resulting in crystallization beginning at the tip.

bridled-cup anemometer [ENG] A combination cup anemometer and pressure-plate anemometer, consisting of an array of cups about a vertical axis of rotation, the free rotation of which is restricted by a spring arrangement; by adjustment of the force constant of the spring, an angular displacement can be obtained which is proportional to wind velocity.

bridled pressure plate [METEOROL] An instrument for measuring air velocity in which the pressure on a plate exposed to the wind is balanced by the force of a spring, and the deflection of the plate is measured by an inductance-type transducer.

briefing *See* pilot briefing.

brig [PHYS] A unit to express the ratio of two quantities, as a logarithm to the base 10; that is, a ratio of 10^x is equal to x brig; it is analogous to the bel, but the latter is restricted to power ratios. Also known as dex.

Briggs equalizer [ENG] A breathing device consisting of head harness, mouthpiece, nose clip, corrugated breathing tube, an equalizing device, 120 feet (37 meters) of reinforced air tubes, and a strainer and spike.

Briggs' logarithm *See* common logarithm.

Briggs pipe thread *See* American standard pipe thread.

Briggs stretcher carriage [MIN ENG] A stretcher used as an ambulance trolley in transporting casualties from underground workings.

bright [MATER] Referring to lubricating oils that are clear, or free from moisture. [OPTICS] Attribute of an area that appears to emit a large amount of light.

bright annealing [MET] Heating and cooling a metal in an inert atmosphere to inhibit oxidation; surface remains relatively bright.

bright band [METEOROL] The enhanced echo of snow as it melts to rain, as displayed on a range-height indicator scope.

bright-banded coal *See* bright coal.

bright coal [GEOL] A jet-black, pitchlike type of banded coal that is more compact than dull coal and breaks with a shell-shaped fracture; microscopic examination shows a consistency of more than 5% anthraxyllon and less than 20% opaque matter. Also known as bright-banded coal; brights.

bright diffuse nebula [ASTRON] A nebula which is illuminated by the action of embedded or nearby stars.

bright dipping [MET] Immersing metal into an acid solution to give a bright, clean surface.

brightener [MET] Any of the agents which are employed in small concentrations in the electrolytic bath for electroplating metal to yield smoother or brighter coatings.

bright-field [OPTICS] Having a brightly lighted background.

bright-line spectrum [SPECT] An emission spectrum made up of bright lines on a dark background.

brightness [OPTICS] **1.** The characteristic of light that gives a visual sensation of more or less light. **2.** *See* luminance.

brightness control [ELECTR] A control that varies the luminance of the fluorescent screen of a cathode-ray tube, for a given input signal, by changing the grid bias of the tube and hence the beam current. Also known as brilliance control; intensity control.

brightness level *See* adaptation luminance.

brightness temperature *See* blackbody temperature.

bright plating [MET] An electroplating process resulting in a smooth, lustrous surface without polishing.

bright points [ASTRON] Relatively small regions on the sun, distributed uniformly over the solar disk, from which there is increased x-ray and ultraviolet emission, having lifetimes on the order of 8 hours.

bright rim structures [ASTRON] Bright edges exhibited by

many diffuse-emission nebulae, usually on the side facing the exciting star.

brights *See* bright coal.

Bright's disease [MED] Any of several kidney diseases attended by glomerulonephritis.

bright segment [GEOPHYS] A faintly glowing band which appears above the horizon after sunset or before sunrise. Also known as crepuscular arch; twilight arch.

bright stars catalog [ASTRON] A catalog of stars brighter than 6.5 magnitude, giving positions, motions, parallaxes, and spectral classes.

bright stock [MATER] High-viscosity refined and dewaxed lubricating oils used in the compounding of motor oils.

Brikollare system [CIV ENG] A method of processing solid waste for composting that is designed to replace windrowing; after metals are separated from solid waste, it is comminuted and sent through a ballistic separator; the organic components are mixed with sewage sludge, compacted into briquets, and stacked; as biodegradation takes place, the briquets are turned; after the process is finished, the bricks are crumbled, bagged, and sold as compost.

bril [OPTICS] A unit of subjective luminance; 100 brils is the luminance level that corresponds to a luminance of 1 millilambert, and a doubling of luminance level corresponds to an increase of 1 bril.

brilliance [ELECTR] **1.** The degree of brightness and clarity of the display of a cathode-ray tube. **2.** The degree to which the higher audio frequencies of an input sound are reproduced by a radio receiver, by a public address amplifier, or by a sound-recording playback system.

brilliance control *See* brightness control.

brilliant cut [LAP] A style of cutting gemstones in which there are 58 facets, all triangular or kite-shaped, except for a large facet at the top of the stone and a very small facet at the lowest point.

brilliancy [LAP] A characteristic of gems that depends on the refractive index, transparency, polish, and proportions of the cut stone.

Brillouin function [SOLID STATE] A function of x with index (or parameter) n that appears in the quantum-mechanical theories of paramagnetism and ferromagnetism and is expressed as $[(2n+1)/2n] \coth [(2n+1)x/2n] - (1/2n) \cdot \coth (x/2n)$.

Brillouin scattering [SOLID STATE] Light scattering by acoustic phonons.

Brillouin zone [SOLID STATE] A fundamental region of wave vectors in the theory of the propagation of waves through a crystal lattice; any wave vector outside this region is equivalent to some vector inside it.

Brill's disease [MED] A mild recurrence of typhus some years after the initial infection.

brimstone [MINERAL] A common or commercial name for native sulfur.

brine [MATER] A liquid used in a refrigeration system, usually an aqueous solution of calcium chloride or sodium chloride, which is cooled by contact with the evaporator surface and then goes to the space to be refrigerated. [OCEANOGR] Sea water containing a higher concentration of dissolved salt than that of the ordinary ocean.

brine cooler [MECH ENG] The unit for cooling brine in a refrigeration system; the brine usually flows through tubes or pipes surrounded by evaporating refrigerant.

Brinell number [ENG] A hardness rating obtained from the Brinell test; expressed in kilograms per square millimeter.

Brinell test [ENG] A test to determine the hardness of a material, in which a steel ball 1 centimeter in diameter is pressed into the material with a standard force (usually 3000 kilograms); the spherical surface area of indentation is measured and divided into the load; the results are expressed as Brinell number.

brine spring [HYD] A salt-water spring.

Brinkmann number [FL MECH] A dimensionless number used to study viscous flow.

briolette [LAP] An oval or pear-shaped gemstone with its surface cut in triangular, or sometimes rectangular, facets.

briquet [MATER] A block of some compressed substance, such as coal dust, metal powder, or sawdust, used as a fuel. Also spelled briquette.

briquette *See* briquet.

briquetting [ENG] **1.** The process of binding together pulverized minerals, such as coal dust, into briquets under pressure, often with the aid of a binder, such as asphalt. **2.** A process or method of mounting mineral ore, rock, or metal fragments in an embedding or casting material, such as natural or artificial resins, waxes, metals, or alloys, to facilitate handling during grinding, polishing, and microscopic examination.

brisa [METEOROL] **1.** A northeast wind which blows on the coast of South America or an east wind which blows on Puerto Rico during the trade wind season. **2.** The northeast monsoon in the Philippines. Also spelled briza.

brisa carabinera *See* carabine.

brisance [ORD] The ability of an explosive to shatter the medium which confines it; the shattering effect of the explosive.

brisance index [ENG] The ratio of an explosive's power to shatter a weight of graded sand as compared to the weight of sand shattered by TNT.

brise carabinée *See* carabine.

Brisingidae [INV ZOO] A family of deep-water echinoderms with as many as 44 arms, belonging to the order Forcipulatida.

brisote [METEOROL] The northeast trade wind when it is blowing stronger than usual on Cuba.

bristle [BIOL] A short stiff hair or hairlike structure on an animal or plant.

Bristol board [MATER] Cardboard with a surface smooth enough for painting or writing, usually at least 0.006 inch (0.15 millimeter) thick.

britannia cell [MIN ENG] In mineral processing, a pneumatic flotation cell 7 to 9 feet (2.1 to 2.7 meters) deep.

britannia metal [MET] A silver-white tin alloy, similar to pewter, containing about 7% antimony, 2% copper, and often some zinc and bismuth; used in domestic utensils.

britholite [MINERAL] $(Na,Ce,Ca)_5(OH)[(P,Si)O_4]_3$ A rare-earth phosphate found in carbonatites in Kola Peninsula, Soviet Union.

British absolute system of units [PHYS] A measurement system based on the foot, the second, and the pound mass; force unit is the poundal. Also known as foot-pound-second system of units (fps system of units).

British antilewisite *See* dimercaprol.

British engineering system of units *See* British gravitational system of units.

British gravitational system of units [PHYS] A measurement system based on the foot, the second, and the slug mass; 1 slug weighs 32.174 pounds at sea level and 45° latitude, and equals 14.594 kilograms. Also known as British engineering system of units; engineer's system of units.

British imperial pound [MECH] The British standard of mass, of which a standard is preserved by the government.

British thermal unit [THERMO] Abbreviated Btu. **1.** A unit of heat energy equal to the heat needed to raise the temperature of 1 pound of air-free water from 60° to 61°F at a constant pressure of 1 standard atmosphere; it is found experimentally to be equal to 1054.5 joules. Also known as sixty degrees Fahrenheit British thermal unit ($Btu_{60/61}$). **2.** A unit of heat energy that is equal to 1/180 of the heat needed to raise 1 pound of air-free water from 32°F (0°C) to 212°F (100°C) at a constant pressure of 1 standard atmosphere; it is found experimentally to be equal to 1055.79 joules. Also known as mean British thermal unit (Btu_{mean}). **3.** A unit of heat energy whose magnitude is such that 1 British thermal unit per pound equals 2326 joules per kilogram; it is equal to exactly 1055.05585262 joules. Also known as international table British thermal unit (Btu_{IT}).

brittle fracture [MET] A break in a brittle piece of metal which failed because stress exceeded cohesion.

brittle mica [MINERAL] Hydrous sodium, calcium, magnesium, and aluminum silicates; a group of more or less related minerals that resemble true micas but cleave to brittle flakes and contain calcium as the essential constituent.

brittleness [MECH] That property of a material manifested by fracture without appreciable prior plastic deformation.

brittle silver ore *See* stephanite.

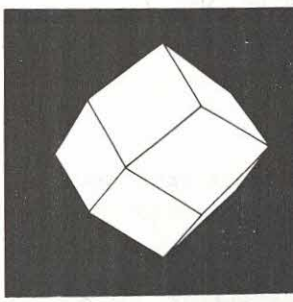
brittle star [INV ZOO] The common name for all members of the echinoderm class Ophiuroidea.

brittle temperature [THERMO] The temperature point below which a material, especially metal, is brittle; that is, the critical normal stress for fracture is reached before the critical shear stress for plastic deformation.

Brix degree [CHEM ENG] A unit of the Brix scale.

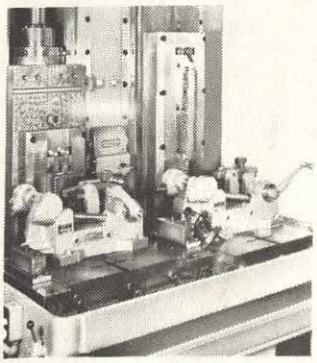
Brix scale [CHEM ENG] A hydrometer scale for sugar solutions indicating the percentage by weight of sugar in the solution at a specified temperature.

BRILLOUIN ZONE



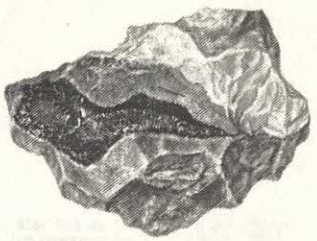
Brillouin zone for the body-centered cubic lattice.

BROACHING



Dual ram-type vertical broaching machine with fixtures. *(Colonial Broach and Machine Co.)*

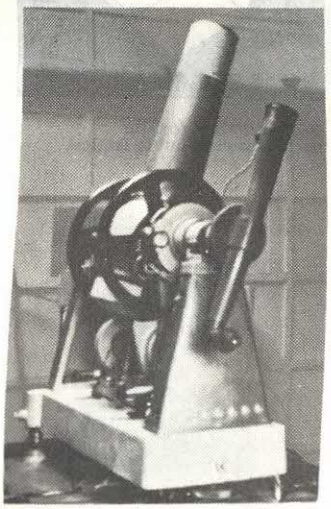
BROCHANTITE



⊢2.5 cm⊣

Needlelike crystals from Tsumeb, Namibia. *(Specimen from Department of Geology, Bryn Mawr College)*

BROKEN-BACK TRANSIT



Broken-back transit at the Sternberg Astronomical Institute, Moscow, Soviet Union. *(Courtesy of B. L. Klock)*

briza *See* brisa.

broach [MECH ENG] A multiple-tooth, barlike cutting tool; the teeth are shaped to give a desired surface or contour, and cutting results from each tooth projecting farther than the preceding one.

broaching [ENG] **1.** The restoration of the diameter of a borehole by reaming. **2.** The breaking down of the walls between two contiguous drill holes. [MECH ENG] The machine-shaping of metal or plastic by pushing or pulling a broach across a surface or through an existing hole in a workpiece.

broaching bit *See* reaming bit.

broad band [COMMUN] A band with a wide range of frequencies.

broad-band amplifier [ELECTR] An amplifier having essentially flat response over a wide range of frequencies.

broad-band antenna [ELECTROMAG] An antenna that functions satisfactorily over a wide range of frequencies, such as for all 12 very-high-frequency television channels.

broad-band channel [COMMUN] A data transmission channel that can handle frequencies higher than the normal voice-grade line limit of 3 to 4 kilohertz; can carry many voice or data channels simultaneously or can be used for high-speed single-channel data transmission.

broad-band klystron [ELECTR] Klystron having three or more resonant cavities that are externally loaded and stagger-tuned to broaden the bandwidth.

broad-band path [COMMUN] A path having a bandwidth of 20 kilohertz or greater.

broadcast [COMMUN] A television or radio transmission intended for public reception.

broadcast band [COMMUN] The band of frequencies extending from 535 to 1605 kilohertz, corresponding to assigned carrier frequencies that increase in multiples of 10 kHz between 540 and 1600 kHz for the United States. Also known as standard broadcast band.

broadcaster [AGR] A machine that utilizes a rotating fanlike distributor for sowing grain, grass, and clover seed or for spreading fertilizer.

broadcast station [COMMUN] A television or radio station used for transmitting programs to the general public. Also known as station.

broadcast transmitter [ELECTR] A transmitter designed for use in a commercial amplitude-modulation, frequency-modulation, or television broadcast channel.

broadcloth [TEXT] A closely woven ribbed fabric having the rib running in the direction of the weft.

broadening of spectral line [SPECT] A widening of spectral lines by collision or pressure broadening, or possibly by Doppler effect.

broadleaf tree [BOT] Any deciduous or evergreen tree having broad, flat leaves.

broad on the beam [NAV] Bearing 090° (broad on the starboard beam) or 270° relative (broad on the port beam); if the bearings are approximate, the expression "on the beam" or "abeam" is used.

broad on the bow [NAV] Bearing 045° relative (broad on the starboard bow) or 315° relative (broad on the port bow); if the bearings are approximate, the expression "on the bow" should be used.

broad on the quarter [NAV] Bearing 135° relative (broad on the starboard quarter) or 225° relative (broad on the port quarter); if the bearings are approximate, the expression "on the quarter" is used.

broadside [ELECTROMAG] Perpendicular to an axis or plane.

broadside array [ELECTROMAG] An antenna array whose direction of maximum radiation is perpendicular to the line or plane of the array.

broadside on [NAV] Orientation of a ship in which the length of the ship is perpendicular to the direction of the wind or of ocean currents.

broad-spectrum antibiotic [MICROBIO] An antibiotic that is effective against both gram-negative and gram-positive bacterial species.

broad tuning [ELECTR] Poor selectivity in a radio receiver, causing reception of two or more stations at a single setting of the tuning dial.

brocade [TEXT] Fabric made in a jacquard weave, usually with raised designs, and having a luxurious appearance; made of silk, polyester, or blends.

brocatelle [TEXT] A heavy cross-ribbed fabric that resembles brocade but has jacquard figures in high relief.

broccoli [BOT] *Brassica oleracea* var. *italica*. A biennial crucifer of the order Capparales which is grown for its edible stalks and buds.

brochanite *See* brochantite.

brochanthite *See* brochantite.

brochantite [MINERAL] $Cu_4(SO_4)(OH)_6$ A monoclinic copper mineral, emerald to dark green, commonly found with copper sulfide deposits; a minor copper ore. Also known as brochanite; brochanthite; warringtonite.

Brocken bow *See* anticorona.

Brocken specter [METEOROL] The illusory appearance of a gigantic figure (actually, the observer's shadow projected on cloud surfaces), observed on the Brocken peak in the Hartz Mountains of Saxony, but visible from other mountaintops under suitable conditions.

Brodmann's area 4 *See* motor area.

Brodmann's area 17 *See* visual projection area.

Brodmann's areas [PHYSIO] Numbered regions of the cerebral cortex used to identify cortical functions.

broeboe [METEOROL] A strong, dry east wind in the southwestern part of the island of Celebes.

Broenner's acid *See* Brönner's acid.

broken [METEOROL] Descriptive of a sky cover of from 0.6 to 0.9 (expressed to the nearest tenth).

broken-back transit [OPTICS] A type of transit telescope in which the light path is broken by insertion of a right-angled prism at the intersection of the optical and rotational axes. Also known as prism transit.

broken belt [OCEANOGR] The transition zone between open water and consolidated ice.

broken bracket *See* angle bracket.

broken-color work *See* antiquing.

broken ground *See* loose ground.

broken line [MATH] A line which is composed of a series of line segments lying end to end, and which does not form a continuous line.

broken stone *See* crushed stone.

broken stream [HYD] A stream that repeatedly disappears and reappears, such as occurs in an arid region.

broken water [OCEANOGR] Water having a surface covered with ripples or eddies, and usually surrounded by calm water.

broken wind *See* heaves.

bromacetone [ORG CHEM] $CH_2BrCOCH_3$ A colorless liquid which is a powerful irritant and lacrimator; used as tear gas and to make other chemicals.

bromacil [ORG CHEM] 5-Bromo-3-*sec*-butyl-6-methyluracil, a soil sterilant; general at high dosage and selective at low.

bromate [CHEM] **1.** BrO_3^- A negative ion derived from bromic acid, $HBrO_3$ **2.** A salt of bromic acid. **3.** $C_9H_9ClO_3$ A light brown solid with a melting point of 118–119°C; used as an herbicide to control weeds in crops such as flax, cereals, and legumes. Also known as 2-methyl-4-chlorophenoxyacetic acid.

bromatium [ECOL] A swollen hyphal tip on fungi growing in ants nests that is eaten by the ants.

bromcresol green *See* bromocresol green.

bromcresol purple *See* bromocresol purple.

bromegrass [BOT] The common name for a number of forage grasses of the genus *Bromus* in the order Cyperales.

bromelain [BIOCHEM] An enzyme that digests protein and clots milk; prepared by precipitation by acetone from pineapple juice; used to tenderize meat, to chill-proof beer, and to make protein hydrolysates. Also spelled bromelin.

Bromeliaceae [BOT] The single family of the flowering plant order Bromeliales.

Bromeliales [BOT] An order of monocotyledonous plants in the subclass Commelinidae, including terrestrial xerophytes and some epiphytes.

bromelin *See* bromelain.

bromellite [MINERAL] BeO A white hexagonal mineral consisting of beryllium oxide; it is harder than zincite.

bromeosin *See* eosin.

bromhidrosiphobia [PSYCH] Abnormal fear of offensive body odors.

bromic acid [INORG CHEM] $HBrO_3$ A liquid, colorless to slightly yellow; boils with decomposition at 100°C; used in dyes and as a chemical intermediate.

bromic ether *See* ethyl bromide.

bromide [CHEM] A compound derived from hydrobromic acid, HBr, with the bromine atom in the −1 oxidation state.

bromide paper [GRAPHICS] A photographic paper with high sensitivity, used for short exposures; it is coated with an emulsion of silver bromide.

brominating agent [CHEM] A compound capable of introducing bromine into a molecule; examples are phosphorus tribromide, bromine chloride, and aluminum tribromide.

bromination [CHEM] The process of introducing bromine into a molecule.

bromine [CHEM] A chemical element, symbol Br, atomic number 35, atomic weight 79.904; used to make dibromide ethylene and in organic synthesis and plastics.

bromine number [ANALY CHEM] The amount of bromine absorbed by a fatty oil; indicates the purity of the oil and degree of unsaturation.

bromine test [CHEM ENG] A laboratory test in which the unsaturated hydrocarbons present in a crude oil are determined by mixing a sample with bromine; the lower the rate of bromine absorption, the more paraffinic the test sample.

bromine value [CHEM ENG] An expression representing the number of centigrams of bromine absorbed by 1 gram of oil under test conditions; an indication of the degree of unsaturation of a given oil.

bromine trifluoride [CHEM] BrF_3 A liquid with a boiling point of 135°C.

bromine water [CHEM] An aqueous saturated solution of bromine used as a reagent wherever a dilute solution of bromine is needed.

bromism [MED] A disease state produced by prolonged usage or overdosage of bromide compounds.

bromlite [MINERAL] $BaCa(CO_3)_2$ An orthorhombic mineral composed of a carbonate of barium and calcium. Also known as alstonite.

bromo- [CHEM] A prefix that indicates the presence of bromine in a molecule.

***N*-bromoacetamide** [ORG CHEM] $CH_3CONHBr$ Needlelike crystals with a melting point of 102–105°C; soluble in warm water and cold ether; used as a brominating agent and in the oxidation of primary and secondary alcohols. Also known as acetobromamide.

***para*-bromoacetanilide** [ORG CHEM] Crystals with a melting point of 168°C; soluble in benzene, chloroform, and ethyl acetate; insoluble in cold water; used as an analgesic and antipyretic. Also known as bromoanilide; monobromoacetanilide.

bromoacetone [ORG CHEM] $BrCH_2COCH_3$ A colorless liquid used as a lacrimatory agent.

bromo acid *See* eosin.

bromoalkane [ORG CHEM] An aliphatic hydrocarbon with bromine bonded to it. Also known as bromohydrocarbon.

bromoallylene *See* allyl bromide.

bromoanilide *See para*-bromoacetanilide.

4-bromoaniline *See para*-bromoaniline.

***para*-bromoaniline** [ORG CHEM] $BrC_6H_4NH_2$ Rhombic crystals with a melting point of 66–66.5°C; soluble in alcohol and in ether; used in the preparation of azo dyes and dihydroquinazolines. Also known as 4-bromoaniline.

***para*-bromoanisole** [ORG CHEM] C_7H_7BrO Crystals which melt at 9–10°C; used in disinfectants.

bromobenzene [ORG CHEM] C_6H_5Br A heavy, colorless liquid with a pleasant odor; used as a solvent, in motor fuels and top-cylinder compounds, and to make other chemicals.

***para*-bromobenzyl bromide** [ORG CHEM] $BrC_6H_4CH_2Br$ Crystals with an aromatic odor and a melting point of 61°C; soluble in cold and hot alcohol, water, and ether; used to identify aromatic carboxylic acids. Also known as *para*,α-dibromotoluene.

bromobenzylcyanide [ORG CHEM] $C_6H_5CHBrCN$ A light yellow oily compound used as a tear gas for training and for riot control. Abbreviated BBC.

bromochloromethane [ORG CHEM] $BrCH_2Cl$ A clear, colorless liquid with a boiling point of 67°C; volatile, soluble in organic solvents, with a chloroformlike odor; used in fire extinguishers. Also known as methylene chlorobromide.

bromochloroprene [ORG CHEM] $CHCl{=}CHCH_2Br$ A compound used as a nematicide and soil fumigant. Also known as 3-bromo-1-chlorpropene-1.

3-bromo-1-chloropropene-1 *See* bromochloroprene.

bromocresol green [ORG CHEM] Tetrabromo-*m*-cresol sulfonphthalein, a gray powder soluble in water or alcohol; used as an indicator between pH 4.5 (yellow) and 5.5 (blue). Also known as bromcresol green.

bromocresol purple [ORG CHEM] Dibromo-*o*-cresol sulfonphthalein, a yellow powder soluble in water; used as an indicator between pH 5.2 (yellow) and 6.8 (purple). Also known as bromcresol purple.

bromocyclen [ORG CHEM] $C_8H_5BrCl_6$ A compound used as an insecticide for wheat crops.

***O*-(4-bromo-2,5-dichlorophenyl)*O*-methyl phenylphosphorothioate** *See* leptophos.

bromodiethylacetylurea [PHARM] $C(C_2H_5)_2BrCONHCONH_2$ A white, crystalline powder with a melting point of 116–117°C; soluble in chloroform, ether, and alcohol; used in medicine. Also known as carbromal.

bromoethane *See* ethyl bromide.

bromofenoxim [ORG CHEM] $C_{13}H_7N_3O_6Br_2$ A cream-colored powder with melting point 196–197°C; slightly soluble in water; used as herbicide to control weeds in cereal crops. Also known as 3,5-dibromo-4-hydroxybenzaldehyde *O*-(2′,4′-dinitrophenyl)oxime.

bromoform [ORG CHEM] $CHBr_3$ A colorless liquid, slightly soluble in water; used in the separation of minerals. Also known as tribromomethane.

bromohydrocarbon *See* bromoalkane.

bromomethane *See* methyl bromide.

1-bromo-3-methylbutane *See* isoamyl bromide.

1-bromonaphthalene [ORG CHEM] $C_{10}H_7Br$ An oily liquid that is slightly soluble in water and miscible with chloroform, benzene, ether, and alcohol; used in the determination of index of refraction of crystals and for refractometric fat determination. Also known as α-bromonaphthalene.

α-bromonaphthalene *See* 1-bromonaphthalene.

1-bromooctane [ORG CHEM] $CH_3(CH_2)_6CH_2Br$ Colorless liquid that is miscible with ether and alcohol; boiling point is 198–200°C; used in organic synthesis. Also known as *n*-octyl bromide.

***para*-bromophenacyl bromide** [ORG CHEM] $C_8H_6Br_2O$ Crystals with a melting point of 109–110°C; soluble in warm alcohol; used in the identification of carboxylic acids and as a protecting reagent for acids and phenols. Also known as 2,4′-dibromoacetophenone; *para*,α-dibromoacetophenone.

***para*-bromophenylhydrazine** [ORG CHEM] $C_6H_7BrN_2$ Needlelike crystals with a melting point of 108–109°C; soluble in benzene, ether, chloroform, and alcohol; used in the preparation of indoleacetic acid derivatives and in the study of transosazonation of sugar phenylosazones.

3-(*para*-bromophenyl)-1-methoxy-1-methylurea *See* metobromuron.

bromophos [ORG CHEM] $C_8H_8SPBrCl_2O_3$ A yellow, crystalline compound with a melting point of 54°C; used as an insecticide and miticide for livestock, household insects, flies, and lice.

bromophosgene *See* carbonyl bromide.

bromopicrin [ORG CHEM] CBr_3NO_2 Prismatic crystals with a melting point of 103°C; soluble in alcohol, benzene, and ether; used for military poison gas. Also known as nitrobromoform; tribromonitromethane.

3-bromo-1-propene *See* allyl bromide.

***N*-bromosuccinimide** [ORG CHEM] $C_4H_4BrNO_2$ Orthorhombic bisphenoidal crystals with a melting point of 173–175°C; used in the bromination of olefins. Also known as succinbromimide.

bromosulfophthalein *See* sulfobromophthalein sodium.

α-bromotoluene *See* benzyl bromide.

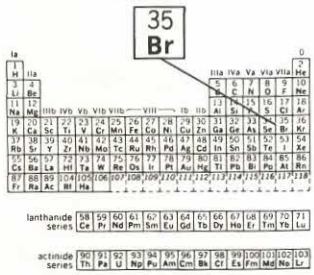
bromotrifluoroethylene [ORG CHEM] $BrFC{:}CF_2$ A colorless gas with a freezing point of −168°C and a boiling point of −58°C; soluble in chloroform; used as a refrigerant, in hardening of metals, and as a low-toxicity fire extinguisher. Abbreviated BFE.

bromotrifluoromethane [ORG CHEM] $CBrF_3$ Fluorine compound that has a molecular weight of 148.93, melting point −180°C, boiling point −59°C; used as a fire-extinguishing agent.

bromouracil [BIOCHEM] $C_4H_3N_2O_2Br$ 5-Bromouracil, an analog of thymine that can react with deoxyribonucleic acid to produce a polymer with increased susceptibility to mutation.

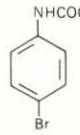
α-bromo-*meta*-xylene [ORG CHEM] $CH_3C_6H_4CH_2Br$ A liquid that is a powerful lacrimator; soluble in alcohol and ether; used in organic synthesis and chemical warfare. Also known as *meta*-methylbenzyl bromide; *meta*-xylyl bromide.

BROMINE



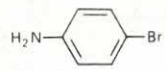
Periodic table of the chemical elements showing the position of bromine.

PARA-BROMOACETANILIDE



Structural formula.

PARA-BROMOANILINE

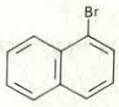


Structural formula.

PARA-BROMOBENZYL BROMIDE

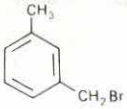
Structural formula.

1-BROMONAPHTHALENE



Structural formula.

α-BROMO-META-XYLENE



Structural formula.

bromoxynil [ORG CHEM] $C_7H_3OBr_2N$ A colorless solid with a melting point of 194–195°C; slightly soluble in water; used as a herbicide in wheat, barley, oats, rye, and seeded turf. Also known as bronate; 3,5-dibromo-4-hydroxybenzonitrile.

bromoxynil octanoate [ORG CHEM] $C_{15}H_{17}Br_2NO_2$ A pale brown liquid, insoluble in water; melting point is 45–46°C; used to control broadleaf weeds. Also known as 3,5-dibromo-4-octanoyloxybenzonitrile.

bromthymol blue [ORG CHEM] An acid-base indicator in the pH range 6.0 to 7.6; color change is yellow to blue. Also known as dibromothymolsulfonphthalein.

bromuration [HISTOL] A process in which a tissue section is treated with a solution of bromine or a bromine compound.

Bromwich contour [MATH] A path of integration in the complex plane running from $c - i\infty$ to $c + i\infty$, where c is a real, positive number chosen so that the path lies to the right of all singularities of the analytic function under consideration.

bromyrite [MINERAL] AgBr A secondary ore of silver that occurs in the oxidized zone of silver deposits; exists in crusts and coatings resembling a wax.

bronate *See* bromoxynil.

bronchial adenoma [MED] A low-grade malignant or potentially malignant tumor of bronchi.

bronchial asthma [MED] Asthma usually due to hypersensitivity to an inhaled or ingested allergen.

bronchial tree [ANAT] The arborization of the bronchi of the lung, considered as a structural and functional unit.

bronchiectasis [MED] Dilation of the bronchi and bronchioles following a chronic inflammatory process or an infection attended by pus formation.

bronchiolar carcinoma [MED] Adenocarcinoma of the lung characterized by mucus-producing cells which spread over the alveoli.

bronchiole [ANAT] A small, thin-walled branch of a bronchus, usually terminating in alveoli.

bronchiolitis [MED] Inflammation of the bronchioles.

bronchiolitis obliterans [MED] Inflammation of the bronchioles with the formation of an exudate and fibrous tissue that obliterate the lumen.

bronchitis [MED] An inflammation of the bronchial tubes.

bronchodilator [MED] An instrument used to increase the caliber of the pulmonary air passages. [PHARM] Any drug which has the property of increasing the caliber of the pulmonary air passages.

bronchogram [MED] Radiography of the bronchial tree made after the introduction of a radiopaque substance.

bronchography [MED] Roentgenographic visualization of the bronchial tree following injection of a radiopaque material.

bronchopneumonia [MED] Inflammation of the lungs which has spread from infected bronchi. Also known as lobular pneumonia.

bronchorrhea [MED] Excessive discharge of mucus from the bronchial mucous membranes.

bronchoscope [MED] An instrument for the visual examination of the interior of the bronchi.

bronchospasm [MED] Temporary narrowing of the bronchi due to violent, involuntary contraction of the smooth muscle of the bronchi.

bronchospirometry [MED] The determination of various aspects of the functional capacity of a single lung or lung segment.

bronchus [ANAT] Either of the two primary branches of the trachea or any of the bronchi's pulmonary branches having cartilage in their walls.

Brönner's acid [ORG CHEM] $C_{10}H_6(NH_2)SO_3H$ A colorless, water-soluble naphthylamine sulfonic acid that forms needle crystals; used in dyes. Also spelled Broenner's acid. Also known as 2-napthylamine-6-sulfonic acid.

Brönsted acid [CHEM] A chemical species which can act as a source of protons. Also known as proton acid; protonic acid.

Brönsted-Lowry theory [CHEM] A theory that all acid-base reactions consist simply of the transfer of a proton from one base to another. Also known as Brönsted theory.

Brönsted theory *See* Brönsted-Lowry theory.

brontides [GEOPHYS] Low, rumbling, thunderlike sounds of short duration, most frequently heard in active seismic regions and believed to be of seismic origin.

brontophobia [PSYCH] An abnormal fear of thunder.

Brontotheriidae [PALEON] The single family of the extinct mammalian superfamily Brontotherioidea.

Brontotherioidea [PALEON] The titanotheres, a superfamily of large, extinct perissodactyl mammals in the suborder Hippomorpha.

bronze [MET] An alloy of copper and tin in varying proportions; other elements such as zinc, nickel, and lead may be added.

bronze mica *See* phlogopite.

bronzing [GRAPHICS] A process in which bronze powder is applied to a surface that has been printed with a sizing ink while the ink is still wet in order to produce a metallic sheen.

bronzing liquid [MATER] A solvent, gloss oil, or varnish containing a bronze powder; used to produce bronze-colored finishes.

bronzite [MINERAL] $(Mg,Fe)(SiO_3)$ An orthopyroxene mineral that forms metallic green orthorhombic crystals; a form of the enstatite-hypersthene series.

bronzitfels *See* bronzitite.

bronzitite [PETR] A pyroxenite that is composed almost entirely of bronzite. Also known as bronzitfels.

brood [BOT] Heavily infested by insects. [ZOO] **1.** The young of animals. **2.** To incubate eggs or cover the young for warmth. **3.** An animal kept for breeding.

brood capsule [INV ZOO] A secondary scolex-containing cyst constituting the infective agent of a tapeworm.

brood parasitism [ECOL] A type of social parasitism among birds characterized by a bird of one species laying and abandoning its eggs in the nest of a bird of another species.

brood pouch [VERT ZOO] A pouch of an animal body where eggs or embryos undergo certain stages of development.

Brookhill waffler [MIN ENG] A coal cutter with the ordinary horizontal jib and also a shearing or mushroom jib.

brookite [MINERAL] TiO_2 A brown, reddish, or black orthorhombic mineral; it is trimorphous with rutile and anatase, has hardness of 5.5–6 on Mohs scale, and a specific gravity of 3.87–4.08. Also known as pyromelane.

Brooks variable inductometer [ELEC] An inductometer providing a nearly linear scale and consisting of two movable coils, side by side in a plane, sandwiched between two pairs of fixed coils.

brooming [CIV ENG] A method of finishing uniform concrete surfaces, such as the tops of pavement slabs or floor slabs, by dragging a broom over the surface to produce a grooved texture.

broomy flow [FL MECH] A swirling flow of a fluid in a pipe after passing through a constricted section or after a sudden change of direction.

Brotulidae [VERT ZOO] A family of benthic teleosts in the order Perciformes.

brown acid [CHEM ENG] Oil-soluble petroleum sulfonate found in sludge following sulfuric acid treatment of petroleum products.

brown algae [BOT] The common name for members of the Phaeophyta.

Brown and Sharpe gage *See* American wire gage.

brown bast [PL PATH] A physiological disease of the para rubber tree characterized by grayish- or greenish-brown discolorations of the inner bark near the tapping cut.

brown blight [PL PATH] A virus disease of lettuce characterized by spots and streaks on the leaves, reduction in leaf size, and gradual browning of the foliage, beginning at the base.

brown blotch [PL PATH] **1.** A bacterial disease of mushrooms caused by *Pseudomonas tolaasi* and characterized by brown blotchy discolorations. **2.** A fungus disease of the pear characterized by brown blotches on the fruit.

brown canker [PL PATH] A fungus disease of roses caused by *Cryptosporella embrina* and characterized by lesions that are initially purple and gradually become buff.

brown clay *See* red clay.

brown clay ironstone [GEOL] Limonite in the form of concrete masses, often in concretionary nodules.

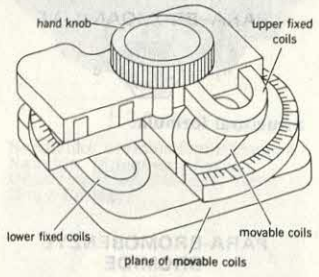
brown coal *See* lignite.

brown coat [MATER] Mortar with about 1 to 1½ bushels (35 to 53 liters) of hair per 200 pounds (91 kilograms) quicklime, used to make a brown coat of plaster, which is covered with a finish coat, and often covers a scratch coat.

brown dwarf [ASTRON] A black dwarf that radiates its internal heat.

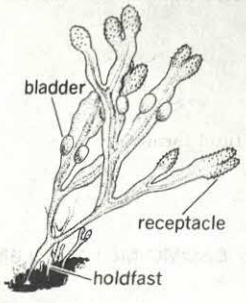
brown fat cell [HISTOL] A moderately large, generally

BROOKS VARIABLE INDUCTOMETER



Drawing of Brooks variable inductometer.

BROWN ALGAE



Fucus, a brown alga. *(From H. J. Fuller and O. Tippo, College Botany, rev. ed., Holt, 1954)*

spherical cell in adipose tissue that has small fat droplets scattered in the cytoplasm.

brown felt blight [PL PATH] A fungus disease of conifers caused by several Ascomycetes, especially *Herpotrichia nigra* and *Neopeckia coulteri;* a dense felty growth of brown or black mycelia forms on the branches.

brown hematite *See* limonite.

Brownian movement [STAT MECH] Random movements of small particles suspended in a fluid, caused by the statistical pressure fluctuations over the particle.

brown induration [MED] A pathologic condition marked by acute pulmonary congestion and edema with leakage of blood into the alveoli.

browning [PL PATH] Any plant disorder or disease marked by brown discoloration of a part. Also known as stem break.

Browning automatic rifle [ORD] A gas-operated weapon whose cyclical rate of fire is adjustable but which is capable of firing 200–350 rounds per minute. Abbreviated BAR.

Browning machine gun [ORD] Any of certain caliber-.30 and caliber-.50 machine guns designed by, or modified from designs by, John M. Browning.

brown iron ore *See* limonite.

brown lead oxide *See* lead dioxide.

brown leaf rust [PL PATH] A fungus disease of rye caused by *Puccinia dispersa*.

brown lignite [GEOL] A type of lignite with a fixed carbon content ranging from 30 to 55% and total carbon from 65 to 73.6%; contains 6300 Btu per pound (14.65 megajoules per kilogram). Also known as lignite B.

brownline [GRAPHICS] A print with a white background and brown lines made by contact-printing a negative on sensitized paper.

brown mica *See* phlogopite.

brownout [ELEC] **1.** A restriction of electrical power usage during a power shortage, especially for advertising and display purposes. **2.** An extinguishing of some of the lights in a city as a defensive measure against enemy bombardment.

brown patch [PL PATH] A fungus disease of grasses in golf greens and lawns caused by various soil-inhabiting species, typically producing brown circular areas surrounded by a band of grayish-black mycelia.

brown petroleum [MATER] A solid or semisolid product formed by air acting on asphalt.

brownprint [GRAPHICS] A print with a brown background and white lines made by contact-printing a negative on a sensitized paper.

brown-ring test [ANALY CHEM] A common qualitative test for the nitrate ion; a brown ring forms at the juncture of a dilute ferrous sulfate solution layered on top of concentrated sulfuric acid if the upper layer contains nitrate ion.

brown root [PL PATH] A fungus disease of numerous tropical plants, such as coconut and rubber, caused by *Hymenochaete noxia* and characterized by defoliation and by incrustation of the roots with earth and stones held together by brown mycelia.

brown root rot [PL PATH] **1.** A fungus disease of plants of the pea, cucumber, and potato families caused by *Thielavia basicola* and characterized by blackish discoloration and decay of the roots and stem base. **2.** A disease of tobacco and other plants comparable to the fungus disease but believed to be caused by nematodes.

brown rot [PL PATH] Any fungus or bacterial plant disease characterized by browning and tissue decay.

brown seaweed [BOT] A common name for the larger algae of the division Phaeophyta.

brown smoke [ENG] Smoke with less particulates than black smoke; comes from burning fossil fuel, usually fuel oil.

brown snow [METEOROL] Snow intermixed with dust particles.

brown soil [GEOL] Any of a zonal group of soils, with a brown surface horizon which grades into a lighter-colored soil and then into a layer of carbonate accumulation.

brown spar [GEOL] Any light-colored crystalline carbonate that contains iron, such as ankerite or dolomite, and is therefore brown.

brown spot [PL PATH] Any fungus disease of plants, especially Indian corn, characterized by brown leaf spots.

brown stem rot [PL PATH] A fungus disease of soybeans caused by *Cephalosporium gregatum* in which there is brownish internal stem rot followed by discoloration and withering of leaves.

brownstone [PETR] Ferruginous sandstone with its grains coated with iron oxide.

brown stringy rot [PL PATH] A disease of conifers caused by the Indian point fungus; rusty or brown fibrous streaks appear in the heartwood.

browse [BIOL] **1.** Twigs, shoots, and leaves eaten by livestock and other grazing animals. **2.** To feed on this vegetation.

broxyquinoline [ORG CHEM] $C_9H_5Br_2NO$ Crystals with a melting point of 196°C; soluble in acetic acid, chloroform, benzene, and alcohol; used as a reagent for copper, iron, and other metals. Also known as 5,7-dibromo-8-hydroxyquinoline.

brubru [METEOROL] A squall in Indonesia.

Brucella [MICROBIO] A genus of gram-negative, aerobic bacteria of uncertain affiliation; single, nonmotile coccobacilli or short rods, all of which are parasites and pathogens of mammals.

Brucella abortus [MICROBIO] The etiological agent of contagious abortion in cattle, brucellosis in man, and a wasting disease in chickens.

Brucellaceae [MICROBIO] Formerly a family of small, coccoid to rod-shaped, gram-negative bacteria in the order Eubacteriales.

brucellergen [BIOCHEM] A nucleoprotein fraction of brucellae used in skin tests to detect the presence of *Brucella* infections.

brucellergen test [IMMUNOL] A diagnostic skin test for detection of *Brucella* infections.

brucellosis [MED] An infectious bacterial disease of man caused by *Brucella* species acquired by contact with diseased animals. Also known as Malta fever; Mediterranean fever; undulant fever. [VET MED] *See* contagious abortion.

Bruchidae [INV ZOO] The pea and bean weevils, a family of coleopteran insects in the superfamily Chrysomeloidea.

Bruch's membrane [ANAT] The membrane of the retina that separates the pigmented layer of the retina from the choroid coat of the eye.

brucine [ORG CHEM] $C_{23}H_{26}N_2O_4$ A poisonous alkaloid from the seeds of plant species such as *Nux vomica;* used in alcohol as a denaturant. Also known as dimethoxy strychnine.

brucite [MINERAL] $Mg(OH)_2$ A hexagonal mineral; native magnesium hydroxide that appears gray and occurs in serpentines and impure limestones; hardness is 2.5 on Mohs scale, and specific gravity is 2.38–2.40.

Brückner cycle [CLIMATOL] An alternation of relatively cool-damp and warm-dry periods, forming an apparent cycle of about 35 years.

brugnatellite [MINERAL] $Mg_6Fe(OH)_{13}CO_3 \cdot 4H_2O$ A flesh pink to yellowish- or brownish-white, hexagonal mineral consisting of a hydrated carbonate-hydroxide of magnesium and ferric iron; occurs in massive form.

bruma [METEOROL] A haze that appears in the afternoons on the coast of Chile when sea air is transported inland.

Brunauer-Emmett-Teller equation [PHYS CHEM] An extension of the Langmuir isotherm equation in the study of sorption; used for surface area determinations by computing the monolayer area. Abbreviated BET equation.

Brunner's glands [ANAT] Simple, branched, tubular mucus-secreting glands in the submucosa of the duodenum in mammals. Also known as duodenal glands; glands of Brunner.

Brunt-Douglas isallobaric wind *See* isallobaric wind.

Brunton *See* Brunton compass.

Brunton compass [ENG] A compact field compass, with sights and reflector attached, used for geological mapping and surveying. Also known as Brunton; Brunton pocket transit.

Brunton pocket transit *See* Brunton compass.

brüscha [METEOROL] A northwest wind in the Bergell Valley, Switzerland.

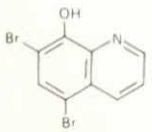
brush [ECOL] *See* tropical scrub. [ELEC] A conductive metal or carbon block used to make sliding electrical contact with a moving part.

brush border [CYTOL] A superficial protoplasic modification in the form of filiform processes or microvilli; present on certain absorptive cells in the intestinal epithelium and the proximal convolutions of nephrons.

brush discharge [ELEC] A luminous electric discharge that starts from a conductor when its potential exceeds a certain value but remains too low for the formation of an actual spark.

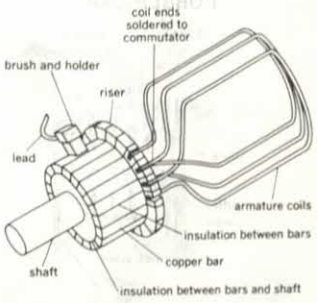
brush encoder [ELECTR] An encoder in which brushes that make contact with conductive segments on a rotating or linearly

BROXYQUINOLINE



Structural formula.

BRUSH



Commutator and brush assembly, showing stationary brush that makes sliding contact with rotating commutator.

moving surface convert positional information to digitally encoded data.

brush fire [FOR] A fire involving growth that is heavier than grass but less than full tree size.

brush holder [ELEC] A structure in which a brush can slide in a direction perpendicular to the moving surface of a motor, generator, or other device.

brush hopper [IND ENG] A rotating brush that wipes quantities of eyelets, rivets, and other small special parts past shaped openings in a chute.

brushing [TEXT] A process for finishing fabrics by rubbing them against a rough surface, such as a wire-covered cylinder, usually to produce a thick nap. Also known as napping.

brushing shot [MIN ENG] A charge fired in the air of a mine to blow out obnoxious gases or to start an air current.

brushite [MINERAL] $CaHPO_4 \cdot 2H_2O$ A nearly colorless mineral that is a constituent of rock phosphates that crystallizes in slender or massive crystals.

brush machine [FOOD ENG] A machine used in rice processing to rub the grains smooth; consists of a vertical cylindrical frame covered with soft leather strips revolving at high speed within a cylinder of wire screening.

brush plating [MET] Electroplating in which the anode with the solution is in the form of a brush or pad; used for plating equipment too large to be immersed.

brush rocker [ELEC] A yoke to which the brush holders in an electrical machine are attached, and which can be moved to adjust the positions of the brushes. Also known as brush rocker ring.

brush rocker ring *See* brush rocker.

brush-shifting motor [ENG] A category of alternating-current motor in which the brush contacts shift to modify operating speed and power factor.

brush station [COMPUT SCI] A location in a device where the holes in a punched card are sensed by brushes sweeping electrical contacts.

brussels sprouts [BOT] *Brassica oleracea* var. *gemmifera* A biennial crucifer of the order Capparales cultivated for its small, edible, headlike buds.

brute-force filter [ELEC] Type of powerpack filter depending on large values of capacitance and inductance to smooth out pulsations rather than on resonant effects of tuned filters.

brute supply [ELEC] A type of power supply that is completely unregulated, employing no circuitry to maintain output voltage constant with changing input line or load variations.

Bruxellian [GEOL] Lower middle Eocene geologic time.

Bryatae *See* Bryopsida.

bryology [BOT] The study of bryophytes.

Bryophyta [BOT] A small phylum of the plant kingdom, including mosses, liverworts, and hornworts, characterized by the lack of true roots, stems, and leaves.

Bryopsida [BOT] The mosses, a class of small green plants in the phylum Bryophyta. Also known as Musci.

Bryopsidaceae [BOT] A family of green algae in the order Siphonales.

Bryozoa [INV ZOO] The moss animals, a major phylum of sessile aquatic invertebrates occurring in colonies with hardened exoskeleton.

BS&W *See* basic sediments and water.

B scan *See* B scope.

B scope [ELECTR] A cathode-ray scope on which signals appear as spots, with bearing angle as the horizontal coordinate and range as the vertical coordinate. Also known as B indicator; B scan.

BSD *See* barrels per stream day.

B size [ENG] One of a series of sizes to which trimmed paper and board are manufactured; for size *BN*, with *N* equal to any integer from 0 to 10, the length of the shorter side is $2^{-N/2}$ meters, and the length of the longer side is $2^{(1-N)/2}$ meters, with both lengths rounded off to the nearest millimeter.

BSR *See* bulk shielding reactor.

B stage [ORG CHEM] An intermediate stage in a thermosetting resin reaction in which the plastic softens but does not fuse when heated, and swells but does not dissolve in contact with certain liquids.

B station [NAV] In loran, the designation applied to one transmitting station of a pair, the signal of which always occurs more than half a repetition period after the succeeding signal and less than half a repetition period before the preceding signal from the other station of the pair, designated an A station.

B store *See* index register.

B supply [ELECTR] Anode high voltage and screen-grid power source in vacuum tube circuits. Also known as B power supply.

BT *See* bathythermograph.

B Tauri [ASTRON] A daytime meteor shower that occurs at the end of June and has its radiant near the star.

B tectonite [PETR] Tectonite with a fabric dominated by linear elements indicating an axial direction rather than a slip surface.

BTO *See* bombing through overcast.

B trace [ELECTR] In loran the second trace of an oscilloscope which corresponds to the signal from the B station.

Btu *See* British thermal unit.

BTX *See* benzene-toluene-xylene.

B-type star [ASTRON] A type in a classification based on stellar spectral characteristics; has strong HeI absorption.

bu *See* bushel.

bubble [METEOROL] *See* bubble high. [PHYS] **1.** A small, approximately spherical body of fluid within another fluid or solid. **2.** A thin, approximately spherical film of liquid inflated with air or other gas. [SOLID STATE] *See* magnetic bubble.

bubble cap [CHEM ENG] A metal cap covering a hole in the plate within a distillation tower; designed to permit vapors to rise from below the plate, pass through the cap, and make contact with liquid on the plate.

bubble-cap plate [CHEM ENG] One of the devices in large-diameter fractional distillation columns that are designed to produce a bubbling action to exchange the vapor bubbles flowing up the column.

bubble cavitation [FL MECH] **1.** Formation of vapor- or gas-filled cavities in liquids by mechanical forces. **2.** The formation of vapor-filled cavities in the interior of liquids in motion when the pressure is reduced without change in ambient temperature.

bubble chamber [NUCLEO] A chamber in which the movements and interactions of charged particles can be observed as visible tracks in a superheated liquid, the tracks being gas bubbles that form along the paths of the moving particles.

bubble high [METEOROL] A small high, complete with anticyclonic circulation, of the order of 50 to 300 miles (80 to 480 kilometers) across, often induced by precipitation and vertical currents associated with thunderstorms. Also known as bubble.

bubble horizon [NAV] An artificial horizon parallel to the celestial horizon, established by means of a bubble level on a bubble sextant.

bubble memory [COMPUT SCI] A computer memory in which the presence or absence of a magnetic bubble in a localized region of a thin magnetic film designates a 1 or 0; storage capacity can be well over 1 megabit per cubic inch. Also known as magnetic bubble memory.

bubble mold cooling [ENG] In plastics injection molding, cooling by means of a continuous liquid stream flowing into a cavity equipped with an outlet at the end opposite the inlet.

bubble point [PHYS CHEM] In a solution of two or more components, the temperature at which the first bubbles of gas appear. Also known as boiling point.

bubble-point reservoir *See* dissolved-gas-drive reservoir.

bubble pulse [GEOPHYS] An extraneous effect during a seismic survey caused by a bubble formed by a seismic charge, explosion, or spark fired in a body of water.

bubble raft [SOLID STATE] A visual demonstration for the structure of dislocations in metal lattices, showing slip propagation; it consists of many identical bubbles floating on a liquid surface in something like a crystalline array.

bubble sextant [NAV] A sextant with a bubble or spirit level to indicate the horizontal.

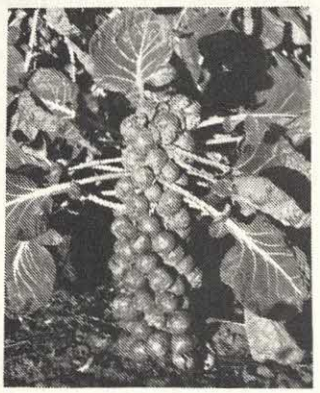
bubble test [ENG] Measurement of the largest opening in the mesh of a filter screen; determined by the pressure needed to force air or gas through the screen while it is submerged in a liquid.

bubble tower [CHEM ENG] A plate tower used in distillation, with plates containing bubble caps.

bubble train [GEOL] A string or strings of vesicles in lava, indicating the path of rising gas escaping a flow of lava.

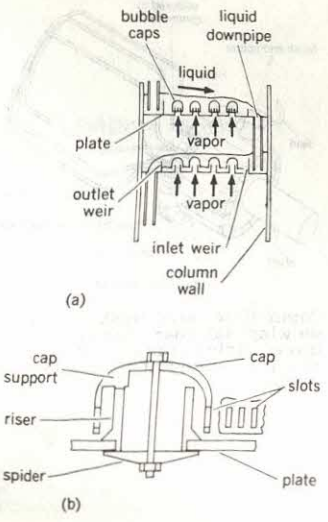
bubble tray [CHEM ENG] A perforated, circular plate placed within a distillation tower at specific places to collect the fractions of petroleum produced in fractional distillation.

BRUSSELS SPROUTS



Brussels sprouts *(Brassica oleracea* var. *gemmifera)*, Jade Cross. *(Joseph Harris Co., Rochester, N.Y.)*

BUBBLE CAP



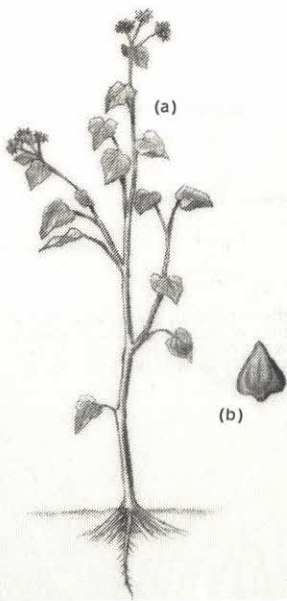
Schematic of *(a)* cross section through bubble-cap-plate column and *(b)* typical bubble cap.

bubble tray column [CHEM ENG] A fractionating column whose plates are formed from bubble caps.
bubble tube [ENG] The glass tube in a spirit level containing the liquid and bubble.
bubble wall fragment [GEOL] A glassy volcanic shard revealing part of a vesicle surface which may be curved or flat.
bubo [MED] An inflammatory enlargement of lymph nodes, usually of the groin or axilla; commonly associated with chancroid, lymphogranuloma venereum, and plague.
bubonic plague *See* plague.
bubulum oil *See* neatsfoot oil.
bucaramangite [MINERAL] A pale yellow variety of retinite that looks like amber but is insoluble in alcohol.
buccal cavity [ANAT] The space anterior to the teeth and gums in the mouths of all vertebrates having lips and cheeks. Also known as vestibule.
buccal gland [ANAT] Any of the mucous glands in the membrane lining the cheeks of mammals, except aquatic forms.
Buccinacea [INV ZOO] A superfamily of gastropod mollusks in the order Prosobranchia.
Buccinidae [INV ZOO] A family of marine gastropod mollusks in the order Neogastropoda containing the whelks in the genus *Buccinum*.
Bucconidae [VERT ZOO] The puffbirds, a family of neotropical birds in the order Piciformes.
Bucerotidae [VERT ZOO] The hornbills, a family of Old World tropical birds in the order Coraciiformes.
Bucherer reaction [ORG CHEM] A method of preparation of polynuclear primary aromatic amines; for example, α-naphthylamine is obtained by heating β-naphthol in an autoclave with a solution of ammonia and ammonium sulfite.
Buchholz protective device [ELEC] A protective relay which is attached to an oil-filled tank containing a transformer and which is activated either by gas produced by faults or by oil surges produced by explosive faults in the transformer. Also known as gas bubble protective device.
buchite [PETR] A partially vitrified inclusion of sandstone in basalt.
buchonite [PETR] An extrusive rock formed of labradorite, titanaugite, and titaniferous hornblende, with nepheline and sodic sanidine and accessory biotite, apatite, and opaque oxides.
buck [BUILD] The frame into which the finished door fits. [ENG] **1.** To break up or pulverize ore samples. **2.** A large quartz reef in which there is little or no accessory minerals such as gold. Also known as buck quartz; bull quartz. [VERT ZOO] A male deer.
bucket [BOT] *See* calyx. [COMPUT SCI] A name usually reserved for a storage cell in which data may be accumulated. [ENG] **1.** A cup on the rim of a Pelton wheel against which water impinges. **2.** A reversed curve at the toe of a spillway to deflect the water horizontally and reduce erosiveness. **3.** A container on a lift pump or chain pump. **4.** A container on some bulk-handling equipment, such as a bucket elevator, bucket dredge, or bucket conveyor. **5.** A water outlet in a turbine. **6.** *See* calyx.
bucket brigade device [ELECTR] A semiconductor device in which majority carriers store charges that represent information, and minority carriers transfer charges from point to point in sequence. Abbreviated BBD.
bucket carrier *See* bucket conveyor.
bucket conveyor [MECH ENG] A continuous bulk conveyor constructed of a series of buckets attached to one or two strands of chain or in some instances to a belt. Also called bucket carrier.
bucket dredge [MECH ENG] A floating mechanical excavator equipped with a bucket elevator.
bucket drill [MIN ENG] An auger stem drill in which the drill bit is replaced by a bit incorporating a steel cylinder to confine the cutting.
bucket dumper *See* lander.
bucket elevator [MECH ENG] A bucket conveyor operating on a steep incline or vertical path. Also known as elevating conveyor.
bucket excavator [MECH ENG] An elevating scraper, that is, one that does the work of a conventional scraper but has a bucket elevator mounted in front of the bowl.
bucket ladder *See* bucket-ladder dredge.
bucket-ladder dredge [MECH ENG] A dredge whose digging mechanism consists of a ladderlike truss on the periphery of which is attached an endless chain riding on sprocket wheels and carrying attached buckets. Also known as bucket ladder; bucket-line dredge; ladder-bucket dredge; ladder dredge.
bucket-ladder excavator *See* trench excavator.
bucket-line dredge *See* bucket-ladder dredge.
bucket loader [MECH ENG] A form of portable, self-feeding, inclined bucket elevator for loading bulk materials into cars, trucks, or other conveyors.
bucket temperature [ENG] The surface temperature of ocean water as measured by a bucket thermometer.
bucket thermometer [ENG] A thermometer mounted in a bucket and used to measure the temperature of water drawn into the bucket from the surface of the ocean.
bucket-wheel excavator [MECH ENG] A continuous digging machine used extensively in large-scale stripping and mining. Abbreviated BWE. Also known as rotary excavator.
buckeye [BOT] The common name for deciduous trees composing the genus *Aesculus* in the order Sapindales; leaves are opposite and palmately compound, and the seed is large with a firm outer coat.
bucking [MIN ENG] A hand process for crushing ore.
bucking coil [ELECTROMAG] A coil connected and positioned in such a way that its magnetic field opposes the magnetic field of another coil; for example, the hum-bucking coil of an excited-field loudspeaker.
Buckingham's equations [MECH ENG] Equations which give the durability of gears and the dynamic loads to which they are subjected in terms of their dimensions, hardness, surface endurance, and composition.
Buckingham's π theorem [PHYS] The theorem that if there are n physical quantities, $x_1, x_2, \ldots, x_n$, which can be expressed in terms of m fundamental quantities and if there exists one and only one mathematical expression connecting them which remains formally true no matter how the units of the fundamental quantities are changed, namely $\phi(x_1, x_2, \ldots, x_n) = 0$, then the relation ϕ can be expressed by a relation of the form $F(\pi_1, \pi_2, \ldots, \pi_{n-m}) = 0$, where the πs are $n - m$ independent dimensionless products of $x_1, x_2, \ldots, x_n$. Also known as pi theorem.
bucking transformer [ELEC] A transformer whose voltage opposes that of a second transformer.
bucking voltage [ELEC] A voltage having a polarity opposite to that of another voltage against which it acts.
bucklandite *See* allanite.
buckle [MET] An up-and-down wrinkle on the surface of a metal bar or sheet.
buckle fold [GEOL] A double flexure of rock beds formed by compression acting in the plane of the folded beds.
buckle plate [CIV ENG] A steel floor plate which is slightly arched to increase rigidity.
Buckley gage [ENG] A device that measures very low gas pressures by sensing the amount of ionization produced in the gas by a predetermined electric current.
buckling [MECH] Bending of a sheet, plate, or column supporting a compressive load. [NUCLEO] The size-shape factor that appears in the general nuclear reactor equation and is a measure of the curvature of the neutron density distribution in the reactor.
buckling stress [MECH] Force exerted by the crippling load.
buckstay [MECH ENG] A structural support for a furnace wall.
buckwheat [BOT] The common name for several species of annual herbs in the genus *Fagopyrum* of the order Polygonales; used for the starchy seed.
buckwheat coal [GEOL] An anthracite coal that passes through 9/16-inch (14 millimeter) holes and over 5/16-inch (8 millimeter) holes in a screen.
buckwheat no. 3 *See* barley coal.
Bucky diaphragm *See* Potter-Bucky grid.
bud [BOT] An embryonic shoot containing the growing stem tip surrounded by young leaves or flowers or both and frequently enclosed by bud scales.
Budan's theorem [MATH] The theorem that the number of roots of an nth-degree polynomial lying in an open interval equals the difference in the number of sign changes induced by n differentiations at the two ends of the interval.
budbreak [BOT] Initiation of growth from a bud.
budding [BIOL] A form of asexual reproduction in which a new individual arises as an outgrowth of an older individual. Also known as gemmation. [BOT] A method of vegeta-

BUCKEYE

Leaf of horse chestnut (*Aesculus hippocastanum*).

BUCKWHEAT



Buckwheat. *(a)* Mature plant. *(b)* Seed.

tive propagation in which a single bud is grafted laterally onto a stock.

budding bacteria [MICROBIO] Bacteria that reproduce by budding.

buddle [MIN ENG] A device for concentrating ore that uses a circular arrangement from which the finely divided ore is delivered in water from a central point, the heavier particles sinking and the lighter particles overflowing.

Buddy [MIN ENG] A shortwall coal cutter designed for light duty such as stabling on longwall power-loaded faces and for subsidiary developments.

budget year [METEOROL] The 1-year period beginning with the start of the accumulation season at the firn line of a glacier or ice cap and extending through the following summer's ablation season.

bud grafting [BOT] Grafting a plant by budding.

budling [BOT] The shoot that develops from the bud which was the scion of a bud graft.

bud rot [PL PATH] Any plant disease or symptom involving bud decay.

bud scale [BOT] One of the modified leaves enclosing and protecting buds in perennial plants.

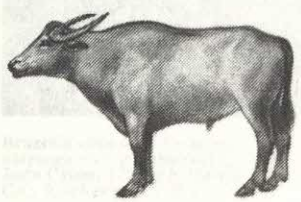
Buerger precession method [CRYSTAL] The recording on film of a single level of the reciprocal lattice of an individual crystal, by means of x-ray diffraction, for the purpose of determining unit cell dimensions and space groups.

Buerger's disease *See* thromboangitis obliterans.

buetschliite [MINERAL] $K_6Ca_2(CO_3)_5 \cdot 6H_2O$ A mineral that is probably hexagonal and consists of a hydrated carbonate of potassium and calcium.

buffalo [VERT ZOO] The common name for several species of artiodactyl mammals in the family Bovidae, including the water buffalo and bison.

BUFFALO



The Indian or water buffalo *(Bubalus bubalis)*, domesticated for draft purposes as well as milk production.

buffer [CHEM] A solution selected or prepared to minimize changes in hydrogen ion concentration which would otherwise occur as a result of a chemical reaction. Also known as buffer solution. [COMPUT SCI] *See* buffer storage. [ECOL] An animal that is introduced to serve as food for other animals to reduce the losses of more desirable animals. [ELEC] An electric circuit or component that prevents undesirable electrical interaction between two circuits or components. [ELECTR] **1.** An isolating circuit in an electronic computer used to prevent the action of a driven circuit from affecting the corresponding driving circuit. **2.** *See* buffer amplifier.

buffer amplifier [ELECTR] An amplifier used after an oscillator or other critical stage to isolate it from the effects of load impedance variations in subsequent stages. Also known as buffer; buffer stage.

buffer cap [ORD] A light cap of ductile metal placed over, and in contact with, an armor-piercing cap in some designs of armor-piercing ammunition.

buffer capacitor [ELECTR] A capacitor connected across the secondary of a vibrator transformer or between the anode and cathode of a cold-cathode rectifier tube to suppress voltage surges that might otherwise damage other parts in the circuit.

buffer capacity [CHEM] The relative ability of a buffer solution to resist pH change upon addition of an acid or a base.

buffered computer [COMPUT SCI] A computer having a temporary storage device to compensate for differences in transmission speeds.

buffered I/O channel [COMPUT SCI] A storage device located between input/output (I/O) channels and main storage control to free the channels for use by other operations.

buffered terminal [COMPUT SCI] A computer terminal which contains storage equipment so that the rate at which it sends or receives data over its line does not need to agree exactly with the rate at which the data are entered or printed.

buffer element [ELEC] A low-impedance inverting driver circuit.

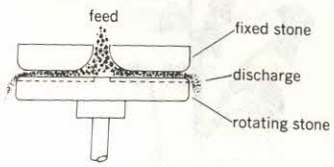
buffering agent [FOOD ENG] A chemical, such as lactic, citric, or acetic acid or the sodium salts of various acids, added to processed food to adjust and regulate its pH.

buffer pooling [COMPUT SCI] A technique for receiving data in an input/output control system in which a number of buffers are available to the system; when a record is produced, a buffer is taken from the pool, used to hold the data, and returned to the pool after data transmission.

buffer solution *See* buffer.

buffer stage *See* buffer amplifier.

BUHRSTONE MILL



Buhrstone mill. Material is fed at center of fixed stone and moves toward outer edge of the stones where finely ground product is discharged.

buffer storage [COMPUT SCI] A synchronizing element used between two different forms of storage in a computer; computation continues while transfers take place between buffer storage and the secondary or internal storage. Also known as buffer.

buffer zone [COMPUT SCI] An area of main memory set aside for temporary storage.

buffeting [AERO ENG] **1.** The beating of an aerodynamic structure or surfaces by unsteady flow, gusts, and so forth. **2.** The irregular shaking or oscillation of a vehicle component owing to turbulent air or separated flow.

buffeting Mach number [AERO ENG] The free-stream Mach number of an aircraft when the local Mach number over the tops of the wings approaches unity.

buffing [ENG] The smoothing and brightening of a surface by an abrasive compound pressed against it by a soft wheel or belt.

buffing wheel [DES ENG] A flexible wheel with a surface of fine abrasive particles for buffing operations.

Bufonidae [VERT ZOO] A family of toothless frogs in the suborder Procoela including the true toads *(Bufo)*.

bufotenine [ORG CHEM] $C_{12}H_{16}N_2O$ An active pressor agent found in the skin of the common toad; a toxic alkaloid with epinephrinelike biological activity.

bug [COMPUT SCI] A defect in a program code or in designing a routine or a computer. [ELECTR] **1.** A semiautomatic code-sending telegraph key in which movement of a lever to one side produces a series of correctly spaced dots and movement to the other side produces a single dash. **2.** An electronic listening device, generally concealed, used for commercial or military espionage. [ENG] **1.** A defect or imperfection present in a piece of equipment. **2.** *See* bullet. [INV ZOO] Any insect in the order Hemiptera.

bugas *See* bottled gas.

bug dust [MIN ENG] The fine coal or other material resulting from a boring or cutting of a drill, a mining machine, or even a pick.

buggy [ENG] *See* concrete buggy. [MIN ENG] A four-wheeled steel car used for hauling coal to and from chutes.

bughole *See* vug.

buhrstone [PETR] A silicified fossiliferous limestone with abundant cavities previously occupied by fossil shells. Also known as millstone.

buhrstone mill [MECH ENG] A mill for grinding or pulverizing grain in which a flat siliceous rock (buhrstone), generally of cellular quartz, rotates against a stationary stone of the same material.

build [ELECTR] To increase in received signal strength.

builder [MATER] A material added to a soap or a synthetic surface-active agent to produce a mixture having enhanced detergency. [MET] A fire-clay brick cull used for bottom construction in kilns or for boxing brick during burning.

building [CIV ENG] A fixed structure for human occupancy and use.

building blocks [MATER] Hollow blocks, either of burned clay or concrete, used in constructing the walls of buildings, and often faced with brick or stone.

building code [CIV ENG] Local building laws to promote safe practices in the design and construction of a building.

building dock [CIV ENG] A type of graving dock or basin, usually built of concrete, in which ships are constructed and then floated out through a caisson gate after flooding the dock.

building line [CIV ENG] A designated line beyond which a building cannot extend.

building-out circuit [ELEC] Short section of transmission line, or a network which is shunted across a transmission line, for the purpose of impedance matching.

building-out network [ELEC] Network designed to be connected to a based network so that the combination will simulate the sending-end impedance, neglecting dissipation, of a line having a termination other than that for which the basic network was designed.

building-out section [ELEC] Short section of transmission line, either open or short-circuited at the far end, shunted across another transmission line for use on an impedance-matching transformer.

building paper [MATER] Heavy, waterproof paper used to cover sheathing and subfloors to prevent passage of air and water.

buildup [MET] Deposition of excess metal, either by elec-

troplating or spraying, on worn or undersized machine components to restore required dimensions.

buildup curve [PETRO ENG] Graph of bottom-hole pressure buildup versus shut-in time for a gas or oil well.

buildup index *See* fire-danger meter.

buildup pressure [PETRO ENG] The increase in bottom-hole pressure up to an equilibrium value in a shut-in oil or gas well.

built-in antenna [ELETROMAG] An antenna located inside the cabinet of a radio or television receiver.

built-in check [COMPUT SCI] A hardware device which controls the accuracy of data either moved or stored within the computer system.

built-in function [COMPUT SCI] A function that is available through a simple reference and specification of arguments in a given higher-level programming language. Also known as built-in procedure; intrinsic procedure.

built-in procedure *See* built-in function.

built terrace *See* alluvial terrace.

built-up beam [ENG] A structural steel member that is fabricated by welding or riveting rather than being rolled.

built-up edge [ENG] Chip material adhering to the tool face adjacent to a cutting edge during cutting.

built-up fraction [GRAPHICS] In typesetting, a fraction set with at least two blocks of type, with each successive block to the right of the preceding one; each block contains one numeral, and the slash is between two blocks.

built-up gun [ORD] Gun tube assembled by the shrinkage method; consists of two or more concentric cylinders shrunk one over another; stronger than a simple cylinder of the same dimensions.

built-up mica [MATER] Large, laminated plates of mica made by bonding thin splittings of natural mica with shellac, glyptol, or some other suitable adhesive.

built-up roof [BUILD] A roof constructed of several layers of felt and asphalt.

built-up roofing [MATER] A seamless piece of flexible, waterproofed roofing material consisting of plies of felt mopped with asphalt or pitch.

buksamin *See* 4-amino-3-hydroxybutyric acid.

bulab-37 [ORG CHEM] $C_{14}H_{19}N_3O_5$ A yellow solid with a melting point of 70–75°C; used as a preemergence herbicide that is placed in the soil for the control of germinating and seeding weed grasses and broadleaf weeds. Also known as 3′,5′-dinitro-4′-(di-*N*-propyl)aminoacetophenone.

bulb [BOT] A short, subterranean stem with many overlapping fleshy leaf bases or scales, such as in the onion and tulip. [ELEC] *See* envelope.

bulb angle [DES ENG] A steel angle iron enlarged to a bulbous thickening at one end.

bulbar paralysis [MED] A clinical syndrome due to involvement of the nuclei of the last four or five cranial nerves, characterized principally by paralysis or weakness of the muscles which control swallowing, talking, movement of the tongue and lips, and sometimes respiratory paralysis.

bulb glacier [HYD] A glacier formed at the foot of a mountain and out into an open slope; the glacier ends spread out into an ice fan.

bulbil [BOT] A secondary bulb usually produced on the aerial part of a plant.

bulbocavernosus *See* bulbospongiosus.

bulb of percussion [ARCHEO] A cone-shaped bulge on a fractured flint surface that was made by a blow striking at an angle.

bulb of the penis [ANAT] The expanded proximal portion of the corpus spongiosum of the penis.

bulbospongiosus [ANAT] A muscle encircling the bulb and adjacent proximal parts of the penis in the male, and encircling the orifice of the vagina and covering the lateral parts of the vestibular bulbs in the female. Also known as bulbocavernosus.

bulbourethral gland [ANAT] Either of a pair of compound tubular glands, anterior to the prostate gland in males, which discharge into the urethra. Also known as Cowper's gland.

bulbous bow [NAV ARCH] A large, elliptical or cylindrical swelling of the lower underwater hull form protruding forward of the bow designed to cancel wave-making at high speeds.

bulimia [MED] Excessive, insatiable appetite, seen in psychotic states; a symptom of diabetes mellitus and of certain cerebral lesions. Also known as hyperphagia.

Buliminacea [INV ZOO] A superfamily of benthic, marine foraminiferans in the suborder Rotaliina.

bulk [GRAPHICS] In book printing, the thickness of paper, in terms of the number of pages per inch for a given basis weight.

bulk acoustic wave [ACOUS] An acoustic wave that travels through a piezoelectric material, as in a quartz delay line. Also known as volume acoustic wave.

bulk-acoustic-wave delay line [ELECTR] A delay line in which the delay is determined by the distance traveled by a bulk acoustic wave between input and output transducers mounted on a piezoelectric block.

bulk cargo [IND ENG] Cargo which is loaded into a ship's hold without being boxed, bagged, or hand stowed, or is transported in large tank spaces.

bulk carrier [NAV ARCH] A vessel designed to transport dry or liquid bulk cargo.

bulk density [ENG] The mass of powdered or granulated solid material per unit of volume.

bulk diode [ELECTR] A semiconductor microwave diode that uses the bulk effect, such as Gunn diodes and diodes operating in limited space-charge-accumulation modes.

bulked-down *See* solid-piled.

bulked yarn [TEXT] A yarn whose individual fibers have been treated so that they do not follow a linear path; air spaces are developed within the yarn, leading to increased loft.

bulk effect [ELECTR] An effect that occurs within the entire bulk of a semiconductor material rather than in a localized region or junction.

bulk-effect device [ELECTR] A semiconductor device that depends on a bulk effect, as in Gunn and avalanche devices.

bulk eraser [ELECTROMAG] A device used to erase an entire reel of recorded magnetic tape at once without running it through a recorder.

bulk factor [ENG] The ratio of the volume of loose powdered or granulated solids to the volume of an equal weight of the material after consolidation into a voidless solid.

bulk flotation [MIN ENG] The rising of a mineralized froth, of more than one mineral, in a single operation.

bulk flow *See* convection.

bulk-handling machine [MECH ENG] Any of a diversified group of materials-handling machines designed for handling unpackaged, divided materials.

bulkhead [AERO ENG] A wall, partition, or such in a rocket, spacecraft, airplane fuselage, or similar structure, at right angles to the longitudinal axis of the structure and serving to strengthen, divide, or help give shape to the structure. [MIN ENG] A tight-seal partition of wood, rock, and mud or concrete in mines that serves to protect against gas, fire, and water. [NAV ARCH] An upright partition separating compartments in a ship.

bulkhead deck [NAV ARCH] The highest continuous deck of a ship to which all transverse watertight bulkheads extend.

bulkhead line [CIV ENG] The farthest offshore line to which a structure may be constructed without interfering with navigation.

bulkhead wharf [CIV ENG] A bulkhead that may be used as a wharf by addition of mooring appurtenances, paving, and cargo-handling facilities.

bulking [MATER] The difference in volume of a given mass of sand or other fine material in moist and dry conditions.

bulking power [TEXT] The relative ability of a textile fiber to increase the finished material's volume.

bulking value [CHEM ENG] The relative ability of a pigment or other substance to increase the volume of paint.

bulk insulation [ENG] A type of insulation that retards the flow of heat by the interposition of many air spaces and, in most cases, by opacity to radiant heat.

bulk lifetime [SOLID STATE] The average time that elapses between the formation and recombination of minority charge carriers in the bulk material of a semiconductor.

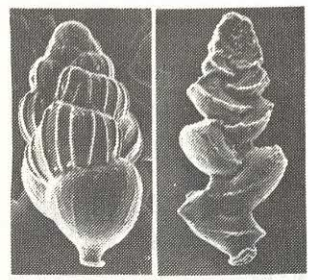
bulk memory [COMPUT SCI] A high-capacity memory used in connection with a computer for bulk storage of large quantities of data.

bulk mining [MIN ENG] Mining in which large quantities of low-grade ore are taken without attempt to segregate the high-grade portions.

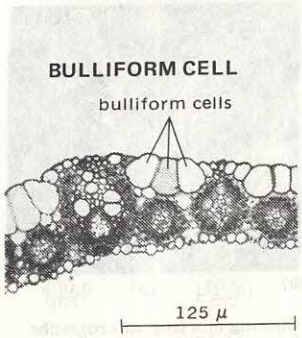
bulk modulus *See* bulk modulus of elasticity.

bulk modulus of elasticity [MECH] The ratio of the compressive or tensile force applied to a substance per unit surface area to the change in volume of the substance per unit vol-

BULIMINACEA



Scanning electron micrographs of foraminiferans, suborder Rotaliina, superfamily Buliminacea, *(a) Eouvigerina*, from Upper Cretaceous of Texas. *(b) Uvigerina*, from Miocene of California. *(R. B. MacAdam, Chevron Oil Field Research Co.)*



Transection of leaf of *Andropogon* showing large bulliform cells in the upper epidermis.

ume. Also known as bulk modulus; compression modulus; hydrostatic modulus; modulus of compression; modulus of volume elasticity.

bulk molding compound [MATER] A mixture of resin, inert fillers, reinforcements, and other additives which forms a puttylike rope, sheet, or preformed shape; used as a premix in composite manufacture.

bulk photoconductor [ELECTR] A photoconductor having high power-handling capability and other unique properties that depend on the semiconductor and doping materials used.

bulk plant [PETRO ENG] A wholesale receiving and distributing facility for petroleum products; includes storage tanks, warehouses, railroad sidings, truck loading racks, and related elements. Also known as bulk terminal.

bulk resistor [ELECTR] An integrated-circuit resistor in which the *n*-type epitaxial layer of a semiconducting substrate is used as a noncritical high-value resistor; the spacing between the attached terminals and the sheet resistivity of the material together determine the resistance value.

bulk shielding reactor [NUCLEO] The prototype swimming-pool reactor located at Oak Ridge, Tennessee; it uses heterogeneous enriched fuel and provides a combination of high thermal-neutron flux, ready accessibility, and versatility. Abbreviated BSR.

bulk storage *See* backing storage.

bulk strength [MECH] The strength per unit volume of a solid.

bulk terminal *See* bulk plant.

bulk transport [MECH ENG] Conveying, hoisting, or elevating systems for movement of solids such as grain, sand, gravel, coal, or wood chips.

Bull *See* Taurus.

bullate [BIOL] Appearing blistered or puckered, especially of certain leaves.

bull bit [MIN ENG] A flat drill bit.

bull block [MET] Power-driven machine for drawing wire through a die.

bulldozer [MECH ENG] A wheeled or crawler tractor equipped with a reinforced, curved steel plate mounted in front, perpendicular to the ground, for pushing excavated materials. [MET] A machine for bending, forging, and punching narrow plates and bars, in which a ram is pushed along a horizontal path by a pair of cranks that are linked to two bullwheels with eccentric pins.

bullet [ENG] **1.** A conical-nosed cylindrical weight, attached to a wire rope or line, either notched or seated to engage and attach itself to the upper end of a wire line core barrel or other retrievable or retractable device that has been placed in a borehole. Also known as bug; go-devil; overshot. **2.** A scraper with self-adjusting spring blades, inserted in a pipeline and carried forward by the fluid pressure, clearing away accumulations or debris from the walls of a pipe. Also known as go-devil. **3.** A bullet-shaped weight or small explosive charge dropped to explode a charge of nitroglycerin placed in a borehole. Also known as go-devil. **4.** An electric lamp covered by a conical metal case, usually at the end of a flexible metal shaft. **5.** *See* torpedo. [GRAPHICS] A hollow hemispherical shell, made of iron and filled with pitch, which holds small objects during the execution of artistic designs in metal. [MATER] A small, lustrous, nearly spherical industrial diamond. [ORD] The projectile fired, or intended to be fired, from a small arm.

bullet drop [MECH] The vertical drop of a bullet.

bullet group [ORD] The bullet holes in a target made by fire from a given small arm from one position and caused by ballistic variations or inaccurate aim.

bullet jacket [ORD] A metal shell surrounding a metal core, the combination composing a bullet for small arms; the jacket is either made of or coated with a relatively soft metal which engages the rifling in the bore, causing rotation of the bullet.

bulletproof armor [ORD] Light, homogeneous, hard armor plate, having a Brinell hardness of 400 to 475, resistant to small-caliber armor-piercing bullets.

bullet splash [ORD] Dispersion of finely divided or melted metal produced upon impact of a projectile with armor plate or other hard objects.

bullfrog *See* barney.

bull gear [DES ENG] A bull wheel with gear teeth.

bullhorn [COMMUN] A portable loudspeaker, generally with built-in amplifier and microphone, used for voice messages to crowds or from one ship to another at sea.

bulliform [BOT] Type of plant cell involved in tissue contraction or water storage, or of uncertain function.

bulliform cell [BOT] One of the large, highly vacuolated cells occurring in the epidermis of grass leaves. Also known as motor cell.

bulling bar [ENG] A bar for ramming clay into cracks containing blasting charges which are about to be exploded.

bullion [MET] Gold or silver in bulk in the shape of bars or ingots. [MIN ENG] A concretion found in some types of coal, composed of carbonate or silica stained by brown humic derivatives; often well-preserved plant structures form the nuclei.

bull ladle [MET] A ladle used in foundry operations for carrying molten metal.

bull nose [BUILD] A rounded external angle, as one used at window returns and doorframes.

bull-nose bit *See* wedge bit.

bullous emphysema [MED] Acute overinflation of the lungs due to extreme efforts to inhale to overcome a bronchial obstruction.

Bullpup [ORD] A U.S. Navy air-to-surface radio-guided missile used against enemy tanks, bridges, and other small targets.

bull's-eye rot [PL PATH] A fungus disease of apples caused by either *Neofabraea malicorticis* or *Gloeosporium perennans* and characterized by spots resembling eyes on the fruit.

bull's-eye squall [METEOROL] A squall forming in fair weather, characteristic of the ocean off the coast of South Africa; it is named for the peculiar appearance of the small, isolated cloud marking the top of the invisible vortex of the storm.

bull shaker [MIN ENG] A shaking chute where large coal from the dump is cleaned by hand.

bull wheel [MECH ENG] **1.** The main wheel or gear of a machine, which is usually the largest and strongest. **2.** A cylinder which has a rope wound about it for lifting or hauling. **3.** A wheel attached to the base of a derrick boom which swings the derrick in a vertical plane.

bulwark [NAV ARCH] The part of a ship's side that extends above the main deck to protect it against heavy weather.

bulwark plating [NAV ARCH] Light plating that extends above a ship's hull plating and acts as a bulwark.

Bulygen number [THERMO] A dimensionless number used in the study of heat transfer during evaporation.

bumblebee [INV ZOO] The common name for several large, hairy social bees of the genus *Bombus* in the family Apidae.

bummer [FOR] A low truck with two wheels for carrying logs, or a tracked cart for dragging them. [MIN ENG] The man who runs conveyors in a quarry or mine.

bump contact [ELECTR] A large-area contact used for alloying directly to the substrate of a transistor for mounting or interconnecting purposes.

bump-down [PETRO ENG] In an oil well pumping operation, the pump's hitting the bottom in the downstroke because the rod between the pumping jack and the pump seat is too long.

bumper [ENG] **1.** A metal bar attached to one or both ends of a powered transportation vehicle, especially an automobile, to prevent damage to the body. **2.** In a drilling operation, the supporting stay between the main foundation sill and the engine block. **3.** In drilling, a fishing tool for loosening jammed cable tools. [MET] A vibrating machine for ramming and consolidating sand into a mold.

bumpiness [AERO ENG] An atmospheric condition causing aircraft to experience sudden vertical jolts.

bumping [AERO ENG] *See* chugging. [CHEM] Uneven boiling of a liquid caused by irregular rapid escape of large bubbles of highly volatile components as the liquid mixture is heated. [MECH ENG] *See* chugging. [MET] Forming a dish in metal by many repeated blows.

bumps [MIN ENG] Sudden, violent expulsion of coal from one or more pillars, accompanied by loud reports and earth tremors.

bunched pair [ELEC] Group of pairs tied together or otherwise associated for identification.

buncher *See* buncher resonator.

buncher resonator [ELECTR] The first or input cavity resonator in a velocity-modulated tube, next to the cathode; here the

faster electrons catch up with the slower ones to produce bunches of electrons. Also known as buncher; input resonator.

bunching [ELECTR] The flow of electrons from cathode to anode of a velocity-modulated tube as a succession of electron groups rather than as a continuous stream.

bunching voltage [ELECTR] Radio-frequency voltage between the grids of the buncher resonator in a velocity-modulated tube such as a klystron; generally, the term implies the peak value of this oscillating voltage.

bunchy top [PL PATH] Any viral disease of plants in which there is a shortening of the internodes with crowding of leaves and shoots at the stem apex.

bund [CIV ENG] An embankment or embanked thoroughfare along a body of water; the term is used particularly for such structures in the Far East.

bundle branch [ANAT] Either of the components of the atrioventricular bundle passing to the right and left ventricles of the heart.

bundled program [COMPUT SCI] A computer program written, maintained, and updated by the computer manufacturer, and included in the price of the hardware.

bundle scar [BOT] A mark within a leaf scar that shows the point of an abscised vascular bundle.

bundle sheath [BOT] A sheath around a vascular bundle that consists of a layer of parenchyma.

bundling machine [MECH ENG] A device that automatically accumulates cans, cartons, or glass containers for semiautomatic or automatic loading or for shipping cartons by assembling the packages into units of predetermined count and pattern which are then machine-wrapped in paper, film paperboard, or corrugated board.

α-bungarotoxin [ORG CHEM] A neurotoxin found in snake venom which blocks neuromuscular transmission by binding with acetylcholine receptors on motor end plates.

Buniakowski's inequality *See* Cauchy-Schwarz inequality.

bunion [MED] A swelling of a bursa of the foot, especially of the metatarsophalangeal joint of the great toe; associated with thickening of the adjacent skin and a forcing of the great toe into adduction.

bunker [ORD] A fortified structure for the protection of personnel, a defended gun position, or a defensive position.

bunker C fuel oil [MATER] A special grade of bunker fuel oil. Also known as Navy Heavy; No. 6 fuel.

bunker fuel oil [MATER] A heavy residual petroleum oil used as fuel by ships, industry, and large-scale heating and power-production installations.

bunkering [ENG] Storage of solid or liquid fuel in containers from which the fuel can be continuously or intermittently withdrawn to feed a furnace, internal combustion engine, or fuel tank, for example, coal bunkering and fuel-oil bunkering.

bunodont [ANAT] Having tubercles or rounded cusps on the molar teeth, as in man.

bunolophodont [VERT ZOO] **1.** Of teeth, having the outer cusps in the form of blunt cones and the inner cusps as transverse ridges. **2.** Having such teeth, as in tapirs.

bunoselenodont [VERT ZOO] **1.** Of teeth, having the inner cusps in the form of blunt cones and the outer ones as longitudinal crescents. **2.** Having such teeth, as in the extinct titanotheres.

Bunsen burner [ENG] A type of gas burner with an adjustable air supply.

Bunsen ice calorimeter [ENG] Apparatus to gage heat released during the melting of a compound by measuring the increase in volume of the surrounding ice-water solution caused by the melting of the ice. Also known as ice calorimeter.

bunsenite [MINERAL] NiO A pistachio-green mineral consisting of nickel monoxide and occurring as octahedral crystals.

Bunsen-Kirchhoff law [SPECT] The law that every element has a characteristic emission spectrum of bright lines and absorption spectrum of dark lines.

bunt [PL PATH] A fungus disease of wheat caused by two *Tilletia* species and characterized by grain replacement with fishy-smelling smut spores.

buntal [TEXT] A fine, white fiber derived from the leaves of the talipot palm. Also known as buri.

Bunter [GEOL] Lower Triassic geologic time. Also known as Buntsandstein.

bunton [MIN ENG] A steel or timber element in the lining of a rectangular shaft.

Buntsandstein *See* Bunter.

buoy [ENG] An anchored or moored floating object, other than a lightship, intended as an aid to navigation, to attach or suspend measuring instruments, or to mark the position of something beneath the water.

buoyage [NAV] A system of buoys; for example, one in which the buoys are assigned shape, color, and number distinction in accordance with location relative to the nearest obstruction is called a cardinal buoyage system.

buoyancy [FL MECH] The resultant vertical force exerted on a body by a static fluid in which it is submerged or floating.

buoyancy parameter [FL MECH] The Grashof number divided by the square of the Reynolds number.

buoyancy pontoons [PETRO ENG] Pontoons that buoy up offshore pipelines during the welding together of sections over bodies of water, after which the pontoons are removed and the pipeline is allowed to sink into position on the bottom.

buoyancy tank [NAV ARCH] An airtight tank near one of the ends of a small boat to keep it from sinking if it capsizes or fills with water.

buoyancy-type density transmitter [ENG] An instrument which records the specific gravity of a flowing stream of a liquid or gas, using the principle of hydrostatic weighing.

buoyant density [PHYS] A technique that uses the sedimentation equilibrium in a density gradient to characterize a solute.

buoyant force [FL MECH] The force exerted vertically upward by a fluid on a body wholly or partly immersed in it; its magnitude is equal to the weight of the fluid displaced by the body.

buoy sensor [ENG ACOUS] A hydrophone used as a sensor in buoy projects; some hydrophone arrays are designed for telemetering.

Buprestidae [INV ZOO] The metallic wood-boring beetles, the large, single family of the coleopteran superfamily Buprestoidea.

Buprestoidea [INV ZOO] A superfamily of coleopteran insects in the suborder Polyphaga including many serious pests of fruit trees.

Burali-Forti paradox [MATH] The order-type of the set of all ordinals is the largest ordinal, but that ordinal plus one is larger.

buran [METEOROL] A violent northeast storm of south Russia and central Siberia, similar to the blizzard.

burble [FL MECH] **1.** A separation or breakdown of the laminar flow past a body. **2.** The eddying or turbulent flow resulting from this occurrence.

burble angle *See* burble point.

burble point [FL MECH] A point reached in an increasing angle of attack at which burble begins. Also known as burble angle.

burden [ELEC] The amount of power drawn from the circuit connecting the secondary terminals of an instrument transformer, usually expressed in volt-amperes. [GEOL] All types of rock or earthy materials overlying bedrock. [MET] **1.** The material which is melted in a direct arc furnace. **2.** In an iron blast furnace, the ratio of iron and flux to coke and other fuels in the charge.

Burdigalian [GEOL] Upper lower Miocene geologic time.

buret [CHEM] A graduated glass tube used to deliver variable volumes of liquid; usually equipped with a stopcock to control the liquid flow.

burga [METEOROL] A storm of wind and sleet in Alaska. Also spelled boorga.

Burgers vector [CRYSTAL] A translation vector of a crystal lattice representing the displacement of the material to create a dislocation.

burglar alarm [ENG] An alarm in which interruption of electric current to a relay, caused, for example, by the breaking of a metallic tape placed at an entrance to a building, deenergizes the relay and causes the relay contacts to operate the alarm indicator. Also known as intrusion alarm.

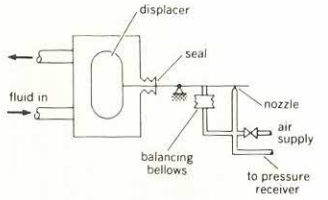
Burhinidae [VERT ZOO] The thick-knees or stone curlews, a family of the avian order Charadriiformes.

buri *See* buntal.

burial ground [NUCLEO] A place for burying unwanted radioactive objects to prevent escape of their radiations, the earth acting as a shield. Also known as graveyard.

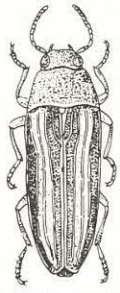
burial metamorphism [GEOL] A kind of regional metamorphism which affects sediments and interbedded volcanic rocks in a geosyncline without the factors of orogenesis or magmatic intrusions.

BUOYANCY-TYPE DENSITY TRANSMITTER



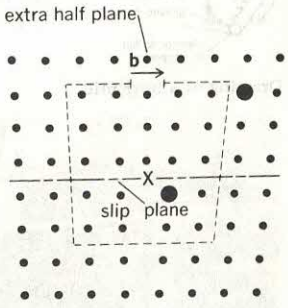
Buoyancy-type density transmitter, used to obtain a continuous record of liquid density. *(From D. M. Considine, ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*

BUPRESTIDAE



An example of Buprestidae. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

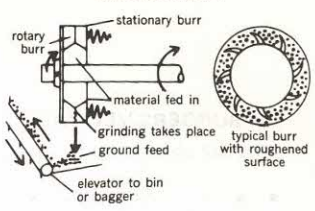
BURGERS VECTOR



An arrangement of atoms around an edge dislocation. The dashed lines represent Burgers closure circuits which define Burgers vector **b**. Dislocation is perpendicular to the paper at X. The large dots represent impurity atoms which may be present.

buried hill [GEOL] A hill of resistant older rock over which later sediments are deposited.
buried placer [GEOL] Old deposit of a placer which has been buried beneath lava flows or other strata.
buried river [GEOL] A river bed which has become buried beneath streams of alluvial drifts or basalt.
buried soil *See* paleosol.
burin [GRAPHICS] An etching tool used for engraving on metal or wood.
burkeite [MINERAL] $Na_6(CO_3)(SO_4)_2$ A white to pale buff or gray mineral consisting of a carbonate-sulfate of sodium.
Burkett's lymphoma [MED] A malignant lymphoma of children, typically involving the retroperitoneal area and the mandible, but sparing the peripheral lymph nodes, bone marrow, and spleen.
burlap [TEXT] A coarse cloth woven from jute fiber. Also known as hessian.
burling [TEXT] Removing loops, knots, and vegetable matter in the finishing section of a woolen or worsted mill.
Burmanniaceae [BOT] A family of monocotyledonous plants in the order Orchidales characterized by regular flowers, three or six stamens opposite the petals, and ovarian nectaries.
burn [ENG] To consume fuel. [MED] An injury to tissues caused by heat, chemicals, electricity, or irradiation effects.
burnable poison [NUCLEO] A neutron absorber that is incorporated in the fuel or fuel cladding of a nuclear reactor and gradually burns up under neutron irradiation. Also known as burnout poison.
burn cut *See* parallel cut.
burned sand [MET] The dissipated claying portion of a casting sand resulting from the heat of the metal.
burner [CHEM ENG] A furnace where sulfur or sulfide ore are burned to produce sulfur dioxide and other gases. [ENG] **1.** The part of a fluid-burning device at which the flame is produced. **2.** Any burning device used to soften old paint to aid in its removal. **3.** A worker who operates a kiln which burns brick or tile. **4.** A worker who alters the properties of a mineral substance by burning. **5.** A worker who uses a flame-cutting torch to cut metals. [MECH ENG] A unit of a steam boiler which mixes and directs the flow of fuel and air so as to ensure rapid ignition and complete combustion.
burner fuel oil [MATER] Any of the petroleum distillate and residual oils used to heat homes and buildings.
burner windbox [ENG] A chamber surrounding a burner, under positive air pressure, for proper distribution and discharge of secondary air.
burnettize [ENG] To saturate fabric or wood with a solution of zinc chloride under pressure to keep it from decaying.
Burnett's syndrome *See* milk-alkali syndrome.
burn-in [ELECTR] Operation of electronic components before they are applied in order to stabilize their characteristics and reveal defects. [ENG] *See* freeze.
burning [ENG] The firing of clay products placed in a kiln. [MET] **1.** Permanent damage to a metal caused by heating beyond temperature limits of the treatment. **2.** Deep pitting of a metal caused by excessive pickling.
burning constant [ORD] In interior ballistics, a figure expressing the relative rate of burning of a propellant; this constant has a different value for each type of propellant. Symbolized *B*.
burning glass [OPTICS] A converging lens used to produce intense heat by converging the rays of the sun on a small area.
burning index *See* fire-danger meter.
burning line [PETRO ENG] A pipeline used to convey refinery fuel gas, as distinguished from gas intended for subsequent processing.
burning oil [MATER] An oil such as kerosine or mineral seal oil suitable for burning.
burning point [ENG] The lowest temperature at which a volatile oil in an open vessel will continue to burn when ignited by a flame held close to its surface; used to test safety of kerosine and other illuminating oils.
burning quality [ENG] Rated performance for a burning oil as determined by specified ASTM tests.
burning-quality index [ENG] Prediction of burning performance of furnace and heater oils; derived from ASTM distillation, API gravity, paraffinicity, and volatility.
burning rate [MATER] The tendency and rate of materials to burn at given temperatures, in contrast to melting or disintegrating.

BURR MILL



Drawing of a burr mill.

burning-rate constant [AERO ENG] A constant, related to initial grain temperature, used in calculating the burning rate of a rocket propellant grain.
burning train *See* igniter train.
burning velocity [CHEM] The normal velocity of the region of combustion reaction (reaction zone) relative to nonturbulent unburned gas, in the combustion of a flammable mixture.
burnish [ENG] To polish or make shiny. [MET] To develop a smooth, lustrous surface finish by tumbling with steel balls or rubbing with a hard metal pad.
burnisher [GRAPHICS] **1.** An etching tool. **2.** A tool usually made of agate for polishing gold leaf after it has been laid.
burn off [METEOROL] With reference to fog or low stratus cloud layers, to dissipate by daytime heating from the sun.
burnout [AERO ENG] **1.** An act or instance of fuel or oxidant depletion or of depletion of both at once. **2.** The time at which this depletion occurs. [ELEC] Failure of a device due to excessive heat produced by excessive current. [ENG] An instance of a device or a part overheating so as to result in destruction or damage. [NUCLEO] **1.** To receive the greatest amount of radiation permissible during a given time. **2.** The point at which the heat flux across a surface causes film-blanketing of the surface, resulting in a drop in the film heat-transfer coefficient, overheating, and possible surface failure.
burnout poison *See* burnable poison.
burnout velocity [AERO ENG] The velocity of a rocket at the time when depletion of the fuel or oxidant occurs. Also known as all-burnt velocity; burnt velocity.
Burnside boring machine [MECH ENG] A machine for boring in all types of ground with the feature of controlling water immediately if it is tapped.
burnt deposit [MET] A dark, powdery deposit obtained by excessive current density in electroplating.
burn-through *See* jammer finder.
burnt lime *See* calcium oxide.
burnt-on sand [MET] A mixture of sand and metal on the surface of a casting due to metal penetration of the sand mold.
burnt plate oil [MATER] A material used to thin etching ink too heavy in body; made by boiling linseed oil and, at a certain temperature, igniting it.
burnt shale [MIN ENG] Carbonaceous shale which has remained for a long period in a colliery tip and undergone spontaneous combustion and converted into a coppery slag material. Also known as oxidized shale.
burnt velocity *See* burnout velocity.
burnup [NUCLEO] A measure of nuclear-reactor fuel consumption, expressed either as the percentage of fuel atoms that have undergone fission or as the amount of energy produced per unit weight of fuel.
burr [BOT] **1.** A rough or prickly envelope on a fruit. **2.** A fruit so characterized. [MET] A thin, ragged fin left on the edge of a piece of metal by a cutting or punching tool.
burr ball *See* lake ball.
burr mill [FOOD ENG] A mill for grinding crops, in which two ribbed plates or disks rub or crush the material between them.
burro [VERT ZOO] A small donkey used as a pack animal.
burrow [MIN ENG] A refuse heap at a coal mine.
bursa [ANAT] A simple sac or cavity with smooth walls containing a clear, slightly sticky fluid and interposed between two moving surfaces of the body to reduce friction.
bursa of Fabricius [VERT ZOO] A thymuslike organ in the form of a diverticulum at the lower end of the alimentary canal in birds.
Burseraceae [BOT] A family of dicotyledonous plants in the order Sapindales characterized by an ovary of two to five cells, prominent resin ducts in the bark and wood, and an intrastaminal disk.
bursicle [BOT] A purse or pouchlike receptacle.
bursitis [MED] Inflammation of a bursa.
burst [COMMUN] **1.** A sudden increase in the strength of a signal being received from beyond line-of-sight range. **2.** *See* color burst. [COMPUT SCI] **1.** To separate a continuous roll of paper into stacks of individual sheets by means of a burster. **2.** The transfer of a collection of records in a storage device, leaving an interval in which data for other requirements can be obtained from or entered into the device. **3.** A sequence of signals regarded as a unit in data transmission. [ELECTR] **1.** An exceptionally large electric pulse in the circuit of an ionization chamber due to the simultaneous arrival of several

ionizing particles. **2.** A radar term for a single pulse of radio energy. [ORD] **1.** Continuous fire from an automatic weapon, as from an aircraft machine gun, sometimes described as a long or short burst. **2.** The explosion of a projectile, bomb, or similar munition.

burst amplifier [ELECTR] An amplifier stage in a color television receiver that is keyed into conduction and amplification by a horizontal pulse at the instant of each arrival of the color burst. Also known as chroma band-pass amplifier.

burst center [ORD] A point about which the bursts of several projectiles from rounds fired under like conditions are evenly distributed.

burst disk [AERO ENG] A diaphragm designed to burst at a predetermined pressure differential; sometimes used as a valve, for example, in a liquid-propellant line in a rocket. Also known as rupture disk.

burster [BOT] An abnormally double flower having the calyx split or fragmented. [COMPUT SCI] An off-line device in a computer system used to separate the continuous roll of paper produced as output from a printer into individual sheets, generally along perforations in the roll. [ORD] An explosive element used in chemical ammunition such as bombs, mines, and shells to open the container and disperse the contents.

bursting charge [ORD] The main explosive charge in a mine, bomb, projectile, or the like that breaks the casing and produces fragmentation or demolition.

bursting layer [ORD] Layer of hard material used in the roofs of dugouts or cave shelters; it sets off projectiles fused for short delay or immediate detonation before they can enter deeply enough to cause great destruction.

bursting strength [MECH] A measure of the ability of a material to withstand pressure without rupture; it is the hydraulic pressure required to burst a vessel of given thickness.

burst mode [COMPUT SCI] A method of transferring data between a peripheral unit and a control processing unit in a computer system in which the peripheral unit sends the central processor a signal to receive data until the peripheral unit signals that the transfer is completed.

burst pedestal [COMMUN] Rectangular pulselike television signal which may be part of the color burst; the amplitude of the color burst pedestal is measured from the alternating-current axis of the sine-wave portion to the horizontal pedestal.

burst pressure [MECH] The maximum inside pressure that a process vessel can safely withstand.

burst range [ORD] Horizontal distance from the piece to the point of burst.

burst separator [ELECTR] The circuit in a color television receiver that separates the color burst from the composite video signal.

burst slug detector [NUCLEO] A radiation detector used for detecting small leaks in a fuel element of a nuclear reactor by measuring the radiation from short-lived fission products that escape into the coolant.

burst transmission [COMMUN] A radio transmission in which messages stored for a given time are sent at from 10 to more than 100 times the normal rate, recorded when received, and then slowed down to the normal rate for the user.

burst wave [FL MECH] Wave of compressed air caused by a bursting projectile or bomb; a detonation wave; it may produce extensive local damage.

burton [MECH ENG] A small hoisting tackle with two blocks, usually a single block and a double block, with a hook block in the running part of the rope.

bus [ELEC] **1.** A set of two or more electric conductors that serve as common connections between load circuits and each of the polarities (in direct-current systems) or phases (in alternating-current systems) of the source of electric power. **2.** *See* busbar. [ELECTR] One or more conductors in a computer along which information is transmitted from any of several sources to any of several destinations. [ENG] A motor vehicle for carrying a large number of passengers.

busbar [ELEC] A heavy, rigid metallic conductor, usually uninsulated, used to carry a large current or to make a common connection between several circuits. Also known as bus.

Busch lemniscate [METEOROL] The locus in the sky, or on a diagrammatic representation thereof, of all points at which the plane of polarization of diffuse sky radiation is inclined 45° to the vertical; a polarization isocline. Also known as neutral line.

bushbaby [VERT ZOO] Any of six species of African arboreal primates in two genera (*Galago* and *Euoticus*) of the family Lorisidae. Also known as galago; night ape.

bushel [MECH] Abbreviated bu. **1.** A unit of volume (dry measure) used in the United States, equal to 2150.42 cubic inches or approximately 35.239 liters. **2.** A unit of volume (liquid and dry measure) used in Britain, equal to 2219.36 cubic inches or 8 imperial gallons (approximately 36.369 liters).

bushing [MECH ENG] A removable piece of soft metal or graphite-filled sintered metal, usually in the form of a bearing, that lines a support for a shaft.

bus reactor [ELEC] An air-core inductor connected between two buses or two sections of the same bus in order to limit the effects of voltage transients on either bus.

buster [MET] A pair of dies used in press forging for barreling, for flattening a hot metal billet, or for loosening scale on hot, ferrous forging billets. [MIN ENG] An expanding wedge used to break down coal or rock.

bustite *See* aubrite.

busulfan [PHARM] $CH_3SO_2O(CH_2)_4OSO_2CH_3$ Crystals with a melting point of 114–118°C; soluble in acetone at 25°C; used as an antineoplastic drug. Also known as 1,4-bis(methanesulfonoxy)butane; busulphan; 1,4-di(methanesulfonyloxy)butane; methanesulfonic acid tetramethylene ester; tetramethylene bis(methanesulfonate).

busulphan *See* busulfan.

busway [ELEC] A prefabricated assembly of standard lengths of busbars rigidly supported by solid insulation and enclosed in a sheet-metal housing.

busy test [COMMUN] A test, in telephony, made to find out whether certain facilities which may be desired, such as a subscriber line or trunk, are available for use.

busy tone [COMMUN] Interrupted low tone returned to the subscriber as an indication that the party's line is busy.

butachlor [ORG CHEM] $C_{17}H_{26}ClNO_2$ An amber-colored liquid with slight solubility in water; used as a preemergence herbicide for weeds in rice. Also known as 2-chloro-2′,6′-diethyl-*N*-(butoxymethyl)acetanilide.

1,3-butadiene [ORG CHEM] C_4H_6 A colorless gas, boiling point −4.41°C, a major product of the petrochemical industry; used in the manufacture of synthetic rubber, latex paints, and nylon.

butadiene dimer [ORG CHEM] C_8H_{12} The third ingredient in ethylene-propylene-terpolymer (EPT) synthetic rubbers; isomers include 3-methyl-1,4,6-heptatriene, vinylcyclohexene, and cyclooctadiene.

butadiene rubber *See* polybutadiene.

butadiene-styrene rubber [MATER] A synthetic rubber that is formed by copolymerization of butadiene and styrene.

butaldehyde *See* butyraldehyde.

α-butalene *See* butene-1.

Butamer process [CHEM ENG] A method of isomerizing normal butane into isobutane in the presence of hydrogen and a solid, noble-metal catalyst; used to prepare raw material in a gasoline alkylation process.

***n*-butanal** *See* butyraldehyde.

butane [ORG CHEM] C_4H_{10} An alkane of which there are two isomers, *n* and isobutane; occurs in natural gas and is produced by cracking petroleum.

butane dehydrogenation [CHEM ENG] A process to remove hydrogen from butane to produce butene or butadiene.

1,4-butanedicarboxylic acid *See* adipic acid.

butanedioic acid *See* succinic acid.

butanedioic anhydride *See* succinic anhydride.

1,3-butanediol *See* 1,3-butylene glycol.

1,4-butanediol *See* 1,4-butylene glycol.

2,3-butanediol [ORG CHEM] $CH_3CHOHCHOHCH_3$ A major fermentation product of several species of bacteria. Also known as 2,3-butylene glycol.

2,3-butanedione *See* diacetyl.

butanenitrile *See* butyronitrile.

butane vapor-phase isomerization [CHEM ENG] A process to isomerize normal butane into isobutane in the presence of aluminum chloride catalyst and hydrogen chloride promoter.

butanoic acid *See* butyric acid.

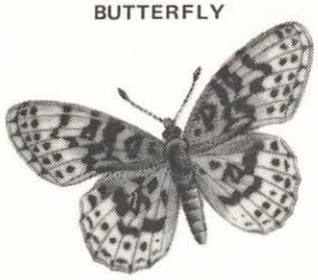
butanol [ORG CHEM] Any one of four isomeric alcohols having the formula C_4H_9OH; colorless, toxic liquids soluble in most organic liquids. Also known as butyl alcohol.

butanol fermentation [MICROBIO] Butanol production as a result of the fermentation of corn and molasses by the anaerobic bacterium *Clostridium acetobutylicum*.

BUS

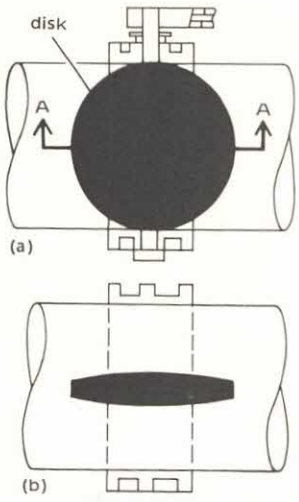
Bus with rear-mounted engine. *(Mack Trucks)*

BUTTERFLY



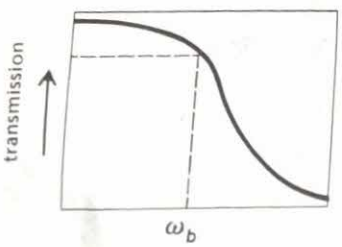
Adult of the marsh (meadow) fritillary.

BUTTERFLY VALVE



Butterfly-type valve for penstock is typically 25 feet (7.6 meters) in diameter. *(a)* Elevation. *(b)* Section A-A.

BUTTERWORTH FILTER



Plot of the passband of the Butterworth filter; ω_b is the point where the transmission function falls below the passband tolerance.

2-butanone *See* methyl ethyl ketone.

butazolidine *See* phenylbutazone.
